## REGISTRAR'S NOTES ON NAMES IN THIS SUPPLEMENT

### \* New hybrid genera

x **Holridestylis** [Hds.] J.M.H.Shaw = *Aerides* Lour. x *Holcoglossum* Schltr. x *Rhynchostylis* Blume.

x **Renfadenia** [Ref.] J.M.H.Shaw = *Renanthera* Lour. x *Seidenfadenia* Garay.

x **Stereostylis** [Sos.] J.M.H.Shaw = *Rhynchostylis* Blume x *Stereochilus* Lindl.

### ¶ Species new to registration

*Dendrobium kratense* Kerr in *Bull. Misc. Inform. Kew* 1927: 217 (1927).

*Epidendrum antonense* Hágsater, *Icon. Orchid.* 2: t. 108 (1993).

*Epidendrum bicirrhatum* D.E.Benn. & Christenson, *Icon. Orchid. Peruv.*: t. 453 (1998).

*Epidendrum rodrigoí* Hágsater, *Icon. Orchid.* 2: t. 181 (1993).

*Luisia zollingeri* Rchb.f. in W.G.Walpers, *Ann. Bot. Syst.* 6: 622 (1863).

*Maxillaria schunkeana* Campacci & Kautsky, *Orquidário* 7: 136 (1993).

*Restrepia chrysoglossa* Luer & R.Escobar in *Orquideologia* 20: 123 (1996).

*Restrepia echinata* Luer & R.Escobar, *Orquideologia* 20: 135 (1996).

*Restrepia ephippium* Luer & Hirtz in *Orquideologia* 20: 141 (1996).

*Restrepia fritillina* Luer & V.N.M.Rao, *Monogr. Syst. Bot. Missouri Bot. Gard.* 112: 110 (2007).

*Restrepia mohrii* Braem in *Schlechteriana* 4: 44 (1993).

*Restrepia portillae* Luer in *Monogr. Syst. Bot. Missouri Bot. Gard.* 88: 109 (2002).

*Stereochilus datalensis* (Guillaumin) Garay in *Bot. Mus. Leaf.* 23: 205 (1972). New Group.

---

## REGISTRAR'S NOTES ON NAMES IN THE REGISTER

### New hybrid genus

x **Bidacaste** [Bdc.] J.M.H.Shaw = *Bifrenaria* Lindl. x *Lycaste* Lindl. x *Ida* Ryan & Oakeley.

### Cultivar group new to registration

*Cypripedium macranthos* Rouge Group. Bred and named by Sven Malmgren, Sweden. A hybrid derived from *Cypripedium macranthos* var. *hotel-atsumorianum* x *Cypripedium macranthos* var. *albiflorum* [as 'Alba']. Made 25 May 2010, first flowered 1 June 2016. Described by the raiser as having a 'bright red flower'. Dorsal sepal rich red with darker veins; petals similar with long white hairs near base; pouch pale red with darker veining, staminode white basally and pink on shield.

### New combinations

**Anacamptis morio** nothosubsp. **cortesii** (E.G.Camus & A.Camus) J.M.H.Shaw comb. et stat. nov. Basionym: *Orchis* x *cortesii* E.G.Camus & A.Camus, *Iconogr. Orchid. Europe*: 4 (1921). Parentage: *Anacamptis morio* subsp. *longicornu* x *A. morio*.

**Anacamptis morio** nothosubsp. **litardierei** (Ruppert & Lebrun) J.M.H.Shaw stat. & comb. nov. Basionym: *Orchis* x *litardierei* Ruppert & Lebrun, *Repert. Spec. Nov. Regni Veg.* 35: 104 (1934). Parentage: *Anacamptis morio* subsp. *longicornu* x *A. morio* subsp. *picta*.

**Anacamptis** x **olida** nothosubsp. **darcissii** (Murr ex Dalla Torre & Sarnth.) J.M.H.Shaw comb. et stat. nov. Basionym: *Orchis* x *darcissii* Murr ex Dalla Torre & Sarnth., *Fl. Tirol* 6(1): 505 (1906). Parentage: *Anacamptis coriophora* subsp. *fragrans* x *A. morio* subsp. *picta*.

**Anacamptis** x **nicodemi** nothosubsp. **yvesii** (Verg.) J.M.H.Shaw comb. et stat. nov. Basionym: *Orchis* x *yvesii* Verg., *Bull. Soc. Bot. France* 54: 600 (1908). Parentage: *Anacamptis morio* subsp. *picta* x *A. papilionacea*.

x **Anacamptorchis richardiorum** (Soca) J.M.H.Shaw comb. nov. Basionym: *Orchis* x *richardiorum* Soca, *Caesiana* 11: 59 (1998). Parentage: *Anacamptis papilionacea* x *Orchis mascula* subsp. *ichnusae*.

x **Anacamptorchis salkowskiana** (C.Alibertis & A.Alibertis) J.M.H.Shaw comb. nov. Basionym: *Orchis* x *salkowskiana* C.Alibertis & A.Alibertis, *Orchidophile (Asnières)* 87: 108 (1989). Parentage: *Anacamptis collina* x *Orchis sitiaca*.

**Bulbophyllum aquinoi** (Cootes, M.Leon & Naïve) J.M.H.Shaw comb. nov. Basionym: *Epicrianthes aquinoi* Cootes, M.Leon & Naïve, *Orchideen J.* 4(3): 3 (2016).

**Bulbophyllum davidii** (Cootes & Boos) J.M.H.Shaw comb. nov. Basionym: *Epicrianthes davidii* Cootes & Boos, *Orchideen J.* 3(1): 3 (2015).

**Bulbophyllum hampelianum** J.M.H.Shaw nom. nov. Replaced basionym: *Cirrhopetalum hampellii* R.Boos, *Orchideen J.* 3(1): 7 (2015), non *Bulbophyllum hampeliae* Cootes, R.Boos & Naïve, *Orchideen J.* 4(4): 3. 2016.

**Caladenia** x **intermedia** (Fitzg.) J.M.H.Shaw comb. nov. Basionym: *Glossodia* x *intermedia* Fitzg., *Gard. Chron.*, n.s., 17: 462 (1882). Parentage: *Caladenia brunonis* x *C. emarginata*.

***Caladenia transitoria* subsp. *isolata*** (R.J.Bates) J.M.H.Shaw comb. nov. Basionym: *Stegostyla transitoria* subsp. *isolata* R.J.Bates, *Austral. Orchid Rev.* 81(4): 44 (2016).

***Callostylis benchaii*** (J.J.Wood & A.L.Lamb) J.M.H.Shaw comb. nov. Basionym: *Cylindrolobus benchaii* J.J.Wood & A.L.Lamb, *Malesian Orchid J.* 14: 35 (2014).

***Cattleya x amoena*** (Bleu) J.M.H.Shaw comb. nov. Basionym: x *Laeliocattleya amoena* Bleu in *Lindenia* 8: 65, t. 367 (1892).  
Synonym: x *Sophrocattleya amoena* (Bleu) Van den Berg & M.W.Chase, *Lindleyana* 16(2): 111 (2001). Parentage: *Cattleya loddigesii* x *Cattleya perrinii*.

***Cattleya x espirito-santensis*** (Pabst) J.M.H.Shaw comb. nov. Basionym: *Laelia x espirito-santensis* Pabst, *Bradea* 2(4): 14 (1975).  
Synonym: *Sophronitis x espirito-santensis* (Pabst) Van den Berg & M.W.Chase, *Lindleyana* 16(2): 110 (2001). Parentage: *Cattleya pumila* x *Cattleya xanthina*.

***Cattleya x leeana*** (Rchb.f.) J.M.H.Shaw comb. nov. Basionym: *Laelia x leeana* Rchb.f. in *Gard. Chron.* 17: 492 (1882).  
Synonym: x *Sophrocattleya leeana* (Rchb.f.) Van den Berg & M.W.Chase, *Lindleyana* 16(2): 111 (2001). Parentage: *Cattleya loddigesii* x *Cattleya pumila*.

***Cattleya locatellii*** (F.E.L.Miranda) J.M.H.Shaw comb. nov. Basionym: *Hoffmannseggella locatellii* F.E.L.Miranda, *Orchideen J.* 23: 16 (2016).

***Cattleya x pittiana*** (O'Brien) J.M.H.Shaw comb. nov. Basionym: x *Laeliocattleya pittiana* O'Brien, *Gard. Chron.* ser. 3, 15: 264 (1894).  
Synonym: x *Sophrocattleya pittiana* (O'Brien) Van den Berg & M.W.Chase, *Lindleyana* 16(2): 111 (2001). Parentage: *Cattleya amethystoglossa* x *Cattleya grandis*.

***Compartmentia alexii*** (Szlach., Kolan. & Oledrz.) J.M.H.Shaw comb. nov. Basionym: *Neokoehleria alexii* Szlach., Kolan. & Oledrz., *Wulfenia* 22: 278 (2015).

***Compartmentia suareziorum*** (Kolan., Szlach. & Mystkowska) J.M.H.Shaw comb. nov. Basionym: *Diadenium suareziorum* Kolan., Szlach. & Mystkowska, *Wulfenia* 22: 241 (2015).

***Corybas globulus*** (D.L.Jones & L.M.Copel.) J.M.H.Shaw comb. nov. Basionym: *Anzybas globulus* D.L.Jones & L.M.Copel., *Austral. Orchid Rev.* 81(3): 40 (2016).

***Corybas minima*** (R.J.Bates) J.M.H.Shaw comb. nov. Basionym: *Corysanthes minima* R.J.Bates, *Austral. Orchid Rev.* 80(5): 48 (2015).

***Cyclopogon hatschbachii*** (Pabst) J.M.H.Shaw comb. nov. Basionym: *Brachystele hatschbachii* Pabst, *Bradea* 2(14): 80 (1976).  
Synonym: *Stigmatosema hatschbachii* (Pabst) Garay, *Bot. Mus. Leaf.* 28: 377 (1980 publ. 1982).

x ***Dactylocampsis schulzii*** (Hauskn.) J.M.H.Shaw comb. nov. Basionym: *Orchis x schulzii* Hauskn., *Irmischia* 1882: 32 (1882).  
Parentage: *Anacamptis coriophora* x *Dactylorhiza majalis*.

***Dactylorhiza x grandis*** nothosubsp. ***robustior*** (Hartm.) J.M.H.Shaw comb. et stat. nov. Basionym: *Orchis angustifolia* var. *robustior* Hartm., *Handb. Skand. Fl.*, ed. 3: 204 (1838). Parentage: *Dactylorhiza fuchsii* x *D. praetermissa* subsp. *osiliensis*.

***Dendrobium xanthocheilum*** (Aver.) J.M.H.Shaw comb. nov. Basionym: *Flickingeria xanthocheila* Aver., *Taiwania* 61: 338 (2016).

***Eleanorthus dressleri*** (Szlach. & Kolan.) J.M.H.Shaw comb. nov. Basionym: *Epilyna dressleri* Szlach. & Kolan., *Ann. Bot. Fenn.* 53: 17 (2016).

***Eleanorthus ecallosus*** (Szlach. & Kolan.) J.M.H.Shaw comb. nov. Basionym: *Epilyna ecallosa* Szlach. & Kolan., *Ann. Bot. Fenn.* 53: 18 (2016).

***Eleanorthus peruvianus*** (Szlach. & Kolan.) J.M.H.Shaw comb. nov. Basionym: *Epilyna peruviana* Szlach. & Kolan., *Ann. Bot. Fenn.* 53: 18 (2016).

***Eleanorthus sytsmae*** (Szlach. & Kolan.) J.M.H.Shaw comb. nov. Basionym: *Epilyna sytsmae* Szlach. & Kolan., *Ann. Bot. Fenn.* 53: 16 (2016).

***Eleanorthus cerrojefensis*** J.M.H.Shaw nom. nov. Replaced basionym: *Epilyna trilobata* Kolan. & Szlach., *Polish Bot. J.* 59: 174 (2014), non *Eleanorthus trilobatus* Ames & C.Schweinf., *Schedul. Orchid.* 8: 53. 1925.

***Encyclia patriciana*** (J.S.Moreno & Campacci) J.M.H.Shaw comb. nov. Basionym: *Anacheilium patricianum* J.S.Moreno & Campacci, *Colet. Orquídeas Brasil.* 12: 462 (2016).

***Epidendrum neofuchsii*** J.M.H.Shaw nom. nov. Replaced basionym: *Epidendrum fuchsii* Hágsater & L.Sánchez, *Icon. Orchid.* 15(2): t. 1583 (2016), nom. illeg. non *Epidendrum fuchsii* Regel, *Schweiz. Z. Gartenbau* 9: 202 (1851).

***Genoplesium capparinum*** (D.L.Jones) J.M.H.Shaw comb. nov. Basionym: *Corunastylis capparina* D.L.Jones, *Austral. Orchid Rev.* 81(6): 36 (2017 publ. 2016).

***Genoplesium carectum*** (D.L.Jones & L.M.Copel.) J.M.H.Shaw comb. nov. Basionym: *Corunastylis carecta* D.L.Jones & L.M.Copel., *Orchadian* 17: 371 (2013).

### Registering of new orchid hybrids and searching the online register

The Register may be searched online at:

[apps.rhs.org.uk/horticulturaldatabase/orchidregister/orchidregister.asp](http://apps.rhs.org.uk/horticulturaldatabase/orchidregister/orchidregister.asp)

The Registration application form may be downloaded for use from:

[www.rhs.org.uk/plants/pdfs/plant-registration-forms/orchid-hybrid-registration](http://www.rhs.org.uk/plants/pdfs/plant-registration-forms/orchid-hybrid-registration)

A Japanese-language version of the application form is available at:

[www.rhs.org.uk/plants/pdfs/plant-registration-forms/orchid-hybrid-registration-in-Japanese](http://www.rhs.org.uk/plants/pdfs/plant-registration-forms/orchid-hybrid-registration-in-Japanese)

- Apply for registration by post to:

International Orchid Registration, 83 Victoria Road, Selston, Nottinghamshire NG16 6AR, UK.

Tel. +44(0) 1773 511814. Fax: +44(0) 115 876 7963. Email: [orcreg@rhs.org.uk](mailto:orcreg@rhs.org.uk)

- The fee is £10.00 (US\$16.50) per registration.

Due to the bank charges for a dollar cheque now exceeding the registration fee, the RHS cannot accept dollar cheques for single applications. Please use a credit card where possible, or send a single cheque for several applications together.

## *Sander's List of Orchid Hybrids Three Year Addendum 2014–2016*

---

The latest three-year (13<sup>th</sup>) addendum to Sander's list of orchid hybrids was published by the Royal Horticultural Society in July 2017. It contains names, parentage, and names of registrant and originator for all orchid hybrids registered between 1 January 2014 and 31 December 2016 – about 9,000 hybrids.

It also includes a master list of all accepted hybrid genera currently in use.

The list includes their standard abbreviations and component genera.

This has been made possible because all the name changes from *Genera Orchidacearum* volumes 1 to 6 have been incorporated.

**Recommended retail price UK£60.**

**Visit [rhsshop.co.uk](http://rhsshop.co.uk) (search "Sanders") for the latest offers.**

**Copies are available from The Wisley Shop  
or from RHS Mail Order**

**RHS Mail Order, RHS Garden Wisley, Woking, Surrey GU23 6QB, UK**

**Tel: +44 1483 211320 Fax: +44 1483 212447**

**Email: [mailorder@rhs.org.uk](mailto:mailorder@rhs.org.uk) Online: [www.rhsshop.co.uk](http://www.rhsshop.co.uk)**

**Previous Addenda still available:**

*Sander's List of Orchid Hybrids Three Year Addendum 2011–2013* is still available at £60.

*Sander's List of Orchid Hybrids Three Year Addendum 2008–2010* is available at the reduced price of £20, while stocks last.

# NEWSLETTER

OF THE RHS ORCHID HYBRID REGISTRATION ADVISORY GROUP (OHRAG)  
NO. 8, SEPTEMBER 2017

An annual update from the Royal Horticultural Society on orchid name registration.

---

The Orchid Hybrid Registration Advisory Group meets twice yearly to review matters relating to the registration of orchid hybrid names. This past twelvemonth both meetings were held in London at the RHS headquarters in Vincent Square. The next meeting is scheduled for November 2017 at Guayaquil, Ecuador during the World Orchid Conference, since most members are planning to attend.

## Membership

Membership of the Advisory Group remains the same as last year except that Rafael Govaerts, a nomenclatural expert at Royal Botanic Gardens, Kew, has been appointed as a full member. Previously he was a corresponding member.

## Sander's List Addendum

*Sander's List of Orchid Hybrids 3 Year Addendum 2014–2016* has now been published. It was a little later than the usual release of the book to coincide with the RHS Chelsea Flower Show in late May, due to technical issues with extracting data from the registration database. Fortunately, these have been resolved.

This *Addendum* includes details of 9,229 new registrations made between 1 January 2014 and 31 December 2016, in addition to details of earlier grexes used as parents of these new hybrids. At the time of writing (July 2017) there are 168,000 entries in the grex register and details of 1,710 names applied to natural hybrids. There are also currently a staggering 2,513 orchid hybrid generic names, not all of which are in current use.

There are some slight changes in presentation, such as typeface and layout, to make better use of space on each page. The introductory material has been reviewed, resulting in an updated summary of the guidelines for forming new grex epithets reflecting the changes in the new 9th edition (June 2016) of the *International Code of Nomenclature for Cultivated Plants* (ICNCP) which provides the rules and recommendations that govern and guide registration of horticultural plant names.

Incidentally, a new edition of the *International Code of Nomenclature for algae, fungi and plants* is anticipated next year following the International Botanical Congress in Shenzhen, China, in 2017. It is this code that governs botanical names of species and genera and, significantly for orchid registration, hybrid genera, also known as nothogenera.

The tables of genera and their abbreviations have both been updated, aiming to include all natural orchid genera in recent registration use, and most of the hybrid generic names. Thus, genera that are currently not in use (such as the much-lamented *Odontoglossum*), due to the implementation of the classification endorsed in *Genera Orchidacearum*, are still included in these lists as an aid to anyone who wishes to continue to use them. These names are still attached to the appropriate hybrids in the register as synonyms, and it is hoped that they will eventually become searchable in the online register. Abbreviations for these genera continue to be included in the individual grex entries in the new *Addendum* as an aid to users.

## e-Registration

The RHS is planning to provide online registration via a secure website, where users can log in and deposit their applications for new hybrids. There is also planned enhanced access to the RHS registers, including better searches that are not hampered by diacritics, ability to search by synonym genera, and access to previously undisclosed fields, such as notes on registered names that provide extra information including literature references for older names. It is hoped that work on this project will commence towards the end of 2017.

Many have voiced their frustration at seeing their favourite generic names disappear into synonymy,

although these are retained in the register, and continue to be used in collections and commerce, hence the need to provide searchability of the register by synonym generic names. This facility has been requested in the anticipated software redesign.

In the meantime, if you should encounter difficulties finding a grex in the online register due to uncertainty over its generic placement, try leaving the genus box blank, and searching by the grex epithet only. This usually results in retrieval of the record sought.

## Nomenclature

During the past year OHRAG considered the following nomenclatural developments.

### *Andinia*

Wilson, M., Frank, G., Joust, L., Pridgeon, A.M., Viera-Uribe, S. & Karremans, A.P. (2017) Phylogenetic analysis of *Andinia* and a systematic recircumscription of the genus. *Phytotaxa* 295(2): 101–131.

**Summary** This paper included the transfer of some *Lepanthes* into *Andinia*, none of which are among the species involved in the 10 grexes, 4 natural hybrids and 1 nothogenus currently used in the register.

It was agreed that since this has no impact on register it would be accepted. The changes had already been implemented in the World Checklist of Selected Plant Families.

### *Calanthe*

Yukawa, T. & Cribb, P. (2014) Nomenclatural changes in the genus *Calanthe*. *Bull. Natl. Mus. Nat. Sci., Ser. B*, 40(4): 145–151 [22 Nov 2014].

**Summary** This paper proposed the splitting of *Calanthe* into 3 genera – *Calanthe* s.str., *Preptanthe* and *Styloglossum* – thus avoiding the need to use a larger generic concept that united *Calanthe* with *Phaius* as that would be horticulturally unacceptable.

Accepting this change would result in alpine and garden plants remaining in *Calanthe*, but warm greenhouse plants becoming *Preptanthe* and  $\times$  *Phaiopreptanthe* (formerly  $\times$  *Phaiocalanthe*). A few grexes will become  $\times$  *Preptacalanthe*.

OHRAG decided that the proposed splits were premature, as several other clades recovered in the analysis of the *Calanthe-Phaius* complex were unaccounted for in the paper. These suggested changes would be put on hold until further results were available.

### *Dendrobium bigibbum* and *D. phalaenopsis*

Adams, P.B. in *Dendrobium bigibbum* (sect. *Phalaenanthe*) in Australia – analysis of diagnostic characters, review of taxa and a new classification. *Kew Bulletin* 70(2): 1–17 (2015).

**Summary** It had already been decided to accept the changes proposed in this paper. However, the Group was uncertain on how to apply these changes in the register. If only species rank units were used then many *Dendrobium* hybrids would be lost from the register; on the other hand, there was hesitation over accepting the previously recognised units at their new rank. If there was a line drawn under existing registrations and a fresh start made using only species rank units, then many hybrids were likely to be registered a second time under a new name, and there would be difficulties with continuity in the register. The Registrar is proposing a solution in the essay below: ‘Stabilizing names in the Register, 2 Grexes’.

### *Guarianthe*

van den Berg, C. (2015) Nomenclatural notes in *Guarianthe* (*Orchidaceae: Laeliinae*): clarification of *Guarianthe*  $\times$  *deckeri*, *G. x guatemalensis* and *G. patinii*. *Phytotaxa* 239(1): 65–72.

**Summary** It was agreed to accept the nomenclature proposed in this paper. This involved changing *G. patinii* to *G. hennisiana*; *G. x guatemalensis* to *G. x laelioides*, and *G. pachecoii* to *G. x laelioides* var. *pachecoii*.

### *Schomburgkia* and *Laelia*

Peraza-Flores, L.N., Carnevali, G. & van den Berg, C. (2016) A molecular phylogeny of the *Laelia* alliance and a reassessment of *Laelia* and *Schomburgkia*. *Taxon* 65(6): 1249–1262.

**Summary** This paper proposed the recognition of *Schomburgkia* as distinct from *Laelia* and *Myrmecophila*, and provided new combinations in *Schomburgkia* for *L. anceps*, *L. dawsonii*, *L. aurea*, *L. mottae* (recently described, previously regarded as a dwarf form of *L. anceps*) and *L. rubescens*. These taxa currently

involve 396 grex records in the register.

OHRAG noted that van den Berg did not agree with the conclusions expressed in this paper, and decided that the suggestion to split *Laelia* by separating *Schomburgkia* did not serve any useful purpose. Consequently this change was not accepted.

### ***Paphiopedilum josianae***

*Paphiopedilum josianae* Braem & Nimp., *Richardiana* 14: 187. 2014 [6 May 2014].

Also known as: *Paphiopedilum concolor* Pfitzer var. *longipetalum* (Rolfe) Pfitzer; *Pflanzenr. (Engler) IV*. 50(Heft 12): 57 [27 Mar 1903].

**Summary** The type specimen is conserved at Kew herbarium and, in the opinion of Dr Cribb, *Paphiopedilum concolor* was quite variable and *Paphiopedilum josianae* was simply *P. concolor* with long petals. It was agreed to continue to recognise this taxon as a variety of *Paphiopedilum concolor*.

### **Stabilizing names in the Register**

#### **1 Nothogenera**

Orchid generic names have undergone unprecedented upheaval in the register following implementation of the system published in the six volumes of *Genera Orchidacearum* (1999–2014). Subsequently, the Registrar has been investigating ways to stabilize plant names in the register.

With a view to exploring possibilities for nothogenera or hybrid generic names, the registrar submitted two test cases that were published in *Taxon* during 2016, one to conserve a well-known name (x *Brassolaeliocattleya*) that is actually predated by two others, and one to reject another nothogenus that is inappropriate, the non-orchid x *Laburnocytisus*. These cases are presently being deliberated by the relevant international committees under the auspices of the International Botanical Congress. So far, the outcome indicates that a proposal to reject a hybrid generic name is acceptable. However, the proposal to conserve a hybrid generic name is currently postponed, due to technical difficulties arising because hybrid genera do not have types which are required for conservation. For this to be possible will require a modification to the *International Code of Nomenclature for algae, fungi and plants*.

With more than 3,000 nothogeneric names published (if one includes non-orchids) there are cases beginning to emerge where not only do nomenclatural conflicts arise between nothogenera (for example, there are three different x *Smithara* published, Garay & Sweet, 1966; Garay, 1972 and D.M. Cumming, 1999), but also between nothogenera and non-hybrid generic names in both orchid and non-orchid families – such as x *Angraecopsis* J.M.H. Shaw (2013), a later homonym of *Angraecopsis* Kraenzl. (1900), both in the *Orchidaceae*, and x *Chondropetalum* Rolfe (1908) which, because it is a later homonym of *Chondropetalum* Rttb. (1773) in the family *Restionaceae*, had to be replaced by x *Zygorhyncha* Mansf. (1936). In such cases the rule of date priority applies, with the oldest name being accepted over the other later homonyms. With more of these cases likely to come to light it would be useful to have a mechanism to propose conservation of nothogenera where appropriate, in the interest of nomenclatural stability. Particularly so in the above cited case of x *Smithara*, the first two generic names cannot be used because their component genera are no longer accepted.

#### **2 Grexes**

In addition, there are possibilities to be explored with stabilizing grex epithets. One major cause of instability is a change in rank of a grex parent. For example, it is generally accepted that if an orchid hybrid is to qualify as a grex, its parent must be at the same perceived rank, that is, be either another grex or a species. This is based on the assumption that all grexes are at species rank which, in turn, is an extrapolation of the principle that two different entities at the same rank, when crossed, produce progeny at the same rank, *i.e.* a species x a species = a species (that is at taxonomic rank, not necessarily a new biological species).

As a consequence, a species may be accepted as such and used in the register as a grex parent. If at some future point a taxonomic revision reclassifies it at a lower rank, say subspecies, then all the grexes registered with that species as a parent also lose their rank of grex, and either become synonyms of other grexes or gain a new parental name at species rank. If these grexes include early hybrids which have been used in the breeding of further hybrids the disruption in the register can be extensive. Is there a way to absorb these changes in rank,

so as to avoid disruption to grex names? It appears that there is – simply continue to accept the original parental entity but at its new botanical rank. That means we should accept that a change in rank has happened, and amend the name used in the register accordingly, but continue to treat it as a grex parent for registration purposes.

There are several advantages to adopting this strategy. There is no disruption to grex names in the register, which in turn, means no changes to be implemented in the register, other databases, labels, catalogues, show schedules and list of awards, saving much effort, time and money – and should a future study reverse the change in rank, the grex registrations do not need to be undone. The rank of the parent is adjusted instead. It also has the advantage of keeping the orchid register synchronised with other nomenclatural databases, such as IPNI, WCSP and their derivatives, with the result that we all use the same name for the same plant.

However, this does require a slight change of thinking with regards to what constitutes a grex – that is, accepting that it is not necessarily of a rank equivalent to a species. In reality, orchid grexes have been a mixture of equivalents to species rank and lower ranks from the late 1800s, although this has not generally been recognised. How can that be so?

One fundamental principal of both nomenclatural codes (ICN and ICNCP) is that two units of the same rank cannot be nested one within the other. So a species cannot be recognised inside another species; if another entity is to be recognised it has either to become a separate species or a subspecies (or other infraspecific entity). Similarly, a cultivar cannot be established within another cultivar; it becomes a new separate cultivar. Consequently it follows that a grex cannot exist within another grex.

Now, applying that to the following situation in *Paphiopedilum*:

- *barbatum* x *villosum* = *Harrisianum* grex, 1869. Grex at species rank because species x species = species. However, once backcrosses are introduced the resultant grexes become a rank lower than species, to avoid the paradox of a species existing within a species.
- *Harrisianum* x *villosum* = *Conspicuum* grex, 1888. Grex below species rank.
- *barbatum* x *Harrisianum* = *Ensign* grex, 1892. Grex below species rank.

As a consequence all the hybrids bred with these grexes and all their progeny also produce grexes at a lower equivalent rank, so that a grex could be seen as a multi-ranked taxonomic unit that includes equivalents ranging from species to cultivar. But of course we continue to accept them all at grex rank in the register without question.

This becomes even clearer to see in cases where a natural hybrid described as a species is involved. There is a different approach under the ICN (botanical code) where a backcross is included in the same species rank name as a primary cross for a natural hybrid, or even an artificial hybrid if named botanically. Whereas in the orchid register it is the custom to provide a new grex name for a backcross, giving it a new name at the same rank as the primary cross. As an example, take *Cattleya loddigesii* x *C. walkeriana*, known from *C. x dolosa* (a natural hybrid) and *C. Heathii*, a grex. In the register there are a further 10 grexes that represent backcrosses as far as the F<sub>6</sub> generation. They are: Anger Walker, Cosmo-Hiroto, Fiddlesticks, Hallie Rogers, Karin Marti, Little Angel, O'Brieniana, Snow Blind, Tsiku Taiwan and White Cameo, all of which constitute varieties or even forms within *C. x dolosa*, and are consequently well below species rank, yet they continue to be used as grex parents, in fact collectively they are the direct parents of a further 254 grexes. (Variety and form are the botanical ranks usually used when these units are botanically named, such as in *Guarianthe x laelioides* (formerly *guatemalensis*), where the backcross, *Guarianthe x laelioides* f. *pachecoii* = Herbert Oesterreich grex.)

The practical result is that in reality perhaps most grexes in the register are below species rank. In the interests of nomenclatural stability could botanically named grex parents be treated in the same way? Surely it follows that it is arbitrary to require their parents to be at species rank.

This is not to suggest that any lower-ranked taxon be accepted as a grex parent, any more than it would be advisable to allow just anything named as a species to be accepted as a grex parent. It is simply to illustrate that botanically named grex parents that undergo a reduction to a rank lower than that of species may continue in the register as grex parents without detriment to the registration system. In fact, allowing this produces undeniable benefits to nomenclatural stability. After all, rank reduction for grexes has been allowed since at least 1888 – with no noticeable ill effects.
