Plant Trials
The Royal Horticultural Society, the UK’s leading gardening charity, has conducted plant trials since its foundation in 1804. They are an intrinsic part of the charitable work the RHS does for all gardeners, aiming to inform, inspire and advise. Today, over 60 trials of different groups of plants (herbaceous, vegetable, fruit, annual, bulb, rock garden and woody) are held at RHS gardens each year. Around 3,000 entries are judged for garden worthiness by 13 RHS plant committees, made up of professional gardeners, nurserymen, plantsmen and enthusiasts with the support of RHS staff and scientists.

RHS plant trials are conducted to identify good, reliable garden plants by awarding the RHS Award of Garden Merit to cultivars of particular value. Botanists examine the plants to ensure they are correctly named. Each plant is also described in detail, photographed and a dried specimen prepared for storage in the RHS Herbarium.

Perennial Yellow Daisy Trials
The perennial, mostly yellow, daisies can provide wonderful colour in a late summer border, they are tolerant of a range of different conditions and are easy to grow. And yet, for some reason, they have been out of fashion in recent years. To help rekindle their popularity, and provide a vibrant, golden display for the Millennium (2000) and the Queen’s Golden Jubilee (2002), the Floral Trials Sub-committee decided that a series of trials (listed below) should be carried out on the Portsmouth Field at RHS Garden, Wisley.

Objectives of the trials
The aims of each of the individual perennial yellow daisy trials included:
- the identification of the most reliable, distinctive and garden worthy cultivars for the RHS Award of Garden Merit
- the establishment of the correct nomenclature
- the production of a permanent record, through representative herbarium and photographic records together with written descriptions.

Entries
In total, for the eight trials, three plants of each of 282 entries were obtained from 52 sources. These senders of plants to the trials (listed on page 15) comprised retail and wholesale nurseries, National Plant Collection holders, gardens and private individuals.

The number of entries submitted to each individual trial was as follows:

The Award of Garden Merit

The Award of Garden Merit requires a plant:
- to be excellent for garden decoration or use
- to be available from nurseries or specialist growers
- to be of good constitution
- not to require specialist care
- not to be particularly susceptible to any pest or disease
- not be subject to an unreasonable degree of reversion

Judging Criteria
The criteria used for judging the perennial daisy trials varied slightly from trial to trial, with each trial being closely examined for a minimum of two flowering seasons. In general the characters that were observed, included:
- habit/uprightness
- floriferousness
- colour
- form
- quantity
- impact
- period of flowering
- hardiness
- vigour
- health
- invasiveness
- weather resistance

AGM Winners

**Coreopsis verticillata ‘Moonbeam’
Coreopsis verticillata ‘Old Timer’
Coreopsis verticillata ‘Zagreb’
*Coreopsis verticillata ‘Grandiflora’

Helenium ‘Baudirektor Linne’
Helenium ‘Blüntentisch’
Helenium ‘Butterpat’
Helenium ‘Feuersiegel’
Helenium ‘Gartensonne’
Helenium ‘Karneol’
Helenium ‘Moerheim Beauty’
Helenium ‘Ring of Fire’
Helenium ‘Rubinzwerg’
Helenium ‘Sahin’s Early Flowerer’
Helenium ‘Summer Circle’
Helenium ‘Waltraut’
Helenium ‘Wesergold’

Helenium ‘Gullick’s Variety’
Helenium ‘Lemon Queen’
*Helianthus ‘Loddon Gold’
Helenium ‘Miss Mellish’
*Helianthus ‘Monarch’

Helianthus ‘Gullick’s Variety’
Helianthus ‘Lemon Queen’
*Helianthus ‘Loddon Gold’
Helianthus ‘Miss Mellish’
*Helianthus ‘Monarch’

Heliopsis helianthoides var. scabra ‘Benzinggold’
Heliopsis helianthoides var. scabra ‘Light of Loddon’
Heliopsis helianthoides var. scabra ‘Sonnenglut’
Heliopsis helianthoides var. scabra ‘Spitzentänzerin’
Heliopsis helianthoides var. scabra ‘Waterperry Gold’

Helianthus ‘Gullick’s Variety’
Helenium ‘Lemon Queen’
*Helianthus ‘Loddon Gold’
Helenium ‘Miss Mellish’
*Helianthus ‘Monarch’

Heliopsis helianthoides var. scabra ‘Benzinggold’
Heliopsis helianthoides var. scabra ‘Light of Loddon’
Heliopsis helianthoides var. scabra ‘Sonnenglut’
Heliopsis helianthoides var. scabra ‘Spitzentänzerin’
Heliopsis helianthoides var. scabra ‘Waterperry Gold’

Inula magnifica ‘Sonnenstrahl’

*Rudbeckia fulgida var. deamii
*Rudbeckia fulgida var. speciosa
*Rudbeckia fulgida var. sullivantii ‘Goldsturm’
Rudbeckia laciniata ‘Goldkugel’
Rudbeckia laciniata ‘Goldquelle’
Rudbeckia laciniata ‘Herbstsonne’

Siphiium perfoliatum
Solidago ‘Gardone’

All of these plants are H4 - plants hardy throughout the British Isles

* AGM reconfirmed during trial
** ‘Moonbeam’ is often raised from seed, leading to great variation particularly in the density of flowers. It is recommended to buy plants in flower, or propagate vegetatively from a free-flowering clone.
Cultivation Notes

- Each entry for each trial consisted of three plants, planted into rotary-cultivated ground in either spring or autumn.
- Top dressing with Vitax Q4 was carried out at the appropriate rates and interval for each particular trial. Requirements did vary between the trials, for example the Solidago Trial was only top dressed in its final year, whereas the Helenium Trial required a feed every spring.
- Staking requirements for perennial yellow daisies also vary, depending upon the stature of the individual plant. All Helianthus, and the taller forms of Helenium, Heliopsis and Rudbeckia do perform better when staked. Solidago and the taller Coreopsis verticillata cultivars, although it is not essential, benefit from some twiggy support.
- Two trials were found to benefit from the ‘Chelsea chop’. Helianthus growing to over 2m were cut back to 30cm in height in late May and similarly Rudbeckia growing to over 2m tall were cut back to 45cm in late May. This was shown to be an easy method of obtaining shorter, bushier plants.
- No significant pest and disease problems were encountered during the course of these trials.
- All these perennial yellow daisies are excellent for encouraging wildlife in the garden; they are very popular with insects and flower late in the season.
- The Coreopsis Trial proved that these are a very useful group of plants with an incredibly long flowering period, benefiting enormously from deadheading. During the trial it became apparent how variable the seed-raised plants can be and how people need to be aware of this when making a purchase. Unfortunately, all the C. grandiflora cultivars in the Trial were found to be inconsistently winter hardy and not to have a strong enough constitution to be considered suitable for the RHS Award of Garden Merit.
- The only known variegated Heliopsis was included in the trial, but LORAIN SUNSHINE (‘Helhan’; ‘Loraine Sunshine’, in US) did not perform, in this trial, as well as the Award of Garden Merit winning cultivars.
- The Solidago and × Solidaster, although very attractive when in bud, mostly flower for too short a time period to be considered for the RHS Award of Garden Merit.

Nomenclatural Comments

- Helianthus ‘Capenoch Star’ has an Award of Garden Merit from 1993. However, none of the plants submitted under this name to the trial were considered to be correctly named. There is therefore some doubt as to how widely available the true ‘Capenoch Star’ now is.
- Rudbeckia fulgida var. sullivantii ‘Anthony Brooks’, ‘Goldschirm’ and ‘Pot of Gold’, although considered to be of Award of Garden Merit quality, were all very similar to Rudbeckia fulgida var. sullivantii ‘Goldsturm’ AGM. As this cultivar is commonly raised from seed, and invariably comes true when raised in such a manner, new cultivars derived from ‘Goldsturm’ seeds may not differ significantly from the parent.
The Genera

The yellow daisies included in these Trials are mostly from North America and are all herbaceous perennials. They flower in mid to late summer and are suitable for sunny borders or prairie-style planting. They differ greatly in habit, especially in size, ranging from 60cm to over 3m. The flower heads, whilst they are predominantly yellow, come in a wide variety of sizes, shades and shapes. Brief introductions to the genera involved are given below:

**Coreopsis**
The tickseeds have small flowers and are wiry in habit compared with the other genera. They tend to have feathery or ferny foliage and are more suitable for the front of a border or as patio or container plants. Most are short-lived perennials and are often raised from seed and grown as annuals.

**Helenium**
The sneezeweeds are very useful for providing yellow, orange and red-brown flower colours over a long period. The flower heads often have an eye of a darker colour surrounding the central disc. Botanically they differ from *Helianthus* and *Heliopsis* in having leaves that are always held alternately at the base of the plant and the absence of scales between the ray florets.

**Helianthus**
The perennial sunflowers are perhaps the most familiar group here, not least because this genus contains well-known garden plants such as the annual sunflower (*Helianthus annuus*) and the Jerusalem artichoke (*H. tuberosus*). The perennial sunflowers exhibit the greatest structural diversity of those trialled; some have semi-double or fully double flower heads.

**Heliopsis**
The oxeyes are superficially similar to the sunflowers and have similar uses in the garden. Botanically they differ in their blunt-tipped phyllaries (bracts enclosing the base of the flower head), ligules (outer petals) persisting on the seed heads and the ray florets (which bear the ligules) being fertile and possessing a style.

**Inula**
The harvest daisies are mostly herbaceous perennials, though the genus does contain a few species that are annual or biennial. They are characterised by the multitude of fine, narrow, tubular ligules. *Telēkia speciosa* (heart-leaved oxeye) and *Buphthalmum salicifolium* (willow-leaved oxeye), from the small closely related genera, were also included in this trial. *Inula* is distinguished from *Telēkia* and *Buphthalmum* by the absence of scales between the ray florets.

**Rudbeckia**
The coneflowers, as their common name suggests, are typified by their conical or columnar disc at the centre of the flower head. It is usually black or greenish-brown and earns them their other common name of black-eyed Susan. Although predominantly grown as herbaceous perennials, cultivars derived from *R. hirta* are biennials or short-lived perennials that are often raised from seed and grown as annuals. The ligules are often slightly dropping, although this effect is much more pronounced in the related *Ratibida*.

**Silphium**
Sometimes referred to as prairie dock or rosinweed, *Silphium* are tall, stiff, coarse-leaved perennial herbs that are particularly suitable for naturalistic planting situations in areas with a moisture-retentive soil. Closely related to sunflowers, they differ in having female ray florets and male disc florets and upper leaf pairs that are fused at the base, forming small bathtubs.

**Solidago**
Garden hybrids of goldenrod are mostly derived from *S. canadensis* and *S. virgaurea*, two species that are now naturalised in Britain; hence their invasive reputation. The garden hybrids however, do not deserve to be tarred with the same brush. Their vibrant yellow plume-like sprays of flowers are easily recognisable and are commonly seen in florists, as they make excellent cut flowers. × *Solidaster*, the bigeneric hybrid between *Solidago* and *Aster*, is more like *Solidago* than *Aster*. It has small, creamy yellow flowers that are slightly larger than that of *Solidago*, but they are held in similar dense sprays.
Coreopsis verticillata ‘Moonbeam’
AGM (H4) 2001
Sent by Powis Castle.
A very floriferous cultivar with pale yellow starry flowers, that almost hide the feathery dark green foliage. Flowers over long period. Beware of seed-raised plants when buying this cultivar; these can be of inferior quality with fewer flower heads. It is advisable to buy plants in flower or ensure they have been vegetatively propagated from a free-flowering clone.
Flowers early July to late September. Plant 50cm high, 90cm wide; erect habit with stiff, airy, well branched flowering stems. Leaves opposite, sessile, palmately divided into filiform segments, 5cm long and 6cm wide. Flower heads 4cm diameter, single, held in loose inflorescence; disc 0.8cm diameter, 0.3cm high, golden; ligules 8, 1.8-2 × 0.8cm, separate, very pale yellow (4B), tips rounded.

Coreopsis verticillata ‘Grandiflora’
AGM (H4) 1993 Reconfirmed 2001
Sent by Beches Nursery.
This has particularly large bright golden yellow flowers over a long flowering period and fine filigree foliage. The outer petals are larger and overlap more than in other C. verticillata cultivars. Flowers early July to late September. Plant 90cm high, 80cm wide; tall, erect habit with stiff, airy, branched flowering stems. Leaves sessile, palmately divided into filiform segments, 6.5cm long and 10cm wide. Flower heads 6cm diameter, single disc 0.8cm diameter, 0.4cm high, lemon yellow to dark brown on ageing; ligules 8, 3 × 1.4cm, overlapping at base, deep golden yellow (17B), tips pointed.

Coreopsis verticillata ‘Old Timer’
AGM (H4) 2001
Sent by Great Dixter Nurseries.
A straight-stemmed cultivar, well clothed with feathery foliage and topped with rich golden single blooms; a delicate combination. Very floriferous and vigorous. The use of twiggy supports is advised to retain habit.
Flowers early July to mid September. Plant 80cm high, 80cm wide; tall, erect habit with stiff, airy, branched flowering stems. Leaves opposite sessile, palmately divided into filiform segments, 4cm long and 7cm wide. Flower heads 4.5cm diameter, single; disc 0.8cm diameter, 0.3-0.4cm high, golden; ligules 8, 2 × 1cm, separate, golden yellow (14B), tips blunt, 3-toothed.

Coreopsis verticillata ‘Zagreb’
AGM (H4) 2001
Sent by Hillview Hardy Plants, Madrona Nursery and RHS Garden Rosemoor.
A very floriferous cultivar with rich golden flowers and feathery foliage. Plants grown in the Trial reached 60cm in height, but often this cultivar has a smaller stature than this.
Flowers early July to late September. Plant 60cm high, 70cm wide; tall erect habit with many stiff, well-branched flowering stems. Leaves opposite, sessile, palmately divided into filiform segments, 5.5cm long and 8cm wide. Flower heads 3.5-4cm diameter, single disc 1cm diameter, 0.5cm high, green-gold to maroon brown on ageing; ligules 8, 1.6 × 0.9cm, slightly overlapping at base, golden yellow (12A/14A), tips blunt, 3-toothed.

Coreopsis verticillata ‘Baudirektor Linne’
AGM (H4) 2001
Sent by Heinz Klose Staudengärtnerei and Waterperry Gardens.
Flowers of a sparkling rich warm gold colour, streaked with orange-red. Requires staking for the best performance.
Flowers mid August to early September. Plant 1.7m high; tall, upright, vigorous dumps. Leaves to 18cm long and 4cm wide. Flower heads 6cm diameter, single; ≥ horizontal; disc 2cm diameter, 1.5cm high, gold-red outer circle and brown-red centre (166A/187A) covered in rich gold anthers (17A); ligules 12-14, 3 × 1.6cm, gaps between near disc, red (45A/42A/34A) flecked with vivid gold (14A) fading to reddish orange brown (171A/B/179A), underside (180A/179A/171A/B), tip reflexed, three lobed.

Coreopsis verticillata ‘Baudirektor Linne’
AGM (H4) 2001
Sent by Four Seasons.
A cultivar of uniform height that has brilliant sunny gold flowers flushed red on the underside and with a green, maturing to light brown, disc. A good late season flowerer. This cultivar was raised by Karl Foerster and the name literally translates as flower table. Requires staking. Flowers early August to mid September. Plant to 1.5m high, vigorous yet compact with much-branched growth. Leaves dense, mid-dark green, sessile, 18cm long and 3.5cm wide, decreasing up the stem. Flower heads <5cm diameter, single, flat with some slight incurve; disc 1.8cm diameter and <1.5 cm high, green-yellow (1A) when young, yellow brown (165A/B) when fully open, turning buff yellow (199A) in old age ligules c.17, 2 × 1.2cm wide, overlapping, 3-lobed, mostly slightly reflexed, golden yellow (14B) streaked with red (34C/171A) on the underside.
**Helenium ‘Butterpat’**
AGM (H4) 2001
Sent by C E & D M Nurseries.
A rich butter yellow, semi-double Helenium. It is lower in height than many other cultivars and does not always require staking. There is more than one entity in circulation under this name; incorrectly named plants tend to be taller in height, although similar in flower colour. Bred by Alan Bloom, 1960.

Flowers mid July to end August. Plant 90-100cm high, vigorous and densely branched but compact. Leaves lanceolate, mid green (137A-C), surface smooth, both surface slightly hairy, 11cm long and 3.5cm wide, decreasing slightly up the stem. Flower heads 5-6cm diameter, semi-double, reflexed when young, a mix of reflected, horizontal and incurved with age; disc <2.5cm diameter, 1.8cm high, green tinged with yellow (153A-D) ageing to a vibrant old gold (163B); ligules broad fan-shaped <2.5 × 2cm at broadest point, tip 3-5 lobed, drooping to dancing, overlapping, clear yellow upper (14A) and lower (15B).

**Helenium ‘Feuersiegel’**
AGM (H4) 2001
Sent by Four Seasons.
A striking plant with startling yellow flowers circled with a broad band of red/orange, surrounding a green-yellow, maturing to brown, disc. The name literally translates as fire seal. Bred by Karl Foerster. Requires staking and lengths of bare stem hiding with other plants.

Flowers late July to mid September. Plant 1.2-1.6m tall, erect, densely branched in upper third. Leaves dark green, lanceolate, slightly serrated, to 15cm long and 3cm wide, with lower leaves dying off with age. Flower heads <6cm diameter, single, flat and regularly arranged; disc 2cm diameter and 1.5cm high, green-yellow (N144A) when young, opening to chocolate brown and ageing to pale light brown (165B); ligules broad fan-shaped <2.5 × 2cm at broadest point, tip 3-5 lobed, drooping to dancing, overlapping, clear yellow upper (14A) and lower (15B).

**Helenium ‘Gartensonne’**
AGM (H4) 2001
Sent by RHS Garden Wisley.
This cultivar has clear yellow, single, well-displayed flowers, held on stems that are furnished well with leaves to the bottom. The new flowers hide the old ones well and there is a nice contrast between the dark brown disc and bright yellow rays. The name literally translates as garden sun. Requires staking.

Flowers late July to mid September. Plant to 1.9m high; tall, erect, vigorous, neatly branching in the crown. Leaves light green (138A/143C), shallowly serrated, surface smooth, lower leaves 14cm long and 4cm wide, upper stem leaves smaller. Flower heads <5.5cm diameter, single, flat; disc 1.8cm diameter, 1.5cm high, reddish brown (166A/176A) ageing to old gold/brown (163A/166A); ligules 19-22, 2.8 × 1.2cm, mostly 3-lobed and slightly incurved at tip, clear yellow above (14B) and below (12B). Phyllaries light green, <1cm long, very narrow, arching, twisted and quite distinctive.

**Helenium ‘Karneol’**
AGM (H4) 2001
Sent by Four Seasons.
A very floriferous Helenium with a solid circle of soft terracotta / warm rust / orange-red rays surrounding a green, maturing to brown, coloured disc. Bred by Karl Foerster. The name literally translates as cornelian. Requires staking.

Flowers early August to early September. Plant to 1.4m high; erect, vigorous and much branched. Leaves mid to dark green, serrated, slightly rough texture, to 13cm long and 4cm wide, decreasing up the stem. Flower heads to 5cm diameter, single, flat to slightly reflexed; disc 1.5cm diameter, 0.8cm high, green (154A) at first, turning mahogany brown (187A/166A) and finishing chocolate brown (166A); ligules 13-16, <2.4 × 1.5cm, overlapping ≥full length with 3 large lobes, mainly in one plane, evenly coloured rich red (46A flushed 44A/42A), turning old orange-gold (170A/171A) with age and increasingly becoming more mottled and uneven in colour, undersurface red-brown (181A). Phyllaries numerous, light green, 2 distinct rings; outer ring folding back almost enveloping the stem; inner ring short.

**Helenium ‘Moerheim Beauty’**
AGM (H4) 2001
Sent by C E & D M Nurseries and Cotswold Garden Flowers.
An excellent cultivar with a long flowering period. The strongly reflexed rays are a uniform rich dark orange-red surrounding a dark brown disc, contrasting nicely with the light green foliage. Bred by Ruys in 1930. Requires staking.

Flowers early July to late August. Plant to 1.3m high, 70cm diameter when staked; erect and densely branched. Leaves light green especially when young, smooth, both surfaces with tiny hairs, to 18cm long and 3cm wide, decreasing up the stem. Flower heads <6cm diameter, single, flat; disc 1.8cm diameter, 1.5cm high, reddish brown (166A/176A) ageing to old gold/brown (163A/166A); ligules 19-22, 2.8 × 1.2cm, mostly 3-lobed and slightly incurved at tip, clear yellow above (14B) and below (12B). Phyllaries light green, <1cm long, very narrow, arching, twisted and quite distinctive.

**Helenium ‘Perennis’**
AGM (H4) 2001
Sent by C E & D M Nurseries.
This cultivar has single, well-displayed flowers, held on stems that are furnished well with leaves to the bottom. The new flowers hide the old ones well and there is a nice contrast between the dark brown disc and bright yellow rays. The name literally translates as garden sun. Requires staking.

Flowers late July to mid September. Plant to 1.9m high; tall, erect, vigorous, neatly branching in the crown. Leaves light green (138A/143C), shallowly serrated, surface smooth, lower leaves 14cm long and 4cm wide, upper stem leaves smaller. Flower heads <5.5cm diameter, single, flat; disc 1.8cm diameter, 1.5cm high, reddish brown (166A/176A) ageing to old gold/brown (163A/166A); ligules 19-22, 2.8 × 1.2cm, mostly 3-lobed and slightly incurved at tip, clear yellow above (14B) and below (12B). Phyllaries light green, <1cm long, very narrow, arching, twisted and quite distinctive.

long and 3.5cm wide, decreasing up the stem. Flower heads to 6cm diameter, single, strongly reflexed and increasingly so with age; disc to 2.3cm diameter and 2cm high, dark chocolate brown (darker than 166A) and covered in golden styles; ligules 3.5 × 1.4cm, overlapping, 3-lobed at tip and wavy, edge often incurved, first opening deep rust red (44A/45A) turning rich orange-red (46A/44A) and ageing to old gold-orange (169A), paler dulled tones beneath (178/179).

Helenium ‘Ring of Fire’
AGM (H4) 2001
**Sent by Mrs F Arnold.**

A vibrant flower composed of a rich golden yellow background colour with a striking strong red band, which gives the effect of a wheel. Selected and named by Mrs Arnold. This tall plant requires staking.

Flowers mid August to late September. Plant to 1.7m tall, 80cm wide; erect and strongly branched. Leaves mid green, surface smooth, to an average size of 13cm long and 3cm wide. Flower heads to 5cm, single, flat and solid-looking; disc to 1.6cm diameter and 1cm high, yellow-green (151A) at first progressively turning dark chocolate red (187A) with golden styles (166A); ligules 2.5 × 1.2cm neatly spaced, only overlapping at outside edge, 4-lobed with inner 2 being pointed, dark red tinged orange (44A/46A), with a circle of bright yellow (14A) beside disc and at the margin, underside red-brown (179A) turning orange-red (34B) with age. Phyllaries distinctive when in bud, up to 1.2cm long, very narrow and twisted among one another.

Helenium ‘Rubinzwerg’
AGM (H4) 2001
**Sent by Green Farm Plants.**

Masses of rich mahogany red flowers surround a green disc that matures to a dark chocolate brown and opens with a halo of golden anthers. The lower stems can have a tendency to be somewhat bare, and therefore it is best planted where they can’t be seen. This was bred by zur Linden and the name literally translates as ruby dwarf.

Flowers early August to late September. Plant to 2.1m high; erect, vigorous and densely branched. Leaves mid green, rough-textured, lower ones to 18cm long and 6.5cm wide, decreasing up the stem to 11cm long and 3cm wide. Flower heads to 7cm diameter, single, slightly reflexed when young but fully dropping with age; disc to 2.4cm diameter and 1.8cm high; mahogany brown (187A/166A) at first, turning to chocolate brown (166A) with gold anthers as the flower fully opens; ligules 16-18, < 3.5 × 2.2cm, with three large lobes, strongly reflexed but with tips incurved, streaked mixture of yellow (14A) oranges (28A/B/32A/34A/B/42A) and reds (47A/180A), underside has some red colouring, especially in the lobes.

Helenium ‘Sahin’s Early Flowerer’
AGM (H4) 2001
**Sent by Cotswold Garden Flowers.**

For a long period, this cultivar is full of good-sized rich bright yellow and orange streaked flowers with dark chocolate coloured discs. Requires staking.

Flowers late June to late August. Plant 1.3m high; erect, vigorous and densely branched. Leaves mid green, rough-textured, lower ones to 18cm long and 6.5cm wide, decreasing up the stem to 11cm long and 3cm wide. Flower heads to 7cm diameter, single, slightly reflexed when young but fully dropping with age; disc to 2.4cm diameter and 1.8cm high; mahogany brown (187A/166A) at first, turning to chocolate brown (166A) with gold anthers as the flower fully opens; ligules 16-18, < 3.5 × 2.2cm, with three large lobes, strongly reflexed but with tips incurved, streaked mixture of yellow (14A) oranges (28A/B/32A/34A/B/42A) and reds (47A/180A), underside has some red colouring, especially in the lobes.

Helenium ‘Summer Circle’
AGM (H4) 2001
**Sent by Mrs F Arnold.**

A late flowering cultivar with large clear yellow flowers and golden yellow to brown discs. The young flower heads are fresh and green and the old flowers are nicely hidden. Selected and named by Mrs Arnold. As one of the tallest cultivars it definitely requires staking.

Flowers early August to late September. Plant to 2.1m high, 80cm wide; much branched in the upper third. Leaves mid green, surface smooth, 19cm long and 5cm wide, decreasing slightly up the stem, well clothed to base. Flower heads < 5.5cm diameter, single, flat to slightly reflexed; disc 2cm diameter, 1.5cm high, green (151B) ageing to gold (14A) and ultimately old gold (163B); ligules, 2.5 × 1.3cm, 3-lobed, neatly spaced, intense yellow (9A) and slightly paler below (12A/9B).

Helenium ‘Waltraut’
AGM (H4) 2001
**Sent by Perryhill Nurseries and RHS Garden Wisley.**

Flowers uniformly golden, overlaid copper-orange-red, with brown discs; the undersides are rusty orange maturing to a soft orange. Raised by Deutschmann, 1947. Requires staking.
Perennial Yellow Daisies

**Perennial Yellow Daisies**

Flowers mid July to late August. Plant to 1.2m high; vigorous and erect. Leaves mid green (138A), surfaces slightly rough and both covered in tiny hairs, 17cm long and 4cm wide, decreasing up the stem. Flower heads 7cm diameter, single, ligules not uniformly held giving the effect of tumbling around the disc; disc <2.3cm diameter, warm red brown (165A/166A) ageing (165A/B) and covered with a halo of golden anthers; ligules 3.5 × 1.5cm, 3-lobed, wavy, edges incurved, rich golden yellow (17B) when young, opening to have bold rusty red streaks across the upper surface and finally fading back to paler orangey tones, undersurface rusty copper (46A/42A/34A) over rich gold ground (17B).

**Helianthemum ‘Wesergold’**

Sent by Peter & Bärbel zur Linden.

A sturdy plant that is full of large yellow flowers surrounding a dark disc. Bred by Junge. Generally requires staking, despite its smaller stature, as it can be top heavy.

Flowers late June to early September. Plant to 1.1m high; vigorous and much branched. Leaves light to mid green, lanceolate, rough textured upper surface, smoother on the underside, lower leaves to 18cm long and 3.5cm wide, considerably smaller at the top of the stem. Flower heads to 6.5cm diameter, single, generally flat; disc to 2cm diameter and 1.5cm high, reddish brown (187A-166A) with bright orange gold anthers, ageing to brown (166A/B); ligules 3.2 × 2.5cm, wedge-shaped, overlapping, tip with 3-4 rounded lobes, some slightly incurved, bright yellow (12A) ageing slightly paler (9A).

**Helianthus ‘Gullick’s Variety’**

AGM (H4) 2001

Sent by L W Plants.

This cultivar has many upwards-facing neat semi-double golden yellow flowers. Matt mid green foliage gives a dense-looking plant. Requires staking.

Flowers late July to late September. Plant 2.2m high; vigorous with many branches and dense flowers. Leaves dull matt mid green, lanceolate, rough textured upper surface, smoother on the underside, lower leaves to 18cm long and 3.5cm wide. Flower heads 7-10cm, semi-double, cupped; disc florets <2.5cm wide and 1.3cm high, a prominent rounded dome, starting dark green-yellow, through to blackish-red and ageing to old gold; ligules c.21, 3.5 × 1.4cm wide, overlapping, pointed, straight, bright yellow (9A/14A) and reverse similar (9A). Phyllaries very dark green, almost black in bud.

**Helianthus ‘Lemon Queen’**

AGM (H4) 2001

Sent by L W Plants.

Free-flowering over a long period, this cultivar has lovely lemon yellow, single flowers. Requires staking. One of the parents of this hybrid is H. tuberosus, the Jerusalem artichoke, but thankfully ‘Lemon Queen’ is not invasive like this parent.

Flowers late August to mid October. Plant 2.2m high (or 1.8m if given “Chelsea chop”); tall growth much-branched. Leaves dull mid green, margins serrated and veins indented, apex sharply pointed, scabrous, lower leaves 18cm long and 5cm wide. Flower heads 7cm wide, single, flat, disc 1.5cm wide, prominent but flat, bright yellow (13A) with dark red corolla tubes; ligules 14, 3 × 0.9cm, spaced apart, horizontal, yellow-green (6A) with a blunt tip. Phyllaries with long white margin hairs, 3 rows, decreasing in length from outer row (2.2cm) to inner (1.5cm).

**Helianthus ‘Loddon Gold’**

AGM (H4) 1993 Reconfirmed 2001

Sent by J Davies.

Distinctive, fully double, rich golden yellow flowers (with a hint of green) are produced on ‘Loddon Gold’. Introduced by Thomas Carlile around 1920. Requires staking.

Flowers late July to late September. Plant 1.9m high; erect much-branched vigorous growth. Leaves dark green, serrate, scabrous on both surfaces, lower leaves 14cm long, 9cm wide. Flower heads <8cm diameter, fully double no disc; ligules many, up to 3 × 1.5cm, the outer ligules larger than the inner ones and more reflexed towards the rounded tip, rich golden yellow (12-13A).

**Helianthus ‘Miss Mellish’**

AGM (H4) 2001

Sent by Cotswold Garden Plants.

This is a showy cultivar with good foliage and pleasing, slightly quilled, semi-double golden yellow flowers. Requires staking.

Flowers mid August to late September. Plant up to 2.2cm tall; vigorous, tall and dense with a spreading habit. Leaves dull green, very finely toothed, scabrous on both surfaces, lower leaves 20cm long and 12cm wide. Flower heads 7-10cm, semi-double, cupped; disc florets <2.5cm wide and 1.3cm high, a prominent rounded dome, starting dark green-yellow, through to bladish-red and ageing to old gold; ligules c.21, 3.5 × 1.4cm wide, overlapping, pointed, straight, bright yellow (9A/14A) and reverse similar (9A). Phyllaries very dark green, almost black in bud.
Helianthus 'Monarch'
AGM (H4) 1993 Reconfirmed 2001
Sent by Great Dixter Nurseries.

'Monarch' has large semi-double brilliant golden yellow flowers on stout stems. Requires strong staking. Flower size may be increased by disbudding, i.e. pinching out the side buds.

Flowers mid August to late September. Plant to 2.9m; very tall, erect, not densely branched with thick stems to 3cm diameter. Leaves mid green, barely serrated, scabrous, lower leaves <33cm long and 15cm wide, stem leaves smaller and very pointed. Flower heads 10-14cm diameter, semi-double with 2-3 rows of ray florets; disc 3.5cm diameter, flat but becoming raised to 2cm rounded dome in old age, dark red brown when young ageing to old gold; ligules 6×1.3cm, overlapping, flat with a slight twist and held slightly cupped, golden yellow (14A), tip pointed. Phyllaries dark green in 2-3 rows, very pointed with hairy edges.

Helianthus helianthoides var. scabra
'Benzinggold'
AGM (H4) 2001
Sent by Four Seasons.

Tall, floriferous and stately, this spectacular cultivar has flowers that are a touch warmer orange than many. The blooms are semi-double with deep orange-gold discs. Requires sympathetic staking to provide support and yet not spoil the airy sprays of flowers.

Flowers mid June to early September. Plant 1.8m high, 1.1m wide; tall, stately, erect and airy. Leaves large, mid to dark green, scabrous, sharply toothed, 14cm long and 8cm wide. Flower heads 10-12cm diameter, semi-double, 3 rows of ray florets, horizontal with some ligules recurved; disc 3cm diameter, 2cm high, prominent, conical, orange (24A); ligules 6×1.9cm, overlapping, vivid yellow orange (23A), becoming paler (14A) at outer edge, tip pointed and bifurcate.

Heliopsis helianthoides var. scabra
'Light of Loddon'
AGM (H4) 2001
Sent by Waterperry Gardens.

A tidy, upright, cultivar that is not too tall, it produces a mass of smallish neat, golden, just semi-double well-shaped yellow flowers. May require staking. Raised by Carlile Ltd.

Flowers mid June to late September. Plant 1.4m high, 1.3m wide; much branched, airy. Leaves dark green, widely serrate, scabrous, basal leaves 11cm long and 7cm wide. Flower heads 7cm diameter, just semi-double, 1-2 rows of ray florets; disc 2.5cm wide and 1.5cm high, prominent, conical and quite pointed, golden yellow (17A); ligules 21-34, 2.5 × 1.0cm, overlapping, ± horizontal, but slightly recurved when young, golden yellow (17A/14A) with colour intensifying near disc (21A), tip bifurcate and blunt.

Heliopsis helianthoides var. scabra
'Sonnenglut'
AGM (H4) 2001
Sent by Bridgemere Nurseries.

Vigorous and smothered in large semi-double golden yellow blooms this cultivar has flowers with a large prominent central deep gold disc. May require staking. A German cultivar bred by Klose, the name translates as sun glow or sun embers.

Flowers mid June to late September. Plant 1.4m high; moderately tall, erect, crown spreading as much branched. Leaves dark green, scabrous, margins with widely toothed, basal leaves 13cm wide and 7cm long. Flower heads 12cm, semi-double with 2+ rows of ray florets, generally more golden and reflected when young, flattening and turning paler with age; disc 3cm wide, 1.5cm high, very prominent, conical, rich golden orange (24A) ageing paler (15A); ligules 4×1.2cm, overlapping, deep rich orange yellow (23A) turning paler yellow (14A/8) with age, tip bifurcate.

Heliopsis helianthoides var. scabra
'Spitzentänzerin'
AGM (H4) 2001
Sent by Bridgemere Nurseries.

Of moderate height, this Karl Foerster cultivar, whose name translates literally as tiptoe dancer, has small, neat semi-double blooms of deep gold. The rays are characteristically reflected at the tip giving the flower a downward curved outer edge. Bred by Foerster, 1949. May require staking.

Flowers late June to late September. Plant 1.4m high; vigorous, much-branched with stiff growth. Leaves dark green, widely and deeply toothed, scabrous, basal leaves 12.5cm long and 6.5cm wide. Flower heads 7-9cm, semi-double with 2-3 rows of ray florets, reflexed more when younger becoming flatter with age; disc 2.2cm wide and 1cm high, prominent, conical golden yellow (23A) becoming paler with age.
Heliosis helianthoides var. scabra 'Waterperry Gold'
AGM (H4) 2001
Raised and sent by Waterperry Gardens.

An elegant floriferous cultivar, that holds the flowers in sprays, so that they are held in many different angles. The flowers are semi-double and gold, fading to lemon yellow with time. Requires staking.

Flowers mid July to early October. Plant 1.2m high, vigorous with arching, airly growth. Leaves dark green, scabrous, widely toothed, basal leaves 10cm long and 6cm wide, considerably smaller and softer looking higher up the stem. Flower heads 7-8cm, semi-double with many rows, flat but tips reflexing and increasingly so with age; disc to 2.5cm wide and 1.2cm high, prominent, conical, golden yellow (23A) turning to look like old gold (163B) with age; ligules <3.9 × 0.9cm, 1-2 overlapping rows, orange yellow (17A) with a paler (15A) lower surface that is lightly veined with green, tip slightly notched and a little reflexed.

Inula magnifica ‘Sonnenstrahl’
AGM (H4) 2002
Sent by Green Farm Plants.

This cultivar was raised by Ernst Pagels. It is not too tall and very floriferous with dark green foliage. The flowers have numerous long outer petals giving a shredded appearance. The name literally translates as sunbeam.

Flowers mid July to late August. Plant 2m high, 1.5m wide (when contained bystaking); tall, erect habit. Leaves dark green (147A), almost glabrous on upper surface, pubescent beneath, base slightly auriculate, basal leaves 40cm long and 28cm wide. Stem pale green (144B), hairy with purple patches, especially on lower portion. Flower heads c.15cm diameter, single, borne in top third of plant; disc <5cm diameter, 1cm high, golden yellow (13A); ligules numerous, < 7 × 0.3cm, spaced neatly around disc, horizontal to drooping, toothed at tip.

Rudbeckia fulgida var. deamii
AGM (H4) 1993 Reconfirmed 2002
Sent by Waterperry Gardens, & Great Dixter Nurseries.

A tried and tested very floriferous variety with a neat, mounded habit.

Rudbeckia fulgida var. speciosa
AGM (H4) 2002
Sent by Dudley Met. Borough and Beeches Nursery.

A striking variety, with glorious golden orange-yellow flowers on a neatly mounded plant.

Flowers early August to early October. Plant to 1.4m high, though often around 1m, 1.7m wide. Leaves elliptic to ovate, shallowly toothed, matt greyish green on upper surface, densely hairy but basal leaves less scabrous than stem leaves. Flowering stem pale yellow green (145A), thickly covered with patent, stiff hairs, some red striation, especially in lower portion. Flower heads c. 8cm, single; cone <1.7cm diameter, 0.6cm high, brown (200B) with yellow pollen; ligules 3.7 × 0.6cm in 2 rows, overlapping, orange yellow (23A), lower surface paler (21B) with green veins and tips, tips a little reflexed and slightly notched.

Rudbeckia fulgida var. sullivantii ‘Goldsturm’
AGM (H4) 1993 Reconfirmed 2002
Sent by Hillview Hardy Plants and Dudley Met. Borough.

A vibrant cultivar that is slightly variable in flower height and habit. Good reliable seed strain.

Flowers from late July to late September. Plant 85-100cm high, 120cm wide. Leaves ovate, sharply toothed, dark green (147A), somewhat glossy on the upper surface, smooth and paler green (147B) beneath, basal leaves only hispid on or near leaf edge, stem leaves lightly scabrous. Flowering stem green (143B), glabrous but with prominent striations. Flower heads 10cm diameter, single, usually only 1 row of outer petals, cone 2cm diameter, 1 cm high, brown (200A) with yellow pollen; ligules 5 × 0.5cm, overlapping at base, neatly spread at tips, horizontal to tips slightly reflexed, orange yellow (17A), paler (14A/15A) on the
RHS Award of Garden Merit descriptions

**Rudbeckia laciniata ‘Goldkugel’** AGM (H4) 2002
*Sent by P&B zur Linden.*
Plant to 1.6m high, tall and erect. Leaves dark to mid green (137A), lower surface slightly lighter (138A/B) and glossier than above. Flowering stem very pale yellow green (14D), glaucous, glabrous, waxy, distinctive dark purple patches in leaf axils. Flower heads to 6.8cm, double; ligules <2.6 cm, overlapping, golden yellow (14B) with slightly paler underside (14C), notched at tip; no cone.

**Rudbeckia laciniata ‘Goldquelle’** AGM (H4) 1993 Reconfirmed 2002
*Sent by Hillview Hardy Plants.*
An old cultivar; an extremely good plant with double flowers. Shorter in stature than the double ‘Goldkugel’. Does not require staking.
Flowers from early August to late September. Plant to 95cm high, 90cm wide. Leaves dark green (137A) with paler veins (138B) and a pale green (138B) underside. Flowering stem mid green (145A), glabrous, lightly glaucous on lower stems, slightly ribbed. Flower heads to 9.5cm, double; ligules 2.9 cm, bright yellow (12A), slightly paler on the underside (12B), tips mostly entire but a few slightly notched; cone hidden by central petals and very undefined and green, c.0.6cm diameter.

**Rudbeckia laciniata ‘Herbstsonne’** AGM (H4) 2002
*Sent by Beth Chatto Gardens and Beeches Nursery.*
A very tall, late flowering cultivar with good clean foliage. The broad, drooping outer petals present the colour well. The name translates literally as autumn sun. Requires staking.
Flowers early August to late September. Plant to 2.5m high, 1.6m wide; tall and erect. Leaves matt dark green (147A) with lower surface paler (137B), basal leaves hairy on both surfaces, mid and upper leaves glabrous. Flowering stems pale green (145A/B), slightly glaucous, waxy, glabrous, angular. Flower heads to 12.5cm, single, borne in upper third of plant; cone 2.0cm diameter, 1.9cm high, yellow-green (144A/N144A); ligules 6.4 cm × 2.5cm, neatly spaced, bright yellow (14A/9A) with upper and lower surfaces almost the same colour, tip margin with a few minute notches.

**Silphium perfoliatum** AGM (H4) 2002
*Sent by Royal Botanic Garden, Kew.*
Excellent tall plant, from the eastern United States, that flowers over a long period. Stems and foliage reminiscent of a dahlia but topped with lots of bright yellow daisies.
Flowers mid July to late September. Plant to 2.3m high and 1.5m wide (when contained by staking); stout and square-stemmed, with little branching in lower half. Leaves large, light to mid green, entire, perfoliate (from half way up stems), margin with large serrations, slightly scabrous on both surfaces, 25-30cm long and 15-20cm wide. Flower heads 6-8.5cm diameter, single, slightly cupped, held in loose inflorescence; disc 2cm diameter, golden yellow with dark maroon anthers; ligules c.33 in ±2 rows, 3.5 × 0.8cm, overlapping, clear yellow (12A) with slightly paler (12B) lower surface, tips pointed; phyllaries glossy yellow-green (144A), short, broad and pointed.

**Solidago ‘Gardone’** AGM (H4) 2002
*Sent by Farmyard Nurseries.*
Attractive yellow stems both in flower and in bud. Relatively clean with only a slight touch of mildew on lower leaves in one season.
Flowers mid July to late August. Plant to 1.2m high and 90cm wide; erect but requiring support. Leaves lanceolate, shortly hairy on both surfaces, no difference between upper and basal leaves, partially stem clasping, yellow-green (143A), 12cm long and 2cm wide. Stem very pale yellow green (151D), enhancing the colour of the flowers, hairy. Flower heads 0.6cm wide, single; ligules bright yellow (14B).
Overall inflorescence width 30cm × 30cm, single central axis with one-sided branching.

**Helenium ‘Goldrausch’ STVN**
*Sent by Longin Ziegler.*

Plant to 1.6m high. Rich butter gold coloured flowers with rusty coloured smudges on the underside of the petals. Centre discs open lime green and mature through dark chocolate tones to gold. Tall. Stately. Requires staking. Name literally translates as golden ecstasy; raised by Foerster in 1942. Flowers early August to early September.

**Helenium ‘Zimbelstern’ STVN**
*Sent by Green Farm Plants.*

Plant to 1.7m high. Name literally translates as Cymbal Star, a musical instrument; raised by Foerster in 1956. Almost identical to ‘Goldrausch’. A difference in height of up to 10cm has been noted, but this was inconsistent in the different years of the trial. We currently consider the entities we observed to be indistinguishable, but are uncertain of the correct name. One source claims that ‘Goldrausch’ flowers slightly later than ‘Zimbelstern’ and therefore it is possible that these two plants are of ‘Goldrausch’ as their flowering season was identical.

**Rudbeckia laciniata var. intermedia STACN, STA**
*Sent by A Brooks.*

This selection, of a variety from northwest California, has persistent flowers over a long period at eye height. A strong stem with good basal leaves. Requires staking.

Flowers late June to late August. Plant to 2m high, 1m wide when staked; erect. Leaves mid green (146A-147A), paler green (147B) beneath, glabrous. Flowering stem pale green (145A) with darker green (147A) markings, glabrous with a slight glaucous bloom, slightly rough immediately below the flower. Flower heads <13cm, single, flowers borne in top third of plant; cone 2.2cm diameter, 2.5cm high, yellow green (N144A) at first, then dark brown changing to yellow (7A) when open; ligules 5.5 × 2cm, but width variable, neatly spaced single row, drooping habit, sunny yellow (14B) with lower surface slightly paler (9B) and with green tinged veins, tips slightly notched.

**Rudbeckia laciniata ‘Starcadia Razzle Dazzle’ STA**
*Sent by A Brooks.*

Clump forming, with sturdy stems and a long flowering period. Good foliage. Although this species can be invasive, this cultivar does not seem to be. Requires staking.

Flowering early July to late August. Plant to 1.6m high, 1.1m wide when staked; erect habit. Leaves dark green (147A), paler green beneath (147B), very shortly hispid with forward facing hairs. Flowering stem striate dark green (137A) on lighter green (137D), sparsely hairy, stem feels rough especially below flower head. Flower heads to 11.5cm, single, borne in top third of plant; disc 2.1cm diameter, 2.4cm high, yellow green (N144A) at first, black just before opening to pale yellow green (151A); ligules 4.7 × 1.4cm, single row irregularly spaced, sometimes overlapping. Drooping, yellow (9A), slightly paler on the underside, tips mostly with a slight notch but some entire.

**Rudbeckia subtomentosa ‘Loofahsa Wheaten Gold’ STA**
*Sent by Longin Ziegler.*

Less stiff in habit than is typical for this species, with well-spaced, chocolate brown-centred flowers. Very clean foliage. Requires staking.

Flowering early August to late September. Plant to 1.7m high, 1.3m wide; erect habit. Leaves mid green (137A), paler (138B) below, slightly scabrous upper, pubescent lower. Flowering stems dull, light mid green (143C), shortly tomentose, darkly striated in places. Flower heads <8cm diameter, single; disc 1.6cm diameter, 0.7cm high, brown/black (166A/200B) with violet sheen in sunlight; ligules 4.3 × 0.9cm, not overlapping. 2 rows, horizontal, golden yellow (14A) above and below, tip pointed, some tips twisted/turned back.

RHS Herbarium

The RHS Herbarium (WSY) is one of only a small number in the world dedicated to preserving garden plants and is therefore an important reference point for the horticultural industry. At present the collection contains more than 80,000 herbarium specimens and over 30,000 images of plants and 4,000 paintings of plants together with additional material such as seeds and cones. Material is actively collected from a wide spectrum of sources including RHS trials. Trial cultivars are stored with detailed descriptions and photographic images. New cultivars are highlighted and stored as Nomenclatural Standards. A Standard Specimen demonstrates the diagnostic characters of a cultivar and would act as a key reference point if the application of that name became confused at some point in the future. Further information about the Herbarium and Standard Specimens is available on the RHS Website (www.rhs.org.uk).

Senders of plants to the trials

RHS Plant Trials rely on nurseries, plant breeders and amateur gardeners to send plant stock for trial. Notices are posted on the RHS website and in the RHS journal. The Garden, when a new trial is planned. RHS Trials Office staff supplement this by actively sourcing material. All stock is given free of charge.

The Royal Horticultural Society

The RHS is the UK’s leading gardening charity dedicated to advancing horticulture and promoting good gardening. Its charitable work includes providing expert advice and information, advancing horticulture, training the next generation of gardeners, helping school children learn about plants, and conducting research into plants, pests and environmental issues affecting gardeners. The RHS Award of Garden Merit plant trial scheme is an important part of this work.

The RHS receives no government grants and for every pound received from members’ subscriptions we need to raise more than twice as much again to fund our charitable work. We also rely on donations and sponsorship to supplement income from our garden operations, flower shows, shops and plant centres.

RHS Plant Trials

With so many different types of gardener and so many different cultivars available to them in each group of plants, it is important that a system of recommendation is in place to help with selection at point of sale. These recommendations must be clear and reliable to ensure that of the thousands of plants available in the UK, a proportion are known to be excellent garden plants. The RHS provides this information through its extensive programme of plant trials held at RHS gardens in the UK. The RHS Award of Garden Merit signifies the selection of the best cultivar for general garden use.

RHS plant trials serve the professional gardener who wants to know the range of plants available, including the latest breeding and selection programmes, with their distinctive characteristics and provenance. They also serve the amateur who wants to know which plants will grow and perform well in a particular garden situation.

The RHS has an unrivalled resource of knowledge and expertise and is therefore best placed to conduct plant trials for the UK gardening market.

RHS Bulletins

Canna: September 2003
Delphinium: June 2003
Lavender (hardy): July 2003
Miscanthus: October 2004
Potentilla (shrubby): July 2002
Salad Potatoes: November 2004
Spiraea japonica (with coloured leaves): November 2003

These bulletins can be viewed at a larger size on the RHS Website.
