FEATURES

Veratrum in cultivation
A guide to the expanding range of species and cultivars becoming available
KEITH FERGUSON 98–105

Getting to grips with Berberis
Species raised from garden seed over the past 100 years have resulted in confusion. What’s gone wrong and how can the situation be remedied?
JULIAN HARBER 106–113

Evaluating plant hardiness
Factors influencing plant hardiness and suggestions for improving the RHS rating system
KENNETH COX 114–117

An international perspective on hardiness ratings
Perhaps the RHS should look to the US to improve its rating system
GRAHAM RICE 118–119

Iridescent plants of the world
An overview of a little-studied phenomenon that has given rise to some remarkable foliage plants
STEWART MCPHERSON 120–125

Har Stemkens – Chaotic or creative?
Breeding new plants for a multinational seed company
HAR STEMKENS 128–131

Discovering primulas of subsection Agleniana
A re-assessment of five beautiful species, and finding them in the wild
PETE BOARDMAN, ANNE CHAMBERS, PAM EVELEIGH & JOHN RICHARDS 88–92

Woody plant propagation by long cuttings
Success with cuttings up to 3.5m long
WOLFGANG SPEITTMANN 93–97

Cortaderia on trial
Highlighting the best cultivars of this maligned genus
JAMES ARMITAGE 78–83

An assessment of Itea
Looking particularly at the hardy, deciduous Itea virginica cultivars
MARGARETH HOP 84–87

Veratrum flavum
(syn. Veratrum album var. flavum)
With its yellow flowers, this is one of the most striking members of the genus (pp98–105).

It establishes easily in the garden and forms a vigorous plant. Seedlings flower within five years.
