

THE INTERNATIONAL DAHLIA REGISTER (1969)

FOURTEENTH SUPPLEMENT

The following list contains the names of *Dahlia* cultivars registered between 1 January 2002 and 31 December 2002. It is issued as the *Fourteenth Supplement* to the *International Dahlia Register* (published in 1969 as a *Tentative Classified List and International Register of Dahlia Names*).

Raisers and introducers of new plants are urged to ensure that all their plants have been registered and are reminded that registration should take place before a plant is released or its' name is mentioned in print. Registration concerns all named cultivars. Registration forms can be obtained from the International Dahlia Registrar, Royal Horticultural Society's Garden, Wisley, Woking, Surrey GU23 6QB, England.

In this list the cultivar name is preceded by an indication of the group to which the plant belongs, as defined in the 1969 Register, but which is repeated below. The line below begins with the parentage, when known, in parenthesis. The names of the raiser, introducer (where applicable) and registrant follow, together with the relevant dates (R = raiser, H = hybridizer, G = grown to first flower by, N = named by, I = introducer, REG = registrant). Where a date is given without a name (e.g. I & REG: 2002) it can be assumed that the individual or firm involved is that immediately preceding it, e.g. R: Y Konishi, I & REG: 2002, in which Mr Y Konishi raised the plant and then introduced it and registered the name in 2002. Details of flower diameter and stem height are included, where supplied by the registrant.

Standards

This Supplement records the designation of Standards for some of the newly registered cultivars. Standards are a way to fix the application of a new name by reference to a particular example of a plant and provide a definitive record of its diagnostic characters. Standards may take the form of herbarium specimens, but can also be paintings or a photographic record, where this is more appropriate. All the Standards designated here are held in the Herbarium, RHS Garden, Wisley.

Note* An asterisk after the name of a variety defines that such variety has not thus far been registered with the International Cultivar Registration Authority.

GROUP CLASSIFICATION AND FORMATION

Group 1 - Single-flowered Dahlias

Single dahlias have blooms with a single outer ring of florets, which may overlap, the centre forming a disc.

Group 2 - Anemone-flowered Dahlias

Anemone-flowered dahlias have blooms with one or more outer rings of generally flattened ray florets surrounding a dense group of tubular florets, which are longer than the disc florets in Single dahlias, and showing no disc.

Group 3 - Collerette Dahlias

Collerette dahlias have blooms with a single outer ring of generally flat ray florets, which may overlap, with a ring of small florets (the Collar), the centre forming a disc.

Group 4 - Waterlily Dahlias

Waterlily dahlias have fully double blooms characterised by broad and generally sparse ray florets, which are straight or slightly involute along their length giving the flower a shallow appearance. The depth should be less than half the diameter of the bloom.

Group 5 - Decorative Dahlias

Decorative dahlias have fully double blooms showing no disc. The ray florets are generally broad, and flat and may be involute for no more than 75% of their length (longitudinal axis), or slightly twisted and usually bluntly pointed.

Group 6 - Ball Dahlias

Ball dahlias have fully double blooms, ball shaped or slightly flattened. The ray florets are blunt or rounded at the tips, with margins spirally arranged and involute for at least 75% of the length of the florets.

Group 7 - Pompon Dahlias

Pompon dahlias have blooms fully double spherical blooms of miniature size, with florets involute for the whole of their length (longitudinal axis).

Group 8 - Cactus Dahlias

Cactus dahlias have fully double blooms, the ray florets are usually pointed, the majority narrow and revolute for 50% or more of their length (longitudinal axis) and either straight or incurving.

Group 9 - Semi-Cactus Dahlias

Semi-Cactus dahlias have fully double blooms, the ray florets are usually pointed, and revolute for more than 25% of their length and less than 50% of their length (longitudinal axis), broad at base and either straight or incurving.

Group 10 -Miscellaneous Dahlias

Any dahlias which do not fall into one of the foregoing Groups e.g. Orchid-flowered, Paeony-flowered dahlias, etc.

GROUPS AND SIZES

Certain Groups have been sub-divided and these, with their relative sizes, are as follows:

Waterlily Dahlias (Group 4), Decorative Dahlias (Group 5), Cactus Dahlias (Group 8) and Semi-Cactus Dahlias (Group 9)

- A** Giant-flowered – usually over 250mm (10in) in diameter.
- B** Large-flowered – usually between 200mm (8in) and 250mm (10in) in diameter.
- C** Medium-flowered – usually between 150mm (6in) and 200mm (8in) in diameter.
- D** Small-flowered – usually between 100mm (4in) and 150mm (6in) in diameter.
- E** Miniature-flowered – not usually exceeding 100mm (4in) in diameter.

Ball Dahlias (Group 6)

- A** Small Ball dahlias – usually between 100mm (4in) and 150mm (6in) in diameter.

- B** Miniature Ball dahlias – usually between 50mm (2in) and 100mm (4in) in diameter.

Pompon Dahlias (Group 7)

Pompon dahlias – not exceeding 50mm (2in) in diameter

The use of “Fim” after the classification indicates a fimbriated dahlia. In these the ray florets should be evenly split or notched into two or more divisions, uniformly throughout the bloom to create a fringed effect.

The use of “Dw.B” after the classification of a cultivar indicates that these are dwarf bedding dahlias, not usually exceeding 600mm (24in) in height.

5(e) ‘Adrienne Simms’

(Un-named seedling × possibly ‘Karenglen’) H, G (1999), N (1999), I (2002) & REG (2002): R.A. Marks. Fls 100mm wide, white. Stem 1m. Standard: colour print supplied by registrant (WSY 0034930).
