REGISTRAR'S NOTES ON NAMES IN THE REGISTER

New Groups

Several species of *Grammatophyllum* produce plants that have uniformly coloured flowers without any darker spotting. For example, Jim Cootes in his book *Orchids of the Philippines* (p.129. 2001) illustrates *Grammatophyllum multiflorum* f. *citrinum*, a form without any markings on the tepals.

Grammatophyllum speciosum, Unspotted Group, 'Golden Tiger'

A name applied to the plant growing in Singapore Botanical Gardens that was awarded earlier this year, which was described as a special pure yellow-flowered variant. The same clone is offered by several nurseries in France, the Netherlands and elsewhere as *Grammatophyllum speciosum* "var. *flava*". Var. *flava* does not appear to have been validly published as a scientific name, and if it had been it would be var. *flavum* to agree with the gender of the genus. Consequently this plant was without a valid name until the recent provision of the cultivar epithet 'Golden Tiger'. A Group name, Unspotted Group, is also here provided as there are other pure unspotted variants of *Gram. speciosum* that differ in their shade of yellow. For example, a similar plant being offered as "var. alba" (another unpublished scientific name) has clear unspotted tepals in a shade of slightly tawny yellow, differing from the bright daffodil yellow of 'Golden Tiger'.

Habenaria Angel Bone grex, Lanna Sweet Pink Group

Lanna Sweet Pink Group represents the reciprocal cross to the original Angel Bone gx, *Habenaria lindleyana* x *Habenaria carnea*. Originated by Nuttha Potapohn of Chiang Mai University, Thailand. Made 10 Oct 2017; first flowered 10 Oct 2018. Tuberous herb, with 5-8 leaves, brownish green, lanceolate. Flowers 10-25, blush pink, 2.0 x 3.0 cm. Blooming for about 1 month, September–October.
