
Nomenclatural standards for cultivated plants at the United States National Arboretum Herbarium (NA)

D.H. Voss¹

Vienna, Virginia, USA

The Nomenclatural Standards listed below were originally privately published in 2007 (Voss, 2007) and a limited number of copies were distributed to Libraries as cited below. However, since it would be useful to make the list more widely available it is re-published below.

Preface

The *International Code of Nomenclature for Cultivated Plants* (ICNCP) has introduced the practice of designating an herbarium specimen or equivalent material as a nomenclatural standard “to make clear the precise application of the name” of a cultivated variety or Group (Brickell *et al.*, 2004). Voucher specimens submitted in connection with registration of cultivar epithets are frequently designated as standards. This list was published to effect the designation of nomenclatural standards held by the herbarium of the US National Arboretum in conformity with *ICNCP*, Division V: Nomenclatural Standards, Clause 7. For the purpose of priority (Clause 8), the date of designation of these standards is 2 July 2007.

The standards held in the herbarium of the US National Arboretum include representative specimens of cultivars in *Lagerstroemia*, *Pyracantha*, and *Viburnum* introduced by Dr Don Egolf, long-time shrub breeder at the Arboretum. The major share of *Ilex* standards is attributable to Mr Gene Eisenbeiss’s long tenure as registrar for the Holly Society of America. Miscellaneous woody plant standards were deposited by Longwood Gardens and US National Arboretum registrars representing the American Association of Botanical Gardens and Arboreta (now named the American Public Gardens Association).

¹ Volunteer, United States National Arboretum Herbarium

In many genera, herbarium specimens have only limited value for identification. For example, dried plant material offers little clue to the flower colour and colour patterning that is diagnostic in distinguishing many azaleas. In holly, flower colour is of little concern but leaf form and fruit are of primary interest. It is important that colour and other fugitive diagnostic features be reported for inclusion in a standard portfolio. Photographs may provide useful information, such as plant habit, that is essential to interpreting application of the name. Colour is a particularly difficult matter: vernacular colour names are often misleading, and photographic reproduction is not reliable. Although high-quality colour charts are expensive, those naming cultivars should seek to evaluate diagnostic colours by reference to the Munsell Book of Color or the Royal Horticultural Society Colour Chart.

Preparation and speed in transmittal of plant material affects the value of herbarium specimens to be held as standards. Proper packing and expedited handling need to be observed at each step along the way from the plant to the herbarium. The finest specimen, freshly cut and then enclosed in a plastic bag and mailed by parcel post, may turn into blackened, mouldy trash before it reaches the herbarium.

Before “Standards” were introduced in the 1995 edition of the *ICNCP*, Dr Egolf instituted the practice of preparing sets of herbarium sheets to document his plant introductions. These sets typically comprised separate sheets for flowers, foliage, fruit, photographs, and documentation relating to release of the cultivar. Subsequently, the practice of combining sheets of authentic material into numbered sets was continued. Because flowers, mature foliage, and fruit are generally not available at the same time, these specimens necessarily result from different gatherings.

A standard is defined as an herbarium specimen or its equivalent, and an herbarium specimen is understood to be plant material from

a single gathering. Accordingly, where a numbered set contains sheets from more than one gathering, a single sheet has been selected as the standard and, in Voss 2007, was identified by setting the plant name in boldface. Other sheets from the set belong to the standard portfolio, and were listed to indicate the nature of material available for study. In some cases, the plant material from a single gathering may be mounted on more than one sheet; this usually occurs when plant parts are unusually large, as in the case of *Musa*.

Each entry in the checklist shows a barcode number identifying the sheet, the name of the cultivar, letter code(s) indicating the nature of the material, and in some cases a sheet number. The letter codes used to indicate the character of the material on each sheet differ from those used by the Royal Horticultural Society (Grayer, 2006). A specimen may have flower buds, flowers, or fruit but may or may not have foliage. The codes appearing in the following list are:

The list does not include references to digital images.

FL	flower or flower bud	PT	painting
FO	foliage	BW	b&w photograph
FR	fruit	CP	colour photograph or slide
RT	root	OM	other image
DD	descriptive data		

Copies of the publication were dispatched to the following libraries on 2 July 2007:

Arnold Arboretum	Bailey Hortorium
Biology Dept., Texas A&M	Brooklyn Botanic Garden
Helen Crocker Russell Library	Morton Arboretum
Royal Horticultural Society	USDA National Agricultural Library
US Library of Congress	US National Arboretum

ACKNOWLEDGMENTS

The author is indebted to other volunteers, notably Abbie Weiner, Carol Rahbar, and Franziska Walczak, for their assistance at various stages of this project. Dr Alan Whittemore of NA and Dr Joseph Kirkbride of USDA-ARS provided valuable guidance and encouragement. For the segregation of the bulk of herbarium sheets identified as voucher specimens or “clonotypes”, we credit the late Dr Theodore Dudley and, with respect to *Ilex*, the late Mr Gene Eisenbeiss, of the National Arboretum. Any errors in compilation of this list are the sole responsibility of the author.
