

THE INTERNATIONAL DIANTHUS REGISTER (1983) & CHECKLIST

NINETEENTH SUPPLEMENT

The following list contains the names of *Dianthus* cultivars registered between 1 January 2001 and 31 December 2001.

Raisers and introducers of all classes of *Dianthus* are urged to ensure that the names of all their plants have been registered and are reminded that registration should take place before a plant is released or the name is mentioned in print. Registration concerns all named cultivars. Registration forms can be obtained from the International Dianthus Registrar, Royal Horticultural Society's Garden, Wisley, Woking, Surrey GU23 6QB, England who will issue a certificate of registration on request. There is no fee.

The format of entries follows a pattern first adopted in the Fifth Supplement. Following the classification and name of each new cultivar a statement regarding parentage or origin is given in parenthesis. The names of those involved in the raising, introduction and registration of the plant are then given, together with relevant dates (R = raiser, H = hybridizer, G = grown to first flower by, S = selected by, N = named by, I = introducer, REG = registrant, L = listed by). When a date is given after a colon and without a name (e.g. REG: 1987) it can be assumed that the individual or firm involved is that immediately preceding it, e.g. R (1982) & I (1983): A. Smith REG: 1984 implies that the plant was raised by A. Smith in 1982, introduced by him in 1983 and registered by him in 1984.

Perpetual carnations are listed, where known, as sprays or standards. The use of the latter should not be confused with the citation of Nomenclatural Standards which refer to individual herbarium specimens or images (slides, prints etc.) which have been selected as the definitive point of reference should any doubt arise about the plant to which the name concerned should be applied.

Colour references such as 128D are to the RHS Colour Chart (1966, 1986, 1995, 2001), those such as 730/3 refer to the Horticultural Colour Chart (1941). The descriptions are as full and consistent as information provided by the registrant and other sources allows. Any additional material would be welcomed by the Registrar.

This publication is styled both as a Register and Checklist. As such it contains not only the most recent new registrations, but details of other plants for which adequate information is available even though their names are not formally registered. Where these names would not be acceptable for registration this is indicated and reference given to the relevant Article of the *International Code of Nomenclature for Cultivated Plants - 1995*. Those most frequently cited here are: Art. 17 which deals with the formation of cultivar epithets and Art. 26 which discourages the re-use of names.
