CHANGES TO THE ORCHID HYBRID REGISTER ARISING FROM *GENERA ORCHIDACEARUM* VOL 5

The RHS Advisory Sub-Committee on Orchid Hybrid Registration (ASCOHR) met on the 26 May to discuss the implication for the Orchid Hybrid Register of name changes made in *Genera Orchidacearum* volume 5 (GO5). The main adjustments concern generic boundaries in the *Oncidiinae*.

ASCOHR consists of an international group of scientists, hybridisers and nurserymen. Their purpose is to advise the RHS as International Registration Authority for *Orchidaceae* on matters relating to orchid nomenclature and taxonomy (further information can be found in the Orchid Hybrid List, June 2010).

After consideration of written and verbal contributions it was agreed unanimously that all changes in GO5 should be implemented in the Register except for those concerning *Odontoglossum* and *Gomesa*. It was agreed that more opinion would be invited regarding the boundaries of those two genera and that these would be discussed at the next ASCOHR meeting in December.

This means that Julian Shaw, the International Orchid Registrar, will start the complex task of implementing changes in the circumscription of *Ada*, *Cyrtochilum*, *Erycina*, *Miltoniopsis*, *Rossioglossum*, *Tolumnia*, *Zelenkoa* etc. Synonyms will be recorded and it is very much hoped that this information will soon be available online: rhs.org.uk/horticulturaldatabase/orchidregister

The reasoning behind these changes has been widely reported and were clearly summarised in the April 2009 issue of AOS *Orchids* (pp229–238). ASCOHR members accepted that the science and interpretation behind the changes is sound and consistent for a number of reasons: it is coherent with the interpretation of other groups in the *Orchidaceae* and other plant families; it is based on solid evidence and a large sample base; the different species in the *Oncidiinae* were found to be genetically close; recognition of broad genera shows plant relationships and is horticulturally more useable than the recognition of numerous smaller genera; the large international team behind GO research are well recognised, and contains scientists who have considerable experience with the *Oncidiinae*.

Although the science and interpretation of the boundaries of *Oncidium*/*Odontoglossum* and *Gomesa* were endorsed by ASCOHR it was felt important to defer a recommendation so that other interested parties could provide more input into a final decision. I therefore encourage everyone who has an interest in this issue to submit their thoughts and evidence as soon as possible, email: orchids1@btinternet.com

In addition ASCOHR delayed a decision on issues concerning *Ida* and *Sudamerlycaste*; this will give individuals a short time to put their case to the relevant authorities.

At the World Orchid Conference in 2011 in Singapore we anticipate holding a forum where the broader issues of generic boundaries and hybrid registration can be discussed.

I am most grateful to Julian Shaw for his meticulous work on integrating all the new information in the Register, to Janet Cubey (RHS Chief Horticultural Data Development Manager), and all the ASCOHR members for their valuable contributions.

Johan Hermans, Chairman ASCOHR
