Introduction

The Twenty-eighth Supplement contains the names of *Dahlia* cultivars registered between 1 January 2017 and 31 March 2019. It is issued as the *Twenty-eighth Supplement* to the *International Dahlia Register* (published in 1969 as a *Tentative Classified List and International Register of Dahlia Names*).

Raisers and introducers of new plants are urged to ensure that all their plants have been registered and are reminded that registration should preferably take place before a plant is released or its name is mentioned in print.

Registration forms can be obtained from: RHS Garden Wisley, Woking, Surrey GU23 6QB
Tel (+44) 0845 260 9000 *Fax* (+44) 1483 211 750 *Email* sharonmcdonald@rhs.org.uk
or online at: <https://www.rhs.org.uk/plants/plantsmanship/plant-registration/Dahlia-cultivar-registration>

In this list the cultivar name is followed by an indication of the group to which the plant belongs, as defined in the 1969 Register, which is repeated below as amended. The line below begins with the hybridiser (**H**) where known, together with the year of hybridisation. This is followed by any or all of the following: Grown to first flower by (**G**); Named by (**N**); Introducer (**I**); Registrant (**REG**). The next line lists parentage (seed parent × pollen parent), if known, and seedling number. **Note:** An asterisk * after the name of a cultivar defines that such cultivar has not thus far been registered with the International Cultivar Registration Authority. This is particularly relevant in recording the parentage of a cultivar when occasionally one or both named cultivars may not be registered.

Details of flower diameter and stem height are included, where supplied by the registrant. Colour Chart numbers in registered descriptions, e.g. N74A in 'Addison June', are from the *RHS Colour Chart* (1966 (reprinted 1986), 1995, 2001, 2007, 2015). Colour names followed by Chart numbers without brackets are equivalents adopted by the RHS for all its international registers. They are taken from the Universal Colour Language in the Inter-Society Color Council-National Bureau of Nomenclatural standards colour-name system. Colour names followed by Chart numbers with brackets or by no numbers at all are those supplied by the registrant.

TGA followed by a date refers to the Trial Garden Award of the Koninklijke Algemeene Vereeniging voor Bloembollencultuur (Royal General Bulbgrowers' Association) of Netherlands.

Nomenclatural standards

This Supplement records the designation of nomenclatural standards for some of the newly registered cultivars. Nomenclatural standards are a way to fix the application of a new name by reference to a particular example of a plant. They often take the form of herbarium specimens but can also be paintings or a permanent photographic record as stated in the International Code of Nomenclature for Cultivated Plants (2016), where this is more appropriate. All the nomenclatural standards designated here are held in the Herbarium, RHS Garden Wisley (WSY).

Trade Designations

A name such as *Dahlia DAHLEGRIA BICOLORE* is a trade designation. In this example it is for the plant with the cultivar epithet 'Dahlgr128'. In the Dahlia Register, trade designations are distinguished by being printed in small capitals, without quotation marks. (See *International Code of Nomenclature for Cultivated Plants* (2016), Article 13 and Appendix X.)

Group Classification and Formation

Formed through consultation with the national societies, or overseeing bodies, for dahlias, of Netherlands, the UK and the USA.

Group 1 – Single-flowered dahlias

Single dahlias have blooms with a single outer ring of florets, which may overlap, the centre forming a disc.

Group 2 – Anemone-flowered dahlias

Anemone-flowered dahlias have blooms with one or more outer rings of generally flattened ray florets surrounding a dense group of tubular florets, which are longer than the disc florets in single dahlias, and showing no disc.

Group 3 – Collerette dahlias

Collerette dahlias have blooms with a single outer ring of generally flat ray florets, which may overlap, with a ring of small florets (the Collar), the centre forming a disc.

Group 4 – Waterlily dahlias

Waterlily dahlias have fully double blooms characterised by broad and generally sparse ray florets, which are straight or slightly involute along their length giving the flower a shallow appearance. The depth should be less than half the diameter of the bloom.

Group 5 – Decorative dahlias

Decorative dahlias have fully double blooms showing no disc. The ray florets are generally broad and flat and may be involute for no more than 75% of their length (longitudinal axis) or slightly twisted and usually bluntly pointed.

Group 6 – Ball dahlias

Ball dahlias have fully double blooms, ball shaped or slightly flattened. The ray florets are blunt or rounded at the tips, with margins spirally arranged and involute for at least 75% of the length of the florets.

Group 7 – Pompon dahlias

Pompon dahlias have fully double, spherical blooms of miniature size, with florets involute for the whole of their length (longitudinal axis)

Group 8 – Cactus dahlias

Cactus dahlias have fully double blooms, the ray florets are usually pointed, the majority narrow and revolute for more than 50% or more of their length (longitudinal axis) and either straight or incurving.

Group 9 – Semi cactus dahlias

Semi-cactus dahlias have fully double blooms; the ray florets are usually pointed and revolute for more than 25% of their length and less than 50% of their length (longitudinal axis), broad at base and either straight or incurving.

Group 10 – Miscellaneous dahlias

Miscellaneous dahlias are any dahlias which do not fall into one of the listed groups.

Group 11 – Fimbriated dahlias

Fimbriated dahlias have blooms where ray florets should be evenly split or notched into two or more divisions, uniformly throughout the bloom to create a fringed overall effect. The petals may be flat, involute, revolute, straight, incurving or twisted.

Group 12 – Single Orchid or Star dahlias

Single Orchid or Star dahlias have blooms with a single outer ring of florets surrounding the disc. Ray florets are uniformly either involute or revolute.

Group 13 – Double Orchid & Stellar dahlias

Double orchid dahlias have fully double blooms, showing no disc, that have triangular centres. Ray florets are narrowly lanceolate and either involute or revolute. Stellar dahlias are similar, but ray florets are generally involute, rather than revolute; bloom depth should be greater than half the diameter of the flower, but not greater than the diameter of the flower.

Group 14 – Peony-flowered dahlias

Peony-flowered dahlias have large flowers consisting of three or four rows of flattened expanded rays somewhat irregularly arranged, and surrounding a golden disc similar to that of the single dahlias.

Groups and Sizes

Certain groups are subdivided by size, for the purposes of exhibition, by various national dahlia societies. As there are differences to the sizes used by different societies to indicate a given class, the RHS no longer classifies dahlias by size, but simply records the size of the flower within its description. The sizes given here indicate the size of the cultivar as recorded by the registrant.

Dwarf Bedder

The use of (Dw.B.) after the classification of a cultivar indicates that these are dwarf bedding dahlias, not usually exceeding 0.6m (24in) in height.

Lilliput dahlias

A low-growing type of dahlia usually no more than 0.3m (12 inches) in height having single, semi-double or double florets attaining 26mm (1 inch) or so in diameter. They are especially suitable for borders or display in containers on patios, etc. Sometimes referred to as “baby” or “top-mix” types of dahlia.

A New Way To Register Your Dahlias

The RHS is the International Cultivar Registration Authority for the genus *Dahlia*. Plants from around the world are registered and registers are published for an international audience. The RHS is currently sent around 100–150 new dahlia names for registration by hybridisers and growers every year. These are published in annual supplements to the International Register which was published in 1969.

We are planning to publish a new International Register and Checklist in 2020. The Register will contain over 62,000 dahlia cultivar names. This will be an amalgamation of all of the names published in the 1969 Register and its supplements, plus the many unregistered names that we have found through our research.

We would like to make one last push to get as many names as possible into the new Register and to that end the RHS has recently introduced an online registration form. The form can be found on our website at:

<https://www.rhs.org.uk/plants/plantsmanship/plant-registration/dahlia-cultivar-registration>.

Dahlia registration remains free of charge and a certificate of registration is available, if required. Registrations can still be made via email (sharonmcdonald@rhs.org.uk) or post (RHS Garden Wisley, Woking, Surrey GU23 6QB, UK). However, please note that the registration form has been updated for GDPR compliance and if you send older registration forms, your registration may be held up. Updated forms can be obtained from the above email and postal addresses.
