

THE INTERNATIONAL DAHLIA REGISTER (1969)

SIXTEENTH SUPPLEMENT

The following list contains the names of *Dahlia* cultivars registered between 1 January 2004 and 31 December 2004. It is issued as the *Sixteenth Supplement to the International Dahlia Register* (published in 1969 as a *Tentative Classified List and International Register of Dahlia Names*).

Raisers and introducers of new plants are urged to ensure that all their plants have been registered and are reminded that registration should take place before a plant is released or its name is mentioned in print. Registration concerns all named cultivars. Registration forms can be obtained from the International Dahlia Registrar, Royal Horticultural Society's Garden, Wisley, Woking, Surrey GU23 6QB, England.

In this list the cultivar name is preceded by an indication of the group to which the plant belongs, as defined in the 1969 Register, which is repeated below as amended. The line below begins with the parentage, when known, in parenthesis. The names of the raiser, introducer (where applicable) and registrant follow, together with the relevant dates (R = raiser, H = hybridizer, G = grown to first flower by, N = named by, I = introducer, REG = registrant). Where a date is given without a name (e.g. I & REG: 2004) it can be assumed that the individual or firm involved is that immediately preceding it, e.g. R: C. Geerlings, I & REG: 2004, in which C. Geerlings raised the plant and then introduced it and registered the name in 2004. Details of flower diameter and stem height are included, where supplied by the registrant.

In this Supplement the International Cultivar Registration Authority has incorporated some of the large number of acceptable names which, for one reason or another, have never formally been sent for registration. These are given as e.g. REG: International Cultivar Registration Authority, 2004. This catching up process will continue in succeeding Supplements.

Nomenclatural standards

This Supplement records the designation of nomenclatural standards for some of the newly registered cultivars. Nomenclatural standards are a way to fix the application of a new name by reference to a particular example of a plant. They may take the form of herbarium specimens, but can also be paintings or a permanent photographic record as stated in the International Code for Cultivated Plants (2004), where this is more appropriate. All the nomenclatural standards designated here are held in the Herbarium, RHS Garden, Wisley.

Note* An asterisk after the name of a variety defines that such variety has not thus far been registered with the International Cultivar Registration Authority.

GROUP CLASSIFICATION AND FORMATION

Group 1 - Single-flowered Dahlias

Single dahlias have blooms with a single outer ring of florets, which may overlap, the centre forming a disc.

Group 2 - Anemone-flowered Dahlias

Anemone-flowered dahlias have blooms with one or more outer rings of generally

flattened ray florets surrounding a dense group of tubular florets, which are longer than the disc florets in Single dahlias, and showing no disc.

Group 3 - Collerette Dahlias

Collerette dahlias have blooms with a single outer ring of generally flat ray florets, which may overlap, with a ring of small florets (the Collar), the centre forming a disc.

Group 4 - Waterlily Dahlias

Waterlily dahlias have fully double blooms characterised by broad and generally sparse ray florets, which are straight or slightly involute along their length giving the flower a shallow appearance. The depth should be less than half the diameter of the bloom.

Group 5 - Decorative Dahlias

Decorative dahlias have fully double blooms showing no disc. The ray florets are generally broad, and flat and may be involute for no more than 75% of their length (longitudinal axis), or slightly twisted and usually bluntly pointed.

Group 6 - Ball Dahlias

Ball dahlias have fully double blooms, ball shaped or slightly flattened. The ray florets are blunt or rounded at the tips, with margins spirally arranged and involute for at least 75% of the length of the florets.

Group 7 - Pompon Dahlias

Pompon dahlias have blooms fully double spherical blooms of miniature size, with florets involute for the whole of their length (longitudinal axis).

Group 8 - Cactus Dahlias

Cactus dahlias have fully double blooms, the ray florets are usually pointed, the majority narrow and revolute for 50% or more of their length (longitudinal axis) and either straight or incurving.

Group 9 - Semi-Cactus Dahlias

Semi-Cactus dahlias have fully double blooms, the ray florets are usually pointed, and revolute for more than 25% of their length and less than 50% of their length (longitudinal axis), broad at base and either straight or incurving.

Group 10 - Miscellaneous Dahlias

Any dahlias which do not fall into one of the foregoing Groups e.g. Orchid-flowered, Paeony-flowered dahlias, etc.

Group 11 – Fimbriated Dahlias

Fimbriated dahlias have blooms where ray florets should be evenly split or notched into two or more divisions, uniformly throughout the bloom to create a fringed overall effect. The petals may be flat, involute, revolute, straight, incurving or twisted.

Lilliput Dahlias

A low growing type of dahlia usually no more than 0.3m in height having single, semi-double or double florets attaining 26mm (1 inch) or so in diameter. Especially suitable for borders or display in containers on patios etc. Sometimes referred to as 'baby' or 'top-mix' types of dahlia.

GROUPS AND SIZES

Certain Groups have been sub-divided and these, with their relative sizes, are as follows:

Waterlily Dahlias (Group 4), Decorative Dahlias (Group 5), Cactus Dahlias (Group 8) and Semi-Cactus Dahlias (Group 9)

- A** Giant-flowered - usually over 250mm (10in) in diameter
- B** Large-flowered - usually between 200mm (8in) and 250mm (10in) in diameter
- C** Medium-flowered - usually between 150mm (6in) and 200mm (8in) in diameter
- D** Small-flowered - usually between 100mm (4in) and 150mm (6in) in diameter
- E** Miniature-flowered - not usually exceeding 100mm (4in) in diameter

Ball Dahlias (Group 6)

- A** Small Ball dahlias - usually between 100mm (4in) and 150mm (6in) in diameter
- B** Miniature Ball dahlias - usually between 50mm (2in) and 100mm (4in) in diameter

Pompon Dahlias (Group 7)

Pompon dahlias - not exceeding 50mm (2in) in diameter

The use of "Dw.B" after the classification of a cultivar indicates that these are dwarf bedding dahlias, not usually exceeding 600mm (24in) in height.

5(d) 'American Gold'

(Parentage unknown) R unknown REG L.J.C.W. Berbeer. Fls 130mm wide, brilliant greenish yellow (1B). Stem 1.4m. Standard: colour print supplied by registrant (WSY 0052470).

6(b) 'Andrea Lawson'

(Parentage unknown) H (1999), G (2000), N (2002) & REG (2004): P. Godsmark I (2003) Rycroft Dahlias. Fls 100mm wide, outer florets lavender, inner florets white. Stem 1.2m.

3 'Ann Breckenfelder'

('Pooh'* × 'Grand Duc') H (2000), G (2001) & N (2002): C. Geerlings I (2002) & REG (2004): Geerlings Dahlias. Fls 70mm wide, outer florets strong red (46A), inner florets light greenish yellow (3C). Stem 1.1m. Standard: colour print supplied by registrant (WSY 0044629).
