

The International  
**Lily Register**  
and Checklist  
2007

# The International Lily Register and Checklist 2007

This major reference work is the first up-to-date list of all *Lilium* cultivars for 25 years. It contains descriptions, parentage, raisers, registrants and awards for over 14,350 lily cultivars. In addition, all *Lilium* species that are, or have been, cultivated are included and described.

There is also a glossary of terms and an A-Z list of all individuals, nurseries and organizations involved in the production of lily cultivars. It also includes a horticultural classification for lily cultivars based on parentage and flower characteristics.

# INTRODUCTION

This is the fourth edition of *The International Lily Register (ILR)* to be published by the Royal Horticultural Society (RHS) since its appointment as the International Cultivar Registration Authority (ICRA) for the genus *Lilium* in 1958. The first edition, compiled by G.E. Peterson, appeared in 1960 and the second edition, compiled by J.W.O. Platt, was published in 1969. The third, much expanded edition, compiled by A.C. Leslie, the then International Lily Registrar, was published in 1982: it also included botanical names of species and infraspecific categories that were known to be, or had been, in cultivation. This third edition was followed by annual Supplements that published the epithets of all lilies registered in subsequent years. Supplements 1–21 were compiled by A.C. Leslie and the title of Supplements 20 and 21 was changed to *The International Lily Register and Checklist* to reflect the inclusion of unregistered epithets that had been brought to the attention of the ICRA. Supplements 22–24 were compiled by V.A. Matthews, who succeeded Dr Leslie as Registrar in 2003.

This new, fourth edition combines the third edition with its 24 Supplements. It therefore includes all registrations up to 30 September 2005. All the registration forms stored in the RHS archives have been re-checked for accuracy of information. Registration dates, which were omitted in the third edition and many of the Supplements, have now been included. The dual system of classification (see p. 15) introduced in the *Seventeenth Supplement* has now been applied to all lilies included here (except in cases where the available information is inadequate). Additional information from publications, or from other reliable sources, has been added to some existing entries: as a result some entries differ from their original publication in the third edition and its Supplements. A survey of publications that had not previously been seen has resulted in the addition of a number of unregistered lilies, in particular some that were raised in the former Soviet Union and Russia. These publications have also allowed many corrections to be made to epithets that had formerly been included in the *ILR* with an incorrect spelling.

There are some changes to Divisions I, VII and VIII in the Horticultural Classification as previously published (see p. 15). The changes in terminology in the descriptions that were initiated in the *Twenty-fourth Supplement* have been incorporated throughout this new Register (see p. 9).

Species (and infraspecific categories) are included if they are, or have been, in cultivation, and descriptions have now been provided. Introduction of species new to cultivation continues, especially from countries such as China, and these may provide new material for breeding.

No attempt has been made to indicate whether or not a plant is believed to be extinct. Many of the very early cultivars or cultivars that were not widely distributed are

unlikely still to exist, but one can never be sure. There are instances where lilies previously thought to be extinct have subsequently reported to be extant. This is one of the reasons why the re-use of epithets is not permitted under the International Code of Nomenclature for Cultivated Plants (ICNCP).

The Introduction to the *ILR* (1982) stated that epithets 'listed before 1958 (the year that the RHS became the ICRA for lilies) and all those listed in previous editions are recognized as registered'. In 1982 this was considered to be a sensible proposition, but later thinking has changed this opinion and such epithets are not now considered to be registered. It should be noted that no unregistered epithets are considered to be acceptable by virtue of their inclusion in this edition of the *ILR*. They are included as part of its checklist function and they provide reference points for names that appear in the literature or in catalogues.

Registration is a voluntary procedure and does not confer any legal protection over the sale or propagation of the plant, or in the use of a registered epithet. Legal protection can only be obtained by a grant of Plant Breeders' Rights or a Plant Patent. However, it is of obvious value to all those interested in lilies that the nomenclature should be stable and as free from duplication of epithets as possible. Lilies are exported and exchanged world-wide, so any Register must be maintained on an international basis and this can only be achieved through the co-operation of all concerned.

It is the duty of an ICRA to endeavour to persuade raisers and introducers of plants in the group concerned to submit all new cultivar and Group epithets for approval and to ensure that only those conforming to the Rules and Recommendations of the latest edition of the ICNCP are accepted for registration. The ICRA is further responsible for maintaining and publishing lists of these epithets as circumstances may require. Wherever possible, however, epithets that have not been registered are included in the *ILR* as part of its checklist function.

It is not the duty of the ICRA to decide whether or not one cultivar is more meritorious or more useful than another, nor to judge the distinctness of cultivars, or to conduct trials. Nor is it the duty of the ICRA to provide new epithets for cultivars or Groups whose epithets are unacceptable. Anyone is eligible to suggest a new epithet for such cultivars and Groups, and send it to the Registrar for approval. It is hoped that, in cases where the raiser is still living, the **raiser** will suggest a new epithet.

Any corrections or additional material will be gratefully received and should be sent to the Registrar. Please write to The International Lily Registrar, The Royal Horticultural Society Garden, Wisley, Woking, Surrey GU23 6QB, UK.

## How to register a lily

If you have a lily cultivar or Group that you believe to be distinct from any other and consider to be worthy of naming, you should obtain an Application for Registration form from the Registrar (see address above), and complete and return it. It is hoped that all applicants will endeavour to fill in this form as fully as possible, because in many cases the entry in the *ILR*, based on this form, will become the only readily available source of information about each cultivar or Group.

In choosing an epithet, applicants must avoid all epithets already listed in the *ILR* and any succeeding Supplements, or an epithet likely to be confused with them. The epithet must also comply in all other respects with the ICNCP. It is strongly suggested that growers apply for registration before marketing a lily, to avoid the considerable trouble and confusion that can result if the epithet is found to be unacceptable.

There is no fee for registration.

## Cultivars and Groups

The *ILR* includes both lily cultivars and Groups. For definitions, see Glossary p. 926.

Throughout the *ILR* from 1960 until 2003, cultivars were marked by cl. (meaning clone) in each entry. In the *Twenty-first Supplement*, cl. was replaced by cv. (the abbreviation for cultivar) and this continued until the most recent *Supplement (Twenty-fourth)*.

The *Thirteenth Supplement* was the point at which the term Group was used consistently in the epithet of a Group. In previous editions of *ILR*, the terms grex or Hybrids, and more rarely Seedlings, Selections and Series were used and the category was marked by the use of g, gp or grp. In this edition of *ILR*, all these terms have been replaced by the word Group.

Thus, Vasaras Prieks Hybrids is now Vasaras Prieks Group, Bridal Series is now Bridal Group, Panamint grex is now Panamint Group.

In this edition the use of cv. or g, gp or grp to mark every entry has been discontinued on the grounds that it is unnecessary. A cultivar epithet is obvious because it has single quotes, and a Group epithet is obvious because it always ends in the word Group!

## Names included in the *ILR*

Cultivar and Group epithets that have been registered and/or published in the literature or in catalogues are included, together with species (and lower ranks – subspecies, varieties and forms) that are, or have been, cultivated. Synonyms, misspellings and unaccepted spellings are included and cross-referenced. Trade designations (selling names), despite not being recognized as accepted names by ICNCP, are nevertheless noted and cross-referenced.

In some countries, plants are marketed using trademarks. A trademark is defined as any sign (usually made from words, letters, numbers or other devices such as logotypes) that individualizes the goods of a given enterprise and distinguishes them from the goods of its competitors. A registered trademark is one that has been formally accepted by a statutory trademark authority, and is distinguished by the international symbol ®. Trademarks are the intellectual property of a person or a corporate body and thus are not universally available for anyone to use. They are not considered to be names and therefore are not included in the *ILR*, although sometimes an included trade designation will be identical to a trademark.

**Cultivar epithets** are written in Roman type and enclosed between single quotation marks, for example ‘Star Gazer’; ‘Enchantment’.

**Group epithets** are written in Roman type but are not enclosed by quotation marks, for example Bellingham Group; *L. × parkmanii* Imperial Silver Group.

**Trade designations** are written in Roman type, without quotation marks, and in small capital letters, for example CORELLI.

**Scientific (botanical) names** are written in Italic type, for example *L. speciosum*, *L. × testaceum*. The generic name *Lilium* is usually abbreviated to *L.*

A botanical hybrid is a cross that is derived from two or more species (or lower ranks) and is written in Italics (apart from the hybrid sign). The sign for a hybrid is written as a multiplication sign (×, not an ‘x’, as specified in the International Code of Botanical Nomenclature (ICBN) 2000, Art. H.1), and precedes the hybrid epithet, for example *L. × testaceum*.

There are words that may form part of cultivar epithets, and can be (and have been) abbreviated or contracted. To maintain consistency, the following are used in the entries in the *ILR*:

Doctor, Docteur	
or Doktor	not Dr. or Dr
Madame	not Mme
Mt	not Mount
Mr	not Mr.
Mrs	not Mrs.
Number	not No, Num. or #
Professor	not Prof.
Reverend	not Rev. or Revd
Saint	not St. or St

### A note on priority

The naming of cultivars and Groups is based upon priority of publication. When two or more cultivars or Groups have been given the same epithet, the accepted one is the first that has been published in accordance with ICNCP. However, there are cases where the necessary information is unknown, and so it is not possible to decide which epithet is earlier and therefore should be accepted. This situation occurs most frequently, although not exclusively, in cultivars raised before 1960, the year in which the first *ILR* was published. The first edition of the ICNCP was published in 1959 and before that date the rules and recommendations regarding the nomenclature of cultivated plants had not been formulated.

## Order of entries

Cultivar, Group and species epithets are arranged in alphabetical order, and sorted letter by letter, ignoring spaces, case (upper or lower) and punctuation. The hybrid sign (×) is ignored in the sorting. Letters with diacritical signs (accents) that may, in some languages, appear at the end of the alphabet, for example Swedish, are incorporated within the A – Z arrangement.

The words ‘forma’, ‘subsp.’ and ‘var.’ are not considered to be relevant in the alphabetical sorting and are ignored, except in cases where identical botanical epithets occur, for example forma *concolor* is followed by var. *concolor*.

The author of a species or infraspecific category is ignored in the sorting, except in rare examples where two or more plants have the same epithet but different authorities: in such cases the authors appear in alphabetical order, for example *L. roezlii* Purdy is followed by *L. roezlii* Regel.

Where a cultivar has the same epithet as a Group, the cultivar is listed first, for example ‘African Queen’ precedes African Queen Group, ‘Celica’ precedes Celica Group.

Where a cultivar epithet is the same word or words as a trade designation, the cultivar is listed first, for example ‘Florence’ precedes FLORENCE.

Cultivar or Group epithets that are attached to a species or an infraspecific category are arranged in alphabetical order within that species listing. All cultivar and Group epithets and all infraspecific categories are cross-referenced, so it is easy to find, for example, a cultivar of a species when the name of the species has been forgotten or is unknown to the searcher. Thus, cultivar and Group epithets as well as infraspecific categories will be found in the overall A – Z.

## Order within entries

- **Cultivar epithet or scientific (botanical) Latin name** (followed by the name(s) of the author(s) if the name is scientific). The author is the person who first described a plant and published the name. Some authors’ names may be abbreviated, for example Linnaeus is abbreviated to L.
- **Horticultural Divisions and sub-divisions** to which a cultivar or Group is assigned (see p. 13). The code Div.? means that, due to insufficient information, it is not possible to place the lily in question into a Division. This situation usually occurs in older lilies that have minimal published details.
- **Parentage.** The seed parent is given first and the pollen parent second, for example ‘Skyline’ × ‘Red Dragon’. They are separated by X. Within each parent, any components are separated by the smaller ×. When a parent is itself a simple or complex cross, the hybrid parent is enclosed in parentheses, for example ‘Compass’ × (‘Tetra Nutmegger’ × ‘Maracana’) or (‘Salmon Jewels’ × ‘Crimson Bute’) × ((‘Allegra’ × ‘Star Gazer’) × ‘Furore’).
- **Details of raiser, registrant etc.** See p. 10.
- **Awards.** See p. 10.
- **Description.** In the case of species, the distribution in the wild is given at the end. Where the chromosome

number of a cultivar is known, it is given at the end of the description (the diploid chromosome number of the genus *Lilium* is  $2n = 24$ ).

In the *Twenty-fourth Supplement* the following changes were introduced in the descriptions and are continued here. **Tepal** replaces **petal** because it is a more botanically correct term. **Alternate** leaves are now referred to as **scattered**; the latter term is more generally accepted in the literature and more accurately describes the leaf-arrangement. The central vein that runs up each tepal is given a different name according to its position: the vein on the upper (inside) surface of a tepal is a **midvein**, whereas the vein (generally raised and more prominent) on the lower (outside) surface is a **midrib**.

• **Synonyms.** A synonym is a validly published name that is not the accepted (correct) name for the plant in question: it can be a scientific name or a cultivar or Group epithet.

• **Trade designation.** See Glossary p. 926. Not all cultivars have trade designations.

• **Relevant notes** (enclosed in parentheses) may include details of publication, unacceptable names, misspellings, unaccepted spellings, derivation of the epithet, details of PBR and other miscellaneous information.

**Publication.** Cites the first occasion on which the name was validly published in accordance with the Rules and Recommendations set out in ICNCP 2004). In some cases the given publication is the first known to the ICRA. In an attempt to find where a cultivar epithet first appeared, many books, periodicals and catalogues have been searched, nevertheless it has not been possible to search all the available literature. Note that electronic publication is not considered to be valid – publication must be in a printed form. If you can fill in any gaps in the records, or know of references earlier than those cited, please inform the Registrar.

### Unacceptable names, etc.

An UNACCEPTABLE NAME is one that is not accepted under ICNCP.

A MISSPELLING is an incorrect spelling. The most common circumstances in which misspellings occur are:

• The misspelt name differs from the correct name by one or more letters (for example ‘Endeavour’ is a misspelling of ‘Endeavor’; ‘White Lightning’ is a misspelling of ‘White Lightning’).

• The misspelt name differs from the correct name in word number (e.g. ‘Grand Stand’ is a misspelling of ‘Grandstand’; ‘Stargazer’ is a misspelling of ‘Star Gazer’).

• The misspelt name differs from the correct name in the presence or absence of diacritical signs (accents), for example, ‘Balta Brigantina’ is a misspelling of the Latvian ‘Baltā Brigantina’.

An UNACCEPTED SPELLING is one that results from the transliteration or transcription of a name from a non-Roman language, using a system not specified by ICNCP. Such a spelling is not intrinsically incorrect, but is not accepted in the *Register and Checklist*. For example, the Russian ‘Iolanta’ is accepted, but ‘Jolanta’ or ‘Yolanta’ are not; ‘Lastochka’ is accepted, but ‘Lastoczka’ or ‘Lastočka’ are not.

Why have these often minor deviants been cross-referenced? People who speak languages that use a Latin alphabet will doubtless regard such inclusions as unnecessary on the grounds that they are 'obvious errors'. However, these deviants may not be apparent to those whose languages are written in non-Latin scripts such as Cyrillic, or Japanese: in such cases, it may not always be evident that two or more similar names may be misspellings of the same cultivar name. Thus, deviant spellings are included to help to establish whether, for example, a misspelling is in fact a misspelling or is a different cultivar name. It is analogous to an English speaker not knowing whether the Russian word *ожа* (*gun*) is correct, or an error for *оже* (*bed* or *couch*) or *ожь* (*falsehood*).

#### A note on Russian transliterations.

ICNCP stipulates that the ALA-LC (American Library Association and Library of Congress) Romanization system must be used. This system has been used for all cultivar or Group epithets where the original Russian has been seen by the ICRA: unfortunately sight of the Russian has not always been possible. The use of ALA-LC has resulted in some epithets now differing from the way in which they originally appeared in *ILR*.

### Notes on the descriptions

**Measurements.** All measurements are metric and should generally be treated as a general guide, rather than as definitive. Many measurements will vary according to environmental conditions. This applies also to the number of flowers per stem. Exceptionally small or large measurements that have been recorded but occur infrequently, are given in parentheses, for example, stems 0.8-1(-1.5) m indicates that the stems are usually 0.8-1 m tall, but may occasionally attain 1.5 m.

**Flowers.** Most lily flowers are single, and in the descriptions this is assumed to be the case unless otherwise stated.

**Flower colour.** Where possible, colour references are given using *The RHS Colour Chart* (1966, 1986, 1995, 2001) cross-referenced to the names of the colours used in the ISCC-NBS system, for example vivid purplish pink (56C). In some older lilies, colour names and numbers from *The Horticultural Colour Chart* (1939/41) have been used, for example (Spectrum Violet HCC 735).

**A note about Tan.** In the UK, *tan* is a reddish brown colour, defined in some dictionaries as 'tawny brown' or the colour of a red fox. However, in North America it is a very different colour, variously described as light brown, light brown tinged with orange, beige or yellow-brown.

Occasionally *tan* has been used in a lily description. If the country of origin of the lily is known, then an assumption can be made about the intended colour. But if the country of origin is unknown or the raiser is from, for example, Russia or Poland, *tan* must be interpreted with caution because it may not be known whether the raiser speaks British English or American English, or, if the description has been translated, what variant of English the translator used.

**Flowering time.** In most cases, flowering time is given for plants grown in the Northern Hemisphere: if the flowering time in the Southern Hemisphere is known, this is stated. It

should be remembered that flowering time may vary with latitude, local climatic conditions and growing conditions.

### Raisers, registrants etc.

The following abbreviations are used in connection with raising, introduction, registration etc. of a cultivar or Group.

G grown to first flower by  
 I introduced by  
 N named by  
 R raised by  
 REG registered by  
 S selected by (Refers to cultivars and Groups that have been either deliberately selected, or found by chance. In both cases the selector has recognized the plant's potential attributes.)

The category H (hybridizer) is no longer used.

Dates (where known) are given in parentheses. For many cultivars there are gaps in these data: any missing or additional information, or corrections, would be welcomed by the Registrar.

All persons, companies and organizations given in this section are listed in Raisers and Registrants on p. 928.

### Awards

AGM Award of Garden Merit (In 1992 the RHS re-instituted the AGM, and all AGMs awarded before that date have been rescinded.)  
 AM Award of Merit  
 AMH Award of Merit (Haarlem)  
 C Commended (now discontinued)  
 FCC First Class Certificate  
 FCCH First Class Certificate (Haarlem)  
 HC Highly Commended  
 PC Preliminary Commendation  
 SCC Second Class Certificate (Replaced by AM in 1888)

### Abbreviations (including journals and Latin terms)

AHS American Horticultural Society  
 Amer. LYB *American Lily Yearbook*  
 Art. Article (with reference to ICNCP)  
 Bot. Reg. *Edwards' Botanical Register*  
 c. abbreviation of Latin *circa*, meaning *about*, *approximately*  
 Cat. Catalogue, Catalog  
 cm centimetres  
 cv. cultivar  
 cvs cultivars  
 E east  
 fil. abbreviation of Latin *filius*, meaning *son*. Used after an author's name to distinguish

	between father and son, as in Hooker and Hooker fil.
fl.	flower
<i>Fl. Mag.</i>	<i>Floral Magazine</i>
fls	flowers
<i>Gard. Chron.</i>	<i>Gardeners' Chronicle</i>
<i>Gard. Illustr.</i>	<i>Gardens Illustrated</i>
HCC	Horticultural Colour Chart
hort.	abbreviation of Latin <i>hortorum</i> , meaning of <i>gardens</i> , or <i>hortulanorum</i> , meaning of <i>gardeners</i> . It identifies those synonyms or misapplied names that have been used erroneously in horticulture.
ICBN	International Code of Botanical Nomenclature
ICNCP	International Code of Nomenclature for Cultivated Plants
ICRA	International Cultivar Registration Authority
<i>Illustr. Hort.</i>	<i>L'illustration horticole</i>
<i>ILR</i>	<i>International Lily Register</i>
infl.	inflorescence
<i>in litt.</i>	Latin for <i>in a letter</i>
<i>JRHS</i>	<i>Journal of the Royal Horticultural Society</i>
LEL	used to designate a grant of Dutch Plant Breeders' Rights, followed by a number (from Dutch <i>lelie</i> = lily)
lf	leaf
lf-axil	leaf-axil
lvs	leaves
<i>LYB</i>	<i>Lily Year Book (RHS)</i>
<i>LYB NALS</i>	<i>Lily Yearbook of the North American Lily Society, Inc.</i>

RHS	Royal Horticultural Society
S	south
subsp.	subspecies
syn.	synonym
USPP	United States Plant Patent
W	west
var.	varietas; in English – variety

## Summary of the changes in this edition

- Dual system of classification (p. 15) has been applied to all entries.
- Change in terminology used in the descriptions (tepala, alternate (leaves), tepal veins – see p. 9).
- All Group epithets now end in the word Group (p. 8).
- The abbreviations cv. and g. are no longer used in the entries (p. 8).
- Category H (hybridizer) is no longer used.
- Changes to the Horticultural Classification (p. 15).
- Change in the situation regarding unregistered epithets (p. 7).
- Species, subspecies, varieties and forms now have descriptions.

## Acknowledgments

Too many people have provided information to be mentioned individually, but their help is gratefully acknowledged. I thank the following regional representatives who have encouraged registration and provided information especially about new cultivars: Neil Jordan (Australia); Ing. Břetislav Mičulka (Czech Republic); Dr Johan van Scheepen and Saskia Bodegom (The Netherlands); Mrs Merle Lepper (New Zealand); Michael Homick and Mrs Kathy Andersen (North America). I also thank Judy Harley, Manager of Honeywood Heritage Nursery in connection with the confusion in the naming of some of A.J. Porter's lilies, and Jānis Rukšāns who helped with the correct spelling of many Latvian cultivar epithets. I am grateful to my successor as International Lily Registrar, Kate Donald, and her husband Duncan, who helped with the enormous task of checking the proofs.

Special thanks go to Dr Alan Leslie, the previous Lily Registrar. His extensive practical knowledge of the intricacies of ICNCP helped to answer many questions and his guidance on obscure problems was invaluable.

I am also grateful to Robert Hacker who designed the lily database, and to Simon Maughan of RHS Publications, for the design and production of this Register.

# HORTICULTURAL CLASSIFICATION

The descriptions below give a brief outline of the range of characteristics shown by members of each Division, and may provide some guidance as to where to place a Lily of unknown parentage. These outlines do not necessarily include every variation but try to describe what is typical or at least common in a Division.

Note: interspecific hybrids that have been given botanical hybrid names (such as *L. × aurelianense*, *L. × parkmanii*) are included in their appropriate Divisions, as are any cultivars and Groups derived from these hybrids.

Examples: *L. × aurelianense* is derived from *sargentiae* and *henryi* and so is placed in Div. VI; *L. × parkmanii* is derived from *speciosum* and *auratum* and so is placed in Div. VII, as is *L. × parkmanii* 'George Woodriff'.

## DIVISIONS

### Division I Asiatic hybrids

Hybrids derived from the following species and interspecific hybrids: *amabile*, *bulbiferum*, *callosum*, *cernuum*, *concolor*, *dauricum*, *dauidii*, *L. × hollandicum*, *lancifolium* (syn. *tigrinum*), *lankongense*, *leichtlinii*, *L. × maculatum*, *pumilum*, *L. × scottiae*, *wardii* and *wilsonii*.

Flowers usually small to medium-sized, few to fairly numerous, bowl-shaped, flat or with tepals recurved, usually with an open centre, up-, out- or down-facing. Flower colour often uniform, or with contrasting tepal-tips and/or throat, rarely with contrasting white tepal-margins. Spots absent, or when present, well defined and often rounded. Papillae, if present, usually inconspicuous. Conspicuous brushmarks sometimes present. Tepal-margins usually smooth or slightly ruffled, with relatively inconspicuous nectaries. Flowers usually with little or no scent. Inflorescence sometimes with secondary buds. Buds sometimes hairy. Leaves scattered, narrow to medium width.

Examples:

'Angela North' I(c/d)  
'Avignon' I(a/b)  
'Ariadne' I(c/d)  
'Black Eyed Cindy' I(b/-)  
Citronella Group I(c/d)  
'Connecticut King' I(a/b)  
'Enchantment' I(a/b)  
'Mont Blanc' I(a/b-c)  
'Willow Wood' I(a/-)

### Division II Martagon hybrids

Hybrids of martagon type derived from the following species and interspecific hybrids: *L. × dalhansonii*, *hansonii*, *martagon*, *medeoloides* and *tsingtauense*.

Flowers usually small, often numerous, mostly down-facing, typically with rather thick, recurved tepals and often of Turk's cap form, and often borne in a narrow, cylindrical inflorescence; sometimes out-facing with tepals hardly recurved. Spots usually present, numerous, often on at least three-quarters of each tepal and sometimes also on the edges of the outside. Tepal-margins usually smooth. Flowers with little or an unpleasant scent. Buds often hairy. Leaves typically whorled, often rather broad. Bulbs often mauve or orange-yellow. Early flowering.

Examples:

'Cadense' II(b/d)  
'Claude Shride' II(c/d)  
'Cranberry Dancer' II(c/d)  
'Larissa' II(-/d)  
*L. × dalhansonii* 'Marhan' II(c/d)  
'Orange Marmalade' II(b/c-d)  
'Rose Tattoo' II(c/d)

### Division III Euro-Caucasian hybrids

Hybrids derived from the following species and interspecific hybrids: *candidum*, *chalcedonicum*, *kesselringianum*, *monadelphum*, *pomponium*, *pyrenaicum* and *L. × testaceum*.

Flowers mostly small to medium-sized, few to fairly numerous, often bell-shaped to Turk's cap-shaped, often down-facing, in a relatively short inflorescence. Flower colour often in rather pale muted shades. Spots absent to numerous. Brushmarks absent. Tepal-margins smooth, often gently reflexed. Flowers often scented. Inflorescence lacking secondary buds. Leaves scattered. Many are lime-tolerant.

Examples:

'Ares' III(c/d)  
Caucasian Group III(c/d)  
'June Fragrance' III(b-c/a-b)  
'Moonlight Madonna' III(-/a)  
*L. × testaceum* III(c/d)  
'Zeus' III(c/d)

### Division IV American hybrids

Hybrids derived from the following American species and interspecific hybrids: *bolanderi*, *L. × burbankii*, *canadense*,

*columbianum*, *grayi*, *humboldtii*, *kelleyanum*, *kelloggii*, *maritimum*, *michauxii*, *michiganense*, *occidentale*, *L. × pardaboldtii*, *pardalinum*, *parryi*, *parvum*, *philadelphicum*, *pitkinense*, *superbum*, *vollmeri*, *washingtonianum* and *wigginsii*.

Flowers small to medium-sized, often in a pyramidal inflorescence, mostly down-facing. Flower colour often strong yellow to orange or orange-red, often with contrasting centre and tepal-tips. Spots often very conspicuous, distributed over at least half of each tepal, usually rounded and often surrounded by a paler halo. Papillae absent or inconspicuous. Brushmarks absent. Tepals rather narrow, margins smooth, usually gently to strongly reflexed. Flowers with little scent. Pedicels often long and slender. Buds usually without hairs. Leaves usually whorled (at least in part).

Examples:

Bullwood Group IV(c/d)  
Bellingham Group IV(c/d)  
Del Norte Group IV(c/d)  
'Eric Mayell' IV(-/-)  
'Lake Tulare' IV(c/c-d)  
'Mexico' IV(-/-)  
'Oliver Wyatt' IV(c/d)  
'Shuksan' IV(c/d)

#### Division V Longiflorum lilies

Hybrids or selections derived exclusively from *formosanum*, *longiflorum*, *philippinense* and *wallichianum*.

Flowers medium-sized to large, often few, trumpet-shaped. Flower colour typically uniform internally (white). Spots, papillae and brushmarks absent. Tepal-margins smooth. Flowers usually scented. Inflorescence lacking secondary buds. Leaves scattered, narrow to medium width.

Examples:

'Formobel' V(b/a)  
Formolongi Group V(-/a)  
'Kiyosato' V(a-b/a)  
*longiflorum* 'Slocum's Ace' V(b/a)  
'Yatsugatake' V(a-b/a)

#### Division VI Trumpet and Aurelian hybrids

Hybrids derived from the following species and interspecific hybrids: *L. × aurelianense*, *brownii*, *L. × centigale*, *henryi*, *L. × imperiale*, *L. × kewense*, *leucanthum*, *regale*, *rosthornii*, *sargentiae*, *sulphureum* and *L. × sulphurgale* (but excluding hybrids of *henryi* with all species listed in Division VII). Aurelian hybrids are derived from a combination of *henryi* and trumpet lilies.

Flowers medium-sized to large, trumpet-shaped, bowl-shaped, flat or with tepals reflexed (the flatter or star-shaped

flowers usually with a shorter funnel-shaped base, so centre of flower is closed). Flower colour white, cream, yellow to orange or pink, often with a contrasting star-shaped throat and/or strong bands of colour outside. Trumpets usually scented, without spots, papillae or brushmarks; other types often with spotting as small streaks gathered in two bands at the base and sometimes with conspicuous papillae. Tepal-margins smooth or twisted with irregular ruffling, tepal-tips often reflexed. Inflorescence sometimes with secondary buds. Leaves scattered, narrow to medium width.

Examples:

'Carnival Queen' VI(b/c)  
'Gold Eagle' VI(b-c/c)  
Golden Splendor Group VI(b-c/a)  
Herald Angel Group VI(a/a)  
'Louise' VI(c/d)  
*L. × kewense* 'White Henryi' VI(b-c/c)

#### Division VII Oriental hybrids

Hybrids derived from the following species and interspecific hybrids: *auratum*, *japonicum*, *nobilissimum*, *L. × parkmanii*, *rubellum* and *speciosum* (but excluding all hybrids of these with *henryi*).

Flowers usually medium-sized to very large, few to fairly numerous, usually bowl-shaped, flat or with recurved tepals. Inner tepals often very broad, margins often ruffled or twisted and usually overlapping at base so the flower has a more 'closed' centre. Flower colour mostly white to pink to purplish red, some golden yellow; ground colour often white, with a contrasting colour as a central ray, or suffused over the whole tepal, except (in many cases) at the margins. Spots absent to numerous and conspicuous, sometimes covering more than half of each tepal, variable in form but often with diffuse edges. Papillae often present and conspicuous, even when flowers are unspotted. Nectaries often large and conspicuous. Flowers usually scented. Leaves scattered, usually broad to very broad. Often late flowering.

Examples:

'Casa Blanca' VII(b/b-c)  
*L. × parkmanii* Imperial Silver Group VII(b/c)  
'Journey's End' VII(b/c)  
'Star Gazer' VII(a/c)  
'Woodriff's Memory' VII(a-b/b)

#### Division VIII Other hybrids

Hybrids not covered by any of the previous Divisions (I-VII). Includes all interdivisional hybrids, such as *longiflorum*/Asiatic (LA) hybrids, *longiflorum*/Oriental (LO) hybrids, Oriental/Asiatic (OA) hybrids and Oriental/Trumpet hybrids (Oriempets or OT hybrids). Hybrids of *henryi* with *auratum*, *japonicum*, *nobilissimum*,

*L. × parkmanii*, *rubellum* and *speciosum* (that are excluded from Divs VI and VII) are placed here.

Examples:

‘Amber Star’ VIII(c/c)  
‘Chinatown’ VIII(b/c)  
‘Elegant Lady’ VIII(b-c/a)  
‘Eureka’ VIII(b/d)  
‘First Crown’ VIII(a-b/b)  
‘Pink Jazz’ VIII(c/a-b)  
‘Red Planet’ VIII(a-b/b)  
‘Wild Treasure’ VIII(b/a-b)

### Division IX Species and cultivars of species

Includes all species and their subspecies, varieties and forms, and cultivars selected therefrom (excluding those derived exclusively from any one of the following: *formosanum*, *longiflorum*, *philippinense* and *wallichianum*, which are placed in Div. V).

Examples:

*auratum* var. *rubrovittatum* ‘Crimson Beauty’ IX(b/c)  
*canadense* var. *editorum* ‘Chocolate Chips’ IX(c/a)  
*lancifolium* ‘Splendens’ IX(c/d)  
*leucanthum* var. *centifolium* ‘Kristine’s Charm’ IX(c/a)  
*nepalense* IX(c/a)  
*speciosum* ‘Coral Queen’ IX(b-c/d)

In 2004 an International Lily Conference was held in the UK and a meeting took place at Wisley to discuss any changes to the Classification. The two previous International Lily Registrars (A.C. Leslie and V.A. Matthews) attended, together with representatives from the USA, The Netherlands and Germany. There were written submissions from Latvia and Tasmania.

The following changes were recommended, and have been adopted in the present *Register*:

1. *L. henryi* hybrids. In the 1982 *Register* and subsequent *Supplements* these had been divided between Div. VI and Div. VII. There was a clear consensus at the meeting that *L. henryi* did not belong in Div. VII and that any hybrids between it and species listed as potential parents in that Division, should be placed in Div. VIII as Orienpets.
2. It had been suggested that the former inclusion of *L. bakerianum* and *L. nepalense* among the Asiatic species in Div. I was inappropriate. *L. bakerianum* has not yet been used in breeding, and the relationship of *L. nepalense* is not yet clear. It was decided that hybrids of both these lilies should be placed in Div. VIII.

## SUB-DIVISIONS

Lilies in all Divisions may be further classified on the basis of flower aspect (up-, out- or down-facing) and flower form (trumpet-shaped, bowl-shaped, flat, with tepals recurved). Flower aspect is given before flower form and the two are separated by a forward slash (/).

Flower aspect is encoded as:-

- a up-facing
- b out-facing
- c down-facing

Flower form is encoded as:-

- a trumpet-shaped
- b bowl-shaped
- c flat (or with only tepal-tips recurved)
- d with tepals recurved (i.e. with more than just the tip recurved or reflexed and with the Turk’s cap form as the ultimate state)

This dual system has been adopted for all lilies in this edition of the *ILR* (in so far as information is available). When information is missing, the relevant code is replaced by a dash (-).

Examples:

‘**Madison**’ **I(a/b)** indicates an Asiatic hybrid with up-facing, bowl-shaped flowers.  
‘**Lightning Bug**’ **II(b/d)** indicates a martagon hybrid with out-facing flowers with recurved tepals.  
‘**Milden Red Ball**’ **IV(c/d)** indicates an American hybrid with down-facing flowers with recurved tepals.  
‘**Snowdon**’ **VII(a-b/-)** indicates an Oriental hybrid with flowers that vary from up- to out-facing, with no information about the flower form.  
*speciosum* ‘**Crimson Glory**’ **IX(b-c/d)** indicates a selection from *speciosum* with out- to down-facing flowers with recurved tepals.

Thus, the inclusion of the dual system together with the Division number gives, in an abbreviated form, a quick ‘picture’ of the flower. This information is not repeated in the description that accompanies each entry.

There is no compulsion to use the dual system in all situations. For example, show organizers might prefer to ignore it and simply use the Divisions, or to use the Division classification plus only flower aspect or flower form.

# INTERNATIONAL LILY REGISTER AND CHECKLIST

## 'Abba' I(a/-)

Parentage unknown

R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V., REG: Hoff Quality First (1993)

Inside strong orange-yellow (24B) with light orange (28C) tepal-tips and edges, throat yellowish white (155D); outside light orange-yellow (25D), the basal part light yellowish pink (27A), midribs strong yellow-green (144A) at top; spots dark red (187A), on a third of each tepal; pollen dark reddish orange (172B); stigma dark red (187B). Fls 170 mm wide; tepals 90 × 44 mm, margins smooth, tips strongly recurved. Lvs scattered, 115 × 10 mm, dark green. Stems 0.72 m, mid green with darker markings, and with c.15 fls.

## 'Abendglühen' I(a/-)

Parentage: (*L.* × *hollandicum* × *bulbiferum* var. *croceum*) × (*bulbiferum* var. *croceum* × *lancifolium*)

R: Gebr. N. & B. Laan & Zn (c. 1965), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1969)  
Fls vivid orange (28B) with deeper coloured veins and purple spots.

(Published in *LYB* 33: 254 (1970).)

## 'Abendglut' I(c/d)

Syn. of 'Red Fox'.

## 'Abendschönheit' I(a-b/c-d)

Parentage: 'Violetta' × mixed pollen of seedling C7.45 and 'Brushstroke'

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Inside and outside moderate red (179A), with a short, narrow, pale orange-yellow (23D) stripe above each nectary; spots scattered, small, dark red (183A), in centre of fl.; nectaries strong pink (54C); stamens conspicuous; pollen moderate red (179A); stigma moderate yellowish pink (39C) on a long, dark style. Fls 130 mm wide; tepals 60 × 26 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 12 mm. Stems 1.2 m, dark green, slightly hairy, with 8-10 fls. Late July.

(Nomenclatural standard: colour print provided by registrant (WSY 0024706).)

## 'Abendsonne' I(b/d)

Parentage unknown

R: L. Neumann (c. 1974), N: L. Neumann, REG: L. Neumann (1988)

Fls butter-yellow, with an orange centre; spots brown; pollen brown. Stems 0.8 m, dark, with 8-10 fls. Mid July.  
(Published in German Lily Group sales list, 1980.)

## 'Aberdeen' I(a-b/b)

Parentage: ('Grand Prix' × (('Red Carpet' × 'Lemon Glow') × 'Pineapple')) × 'Gran Paradiso'

R: Bischoff Tulleken Lelies B.V. (pre 1994), REG: Fa P.C. Hoogland (2000)

Inside vivid reddish orange (32A), each tepal a little stronger coloured at base and vivid reddish orange (34A) towards tip, midveins vivid reddish orange (33A); outside vivid reddish orange (34B); spots and papillae present; nectaries red-purple; pollen reddish brown; stigma purple. Fls 150 mm wide; tepals 100 × 60 mm, margins ruffled, tips recurved. Lvs scattered, 70 × 20 mm. Stems 1 m, green with dark spots and stripes, and with 4-6 fls. Early.

## 'Aberfoyle' I(c/-)

Parentage: ((*dauidii* var. *unicolor* × 'Lillian Cummings') × 'Edith Cecilia') × ((*dauidii* var. *unicolor* × 'Lillian Cummings') × 'Edith Cecilia')

R: W.D. Evans (1969), N: University of Guelph (1975), I: University of Guelph (1979), REG: University of Guelph (between 1979 and 1982)

Inside light orange-yellow (23C); outside light orange-yellow (23C) with green stripes and strong red (53C) base; spots faint, near the throat. Lvs scattered, mid green. Stems 0.7 m.

(Published in *Ontario Regional Lily Soc. Newsletter*, Sept. 1975.)

## 'Abraxas' I(a/-)

Parentage: 'Pink Champagne' × 'Gelber Herold'

R: A. Weinreich, N: A. Weinreich, I: A. Weinreich (1979), REG: A. Weinreich (1985)

Inside brilliant yellow (7A); outside brilliant greenish yellow (7C) with a brown-red overlay on midribs; spots sparse, tiny, dark red (187A), on a third of each tepal; nectaries white; pollen moderate reddish orange (171A). Fls 110 mm wide; tepals 84 × 31 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 13 mm, mid green. Stems 1.2-1.4 m, dark violet, with bulbils. July.

(Published in *Liliářská ročenka*, 1983.)

## 'Abruzzo' VII(a-b/-)

Parentage: ('Casa Blanca' × seedling STD) × seedling X99

R: Vletter & Den Haan (1988), G: Vletter & Den Haan, N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1997), REG: Langedijk Lelies B.V. (1997)

Inside strong/light purplish pink (55B/C) on a yellowish white (155D) ground, tepal-edges yellowish white (155D), midveins light greenish yellow (8B), throat yellowish white (155D); outside light purplish pink (55C) on a yellowish white (155D) ground, tepal-edges

yellowish white (155D), tinged with strong yellow-green (144B) at base, tipped strong yellow-green (143A); spots dark red (59A), on basal part of each tepal; papillae dark red (59A), in the throat; nectaries strong yellow-green (144B); pollen strong orange (169C); stigma greyish yellow-green (148D) and dark red (59A). Fls 210 mm wide; tepals 125-135 × 45-60 mm, margins ruffled, tips recurved. Lvs scattered, 190 × 30 mm, green. Stems 1.1 m, pale green, with 7-9 fls.

#### **'Abstinence' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1983), G: J. Vasarietis (1987), N: J. Vasarietis (1991), I: J. Vasarietis (1991), REG: J. Vasarietis (1992)

Fls pale yellow (20D); spots black, on basal quarter of each tepal; nectaries cream; pollen orange. Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 16 mm, mid green. Stems 0.7 m, green, with c.7 fls. Early July.

#### **'Abu Hassan' I(a/-)**

Parentage: (*cernuum* × *lancifolium*) × Red Knight Group  
R: Gebr. N. & B. Laan & Zn, G: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn (1980), REG: Gebr. N. & B. Laan & Zn (1980)

Inside brownish orange (165B), centre strong red (53B); spots dark brown; anthers moderate reddish orange (173B). Tepal-margins smooth, tips not recurved. Lvs scattered, dark green. Stems 0.7 m.  
(Published in *Bloembollencultuur*, July 1980.)

#### **'Abydos' I(a/b)**

Parentage: unnamed seedling × 'Pollyanna'  
R: Mak-Leek Inc. (1997), N: Mak-Leek Inc., REG: ICRA (1998)

Buds and fls clean yellow. Tepal-tips recurved. Lvs light green. Stems 1.2 m. Late. Polyploid.

#### **'Abyssinian' I(c/d)**

Parentage: 'Edna Kean' × unknown  
R: P.H. Wright (pre 1954), N: P.H. Wright  
Tepals very dark red. Stems 1.2-1.5 m. July.  
(Published in *Carrot Valley Nursery Cat.*, 1954.)

#### **'Aby Star' VII(a/b)**

Parentage: (('Sweet Frost' × 'Star Gazer') × unnamed seedling) × 'Impressive'  
R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside yellowish white (155B), midveins brilliant yellow to light greenish yellow (8A/B), throat yellowish white (155B); outside yellowish white (155B), with a little red-brown at base; spots brilliant yellow (8A), on two-thirds of each tepal; papillae yellowish white (155B) and light greenish yellow (8B), in the throat; nectaries strong yellow-green (144B); pollen strong reddish orange/strong orange (169A/B); stigma dark purple/dark greyish purple (79A/202A). Fls 230 mm wide; tepals 110 × 30-40 mm,

margins ruffled, tips strongly recurved. Lvs scattered, 180 × 40 mm, green. Stems 1.1 m, pale green with darker markings at lf-nodes, and with 3-4 fls.

#### **'Academic Korolëv' VI(-/c)**

Parentage: selection from Cosmic Group  
S: N.A. Miroshniczenko (c. 1979), N: N.A. Miroshniczenko

Fls dark orange, up to 170 mm wide, with a large, jade-green nectary-star in the throat. Stems up to 1.7 m. July.

#### **'Acadian Group' VIII(a,b/-)**

Parentage: *L. × phildauricum* 'Glow' & other *philadelphicum* hybrids × Preston Group  
R: J.C. Ericksen (1950s), N: J.C. Ericksen, I: J.C. Ericksen, REG: J.C. Ericksen (1983)

Fls clear red to rusty red or yellow, often orange outside, often spotted, some fragrant; nectaries sometimes yellow; pollen dark. Lvs scattered, dark green. Stems 0.45-0.6 m, with 5-10 fls.

#### **'Acapulco' VII(-/d)**

Parentage: 'Star Gazer' × seedling 159  
R: Vletter & Den Haan (1981), G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1989), REG: Vletter & Den Haan (1991)

Inside deep to moderate purplish pink (66C/D), midvein on basal half of each tepal vivid red (46C), throat strong yellow-green (143C) edged with brilliant greenish yellow (6C); outside deep to moderate purplish pink (70C/D), midribs brilliant yellow-green (150C), outer tepals suffused with strong purplish red (64B); spots dark red (187B), on basal half of tepals (chiefly on inner tepals); nectaries deep purple (79C); pollen strong orange (169B). Fls 270 mm wide; tepals 130 × 65 mm, margins ruffled, tips slightly recurved. Lvs scattered, 170 × 40 mm, mid green. Stems 1.3 m, green with darker markings, with 4-6 fls. May to June (under glass).

#### **'Accent' I(a/-)**

Parentage: ('Connecticut King' × (*leichtlinii* var. *maximowiczii* 'Unicolor' × 'Golden Wonder')) F<sub>2</sub>  
R: E.A. McRae (1970), G: Oregon Bulb Farms, Inc. (1973), N: Oregon Bulb Farms, Inc. (1983), I: Oregon Bulb Farms, Inc. (1983), REG: Oregon Bulb Farms, Inc. (1984)

Fls soft orange; brushmarks red, sometimes surrounded with spots; nectaries green; pollen orange. Tepals 80 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm, mid green. Stems 1.4 m, light green, with 6-20 fls. Mid to late June.

#### **'Acclaim' VII(a-b/c)**

Parentage unknown  
R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1962), N: H.J. Strahm (1972), I: H.J. & R.L. Strahm (1972), REG: Strahm's Lilies, Inc. (1981)

Inside white, throat strong yellow-green (144B); outside white and pale yellow (18C); spots usually present, strong reddish purple (70B), on half of each tepal; nectaries strong greenish yellow (151A); pollen orange.

Fls 200 mm wide; tepals broadly overlapping at base, 95 × 70 mm, margins ruffled, tips slightly recurved. Lvs scattered, 170 × 45 mm, dark green. Stems 1.8 m, green, with c.7 fls. Aug.  
(Published in Strahm's sales list, 1972.)

**'Ace' IX(b/a)**

Syn. of *longiflorum* 'Slocum's Ace'.

**'Ace of Spades' I(a/c)**

Parentage: ('Sun Ray' × 'Windahloo') × ('Edith' × 'Fudge Sundae')

R: E.E. Fox (1989), G: E.E. Fox (1993), N: E.E. Fox (1996), I: Fox Lily Ranch (2002), REG: E.E. Fox (2001)  
Inside vivid yellow (12A), throat brilliant yellow-green (150B); outside vivid yellow (9A); brushmarks spear-point-shaped, dark red (187A); spots absent; nectaries lime-green, white-frosted; pollen vivid orange-yellow (23A); stigma off-white towards light yellow-green (145D). Fls 160 mm wide; tepals 80 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 80 × 12 mm. Stems 0.6 m, pale green, with 9-12 fls. Late July. (Epithet was suggested by the spade-like shape of the brushmark.)

**'Achievement' II(c/d)**

Parentage: (*martagon* × *bansonii*) F<sub>2</sub>  
R: J. de Graaff (c. 1954), N: J. de Graaff  
Fls pale lemon-yellow. Stems 1 m. June.

**'Achilles' I(a/-)**

Parentage: (*lancifolium* var. *flaviflorum* × 'Destiny') × *wilsonii* var. *flavum*  
R: C. North (pre 1977), N: C. North, I: Lingarden Ltd, REG: C. North (1977)  
Fls vivid yellow (9A); spots dark. Stems medium height, with 20-30 fls. Aug.  
(Published in *Lilies and other Liliaceae*, 1977: 76.)

**'Acropolis' VII(-/d)**

Parentage unknown  
R: Fa J. Dignum & Zn (1977), G: Fa J. Dignum & Zn (1979), N: Fa J. Dignum & Zn, I: Fa J. Dignum & Zn, REG: Fa J. Dignum & Zn (1986)  
Inside and outside white, throat white-green; spots absent; nectaries purple; pollen red-brown. Fls 180 mm wide; tepals 110 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 30 mm, mid green. Stems 0.85-0.9 m, green, with 4-5 fls.

**'Action' VII(a/b-c)**

Parentage: seedling 90-007 × seedling 90-058-1  
R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)  
Inside vivid purplish red (57C/D), towards tip and margins almost white, midveins yellow at base changing upwards to deep red (53A); outside vivid purplish red (57D); spots dark red (187A), on basal half of tepals; papillae present; nectaries green changing into yellow; filaments pale green; pollen moderate reddish orange (171A); stigma dark red (187A). Fls 180 mm wide; tepals

110-115 × 44-62 mm, margins ruffled, tips recurved. Lvs scattered, 135-175 × 34-50 mm, dark green. Stems 0.95-1.4 m, green, with 3-10 fls. Midseason.  
(Nomenclatural standard: colour print supplied by registrant (WSY 0096389).)

**'Actrice' VII(-/c-d)**

Parentage: *L. × parkmanii* 'Allura' × 'Star Gazer'  
R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1990)  
Inside strong purplish pink (55B), midveins narrow, yellowish white (155D) and strong red (53C); outside strong to deep purplish pink (68B/70C) flushed with ivory-white; spots dark red (187B), on basal half of each tepal; papillae in the throat; nectaries moderate purplish red (70A); pollen strong orange (168B). Fls 250 mm wide; tepals 120 × 55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 35 mm, mid green. Stems 0.95 m, pale green with darker markings, and with 6-8 fls.

**'Acuraugs' I(a/b)**

Parentage unknown  
R: J. Vasarietis (1989), G: J. Vasarietis (1992), N: J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J. Vasarietis (1999)  
Inside white, midveins with a greenish stripe c.10 mm long above nectaries, tepal-tips curled in at margins at least at first, light yellowish pink (38C), soon fading to white, throat moderate yellowish pink (38B); outside light yellowish pink (38D); spots numerous, rather large, on basal third of each tepal; nectaries white; pollen brown; stigma brownish. Fls 160 mm wide; tepals 92 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 95 × 11 mm, dark green. Stems 0.7 m, green, with c.6 fls. Early July.  
Trade designation: PARAMOUR.  
(Published in *Lilium Balticum Cat.*, 1996 and *Liliju Avize*, 1999. Nomenclatural standard: colour print provided by registrant (WSY 0023027).)

**'Ada' VII(-/c)**

Parentage: (*auratum* × unknown) × *L. × parkmanii* 'Jillian Wallace'  
R: G.M. Chandler, G: G.M. Chandler (1956), N: G.M. Chandler, I: G.M. Chandler (1964)  
Inside parchment-white, fading to pure white with pink-flushed centre; outside with faint lilac spots, outer tepals pink. Fls 190 mm wide; tepals broad, overlapping. Lvs *auratum* type. Stems 1.5 m.

**'Adagio' I(c/-)**

Parentage: 'Edith Cecilia' × 'Lighthouse'  
R: J. de Graaff (c. 1962), N: J. de Graaff  
Fls crimson-red; spots nearly black. Stems 1.2-1.5 m. July.

**'Adam Bryden's Variety' IX(c/d)**

See *lancifolium* 'Adam Bryden's Variety'.

**'Adamita' I(b-c/b)**

Parentage: 'Letkis' × 'Advent'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997),

REG: B. Mičulka (1997)

Inside pale peach-salmon, centre tinted brown; outside peach-coloured, midribs pinkish; spots medium large, dark pinkish brown, fairly numerous, on two-fifths of each tepal; nectaries dark olive, white-granulated; filaments pale pink; pollen brown-orange; stigma pinkish brown. Fls 115 mm wide; tepals 85 × 40 mm, tips moderately recurved; pedicels 65 mm long, brown-dotted. Lvs scattered, 80 × 14 mm, dull mid green. Stems 0.9 m, brownish (brown-black at base), with a short infl. Early July.

**'Adamovo' IX(-/d)**Misspelling of *henryi* 'Adams'.**'Adams' VI(-/a)**Parentage: 'T.A. Havemeyer' × *sulphureum*

R: S.L. Emsweller, N: S.L. Emsweller

Fls creamy yellow. Stems 1.5 m. Aug.

(Published in *Strawberry Hill Cat.*, 1954.)**'Adams' IX(-/d)**See *henryi* 'Adams'.**'Adazhio' I(-/-)**

Parentage unknown

Fls apricot; each tepal with a red-purple brushmark.

(Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to 'Adagio'. Published in M.F. Kireeva, *Lilii*, 62 (2000).)**'Addington' I(a/-)**

Parentage: 'Grace Marshall' × 'Lyla McCann'

R: I. Preston (c. 1952), N: I. Preston, I: Central Experimental Farm (1953)

Fls light yellow; spots brown. Stems 0.6 m. July.

**'Adelaid' I(a/-)**

Parentage: ('Valiant' × unknown) × 'Connecticut Glow'

R: Piedmont Gardens (c. 1975), N: Piedmont Gardens (1976), I: Piedmont Gardens (1976)

Fls strong red (46A); spots absent; nectaries white; pollen strong reddish orange (169A). Tepal-margins smooth.

Lvs narrow. Stems 1 m. July.

(Published in *Piedmont Gardens Cat.*, 1976.)**'Adelina' I(a/b)**Parentage: *wilsonii* var. *flavum* × 'Connecticut King'

R: E.A. McRae (1971), G: Oregon Bulb Farms, Inc.

(1974), N: Oregon Bulb Farms, Inc. (1982), I: Oregon Bulb Farms, Inc. (1982), REG: Oregon Bulb Farms, Inc. (1982)

Inside vivid yellow (12A) with a vivid orange-yellow (21A) flush (20 × 20 mm) along midveins, throat gold; outside vivid yellow (12A); spots inconspicuous, in a ring parallel to nectaries; nectaries green; pollen moderate orange (167A). Fls 150-180 mm wide; tepals 90 × 30-50 mm, margins smooth, tips slightly recurved. Lvs

scattered, 80-120 × 20 mm, dark green. Stems 1-1.5 m, soft green, with 7-30 fls. Late June to July.

**'Adina' I(c/-)**Parentage: *lancifolium* × Citronella Group

R: Laan, N: Laan (1970)

Fls 80 mm wide; tepals 70 × 27 mm. Lvs 75 × 9 mm.

Stems 0.85 m.

(Published in B. Mičulka, *Odrůdy lilii pěstované u nás*, (1995))**'Adinda' VII(-/a)**

Parentage: unnamed seedling × unnamed seedling

R: De Jong Lelies Holland B.V. (1985), G: De Jong

Lelies Holland B.V. (1988), N: De Jong Lelies Holland

B.V. (1991), I: De Jong Lelies Holland B.V. (1991),

REG: De Jong Lelies Holland B.V. (2001)

Inside strong purplish pink (73B), each tepal paler towards edges and tip, edged yellowish white (155D), midveins yellow, changing to strong red (53B); outside yellowish white (155D); spots and papillae present; nectaries green; pollen reddish brown; stigma red-purple. Fls 220 mm wide; tepals 120 × 45 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 35 mm. Stems 1 m, green, with c.6 fls. Midseason.

**'Admiral' I(a/-)**

Parentage: selection from Coronado Group

S: Bischoff Tulleken Leliecultuur B.V. (c. 1976), G:

Bischoff Tulleken Leliecultuur B.V. (1976), N: Bischoff

Tulleken Leliecultuur B.V. (1979), I: Bischoff Tulleken

Leliecultuur B.V. (1979), REG: Bischoff Tulleken

Leliecultuur B.V. (1985)

Strong orange-yellow (24B), throat nasturtium-orange; outside brilliant/light orange-yellow (23B/C); spots chocolate-brown, in the throat and on half of each tepal; nectaries oxblood-red; pollen reddish brown. Buds hairy. Fls 80-90 mm wide; tepals 70 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 5 mm, dark green. Stems pale green with some darker markings, hairy, with c.6 fls. Early June.

**'Admiral Nelson' VI(b-c/d)**Parentage: (*henryi* × unknown) × unknown

R: J. Kovář, N: J. Kovář, I: J. Kovář (1998), REG: J. Kovář (1998)

Inside bright apricot, tepal-edges fading to white, throat paler; outside paler apricot, midribs cadmium-yellow; tiny to medium-sized, brown-carmine dashes on half of each tepal (numerous at edges); papillae numerous, apricot; nectaries deep green; pollen dark chocolate-brown; stigma pale grey-green. Fls 85 mm wide; tepals 90 × 30 mm, strongly recurved; pedicels 95 mm long, lightly spotted, with secondary buds. Lvs scattered, 160 × 32 mm, slightly glossy mid green. Stems 1.3 m. Bulbs dark brown-red. Late July.

(When registered and included in *ILR Seventeenth Supplement*, the spelling was 'Admiral Nelson': it was corrected in the *Eighteenth Supplement*.)

**'Admiration' I(a/b)**

Parentage: Sundrop Group × 'Sterling Star'  
 R: Bischoff Tulleken Leliecultuur B.V. (1978), G: Bischoff Tulleken Leliecultuur B.V. (1981), N: Bischoff Tulleken Leliecultuur B.V. (1987), I: Bischoff Tulleken Leliecultuur B.V. (1988), REG: Bischoff Tulleken Leliecultuur B.V. (1989)  
 Inside light greenish yellow/pale yellow-green (4C/D); outside pale yellow-green (4D), midribs light greenish yellow (4C), outer tepals flushed with moderate reddish orange (179C); spots dark red (187B), on basal half of each tepal; pollen moderate orange (167A). Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 10 mm, mid green. Stems 0.6 m, green, with c.8 fls. June.

**'Adobe Fire' I(a-b/-)**

Parentage: ('Appleblossom' × 'Sunrise') × 'Willow Wood'  
 R: J. Wadekamper (1978), N: J. Wadekamper (1984), I: Borbeleta Gardens (1984), REG: Borbeleta Gardens (1984)  
 Fls very light pink over ivory; spots and brushmarks reddish brown; nectaries cream-ivory; pollen mid brown. Tepals 70 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 12 mm, dark green. Stems 0.8 m, dark green, with 12-15 fls. Early July.  
 (Published in *Borbeleta Gardens Cat.*, 1984.)

**'Adonis' I(c/d)**

Parentage: *lankongense* × 'Edith Cecilia'  
 R: C. North, N: C. North, I: C. North (1976), REG: C. North (1976)  
 AM 1974  
 Tepals strong purplish red (64B); pollen sparse. Stems with c.20, rather small, scented fls. July.  
 (Published in *Lilies and other Liliaceae*, 1976: 89.)

**'Advance' VII(-/c)**

See *L. × parkmanii* 'Advance'.

**'Advantage' VIII(a/b)**

Parentage: seedling BG 95-60 × seedling AJ 94-15  
 R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2003)  
 Inside brilliant orange (25C), strong orange (25A) towards tepal-edges, throat light orange-yellow (24C); outside light orange-yellow (24C), midribs light yellow-green (144D), each tepal brilliant orange (25C) towards edges and tip; spots dark red (59A), on basal third of each tepal; papillae strong orange (25A); nectaries strong orange (25A); filaments orange; pollen dark red (183A); stigma strong purplish red (59D). Fls 170 mm wide, slightly fragrant; tepals 122 × 52 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 155 × 24 mm, dark green. Stems 1.2 m, green, with 5-6 fls.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Advent' I(b-c/b-c)**

Parentage: ('Nutmegger' × ('Connecticut King' × 'Pink Champagne')) × 'Heloma'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)

Inside peach-coloured, throat paler with a brownish tint, tepal-tips paler; outside paler with brownish and greenish midribs; spots numerous, large, oval, dark brown-purple, on two-thirds of each tepal; papillae numerous; pollen brown-orange; nectaries brownish olive-green, frosted. Fls 110 mm wide; tepals 80 × 40 mm, thick, tips slightly recurved; pedicels 70 mm long, densely spotted, with secondary buds. Lvs scattered, 125 × 16 mm, slightly glossy dark green. Stems 1.1 m, thick, black-brown, with fls in an irregular short raceme. Early July.

**'Advent' I(a/c)**

Syn. of 'Solemnity'.

**'Adventure' VII(-/c)**

See *L. × parkmanii* 'Adventure'.

**'Aegina' I(b/c)**

Parentage: 'Schwefelblüte' × yellow-orange-flowered, Asiatic brushmarked seedling  
 R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2003)  
 Inside moderate orange (171C) with a slight red tinge; outside somewhat paler, midribs beige; spots absent; nectaries soft pink; pollen strong reddish orange (169A); stigma strong yellowish pink (37A). Fls 160 mm wide; tepals 70 × 27 mm, margins smooth, tips not or very slightly recurved. Lvs scattered, 90 × 12 mm. Stems 1 m, mid green, with c.12 fls. Mid July.  
 (Named after the Greek island. Nomenclatural standard: colour print provided by registrant (WSY 0038774).)

**'Aelita' I(a-b/b-c)**

Parentage: 'Redstart' × 'Dora Pinnow'  
 R: M.F. Kireeva (1975), N: M.F. Kireeva  
 Fls pale yellow, centre tan; spots numerous, ochre-orange, on four-fifths of each tepal; pollen orange-brown. Fls 120-160 mm wide; tepals recurved. Lvs 120-140 × 15 mm, shiny dark green. Stems 0.8-1 m, with 8-16 fls and numerous bulbils. July.  
 (Published in M.F. Kireeva, *Lilii*, 41 (1984).)

**'Aerobic' VIII(a/b)**

Parentage: 'Loblanca' × white-flowered Asiatic seedling  
 R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1996)  
 Inside paler than pale yellow-green (4D), throat strong yellow-green (144C); outside paler than pale yellow-green (4D), midribs moderate red (182A) at base and strong yellow-green (144C) at top; spots dark red (187B), mainly in the throat on inner tepals; papillae absent; nectaries white, hairy, with a little strong yellow-green (144C) above, shading into the tepal; pollen deep orange-yellow (163A); stigma brilliant yellow-green (150C). Fls 190 mm wide; tepals 120 × 45-60 mm, margins smooth, tips hardly recurved. Lvs scattered, 140

× 22 mm, mid green. Stems 0.8 m, green with some darker markings, with 3-9 fls. June.  
(*A. longiflorum*/Asiatic (LA) hybrid.)

#### 'Aethra' I(b/b)

Parentage: Hallmark Group × seedling 80-51-05  
R: Hartle-Gilman Gardens (1982), G: Hartle-Gilman Gardens (1984), N: Hartle-Gilman Gardens (1995), I: Hartle-Gilman Gardens (1995), REG: Hartle-Gilman Gardens (1995)

Inside with apical two-thirds of each tepal powdery pale yellowish pink (27C), edges light yellowish pink (27A), throat strong to light orange-yellow (24B,C); outside a blend of light yellowish pink (27C) and strong to light orange-yellow (24B,C); numerous spots (and a few short lines) greyed dark purple, on basal half of each tepal; nectaries lightly frosted; pollen bright rusty red. Fls 121 mm wide; tepals 62 × 30 mm, margins strongly ruffled, tips fairly strongly recurved. Lvs scattered, 86 × 11 mm, mid green (darker than moderate olive-green (146A)), with c.12 fls in an elongated, racemose infl. Late.

#### 'Affection' I(b-c/-)

Parentage: 'Pastel Princess' sibling (parentage unknown, but involves *pumilum*) × Wadekamper seedling 79-82  
R: W.D. Evans (1982), G: W.D. Evans (1985), N: W.D. Evans (1992), I: W.D. Evans (1992), REG: W.D. Evans (1992)

Inside light purplish pink (55C), midveins deeper, throat pale yellow (18D); outside pale purplish pink (55D), midribs light purplish pink (55C); spots burgundy; nectaries pale purplish pink (55D); pollen moderate reddish brown (166B). Fls 135 mm wide; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 8 mm, mid green. Stems 0.9 m, brown with an underlay of green, with c.11 fls. Mid to late July.

#### 'Aflame' I(b/b-c)

Parentage: 'Cromottia' × 'Redwing'  
R: G.M. Chandler (1946), G: G.M. Chandler (1949), N: G.M. Chandler, I: G.M. Chandler (1961)  
Inside with tepals brilliant orange-red at tips, shading to golden in centre; lightly spotted with black in basal part of each tepal. Fls 175 mm wide. Stems up to 0.9 m, with 5-7 fls.  
(Published in R.M. Withers, *Liliums in Australia*, 177 (1967).)

#### 'Afra' I(a/-)

Parentage: 'Enchantment' × (*dauidii* × 'Stroinaia')  
R: De Jong Lelies Beheer B.V. (pre 1978), N: De Jong Lelies Beheer B.V., REG: De Jong Lelies Beheer B.V. (1978)  
Tepals strong orange (30D), flushed with carrot-red; spots dark brown; anthers chocolate-brown.  
(Published in *Lilies and other Liliaceae*, 1978/9: 104.)

#### 'Africa' IX(b/c)

See *auratum* 'Africa'.

#### 'Africa' VII(-/b)

Parentage: selection from Zealandia Group  
S: L.B. Tuffery (c. 1966), N: L.B. Tuffery  
Tepals very dark red, tending to almost black, with much darker, large spots. Stems medium height. Midseason.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

#### Āfricāniete Div. ?

Given as a parent of several cvs. No further details.

#### 'Afričanka' VI(b-c/a)

Parentage unknown  
R: B. Mičulka (1989), N: B. Mičulka  
Inside bronze-orange with brownish red veining, throat apricot; outside golden yellow with old rose veining and midribs; pollen dark apricot; stigma dark brown-purple. Fls 120 mm wide; tepals 125 × 44 mm, margins wavy, tips moderately recurved; pedicels short, slightly spotted with dark violet. Lvs scattered, 105 × 11 mm, dark green. Stems 1.1 m, silver-grey with a violet tint. Early July.

#### 'African Queen' VI(b-c/a)

Parentage: selection from African Queen Group  
S: J. de Graaff (c. 1958), N: J. de Graaff  
AM 1958  
Inside vivid yellow (16A), with a brown line on outside of inner tepals; outer tepals garnet-brown (HCC 00918). Stems 1.2-1.9 m. July.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cultivar Group. Published in *LYB* 22: 131 (1959).)

#### African Queen Group VI(-/a)

Parentage: selections from Aurelian Group  
S: J. de Graaff (c. 1958), N: J. de Graaff  
AGM 2002  
Inside near vivid yellow (16A) to apricot-orange; outside with garnet-brown (HCC 00918) markings. Stems 1.5-1.9 m. July to Aug.  
(Published in *Greenock Farms Cat.*, 1958/59: 11.  
Included in *ILR* (1982) as African Queen grex.)

#### 'Afterglow' IV(-/-)

Parentage: selection from Bellingham Group  
S: J. de Graaff (c. 1954), N: J. de Graaff  
Fls rich crimson, centre gold; spots black. Stems 1.8 m. July.  
(Published in *Oregon Bulb Farms Cat.*, 1954.)

#### Agate Group VI(-/a)

Parentage: (*sargentiae* × unknown) × unknown  
N: J.M. Shaver, I: J.M. Shaver, REG: Rex Bulb Farms (1984)  
Inside white; outside purple, reddish brown or green; spots absent. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.5-2.1 m, with bulbils. Late July to Aug.  
(Published in *Rex Bulb Farms Cat.*, May 1966: 17.  
Included in *ILR* (1982) as Agate grex.)

**'Agenda' I(a/-)**

Parentage: 'Fire King' (Div. I) × *bulbiferum* var. *croceum*  
 R: Gebr. N. & B. Laan & Zn (c. 1970), N: Gebr. N. & B. Laan & Zn  
 Fls vivid orange (28B), darker in centre; spots purple; anthers dark red-brown.

**'Agita' VI(-/a)**

Parentage unknown  
 R: V.P. Orehovs (1958)  
 Fls white; pollen brown; stigma green. Fls 110 mm wide, strongly scented. Stems 1 m. July to Aug.  
 (Published in M.V. Baranova, *Lilii*, 355 (1990).)

**'Aglona' VI(b/a)**

Parentage: ('Tetra White Henry' × white-flowered tetraploid seedling) × 'Pārgalvīgā'  
 R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)  
 Inside clean white, with a brilliant yellow (13C) blotch in the centre, throat greenish; outside white with green stripes; spots absent, but some strong reddish orange (31B) stripes present; nectaries green; pollen orange. Fls 165 mm wide, slightly scented; tepals 100 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, dark green. Stems 1.1 m, dark green, with c.5 fls. Late July.  
 (Weather-resistant.)

**'Agne' I(a/b)**

Parentage: 'Venta' (Div. I) × 'Baltais Lācis'  
 R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)  
 Inside pale yellow-green (155A) with a light greenish yellow (6D) blotch on tepal-centres, throat green; outside greenish; spots dark red (187A), on a third of each tepal; nectaries green; pollen dark brown. Fls 120 mm wide; tepals 65 × 45 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 70 × 15 mm, dark green. Stems 0.6 m, green, with c.3 fls. Early July.  
 (Nomenclatural standard: colour print provided by registrant (WSY 0022988).)

**'Agnes Bernauer' I(b/-)**

Parentage: 'Blood Tiger' × unknown  
 R: C. Feldmaier (c. 1970), N: C. Feldmaier (1975), I: C. Feldmaier (1978), REG: C. Feldmaier (1975)  
 Inside vivid reddish orange (34A), tepal-tips redder, throat with orange shading; outside vivid reddish orange (34A) with reddish shading; spots large, dark brown, on two-thirds of each tepal; nectaries orange; pollen reddish brown. Tepals 90 × 35 mm, margins smooth, tips reflexed. Lvs 120 × 16 mm, bright green. Stems 1.2 m, suffused with brown, with up to 12 fls, and with bulbils.  
 (Published in *Lilies and other Liliaceae*, 1978/9: 104.)

**'Agnese' I(a/b)**

Parentage: unnamed seedling × mixed pollen from brushmarked seedlings  
 R: D.-V. Škimele (1992), G: D.-V. Škimele (1994), N: D.-V. Škimele (1997), REG: D.-V. Škimele (2001)

Inside vivid yellow, paler at tepal-tips, with dark red, pencil brushmarks, throat yellow; outside vivid yellow, midribs green; a few, tiny, dark red spots near the nectaries; nectaries green; pollen dark yellow; stigma light pink. Fls 140 mm wide; tepals 70 × 35 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 60 × 10 mm, mid green. Stems 0.5 m, green, with c.6 fls. Early July.

(Published in *Liliju Avīze*, 1998.)

**'Agrā Liesma' VII(b-c/b)**

Parentage: white-flowered seedling × 'Liesma'  
 R: D.-V. Škimele (1995), G: D.-V. Škimele (1999), N: D.-V. Škimele (2001), REG: D.-V. Škimele (2004)  
 Inside red, each tepal with a dark red ray, throat green; outside yellowish white, midribs yellow; spots dark red, medium sized, on three-quarters of each tepal; nectaries green; pollen brown; stigma violet. Fls 200 mm wide, slightly scented; tepals 105 × 50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 30 mm. Stems 1.1 m, green, with c.6 fls. Late July.  
 (Published in *Lilium Balticum Lily Register*, 2003.)

**'Agustra' VII(a-b/b)**

Parentage unknown  
 R: J. Wiśniewski (1986), G: J. Wiśniewski (1991), N: J. Wiśniewski (1993), I: W. Peryt (1993), REG: J. Wiśniewski (1993)  
 Inside moderate purplish red (64A), throat light olive (152A); outside strong purplish pink (63C); spots dark red (59A), on three-quarters of each tepal; nectaries strong yellow-green (143C); pollen strong brown (172A). Fls 220 mm wide; tepals 137 × 68 mm, margins smooth, tips slightly recurved; pedicels short. Lvs scattered, 222 × 52 mm, dark green. Stems 1.5 m, moderate yellowish green (137D), with c.13 fls. Mid July.

**'Aida' VI(-/a)**

Parentage: selection from African Queen Group  
 R: J. de Graaff (c. 1963), N: J. de Graaff  
 Inside apricot-yellow; outside dark bronze. Stems 1.5 m. July.

**'Aigul' VI(-/a)**

Parentage: Golden Clarion Group × 'Honeydew'  
 R: B.P. Guzhavein, N: B.P. Guzhavein (1983)  
 Fls dark yellow, scented. Stems 1.5 m.

**'Aija' I(b-c/c)**

Parentage: *lankongense* × unknown  
 R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)  
 Fls pale whitish pink; spots lilac, numerous. Fls 100 mm wide; tepals 60 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 8 mm, mid green. Stems 0.7 m, green.

**'Aileen' VII(-/b)**

Parentage unknown  
 R: J.C. Smit, G: J.C. Smit, I: Van der Salm (Holland), REG: Van der Salm (USA) (1989)

Inside soft pink suffused with red, tepal-tips rose-pink, throat cream/gold; outside pink; spots numerous; nectaries lime-green; pollen yellow to gold. Tepals 80 × 30 mm, margins ruffled, tips slightly recurved. Lvs scattered, 100 × 50 mm, dark green. Stems 1.2 m, light green, with 6-20 fls. Early July.

**'Aina' I(b/-)**

Parentage unknown

R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)

Fls light yellow; spots dark brown, on a third of each tepal; nectaries pale green; pollen brown. Fls 150 mm wide; tepals 70 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 0.9 m, green, with c.6 fls.

**'Ainava' I(b/c)**

Parentage: unnamed seedling × unknown

R: D.-V. Škimele (1990), G: D.-V. Škimele (1993), N: D.-V. Škimele (1996), REG: D.-V. Škimele (2001)

Inside deep yellow, tepal-tips paler, centre darker with a narrow brown ray, throat greenish yellow; outside deep yellow suffused with maroon; spots absent; nectaries light green; pollen vivid orange; stigma dark yellow. Fls 140 mm wide; tepals 75 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 15 mm. Stems 0.7 m, brownish green. Mid July.

**'Airam' I(a/-)**

Parentage unknown

R: A. Rech (pre 1983), N: A. Rech, REG: A. Rech (1988)

Fls scarlet-red. Lvs dark green. Stems 0.8 m, dark green. Mid July.  
(Published in German Lily Group sales list, 1983.)

**'Air Drop' VI(c/-)**

Parentage: *L. × aurelianense* × (*leucanthum* var. *centifolium* × *sargentiae*)

R: G.W. Darby (c. 1954), N: G.W. Darby

Fls light champagne-buff, centre orange.

**'Airisa' I(a/b)**

Parentage: unnamed seedling × 'Monte Rosa'

R: D.-V. Škimele (1995), G: D.-V. Škimele (1998), N: D.-V. Škimele (2000), REG: D.-V. Škimele (2004)

Inside soft pink, each petal with a paler margin and darker base, and with a narrow vivid pink ray; outside pale pink, midribs greenish brown; spots brown, tiny, in centre; nectaries white; pollen brownish orange; stigma maroon. Fls 140 mm wide; petals 80 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 40 × 10 mm. Stems 0.6 m, dark green, with c.7 fls. Mid July.

**'Airmail' VII(a-b/b)**

Parentage: ('Furore' × 'Star Gazer') × white-flowered seedling

R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997),

REG: Bischoff Tulleken Lelies B.V. (1997)

Inside white (whiter than 155B), midveins light greenish yellow (7D) fading towards top; outside white (whiter than 155D), basal part of midribs pale yellow-green (155A), strong yellow-green (144C) at top, tepal-tips strong yellow-green (143A); spots light greenish yellow (7D) on basal part of each tepal; papillae yellowish white (155D) and light greenish yellow (7D), in the throat; nectaries strong yellow-green (143D); pollen strong brown (172A); stigma dark purple (79A). Fls 240 mm wide; tepals 130 × 50-60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 160 × 40 mm, mid green. Stems 0.97 m, light green, with 4-7 fls. July.

**'Aislaby Apricot' III(c/d)**

See *L. × testaceum* 'Aislaby Apricot'.

**'Aiva' I(b/c)**

Parentage: 'Evrika' × 'Arabeska'

R: A. Balode (1994), G: A. Balode (1996), N: A. Balode (1998), REG: A. Balode (1998)

Inside white, with deep red (60A) marbling, throat light yellow-green (142C); outside brilliant yellow-green (142B); spots small and large, deep red, on two-thirds of each tepal; nectaries greenish; pollen absent. Fls 85 mm wide; tepals 60 × 35 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 85 × 5 mm, mid green. Stems 0.75 m, green, with c.7 fls. Mid July.

**'Aivenko' I(a/-)**

Parentage: Amālijas Group × ('Nutmegger' × Symphonietta Group)

R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)

Inside light violet; outside violet; spots numerous, large, dark violet, on two-thirds of each tepal; pollen brown. Fls 130-140 mm wide; tepals 60 × 35 mm, margins ruffled, tips slightly recurved. Lvs scattered, 50 × 10 mm, mid green. Stems 1.1 m, green. Mid July.

**Ajax Group VI(-/a)**

Parentage unknown

R: W.M. Spry (c. 1965), N: W.M. Spry

Fls pink.

(Included in *ILR* (1982) as Ajax grex.)

**'A.J. Harmeling' IV(c/-)**

Syn. of 'Stephen Harmeling'.

**'Akademic N.J. Vavilov' VI(-/a)**

Unaccepted spelling of 'Akademik N.I. Vavilov'.

**'Akademic Zichfeld' VI(-/a)**

Error for 'Akademik I. Eikhfeld'.

**'Akademik I. Eikhfeld' VI(-/a)**

See *L. × imperiale* 'Akademik I. Eikhfeld'

**'Akademik N.I. Vavilov' VI(-/a)**

Parentage: Olympic Group × *L. × imperiale* 'Estoniia'

R: V.N. Esinovskaya (1965), N: V.N. Esinovskaya

Inside cream/greenish, throat yellow; outside with pink midribs; pollen ochre-brown; stigma green. Fls 150 mm wide, slightly fragrant. Stems up to 1.2 m, with up to 5 fls, and with bulbils. July to Aug.

(Published in *LYB* 33: 76 (1970) as 'Akademic N.J. Vavilov' which is an unaccepted spelling.)

**'Akane'** I(c/d)

Parentage: 'Josef Matásek' × 'Tigrimount'

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside dark crimson-red, shiny, tepal-tips paler; outside with tepals paler in centre, midribs brownish; spots brown-black, moderately numerous, on half of each tepal; nectaries greyed brown, crimson-granulated, partly open; filaments dark red; pollen red-brown; style dark red; stigma crimson. Fls 105 mm wide; tepals 75 × 33 mm, very strongly recurved, margins slightly wavy; pedicels 95 mm long, thick, dotted with dark brown, with secondary buds. Lvs 90 × 8 mm, dull mid green. Stems 0.95 m, slender, rigid, dark brown. Late June.

**'Akarana'** VII(-/d)

See *L. × parkmanii* 'Akarana'.

**'Akatsuki'** IX(c/d)

See *leichtlinii* var. *maximowiczii* 'Akatsuki'.

**'Akatsuki'** I(a/-)

Parentage: selection from hybrids involving *L. × maculatum* 'Chigusa', *L. × maculatum* 'Kisukaski' & *L. × hollandicum* 'Vermilion Brilliant'

R: S. Tanabe et al., N: S. Tanabe et al. (1982)

Flowers bright vermilion red, moderately spotted, 160 mm wide. Stems 0.5 m. Midseason.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Akenishiki'** I(a/-)

Parentage: 'Enchantment' × 'Orange Triumph'

R: S. Fujishima (c. 1962), N: S. Fujishima

Fls red.

**'Akiba-nishiki'** I(a/-)

Parentage: selection from hybrids involving *L. × maculatum* 'Chigusa', 'Sakigake', *L. × hollandicum* 'Vermilion Brilliant', *L. × maculatum* 'Kisukashi' & 'Hirado'

S: S. Tanabe et al. (1982), N: S. Tanabe et al.

Tepals vivid reddish orange (34A); spots numerous, orange. Fls 140-150 mm wide. Stems 0.5-0.7 m. Early

**'Akimina'** II(c/d)

Parentage: (*martagon* × unknown) × (*martagon* × unknown)

R: F. Tarlton (pre 1970), G: F. Tarlton, N: F. Tarlton (1988), I: Honeywood Lilies, REG: F. Tarlton (1988)

Inside light yellow (10C), throat light yellow (11B); outside pale yellow (11D) with a slight purplish flush in bud; spots c.18, oval, c. 1 mm long, strong orange (46A), on basal half of each tepal; nectaries slightly

deeper yellow; pollen moderate yellow (162A). Tepals 35 × 14 mm, margins smooth, tips slightly recurved. Lvs whorled, 140 × 30 mm, mid green. Stems 0.95 m, mid green, with c.10 fls. June.

**'Akina'** I(a/b)

Parentage: 'Apeldoorn' × seedling (no.1258 × no.531)

R: De Jong Beheer B.V. (1988), G: De Jong Beheer B.V., N: De Jong Beheer B.V. (1992), I: De Jong Beheer B.V. (1993), REG: De Jong Beheer B.V. (1995)

Inside vivid yellowish orange (30C), midveins strong orange (24A); outside near strong orange (30D); spots very few, inconspicuous; papillae present; nectaries orange; pollen reddish brown; stigma purple. Tepals 102 × 36 mm, margins smooth, tips slightly reflexed. Lvs scattered, 123 × 13 mm. Stems with 6-8 fls (from 14-16 cm bulbs). Midseason to late.

**AKITA** I(a-b/c)

Trade designation of 'Sayuri'.

**'Akkord'** I(a-b/b-c)

Misspelling of 'Akorde'.

**'Akord'** I(a-b/b-c)

Misspelling of 'Akorde'.

**'Akorde'** I(a-b/b-c)

Parentage: selection from Willtigrinum Group

S: V.P. Orehovs (post 1959), N: V.P. Orehovs  
Fls pale orange; each tepal with a purple-brown brushmark.

(Misspelling: 'Akkord'. Published in *LYB* 33: 81 (1970) and included in *ILR* (1982) as 'Akord' which is also a misspelling.)

**'Aksioma'** I(-/-)

Parentage unknown

Fls yellow; each tepal with a red-purple brushmark.

(Published in M.F. Kireeva, *Lilii*, 62 (2000).)

**'Aktiva'** VII(a/b)

Parentage: seedling 9010 × seedling 9910

R: Trior Lelie B.V. (1990), G: Trior Lelie B.V. (1993), N: Trior Lelie B.V. (1993), I: Trior Lelie B.V., REG: Trior Lelie B.V. (1996)

Inside strong purplish red (60D) on a yellowish white (155D) ground, midveins deep purplish red (59B), tepal-edges and throat yellowish white (155D); outside with a very slight strong purplish red (60D) suffusion on a yellowish white (155D) ground, midribs light yellow-green (150D); spots dark red (59A), on basal part of each tepal; papillae present; nectaries strong yellow-green (144B); pollen moderate reddish orange (171A) and strong orange (25A); stigma light yellow-green (145D). Fls 210 mm wide; tepals 115 × 35-55 mm, margins ruffled, tips somewhat recurved. Lvs scattered, mid green. Stems 1.25 m, green with darker markings, with c.6-8 fls.

**'Akvarel' I(a-b/b)**

Parentage: 'Liudmila' (of Kireeva) × ('Rubinovaia' × *cernuum* and its hybrids)

R: M.F. Kireeva (1984), N: M.F. Kireeva

Fls lilac-pink, with a cream-white throat; spots dark purple, small. Fls 120-140 mm wide. Stems 0.6-0.7 m, with 7-11 fls. July.

(Published in M.F. Kireeva, *Lilii*, 45 (2000).)

**'Akvarelnaia' I(a/-)**

Parentage unknown

R: M.F. Kireeva (1984)

Fls dark carmine-pink; spots deep purple. Fls 130-140 mm wide. Stems 0.8-0.9 m, with 9-15 fls. July.

(Published in M.F. Kireeva, *Lilii*, 45 (2000).)

**'Alabaster' VI(b/b)**

Parentage: *leucanthum* var. *centifolium* × *sargentiae*

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls white.

**'Alabaster Rose' I(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Cebeo Lilies, Inc. (pre 1997), N: Cebeo Lilies, Inc.

Inside wine-pink, tepals shading to ivory in centre. Tepals slightly recurved. Stems 0.6-1 m, dark. Late June to July.

(Included in *ILR Nineteenth Supplement* as an unacceptable name: ICNCP, 1995: Art. 17.13 - "rose" is the vernacular name of another genus. However, in 2004 this ICNCP Article was amended and this epithet is now accepted.)

**'Aladdin' I(a/b)**

Parentage: (Yellow Blaze Group × 'Connecticut King') × (Yellow Blaze Group × 'Connecticut King')

R: Bischoff Tulleken Leliecultuur B.V. (1980), G:

Bischoff Tulleken Leliecultuur B.V. (1983), N: Bischoff Tulleken Leliecultuur B.V. (1986), I: Bischoff Tulleken Leliecultuur B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1990)

Inside vivid yellow (9A/B) flushed with vivid orange-yellow (21A), throat vivid to brilliant yellow-green (154A/B); outside vivid yellow (9A); spots small, dark red (187A), in the throat; pollen strong orange (26A). Fls 180 mm wide; tepals 85 × 47 mm, margins smooth, tips strongly recurved. Lvs scattered, 130 × 13 mm, mid green, recurved. Stems 1.1 m, green, with c.7 fls.

**ALADDIN'S®**

For information: ALADDIN'S® is a registered trademark of Cebeo Lilies, Inc. in USA.

**ALADDIN'S® BEAUTY VIII(a/b)**

Trade designation of 'Ceb Beauty'.

**ALADDIN'S® CHARM VIII(a/b)**

Trade designation of 'Ceb Charm'.

Trade designation of 'Ceb Wine'.

**'Alamein' I(a/-)**

Parentage: ? seedling of 'Black Prince' (Div. I)

R: L.B. Tuffery (c. 1945), N: L.B. Tuffery

Fls dark red. Dwarf.

(Published in *Dunhampton Lily Fields Cat.*, c.1945.)

**'Alan Woodriff' VII(-/c)**

Parentage: *L. × parkmanii* × unknown

R: L. Woodriff (1950), N: L. Woodriff, I: L. Woodriff,

REG: L. Woodriff (1983)

Inside red, tepal-margins white, throat green; outside reddish; spots white overlaid with red, and darker spots around papillae. Tepals 150 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, dark green. Stems 1.4-1.5 m, dark, with 6-10 fls. Late Aug. to Sept. (Named after the raiser's father. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 49 (1978).)

**'Alaska' VI(-/c)**

See *L. × aurelianense* 'Alaska'.

**ALASKA I(a-b/b)**

Trade designation of 'Atoll'.

**'Alassio' I(a/-)**

Parentage: unnamed seedling × 'Grado'

R: V. Strasser (1976), G: V. Strasser (1978), N: V.

Strasser (1982), I: V. Strasser (1986), REG: V. Strasser (1986)

Fls bronze throughout. Tepal-margins smooth, tips not reflexed. Lvs scattered, 90 × 10 mm, dark green. Stems 1.3 m, brownish green, with c.20 fls. June to July.

***albanicum* Grisebach IX(c/d)**

Syn. of *pyrenaicum* subsp. *carniolicum* var. *albanicum*.

**'Albanie' I(a/c)**

Parentage: seedling LARS 93-12 × seedling AM 95-13

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside moderate purplish pink (70D), midveins and tepal-margins deep purplish pink (70C), throat yellowish white

(155D); outside pale purplish pink (62D), midribs flushed with greyish yellow-green (148D) and strong yellow-green (143C) at top, tepal-margins moderate purplish pink (66D); spots dark red (59A); papillae moderate purplish pink (70D); nectaries strong yellow-green (143C); pollen strong orange (168B); stigma deep purplish red (71A). Fls 220 mm wide; tepals 120 × 55 mm, margins smooth, tips recurved. Lvs 140 × 25 mm. Stems 1.4 m, green with darker markings at base, and with c.5 fls.

#### **'Albany' VIII(a-b/b)**

Parentage: seedling E819-1 × seedling 93,40-033-1  
R: World Breeding B.V., N: World Breeding B.V. (2001)  
Inside light greenish yellow (5D), each tepal with a deep red (53A) flame from nectary, midveins yellow at base; outside pale greenish yellow (2D), flushed with red at base; spots absent; papillae present; nectaries yellow-green; pollen strong reddish orange (169A); stigma orange with purple spots. Fls 190 mm wide; tepals 140 × 27-64 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 13-25 × 49-65 mm, dark green. Stems 0.9-1.2 m, dark green, with 2-9 fls. Late. (An Orienpet (OT) lily. Registration was refused under ICNCP, 2004; Art. 19.25, because the name is too similar to 'Albanie'. However, under ICNCP, 2004: Art. 24.4, 'Albany' must be accepted because Dutch PBR (LEL 2017) were granted in 2004. Nomenclatural standard: colour print supplied by registrant (WSY 0096409).)

#### **'Albatros' I(a-b/-)**

Parentage: ('Juliana' × unknown) × (seedling 8759 × 'Orlito')  
R: World Flower B.V. (1992), G: World Flower B.V. (1994), N: World Flower B.V. (2000), I: World Flower B.V. (2000), REG: World Flower B.V. (2000)  
Inside and outside yellowish white (155D), throat green; spots absent; papillae present; pollen brown; stigma green, spotted purple. Fls 130 mm wide; tepals 70 × 45 mm, margins ruffled, tips recurved. Lvs scattered, 100 × 20 mm. Stems 1.35 m, green with dark spots and stripes, and with c.12 fls. Early.  
(The spelling with one 's' is intentional.)

#### **'Albenga' I(a-b/-)**

Parentage unknown  
REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside and outside vivid yellow (12A/13A); spots and papillae absent; nectaries green; pollen light brown; stigma yellow with purple-red spots. Tepal-margins slightly ruffled, tips recurved. Stems medium to tall, with reddish markings. Midseason.  
(Production ceased in 1997.)

#### **'Albert' I(b/-)**

Misspelling of 'Alberts'.

#### **'Alberta' I(a/-)**

Parentage: *L. × maculatum* 'Aureum' × *philadelphicum*  
Fls apricot, splashed with brown. Stems 0.6-0.8 m. June to July.  
(Published in *Constable Lily Cat.* 1936/37: 11.)

#### **'Alberta Rose' I(b/-)**

Parentage: (*cernuum* × unknown) × (*cernuum* × unknown)  
R: F. Fellner (1982), G: F. Fellner (1984), N: F. Fellner (1993), I: Riverside Gardens, REG: F. Fellner (1993)  
Fls pink throughout; spots absent; pollen red-brown. Fls 100 mm wide; tepals 50 × 35 mm, margins smooth, tips not reflexed. Lvs scattered, 30 × 8 mm. Stems 0.5 m, green, with c.12 fls. Mid July.

#### **'Alberta Sunrise' II(b-c/d)**

Parentage: unnamed hybrid × unnamed hybrid  
R: F. Tarlton (1989), G: M. Joslin (1997), N: F. Tarlton & M. Joslin, I: M. Joslin & W. Kuyt (1999), REG: Parkland Perennials (1999)  
Inside strong red (46A) at tips, shading to strong yellowish pink (37A) in throat; outside mostly strong red (46A); spots dark red (183B), surrounded by moderate reddish orange (171A), on basal half of each tepal and extending up the sides; nectaries coloured as tepals; pollen moderate reddish orange (171A); stigma dark red (183B). Fls 80 mm wide, slightly scented; tepals 50 × 16 mm, margins smooth, tips strongly recurved. Lvs whorled, 100 × 40 mm. Stems 1 m, dark yellowish green (139A) towards top, paler towards base, with 6-8 fls in a short, broad infl. Early July.  
(Nomenclatural standard: colour print supplied by F. Tarlton (WSY 0015381).)

#### **'Albert Rech' VI(-/a)**

Parentage: (unnamed seedling × 'Lady Ann') × 'Glockenturm'  
R: V. Strasser (1983), G: V. Strasser (1987), N: V. Strasser (1989), I: V. Strasser (1995), REG: V. Strasser (1996)  
Inside white, throat yellow; outside brownish rose-pink; nectaries green; pollen yellow. Tepals 120 × 48 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 10 mm, dark green. Stems 1.75 m, green, with c.30 fls. Mid July.

#### **'Alberts' I(b/-)**

Parentage: selection from Vasaras Priekus Group  
S: V.P. Orehovs (pre 1970), N: V.P. Orehovs  
Fls light orange with brown spots, 125 mm wide, scentless. Lvs pale green. June to July.  
(Published in *LYB* 28: 132 (1965) and included in *ILLR* (1969) as 'Albert' which is a misspelling.)

#### **'Albertville' VII(a-b/-)**

Parentage unknown  
REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen red-brown; stigma grey with purple spots. Tepal-margins ruffled, tips strongly recurved. Stems medium height. Midseason to late.

**var. *albiflorum* IX(c/d)**  
See *martagon* var. *albiflorum*.

**Albino Group V(-/a)**

Parentage: inbred line of 'White Superior' × inbred line of *longiflorum* 'Holland's Glory'

R: Z.K. Tvrtkovic-Sahin, I: Z.K. Tvrtkovic-Sahin (c. 1964), REG: (1969)

Fls pure white with greenish centre, buds greenish; pollen golden yellow or orange. Lvs dark green. Stems up to 1.5 m.

(Published in *LYB* 33: 254 (1970). Flowers true from seed in 6 months. Included in *ILR* (1982) as Albino grex.)

**'Albion' VII(b/b)**

See *L.* × *parkmanii* 'Albion'.

**'Albion' VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
R: W. Paauw & Zn B.V. (1991), G: W. Paauw & Zn B.V. (1992), N: W. Paauw & Zn B.V. (1993), I: Peacock B.V. & Imanse Lelieveredeling B.V. (1993)

Inside and outside yellowish white (155D), midribs pale yellow-green (155A); spots pale yellow-green (155A), on three-quarters of each tepal; papillae present in throat; nectaries strong yellow-green (144C); pollen a little darker than moderate orange (167A); stigma close to light yellow-green (145C). Fls 230 mm wide; tepals 130 × 42 mm, margins ruffled, tips strongly recurved. Lvs scattered, 170 × 40 mm, mid green. Stems 1.1 m, pale green, with c.5 fls.

(Unacceptable name: ICNCP, 2004: Art.27.1 - name already used for another lily.)

**'Albipayne' Div. ?**

Given as a parent of several cvs. A white-flowered lily introduced by Henry Payne.

**'Albivetta' V(b/a)**

See *longiflorum* 'Albivetta'.

**'Albolena' VI(-/)**

Parentage: seedling 9/83 × 'Glockenturm'

R: V. Strasser (1983), G: V. Strasser (1986), N: V. Strasser (1996), REG: V. Strasser (1996)

Inside white; outside rose-pink. Tepals 110 × 35 mm, margins smooth. Lvs scattered, 105 × 9 mm, dark green. Stems 1.3 m, green, with c.25 fls. Mid July.

**'Albomarginatum' V(b/a)**

**'Alcan' VI(-/c)**

Parentage: *L.* × *aurelianense* 'Alaska' × yellow-flowered Aurelian seedling from Palmer

R: F.M. Abbey (pre 1978), N: F.M. Abbey, REG: F.M. Abbey (1984)

Fls white, flushed with gold. Stems 1.5 m. July to Aug. (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 47 (1978).)

**'Aldona' VI(-/a)**

Parentage: *regale* × mixed pollen of *henryi*, *dauidii* & *candidum*

R: Research Institute of Pomology & Floriculture (1964), G: S. Dąbrowska (1966), N: S. Dąbrowska (1983), I: Research Institute of Pomology & Floriculture (1983), REG: Res. Center Var. Agric. Crops (1983)

Inside creamy white, tepal-tips yellowish white (158C), throat vivid orange (25B); outside white shaded bronze at base and along midribs; spots absent; nectaries light green; pollen bronze. Fls 160 mm wide, very fragrant; tepals 130 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm, dark green. Stems 1.4 m, dark green, with 7-11 fls. Late July. (Published in *Owoce, Warzywa, Kwiaty* 23 (13): 18-19, 1983.)

**'Aleida' I(a/-)**

Syn. of 'Edith'.

**'Aleida Harmeling' I(c/-)**

Parentage unknown

R: S.A. Harmeling, N: S.A. Harmeling, I: A. & E. MacNeil (1943)

Fls orange-red. (Published in *Sandyloam Cat.*, 1943/44.)

**'Alena' I(a/-)**

Parentage: Pastel Group × 'Connecticut King'

R: V. Jošt (1975), N: V. Jošt (1979), I: V. Jošt (1983), REG: V. Jošt (1983)

Inside vivid yellow (13A), throat brilliant yellow (12B); outside overlaid with dark reddish orange (172B); spots small, dark red (187B), on a third of each tepal; nectaries white-frosted; pollen strong orange (169C). Fls 135 mm

wide. Lvs scattered, 95 × 13 mm, dark green. Stems 0.5-0.9 m, with 10-21 fls. Late June.

#### **'Alenushka' I(a/b)**

Parentage: 'Enchantment' × 'Byam's Ruby'

R: M.F. Kireeva (1975), N: M.F. Kireeva

Fls orange-red; almost unspotted. Fls 110-130 mm wide. Stems 0.7-0.9 m, with 9-15 fls in a compact, pyramidal infl. Early June.

#### **'Alessia' VII(a-b/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside whiter than yellowish white (155D), midveins brilliant yellow (10A) on up to three-quarters of each tepal, with pale greenish yellow (10D) alongside midvein, throat pale greenish yellow (10D) edged with yellowish white (155D); outside pale yellow-green (155A), changing to yellowish white (155D) towards tepal-edges, midribs brilliant greenish yellow (151D); spots absent; papillae on three-quarters of each tepal, mostly vivid yellow (12A), a few brilliant yellow (12B); pollen strong reddish orange (169A); stigma moderate yellow-green (138C), speckled with purple. Fls 250 mm wide; tepals 140-150 × 40-70 mm, margins ruffled, tips recurved. Lvs scattered, 160-175 × 35-45 mm. Stems 1-1.3 m, green, with c.5 fls.

#### **'Alex' IX(b/c)**

See *auratum* var. *rubrovittatum* 'Alex'.

#### **'Alexander' I(b-c/-)**

Syn. of 'Nataka'.

#### **'Alexandra' VIII(-/-)**

Parentage: *sargentiae* × *speciosum* var. *rubrum*

R: Saatzucht Zierpflanzen Erfurt (1977), G: Saatzucht Zierpflanzen Erfurt (1980), N: Saatzucht Zierpflanzen Erfurt (1988)

Inside deep purplish pink (66C), shading to white at tepal-margins and to deep purplish red (61A) along middle of tepals, tips white, throat deep purplish pink (66C); outside white suffused with deep purplish pink (66C); nectaries strong greenish yellow (151B); pollen dark orange-brown. Fls 160 mm wide, scented; tepals 105-115 × 24-45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 180 × 17 mm, mid green. Stems 1.45 m, dark green, with c.30 fls. July. (Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Alexandria'.)

#### ***alexandrae* (Wallace) Coutts IX(a-b/a)**

Syn. of *nobilissimum*.

#### **'Alexandria' VII(-/d)**

Parentage unknown

R: Gebr. Mak B.V. (1984), G: Gebr. Mak B.V. (1987), N: Gebr. Mak B.V. (1989), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1991)

Inside yellowish white to greenish white (155B/C), inner tepals suffused with pale purplish pink (55D), outer tepals pale purplish pink, midveins light yellow (10B), throat strong yellow-green (144C); outside yellowish white (155B), outer tepals suffused with strong purplish pink (63C), midribs light yellow (162C); spots deep purplish red (59B), on basal part of each tepal; nectaries strong to light purple (80B/C); pollen strong orange (169B). Fls 250 mm wide; tepals 120 × 60 mm, the outer with margins slightly ruffled, tips strongly recurved. Lvs scattered, 170 × 42 mm, mid green. Stems 1.1 m, green, with c.6 fls. May to June (under glass).

#### **'Alexis' VIII(b/-)**

Parentage: ('Gold Brocade' × 'Green Dragon') × 'Helios'

R: R.C. Haring, N: J. Wadkamper (1977), I: J.

Wadkamper (1978), REG: J. Wadkamper (1978)

Fls yellow-orange throughout; spots absent; nectaries light cream; pollen brown. Tepal-margins smooth. Lvs scattered, dark green. Stems 1.1-1.2 m. July.

(Published in *Lilies and other Liliaceae*, 1978/9: 105. For most practical purposes this can be treated as an Asiatic lily and classified as Div. I(b/-).)

#### **'Alfa' Div. ?**

Given as a parent of 'Odillie' and 'Zhizel', both raised by M.F. Kireeva. No further details.

#### **'Alfred Weinreich' I(a/b)**

Parentage: 'Heidi III' × 'Sonnenwunder'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)

Inside pale yellow (18D) overlaid with strong orange-yellow (22A) especially in basal half, throat pale yellow-green (157C) with delicate papillae; outside orange-yellow; brushmark streaks very reduced, dark purple (79A); spots numerous, medium sized; nectaries pale yellow-green (157A), green-white-hoary; pollen dark greyish reddish brown (200A); style greenish yellow; stigma dark red (187A). Fls 150 mm wide; tepals 90 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 20 mm. Stems 1.4 m, dark green, with c.11 fls. Mid to late July.

(Named for Alfred Weinreich, a lily breeder from Wolmirstedt, Germany. Nomenclatural standard: colour print provided by registrant (WSY 0032242).)

#### **'Algarve' VIII(a-b/c)**

Parentage: seedling J 76 × seedling W 92

R: Vletter & Den Haan Beheer B.V. (1994), G: Vletter & Den Haan Beheer B.V. (1994), N: Vletter & Den Haan Beheer B.V. (1996), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside strong purplish pink (62A); outside moderate purplish pink (62B); spots and papillae present; nectaries green; pollen orange-brown; stigma green. Tepal-margins very slightly ruffled, tips slightly recurved. Stems 1.1 m, green with dark stripes and speckles, and with c.8 fls. Midseason.

(*A longiflorum*/Asiatic (LA) hybrid.)

**'Alghero' VII(b/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (c. 1988), I: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2001)  
 Inside moderate purplish pink (62B), base strong red (53B); outside strong purplish pink (63C), tepal-edges narrow, slightly stronger coloured, base strong red (53B); spots and papillae present; pollen orange-brown; stigma green, with purple speckling. Stems 1.2 m, pale green with darker markings. Late.

**'Algol' I(a/b)**

Parentage: 'Helenka' × 'White Happiness'  
 R: K. Braun (1986), N: K. Braun, REG: K. Braun (1990)  
 Inside yellow-orange, tepal-edges, tips and throat paler; spots sparse, large, brown-red, on nearly all of each tepal; nectaries pale; pollen brown. Fls 170 mm wide, tepals 89 × 38 mm, recurved; pedicels 115 mm long, greenish brown. Lvs scattered, 80 × 8 mm, green. Stems 0.9 m, brownish green, with c.7 fls. Early July.

**'Algoma' I(b/-)**

Parentage: complex hybrid  
 R: P.M. Byam (c. 1960), N: RBG, Canada, I: RBG, Canada (1968)  
 Fls vivid yellow (12A), lightly spotted with brown. Stems 1.2-1.5 m. July.  
 (Published in *ILR* (1969).)

**'Algonquin' I(b/-)**

Parentage: 'Mohawk' × sister seedling of 'Mohawk'  
 R: E.F. Palmer, N: E.F. Palmer, I: B.L. Palmer (1962), REG: J. Wadekemper (1983)  
 Fls dark blackish red; spots few, inconspicuous; pollen brown. Fls 125-150 mm wide; tepals reflexed in apical half, margins smooth. Lvs scattered, dark green. Stems 1-1.2 m, almost black or brownish green, with 8-15 or more fls, and with a few bulbils. July.  
 (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

**'Alhambra' VII(a-b/d)**

Parentage: seedling L 222 × seedling L 500  
 R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
 Inside greenish white (155C), midveins yellowish white (155D), throat light yellow-green (145B); outside white, midribs strong yellow-green (144C); spots reddish; papillae white, in the throat; filaments pale green; pollen brownish orange (172C). Fls 225 mm wide; tepals 105 × 70 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 230 × 40 mm, mid green. Stems 1.25 m, green, with c.6 fls. May.

**'Alibi' VII(a-b/b)**

Parentage: (*L.* × *parkmanii* Little Rascal Group × 'Star Gazer') × white-flowered seedling

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1995)  
 Inside strong purplish pink (73B), fading to the base, each tepal with a vivid yellow (9B) flare from base to mid section, tips strong purplish pink (73B), throat vivid yellow (9B); outside light purplish pink (65B) with yellowish white (155D) at base; spots few, near the yellow flare; papillae few; pollen orange-brown; stigma purplish red. Fls 120 mm wide; tepals 60 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, green. Stems 0.25-0.3 m, dark. Late.

**'Alibi' I(b/b-c)**

Parentage unknown  
 R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1995)  
 Fls creamy white, flushed with yellowish pink towards base; dark spots on basal half of tepals. Fls 120-130 mm wide; tepal-margins smooth, tips recurved. Stems 0.8-0.9 m, with 11-20 fls. June.  
 (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in M.F. Kireeva, *Lilii*, 68 (2000).)

**'Alicante' VII(a-b/b)**

Parentage: seedling 88-189 × seedling 91-10  
 R: Vletter & Den Haan Beheer B.V. (1994), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)  
 Inside yellowish white (155D), midveins light greenish yellow (5D), throat light yellow-green (145D); outside yellowish white (155D), midribs pale greenish yellow (2D); spots light greenish yellow (5D); papillae present; nectaries strong yellow-green (144B); pollen moderate reddish orange (171A); stigma light greenish grey (190D). Fls 270 mm wide, scented; tepals 145 × 70 mm, margins slightly ruffled, tips recurved. Lvs scattered, 210 × 50 mm. Stems 1.03 m, light green, with c.6 fls.

**'Alice' VI(-/c)**

Misspelling of 'Alice'.

**'Alice Bergstrom' I(a/-)**

Parentage: 'Brauner Bär' × Borbeleta seedling 79-20-3  
 R: J. Russell (1986), G: J. Russell (1989), N: J. Russell (1992), REG: J. Russell (1994)  
 Inside vivid yellowish orange (30A) to vivid orange (28A), tepal-tips vivid reddish orange (30A), throat light orange (28D); outside tepal-edges vivid reddish orange (30B), centre of each tepal strong yellowish pink (32C); spots many, large, dark red (187A), on three-quarters of each tepal; nectaries moderate olive-brown (199A); pollen dark reddish orange (172B). Fls 143 mm wide; tepals 89 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, up to 184 × 16 mm, mid green. Stems 1.17 m, mid green with brown-purple spotting, with up to 13 fls, and many large bulbils. Mid July to early Aug.

**‘Alice Hicks’ Div. ?**

Parentage unknown

(Grown in USA. No further details.)

**‘Alice Moger’ I(b/b-c)**

Parentage unknown

R: F. Fellner (1988), G: B. Strohman (1990), N: B. Strohman (1994), I: B. Strohman (1994), REG: B. Strohman (1994)

Inside pale greenish yellow (2D), deeper in centre of tepals, throat white; outside pale greenish yellow (2D); a halo of brown spots around centre of fl.; nectaries white; pollen orange-brown. Fls 120 mm wide; tepals 60 × 45 mm, of heavy substance, margins smooth, tips not recurved. Lvs scattered, 65 × 14 mm, mid green. Stems 0.75 m, light green, with 11-13 fls. Early to late July.

**‘Alice Wilson’ I(a/b)**

See *L. × maculatum* ‘Alice Wilson’.

**‘Alicia’ I(a/c)**

Parentage: clear white-flowered seedling × ‘Paloma’  
R: Mak-Leek Inc. (1990), G: Mak-Leek Inc. (1992), N: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside yellowish white (158D); outside mostly pale greenish yellow (2D) with some moderate reddish orange (35A) stripes and some areas of brilliant yellow-green (142B); spots absent; nectaries soft yellow and green; pollen moderate reddish brown (166B); stigma moderate yellow-green (138B). Fls 200 mm wide; tepals 100 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-110 × 15 mm, moderate yellowish green (138A). Stems 0.8-1.1 m, dark greyish reddish brown (200A), with 4-10 fls. Late June to early July. (Lf and stem colour can be slightly affected by light intensity and temperature.)

**‘Alida Livingston’ VI(-/c)**

Parentage: unknown × seedling 47-38

R: C. Yerex (c. 1958), N: C. Yerex

Fls brilliant orange-yellow (23B), margins and outer half of tepals white. Tepals strongly recurved.

**‘Alina’ VII(b/c)**

Parentage unknown

Fls clear azalea-pink. Tepal-tips slightly recurved. Stems up to 1 m.

(Raised before 1990. Gerald Keast reported that it was imported into New Zealand from Van der Salm.)

**‘Alisa’ I(a/b)**

Parentage unknown

R: N.G. Korshikova (c. 1985), N: N.G. Korshikova

Tepals orange, with maroon spots and markings. Fls 90 mm wide. Stems 0.6 m.

**‘Alkestios’ I(a/b)**

Parentage: ‘Abendsonne’ × ‘Connecticut King’

R: A. Weinreich, N: A. Weinreich, I: A. Weinreich (1981), REG: A. Weinreich (1984)

Inside vivid yellow (12A), throat yellow-green; outside

brilliant yellow (9C); spots large, dark red (187A), on basal half of each tepal; nectaries light yellow-white; pollen moderate reddish brown (175A). Fls 180 mm wide; tepals 116 × 47 mm, margins smooth, tips slightly recurved. Lvs scattered, 96 × 13 mm, dark green. Stems 0.75-0.8 m. July.  
Syn.: ‘Alkestis’.

**‘Alkestis’ I(a/b)**

Syn. of ‘Alkestios’.

**‘Alkor’ I(c/d)**

Parentage: ‘Rondo’ (of Braun) × Sutter’s Gold Group  
R: K. Braun, N: K. Braun, I: K. Braun (2001), REG: K. Braun (2002)

Inside yellow, throat green; outside yellow, midribs yellowish brown; spots dark brown, medium sized, numerous, on two-thirds of each tepal; papillae pale yellow; nectaries green; pollen orange; stigma green. Fls 80 mm wide; tepals 60 × 26 mm; pedicels 65 mm long, brown-dotted. Lvs scattered, 60 × 10 mm. Stems 0.8 m, brown-dotted, with a moderately long infl. Early July.

**‘Allegra’ VII(b-c/d)**

See *L. × parkmanii* ‘Allegra’.

**‘Allegretto’ I(a-b/c)**

Parentage: unnamed seedling × ‘Marseille’

R: Vletter & Den Haan (1988), G: Vletter & Den Haan, N: Vletter & Den Haan (1996), REG: Vletter & Den Haan (1997)

Inside close to strong purplish red (59D), tepal-tips a little paler; outside close to strong purplish red (59D); a few small spots and some papillae present; nectaries green merging into pink; pollen reddish brown; stigma purple. Tepal-margins slightly ruffled, tips slightly recurved. Lvs scattered, mid green. Stems 1.25 m, green with dark stripes and spots, and with c.5-8 fls. Late. (Fls fade with age.)

**‘Allegro’ Div. ?**

Given as a parent of Celebrity Group and ‘Imperial Day’. No further details. Possibly an error for *L. × parkmanii* ‘Allegra’ or Allegro Group.

**Allegro Group VII(-/d)**

See *L. × parkmanii* Allegro Group.

**‘Alletta’ I(b/-)**

Parentage unknown

R: R.C. Haring, G: R.C. Haring, N: J. Wadekamper (1987), I: Borbeleta Gardens (1987), REG: Borbeleta Gardens (1988)

Fls orange; spots brown, on centre half of each tepal; nectaries red-orange; pollen light brown. Tepals 90 × 40 mm, margins smooth, slightly recurved. Lvs scattered, 100 × 40 mm, dark green. Stems 1 m, green, with c.12 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1988.)

**'All Gold' VI(-/a)**

Parentage: selection from Golden Clarion Group  
S: J. de Graaff (c. 1960), N: J. de Graaff  
Fls golden yellow throughout.

**'Alliance' VII(a/b)**

Parentage: complex hybrid origin  
R: Bischoff Tulleken Leliecultuur B.V. (1978), G:  
Bischoff Tulleken Leliecultuur B.V. (1981), N: Trior Lelie  
B.V. (1985), I: Trior Lelie B.V. (1988), REG: Trior Lelie  
B.V. (1988)

Fls rose-pink, midveins green, tepal-tips white, throat  
white; outside rose-pink and green; spots red, on two-  
thirds of each tepal; pollen orange-brown. Tepals 140-  
145 × 39-53 mm, margins ruffled, tips recurved. Lvs  
scattered, 60-70 × 39-65 mm, dark green. Stems 1 m,  
green-brown, with c.7 fls.

**'Alice' VI(-/c)**

Parentage: selection from Aurelian Group  
S: C. Yerex (c. 1955), N: C. Yerex  
Fls white, centre apricot. Stems 1.5 m. July to Aug.  
Syn.: 'Alice'.  
(Published in *LYB* 21: 46, fig.10 (1958) as 'Alice' which  
is a misspelling.)

**'All In' VII(a-b/b)**

Parentage: 'Belle Epoque' × 'Opus One'  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff  
Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies  
B.V. (1997), I: Bischoff Tulleken Lelies B.V. (1998),  
REG: Bischoff Tulleken Lelies B.V. (1999)  
Inside and outside yellowish white (155D) flushed with  
pale purplish pink (62D); spots few; some papillae  
present; nectaries yellow-green; pollen orange-brown;  
stigma purple. Fls 270 mm wide; tepals 140 × 40 mm,  
margins ruffled, tips recurved. Lvs scattered, 150 × 50  
mm. Stems 1 m, green, with 5-6 fls. Midseason.

**'Allissia' VII(a-b/b)**

Parentage unknown  
R: De Jong Lelies Holland B.V. (1989), G: De Jong  
Lelies Holland B.V. (1991), N: De Jong Lelies Holland  
B.V. (1997), I: De Jong Lelies Holland B.V. (1999)  
Inside deep/strong purplish pink (68A/B), outer tepals  
with strong red (53B) midveins; outside with inner tepals  
moderate purplish pink (65A) on a white ground and  
with strong purplish red (63B) midribs, outer tepals  
strong purplish red (60C), midribs flushed with strong  
yellow-green (144B); spots dark red (59A); papillae  
greenish white (155C) tipped with dark red (59A);  
nectaries strong yellow-green (144B), light yellow-green  
(154D) towards top; pollen strong brown (172A); stigma  
very pale purple (76D) flushed with deep reddish purple  
(77A). Fls 200 mm wide; tepals 175 × 50 mm, margins  
ruffled, tips recurved. Lvs scattered, 120 × 35-55 mm,  
light green. Stems 1.4 m, light green, with c.5 fls.  
(Unacceptable name - name sounds too similar to 'Alicia'  
(ICNCP, 2004: Art. 19.25) and so was rejected for  
registration.)

**'All Right' VII(a-b/c-d)**

Parentage: 'Coralbee' × 'Star Gazer'  
R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff  
Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies  
B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1990),  
REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside deep purplish pink (66C), tepal-edges and tips  
greenish white (155C), midveins on basal half of each  
tepal strong red (53B), throat ivory-white with a strong  
red (53B) edge; outside greenish white (155C) suffused  
with deep purplish pink (70C), tepal-edges ivory-white;  
papillae deep to dark red (185A/187B), on basal half  
of each tepal; nectaries pale yellow-green (195D) edged  
light olive-grey (197B); pollen strong orange (169C).  
Fls 220 mm wide; tepals 100 × 45 mm, margins slightly  
ruffled, tips slightly recurved. Lvs scattered, 140 × 40  
mm, mid green. Stems 0.45 m, pale green with darker  
markings, with c.5 fls. July (under glass).  
(Registered as 'Allright', but Dutch PBR (LEL 944) were  
granted under the epithet 'All Right', so this form of the  
epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Allright' VII(b/d)**

See 'All Right'.

**'All Round' I(a/b)**

Parentage: ('Grand Prix' × (Yellow Blaze Group ×  
'Connecticut King')) × ('Sterling Star' × 'Connecticut  
King')  
R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff  
Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies  
B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1996),  
REG: Bischoff Tulleken Lelies B.V. (1996)  
Inside vivid orange (28B), each tepal tipped vivid orange  
(28A) and with a 28A tinge towards base, throat light  
yellowish pink (26D); outside brilliant yellow (13B)  
shading to strong orange/strong orange-yellow (24A/B)  
towards tepal-margins which are narrowly edged vivid  
orange (28A); spots absent; papillae few, in the throat;  
nectaries light yellowish pink (26D); pollen dark reddish  
orange (175C); stigma light orange (28C). Tepals 90  
× 30-40 mm, margins smooth, tips slightly recurved.  
Lvs scattered, 140 × 20 mm, mid green. Stems 1-1.2 m,  
green with some darker markings, with c.8-10 fls. June.  
(Registered as 'Allround', but Dutch PBR (LEL 1323)  
were granted under the epithet 'All Round', so this latter  
form of the epithet must be accepted (ICNCP, 2004:  
Art. 24.4).)

**'Allround' I(a/b)**

See 'All Round'.

**'All Seasons' VII(a/b)**

Parentage: red-flowered seedling × 'Star Gazer'  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff  
Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies  
B.V. (1999), I: Bischoff Tulleken Lelies B.V. (2000),  
REG: Bischoff Tulleken Lelies B.V. (2000)  
Inside of inner tepals deep purplish red (59B), becoming  
dark purplish pink (186C) towards tepal-edges and tips,  
tips greenish white (155C); inside of outer tepals deep

purplish red (59B), becoming moderate purplish red (59C) towards tepal-edges and tips, tips greenish white (155C), throat very pale purple (69D); outside of inner tepals deep purplish pink (68A) on a paler ground, becoming dark purplish pink (186C) towards edges and tips, tips greenish white (155C), outside of outer tepals strong reddish purple/strong purplish red (70B/71C) changing towards edges and tips to moderate purplish red (186A), tips greenish white (155C) with some strong yellow-green (144A); spots absent; papillae dark red (59A); nectaries strong yellow-green (144A) with a narrow, brilliant yellow-green (150C) rim; pollen moderate reddish orange/brownish orange (172B/C); stigma pale yellow-green (195D) suffused with purple. Fls 230 mm wide; tepals 135 × 50-55 mm, margins ruffled, tips recurved. Lvs scattered, 175 × 35-65 mm. Stems 1.1 m, green with darker markings, and with c.5 fls. July.

#### 'All Time' I(a-b/b)

Parentage: ('Pineapple' × (Sundrop Group × 'Red Carpet')) × 'Avignon'  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2000)

Inside vivid reddish orange (34A), midveins vivid red (45A), throat strong yellowish pink (37A); outside of inner tepals strong reddish orange (169A), midribs moderate red (179A), outside of outer tepals moderate red (179A) with strong yellow-green (144C) on and beside midribs; spots few, dark red (187A), on up to a third of each tepal; papillae dark red (187A); nectaries strong yellowish pink (37A); pollen dark red (187A); stigma vivid reddish orange (34A). Fls 140 mm wide; tepals 80 × 45 mm, margins smooth, tips recurved. Lvs scattered, 130 × 15 mm. Stems 0.75 m, green, with c.7 fls. June.

#### 'Allura' VII(-/d)

See *L. × parkmanii* 'Allura'.

#### 'Allure' Div. ?

Given as a parent of 'Password' and 'Reflection', both raised by Bischoff Tulleken Lelies B.V. No further details. Perhaps an error for *L. × parkmanii* 'Allura'.

#### 'Allyson Jane' I(a-b/-)

Parentage unknown  
R: R.A. Prochaska, G: R.A. Prochaska, N: Hartle-Gilman Gardens (1995), I: Hartle-Gilman Gardens (1995), REG: Hartle-Gilman Gardens (1995)  
Inside brilliant yellow (7A), deep yellowish pink (39B) at tepal-tips and in throat; almost unspotted; nectaries frosted white. Fls 162 mm wide; tepals 82 × 31 mm, margins smooth, tips slightly recurved. Lvs scattered, 153 × 10 mm, dark green. Stems 1.08 m, with c.11 fls. Midseason.

#### 'Alma' I(a/-)

Parentage: selection from Skumstu Group  
S: V.P. Orehovs, N: V.P. Orehovs  
Fls orange-red.  
(Published in *LYB* 33: 79 (1970).)

#### 'Alma' I(a/-)

Parentage unknown  
Fls yellow, spotted. Stems 1.2 m.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Listed in ELG sales list, 2000. No further details.)

#### 'Alma Ata' VII(a-b/b)

Parentage unknown  
R: Mak Lelieveredeling B.V., REG: Levenslust B.V. (1994)  
Inside yellowish white (155D), suffused with pale greenish yellow (10D) along midvein of outer tepals, the midvein itself brilliant greenish yellow (151D) at top, fading towards base where the tepal is suffused with strong yellow-green (144A); spots and papillae yellowish white (155D), on two-thirds of each tepal; pollen strong reddish orange; stigma pale yellow-green (184D) with moderate purplish red (70A) hairs. Fls 245 mm wide; tepals 130 × 60 mm, margins somewhat ruffled, tips slightly recurved. Lvs scattered, 130 × 45 mm, dark green. Stems 0.9 m, green with dark markings, with c.8 fls.

#### 'Alma-Atinskaia Aromatnaia' VI(-/a)

Parentage: 'Topaz' × 'Richard Latty'  
R: B.P. Guzhavin, N: B.P. Guzhavin (1983)  
Fls greenish white. Stems up to 1.5 m.  
(Unaccepted spelling: 'Alma-Atinskaja Aromatnaja'.)

#### 'Alma-Atinskaja Aromatnaja' VI(-/a)

Unaccepted spelling of 'Alma-Atinskaia Aromatnaia'.

#### 'Almagul' I(c/-)

Parentage: orange-flowered clone from Fiesta Group × *cernuum*  
R: B.P. Guzhavin, N: B.P. Guzhavin (1983)  
Tepals pale pink with white tips; spots present. Stems 1.3 m.

#### 'Almandine' I(a/c)

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1988), G: J. Vasarietis, N: J. Vasarietis (1989), I: J. Vasarietis (1989), REG: J. Vasarietis (1993)  
Inside deep red (60A); outside strong purplish red (60D); spots inconspicuous, black, on two-thirds of each tepal; nectaries white; pollen orange. Fls 140 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 12 mm, mid green. Stems 0.9-1.3 m, green, with 7-15 fls. Mid July.  
(Published in *Latvian Lily Register*, 1993.)

#### 'Almanzo' IX(c/d)

See *michiganense* 'Almanzo'.

#### 'Almeria' VII(a/b-c)

Parentage: seedling 87-121 × 'Medusa'  
R: Vletter & Den Haan, G: Vletter & Den Haan (1993), N: Vletter & Den Haan (1997), I: Vletter & Den Haan (1997), REG: Vletter & Den Haan (1997)  
Inside with a yellowish white (155D) flame on centre

of each tepal, moderate purplish red (58A) on a white ground towards tip, throat yellowish white (155D); outside yellowish white (155D) with a very pale suffusion of deep purplish red (61A), yellowish white (155D) at base, midribs strongly suffused with ruby-red at base and tipped strong yellow-green (144B), the colour shading out into tepal; spots yellowish white (155D), on two-thirds of each tepal; papillae yellowish white (155D), in the throat; nectaries strong yellow-green (144B); pollen strong brown (172A); stigma greyish yellow-green (148D) and more-or-less ruby-red. Fls 230 mm wide, scented; tepals 120 × 50-75 mm, margins ruffled, tips recurved. Lvs scattered, 130 × 40 mm, mid green. Stems 0.7-1.1 m, green, with c.7 fls.  
Trade designation: VLETAL.

#### **'Almeriké' I(a/b)**

Parentage: ('Stroinaia' × unknown) F<sub>2</sub> × 'Connecticut King'  
R: I. Wiesner, N: I. Wiesner, REG: I. Wiesner (1989)  
Inside deep orange (12); outside with greenish midribs; spots medium sized, on half of each tepal; pollen red-brown; stigma purple-brown. Fls 125 mm wide; tepals 78 × 34 mm, margins slightly recurved; pedicels 80 mm long. Lvs scattered, dark green. Stems 0.6-0.7 m, thick, brownish at base, with 8-10 fls. Mid July.

#### **'Almira' I(a/b)**

Parentage: 'White Prince' × pure white-flowered seedling  
R: De Jong Lelies Holland B.V. (1982), G: De Jong Lelies Holland B.V. (1984), N: De Jong Lelies Holland B.V. (1987), I: De Jong Beheer B.V. (1987), REG: De Jong Lelies Holland B.V. (1989)  
Inside pale yellow-green to yellowish white (155A/B) flushed with light yellow-green (150D), throat strong yellow-green (144C); outside greenish white (157D) flushed with light yellow-green (150D); spots absent; pollen dark reddish orange to brownish orange (172B/C). Fls 175 mm wide; tepals 90 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 190 × 15 mm, mid green. Stems 0.9 m, green with darker markings, with c.5 fls. July.

#### **'Almyros' I(a/-)**

Parentage unknown  
REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside and outside brilliant yellow (7A), midribs paler; spots absent; papillae present; nectaries yellow-green; pollen brown; stigma purple-red. Tepal-margins ruffled, tips slightly recurved. Stems tall, with dark markings. Midseason.

#### **'Aloft' I(b/c)**

Parentage unknown  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Inside pure white; outside of outer tepals white with a broad band of brownish red, outside of inner tepals white with a narrow brownish red midrib; pollen orange-red. Tepal-margins slightly ruffled, tips slightly recurved. Stems 1.2 m, with a pyramidal infl. Early to mid June.

#### **'Aloha' Div. ?**

Given as a parent of 'Orangerie'. No further details.

#### **Alouette Group I(b/-)**

Parentage: derived from 'Melody' × 'Prosperity' & other yellow-flowered hybrids, including 'Palomino' & 'Yamaska'  
R: J.C. Ericksen (c. 1963), N: J.C. Ericksen  
Fls clear yellow.

#### **'Alpe d'Huez' VII(-/b)**

Parentage unknown  
R: Vletter & Den Haan, G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1992), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)  
Inside and outside yellowish white (155D), midveins strong yellow-green (144C) becoming strong yellow-green (144A) at base and top; pollen strong brown (172A); stigma dark greyish reddish brown (200A). Fls 200 mm wide; tepals 118 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 137 × 40 mm, dark green. Stems 1.17 m, mid green, with c.7 fls.

#### **'Alpenglow' I(a/-)**

Parentage: 'Juliana' × (Hallmark Group × 'Destiny')  
R: E.A. McRae (1975), N: Oregon Bulb Farms, Inc. (1982), I: Oregon Bulb Farms, Inc. (1983), REG: Oregon Bulb Farms, Inc. (1983)  
Inside pure deep pink (48B) to strong pink (48C), fading to purplish rose-pink, tepal-tips darker, throat soft golden yellow; outside deep pink (48B); spots numerous, small, deep magenta; nectaries green; pollen dark reddish orange (173A/B). Fls 140-170 mm wide; tepals 80 × 25 mm, margins ruffled, tips slightly recurved. Lvs scattered, 70-110 × 7.5 mm, mid green. Stems 1 m, light green, with 5-18 fls. Mid June.

#### **'Alpha' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Alpha'.

#### **'Alphaid' I(a/-)**

Error for 'Alphard'.

#### **'Alphard' I(a/-)**

Parentage: unnamed hybrid × unnamed hybrid  
R: F. Tarlton (1972), G: F. Tarlton (1975), N: F. Tarlton (1990), I: Lilydale Lilies (1991), REG: F. Tarlton (1991)  
Inside vivid yellow (17C), throat light yellow (17D); outside light yellow (17D), midribs dark; spots dark purple, on basal half of each tepal; nectaries light yellow (18A); pollen strong reddish orange (31A). Fls 120 mm wide; tepals 64 × 33 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 7 mm, mid green. Stems 1.2 m, mid green, with 12-18 fls (including secondary buds). Late July.  
(Published in *Lilydale Lilies Cat.*, 1991 (listed in error as 'Alphaid').)

#### **'Alpi' I(a/-)**

Parentage: 'Blizzard' × seedling W 659  
R: Vletter & Den Haan (1985), G: Vletter & Den Haan,

N: Vletter & Den Haan (1988), REG: Vletter & Den Haan (1997)

Inside and outside yellowish white (155D), throat white/pale green; spots few, dark pink; papillae few; pollen orange-brown; stigma purple. Tepal-margins ruffled, tips recurved. Lvs scattered, mid green. Stems 0.9 m, brown speckled with green. Early to midseason.

**'Alpina' I(a/-)**

Error for 'Alpine'.

**'Alpine' I(a/-)**

Parentage: 'Sterling Star' × 'Mont Blanc'  
R: De Lijster Hillegom B.V. (1979), G: De Lijster Hillegom B.V. (1981), N: Lybelmex Hillegom B.V. (1984), I: Lybelmex Hillegom B.V. (1984), REG: Lybelmex Hillegom B.V. (1985)

Inside and outside yellowish white (155B), midribs brilliant yellow-green (150C); spots dark red (187A), in the throat; nectaries light grey-brown; pollen majolica-yellow. Fls 155-160 mm wide; tepals 80 × 30 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 90 × 12 mm. Stems 1.25 m, pale green, with 5-10 fls. Midseason.

(Published in *Bloembollencultuur*, 1984, erroneously as 'Alpina'.)

**'Alpine Gold' I(a/-)**

Parentage: 'Matterhorn' × soft yellow-flowered seedling  
R: M.D. Holloway (1993), G: M.D. Holloway (1994), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)

Inside white, with a rich golden blush above the throat, the colouring darker on outer tepals; outside of inner tepals white, midribs dark pinkish brown, outside of outer tepals with white margins, otherwise pink, midribs brown; spots absent; nectaries white-frosted; pollen dark brown. Fls 180 mm wide; tepals 95 × 49 mm, margins very slightly ruffled, tips not recurved. Lvs scattered, 120 × 18 mm, dark green. Stems 0.76 m, dark brown, with c.5 fls. Aug.

**'Alsunga' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis, G: J. Vasarietis, N: J. Vasarietis (1988), I: J. Vasarietis (1988), REG: J. Vasarietis (1993)

Inside strong orange (25A), a shade darker in basal part, throat vivid reddish orange (32A); outside strong reddish orange (31A); spots few, purple-black, on half of each tepal; nectaries light rose-pink; pollen brown. Fls 140 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 10 mm, mid green. Stems 1 m, brownish, with 10-17 fls. Early July.  
(Published in *Latvian Lily Register* 1993.)

**'Alta Lee' I(a/-)**

Parentage: 'Enchantment' × *bulbiferum* var. *croceum*  
R: H. Nelson, N: H. Nelson (1977), I: J. Wadekamper (1978), REG: J. Wadekamper (1978)  
Fls orange, spotted; nectaries light orange; pollen brown. Tepal-margins smooth. Lvs scattered. Stems 1 m.  
(Published in *Lilies and other Liliaceae*, 1978/9: 105.)

**'Altari' VIII(a-b/b)**

Parentage: seedling 819-18 × seedling 90-033-1  
R: World Breeding B.V., N: World Breeding B.V. (2001), REG: World Breeding B.V. (2004)

Inside dark red to deep red (187C/53A), pale yellow-green (155A) towards tepal-margins; outside yellowish white (155D) with some purple-red; spots dark red to deep red (187C/53A); papillae present; nectaries yellow-green; pollen orange-brown; stigma purple, spotted. Tepal-margins slightly ruffled, tips recurved. Lvs scattered, dark green. Stems medium to tall, with c.10 fls. Late.

(An Orienpet (OT) lily.)

**var. *alternifolium* IX(c/d)**

See *martagon* var. *alternifolium*.

**'Altgold' I(a/-)**

Parentage unknown

Fls orange-red, slightly spotted. Stems 1.2-1.5 m, brown-green.

(Raised and named in Germany.)

**'Alto' I(a/b)**

Parentage: 'Connecticut King' × ('Connecticut Yankee' × 'Connecticut Glow')

R: K. Braun, N: K. Braun, I: K. Braun (1996), REG: K. Braun (1997)

Inside glowing orange; outside paler orange, midribs orange; spots absent; nectaries green-brown; pollen cinnamon; stigma dark red. Fls 160 mm wide; tepals 82 × 36 mm, tips slightly recurved; pedicels 110 mm long, brownish. Lvs scattered, 110 × 15 mm, mid green, held horizontally. Stems 1.05 m, rigid. Bulbs white. Early July.

**'Altyn' I(a/-)**

Parentage: derived from one of the "Connecticut" hybrids

R: A.V. Otroshko, N: A.V. Otroshko, REG: A.V. Otroshko (1991)

Fls chartreuse-yellow, greener towards centre; pollen brown. Tepals broad, margins slightly ruffled. Stems 1.3 m.

**'Alutaceum' I(a/b)**

See *L. × maculatum* 'Alutaceum'.

**'Alutaceum Grandiflorum' I(a/b)**

See *L. × maculatum* 'Alutaceum Grandiflorum'.

**'Alwin' I(a/-)**

Parentage: 'Yellow Star' × ('Tabasco' × *L. × hollandicum*)  
R: G. & S.E. Bottema (1977), G: G. & S.E. Bottema (1979), N: G. Bottema

Inside vivid to strong reddish orange (34A/C), throat with orange blotches; outside moderate red (179A/B), outer tepals moderate orange (168C) edged with burnt brownish red and tipped saffron-yellow; spots dark brown, in the throat; nectaries greyish red (184A); pollen dark reddish orange (172B). Fls 170 mm wide; tepals 85 × 40 mm, margins smooth. Lvs scattered, 190 × 12.5 mm, mid green. Stems 1.25 m, green tinged with red,

with c.4 fls. June to July.

Syn.: 'Marianne'.

(Originally named 'Marianne' but granted Dutch PBR (LEL 251) in 1988 as 'Alwin', so this latter epithet is accepted (ICNCP, 2004: Art. 24.4).)

#### 'Alye Parusa' I(a/b)

Parentage: 'Vostok-2' × 'Destiny'

R: M.F. Kireeva (1976), N: M.F. Kireeva

Fls raspberry-red; spots absent. Fls 110-120 mm wide.

Stems 1-1.5 m with 10-15 fls. Mid July.

(Published in M.F. Kireeva, *Lilii*, 41 (1984). Included in *ILR Third Supplement* as 'Alyie Parusa' which is an unaccepted spelling.)

#### 'Alyie Parusa' I(a/b)

Unaccepted spelling of 'Alye Parusa'.

#### 'Alyi Stjag' I(b/-)

Parentage: 'Rubinovaia' × 'Connecticut King' F<sub>2</sub>

R: A.V. Otroshko (1985), N: A.V. Otroshko, REG: A.V. Otroshko (1991)

Fls vivid red; spots absent. Tepals broad, of heavy texture.

Stems 1.1 m, dark.

#### 'Alyssa' I(a-b/-)

Parentage unknown

R: Mak-Leek Inc. (1988), G: Mak-Leek Inc. (1991), N: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (2003)

Inside and outside deep pink (185D); spots and papillae present; nectaries green with a purple-red tinge; pollen red-brown; stigma purple. Fls 70 mm wide; tepals 75 × 42.5 mm, margins slightly ruffled, tips recurved. Lvs 130 × 11 mm. Stems 1.1 m, with some darker markings, with c.7 fls. Early.

#### *amabile* Palibin IX(c/d)

Fls bright red; spots black; anthers brown; pollen dark brown; stigma red-brown. Fls often unpleasantly scented; tepals 50-55 mm long. Lvs scattered, up to 90 × 10 mm, downy beneath. Stems 0.3-0.9 m, with up to 10 fls. June to July. Korea.

#### *amabile* 'Coccineum' IX(c/d)

Parentage: selection from *amabile*

S: K. Wada, I: K. Wada (pre 1936)

Fls fiery crimson.

(Published in *Wada Cat.*, 1936.)

#### *amabile* var. *luteum* hort. Constable ex Gard. Chron.

IX(c/d)

AM 1939

Fls yellow to orange-yellow; spots red.

#### *amabile* 'Yellow Spotless' IX(c/d)

Parentage: sport from *amabile*

G: D.B. Cook (1945), N: D.B. Cook (1958)

Fls primrose-yellow; spots absent. Stems up to 0.8 m, with up to 10 fls.

(Published in *LYB NALS* 11: 66 (1958). This epithet now covers more than one clone.)

#### 'Amadeus' I(a/-)

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1994)

Inside vivid yellowish orange (30C), throat brilliant orange (29A); outside strong orange (30D), tepal-edges vivid yellowish orange (30C); spots few, dark red (187A), on inner tepals only; pollen vivid orange (28A); stigma strong red (46A). Fls 180 mm wide; tepals 100 × 40 mm, tips slightly recurved. Lvs scattered, 120 × 25 mm, mid green. Stems 0.85 m, green, with c.4 fls.

#### 'Amalfi' I(b-c/-)

Parentage: 'Kreta' × ('Noris Star' × ('Tetra Tabasco' × 'Tetra Enchantment'))

R: V. & S. Strasser (1989), G: V. & S. Strasser (1992), N: V. & S. Strasser (1996), REG: V. & S. Strasser (1998)

Inside red, throat dark red; outside red; spots purple, elongated, on half of each tepal; nectaries frosted; pollen red-orange. Tepals 75 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 35 mm, dark green. Stems 1.3 m, rather dark green, with up to 23 fls. Late July.

#### Amalia Group I(b-c/d)

Misspelling of Amālijas Group.

#### Amalija Group I(b-c/d)

Misspelling of Amālijas Group.

#### Amālijas Group I(b-c/d)

Parentage: 'Vasaras Prieks' × *cernuum*

R: V.P. Orehovs (1963), N: V.P. Orehovs

Fls pale lilac to intense violet, sometimes with dark brown spots; pollen dark brown; stigma brown. Fls 80-120 mm wide, slightly scented; pedicels 80-120 mm long. Stems 0.4-0.9 m, with 3-18 fls. Late June to early July.

(Misspelling: Amalijas Group. Published in *LYB* 33: 81 (1970) and included in *ILR* (1982) as Amalia Hybrids (= Group) – also a misspelling.)

#### 'Amālka' I(a/b)

Parentage: 'Kismet' × 'Edith'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000),

REG: B. Mičulka (2000)

Inside deep yellow, flushed with brown-red above nectaries, tepal-tips with a whitish halo; outside paler, midribs brownish; spots very sparse, tiny; nectaries green, white-granulated; pollen ochre-apricot; stigma pale old rose. Fls 120 mm wide; tepals 75 × 32 mm, tips slightly recurved; pedicels 80 mm long, green. Lvs scattered, 90 × 11 mm, dull pale green. Stems 0.9 m, green, with a medium-long infl. Late June.

#### 'Amanda' Div. ?

Parentage unknown

R: R.F. Nelson, N: R.F. Nelson

Tepals flushed with lavender, heavily spotted deep lavender. Fls *auratum* type, 200-250 mm wide.

**'Aman'** I(a-b/-c)

Parentage: ('Veronika' × 'Sweetheart') × (('Connecticut Star' × unknown) × Pastel Group)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997), REG: B. Mičulka (1997)

Inside pale pinkish rose, each tepal with a small darker 'tongue', throat pale olive; outside with light beige midribs; spots numerous, large, dark red-brown, on half of each tepal; nectaries white-granulated; filaments pale pink; pollen red-black; stigma whitish. Fls 150 mm wide; tepals 95 × 38 mm, slightly recurved; pedicels 80 mm long, slightly dotted. Lvs scattered, 110 × 11 mm, dull yellowish green. Stems 1 m, thick, slightly spotted, brown at base, with a short infl. Early July.

**'Amapola'** I(a/b)

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler (1981), N: B.G. Hayler (1986), I: B.G. Hayler (1985), REG: B.G. Hayler (1986)

Inside and outside vivid yellow (14B), with a vivid orange-yellow (23A) flush below; spots purple, in centre half of each tepal; nectaries pale green; pollen brown. Fls 130 mm wide; tepals 85 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 1.5 m, purple, with c.20 fls. Dec. (Australia).

Syn.: 'Lolita'.

(Introduced as 'Lolita' in 1985, but the epithet was changed because it had already been used.)

**'Amarna'** VIII(a-b/b)

Parentage: seedling PH 94-01 × seedling RH 96-03

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2001), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals brilliant greenish yellow (6C), pale yellow-green (4D) towards margins and tips, margins light greenish yellow (5D), throat yellowish white (155D), outer tepals brilliant greenish yellow (6C) but less yellow; outside with inner tepals pale yellow-green (155A), margins light greenish yellow (5D), midribs strong yellow-green (144C) at base changing to dark yellowish pink (181D) towards top, outer tepals pale yellow-green (155A), with dark yellowish pink (181D) along midribs which are strong yellow-green (143C) at base and top; spots absent; papillae brilliant greenish yellow (6C); nectaries strong yellow-green (143C); pollen dark red (183B); stigma deep purple (79C). Fls 235 mm wide, fragrant; tepals 170 × 51-81 mm, margins ruffled, tips recurved. Lvs scattered 181 × 30 mm. Stems 1-1.3 m, green with darker markings, and c.3 fls. (An Orienpet (OT) lily.)

**'Amaro'** I(a/-)

Parentage: unnamed seedling × unnamed seedling  
R: Peacock B.V. (1991), G: Peacock B.V. (1992), N: Peacock B.V. (1993), I: Peacock B.V. (1993)

Inside close to vivid reddish orange (30B), throat close to vivid yellowish orange (30C); outside close to strong orange (30D) with vivid yellowish orange (30C) towards tepal-edges; spots dark red (187A), on a third

of each tepal; papillae few, near nectaries; nectaries hairy, coloured as tepals; pollen moderate reddish brown (175A); stigma dark red (187A). Fls 165 mm wide; tepals 95 × 30 mm, margins hardly ruffled, tips slightly recurved. Lvs scattered, 110 × 10 mm. Stems 1.1 m, dark, with c.8 fls.

**'Amarone'** I(a/b)

Parentage: 'Nove Cento' × seedling OR 88-1

R: Vletter & Den Haan (1991), G: Vletter & Den Haan, N: Vletter & Den Haan (1994), REG: Vletter & Den Haan (1997)

Inside deep red (53A), midveins purple; outside deep red (53A), paler along midribs, and tipped green; a few small spots and some papillae present; nectaries purple, hairy; pollen light brown; stigma dark purple. Tepal-margins slightly ruffled, tips recurved. Lvs scattered, green. Stems 1.1-1.5 m, green with dark streaks and spots, with 6-7 fls. Midseason.

**'Amaryllis'** I(b/-)

Parentage: *davidii* × unknown

R: F.L. Skinner (c. 1950), N: F.L. Skinner

Fls orange. Stems 0.8 m. July.

(Published in *Dropmore Hardy Plants Cat.*, 1950.)

**'Amarynthos'** VI(-/-)

Parentage: 'Kaprun' × ('Heidelberg' × unknown)

R: V. Strasser (1988), G: V. Strasser (1991), N: V.

Strasser (1996), REG: V. Strasser (1996)

Inside white, throat greenish yellow; outside white and green; nectaries green; pollen brown. Tepals 123 × 36 mm, margins smooth, tips not reflexed. Lvs scattered, 170 × 14 mm, mid green. Stems 1.7 m, green, with c.30 fls. Mid July.

**'Amazing'** VII(a-b/b-c)

Parentage: (*speciosum* var. *rubrum* 'Brabander' × ('Star Gazer' × 'Early Splendor')) × 'Elysée'

R: Bischoff Tulleken Lelies B.V. (pre 1996), G: Bischoff Tulleken Lelies B.V., REG: H.J.A. Rooyakkers B.V. (2002)

Inside yellowish white (155D), with brilliant yellow (9C) along midveins; outside yellowish white (155D); spots yellow; papillae present; nectaries yellow-green; pollen orange-red; stigma purple. Tepal-margins ruffled, tips recurved. Early to midseason.

**'Amazing Grace'** VII(-/b)

Parentage: selection from Atomic Group

S: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1979)

Tepals creamy white, each with an orange-red ray. Fls *auratum* type, turning deep pink with age. Stems up to 2 m, with up to 20 fls. Feb. (Australia).

**'Amazone'** VI(-/c)

Parentage: unnamed seedling × unnamed seedling

R: P. Hoff, G: P. Hoff (1983), N: P. Hoff (1985), I: P.

Hoff (1985), REG: Fa P. Hoff & Zn

Fls strong orange-yellow (17A) with ox-blood spots in centre; nectaries absent; pollen absent. Fls 160 mm

wide; tepals 99 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 125 × 15 mm, dark green. Stems 1.5 m, dark, with c.10 fls.  
(Published in *Bloembollencultuur*, 1985.)

#### **'Amazonka' VI(b-c/e)**

Parentage: ('Lady Alice' × 'Gold Eagle') × 'Kankán'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1999),  
REG: B. Mičulka (1999)

Inside pale greenish yellow, tepal-tips paler, throat darker with some brown dusting; outside pastel yellow, midribs greenish; nectaries yellow-green; anthers pale yellow, without pollen; stigma green. Fls 135 mm wide; tepals 100 × 40 mm, margins coarsely wavy, tips slightly recurved; pedicels 55 mm long, spotted. Lvs scattered, c.140 × 18 mm, dull mid green. Stems 1.45 m, pale brown-red. Mid July.

#### **'Ambassador' I(a/-)**

Parentage: (seedling of Stenographer Group × *davidii* var. *unicolor*) × 'Connecticut King'  
R: C. Robinson (pre 1977), N: C. Robinson, REG: C. Robinson (1977)

Inside brilliant yellow (8A), throat vivid orange-yellow (23A); outside brilliant yellow (8A), midribs wine-red; spots absent; nectaries green; pollen orange. Stems 1 m.  
(Published in *Lilies and other Liliaceae*, 1978/9: 105.)

#### **'Ambato' I(a/-)**

Parentage unknown  
R: P. Hoff, G: Hoffgaarde B.V. (1994), N: Hoffgaarde B.V. (1994), I: Hoffgaarde B.V. (1997), REG: Hoffgaarde B.V. (1997)

Inside with a third of each tepal brilliant yellow (11A) on a yellowish white (155B) ground, tips and throat yellowish white (155B); outside yellowish white (155B), with a little strong yellow-green (145A) towards tepal-tips and tipped deep pink (51C), midribs suffused with pink; spots dark red (187A), in the throat; papillae few, in the throat; nectaries strong yellow-green (143C); pollen dark reddish orange (175C); stigma strong brown (172A). Fls 200 mm wide; tepals 100 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 0.8 m, green, with 3-6 fls.  
Trade designation: JUMBO® AMBATO.

#### **'Amber' VII(a/b-c)**

Parentage unknown  
R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)  
Inside pale purplish pink (65C), throat yellowish white (155D); outside pale purplish pink (62D), midribs moderate purplish pink (62B); spots strong purplish red (63A); papillae present; nectaries brilliant yellow-green (150B); pollen dark reddish orange (173A); stigma moderate purplish red to strong reddish purple (70A/72B). Fls 250 mm wide, slightly scented; tepals 145 × 78 mm, margins slightly ruffled, tips recurved. Lvs scattered, 179 × 63 mm. Stems 0.86 m, green, with few fls.

#### **'Amber Ace' VIII(b/b)**

Parentage: trumpet seedling (with Golden Splendor Group & a multiple cross in its parentage) × 'Canterbury Belle'

R: A.E. Alexander (1995), G: A.E. Alexander (1998), N: A.E. Alexander (2002), I: A.E. Alexander (2002), REG: A.E. Alexander (2002)

Inside apricot; outside apricot with some wine-red stripes; spots absent; nectaries green; pollen orange; stigma frosty green. Fls 130 mm wide; tepals 90 × 50 mm, margins smooth, tips slightly reflexed. Lvs scattered, 90 × 15 mm. Stems 1.3 m, green with purple flecks, and with c.8 fls. Jan. (New Zealand).  
(An Oriempet (OT) lily. Nomenclatural standard: colour print provided by registrant (WSY 0032050).)

#### **'Amber Cascade' I(a/b-c)**

Parentage: ('Edith' × Asiatic seedling with up-facing, white fls) × Asiatic seedling with up-facing, cream fls  
R: E.E. Fox (1986), G: E.E. Fox (1988), N: E.E. Fox (1990), I: Fox Lily Ranch (1993), REG: E.E. Fox (1992)  
Tepals with creamy gold tips, deepening to amber-gold in basal third, throat amber-gold; outside pale yellow, midribs green; spots large, maroon, evenly distributed on half of each tepal; nectaries lime-green; pollen cinnamon; stigma maroon, 3-lobed. Fls almost flat, 150 mm wide; tepals 75 × 45 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 130 × 25 mm, dark green. Stems 0.8 m, pale green, with 10-14 fls in a double umbellate infl. Early July.

#### **'Amber Dream' I(a/-)**

Parentage: seedling 89-68-03 × seedling 89-6-21  
R: World Flower B.V. (1992), G: World Flower B.V. (1995), N: World Flower B.V. (2000), I: World Flower B.V. (2002), REG: World Flower B.V. (2002)  
Inside strong orange (24A/25A), tepal-tips with a reddish flush; outside vivid orange-yellow/strong orange (23A/24A), tepal-tips with a yellowish tinge; spots absent; papillae present; pollen orange; stigma orange. Tepal-margins ruffled, tips recurved. Stems 1.1 m, green, with 8-10 fls (from 16-18 cm bulbs). Very early to early.

#### **'Amberflare' VI(-/a)**

Parentage: selection from unnamed hybrids ex Yerex  
S: C. Yerex, N: D. Foxwell (1962)  
Buds red-mahogany; tepals light yellow (18A), deepening to light orange-yellow (16C) at centre, with some red tinting outside.

#### **'Amber Gold' I(c/d)**

Parentage: selection from Fiesta Group  
S: J. de Graaff (c. 1963), N: D. Foxwell (1964)  
PC 1964, AM 1967  
Inside vivid orange-yellow (15B); outside bronze; spots maroon. Fls 90 mm wide; tepal-tips strongly recurved. Stems 1.2-1.5 m, dark. July.

#### **'Amber Lights' I(a/-)**

Parentage: 'Northern Lights' × unknown  
R: E. Robinson, G: E. Robinson (1970), N: E. Robinson (1977), I: E. Robinson (1977), REG: E. Robinson

(1977)

Fls pale amber-yellow, fading to cream. Stems 1-1.2 m, with a tiered candelabrum-type infl.

(Published in *Lilies and other Liliaceae*, 1978/9: 105.)

#### 'Amber Rose' I(a/-)

Parentage: ('Connecticut Dream' × Windus seedling of *leichtlinii*) × 'Peachblush'

R: V.E. Bowen (1983), G: V.E. Bowen (1985), N: V.E. Bowen (1995), REG: V.E. Bowen (1995)

Inside light yellow (20B) except for tepal-tips, throat, nectaries, style and filaments which are moderate yellowish pink (38B); outside yellowish pink (38B); a moderate number of dark brown spots from nectaries to half way up each tepal; pollen dark brown. Fls 110 mm wide; tepals 80 × 35 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 90 × 30 mm, mid green. Stems 1.07 m, green, with 10-14 fls. Mid to late June.

#### 'Amber Star' VIII(c/c)

Parentage: (*henryi* × unnamed trumpet) × 'Canterbury Belle'

R: A.E. Alexander (1992), G: A.E. Alexander (1995), N: A.E. Alexander (2002), I: A.E. Alexander (2002), REG: A.E. Alexander (2002)

Inside apricot; outside apricot marked with pink and green; nectaries green; pollen brown; stigma grey. Fls 140 mm wide; tepals 110 × 50 mm, margins smooth; tips slightly recurved. Lvs scattered, 150 × 20 mm. Stems 1.8 m, black flecked with green, with 10-12 fls in a racemose infl. Jan. (New Zealand).

(An Oriempet (OT) lily. Nomenclatural standard: colour print provided by registrant (WSY 0032055).)

#### 'Ambiance' I(a/b)

Parentage: unnamed seedling × unnamed seedling

R: Lybelmex Hillegom B.V. (1992), G: Lybelmex Hillegom B.V., N: Van den Bos Breeding B.V., I: Van den Bos Breeding B.V. (2000), REG: Van den Bos Breeding B.V. (2000)

Inside variegated deep purplish pink (58D) on a paler ground, throat moderate orange (170D); outside of inner tepals deep purplish pink (58D), midribs pale greenish yellow (2D) with light purplish pink (65B) alongside, outer tepals pale purplish pink (65D) edged deep purplish pink (58D), midribs pale greenish yellow (2D) and tipped strong yellow-green (144C); spots dark red (187A), on a quarter of each tepal; papillae few, in the throat; nectaries white-hairy; pollen dark reddish orange (175C); stigma moderate orange (168C). Fls 165 mm wide; tepals 100 × 40 mm, margins smooth, tips recurved. Lvs scattered, 120 × 15 mm. Stems 1 m, green, with c.7 fls.

#### 'Ambiente' VIII(a-b/b)

Parentage: seedling PG 95-57 × seedling RH 95-01 R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals light yellow (10C), brilliant greenish yellow (6B) on the narrow margins and along

midveins, outer tepals light greenish yellow (8C), brilliant yellow (8A) on the narrow margins and along midveins, throat pale yellow-green (4D); outside with inner tepals pale yellow (8D), light greenish yellow (5D) towards margins, midribs moderate yellow-green (147D), at base dark pink (182C) changing to light greenish yellow (5D), outer tepals pale greenish yellow (2D), dark pink (182C) along midribs, at base moderate yellow-green (147D) and dark pink (182C), strong yellow-green (143C) at top; spots absent; papillae brilliant greenish yellow (6B); nectaries strong yellow-green (143B); pollen moderate orange (167B); stigma dark red (187A). Fls 250 mm wide, fragrant; tepals 155 × 58-82 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 195 × 28 mm. Stems 1.55 m, green with darker margins, and with c.4 fls.

(An Oriempet (OT) lily.)

#### 'Ambition' VII(-/c)

Parentage: 'Star Gazer' × white-flowered Oriental seedling

R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1993)

Inside moderate purplish red (58A) on a yellowish white (155D) ground, tepal-tips and edges yellowish white (155D), midveins deep red (60A), throat yellowish white (155D); outside slightly suffused with moderate purplish red (58A) on a yellowish white (155D) ground, the outer tepals slightly darker coloured, midribs pale yellow-green (155A); spots dark red (187B & C), on two-thirds of each tepal; pollen strong orange (169B); stigma moderate yellow-green (147D). Fls 255 mm wide; tepals 132 × 62 mm, margins ruffled, tips slightly recurved. Lvs scattered, 202 × 48 mm, dark green. Stems 0.74 m, mid green with darker markings, with c.6 fls.

#### 'Ambon' VII(a-b/b)

Parentage unknown

R: Peacock B.V. & Imanse Lelieveredeling B.V.

(1992), G: Peacock B.V., N: Peacock B.V. & Imanse Lelieveredeling B.V. (1995), I: Peacock B.V. & Imanse Lelieveredeling B.V. (1995), REG: Peacock B.V. (1997)

Inside strong purplish red (59D), each tepal edged and tipped yellowish white (155D), midveins deep/strong red (53A/B) above nectaries, fading towards top, throat yellowish white (155D) and strong purplish red (59D); outside yellowish white (155D), very slightly suffused with strong purplish red (59D), outer tepals a little stronger coloured, midribs light yellow-green (150D) with some strong yellow-green (144C) and dark reddish brown at base; spots dark red (187A & B), on basal part of each tepal; papillae yellowish white (155D) and dark red (187A & B), mostly on inner tepals; nectaries strong yellow-green (144B) surrounded by a brilliant yellow (8A) rim; pollen strong orange (169B); stigma moderate purplish red (186A). Fls 270 mm wide; tepals 130-140 × 50-65 mm, margins ruffled, tips strongly recurved. Lvs scattered, 175 × 65 mm, mid green. Stems 0.85 m, green, with a little darker marking, with c.3-7 fls.

**'Ambos Mundos' I(a/c)**

Parentage: 'Alexis' × mixed pollen of 'Limpopo', 'Brushstroke' & 'Impact'  
 R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)

Inside moderate reddish orange (35A); outside yellowish white, midribs pale green; spots absent; nectaries pale yellow-green (196B); filaments slender, short, light orange-yellow (19A); pollen deep red (185A); stigma moderate yellowish white. Fls 150 mm wide; tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 17 mm. Stems 1 m, mid green, with 8-10 fls. Mid July.

(Ambos Mundos is a place in Havana, Cuba where Ernest Hemingway worked. Nomenclatural standard: colour print provided by registrant (WSY 0032244).)

**'Ambra-gamma' VIII(-/-)**

Parentage: (*monadelphum* × unnamed Asiatic with red up-facing fls) F<sub>2</sub>

R: V.G. Otroshko (1972), N: V.G. Otroshko, REG: ICRA (1994)

Tepals orange-red, throat yellow; filaments red, united. Fls scented. Early June.

**'Ambrosia' I(b/c-d)**

Parentage unknown

R: W. Windus (1974), N: W. Windus (1979), I: J. Wadkamper (1980), REG: (between 1980 and 1982)  
 Fls soft apricot over ivory giving a fawn-buff shade, tepal-tips darker, centre dark satin-green; spots absent; pollen brown; stigma tan. Stems 1 m, with up to 20 fls. July. (Published in *Borbeleta Gardens Cat.*, 1980.)

**'Amelia' VI(-/a)**

Parentage: (*leucanthum* var. *centifolium* × *regale*) × Golden Clarion Group

R: C.W. Davidson (1959), G: C.W. Davidson (1962), N: C.W. Davidson, I: C.W. Davidson (1966)

Inside brilliant yellow (12B), throat brilliant yellow (15C); stigma strong greenish yellow. Fls 100 mm long, 125 mm wide, highly scented. Lvs 165 mm long, parsley-green. Stems up to 2.4 m.

**'Amelita' II(c/d)**

Parentage: (*martagon* × unknown) × (*martagon* × unknown)

R: F. Tarlton (1982), G: F. Tarlton (1987), N: F. Tarlton (1993), I: F. Tarlton (1993), REG: F. Tarlton (1993)

Inside moderate purplish red (70A), throat strong purplish red (70B); outside deep purplish pink (70C); spots numerous, mostly on mid-section of each tepal; nectaries light yellow-green (145C); pollen vivid yellow (17B). Fls 70 mm wide; tepals 40 × 15 mm, margins smooth, tips recurved; pedicels unusually long. Lvs whorled, 120 × 65 mm, mid green. Stems 1.1-1.2 m, mid green, with c.12 fls. June.

**'Amendola' I(a/b)**

Parentage unknown

R: Fa Jaap Boon, G: Fa Jaap Boon, N: Fa Jaap Boon, REG: Fa Jaap Boon (2000)

Inside vivid reddish orange (33A), throat strong yellowish pink (32D); outside vivid reddish orange (34B), midribs moderate yellowish pink (31D), up to a third of inner tepals strong red (50A); spots and papillae absent; nectaries white-hairy; pollen strong orange (169B); stigma dark red (59A). Fls 130 mm wide; tepals 90 × 45 mm, margins smooth, tips recurved. Lvs scattered, 170 × 15 mm. Stems 1.2 m, dark, with 6-9 fls.

**'America' I(a/b)**

See AMERICA.

**AMERICA I(a/b)**

Trade designation of 'Holeaw'.

**Americana Group IV(-/d)**

Parentage unknown

R: W.M. Spry, N: W.M. Spry  
 Fls yellow to red. Stems tall, with up to 30 fls. (Published in *ILR* (1982) as Americana grex.)

**'American Eagle' VII(-/b)**

See *L. × parkmanii* 'American Eagle'.

**'American Pie' IV(-/l)**

Parentage unknown, but influence of *parryi*

R: D.B. Fox, N: D.B. Fox, I: D.B. Fox (1972), REG: D.B. Fox (1972)

Fls brilliant orange-yellow (21B) with occasional spots near centre; pollen orange-brown. Lvs usually whorled. Stems 1.5 m.

(Published in *Lilies and other Liliaceae*, 1973: 114.)

**Amersham Aurelians Group VI(-/l)**

Parentage: Aurelians

R: H.E. Barry, N: H.E. Barry

Fls in apricots and yellows. (Published in *ILR* (1982) as Amersham Aurelians grex.)

**'Amethyst' VI(-/l)**

Parentage: 'Damson' × unknown

R: H. Böhm (pre 1988), N: H. Böhm, REG: H. Böhm (1990)

Fls dark pink. Stems 1.6 m. July.

(Published in German Lily Group sales list, 1988.)

**'Amethyst King' IX(b/c)**

See *auratum* 'Amethyst King'.

**Amethyst Temple Group VI(-/a)**

Parentage: selections from Temple Group

S: J.M. Shaver, N: J.M. Shaver, I: C.A. Best (1956)

Fls in shades of amethyst-pink to columbine-red. Stems 1.5 m.

(Published in *Greenock Farms Cat.* 1956. Included in *ILR* (1982) as Amethyst Temple grex.)

**'Ami Ann'** I(a/-)

Parentage: 'Prince Charming' (Div. 1) × ('Prince Charming' (Div. 1) × unknown)

R: L. Schmit (1974), G: L. Schmit (1976), N: L. Schmit (1977), I: Borbeleta Gardens (1979), REG: J. Wadkamper (1980)

Inside pink, tepal-tips darker pink, throat cream; outside reddish pink; spots inconspicuous; pollen brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 0.6 m, dark green, with up to 18 fls. July. (Published in *Borbeleta Gardens Cat.*, 1979.)

**AMIGOS** I(a/-)

Trade designation of 'Holea'.

**amoenum** E.H. Wilson ex Sealy IX(c/b)

Fls purple-red or pink-purple; spots deep red; nectaries green. Fls fragrant; tepals 30-40 × 9-10 mm, Lvs 8-12, scattered, 28-45 × 2-7 mm. Stems 0.15-0.3 m, with solitary fls. W China (Yunnan).

**'Amor'** I(b/-)

Parentage: 'Edith Cecilia' × ('Amber Gold' × Bronzino Group)

R: V. Jošt (1974), G: V. Jošt (1977), N: V. Jošt (1984), REG: V. Jošt (1984)

Inside strong pink (54C), throat moderate purplish pink (54D) with a halo of brilliant yellow (11A); outside moderate purplish pink (54D); spots small, dark red (187A), in the throat; nectaries white-purple; pollen strong orange (169D). Fls 80-90 mm wide; tepals 65 × 30 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 84 × 12 mm, dark green. Stems 0.5-0.6 m, dark green with purple markings, with c.7 fls. Late June.

**'Amorette'** I(a/-)

Parentage: selection from Coronado Group

S: Bischoff Tulleken Leliecultuur B.V. (1974), G: Bischoff Tulleken Leliecultuur B.V., N: Bischoff Tulleken Leliecultuur B.V. (1979), I: Bischoff Tulleken Leliecultuur B.V. (1979), REG: Bischoff Tulleken Leliecultuur B.V. (1982)

Strong orange (170A), tepal-tips reddish orange (35A), throat vivid orange-yellow (23A); outside moderate orange (170C); spots small, brown; pollen red-brown. Tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 65 × 19 mm, mid green. Stems 0.7 m, mid green, with c.5 fls. Mid June.

**'Amoroso'** VI(b-c/b)

Parentage: (pink-flowered selection ex Freimann × unknown) × First Love Group

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1994), REG: B. Mičulka (1994)

Inside pale pink, throat with pale yellow rays; outside deeper pink, midribs darker; spots absent; nectaries yellow-green; pollen apricot; stigma dark crimson. Fls 65 mm long, 145 mm wide, crowded; tepals 125 × 37 mm, moderately recurved; pedicels 80 mm long. Lvs scattered, 115 × 8 mm, pale green. Stems 1.15 m, greyed. July.

**'Amos'** I(a/b-c)

Parentage: ('Sioux' × 'Wattle Bird') × ('Parfait' × 'Wattle Bird')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1993), REG: B. Mičulka (1993)

Inside deep brown-scarlet, each tepal with a narrow flame, tips and edges golden yellow; outside beige-ochre with scarlet tepal-edges and greenish midribs; spots absent; nectaries scarlet- and pink-granulated; pollen ochre; stigma red-bronze. Fls 130 mm wide; tepals 80 × 43 mm, slightly recurved; pedicels 70 mm long, pale green, with secondary buds. Lvs scattered, 135 × 18 mm, glossy pale green. Stems 0.95 m, pale green. Mid July.

**'Amos Perry'** IV(c/-)

Parentage: *humboldtii* var. *ocellatum* × *parryi*

R: A. Perry (c. 1915), N: A. Perry

AM 1915

Tepals orange-yellow, with chocolate-purple spots on basal half, recurved.

(Published in *JRHS* 41: cxxvii (1915).)

**'Amou'** I(a-b/-)

Parentage: seedling 85-63-29 × unknown

R: World Flower B.V. (1991), G: World Flower B.V. (1993), N: World Flower B.V. (2000), I: World Flower B.V. (2000), REG: World Flower B.V. (2000)

Inside and outside moderate purplish red (58A); spots and papillae present; nectaries red-purple; pollen reddish brown; stigma brown. Fls 130 mm wide; tepals 70 × 20 mm, margins ruffled, tips recurved. Lvs scattered, 130 × 20 mm. Stems 1.2 m, green, with c.6 fls. Early.

**'Amplion'** VI(b/b)

Parentage: 'Henrietta' × orange-flowered trumpet

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1998), REG: B. Mičulka (1998)

Inside orange-apricot; outside paler, midribs pale beige, greenish at base; spots absent; nectaries short, dark green; pollen ochre-apricot; stigma green. Fls 135 mm wide; tepals 115 × 45 mm, slightly recurved; pedicels 190 mm long, densely spotted red-brown. Lvs scattered, 105 × 18 mm, dull dark green. Stems 1.15 m, marbled brown-red, with a short infl. Mid July.

**'Amsterdam'** Div. ?

Given as a parent of 'Parma', 'Pimpernel' and 'Positano' which were raised by Vletter & Den Haan Beheer B.V. Was granted Dutch PBR in 1985. Further details awaited.

**'Amulet'** I(a/b)

Parentage unknown

N: F. Tarlton (1957), I: F. Tarlton (1972), REG: F. Tarlton (1972)

Fls brilliant greenish yellow (6B), each tepal lightly spotted on basal third. Pedicels long, with the secondary pedicels vertical. Stems 1-1.2 m. July.

(Published in *Lilies and other Liliaceae*, 1973: 114.)

**'Amurgold' I(c/d)**

Parentage: 'Connecticut King' × unknown  
 R: A. Weinreich, N: A. Weinreich, REG: ICRA (1992)  
 Fls large, golden yellow. Stems 0.8-1 m. Mid July.  
 (Published in German Lily Group sales list, 1991.)

**'Amuse' I(a/-)**

Parentage: (Golden Chalice Group × 'Aristo') × 'Mont Blanc'  
 R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)  
 Inside with tepals pale orange-yellow (19D) in apical part, paler than pale orange-yellow (16D) in basal part, throat paler than pale orange-yellow (19D); outside close to pale orange-yellow (19D), darker towards the tepal-margins (especially on inner tepals), narrowly edged light yellow (19B); spots dark red (187A), on basal part of each tepal; papillae near nectaries; nectaries coloured as tepals; stigma greyish red (182B) with dark red (187A) papillae. Fls 150 mm wide; tepals 90 × 35 mm, margins very slightly ruffled, tips slightly recurved. Lvs scattered, 95 × 17 mm, mid green. Stems 0.31 m, mid green, with c.6 fls.

**'A.M. Vollmer' IX(c/d)**

Syn. of *lancifolium* var. *flaviflorum*.

**'Amy' I(b/-)**

Parentage unknown  
 R: American Plant, Inc. (1980), G: American Plant, Inc. (1982), N: Gebr. Mak B.V. (1988), I: Gebr. Mak B.V. (1988), REG: Gebr. Mak B.V. (1989)  
 Inside strong to vivid red (46A/B), flamed vivid yellowish orange (30C); outside vivid red (45C), flushed with deep red (53A) on outer tepals; spots few, small, dark red (187A), in the throat on inner tepals; pollen moderate reddish orange (171A). Fls 180 mm wide; tepals 85 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 10 mm, mid green. Stems 0.8 m, green, with darker markings, with c.7 fls. July.

**'Amy Syme' I(a/b)**

Parentage: *L. × maculatum* 'Wallacei' × *lancifolium*  
 R: G. Errey, N: G. Errey  
 Tepals cadmium-yellow; spots absent. Stems 0.6 m, with c.4 fls. June to July.  
 (Published in *LYB* 11: 81 (1947).)

**'Anaconda' VI(-/a)**

Parentage: selection from Copper King Group  
 S: J. de Graaff (c. 1963), N: J. de Graaff  
 Inside orange, tinted gold; outside wine-red. Stems 1.9 m. July.

**'Anafe' I(a/-)**

Parentage: 'Orange Light' × 'Enchantment'  
 R: V. Strasser (1975), G: V. Strasser (1977), N: V. Strasser (1980), I: V. Strasser (1982), REG: V. Strasser (1986)  
 Inside golden yellow to tomato-red, tepal-tips red; outside

yellow. Tepal-margins smooth, tips not recurved. Lvs scattered, dark green. Stems 0.7 m, almost black. June to July.

**'Anais Anais' VII(a/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), I: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2001)  
 Inside yellowish white (155D), midveins vivid yellow (9A) at base; outside yellowish white (155D); spots present; papillae white and yellow; nectaries yellow-green; pollen reddish brown; stigma purple. Tepal-margins strongly ruffled, tips recurved. Stems 1.25 m, green, with c.5 fls. Midseason.

**'Analyzer' VII(-/d)**

Parentage: *speciosum* var. *rubrum* 'Uchida' × 'Red Jamboree'  
 R: van Egmond B.V. (1979), G: M. van Egmond (1982), N: M. van Egmond (1984), REG: van Egmond B.V. (1988)  
 Inside deep purplish pink (64D) with white spots in the throat; outside deep purplish pink (70C); spots dark red (187A), on two-thirds of each tepal; nectaries deep purple (79C); pollen dark to moderate reddish orange (173A/B). Fls 180 mm wide; tepals 90 × 50 mm, tips strongly recurved. Lvs scattered, 135 × 25 mm, mid green. Stems 0.65 m, green with darker spots, with c.4 fls.

**'Anastasia' VIII(b-c/b-d)**

Parentage: an Orienpet hybrid backcrossed to *L. × parkmanii* 'Allegra'  
 R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
 Inside rosy pink in centre, shading to extensive white tepal-tips (the colour intensifies and broadens in cool weather); papillae pink, conspicuous; anthers brownish orange. Fls spicily scented; tepals distinctly twisted, margins slightly ruffled, tips recurved. Stems 1.2-1.9 m, arching gracefully. Early to mid Aug.  
 (Published in *ILR Seventeenth Supplement* as Div. VIII(a-b/-). Corrected in *Eighteenth Supplement* to VIII(b-c/b-d).)

**'Anastasiia-2' I(a/b-c)**

Parentage unknown  
 R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1992)  
 Fls carmine-pink, each tepal with a creamy white centre; spots absent. Fls 110-120 mm wide; tepal-margins smooth, tips slightly recurved. Stems c.1.2 m, with c.25 fls. July.  
 (Published in M.F. Kireeva, *Lilii*, 58 (2000).)

**'Ance' VII(b/b)**

Parentage unknown  
 R: Ē. Ievīņa (1994), G: R. Krūmiņš (1998), N: R. Krūmiņš (2003), REG: Lilium Balticum Association (2004)  
 Inside reddish pink, tepals with white margin; outside pale pink, midribs greenish; spots and papillae reddish

brown; nectaries light green; pollen brown; stigma light grey. Fls 190 mm wide; tepals 130 × 65 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 150 × 52 mm. Stems 1 m, green, with 5-6 fls. Early Aug. (Published in *Lilium Balticum Lily Register*, 2003.)

**'Ancona' I(a/-)**

Parentage: 'John Dix' × 'Pirate'

R: V. Strasser (1975), G: V. Strasser (1977), N: V. Strasser (1978), I: V. Strasser (1983), REG: V. Strasser (1985)  
Fls red; pollen red-orange. Tepal-margins smooth, tips not recurved. Lvs scattered, dark green. Stems 1.3 m, with c.25 fls in a pyramidal infl. Early July. (Published in *Der Staudengarten*, 1983.)

**'Andalusie' I(a/b)**

Parentage: seedling G 96-2 × seedling RS 91-1

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2000), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid yellow (9A), throat pale greenish yellow (1D); outside brilliant yellow (8A), each tepal vivid yellow (9A) towards margin and strong yellow-green (144B) at tip with small strong red (46A) spot; spots many, strong red (46A); papillae pale greenish yellow (1D); nectaries light yellow-green (154D); pollen moderate orange (167A); stigma light greenish yellow (1C) with vivid reddish orange (34B). Fls 190 mm wide; tepals 115 × 45 mm, margins smooth, tips slightly recurved. Lvs 120 × 23 mm. Stems 1.15 m, green with darker markings, and with c.6 fls.

**'Andalusischer Frühling' I(a/b-c)**

Parentage: Asiatic seedling × Asiatic seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Inside brownish orange (172C) with a slight reddish tinge, tepal-tips moderate reddish orange (178D), throat and outside brownish orange (172C); spots numerous, small, moderate purplish red (64A), on basal half of each tepal; anthers large, with dark red (187A) pollen; stigma dark purple (83A). Fls 135 mm wide; tepals 65 × 30 mm, margins smooth, tips slightly recurved, with conspicuous midribs. Lvs scattered, 120 × 15 mm. Stems 0.9 m, dark green, with 8-10 fls. Mid June.

**'Andenken an Carl Feldmaier' II(-/-)**

Parentage unknown

R: H. Fuchs (pre 1986), N: H. Fuchs

Inside light lilac with many spots. Stems 1.8 m, with 30-40 fls. Late June. (Published in German Lily Group sales list, 1986.)

**'Andes' VII(-/-)**

Parentage: 'Casa Blanca' × unknown

R: Vletter & Den Haan (1983)

Inside yellowish white (155B), midveins flushed with pale greenish yellow (2D); outside yellowish white (155B), midribs brilliant yellow-green (150B) flushed with pale greenish yellow (2D); spots absent; papillae white and yellow; nectaries strong yellow-green (144B); pollen

brownish orange (171B); stigma brilliant/light yellow-green (150C/D). Fls 230 mm wide; tepals 125 × 70 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 180 × 45 mm. Stems 1.2 m, green, with c.4 fls. (Granted Dutch PBR (LEL 705) in 1989, but not registered - the stock was destroyed by the raiser.)

**var. *andinum* IX(a/b)**

See *philadelphicum* var. *andinum*.

**'André' I(a/-)**

Parentage unknown

R: J. Boon (pre 1982), N: J. Boon

Inside vivid reddish orange (33A) to vivid reddish orange (34A); outside capsicum-red, each tepal with a jasper-red flame; nectaries marigold-orange; pollen orange. Tepal-margins smooth. Lvs scattered, dark green.

**'Andrea' I(a/-)**

Parentage: 'Connecticut King' × unnamed seedling

R: V. Jošt (1971), G: V. Jošt (1974), N: V. Jošt (1984), I: Sempra Praha a.s. (1984), REG: V. Jošt (1984)

Inside vivid yellow (12A); outside vivid yellow (9A); unspotted; nectaries white-green, frosted; pollen moderate reddish orange (171A). Fls 140 mm wide; tepals 80 × 37 mm, margins smooth, tips slightly recurved. Lvs scattered, 118 × 15 mm, mid green. Stems 1 m, mid green, with c.9 fls. June to July. (Published in *Zabradnictvo*, 1984.)

**'Andrea Kay' I(b/-)**

Parentage: 'Carolyn Marie' × 'Connecticut King'

R: H.R. & R. Cocker, G: H.R. & R. Cocker (1981), N: H.R. & R. Cocker (1989), REG: H.R. & R. Cocker (1989)

Inside moderate orange (168C), tepal-tips dark yellowish pink (181D), throat greyish reddish orange (174D); outside dark yellowish pink (181D); spots dark red, on basal half of each tepal; nectaries green; pollen dark brown. Tepal-margins slightly ruffled, tips slightly reflexed. Lvs dark green. Stems 1 m.

**'Andrea Vavilov' I(a-b/b)**

Parentage: *lancifolium* × Pink Perfection Group

R: A.M. Fedorov (1985), G: A.M. Fedorov (1987), N: A.M. Fedorov, I: A.M. Fedorov (1990), REG: A.M. Fedorov (2004)

Inside mid pink, throat ruby-red; outside brownish red; spots and papillae absent; nectaries brown-red; pollen brown-red; stigma brown-red. Fls 130 mm wide; tepals 80 × 15-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm. Stems 1 m, green, with 5-7 fls. July. (The fls tend to fade in sun. Nomenclatural standard: colour print supplied by registrant (WSY 0096339).)

**'André Rieu' I(a/b)**

Parentage: 'Tetra Monaco' × unnamed seedling

R: Sande B.V. (1991), G: Sande B.V. (1993), N: Sande B.V. (1995), I: Sande B.V., REG: Sande B.V. (2001)

Inside vivid yellow (12A), changing to vivid yellow (9A) at tepal-tips, throat vivid yellow (9A); outside brilliant

greenish yellow (7C), changing to brilliant yellow (7A) at tepal-edges; nectaries light greenish yellow (5C); pollen strong orange-yellow (17A) and moderate/light yellow (162B/C); stigma brownish orange (172C); Fls 190 mm wide; tepals 100 × 30-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 20 mm. Stems 0.85 m, green, with 3-4 fls.

#### **‘Andromeda’ I(a/-)**

Parentage: ‘Primrose Green’ × ‘Connecticut King’  
R: C. Feldmaier (1972), G: C. Feldmaier (1976), N: C. Feldmaier (1984), I: G. & F. Ewald (1985)  
Inside vivid yellow (12A); outside brilliant yellow (11A); spots few, moderate reddish brown (177A), in the throat; brushmarks small, light brown, in centre of each tepal; nectaries green; pollen strong orange (25A). Fls 120 mm wide; tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 125 × 16 mm, mid green. Stems 1 m, green suffused with brown, with c.12 fls. July.  
(Included in *ILR Twentieth Supplement* as an unacceptable name: ICNCP, 1995: Art. 17.13 - *Andromeda* is the name of another genus. However in 2004 this ICNCP Article was amended and this name is now accepted. Published in *Gesellschaft der Staudenfreunde*, bulb list, 1984.)

#### **‘Andromeda’ I(-/-)**

Parentage unknown  
R: M.F. Kireeva & N.V. Ivanova (1985)  
Fls golden yellow, with dark brownish spots. Fls 130-150 mm wide. Stems 1.2-1.4 m, with 10-16 fls. July.  
(Unacceptable name: ICNCP, 2004: Art. 27.1- name already used for another lily. Published in M.F. Kireeva, *Lilii*, 39 (2000).)

#### **‘Andromeda’ I(a/c)**

Syn. of ‘Sommersonne’.

#### **‘Angela North’ I(c/d)**

Parentage: (*lankongense* × ‘Edith Cecilia’) × (*lancifolium* var. *flaviflorum* × ‘Destiny’) × ‘Red Fortune’  
R: C. North (1973), G: SHRI (1975), N: C. North (1985), I: RHS Lily Group (1985), REG: RHS Lily Group (1986)  
Fls dark red; spots darker red; nectaries dark red; pollen brown. Fls slightly scented; tepal-margins smooth, tips strongly recurved. Lvs scattered, 110 × 8 mm, dark green. Stems 0.65-1 m, with 5-7 fls. Midseason. Allotriploid. (Slight tendency to a stoloniferous habit.)

#### **‘Angel Bells’ I(c/b)**

Parentage: ‘Ethelwaite’ sibling × ‘Ethelwaite’ sibling  
R: W.D. Evans (1975), G: W.D. Evans (1979), N: W.D. Evans (1986), I: W.D. Evans (1986), REG: W.D. Evans (1986)  
Inside and outside moderate purplish pink (62B), throat light greenish yellow (8B); spots numerous, small, dark red (59A), ring-like; nectaries light greenish yellow (8B); pollen orange-brown. Fls 140 mm wide; tepals 78 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 9 mm, mid green. Stems 1.2 m, dark brown, with c.20 fls. Late.

#### **‘Angel Choir’ I(c/b-c)**

Parentage unknown  
R: unknown, G: Hartle-Gilman Gardens (1989), N: Hartle-Gilman Gardens (1996), I: Hartle-Gilman Gardens (1996), REG: Hartle-Gilman Gardens (1996)  
Inside yellowish white (158C) with a greenish tinge; outside vivid yellow to pale orange-yellow (16A/D), each tepal with a brown central ray grading into green towards the tip; nectaries green-frosted; pollen rust; stigma dark grey. Fls 106 mm wide; tepals 72 × 40 mm, margins very slightly ruffled, tips strongly recurved. Lvs scattered, 162 × 15 mm, moderate olive-green (137B). Stems 1.05 m, moderate brown (165A) above, greener below, with c.13 fls.

#### **‘Angelica’ VI(-/-)**

Parentage: Aurelian hybrid  
Inside lime-green just after opening; outside flushed with pink.  
(Raised before 1985. Listed in *New Zealand Lily Soc. Bull.* March 1985.)

#### **‘Angeline’ I(b/d)**

Parentage: complex hybrid  
R: J.C. Ericksen (c. 1969), N: J.C. Ericksen, REG: J.C. Ericksen (1975)  
Inside greenish white; outside reddish at base; nectaries reddish; pollen yellow. Stems up to 1.5 m, with 20-25 fls. July.  
(Published in *Lilies and other Liliaceae*, 1975: 91.)

#### **‘Angelique’ VII(a-b/b)**

Parentage: unnamed seedling × red-flowered seedling of *L. × parkmanii* Little Rascal Group  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2001)  
Inside very pale purple (69D), with a light greenish yellow (4B) mark from above each nectary extending up to half of each tepal, changing to a strong purplish red (59D) suffusion, throat very pale purple (69D); outside moderate purplish pink (68C) on a very pale purple (69D) ground, midribs tipped strong yellow-green (144A); spots deep purplish red (59B); papillae light greenish yellow (4B); nectaries strong yellow-green (144A); pollen strong brown (172A); stigma light yellow-green (145D). Fls 120 mm wide; tepals 70-80 × 40-50 mm, margins smooth, tips recurved. Lvs scattered, 80 × 55 mm. Stems 0.3-0.5 m, light green with a little darker marking, and with 5-9 fls. July to Aug.

#### **‘Angel Lip’ I(a/-)**

Parentage unknown  
R: H. Takizawa (pre 1989), N: H. Takizawa  
Inside pinkish, each tepal with yellowish base, throat dark; basal part of yellow areas with dark spots.  
(Listed in *Miyoshi & Co. Cat.* no. 87: 110 (1989), with colour illustration.)

**'Angelo' VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1983), N: Bischoff Tulleken Lelies B.V. (1986), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (2001)  
 Inside pale purplish pink (65C), shading into white tepal-edges and tips, midveins strong red (53D) with white base; outside moderate purplish pink (65A), shading into white tepal-edges and tips, midribs strong red (53D); spots and papillae present; pollen dark brown; stigma purple. Fls 220 mm wide; tepals 110 × 40 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 40 mm. Stems 0.9 m, dark with green spots. July.

**'Angel's Dream' VII(a-b/c-d)**

Parentage: (*L. × parkmanii* Everest Group × 'Star Gazer') × white-flowered seedling  
 R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1993)  
 Inside yellowish white (155D), each tepal suffused with moderate purplish red (58A) on apical part; outside yellowish white (155D), suffused with moderate purplish red (58A) along midribs, outer tepals darker; spots moderate purplish red (58A), on more than half of each tepal; pollen strong brown (172A); stigma dark red (187A) and dark greyish reddish brown (200A). Fls 250 mm wide; tepals 125 × 63 mm, margins ruffled, tips strongly recurved. Lvs scattered, 205 × 28 mm, mid green. Stems 0.74 m, pale green, with c.5 fls.

**'Angel Wings' VII(-/c)**

See *L. × parkmanii* 'Angel Wings'.

**Angel Wings Group VII(-/c)**

See *L. × parkmanii* Angel Wings Group.

**'Angers' I(a/b)**

Parentage unknown  
 R: Fa Jaap Boon, REG: Fa Jaap Boon (2003)  
 Inside light purplish pink (63D), strong purplish pink (63C) towards tepal-edges and tips, throat strong purplish pink (63C) with a little strong yellow-green (143B); outside light purplish pink (62C), strong purplish pink (63C) towards tepal-edges; spots dark red (187B); papillae absent; nectaries greenish white (155C) with yellowish white (155D) mark above; pollen strong reddish orange (169A); stigma moderate to light purplish pink (65A/B). Fls 150 mm wide; tepals 85 × 25-40 mm, margins ruffled, tips not recurved. Lvs 190 × 20 mm. Stems 1.3-1.5 m, light green, with 3-11 fls.

**'Angie' I(a/-)**

Parentage: F<sub>2</sub> seedling of 'Edith Cecilia' × a pale-flowered Harlequin Group  
 R: J. Wadkamper (1975), N: J. Wadkamper (1977), I: J. Wadkamper (1979), REG: J. Wadkamper (1977)  
 Inside pink, throat pink-cream; outside greenish pink; lightly spotted; nectaries cream; pollen absent. Tepals

unusually thick, margins smooth. Stems 0.9 m. (Published in *Lilies and other Liliaceae*, 1978/9: 105.)

**'Anglia' VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Trior Lelie B.V., G: Trior Lelie B.V. (1991), N: Trior Lelie B.V. (1993), I: Trior Lelie B.V. (1995), REG: Trior Lelie B.V. (1997)  
 Inside yellowish white (155D), midveins light greenish yellow (8C) and moderate purplish red (59C); outside yellowish white (155D), midribs strong yellow-green (144A) at top, fading strongly into the tepal; spots deep purplish red (59B), on half of each tepal; papillae yellowish white (155D), in the throat; nectaries strong yellow-green (144C); pollen strong orange (25A); stigma dark red (187B). Fls 220 mm wide; tepals 120-130 × 50-60 mm, margins ruffled, tips recurved. Lvs scattered, 135 × 30 mm, mid green. Stems 0.9 m, light green, with 5-10 fls.

**'Angora' VII(a-b/b-c)**

Parentage unknown  
 R: Trior Lelie B.V. (1988), G: Trior Lelie B.V. (1990), N: Trior Lelie B.V. (1994), I: Trior Lelie B.V. (1994), REG: Trior Lelie B.V. (1995)  
 Inside and outside yellowish white (155D); spots absent; papillae white; nectaries green; pollen red-brown; stigma purple-red. Tepals 165 × 49 mm, margins smooth, tips recurved. Lvs scattered, 192 × 43 mm, green. Stems 1.2 m, green, with c.8 fls. Midseason.

**'Angsburg' VI(-/a)**

Error for 'Augsburg'.

**var. *angustifolium* IX(c/d)**

See *pardalinum* var. *angustifolium*.

**'Aninka' I(a/-)**

Parentage: 'Elite' × 'Connecticut King'  
 R: V. Jošt (1974), G: Sempra Praha a.s. (1977), N: Sempra Praha a.s. (1984), I: Sempra Praha a.s.  
 Inside brilliant yellow (8A), tepal-tips light greenish yellow (8B); outside light greenish yellow (8B), spots dark red (187A), in the throat; nectaries white-green; pollen brown. Fls 145-165 mm wide; tepals 98 × 44 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 12 mm, mid green. Stems 0.75 m, mid green, with 15-21 fls. July.

**'Anita' VII(-/c)**

See *L. × parkmanii* 'Anita'.

**'Anita Gail' I(c/d)**

Parentage: unnamed seedling × 'Polar Bear'  
 R: R. & H.R. Cocker (1978), G: R. & H.R. Cocker, N: R. & H.R. Cocker, REG: R. & H.R. Cocker (1999)  
 Inside strong purplish red (54A), throat white; outside strong purplish red (54A); spots dark, on two-thirds of each tepal; nectaries green; pollen dark maroon. Fls 120 mm wide; tepals 70 × 22 mm, margins smooth, tips strongly recurved. Stems 1 m, dark green, with 20-25 fls

in a pyramidal infl. Midseason.  
(Nomenclatural standard: colour print supplied by registrant (WSY 0015647).)

**'Anitra' VI(b/b)**

Parentage: 'Wahlula' × seedling 47-2  
R: C. Yerex (c. 1956), N: C. Yerex  
Fl. centre brilliant yellow (15C); outside parsley-green (HCC 00962) at base, blending to garnet-brown (HCC 00918/3) at tepal-tips, with irregular, prominent furrows extending to tips.

**'Anjuschka' I(c/d)**

Parentage: Asiatic seedling × Asiatic seedling  
R: G. Steinbrück (1990), G: G. Steinbrück (1993), N: G. Steinbrück (1998), I: G. Steinbrück (1998), REG: G. Steinbrück (1998)  
Inside yellowish white (155D), throat with a tinge of pale green; outside similarly coloured; spots numerous, medium sized, red-purple, on basal half of each tepal; pollen dark red (187A); stigma greyish red (184A). Fls 120 mm wide; tepals 60 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 60 × 8 mm, mid green. Stems 0.7 m, rather dark green, with up to 7 fls. Early July.

**'Ankara' VII(-/b)**

Parentage: unnamed seedling × 'Star Gazer'  
R: Vletter & Den Haan (1981), G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)  
Inside greenish white to yellowish white (155C/D), throat brilliant yellow-green (150B/C); outside yellowish white (155B), midribs suffused with pale greenish yellow (9D) at top, suffused with dark yellowish pink (181D) at base; spots absent; papillae yellowish white, in the throat; pollen strong orange (169B). Fls 190 mm wide; tepals 110 × 60 mm, the outer with margins ruffled, all with tips strongly recurved. Lvs scattered, 150 × 50 mm, mid green. Stems 1.1 m, green, with c.4 fls. June (under glass).

**'Anna' I(a/-)**

Syn. of 'Peking'.

**'Anna' VII(-/b)**

See *L. × parkmanii* 'Anna'.

**'Annabelle' I(a/-)**

Parentage: 'Escapade' × unnamed seedling  
R: Gebr. Mak B.V. (1981), G: Gebr. Mak B.V. (1983), N: Gebr. Mak B.V. (1986), I: Gebr. Mak B.V. (1988), REG: Gebr. Mak B.V. (1990)  
Inside strong reddish orange (31A/B); outside strong reddish orange (31A) flushed with brownish orange (171B); spots small, dark red (187A), in the throat; pollen moderate reddish orange (171A). Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 0.6 m, green with darker markings, with c.14 fls.

**'Anna Maria' Div. ?**

Given as a parent of 'Wiroma' and 'Yellow Surf'. No further details. Possibly an error for 'Anna-Maria'.

**'Anna-Maria' VI(b/b)**

Parentage unknown  
R: B. & W. Kossowski (1983), G: B. & W. Kossowski, N: B. & W. Kossowski, I: B. & W. Kossowski (1998)  
Inside and outside orange, throat orange-green; pollen orange. Fls 120 mm wide; tepals 180 mm long, margins smooth, tips slightly recurved. Stems 1.5 m, with 8-10 fls. July.  
(Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to 'Annemarie'.)

**'Anna Theresia' I(b-c/c)**

Parentage unknown  
R: J. Wadekamper, N: Lily Company B.V. (2004), REG: Lily Company B.V. (2004)  
Inside vivid yellow (12A), each tepal with a dark red (183A) flame, throat brilliant greenish yellow (2B); outside vivid yellow (12A), tepal-margins vivid yellow (13A); spots dark red (183A); papillae absent; nectaries strong yellow-green (143B); pollen moderate reddish orange (171A); stigma dark red (59A). Fls 120-155 mm wide; tepals 90 × 30-40 mm, margins smooth to slightly ruffled, tips recurved; pedicels with felty white hairs especially at base. Lvs scattered, 137 × 9 mm. Stems 0.8-1.15 m, green with darker markings, with c.14 fls.

**'Ännchen' I(b/-)**

Parentage unknown  
R: P. Köpke, N: P. Köpke, REG: P. Köpke (1997)  
Fls very large, light yellow, with a green centre and no spots. Stems 1 m. Mid July.  
(Published in European Lily Society sales list, 1995.)

**'Ann Constable' I(c/-)**

Parentage: 'Violet M. Constable' ×  *davidii* var. *unicolor*  
R: W.A. Constable Ltd (c. 1950), N: W.A. Constable Ltd AM 1950  
Fls light greenish yellow (8B); spots reddish. Tepals recurved. Stems 1-1.2 m, green mottled with brown, with 6-8 fls.  
(Published in *Gard. Chron.*, ser. 3, 128: 43, fig. 26 (1950).)

**'Anne' I(a/b)**

Parentage unknown  
R: P. Hoff (1994), G: Hoffgaard B.V. (1996), N: Hoffgaard B.V. (1996), I: Hoffgaard B.V. (1997), REG: Hoffgaard B.V. (1997)  
Inside yellowish white (155B); outside yellowish white (155B), each tepal tipped dark red (187A), the base suffused with strong purplish red (60D) with a little strong yellow-green (143C), midribs light yellow-green (154D) in the mid-section of each tepal, strong yellow-green (143C) at the top; spots and papillae absent; nectaries strong yellow-green (143C); pollen strong orange (24A); stigma strong yellow-green (145A) with a moderate reddish brown (176B) rim. Fls 170 mm wide;

tepals 90 × 30-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 15 mm, mid green. Stems 0.8-0.95 m, green with c.5-8 fls.

**'Anne Boleyn' I(a/b-c)**

Parentage: 'Citronella' × ? 'Citronella'

R: D.B. Fox, G: D.B. Fox (1967), N: D.B. Fox (1970), REG: D.B. Fox (between 1970 and 1982)

Inside vivid yellow (9A) on opening, ageing to more-or-less vivid yellow (12A), spots present. Tepal-margins smooth, tips slightly recurved. Lvs mid green. Stems 1.2-1.5 m, with 8-18 fls.

**'Annemarie' I(a/-)**

Parentage: ('Albipayne' × brushmarked seedling) × 'Cabaret'

R: H. Georgi (1989), G: H. Georgi (1991), N: H. Georgi (1992), REG: H. Georgi (1992)

Inside creamy white with conspicuous, basal black-brown-red brushmarks, extended at the top by distinct lines and with discrete spots below, throat cream tinged with green; outside cream; nectaries yellow-green; pollen deep brown. Fls 150-160 mm wide; tepals 150 × 30 mm, margins distinctly wavy, tips slightly recurved. Lvs scattered, 130 × 15 mm, mid green. Stems 1.4 m, dark green, with 8-10 fls. Late June to mid July.

**'Anne Spry' VII(-/b)**

See *L. × parkmanii* 'Anne Spry'.

**'Annette' I(a/-)**

Parentage: ('Sutter's Gold' × *L. × maculatum*) × 'Connecticut King'

R: Bischoff Tulleken Leliecultuur B.V. (1974), G: Bischoff Tulleken Leliecultuur B.V. (1977), N: Bischoff Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken Leliecultuur B.V. (1983), REG: Bischoff Tulleken Leliecultuur B.V. (1983)

Inside strong orange (25B) on a brilliant yellow (13B) ground, tepal-tips yellow-orange, throat yellow-orange; outside vivid yellow (13A); lightly spotted with brown; nectaries reddish brown; pollen majolica-yellow. Fls 110-165 mm wide; tepals 80-90 × 25-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10-25 mm, mid green. Stems 0.9-1 m, green, with 5 fls. Early July.

**'Annette Gay' VII(-/b)**

Error for *L. × parkmanii* 'Annette Gaye'.

**'Annette Gaye' VII(-/b)**

See *L. × parkmanii* 'Annette Gaye'.

**'Anni Cornelia' VII(-/-)**

Parentage unknown

R: C.D. Bakker (c. 1973), N: C.D. Bakker

Tepals moderate purplish pink (62B), veined strong red (53B); spots strong red (53B); anthers reddish brown.

**'Annie' I(b/b)**

Parentage unknown

R: C.K. Kroell (c. 1982), G: C.K. Kroell (1984), N: C.K.

Kroell (1996), REG: C.K. Kroell (1997)

Vivid reddish orange (43A); spots inconspicuous, small, black, on basal quarter of each tepal; nectaries lightly frosted white; pollen vivid reddish orange (33B); stigma purple. Fls 110 mm wide; tepals 80 × 35 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 115 × 9 mm, dark green. Stem 1.3 m, brown-purple, with c.15 fls in an elongated pyramidal infl. July.

**'Annushka' I(-/-)**

Parentage unknown

R: M.F. Kireeva (1983)

Fls deep orange, 120-130 mm wide. Stems 0.8-0.9 m, with 9-15 fls. June.

(Published in M.F. Kireeva, *Lilii*, 43 (2000).)

**'Anouk' I(a/-)**

Parentage: *lankongense* × (*L. × hollandicum* × *davidii*)

R: Gebr. N. & B. Laan & Zn (1975), G: Gebr. N. & B. Laan & Zn (1977), N: Gebr. N. & B. Laan & Zn (1982), I: Gebr. N. & B. Laan & Zn (1982), REG: Laan Lelie B.V. (1982)

Inside creamy white, tepal-tips white, throat yellow; outside greenish white; spots dark brown, in the throat; nectaries yellow-green; pollen brown. Tepals 80 × 36 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 7-9 mm, dark green. Stems 0.8 m, dark green, with 10-18 fls. Early July.

(Published in *Bloembollencultuur*, June 1982.)

**'Antaeus' VII(-/b)**

Parentage: (*auratum* 'Wittei' × 'Cymbeline') × *rubellum*

R: G.G. & F.S. Blake (1979), G: G.G. & F.S. Blake (1983), N: G.G. & F.S. Blake (1986), I: G.G. & F.S. Blake (1986), REG: G.G. & F.S. Blake (1986)

Inside pale purplish pink (55D) shading to white at tepal-margins, tips pale purplish pink (55D), throat light yellow (15D); outside white shading to pale purplish pink (55D); spots deep purplish red (59B); nectaries light yellow-green (144D); pollen dark reddish orange (178B). Fls 280 mm wide; tepals 190 × 100 mm, margins ruffled, tips slightly recurved. Lvs scattered, 220 × 50 mm, mid green. Stems 1.6 m, moderate yellow-green (147C), with 25 fls. Jan. to Feb. (Australia).

**'Antalya' I(a-b/-)**

Parentage: 'Roter Cardinal' × 'Tetra Mountaineer'

R: V. Strasser (1974), G: V. Strasser (1977), N: V. Strasser (1991), I: V. Strasser (1992), REG: V. Strasser (1992)

Inside and outside blood-red, 100 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 15 mm, dark green. Stems 1 m, green, with c.15 fls. Late June to late July. Triploid.

**'Antarctica' I(a/b)**

Parentage unknown

R: Van der Salm (Holland), G: Van der Salm (Holland), N: Van der Salm (Holland), I: Van der Salm (Holland), REG: Van der Salm (USA) (1989)

Inside cream to pure white, tepal-tips white, throat cream/gold; outside green to white; spots absent; nectaries

lime-green; filaments white; pollen soft brown. Tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm, dark green. Stems 0.9 m, light green, with 8-40 fls. Late June to July.

#### 'Antibes' I(a/-)

Parentage: 'Connecticut King' × 'Chinook'  
R: M.A. van den Berg (1977), G: M.A. van den Berg (1979), N: M.A. van den Berg (1986), I: M.A. van den Berg, REG: M.A. van den Berg (1988)  
Inside light orange-yellow (24C), throat blotched vivid orange (28B); outside light to pale orange-yellow (24C/D), each tepal edged tangerine-orange, midribs pale green; dark brown spots and stripes in a ring around the throat; nectaries brownish red; pollen strong orange (170A). Fls 170 mm wide; tepals 80 × 40 mm, tips strongly recurved. Lvs scattered, 110 × 10 mm. Stems 1.5 m, dark green, with 13-14 fls.

#### 'Antigone' I(c/-)

Parentage: ('Orange Stern' × 'Nutmegger') × 'Despina'  
R: V. & S. Strasser (1990), G: V. & S. Strasser (1993), N: V. & S. Strasser (1995), REG: V. & S. Strasser (1997)  
Inside vivid yellow (12A), throat with a green-frosted nectary-star; outside brilliant yellow (12B); spots strong purple, on two-thirds of each tepal; pollen pale brown. Tepals 90 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 100 × 18 mm, dark green. Stems 1.4 m, almost black, with c.27 fls. Early July.

#### Antique Ivory Group I(-/-)

Parentage: selections from Futura Group  
S: Blackthorne Gardens, N: Blackthorne Gardens, I: Blackthorne Gardens (1982)  
Fls yellowish white.

#### 'Antofagasta' I(a-b/-)

Parentage: unnamed seedling × unnamed seedling  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)  
Inside and outside vivid yellow (12A); spots absent; papillae present; nectaries greenish yellow; pollen light brown; stigma purple. Stems 1.3 m, green with darker markings. Late.

#### 'Anton Geesink' VII(a/b)

Parentage: unnamed seedling × unnamed seedling  
R: Trior Lelie B.V. (1986), G: Trior Lelie B.V. (1988), N: Trior Lelie B.V. (1991), I: Trior Lelie B.V. (1991), REG: Trior Lelie B.V. (1996)  
Inside yellowish white (155D), midveins light greenish yellow (8C); outside yellowish white (155D); yellow spots and yellow papillae present on basal half of each tepal; nectaries yellow-green; pollen reddish brown; stigma dark purple. Tepal-margins ruffled, tips slightly recurved. Lvs scattered, mid green. Stems 1.2 m, green, with (5-)/6(-)9 fls (from 18 cm bulbs).

#### 'Antonia' VII(c/b)

Parentage unknown  
R: J.W.A. van der Wereld?, N: Lily Company B.V. (2004), REG: Lily Company B.V. (2004)  
Inside dark purplish pink (186C), inner tepals with light greenish yellow (4B) above nectaries; outside with outer tepals dark to moderate purplish pink (186C/D), midribs strong yellow-green (144B) at base, changing from moderate purplish red (185C) to brilliant yellow-green (154C), at top some strong yellow-green (144A), inner tepals similar in colour but lacking green top; spots absent; papillae pale yellow-green (155A), pale yellow-green (4D) and moderate purplish pink (186D); nectaries strong yellow-green (144B); pollen strong brown (172A); stigma dark red/dark purple (187A/79A). Fls 150-250 mm wide, fragrant; tepals 144-150 × 39-46 mm, margins strongly ruffled, tips recurved. Lvs scattered, 165 × 30 mm, dark green with lighter veins. Stems 0.7-1 m, light green, with c.9 fls.  
(The young fls have more whitish inside.)

#### 'Antonina' I(b-c/d)

Parentage: ('Stroinaia' × *davidii* var. *willmottiae*) × 'Enchantment'  
R: M.F. Kireeva (1974)  
Fls intense orange-red with large sparse brownish spots; filaments pale orange; anthers red-orange. Fls 90-120 mm wide. Lvs 100 × 10 mm, dark green. Stems 0.8-1.3 m, greenish brown, with 25-30 fls. June to July.  
Syn.: 'Tambovchanka' (unaccepted spelling 'Tambovczanka').  
(Published in M.F. Kireeva, *Lilii*, 43 (2000). First published as 'Tambovchanka' in 1984 and included in *ILR Fourth Supplement* as 'Tambovczanka' which is an unaccepted spelling.)

#### 'Antre' I(a/-)

Parentage unknown  
R: V.G. Otroshko (1973), N: V.G. Otroshko, REG: ICRA (1994)  
Tepals red, with yellow in the centre, and small spots. Stems 1.2 m. June.

#### 'Anviers' I(a/-)

Parentage unknown  
REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside vivid orange-pink (28A); outside vivid yellowish pink (30C); spots and papillae absent; nectaries orange; pollen orange-brown; stigma orange flushed with purple-red. Tepal-margins slightly ruffled, tips slightly recurved. Stems of medium height, with dark markings. Early to midseason.

#### 'Anzac Glory' VI(-/a)

Parentage: (*leucanthum* var. *centifolium* × *regale*) × Golden Clarion Group  
R: C.W. Davidson (1959), G: C.W. Davidson (1962), N: C.W. Davidson, I: C.W. Davidson (1963), REG: C.W. Davidson (between 1963 and 1969)  
Fls brilliant greenish yellow, deepening to brilliant yellow (13B); nectaries pale green; pollen vivid orange-yellow (23A). Fls 130 mm wide, scented. Lvs 75-125 × 17 mm. Stems 1.5 m.

**'Aorangi' IX(b/c)**

See *auratum* var. *rubrum* 'Aorangi'.

**Aotea Group I(b/-)**

Parentage: red-flowered *dauidii* seedling × red-flowered *wilsonii* seedling

R: L.B. Tuffery (c. 1948), N: L.B. Tuffery

Fls scarlet-red, some darker.

(Published in *Dunhampton Lily Fields Cat.*, 1953.

Included in *ILR* (1982) as *Aotea* grex.)

**'Aotearoa' IX(b-c/d)**

See *speciosum* 'Aotearoa'.

**'Apache' I(b/-)**

Parentage: selection from Mid-century Group

S: J de Graaff (c. 1950), N: J. de Graaff

Fls deep mahogany-red, fading to deep walnut; spots dark brown. Stems 1-1.5 m. June to July.

(Published in *Oregon Bulb Farms Cat.*, 1950.)

**'Apart' I(a/b)**

Parentage: 'Connecticut King' × 'Redbird'

R: G. Thürmer (1980), G: G. Thürmer (1982), N:

G. Thürmer (1986), I: G. Thürmer (1986), REG: G.

Thürmer (2001)

Inside brilliant greenish yellow (6B), throat strong yellow-green (143B); outside of outer tepals reddish, outside of inner tepals yellow with reddish midribs; spots small, dark red (183A) on basal third of each tepal (more on inner than outer tepals); nectaries reddish; pollen strong brown (172A). Fls 160 mm wide; tepals 85 × 30 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 110 × 8 mm. Stems 0.95 m, rather dark green, with c.12 fls from prominent dark buds. Early to mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0030334).)

**'Apassionata' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (1983), G: J. Vasarietis (1986), N: J.

Vasarietis (1989), REG: J. Vasarietis (1992)

Fls pale yellow (20C); spots black, on half of each tepal; nectaries greenish white; pollen orange-brown. Fls 150 mm wide; tepals 80 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 75 × 16 mm, pale green. Stems 0.7 m, green, with 6 or more fls. Mid July.

**'Apbalvaim' I(b/-)**

Misspelling of 'Apbalvojums'.

**'Apbalvojums' I(b/-)**

Parentage: selection from Vasaras Prieks Group

R: V.P. Orehovs, S: V.P. Orehovs, N: V.P. Orehovs, N: V.P. Orehovs

Fls clear red.

(Published in *LYB* 33: 78 (1970) and included in *ILR* (1982) as 'Apbalvaim' which is a misspelling.)

**'Apeldoorn' I(c/-)**

Parentage: (*dauidii* × *L. × hollandicum* 'Erectum') F<sub>2</sub>

R: Gebr. N. & B. Laan & Zn (c. 1965), N: Gebr. N. & B. Laan & Zn

Fls vivid reddish orange (30B) with blackish purple spots.

Stems 0.8-1 m, with c.12 fls. July.

**'Apelsinovaia' I(a/-)**

Parentage: 'Sluchainaia Moskvichka' × *henryi*

R: V.A. Grot (1956), N: V.A. Grot

Fls pale orange, spotted. Stems up to 2 m.

(Unaccepted spelling: 'Apelsinovaja'.)

**'Apelsinovaja' I(a/-)**

Unaccepted spelling of 'Apelsinovaia'.

**'Apelsins' I(b-c/-)**

Parentage unknown

R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs

(1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)

Fls bright orange; spots numerous, brown; pollen dark brown. Fls 140 mm wide; tepals 100 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 150 × 10 mm, mid green. Stems 0.9 m, green, with c.10 fls.

**'Apex' IX(b/c)**

See *auratum* var. *platyphyllum* 'Apex'.

**'Apfelblüte' VI(a/-)**

Parentage unknown

R: H. Böhm (c. 1975), N: H. Böhm

Fls cream, shaded with pink, 125 mm wide; tepals 125 × 63 mm. Lvs 80 × 8 mm. Stems 1.2-1.5 m. Late July.

(Listed in German Lily Group sales list, 1988; published in B. Mičulka, *Odrůdy lilii pěstované u nás*, (1995).)

**'Apfelsine' I(a/-)**

Parentage unknown

R: H. Böhm (pre 1986), N: H. Böhm, REG: H. Böhm (1988)

Fls orange, spotted; pollen brown. Stems 0.8 m. Late July.

(Published in German Lily Group sales list, 1986.)

**'Aphrodite' (Hoffgaarde) I(a-b/b)**

Parentage unknown

R: Hoffgaarde B.V. (1992), G: Hoffgaarde B.V. (1993),

N: Hoffgaarde B.V. (1993), I: Hoffgaarde B.V. (1994)

Inside deep pink (51C), each tepal edged pale orange-yellow (23D), base paler; outside deep pink (51C), each tepal edged pale orange-yellow (23D); spots few, small; papillae present; nectaries green; pollen sterile; stigma purple. Fls double, 200 mm wide; tepals 90 × 50 mm, margins ruffled, tips recurved. Lvs scattered, 125 × 15 mm, green. Stems 0.6-0.95 m, green, with 5-8 fls. Late.

(Unacceptable name: already used for another lily (ICNCP, 2004: Art. 27.1). However, the plant is protected by PBR in The Netherlands (LEL 1128) and therefore this name has to be accepted (ICNCP, 2004: Art. 24.4) although the cv. cannot be registered. Thus, there are two lilies with the name 'Aphrodite' and to

distinguish them, the name of the raiser is appended to each and should be thus cited when the names are used - see ICNCP, 2004: Art. 27.5.)

**'Aphrodite' (Lindenbach) I(a/c)**

Parentage unknown  
R: G. Lindenbach (pre 1981), N: G. Lindenbach, REG: G. Lindenbach (1988)  
Fls large, sulphur-yellow. Lvs glossy dark green. Stems 0.9-1 m, with an umbellate infl. Mid July to mid Aug. (Published in *Die Staudengarten* 3: 86 (1982). See note under 'Aphrodite' (Hoffgaarde).)

**'Apollo' III(-/d)**

See *L. × testaceum* 'Apollo'.

**'Apollo' IX(b/c)**

See *auratum* var. *rubrovittatum* 'Apollo'.

**APOLLO I(a/b)**

Trade designation of 'Blizzard'.

**'Apollonia' I(c/-)**

Parentage unknown  
R: F. Ewald (pre 1979), N: F. Ewald, REG: F. Ewald (1988)  
Tepals orange-red; anthers lacking pollen. Stems 1.7 m, with up to 60 fls. Late June. (Published in German Lily Group sales list, 1980.)

**'Appaloosa Queen' I(b/-)**

Parentage: uncertain, but probably (*L. × scottiae* 'Apricot Glow' × 'Orchid Queen')  
R: R. Erskine (pre 1970), G: R. Erskine, N: R. Erskine (1980), I: R. Erskine (1988), REG: R. Erskine (1994)  
Inside pink-orange, throat pink; outside pink; spots many, large, dark brown; nectaries orange; pollen brown. Fls 125 mm wide, scented; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 0.3 m, dark green, with up to 20 or more fls. Early.

**'Applause' VII(a/-)**

Parentage: complex hybrid origin  
R: Bischoff Tulleken Leliecultuur B.V. (1978), G: Bischoff Tulleken Leliecultuur B.V. (1981), N: Trior Lelie B.V. (1985), I: Trior Lelie B.V. (1988), REG: Trior Lelie B.V. (1988)  
Inside rose-pink, tepal-tips white, throat green; outside white and green, tinged with rose-pink when fls open; spots large, rose-pink, on three-quarters of each tepal; pollen dark orange-brown. Tepals 120-125 × 41-54 mm, margins ruffled, tips slightly recurved. Lvs scattered, 188-200 × 37-52 mm, mid green. Stems 1 m, green, with c.5 fls.

**'Appleblossom' I(a/-)**

Parentage unknown  
R: E.H. Doerr (1969), N: J. Wadkamper (1973), I: J. Wadkamper (1974), REG: J. Wadkamper (1973)  
Throat cream, tepal-tips pink; outside pink; spots present; nectaries light green; pollen yellow. Tepal-margins

smooth. Lvs typical Asiatic, deep green. Stems 0.8 m. (Published in *Lilies and other Liliaceae*, 1973/1974: 109.)

**'Appleblossombelle' VI(-/a)**

Parentage: selection from *L. × imperiale* Pink Trumpet Group  
S: D. Foxwell (1960)  
Fls mainly white, flushed with strong purplish pink (67D). (Published in *LYB* 28: 132 (1965).)

**Appleblossom Time Group VII(-/-)**

Parentage unknown  
R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens  
Fls pastel pink. Stems up to 1 m. Early.

**'Applegate's Variety' I(a/b)**

See *L. × hollandicum* 'Applegate's Variety'.

**'Apricot' I(a/-)**

Parentage: 'Connecticut King' × 'Enchantment'  
R: M. Rohrmeier (pre 1981), N: M. Rohrmeier  
Fls light orange; unspotted.  
(Included in *ILR Twenty-first Supplement* as an unacceptable name: ICNCP, 1995: Art. 17.13 - "apricot" is the vernacular name of a genus. However, although in 2004 this ICNCP Article was amended and this epithet could now be now accepted, it is still unacceptable because 'Apricot' has already been used for another lily (ICNCP, 2004: Art. 27.1).)

**'Apricot' I(b/-)**

Syn. of 'Prins Constantijn'.

**'Apricot' I(a/b)**

See *L. × hollandicum* 'Apricot'.

**'Apricot Beauty' I(b/b)**

Parentage: (*lancifolium* × *L. × hollandicum*) × (*L. × hollandicum* 'Erectum' × ('Maxwill' × *lancifolium*))  
R: Gebr. N. & B. Laan & Zn (c. 1964), N: Gebr. N. & B. Laan & Zn  
Tepals strong orange (24A), becoming vivid reddish orange (30A) towards centre; spots numerous. Stems 1 m. July to Aug.

**'Apricot Belle' VI(-/a)**

Parentage: *L. × aurelianense* × unknown  
R: E.C. Genat (c. 1954), N: E.C. Genat  
Fls apricot, bell-shaped; tepal-tips reflexed. Stems 1.2-2.2 m. Jan. (Australia). (Published in *LYB* 20: 78 (1957).)

**'Apricot Cream' I(b-c/-)**

Parentage unknown  
R: F. Fellner (1975), G: F. Fellner (1977), N: F. Fellner (1987), I: Riverside Gardens (1987), REG: F. Fellner (1987)  
Fls soft apricot throughout; pollen yellow. Fls 100 mm wide. Lvs mid green. Stems 0.4 m, green, with 6-10 fls. Mid July.

**'Apricot Delight' I(b/-)**

Parentage: *lanceifolium* var. *flaviflorum* 'Yellow Tiger' × *L. × maculatum*

R: D.M. Stone & F.H. Payne (pre 1967), N: D.M. Stone & F.H. Payne

Fls apricot; spots absent. Tepals heavily ruffled. Stems 1.2 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

**'Apricot Flare' VI(-/-)**

Parentage: Aurelian Group

R: C. Yerex

(Published in *LYB NALS* 15: 93 (1962). No further details.)

**Apricot Glory Group I(-/-)**

Parentage: selections from Futura Group

S: Blackthorne Gardens, N: Blackthorne Gardens, I: Blackthorne Gardens (1982)

Fls apricot.

**'Apricot Glow' I(b/-)**

See *L. × scottiae* 'Apricot Glow'.

**Apricot Gold Group VI(-/c-d)**

See *L. × kewense* Apricot Gold Group.

**'Apricot Orange' I(-/-)**

R: unknown (pre 1951)

Listed as a parent of 'Lady Eva Price'. No further information.

**'Apricot Pie' I(a/-)**

Parentage: 'Honeybunch' × ? 'Delicious'

R: R. Erskine, G: R. Erskine (pre 1985), N: R. Erskine (1987), I: R. Erskine (1990), REG: R. Erskine (1994)

Inside and outside apricot-orange, throat yellow; spots few, brown; nectaries yellow; pollen red-orange. Fls 120 mm wide; tepals 65 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 10 mm, mid green. Stems 0.6 m, green, with c.16 fls.

**'Apricot Prince' VI(-/c)**

Parentage: selection from Sunburst Group

S: J. de Graaff (c. 1958), N: J. de Graaff

Fls apricot. July to Aug.

(Published in *Greenock Farms Cat.*, 1958/59: fig.11.)

**'Apricot Queen' VI(-/a)**

Parentage: ((*sargentiae* × *regale*) × *leucanthum* var. *centifolium*) × ('T.A. Havemeyer' × *henryi*)

R: LeV. Freimann (c. 1939), N: LeV. Freimann

Fls deep apricot, tepal-margins paler. Stems 1.5 m. July. (Published in *Oregon Bulb Farms Cat.*, 1954.)

**Apricot Reflections Group VI(-/a)**

Parentage unknown

R: J.M. Shaver, N: J.M. Shaver, I: J.M. Shaver, REG: J.M. Shaver (1985)

Fls shades of apricot or soft orange. Tepal-margins

smooth. Lvs scattered, dark green. Stems 1.2-2.2 m. July. (Published in *Rex Bulb Farms Cat.*, 1966/67. Included in *ILR Fourth Supplement* as Apricot Reflections grex.)

**Apricot Royal Group VI(-/-)**

Syn. (in part) of both Apricot Royal Bowls Group and Apricot Royal Trumpets Group.

**Apricot Royal Bowls Group VI(b/b)**

Parentage: Aurelians

R: R.W. Bemis (pre 1978), N: R.W. Bemis, I: R.W. Bemis, REG: R.W. Bemis (1984)

Tepals apricot throughout; spots absent; nectaries apricot; pollen orange. Tepal-margins smooth, tips strongly recurved. Lvs scattered, dark green. Stems 1.3-1.6 m. July. Syn.: Apricot Royal Group (in part).

(Published in '*Deep-Freeze*' *Lilies Cat.*, 1978/79: 4.

Included in *ILR* (1982) as Apricot Royal grex (in part) and mentioned as registered in *Third Supplement* as Apricot Royal Bowls grex.)

**Apricot Royal Coronas Group VI(b/c)**

Parentage: Aurelians

R: R.W. Bemis, N: R.W. Bemis, I: R.W. Bemis, REG: R.W. Bemis (1984)

Tepals apricot throughout; spots absent; nectaries apricot. Tepal-margins smooth, tips not recurved. Lvs scattered, dark green. Stems 1.3-2 m. July to Aug.

(Published in '*Deep-Freeze*' *Lilies Cat.*, 1978/79: 4.

Included in *ILR* (1982) as Apricot Royal Coronas grex and mentioned as registered in *Third Supplement*.)

**Apricot Royal Trumpets Group VI(-/a)**

Parentage: Aurelians

N: R.W. Bemis, I: R.W. Bemis, REG: R.W. Bemis (1984)

Tepals apricot throughout; spots absent; nectaries apricot. Tepal-margins smooth, tips strongly recurved. Lvs scattered. Stems 1.3-1.6 m. July.

Syn.: Apricot Royal Group (in part).

(Published in '*Deep-Freeze*' *Lilies Cat.*, 1978/79: 4.

Included in *ILR* (1982) as Apricot Royal grex (in part) and mentioned as registered in *Third Supplement* as Apricot Royal Trumpets grex.)

**'Apricot Ruffles' I(a/b)**

Parentage: 'Pirate' × 'Juliana'

R: D.K. Kölli (1983), G: D.K. Kölli (1985), N: D.K. Kölli (1985), REG: D.K. Kölli (1988)

Inside and outside soft glowing apricot-orange, throat slightly more pinkish orange; very lightly spotted with tiny, maroon spots in area of nectaries/throat; nectaries greyish green, becoming pinkish; pollen dark orange. Buds hairy. Fls sometimes scented; tepals 70 × 35 mm, the narrow margins becoming progressively more ruffled with age, tips slightly recurved. Lvs scattered, 90 × 11 mm, dark green. Stems 0.92 m, dark green, with c.14 fls (some from secondary buds). Late June to early July.

**'Apricot Silk' I(a/-)**

Parentage: 'Honeybunch' × unknown

R: R. Erskine, G: R. Erskine, N: R. Erskine, I: R.

Erskine, REG: R. Erskine (1995)

Inside pastel orange, throat pale orange; outside pale orange; spots absent; nectaries and pollen orange. Fls 110 mm wide; tepals 60 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered. Stems 0.6 m, green, with c.6 fls. Late.

#### 'Apricot Stern' I(a/-)

Parentage unknown

R: J. Klein (pre 1986), N: J. Klein, REG: J. Klein (1988)

Tepals salmon/apricot. Stems 1 m. Mid July.

(Published in German Lily Group sales list, 1986.)

#### 'Apricot Supreme' VIII(b/-)

Parentage: ('Thunderbolt' × 'Tetra Rachel Pappo') × 'Thunderbolt'

R: LeV. Freimann (1980), G: LeV. Freimann (1984), N:

LeV. Freimann (1985), REG: LeV. Freimann (1985)

Inside and outside strong reddish orange (32B); spots sparse, dark, on basal half of each tepal; nectaries orange-red; pollen brown. Tepals 80 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 200 × 20 mm, dark green. Stems 1.2 m, dark green, with c.15 fls. July.

(Classified in *ILR Fourth Supplement* as Div. I(b).)

#### 'Apricot Trumpets Group' VI(-/a)

Parentage: selections from Aurelian Group

S: C. Yerex, N: C. Yerex, I: C.A. Best (1956)

Fls apricot, saffron and tangerine. Stems 1.5-1.9 m. July to Aug.

(Published in *Greenock Farms Cat.*, 1956. Included in *ILR* (1960) as Apricot Trumpets grex.)

#### 'Apriglo' VI(b/b)

Parentage unknown

R: G.S. Jacobs, G: G.S. Jacobs, N: G.S. Jacobs, I: Ozark Mountain Lilies (1991), REG: C. Helsley (1989)

Inside brilliant orange-yellow (23B); outside brilliant orange-yellow (23B) brushed dark reddish orange (173A), midribs brilliant yellow-green (150B); spots absent; nectaries green; pollen mid brown. Fls 130 mm wide; tepals 130 × 40-60 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 160 × 10 mm, mid green. Stems 1.25 m, green with violet-brown spots, with 8-16 fls. Late June.

#### 'Apropos' VII(a/b-c)

Parentage: 'Furore' × (*L. × parkmanii* 'Allegra' × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside light purplish pink (65B), the base of each tepal paler than yellowish white (155D), the pink colour sometimes almost lacking, margins paler, tips white, throat cream; outside yellowish white (155D); spots yellow, medium sized to large; nectaries green changing to yellow; pollen red-brown; stigma grey. Tepals 140 × 43 mm, margins smooth, tips slightly recurved. Lvs scattered, 167 × 32 mm, mid green. Stems 1 m, with dark dots and stripes, with 5-6 fls (from 14-16 cm bulbs). Midseason.

#### 'Aquila' I(a/-)

Parentage unknown

R: P. Hoff (1992), G: Hoffgaard B.V., N: Hoffgaard B.V. (1993), I: Hoffgaard B.V. (1996), REG: Hoffgaard B.V. (1996)

Inside vivid yellow (9A/12A), with a little dark reddish brown at base; dark red (187A) spots and a few papillae in the throat; nectaries hairy, coloured as throat; pollen moderate orange (167A); stigma brilliant greenish yellow (6C) with a little greyish red/dark reddish orange (178A/B). Fls 175 mm wide; tepals 95 × 30-40 mm, margins smooth, tips recurved. Lvs scattered, 95 × 20 mm, green. Stems 1.1 m, green, with 5-8 fls.

Syn.: 'Imagine'.

(Registered (see *ILR Sixteenth Supplement*) as 'Imagine'. However, in 1998 European PBR were granted to this cv. under the epithet 'Aquila', and so the epithet must be changed to 'Aquila' (ICNCP, 2004: Art. 24.4).)

#### 'Aquino' I(a/b)

Parentage unknown

R: W. Paauw & Zn B.V. (pre 1987), REG: Peacock B.V. (2002)

Inside vivid yellow (12A), throat yellow; spots black with red margins; pollen dark brown; stigma brown. Tepal-margins slightly ruffled, tips recurved. Stems brown/brown purple.

#### 'Arabelle' I(b/-)

Parentage: *lancifolium* × unknown

R: J. Koeman (pre 1972), N: J. Koeman, REG: J. Koeman (1973)

Tepals brilliant greenish yellow (6B); spots brownish orange (172C).

(Published in *Lilies and other Liliaceae*, 1973/1974: 109.)

#### 'Arabeska' I(b/c)

Parentage: seedling 17-61 × 'Våverite'

R: N.G. Korshikova (c. 1985), N: N.G. Korshikova

Tepals light apricot with dark red spots and markings (similar to Tango Group). Stems 0.8 m.

#### 'Arabesque' VII(c/d)

Parentage: *L. × parkmanii* 'Tetra Journey' × 'Tetra Black Beauty'

R: P. Schenk, I: Columbia-Platte Lilies (pre 1995)

Inside deep velvety rose-red, each tepal with very narrow, paler margin; papillae darker rose-red on basal half of each tepal; nectaries conspicuous, green. Fls 200-250 mm wide; tepals slightly twisted, margins ruffled. Stems 1.5-1.9 m, with numerous fls. Mid to late Aug.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Arabeska'.)

#### 'Arabian Knight' II(c/d)

Parentage unknown

R: G.L. Slate, N: R. & H.R. Cocker (1999), REG: R. & H.R. Cocker (1999)

Inside the apical third strong red (46A), the basal two-thirds strong orange (26A); outside strong red (53B); spots red, on the orange area; nectaries green; pollen light

orange. Fls 65 mm wide, strongly scented; tepals 35 × 15 mm, margins smooth, tips strongly (but not fully) recurved. Lvs whorled. Stems 1 m, dark green, with 10-15 fls. Early.

(Nomenclatural standard: colour print supplied by registrant (WSY 0015645).)

#### 'Arabian Pearl' VII(a/b)

Parentage: 'Medusa' × 'Solaia'

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Beheer B.V. (2004)

Inside deep purplish pink (66C), moderate purplish pink (66D) towards yellowish white (155D) margins, moderate purplish pink (66D) along midveins (with age the colour becomes more light purple (75A) with (74B) midveins), throat yellowish white (155D); outside with outer tepals vivid purplish red (67B), deep purplish pink (66C) towards narrow yellowish white (155D) margins, midveins strong yellow-green (143C) at base and top, the middle part brilliant yellow-green (150A) in basal half and in apical half moderate red (179A) with strong yellow-green (143C), inner tepals very pale purple (69D) at base changing into strong purplish pink (68B), towards margins moderate purplish pink (65A), from halfway up margins narrow, yellowish white (155D), midribs strong yellow-green (143C) at base, changing into brilliant yellow-green (150B), towards top strong purplish red (60D); spots few, strong purplish red (60D); nectaries strong yellow-green (144B) with narrow light greenish yellow (1C) edge; pollen strong orange (168A); stigma light purple (77C). Fls 210 mm wide, fragrant; tepals 130 × 50-65 mm, margins slightly ruffled, tips recurved. Lvs scattered, 165 × 30 mm. Stems 1.1-1.2 m, green with darker flush, and with 4-7 fls.

#### 'Arabian Red' VII(a/b)

Parentage: Oriental seedling × ('Barbaresco' × Oriental seedling)

R: Bischoff Tulleken Lelies B.V. (1994), G: Bischoff Tulleken Lelies B.V. (1997), N: De "Classic" Groep (2001), I: De "Classic" Groep (2002), REG: De "Classic" Groep (2001)

Inside strong purplish red (60B), each tepal narrowly edged yellowish white (155D) towards tip, midveins deep red (185A) above nectaries, fading towards top, throat yellowish white (155D); outside strong purplish red (60C) on a paler ground, midribs light yellow-green (154D) with a little strong yellow-green (144B) at base and top; spots dark red (187A) and deep red (60A), on up to two-thirds of each tepal; papillae in the throat, yellowish white (155D) or strong purplish red (60B); nectaries strong yellow-green (144B), surrounded by light greenish yellow (8B); pollen strong orange (169B); stigma light yellow-green (145C). Fls 200 mm wide; tepals 115-120 × 45-65 mm, margins hardly ruffled, tips slightly recurved. Lvs scattered, 170 × 60 mm. Stems 0.8-0.9 m, light green with darker markings, and with c.5 fls. July to Aug.

#### 'Aranal' VII(a/-)

Parentage unknown

R: Sande B.V., REG: Sande B.V. (2004)

Inside deep red to strong purplish red (60A/B), each tepal lighter towards tip and margins; outside between moderate purplish red (186B) and strong purplish red (60D); spots dark purple-red, many, large; papillae present; nectaries purple-red changing to yellow-green; pollen red-brown; stigma dark purple. Tepals medium sized, margins slightly ruffled, tips recurved. Lvs medium to long. Stems tall, with darker markings. Midseason to late.

#### 'Arancia' I(a/-)

Parentage unknown

R: P.M. Hoogland (pre 1989), N: P.M. Hoogland (2002), REG: P.M. Hoogland (2002)

Inside a little darker than strong orange (24A), with dark red-purple markings; outside strong orange (24A), midribs strong orange-yellow (24B); spots and papillae present; pollen dark brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems with dark markings. Early to midseason.

#### 'Aranka' VI(b/b)

Parentage: Golden Clarion Group × 'Bright Star'

R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)

Inside rich apricot; outside paler, midribs red-veined; nectaries green; pollen dark apricot. Fls 125 mm wide, funnel-shaped; tepals 110 × 44 mm, rigid, slightly recurved; pedicels 50 mm long, spotted. Lvs 90 × 12 mm, dark green, slightly glossy. Stems 1.1 m, slender, spotted with dark violet especially at base. Mid July.

#### 'Arawa' VII(-/d)

See *L. × parkmanii* 'Arawa'.

#### 'Arbat' I(a/b)

Parentage: (*monadelphum* × mixed Asiatics) × ('Redstart' × 'Connecticut King')

Fls red, scented. Stems 1 m. July.

(The raiser is unknown.)

#### 'Arber' VI(c/-)

Parentage: 'Lady Ann' × 'Henriette'

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1982), I: V. Strasser (1986), REG: V. Strasser (1990)

Inside cream-white, tepal-tips white, throat orange; outside cream; spots absent; pollen brown. Tepals 100 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 24 mm, mid green. Stems 1.3 m, brown-green, with c.25 fls. Late July.

#### *arboricola* Stearn IX(c/d)

Fls greenish, sometimes flushed with gold; pollen orange-red. Fls 130 mm wide, solitary, scented. Lvs scattered, up to 250 × 45 mm. Stems up to 1.2 m, slender, green, with bulbils in the lf-axils. Aug. N Myanmar.

(Found growing on trees in 1953 by Frank Kingdon Ward. It is the only epiphytic lily known. It was distributed to Wisley, RBG Edinburgh and Liverpool Parks Dept. but all the bulbs rotted and died. There is a recent report (2007) that it may have been re-discovered in Vietnam by Sue & Bledwyn Wynn-Jones of Crŭg Farm

Nursery, who have introduced bulbs, bulbils and seed, but until the plants bloom the identification cannot be confirmed.)

**'Arcade' VII(a-b/-)**

Parentage unknown

R: Vletter & Den Haan (pre 1992)

Inside strong purplish pink (73B), midveins orange-pink at base; outside light purplish pink (65B); spots and papillae present; nectaries green, surrounded by light yellow (11B); pollen orange-brown; stigma purple. Tepal-margins slightly ruffled, tips recurved. Stems of medium height, green with some darker markings.

(Granted Dutch PBR (LEL 1072) in 1993, but not registered - the stock was destroyed by the raiser.)

**'Arc de Triomphe' I(a/-)**

Parentage: 'Vesuvius' × 'Connecticut King'

R: Gebr. Vletter & J.A. Den Haan (1977), G: Gebr. Vletter & J.A. Den Haan (1979), N: Gebr. Vletter & J.A. Den Haan (1984), I: Gebr. Vletter & J.A. Den Haan (1984)

Inside vivid reddish orange (32A), tepals edged vivid reddish orange (30A), throat transparent strong yellowish pink (32C); outside vivid orange (28A) to strong reddish orange (32A), tepals edged darker, midribs paler; spots dark brown; nectaries violet-red; pollen orange to purple-brown. Tepal-margins smooth, tips strongly recurved. Lvs scattered, mid green. Stems pale green. July.

(Published in *Bloembollencultuur*, 1984.)

**'Archangel' IX(b/b)**

See *auratum* 'Archangel'.

**'Arch Chandler' I(c/-)**

Parentage: *L. × maculatum* 'Wallacei' × *lancifolium*

R: G. Errey, N: G. Errey

Tepals cadmium-yellow, broad; spots absent. Stems with 15-20 fls.

(Published in *LYB* 10: 60 (1946).)

**Arctic Group IX(b/a)**

Syn. of *candidum* 'Cascade'.

**'Arctica' I(b-c/-)**

Unaccepted spelling of 'Arktika'.

**'Arctic Diamond' VIII(a/b)**

Parentage: seedling LA 93096-1 × 'Sancerre' (tetraploid form?)

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Beheer B.V. (2004)

Inside yellowish white (155D), throat light yellow-green (138D); outside yellowish white (155D), with little light purplish pink (65B) stripes from base to about halfway of each tepal along midrib, midrib brilliant yellow-green (142B) at base and top, inner tepals less light purplish pink (65B); spots few, dark red (59A); papillae yellowish white (155D); nectaries strong yellow-green (143B); pollen dark reddish orange (175B); stigma light greenish yellow (3D). Fls 160 mm wide; tepals 103 × 55 mm,

margins slightly ruffled, tips recurved. Lvs scattered, 140 × 20 mm. Stems 0.9-1.15 m, green with darker markings, and with 2-7 fls.

(*A longiflorum*/Asiatic (LA) hybrid.)

**'Arctic Dove' VI(-/c)**

Parentage: Aurelian Group type

R: C. Yerex, N: C. Yerex

Fls white with green centre.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 47 (1978).)

**'Arctic Snows' I(b/-)**

Parentage: 'Snow Bunting' × ('Snow Bunting' × unknown)

R: E. Robinson (1971), N: E. Robinson, I: E. Robinson (1979), REG: E. Robinson (1980)

Fls white, tinged with yellow when first open; large spots in centre. Fls 125-150 mm wide; tepal-margins smooth.

Lvs scattered, mid green. Stems up to 1 m, pale green.

(Published in *Gaybird Nursery Lily List*, 1979.)

**'Arctic Sunrise' I(a/c)**

Parentage: unnamed seedling × unnamed seedling

R: R.H. Bazett (1990), G: R.H. Bazett (1993), N: R.H. Bazett (2002), I: The Lily Nook (2002), REG: R.H. Bazett (2002)

Inside white, with a pale orange flush at the base extending up c. a third of each tepal, throat pale orange shading to green at nectaries; outside white, midribs grey-green; spots numerous, small, maroon, on basal third of each tepal; nectaries green; pollen burnt orange; stigma green. Fls 160 mm wide; tepals 87 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 113 × 18 mm. Stems 0.9 m, dark green, with c.17 fls in a racemose infl. (including some secondary buds). Late June to early July.

(Epithet describes the fl. coloration. Nomenclatural standard: colour reproduction provided by registrant (WSY 00351212).)

**Arctic Treasures Group VII(-/c)**

Parentage: derived from 'Swan Lake' & other cvs

R: Rex Bulb Farms (pre 1983), N: Rex Bulb Farms, REG: ICRA (1997)

Tepals white, usually with purple spots; nectaries green.

Fls strongly scented; tepals 110 × 50 mm, margins smooth, tips slightly reflexed. Lvs scattered, 110 × 30 mm, mid green. Stems 1-1.8m, mid green, with c.6 fls.

Late July to Aug.

**'Ardaty' VI(-/c)**

Parentage: white-flowered seedling × pink-flowered seedling

R: Mak-Leek Inc. (1990), G: Mak-Leek Inc. (1993), N: Mak-Leek Inc. (1996), I: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside white, with a strong to light purplish pink (63C/D) blush along basal margins of inner tepals, a 5-8 mm wide, brilliant greenish yellow to vivid yellow (6C/9B) ray extending from each soft greenish white

nectary; outside ivory-white to pale green, midribs slightly deeper; spots absent. Fls c. 180 mm wide; tepals 80-120 × 50 mm, tips slightly reflexed. Lvs scattered, 130 × 55 mm, mid green. Stems 0.7-1.25 m, green with darker markings, with 4-10 fls. Aug.  
(Fl. colour and stem height are slightly affected by temperature and light levels.)

#### 'Ardent' I(a/-)

Parentage: 'Ladykiller' × 'Roter Cardinal'  
R: Gebr. N. & B. Laan & Zn (1975), G: Gebr. N. & B. Laan & Zn (1977), N: Gebr. N. & B. Laan & Zn (1982), I: Gebr. N. & B. Laan & Zn (1982), REG: Gebr. N. & B. Laan & Zn (1983)  
Inside brownish red, flushed with orange; tepal-tips maroon-red, throat orange-red; outside brown-red; spots very few, purple; nectaries purple; pollen orange-red. Tepals 80 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 13 mm, dark green. Stems 1 m, dark green with reddish spots, with c.20 fls. July.  
(Published in *Bloembollencultuur* 93 (2): 32 (1982).)

#### 'Arena' VII(a/b)

Parentage: seedling 553 × seedling 201  
R: Vletter & Den Haan Beheer B.V. (1983), G: Vletter & Den Haan Beheer B.V. (1986), N: Vletter & Den Haan Beheer B.V. (1991), I: Vletter & Den Haan Beheer B.V. (1992), REG: Vletter & Den Haan Beheer B.V. (1992)  
Inside greenish to yellowish white (155C-D), midveins with deep red (185A) stripe, throat strong yellow-green (144C); outside greenish white (155C), midribs pale yellow-green (4D); spots deep red (185A); nectaries dark purple/strong purplish red (79A/72A); pollen strong reddish orange/strong orange (169A/B). Fls 230 mm wide; tepal-margins slightly ruffled, tips slightly recurved. Lvs scattered, 185 × 38 mm, mid green. Stems 1.24 m, green, with c.5 fls. June.

#### 'Ares' III(c/d)

See *L. × testaceum* 'Ares'.

#### 'Arfa' I(a/b)

Parentage: 'Orfejs' × 'Aristo'  
R: A. Balode (1994), G: A. Balode & D. Grauda (1997), N: A. Balode (2000), REG: A. Balode (2000)  
Inside strong pink (49A), centre of each tepal deep pink (50B) with a brilliant yellow (13B) blotch, throat light red-purple; outside red-purple and greenish; spots many, large, dark red (185A) on two-thirds of each tepal; nectaries velvety dark greyed purple; pollen light brown. Buds downy. Fls 140 mm wide, slightly scented; tepals 70 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 90 × 15 mm, dark green. Stems 0.9 m, dark green, with c.6 fls. Late July.

#### 'Argenta' VI(-/d)

Parentage: 'Heidelberg' × 'Lednice'  
R: V. Strasser (1982), G: V. Strasser (1985), N: V. Strasser (1992), I: V. Strasser (1992), REG: V. Strasser (1992)  
Inside brilliant yellow (11A); outside brilliant yellow (12B); spotted as in *L. henryi*. Fls 180 mm wide; tepals

115 × 38 mm, tips slightly reflexed. Lvs scattered, 150 × 24 mm, dark green. Stems green, with up to 20 fls. Late July to late Aug.

#### 'Argentina' VII(a/b)

Parentage unknown  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside vivid purplish red (57C), each tepal with a light greenish yellow (6D) spot above nectaries, throat yellowish white (155D); outside moderate purplish pink (66D), midribs light yellow-green (142C) at base changing to yellowish white (155D) at top with a strong yellow-green (143C) spot; spots and papillae moderate purplish red (58A); pollen strong orange (168A); stigma pale yellow-green (157C) with vivid purple (80A). Fls 235 mm wide, strongly scented; tepals 150 × 72 mm, margins ruffled, tips slightly recurved. Lvs 195 × 58 mm. Stems 1 m, reddish brown, with c.3 fls.

#### 'Argentinas Tango' I(-/-)

Parentage: derived from Tango Group  
R: V.P. Orehovs  
Fls orange with brown spots and marbling.

#### 'Argolis' I(a/b)

Parentage: Asiatic hybrid WR 501 × 'Roter Cardinal'  
R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2001)  
Inside strong red (53B), tepal-tips slightly paler, throat strong red (53B); outside strong red (53B), midribs dark greenish yellow (152C); spots absent; nectaries deep purplish pink (73A), white-hoary; filaments soft red with large thick anthers; pollen vivid reddish orange (34A); style vivid reddish orange (33A); stigma deep purplish red (71A). Fls 100 mm wide; tepals 50 × 27 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 17 mm. Stems 0.65 m, dark green, with c.8-10 fls. Late June.  
(Published in Steinbrück's sales list, 2000. Nomenclatural standard: colour print provided by registrant (WSY 0028882).)

#### 'Argos' VIII(a/b)

Parentage: seedling LAOR 93-2 × seedling AC 94-1  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1992), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside strong orange (26A), strong orange (25A) along midveins and on tepal-margins and tips, throat pale orange-yellow (23D); outside light orange-yellow (22C), midribs strong yellow-green (144C), strong orange (25A) towards tepal-margins, tips strong yellow-green (144C) with a small strong yellow-green (144A) spot; spots and papillae absent; nectaries moderate yellow-green (147C); pollen strong brown (172A); stigma strong yellowish pink (31C). Fls 200 mm wide; tepals 135 × 55 mm, margins smooth, tips recurved. Lvs 155 × 28 mm. Stems 1.6-2.2 m, green, with 9-11 fls.

**'Argusauge' I(b/c)**

Parentage: 'Kleopatra' (of Weinreich) × 'Butterscotch'  
 R: G. Steinbrück (1989), G: G. Steinbrück (1992), N:  
 G. Steinbrück (1997), I: G. Steinbrück (1997), REG: G.  
 Steinbrück (1998)

Tepals moderate red (180A) with a narrow gold rim (the gold underlying the colour of the whole fl.); spots many, medium sized, dark greyish purple (202A) on basal three-quarters; nectaries greyish yellow-green (194A), white-frosted; pollen vivid orange (28A); stigma moderate orange (167C). Fls 160 mm wide; tepals 75 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 12 mm, dark green. Stems 0.8 m, rather dark green, with up to 10 fls. Early July.

**'Aria' I(b/-)**

Misspelling of 'Ārija'.

**'Ariadne' I(c/d)**

Parentage: *lankongense* × 'Maxwill'

R: C. North, N: C. North, I: C. North (1976), REG: C. North (1976)

Fls light yellowish pink (159A), flushed with purple at tepal-tips; pollen sparse. Stems with 20-30 fairly small, scented fls. July.

(Published in *Lilies and other Liliaceae*, 1976: 89.)

**'Ariel' III(c/b)**

Parentage: *monadelphum* × *candidum*

R: L.D. Marshall (1977), G: E.A. & J.F. McRae (1979), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988)

Inside pure white, shading into light greenish yellow (3D), tepal-tips pure white (the tips plum before they open), throat light greenish yellow (3D); outside white, suffused with light greenish yellow (3D) at base; spots few (2-5 per tepal), tiny, not always apparent; nectaries green; pollen light orange-yellow (22B). Fls strongly scented; tepals 50-60 × 25-30 mm, margins smooth, tips recurved. Lvs whorled to spiral, 80-150 × 20-25 mm, pale to mid green, hairy on margin and veins beneath. Stems 0.75-1 m, mid green, with 7-20 fls. Bulbs very large, strong yellow. Mid May to early June.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Ariel' II(-/-)**

See *L. × dalhansonii* 'Ariel'

**'Aries' VIII(c/-)**

Parentage unknown

R: Miyoshi & Co. Ltd, REG: P.F. Onings

Bloembollenbedrijf B.V. (2003)

Inside moderate to light purplish pink (65A/B); outside light purplish pink (65B); spots and papillae absent; nectaries green; pollen orange-yellow; stigma green. Stems medium height. Midseason to late.

(*A. longiflorum*/Oriental (LO) hybrid.)

**'Ariia' I(b/-)**

Misspelling of 'Ārija'.

**'Ārija' I(b/-)**

Misspelling of 'Ārija'.

**'Ārija' I(b/-)**

Parentage: selection from Skumstu Group

S: V.P. Ōrehovs, N: V.P. Ōrehovs (post 1956)

Fls bright red, shiny.

(Misspelling: 'Aria'; 'Āriia'. Published in *LYB* 33: 79

(1970) and included in *ILR* (1982) as 'Ārija' which is also a misspelling.)

**'Ārija Elksne' VI(-/a)**

Parentage: 'Rita' × unknown

R: D.-V. Šķimele, G: D.-V. Šķimele, N: D.-V. Šķimele (1984), I: D.-V. Šķimele, REG: D.-V. Šķimele (1987)

Inside cream, throat bright yellow; outside cream, midribs light brown; pollen orange. Tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.8 m. Late July to Aug.

**'Āriki' VII(b/c)**

See *L. × parkmanii* 'Āriki'.

**'Āriosto' VII(a-b/b)**

Parentage: seedling 89-59 × seedling 93-14

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Fls whiter than yellowish white (155D), midveins pale yellow-green (155A); outside whiter than yellowish white (155D), midribs light yellow-green (154D), with a little strong yellow-green (144C) at base and top; spots and papillae white (whiter than 155D); nectaries strong yellow-green (144B); pollen strong orange (169B); stigma pale yellow-green (157A) speckled with purple. Fls 220 mm wide; tepals 120-125 × 45-70 mm, margins ruffled, tips recurved. Lvs scattered, 150-190 × 35-65 mm. Stems 1.1 m, green, with c.3-5 fls.

**'Āriстера' I(a/b-c)**

Parentage unknown

R: J. Hloušek, N: J. Hloušek, I: J. Hloušek (1986), REG: J. Hloušek (1993)

Inside dark red, tepal-tips paler, throat darker; outside red; spots small to medium sized, red, on half of each tepal; nectaries red with a yellow flare above; pollen red; stigma red. Fls 130 mm wide; tepals 95 × 25 mm, margins smooth, tips recurved; pedicels 150 mm long, dark brown. Lvs scattered, 150 × 14 mm, dull deep green. Stems 1.45 m, thick, flushed with brown, slightly hairy, with bulbils. Mid July.

**'Āriosto' I(a/b)**

Parentage: *L. × hollandicum* × 'Tabasco'

R: Bischoff Tulleken Leliecultuur B.V. (1975), G:

Bischoff Tulleken Leliecultuur B.V., N: Bischoff Tulleken Leliecultuur B.V. (1979), I: Bischoff Tulleken Leliecultuur B.V. (1979), REG: Bischoff Tulleken Leliecultuur B.V. (1981)

Inside brilliant orange-yellow (23B), centre blotched

orange-yellow; spots rust-brown; anthers rust-brown; pollen dark red-brown. Fls 160 mm wide; tepals 80 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 12 mm, mid green. Stems 0.5-0.7 m, mid green, with c.4 fls. Mid June.

Syn.: 'Orange Aristo'.

(Published in *Bloembollencultuur*, September 1980.

Registered and included in *ILR* (1982) as 'Orange Aristo', but was granted Dutch PBR (LEL 75) in 1981 as 'Aristo'. Under ICNCP, 2004: Art. 24.4, 'Aristo' becomes the accepted cv. epithet.)

#### 'Aristocrat' II(-/-)

See *L. × dalhansonii* 'Aristocrat'.

#### 'Aristo Tetra' I(a/-)

Syn. of 'Tetra Aristo'.

#### 'Arizona' VIII(-/-)

Parentage: (*longiflorum* × 'Mont Blanc') × rose-pink-flowered seedling

R: A. Bakker & Zn (1987), G: A. Bakker & Zn, N: A. Bakker & Zn (1991), I: A. Bakker & Zn (1991), REG: A. Bakker & Zn (1991)

Inside light purplish pink (55C), throat suffused with pale greenish yellow (10D); outside light to pale purplish pink (55C/D), midribs slightly suffused with light yellow-green (145C); spots moderate purplish red (59C) on basal half of each tepal; nectaries brilliant yellow-green (150C); pollen moderate to dark reddish orange (167A/172B). Fls 210 mm wide; tepals 105 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 0.75 m, green with darker markings, with c.6 fls. June to July (under glass).

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Arka' I(b/c)

Parentage: 'Nakts Tango' × 'Baltais Lācis'

R: A. Balode (1996), G: A. Balode (1998), N: A. Balode (1999), REG: A. Balode (1999)

Inside pure white, throat green; outside white, midribs green; numerous dark red (187A) spots and marbling on two-thirds of each tepal; nectaries brown; pollen brown. Fls 155 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 10 mm, dark green. Stems 1 m, green, with c.5 fls. Early July.

#### 'Arkansas Traveler' IX(c/d)

See *michiganense* 'Arkansas Traveler'.

#### 'Arkell' I(c/-)

Parentage: ((*davidii* var. *unicolor* × 'Lillian Cummings') × 'Edith Cecilia') × 'Skylark' (Div. I)

R: W.D. Evans (1968), N: University of Guelph (1979), I: University of Guelph (1979), REG: University of Guelph (between 1979 and 1982)

Inside strong pink (54C), with a stripe of strong purplish red (54A) and light yellowish pink (29C) at base of each tepal, tips strong pink (54C), throat white; outside strong pink (54C), tepal-tips dark yellowish green (136B);

lightly spotted with deep red (53A). Tepals recurved, margins smooth. Lvs dark green. Stems 0.9 m.

#### 'Arktika' I(b-c/-)

Parentage: ('Stroinaia' × *davidii* var. *willmottiae*) × *cernuum* hybrids

R: M.F. Kireeva (c. 1983), N: M.F. Kireeva

Fls creamy white, large; spots brown. Stems 1.3 m, with bulbils. July.

(Included in *ILR Twenty-first Supplement* as 'Arctica', which is an unaccepted spelling. Published in M.F. Kireeva, *Lilii*, 72 (2000).)

#### 'Arma' VII(a/b)

Syn. of 'Zanarma'.

#### 'Armada' I(c/-)

Parentage: 'Paprika' × ('Edith Cecilia' × 'Mega') F<sub>2</sub>

R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1971), REG: (1969)

Fls vivid red (45A). Stems 1.2 m. June.

(Published in *LYB* 33: 254 (1970).)

#### 'Armeniacum' I(a/b)

See *L. × maculatum* 'Armeniacum'.

#### var. *armenum* IX(c/d)

See *monadelphum* var. *armenum*.

#### 'Armonia' VII(a/b)

Parentage: seedling 92-22 × seedling RF 94-01

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside deep purplish red (61A), tepal-edges dark purple (79A), along midveins strong purplish red (60B), throat yellowish white (155D); outside with outer tepals deep purplish red/strong purplish red (61A/60B), edges dark purple (79A), midribs light yellow-green (145B) at base, yellowish white (155D) up to half way, changing to light yellow-green (145D) with deep purplish red (61A), at top strong yellow-green (143B), inner tepals strong purplish red (60C), deep purplish red (61A) towards margins and with dark purple (79A) edges, midribs similar to outer tepals but lacking green top, spots absent; papillae dark red (59A), nectaries strong yellow-green (145A); pollen strong orange (25B); stigma light greenish grey (190D) with dark purple (79B). Fls 250 mm wide, fragrant; tepals 145 × 52-76 mm, margins slightly ruffled, tips recurved. Lvs scattered, 160 × 40 mm. Stems 0.9-1.4 m, red-brown with green, with 2-5 fls.

#### 'Aroha' VII(-/-)

See *L. × parkmanii* 'Aroha'.

#### 'Aroma-3' VI(b/a-b)

Parentage: 'Bright Star' × mixed pollen of trumpet hybrids

R: M.F. Kireeva & N.V. Ivanova (1990)

Fls white, with deep yellow in centre of tepals in basal half; pollen orange-red. Fls 130 mm wide, scented. Stems

0.7-0.8 m, with 7-11 fls. July.  
(Published in M.F. Kireeva, *Lilii*, 87 (2000).)

**‘Aromatic Amber’ VI(b/a)**

Parentage: *leucanthum* var. *centifolium* × *leucanthum* var. *centifolium* Sentinel Group  
R: K. Paszyńska (1984), G: K. Paszyńska (1988), N: K. Paszyńska (1992), I: K. Paszyńska (1992), REG: K. Paszyńska (1992)

Inside cream, throat amber-yellow; outside greenish with a slight pink suffusion; spots absent; nectaries yellow; pollen light brown. Fls 150 mm wide, intensely scented; tepals 125 × 45 mm, margins ruffled, tips slightly recurved; pedicels with some secondary buds. Lvs scattered, 140 × 20 mm, mid green. Stems 1.4 m, green, with 6-8 fls. Mid July.

**‘Aromatic Dream’ IV(b/d)**

Parentage: *pardalinum* × San Gabriel Group  
R: K. Paszyńska, G: K. Paszyńska (1989), N: K. Paszyńska (1991), I: K. Paszyńska (1991), REG: K. Paszyńska (1991)

Inside of each tepal yellow in basal part, with numerous, tiny brown spots, red in apical part; nectaries pale green; pollen brown. Fls 100 mm wide, with an especially good scent (inherited from San Gabriel Group); tepals 80 × 20 mm, margins smooth, tips strongly recurved. Lvs whorled, 120 × 15 mm, mid green. Stems 1.2 m, green, with 8-12 fls. Mid to late June.

**‘Arosa’ I(a/b)**

Parentage: seedling RS 105 × seedling RS 460  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (c. 1987), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside strong purplish pink (54A), changing to strong pink (54C) towards tepal-tips, throat light pink; outside strong purplish pink (54A), changing to strong pink (54C) towards tepal-tips; spots and papillae present; pollen dark brown; stigma light pink. Tepal-margins ruffled, tips recurved. Stems 1.2 m, pale green with darker markings.

**‘Arpeggio’ I(c/d)**

Parentage unknown  
R: Columbia-Platte Lilies, N: Columbia-Platte Lilies, I: Columbia-Platte Lilies (1996), REG: ICRA (1998)  
Inside deep pink; spots few, dark, on basal quarter of each tepal. Tepal-margins smooth, tips loosely recurved. Stems 1-1.5 m, with a long panicle of fls. June.  
(Published in *The Lily Garden Cat.*, 1996/97: 2, with colour illustration.)

**‘Arpus Plana’ VI(b/a)**

Parentage unknown  
Fls greenish white, 130 × 90 mm. Stems 1.1 m. July.  
(Published in *Cvetovodstvo* 2: 21 (1981). Raised and named in the Baltic Republics.)

**‘Arrivederci’ VIII(a-b/-)**

Parentage unknown  
REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside moderate purplish pink (65A), each tepal lighter at tip; outside light purplish pink (65B); spots and papillae present; nectaries green; pollen brown; stigma cream. Tepal-margins slightly ruffled, tips recurved. Stems tall. Early to midseason.  
(*A longiflorum*/Asiatic (LA) hybrid.)

**‘Arta’ I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
R: H. Hauwert (1988), G: H. Hauwert (1990), N: H. Hauwert (1997), I: H. Hauwert (1997), REG: H. Hauwert (1997)  
Inside pale yellow (20C), each tepal edged strong orange-yellow (2A), tip tinged with strong orange (24A); outside pale orange-yellow (19D), tepal-edges strong orange (24A), tips strong yellow-green (143A); spots dark red (187A), on basal part of each tepal; papillae strong orange-yellow (22A), in the throat; nectaries light orange-yellow (22B); pollen absent; stigma strong reddish orange (31B). Fls 150 mm wide; tepals 80 × 25-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 0.9 m, mid green, with 7-8 fls.

**‘Art Deco’ I(b/b)**

Parentage: (‘Jalna’ × ‘Ethelwaite’) × ‘Powder Puff’  
R: W.D. Evans (1979), G: W.D. Evans (1982), N: W.D. Evans (1992), I: W.D. Evans (1992), REG: W.D. Evans (1992)  
Inside light orange-yellow (22B), tepal-tips light yellow (10B); outside with dark reddish orange (172B) midribs; spots many, large, greyish red (176A) on all but tips; papillae present in throat; nectaries light yellow (10B) with a dark reddish orange (172B) groove; pollen dark reddish orange (172B). Fls 115 mm wide; tepals 80 × 22 mm, margins smooth, tips strongly recurved. Lvs scattered, 117 × 7 mm, mid green. Stems 1.1 m, green with slight brown spots, with c.18 fls. Late July.

**‘Artemis’ III(c/d)**

See *L. × testaceum* ‘Artemis’.

**‘Arthur Grove’ VI(b/a)**

Parentage: selection from *L. × sulphurgale* Vico Gold Group  
G: Sir Peter Smithers (1994), N: Sir Peter Smithers (1997), REG: Sir Peter Smithers (1997)  
Inside brilliant yellow (13B), very slightly darker in the throat and green at base; outside a paler yellow, midribs green; spots absent; pollen orange; stigma brown. Fls 120 mm wide; tepal-margins smooth, tips strongly recurved. Lvs scattered, 220 × 14 mm, dark green. Stems 2.22 m, grey-green, speckled brown, with c.11 fls and rudimentary bulbils in upper lf-axils. Early July.

**‘Arthur Moore’ I(b-c/-)**

Parentage unknown  
N: J. Gould (1981), REG: J. Gould (1981)  
Fls tangerine, paler outside; spots tiny, purple, on basal

half of tepals; nectaries green; pollen brick-red. Tepals 90 × 40 mm, margins smooth, tips becoming strongly recurved. Lvs scattered, 90 × 5 mm, mid green. Stems 0.5 m, light green, with 6-12 fls. July.  
(Original bulb purchased from Lowland Nurseries.)

**‘Artis’ VI(b/a)**

Parentage unknown

R: È. Kivilands (1985), G: È. Kivilands (1988), N: È. Kivilands (1988), I: È. Kivilands (1989), REG: È. Kivilands (2000)

Inside white with a pale pink tinge, throat pale yellow; unmarked; nectaries white; pollen dark brown; stigma pale brown. Fls 150 mm wide, sweetly scented; tepals 180 × 100 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 20 mm. Stems 1.6 m (under glass), green, with c.12 fls. July.

(First published in *Liliju Avize* 1998: 39.)

**‘Artistic’ I(a/b)**

Parentage: (‘Sterling Star’ × (*leichtlinii* var. *maximowiczii* ‘Unicolor’ × ‘Golden Wonder’)) F<sub>2</sub> × ‘Endeavor’

R: E.A. McRae (1979), G: Oregon Bulb Farms, Inc. (1982), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc. (1985)

Inside and outside buff-white, throat green; spots few, raised, purple, surrounding purple brushmarks; nectaries green; pollen brown. Fls 150-160 mm wide; tepals 60 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1.2 m, light green, with 8-30 fls. Late June.

(Published in *Oregon Bulb Farms Cat.*, 1985.)

***artvinense* Mishchenko IX(c/d)**

Syn. of *pyrenaicum* subsp. *ponticum* var. *artvinense*.

**‘Aruba’ I(a/-)**

Parentage: ‘Nutmegger’ × dwarf pink-flowered seedling  
R: B. Johnson, G: B. Johnson, N: P.M. Johnson (1978), I: Borbeleta Gardens (1979)

Inside brilliant orange (29A) with pink overlay, tepal-tips light orange, throat glowing orange; outside sunset orange; spots brown, on a quarter of each tepal; nectaries orange; pollen brown. Tepals 75 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 16 mm, mid green. Stems 0.7 m, light green, with 10-12 fls. July.  
(Published in *Borbeleta Gardens Cat.*, 1979.)

**‘Aruba’ VII(b/-)**

Syn. of ‘Titanico’.

**‘As’ I(a/b)**

Parentage: ‘Gold Medal’ × ‘Brushmarks’

R: E.A. McRae (1985), G: J. Bodalski (1987), N: J. Bodalski (1994), I: J. Bodalski (1994), REG: J. Bodalski (1994)

Inside vivid yellow (12A), with a vivid orange-yellow (23A) flush at base of each tepal; outside vivid yellow (12A); spots brown on basal third of each tepal; nectaries yellow shading to green; pollen deep orange-yellow

(163A). Tepals 90 × 40 mm, margins ruffled, tips not recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1.15 m, green, with c.14 fls. Mid July.

**‘Asahihikari’ I(a/-)**

Parentage: ‘Destiny’ × *lancifolium*

R: S. Fujishima (c. 1964), N: S. Fujishima

Fls lemon-yellow.

**‘Ascari’ VII(a-b/b)**

Parentage: seedling 624 × seedling 88-122

R: Vletter & Den Haan (1988), G: Vletter & Den Haan (1991), N: Vletter & Den Haan (1994), I: Vletter & Den Haan (1995), REG: Vletter & Den Haan (1995)

Inside strong reddish purple (70B), paling to an almost white base and shading to darker tepal-margins, tips deep purplish pink (70C), throat yellow changing into rose-pink; outside between strong reddish purple (70B) and deep purplish pink (70C); spots present on a large part of each tepal; papillae present; nectaries yellow-green; pollen red-brown; stigma purple. Tepals 140 mm long, margins smooth, tips slightly recurved. Lvs scattered, green. Stems 1.05 m, with dark stripes and speckles, with c.4-6 fls. Midseason.

**‘Ascheberg’ I(a/-)**

Parentage unknown

R: Becker (pre 2000), N: Becker

Fls glossy red-orange, flushed with orange. Stems 1 m.

Early July. Tetraploid.

(Listed in ELG sales list, 2000.)

**‘Ascona’ VII(a-b/b-c)**

Parentage: unnamed seedling × unnamed seedling

R: Trior Lelie B.V. (1994), G: Trior Lelie B.V., N: Trior Lelie B.V. (1996), I: Trior Lelie B.V. (1998), REG: Trior Lelie B.V. (1997)

Inside yellowish white (155D), tepals very slightly suffused with strong purplish red (54A) on apical part, midveins pale yellow-green (155A), throat yellowish white (155D); outside yellowish white (155D), midribs with a strong purplish red (54A) suffusion; spots pale yellow-green and yellowish white (155A & D) on two-thirds of each tepal; papillae yellowish white (155D) in the throat; nectaries yellowish white (155D); pollen strong orange (169C); stigma moderate yellow-green (147D). Fls 250 mm wide; tepals 135-145 × 45-65 mm, margins ruffled, tips recurved. Lvs scattered, 205 × 60 mm, mid green. Stems 1.1 m, light green, with c.6 fls.

**‘Asdrubal’ IX(a/b)**

See *bulbiferum* ‘Asdrubal’.

**‘Ashcroft’s Dawn’ VII(-/-)**

Syn. of ‘Dawn’.

**‘Ashu’ VII(-/-)**

See *L. × parkmanii* ‘Ashu’.

**‘Asins Lase’ I(a/b)**

Misspelling of ‘Asins Lāse’.

**'Asins Lāse' I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: J. Vasarietis (1988), G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)

Inside strong red (46A), tepals with vivid reddish orange (44B) tips; outside strong red (46A); spots absent; nectaries reddish white; pollen brown. Fls 200 mm wide; tepals 110 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 16 mm, dark green. Stems 1.2 m, brownish green, with c.12 fls. Mid July. (Included in *ILR Thirteenth Supplement* as 'Asins Lase' which is a misspelling.)

**'Asklepios' I(a/-)**

Parentage unknown

R: unknown, G: Hartle-Gilman Lilies (c. 1989), N: Hartle-Gilman Gardens (1995), I: Hartle-Gilman Gardens (1995), REG: Hartle-Gilman Gardens (1995)  
 Inside a blend of moderate red (180A,B & C), tepal-tips with a small amount of moderate red (181C), throat 180B & C; outside shades of moderate red (181C); spots scattered, medium sized, dark, in the throat (c.24 per tepal); nectaries powdery pale orange; pollen pinkish brown. Fls 162 mm wide; tepals 82 × 38 mm, margins smooth, tips very slightly recurved. Lvs scattered, 163 × 23 mm, mid green. Stems 1.42 m, strong yellow-green, with c.20 fls (including secondary buds). Late.

**'Aso' VI(b-c/d)**

Parentage: 'Brno' × *henryi*

R: K. Braun, N: K. Braun, I: K. Braun (1992), REG: K. Braun (1993)

Inside white, with a light orange centre, tepal-edges white, throat green; outside greenish and white, midribs green; small, sparse, brown dashes on a third of each tepal; nectaries green; pollen brown; stigma green. Fls 120 mm wide; tepals 120 mm long, strongly recurved; pedicels 100 mm long, green. Lvs scattered, 120 × 22 mm, dull dark green. Stems 1.1 m. Mid July.

**'Asonia' I(a/-)**

Parentage: Sundrop Group × 'Polar Bear'

R: J. Meyles (1975), G: J. Meyles (1977), N: J. Meyles (1983), I: J. Meyles (1983), REG: J. Meyles (1983)

Pale greenish yellow (2D), with darker blotches, throat greenish; outside pale greenish yellow (2D); spots small, chocolate-brown; nectaries brown; pollen dark brown. Fls 140 mm wide; tepals 60-70 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 20 mm. Stems 0.6 m, dark green, with 4-5 fls. Late June.

**Asotic Jewels Group I(a-b/-)**

Parentage: 'Lillass' × mixture of pink- and white-flowered Asiatic hybrids

R: J.C. Ericksen (1969), G: J.C. Ericksen (1973), N: J.C. Ericksen, I: J.C. Ericksen, REG: J.C. Ericksen (1980)

Inside white to orchid-pink-lilac, throat in some fls red-carmine; outside frosted, becoming orchid-pink-lilac; spots absent to very few; nectaries red; pollen red to orange. Tepals c.60 mm long, tips slightly recurved. Lvs

scattered, 50 × 6-12 mm, dark green. Stems 0.6-0.8 m, dark, with 8 or more fls. July.

(Published in *ILR* (1982) as Asotic Jewels grex.)

**'Aspas' I(a/-)**

Parentage unknown

R: H. Gärtner (pre 1987), N: H. Gärtner, REG: H. Gärtner (1988)

Fls brick-red; spots brown. Lvs narrow. Stems 0.6-0.7 m, light brown, with 6-10 fls. Mid July.

(Published in German Lily Group sales list, 1987.)

**'Aspen Gold' II(c/d)**

Parentage unknown

R: H.R. Cocker, G: H.R. Cocker, N: Hartle-Gilman Gardens (2004), I: Hartle-Gilman Gardens (2004), REG: M. Hartle (2004)

Inside yellow-green (145), throat brilliant yellow (14C); outside light orange-yellow (24C), midribs green; spots dark reddish orange (173A), in a pattern that starts in the centre quarter of each tepal, with many smaller spots towards edge, giving the tepal the appearance of having a yellow margin; nectaries green-yellow; pollen moderate reddish orange (173B). Fls slightly scented; tepals 62 × 7 mm, margins smooth, tips strongly recurved. Lvs 148 × 42 mm. Stems 1.35 m, with 18-19 fls.

**'Aspin' I(a-b/b)**

Parentage: seedling W 729 × seedling W 86-1

R: Vletter & Den Haan Beheer B.V. (1987), G: Vletter & Den Haan Beheer B.V. (1989), N: Mak 't Zand B.V. (1996), I: Mak 't Zand B.V. (1996), REG: Vletter & Den Haan Beheer B.V. (1996)

Inside yellowish white (155D), midveins yellow-green at base, throat strong yellow-green, shading into rest of tepals; outside yellowish white (155D), midribs of inner tepals brilliant yellow-green (154C), outer tepals with a broad suffusion of brilliant yellow-green (154C) and a little reddish brown at base, mainly the outer tepals with dark greyish reddish brown (200A) tips; spots few, dark red (187A), in the throat; papillae few, yellowish white (155D), near nectaries; nectaries hairy, pale yellow-green (157C); pollen moderate orange (167A); stigma dark red (187A). Fls 175 mm wide; tepals 100 × 35 mm, margins slightly ruffled, tips not or slightly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1.15 m, with dark markings, with c.8 fls. Midseason.

Trade designation: SNOW STORM.

('Snow Storm' was registered by Mak 't Zand B.V. in 1996 and included in *ILR Fifteenth Supplement*. In 1998 Vletter & Den Haan Beheer B.V. were granted Dutch PBR (LEL 1379) under the epithet 'Aspin'. The accepted epithet is therefore 'Aspin' (ICNCP, 2004: Art. 24.4). SNOW STORM is regarded as a trade designation because the cv. has been sold under this name.)

**var. *asprellum* IX(a/b)**

See *catesbaei* var. *asprellum*.

**'Assinoboine'** VI(-/a)

Parentage: *leucanthum* var. *centifolium* × (*auratum* × *japonicum*)

R: F.L. Skinner (c. 1964), N: F.L. Skinner

Fls pink, medium sized; buds *auratum*-shaped. Stems 0.6-0.8 m.

(Published in *LYB* 28: 132 (1965).)

**'Assisi'** I(a/b)

Parentage: seedling RS 615 × seedling RS 895

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside pale purplish pink (56C/D); outside pale purplish pink (56C), outer tepals flushed with strong purplish pink (63C); spots deep purplish red (71A), in the throat; pollen strong orange (25A). Fls 200 mm wide; tepals 100 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 1-1.3 m, green, with 4-6 fls. May.

**'Astarix'** I(a/-)

Error for 'Asterix'.

**'Asterix'** I(a/-)

Parentage: 'Enchantment' × unknown

R: Fa P. Hoff & Zn (pre 1978), N: Fa P. Hoff & Zn,

REG: Fa P. Hoff & Zn (1978)

Inside vivid yellow (12A), each tepal flamed light orange-yellow (23C), centre spotted dark brown; anthers brownish orange (172C).

(Published in *Lilies and other Liliaceae*, 1978/9: 105 and registered as 'Astarix' and included in *ILR* (1982) under this epithet. The epithet was later corrected to 'Asterix'.)

**'Asti'** I(a-b/-)

Parentage: seedling W 88-15 × seedling W 88-4

R: Vletter & Den Haan Beheer B.V. (1991), G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1996), REG: Vletter & Den Haan Beheer B.V. (1997)

Inside yellowish white (155D); outside yellowish white (155D) suffused with brown-pink; spots few, small; papillae present; nectaries green; pollen orange; stigma purple. Tepal-margins ruffled, tips recurved. Lvs scattered, mid green. Stems 1 m, green, with 4-6 fls. Late.

**'Aston'** VI(c/d)

Parentage: 'Brno' × 'Gold Eagle'

R: K. Braun, N: K. Braun, I: K. Braun (1996), REG: K. Braun (1997)

Inside with white tepal-tips and edges, the centre of each tepal orange-yellow, throat green; outside white; large, numerous, brown dashes on two-thirds of each tepal; nectaries green; pollen brown; stigma green. Fls 130 mm wide; tepals 78 × 35 mm, strongly recurved, twisted; pedicels 100 mm long, brownish, with secondary buds. Lvs scattered, 133 × 21 mm, dull dark green. Stems 1.1 m, brownish. Bulbs pink-violet. Mid July.

**Astor Group** I(c/-)

Parentage: 'Nestor' × *dauidii*

R: G.M. Chandler (c. 1956), N: G.M. Chandler

Similar to *dauidii*, but with larger fls on shorter stems.

**'Astra'** VI(a-b/c)

Parentage: 'Henrietina' × orange-flowered trumpet

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1991),

REG: B. Mičulka (1991)

Fls yellow; outside with greenish midribs that are dotted brownish; nectaries yellowish green; pollen chocolate-brown; stigma green. Fls 130 mm wide; tepals 100 × 47 mm, slightly recurved; pedicels 90 mm long, brown-spotted. Lvs scattered, 75 × 17 mm, slightly glossy dark green. Stems 1.2 m, black-dotted. Mid July.

**'Astronaut'** I(a/-)

Parentage: 'Pirate' × unknown

R: W.S. Summers, G: W.S. Summers, N: W.S.

Summers (1983), I: Borbeleta Gardens (1983), REG: J. Wadekamper (1983)

Inside vivid reddish orange (43A), tepal-tips strong orange (30D), throat vivid reddish orange (43A); outside strong red (47B); a few, fine spots on basal third of each tepal; nectaries red; pollen light brown. Tepals 90 × 30 mm, margins ruffled, tips slightly recurved. Lvs scattered, 125 × 10 mm, pale green. Stems 1 m, tan, with 15-20 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1983.)

**'Atblázma'** VI(-/b)

Parentage: *henryi* × Golden Clarion Group

R: Ā. Zorgevics (1970), G: Ā. Zorgevics (1974), N:

Ā. Zorgevics (1975), I: Ā. Zorgevics (1982), REG: Ā. Zorgevics (1987)

Fls apricot-yellow, paler at tepal-tips and in throat; spots absent; nectaries light green; pollen brown. Fls 150 mm wide; tepals 140 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 75 × 12 mm, mid green. Stems 0.8 m, dark green, with c.8 fls. Mid July to early Aug. (Published in *Dārzs un Drava* 7 (1986).)

**'Atgyz'** VI(b/a-b)

Parentage: (Golden Regale Group × unknown) F<sub>3</sub>

R: I. Wiesner (1989), N: I. Wiesner, REG: I. Wiesner (1990)

Inside golden yellow, with paler tepal-tips; outside golden yellow; nectaries olive-green; pollen cinnamon; stigma dark purple-brown. Fls 90 × 120 mm; tepals 105 × 40 mm, recurved and twisted, margins slightly wavy; pedicels 70-90 mm long. Lvs scattered, 100 × 8 mm, dark green. Stems 0.85-0.95 m, brown-green. Bulbs brown-violet. Mid July.

**'Athene'** III(-/-)

Syn. of 'Zeus'.

**'Athos'** I(b/c)

Parentage: 'Kirschstern' × 'Tihowa'

R: V. Strasser (1974), G: V. Strasser (1977), N: V. Strasser (1978), I: V. Strasser (1981), REG: V. Strasser (1986)

Fls red, except for an orange throat; with darker spots on three-quarters of each tepal; nectaries paler; pollen orange-red. Tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 12 mm, dark green. Stems 1.25 m, brownish green, with up to 39 fls. June to July.

**'Atilla' I(a/-)**

Parentage: (*lancifolium* × *L. × hollandicum*) × (*dauricum* × 'Orange Triumph')

R: Gebr. N. & B. Laan & Zn (1974), G: Gebr. N. & B. Laan & Zn (1976), N: Gebr. N. & B. Laan & Zn (1980), I: Gebr. N. & B. Laan & Zn (1980), REG: Laan Lelie B.V. (1982)

Inside light orange (18B) flushed with pale orange-yellow (24D), tepal-tips light orange (18B), throat dark yellow with orange centre; outside brownish yellow; spots dark brown all over tepals; nectaries light orange (28B); pollen red-brown. Tepals 120 × 70 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 15 mm, dark green. Stems 1.2 m, dark green, with 20-25 fls. Early July.

Syn.: 'Corona'; 'Maureen'.

(Published in *Bloembollencultuur*, July 1980 as 'Maureen': this epithet had already been used and so the epithet was changed to 'Atilla'. Unfortunately, this epithet can be confused with 'Attila' (from the same raiser), and under the rules of ICNCP, it would not now be accepted for registration. See also note under 'Rosalind's Joke'.)

**'Atklata' I(b/-)**

Misspelling of 'Atklātā'.

**'Atklātā' I(b/-)**

Parentage: selection from Vasaras Priekis Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls dark orange.

(Published in *LYB* 33: 78 (1970) and included in *ILR* (1982) as 'Atklata' which is a misspelling.)

**'Atlanta' I(a/-)**

Parentage: unnamed seedling × 'Orlito'

R: Sande B.V. (1989), G: Sande B.V. (1992), N: Sande B.V. (1996), I: Sande B.V. (1997), REG: Sande B.V. (1997)

Inside a little stronger than vivid reddish orange (30B); outside vivid reddish orange/vivid yellowish pink (30B/C), midribs strong orange (30D), tepals tipped strong yellow-green (143A); spots few, moderate reddish brown (175A) on inner tepals only; papillae few, vivid reddish orange (30B) in the throat; nectaries light orange (29B), surrounded by a vivid yellowish pink (30C) rim; pollen moderate reddish brown (175A); stigma deep red (60A). Fls 160 mm wide; tepals 90 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 1 m, green with a lot of darker marking, with c.7 fls. Early.

**'Atlantic Ocean' VII(a-b/b)**

Parentage: 'Star Gazer' × Imperial Pink Group

R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1983), N: Gebr. Mak B.V. (1984), I: Oriental Express (1987),

REG: Oriental Express (1989)

Inside strong purplish red (63B); outside moderate purplish red (186A); papillae dark red (59A) on the whole of the tepals; pollen brownish orange (172C). Fls 210 mm wide; tepals 110 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 125 × 40 mm, mid green. Stems 0.75 m, green with darker markings, with c.4 fls.

**'Atlantic Pearl' VII(a-b/b)**

Parentage: 'Sorbonne' × 'Tiber'

R: De Jong Lelies Holland B.V. (1995), G: De Jong Lelies Holland B.V. (1997), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2003)

Inside moderate purplish pink (66D), throat yellowish white (155D), tepal-margins and tips yellowish white (155D), with light greenish yellow (3C) along each midvein for two-thirds of its length; outside moderate purplish pink (66D), each tepal with yellowish white (155D) margin, along midribs moderate yellow-green (143D) changing into pale yellow-green (4D), at top strong yellow-green (143A); spots deep purplish red (59B); papillae yellowish white (155D); nectaries strong yellow-green (144B) surrounded by light greenish yellow (3C); pollen vivid yellowish pink (28A); stigma pale yellow-green (193D). Fls 195 mm wide, slightly fragrant; tepals 118 × 63 mm, margins slightly ruffled, tips slightly recurved. Lvs 145 × 28 mm. Stems 1.1 m, green, with c.5 fls.

**'Atlantic White' VII(a-b/b)**

Parentage: *L. × parkmanii* Little Rascal Group with yellow fls × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside and outside yellowish white (155D); midribs light yellow-green (145C) with strong yellow-green (144A) at top; spots and papillae yellowish white (155D); nectaries strong yellow-green (144B); pollen reddish orange (169A); stigma deep reddish purple (77A). Fls 125 mm wide, slightly fragrant; tepals 80 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 45 mm, dark green. Stems 0.4 m, green, with 7 fls. July.

**'Atlantis' I(a/-)**

Parentage: 'Dawn Star' × 'Sun Ray'

R: R.F. Nelson (1980), G: R.F. Nelson (1984), N: R.F. Nelson (1985), I: R.F. Nelson (1985), REG: R.F. Nelson (1986)

Inside brilliant greenish yellow (6A), throat light greenish yellow (1C); outside light yellow (10B); spots dark red (183A) on basal third of each tepal; nectaries light greenish yellow (1C); pollen vivid yellow (17B). Fls 140 mm wide; tepals 75 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 12 mm, mid green. Stems 0.9 m, light green, with 12-14 fls. Dec. (Australia).

**'Atlas' I(-/-)**

Parentage: "common orange-flowered bulbiferous lily" × *L. × maculatum*

R: H. Groom (c. 1848), N: H. Groom

Dwarf plant with deep brown fls.

(Published in *JRHS* 3: xliii (1848). The seed parent is probably *bulbiferum*.)

**'Atlas' I(b/-)**

Syn. of 'Hermes'.

**'Atlasa' I(b/-)**

Parentage: selection from Willtigrinum Group

S: V.P. Orehovs (1960), N: V.P. Orehovs

Fls satin orange-red; pollen brownish; stigma violet. Fls

60 mm wide. Lvs 120-140 × 10-12 mm. Stems 1.8 m, greenish-brown, with c.30 fls. July.

(Published in *LYB* 33: 81 (1970).)

**'Atletico' I(a/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid reddish orange to vivid yellowish orange

(30B/C), strong orange (25A) along midvein; outside

vivid yellowish orange (30C); spots and papillae present;

nectaries orange; pollen red-brown; stigma purple-red.

Tepal-margins slightly ruffled, tips recurved. Stems tall,

with reddish markings. Early to midseason.

**'Atmoda' I(a/-)**

Parentage: 'Sinai' × 'Olga'

R: J. Vasarietis (1981), G: J. Vasarietis (1984), N:

J. Vasarietis (1987), I: J. Vasarietis (1987), REG: J.

Vasarietis (1992)

Inside brilliant orange-yellow (23B) shading to pale

orange-yellow (23D) at tepal-tips; throat light orange-

yellow (23C); outside brilliant orange-yellow (23B);

spots absent; nectaries greenish; pollen brown. Fls 140

mm wide; tepals 75 × 40 mm, margins smooth, tips not

recurved. Lvs scattered, 120 × 15 mm, dark green. Stems

1 m, dark green, with 13-22 fls. Early July.

**'Atoll' I(a-b/b)**

Parentage: seedling RS 870 × 'Sancerre'

R: Gebr. Vletter & Den Haan (1985), G: Gebr. Vletter &

Den Haan, N: Gebr. Vletter & Den Haan (1989), REG:

Gebr. Vletter & Den Haan (1997)

Inside yellowish white (155D), midveins pale greenish

yellow (10D); outside yellowish white (155D), tepals pale

yellow (11D) at base and along edges, midribs brown-

pink; spots few, small, dark purple; papillae present;

nectaries pea-green; pollen light brown; stigma purple.

Tepal-margins ruffled, tips recurved. Lvs scattered, mid

green. Stems 0.8-1 m, green, darker at base, with c.8 fls.

Midseason.

Trade designation: ALASKA.

**Atomic Group VII(-/-)**

Parentage: contains *auratum*, *rubellum*, *japonicum* & *L. × parkmanii*

R: L. Woodriff (pre 1958), N: L. Woodriff

Fls white to deep pink, some heavily spotted; scented.

Stems 1 m. Aug.

(Published in *Woodriff Cat.*, 1958.)

**'Atrorubrum' I(a/b)**

See *L. × maculatum* 'Atrorubrum'.

**'Atrosanguineum' I(a/b)**

See *L. × maculatum* 'Atrosanguineum'.

**'Atrosanguineum Maculatum' I(a/-)**

Parentage: probably a selection from *L. × maculatum*

Said to differ from 'Atrosanguineum' in having paler fls,

marked and veined yellow, and sprinkled with small black

spots; tepals not hairy outside. Lvs broader, not ciliate.

(Published in *Rev. Hort.* (4th Series) 1: 284 (1852).

Introduced from Japan by P.F. von Siebold.)

**'Attica' I(b/-)**

Parentage: *lancifolium* 'Splendens' × 'Tetra Mountaineer'

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser

(1983), I: V. Strasser (1983), REG: V. Strasser (1991)

Inside blood-red; outside red. Tepal-margins smooth, tips

slightly recurved. Lvs scattered, 140 × 13 mm, mid green.

Stems 1 m, almost black, with c.12 fls and with bulbils.

Mid July. Tetraploid.

(Published in *Der Staudengarten*, 1983.)

**'Attila' I(b/-)**

Parentage: 'Tigrimax' × *L. × hollandicum* 'Grandiflorum'

R: Gebr. N. & B. Laan & Zn (c. 1966), N: Gebr. N. &

B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1969)

Tepals vivid orange (28B); spots brown-purple.

(Published in *LYB* 33: 254 (1970).)

**'Attiwaw' II(c/d)**

Parentage: (*martagon* × unknown) × (*martagon* × unknown)

R: F. Tarlton (1982), G: F. Tarlton (1987), N: F. Tarlton

(1988), I: Honeywood Lilies, REG: F. Tarlton (1988)

Inside near strong yellowish pink (34D), tepal-tips strong

purplish pink (68B), throat strong orange (25A); outside

each tepal light orange yellow (22B) at edges, merging

to strong purplish pink (68B) in the centre; spots many,

purple, on half of each tepal; nectaries strong orange

(25A); pollen strong orange (26A). Tepals 40 × 16 mm,

margins smooth, moderately recurved. Lvs whorled, 80

× 25 mm, mid green. Stems 0.9 m, light green, with c.14

fls. June.

**'Atto's Red' I(c/-)**

Parentage unknown

R: R. Atto, G: R. Atto, N: R. Atto (1968), REG: R. Atto

(1984)

Fls vibrant currant-red, with a few dark spots. Tepal-

margins smooth, tips strongly recurved. Lvs scattered,

long and narrow, dark green. Stems 1.2-1.9 m, with up to 30 fls. July.

**'Attraction' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Attraction'.

**'Aubade' VII(a/b)**

Parentage unknown

R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: J.S. Pennings (1993), I: J.S. Pennings (1993), REG: J.S. Pennings (1995)  
 Inside yellowish white (155D), with brilliant yellow (8A) along midveins, throat yellow; outside yellowish white (155D); spots large, yellow, over a large area; papillae present; nectaries green; pollen red-brown; stigma dark purple. Tepals 145 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 35 mm, mid green. Stems 1-1.1 m, green, with 6-8 fls (from 16 cm bulbs). Midseason to late.

**'Auburn Maid' IV(-/a)**See *L. × burbankii* 'Auburn Maid'.**'Auce' I(a/b)**

Parentage: 'Baltais Lācis' × Tango Group

R: A. Balode (1994), G: A. Balode (1996), N: A. Balode (1999), REG: A. Balode (1999)

Inside pale yellow-green (4D), with a brilliant greenish yellow (4A) centre and a green throat; outside white with a pinkish tinge; spots numerous, large and small, deep red (53A) on a third of each tepal; nectaries brown; pollen dark brown. Fls 160 mm wide; tepals 95 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 30 mm, dark green. Stems 1 m, dark green, with c.5 fls. Mid July.

**'Auckland' VIII(a/b)**

Parentage: seedling N 64 × seedling G 90-5

R: Gebr. Vletter &amp; Den Haan (1992), G: Gebr. Vletter &amp; Den Haan, N: Gebr. Vletter &amp; Den Haan, I: Gebr. Vletter &amp; Den Haan (1997), REG: Gebr. Vletter &amp; Den Haan (1997)

Inside pale yellow-green (155A), tepals edged yellowish white (155B); outside pale yellow-green to yellowish white (155A/B), tepals with strong yellow-green (144B) at base and top; spots and papillae absent; nectaries strong yellow-green (143B); pollen deep orange-yellow/greyish brown (163A/166A); stigma strong greenish yellow (153C). Fls 210 mm wide; tepals 125 × 45-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 200 × 25 mm, mid green. Stems 0.9 m, green, with 1-6 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

**'Audacious' VII(-/c)**See *L. × parkmanii* 'Audacious'.**'Audrey Rivet' I(a/-)**

Parentage: raised from seed of Mid-century Group  
 R: J. Gould (1978), G: J. Gould (1979), N: J. Gould (1981), REG: J. Gould (1981)

Inside deep golden yellow, throat deep yellow with touches of brown; outside deep yellow and brown; spots very few, insignificant, brown, at base of tepals; nectaries brown and green; pollen orange. Fls c.130 mm wide; tepals 90 × 38 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 1 m, dark brown, with 8 fls. July.  
 (Seed ex Thompson & Morgan.)

**'Audrey Soames' I(a/-)**Parentage unknown, but includes *L. × scottiae*

R: J.E.H. Stooke, N: J.E.H. Stooke, I: W.A. Constable Ltd (1951)

Tepals orange-red; spots purple-brown at base. Fls 130-150 mm wide; tepal-tips reflexed. Stems 1 m, with 4-6 fls.

(Published in *W.A. Constable Ltd Cat.*, Autumn 1951.)**'Augment' VII(-/c)**See *L. × parkmanii* 'Augment'.**'Augosa' I(b/-)**

Misspelling of 'Augošā'.

**'Augošā' I(b/-)**

Parentage: selection from Willtigrinum Group

S: V.P. Orehovs (post 1959), N: V.P. Orehovs

Fls orange-yellow.

(Misspelling: 'Augosha'. Published in *LYB* 33: 81 (1970) and included in *ILR* (1982) as 'Augosa' which is also a misspelling.)

**'Augosha' I(b/-)**

Misspelling of 'Augošā'.

**'Augsburg' VI(-/a)**Parentage: (*regale* 'Royal Gold' × *L. × imperiale* Pink Trumpet Group) × ('Life' × Aurelian seedling)

R: V. Strasser (1974), G: V. Strasser (1977), N: V. Strasser (1991), REG: V. Strasser (1992)

Inside white with pink tepal-margins and midveins, tepal-tips white, throat yellow; outside white; nectaries green. Tepal-margins smooth, tips not reflexed. Lvs scattered, 140 × 9 mm, dark green. Stems 1.4 m, green, with up to 24 fls. Mid July to early Aug.

(Published incorrectly in *ILR Eleventh Supplement* as 'Angsburg'.)**'August Apollo' I(a(b)-/)**

Parentage: late-flowering red-flowered seedling × 'August Gold'

R: J. Wadkamper (1989), G: J. Wadkamper (1992), N: J. Wadkamper (1996), I: Willowood (1997), REG: J. Wadkamper (1996)

Inside deep pink (48A), throat strong pink (48D); outside moderate red (47A); spots few, black, in centre of fl.; nectaries deep pink (47D); pollen deep brown. Fls 130 mm wide; tepals 70 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 15 mm, dark green. Stems 1.3 m, very robust, deep lavender to purple, with 20-22 fls in an extended infl., and with many large bulbils. Early Aug.

**'August Crimson' I(b/-)**

Parentage: selection from Rosebank Group

S: H.J. Eaton, N: H.J. Eaton (1979)

Inside strong red (46A), tepal-tips and outside vivid red (46B); finely spotted with black; papillae greyish red (176A); pollen strong reddish orange (169A). Tepals 90 mm long. Lvs 150 × 13 mm. Stems 0.9 m.

**'August Gold' I(b-c/-)**

Parentage unknown

R: W.T. Craig, G: W.T. Craig, N: W.T. Craig (1983), I: Borbeleta Gardens (1984), REG: J. Wadkamper (1984)  
 Inside brilliant yellow (13B); outside brilliant yellow (13B) and tan; spots large, purple, on two-thirds of each tepal; nectaries green; pollen brown. Tepals 90 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 22 mm, mid green. Stems 1.4 m, mid green, with 18-20 fls. Mid Aug.

(Published in *Borbeleta Gardens Cat.*, 1984.)**'August Ruby' I(b-c/-)**

Parentage unknown

R: W.T. Craig (1982), G: W.T. Craig (1984), N: W.T. Craig (1988), I: B & D Lilies (1982), REG: W.T. Craig (1989)

Buds and open fls strong red (46A), tepal-tips vivid red (46B), throat and outside strong red (46A); spots small, elongated, greyed red, on two-thirds of each tepal; nectaries frosted orange; pollen dark reddish orange (175B). Fls 135 mm wide; tepals 85 × 24 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 14 mm, dark green. Stems 1.6 m, dark reddish brown, hairy, with c.16 fls, and a few bulbils. Early Aug.

**'Aunt Rosie' I(b/b)**

Parentage unknown

G: M.D. Holloway (1994), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)

Inside deep pink, paling slightly at tepal-tips and darkening in the throat and on outer tepal-margins, throat frosty; outside dark rose-pink on tepal-edges, paler towards centre, midribs green-brown, raised; spots dark pink on basal third of tepals; nectaries frosted; pollen orange. Fls 135 mm wide; tepals 70 × 34 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 12 mm, mid green. Stems just over 1 m, green, with up to 17 fls. Late July to late Aug.

(Grown from seed from the NALS seed exchange, 1993.)

**'Aura' I(b-c/-)**

Parentage: (('Edith Cecilia' × *davidii* var. *unicolor*) × 'Scarlet Robe' × 'Rose Marie'

R: C. Robinson (1971), G: C. Robinson (1974), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Inside light yellowish pink (36C), tepal-tips light to pale purplish pink (62C/D), throat pale yellowish pink (27C); outside pale purplish pink (62D), varying with temperature - more plum purple if cool, paler apricot if hot; spots very tiny on basal third of each tepal; nectaries soft apricot; pollen strong reddish orange (169A). Tepals 100-150 × 25-30 mm, margins slightly ruffled, tips strongly recurved; pedicels long and dark. Lvs scattered, 100-150 × 15-20 mm, dark green. Stems 1-1.5 m, dark green, with 7-15 fls. Late June to early July.

**'Aurabunda' VI(-/c)**

Parentage: selection from self-pollinated Sunshine Flares Group

S: C. Yerex (c. 1958), N: C. Yerex

Inside vivid yellow (12A); outside brilliant yellow (12B) with light green shading at base. Stems 1.5 m. July to Aug.

(Published in *Kline Cat.*, 1967.)**'Aurach Fackel' VI(b/b)**

Parentage: 'Heidelberg' × 'Lednice'

R: V. Strasser (1982), G: V. Strasser (1985), N: V. Strasser (1994), REG: V. Strasser (1997)

Inside strong orange (25A); outside orange; spots absent; nectaries green. Tepals 120 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 115 × 15 mm, dark green. Stems 1.5 m, rather dark green, with up to 24 fls. Late July.

**'Aurachglut' Div. ?**

Given as a parent of 'Barock'. No further details.

**'Aurach Gold' VI(b/b)**Parentage: (*henryi* × unknown) × Aurelian Group

R: V. Strasser (pre 1979), N: V. Strasser, REG: ICRA (1996)

Tepals golden yellow. Stems 1.6 m. Late July.

**'Aurach Gold' VI(-/a)**

Parentage: seedling 9/83 × seedling 28/85

R: V. Strasser (1986), G: V. Strasser (1989), N: V. Strasser (1991), I: V. Strasser (1995)

Inside vivid yellow; outside red-brown; pollen yellow-orange. Tepals 125 × 42 mm, margins smooth, tips not recurved. Lvs scattered, 160 × 12 mm, dark green. Stems 1.5 m, dark green, with up to 23 fls. Mid July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily, by the same raiser. As far as is known this cv. was not renamed.)

**'Aurach Prinz' I(a/-)**

Parentage: ('Pirate' × 'Hornback's Gold') × 'Sporades'

R: V. Strasser (1978), G: V. Strasser (1981), N: V. Strasser (1984), I: V. Strasser (1986), REG: V. Strasser (1990)

Inside and outside dark red (187B/C), throat orange; spots absent; pollen orange-red. Fls 150 mm wide; tepals 90 mm long, margins smooth, tips slightly recurved. Lvs scattered, 140 × 12 mm, mid green. Stems 1.2 m, brown-green, with c.36 fls. Mid July.

**'Aurachtiger' Div. ?**

Given as a parent of 'Frankavilla', 'Meran' and 'Mykonos' which were raised by V. Strasser. No further details.

***aurantiacum* Paxton I(a/b)**Syn. of *L. × maculatum* 'Aurantiacum'.

(Included in Div. I because, although *aurantiacum* was originally published as a species, it is a synonym of *L. × maculatum* 'Aurantiacum' which is placed in Div. I.)

**'Aurantiacum' I(a/b)**See *L. × maculatum* 'Aurantiacum'.

***auratum* Lindl. IX(b/c)**

Fls white, each tepal with a yellow ray; spots yellow or crimson, papillae towards base of each tepal; pollen brownish red. Fls 200-300 mm wide, fragrant; tepals 120-180 × 40-50 mm, tips slightly recurved. Lvs scattered, 100-220 × 15-40 mm. Stems 0.6-1.5(-2.3) m, purplish green, with up to 10(-30) fls. Japan.

***auratum* 'Africa' IX(b/c)**

Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1945.)

***auratum* 'Alex' IX(b/c)**

See *auratum* var. *rubrovittatum* 'Alex'.

***auratum* 'Amethyst King' IX(b/c)**

Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with a very broad ray that is yellow only at base, otherwise purplish red, not reaching tip; spots numerous, large, purplish red; pollen orange-red.

***auratum* 'Aorangi' IX(b/c)**

See *auratum* var. *rubrum* 'Aorangi'.

***auratum* 'Apex' IX(b/c)**

See *auratum* var. *platyphyllum* 'Apex'.

***auratum* 'Apollo' IX(b/c)**

See *auratum* var. *rubrovittatum* 'Apollo'.

***auratum* 'Archangel' IX(b/b)**

Parentage: selection from *auratum*  
G: D.K. Kölli (1965), N: D.K. Kölli (1986), REG: D.K. Kölli (1988)  
Inside white, each tepal with a gold ray and white tip, throat with green nectaries within the gold rays; outside white, midribs pale green; spots absent; papillae gold within the rays, becoming white outside the rays; pollen orange; stigma brown. Fls 230-265 mm wide, strongly scented; tepals 140 × 66 mm, margins slightly waved, tips recurved. Lvs scattered, 190 × 45 mm, mid green. Stems 1.8-2.7 m, pale green, with up to 36 fls, and very few bulbils. Late July to late Aug.  
(Grown from a young bulb sold as *auratum* var. *platyphyllum*.)

***auratum* 'Aureolin' IX(b/c)**

See *auratum* var. *platyphyllum* 'Aureolin'

***auratum* 'Autumn Giant' IX(b/c)**

Parentage: selection from *auratum*  
I: B.G. Hayler (1964), REG: B.G. Hayler (between 1964 and 1969)  
Typical *auratum* with a gold ray on each tepal. Fls 275 mm wide. Stems 1.5 m. Very late.  
(Published in *LYB* 28: 132 (1965). Bulbs imported from Japan in the 1920s.)

***auratum* 'Black Panther' IX(b/c)**

Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with a broad, orange-yellow ray becoming red at top; spots numerous, prominent, black-centred, purplish red; pollen orange-red. Tepal-margins very ruffled.

***auratum* 'Bright Tiger' IX(b/c)**

Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1945. No further details.)

***auratum* 'Caesar' IX(b/c)**

Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
(Published in *LYB* 13: 78 (1949).)

***auratum* 'Carol' IX(b/c)**

Parentage: selection from *auratum*  
(Grown in the USA. No further details.)

***auratum* 'Carved Ivory' IX(b/c)**

Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
Each tepal pure white with a narrow yellow ray; papillae few, small, brownish; stigma pale green. Aug.  
(Published in *Amer. LYB* 1: 49 (1947/48).)

***auratum* 'Charles Turner' IX(b/c)**

Parentage: selection from *auratum*  
S: C. Turner (pre 1872), N: C. Turner  
FCC 1870  
Each tepal with a reddish brown ray.  
(Published in *JRHS* 3: xli (1872).)

***auratum* 'Chastity' IX(b/c)**

See *auratum* var. *platyphyllum* 'Chastity'.

***auratum* 'Cheetah' IX(b/c)**

Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* 'Cherry Giant' IX(b/c)**

Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* 'Cherry Tip' IX(b/c)**

Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1945. No further details.)

***auratum* 'Chubby' IX(c/b)**

Parentage: selection from *auratum*  
S: A. Buckley, N: A. Buckley  
Fls snowdrop-shaped, 2-3 on a curved stem.  
(Published in *Amer. LYB* 1: 45 (1947/48).)

**auratum 'Cinnabar' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
(Published in *Buckley Cat.*, 1945. No further details.)

**auratum 'Citronella' IX(b/c)**  
Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1945. No further details.)

**auratum 'Classic' IX(b/c)**  
Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1945. No further details.)

**auratum 'Cream Star' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

**auratum 'Crimson Beauty' IX(b/c)**  
See *auratum* var. *rubrovittatum* 'Crimson Beauty'.

**auratum 'Crimson Queen' VII(b/b)**  
Syn. of 'Crimson Queen'.

**auratum var. cruentum Burbidge IX(b/c)**  
Syn. of *auratum* var. *rubrum*.

**auratum 'Cruentum' IX(b/b)**  
Parentage: selection from *auratum*  
I: E. Pynaert van Geert (c. 1891)  
Tepals creamy white, lightly tinted with Nankeen-yellow near edges, each with a very broad central chocolate-purple ray. Fls 25-30 cm wide. Lvs dark green. Stems 0.6-0.8 m, with 6-8 fls.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Rev. Hort. Belg.* 17: 193 (1891), with colour illustration.)

**auratum 'Cucumber' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with a broad yellow ray; spots small, red; pollen orange-red.

**auratum 'Dainty' IX(b/c)**  
See *auratum* var. *rubrovittatum* 'Dainty'.

**auratum 'Dark Beauty' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with a pale yellow ray which is broadly suffused rose-red in apical half; spots rose-red; pollen orange-red.

**auratum 'Darkie' VII(b/c)**  
Syn. of 'Darkie'.

**auratum 'Dianne' VII(-/b)**  
Syn. of 'Dianne'.

**auratum 'Dianthus' VII(-/b)**  
Syn. of 'Dianne'.

**auratum 'Dignity' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with an orange-yellow ray, not or hardly reaching tip; spots red, scattered; pollen orange-red. Inner tepals broad.

**auratum 'Dominion Monarch' IX(b/b)**  
Parentage: *auratum* var. *platyphyllum* × *auratum* var. *virginale*  
R: B.G. Hayler (c. 1964), N: B.G. Hayler  
Fls white, each tepal with short gold ray; spots absent. Lvs pale green, very wide. Stems 1.5 m, pale green.

**auratum 'Early Glory' IX(b/c)**  
Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1945. No further details.)

**auratum 'Electra' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals strikingly marked with plum-red.

**auratum 'Electric' IX(b/c)**  
Parentage: selection from *auratum*  
S: A. Buckley, N: A. Buckley  
Tepals marked throughout with deep plum-red. Fls "large cone-shaped stars". Early to mid Aug.  
(Published in *Esperanza Lily Gardens Cat.*, 1945.)

**auratum 'Enchantress' IX(b/c)**  
Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1949. No further details.)

**auratum 'Esperanza' IX(b/c)**  
Parentage: selection from *auratum*  
S: A. Buckley, N: A. Buckley  
(This epithet was used by Buckley to cover a wide range of seedlings from which many clones were selected and named - see *JRHS* 71: 332 (1946).)

**auratum 'Esperanza Gold' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

**auratum 'Exotic' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
(Published in *Amer. LYB* 1: 49 (1947/48). No further details.)

**auratum 'Finest White' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘Fire King’ IX(b/c)**

Parentage: selection from *auratum*

S: A. Buckley, N: A. Buckley

Tepals white, each with a deep chrome ray which is suffused with rose dorée in apical half; papillae numerous, rose dorée; anthers orange. Stems short, with c.6 fls. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Esperanza Lily Gardens Cat.*, 1946.)

***auratum* ‘Fire Opal’ IX(b/c)**

Parentage: selection from *auratum*

(Published in *Buckley Cat.*, 1945. No further details.)

***auratum* ‘Flore Pleno’ IX(b/c)**

Parentage unknown

G: C.B. Pinchot, N: J.H. McFarland (1934)

Fls double with 12 tepals. Stems 1.5 m, with c.8 fls.

(Published in *Horticulture* (Boston) 12: 357 (1934).

Imported from Japan.)

***auratum* ‘Fogarty Fegan’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley, N: A. Buckley

(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘Freckles’ IX(b/c)**

Parentage: selection from *auratum*

(Published in *Buckley Cat.*, 1949. No further details.)

***auratum* ‘Frost’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley (pre 1946), N: A. Buckley

Tepals white, each with a narrow yellow ray; spots very few, brownish; papillae conspicuous, white. Tepals twisted and ruffled.

***auratum* ‘George’ IX(b/c)**

Parentage: *auratum* var. *rubrum* × *auratum* var.

*platyphyllum*

R: L. Woodriff (c. 1958), N: L. Woodriff

Colour of var. *rubrum* with very large fls.

***auratum* ‘Geranium’ IX(b/c)**

Parentage: selection from *auratum*

(Published in *Buckley Cat.*, 1949. No further details.)

***auratum* ‘Glow’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley (pre 1946), N: A. Buckley

Tepals white, each with a broad pale yellow ray which is slightly suffused with pinkish red at top; spots scattered, of the same colour; pollen orange.

***auratum* ‘Gold Emperor’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley (pre 1946), N: A. Buckley

Tepals white, each with a broad orange-yellow ray; spots sparse, small, brownish, confined to basal two-thirds; pollen orange-red.

***auratum* ‘Golden Chalice’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley, N: A. Buckley

(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘Golden Dancer’ IX(b/c)**

Given as a parent of ‘Stowport Heart Starter’. No further details.

***auratum* ‘Golden Pictum’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley, N: A. Buckley

(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘Golden Ruffle’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley, N: A. Buckley

(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘Goldie’ IX(b/c)**

See *auratum* var. *platyphyllum* ‘Goldie’.

***auratum* ‘Gold Ray’ IX(b/c)**

Parentage: selection from *auratum*

S: W.G. Donnelly, N: W.G. Donnelly

(Published in *Amer. Lily Soc. Bull.* 6 (Dec.1956). No further details.)

***auratum* ‘Good Friday’ IX(b/c)**

Parentage: selection from *auratum*

(Grown in New Zealand before 1964. Included in *ILR Fourth Supplement* without any details.)

***auratum* ‘Grail’ IX(b/c)**

Parentage: selection from *auratum*

(Published in *Buckley Cat.*, 1945. No further details.)

***auratum* ‘Green Treasure’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley, N: A. Buckley

Tepals ‘sea-foam green’ on opening, turning white.

(Published in *Amer. LYB* 1: 49 (1947/48).)

***auratum* ‘Ideal Pictum’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley, N: A. Buckley

(Published in *Amer. LYB* 1: 45 (1947/48). No further details.)

***auratum* ‘Jewel’ IX(b/c)**

Parentage: selection from *auratum*

S: A. Buckley, N: A. Buckley

Brilliant Indian lake markings. Stems short.

(Published in *Esperanza Lily Gardens Cat.*, 1945: 2.)

***auratum* Kimono Group IX(b/b)**

See *auratum* var. *platyphyllum* Kimono Group.

***auratum* ‘King of Tyre’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Amer. LYB* 1: 49 (1947/48). No further details.)

***auratum* ‘Lady Trim’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with an orange-yellow ray which is slightly flushed with red near top; spots pinkish red; pollen orange-red.

***auratum* ‘Little Gem’ IX(b/c)**

See *auratum* var. *platyphyllum* ‘Little Gem’.

***auratum* ‘Majesty’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with a broad yellow ray extending to top (where it may be slightly suffused with red); spots numerous, purplish red; pollen orange.

***auratum* ‘Malta’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Amer. LYB* 1: 49 (1947/48). No further details.)

***auratum* ‘Mandarin’ IX(b/c)**

Parentage: selection from *auratum*  
S: A. Buckley, N: A. Buckley  
Similar to *auratum* ‘Citronella’. Mid Aug. to Sept.

***auratum* ‘Margaret Rose’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
Tepals white, each with a buff-yellow ray sprinkled with pink; papillae deep rose-pink; stigma purplish. Tepal-margins frilled. July.

***auratum* ‘Midas’ IX(b/c)**

Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1948. No further details.)

***auratum* ‘Mikado’ IX(b/c)**

See *auratum* var. *platyphyllum* ‘Mikado’.

***auratum* ‘Molten Gold’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
Each tepal with rich golden ray that suffuses almost the whole area; stigma greenish white. Stems reddish. Aug.  
(Published in *Constable Chelsea Cat.*, 1949.)

***auratum* ‘Morse’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with a deep gold ray, evenly and heavily marked with longitudinal dashes.

***auratum* ‘Ocelot’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘Old Gold’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with an orange-yellow ray to the tip, that covers all but the margins; spots purplish red; pollen orange-red.

***auratum* ‘Orient’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley (pre 1946), N: A. Buckley  
Fls white, each tepal with a broad, yellow ray which is suffused with purplish red in the apical half, not quite reaching the tip; spots the same colour; pollen orange-red.

***auratum* ‘Pale Emperor’ IX(b/c)**

Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1949. No further details.)

***auratum* ‘Passion’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with a broad yellow ray, slightly suffused with red at tips where large spots are smudged, with numerous, red spots on the remainder; pollen orange-red. Inner tepals broad.

***auratum* ‘Peace’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘Perfection’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Amer. LYB* 1: 49 (1947/48). No further details.)

***auratum* ‘Phyllis’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* var. *pictum* Wallace IX(b/c)**

Each tepal with a ray that is yellow at base, changing to crimson at top. The tepals are heavily spotted with crimson.

***auratum* ‘Pigmy Pictum’ IX(b/c)**

See *auratum* var. *platyphyllum* ‘Little Gem’.

***auratum* ‘Pitapat’ IX(b/c)**

Parentage: selection from *auratum*  
S: A. Buckley, N: A. Buckley

Tepals flushed with pink at tips; spots large, pink, evenly spaced.

(Published in *Esperanza Lily Gardens Cat.*, 1946.)

***auratum* ‘Pizzicato’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley, N: A. Buckley

(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* var. *platyphyllum* Baker IX(b/c)**

FCC 1880

Southern geographical race of the species, with large fls that have yellow rays and fewer, more concentrated spots.

Lvs broader than in *auratum* itself. Stems 1.2-2.2 m. July to Aug.

Syn.: ‘Gold Band’.

***auratum* var. *platyphyllum* ‘Apex’ IX(b/c)**

Parentage: selection from *auratum* var. *platyphyllum* imported from Japan

N: B.G. Hayler (1956), I: B.G. Hayler (1964), REG:

B.G. Hayler (between 1964 and 1969)

Tepals white, each with a yellow ray; lightly spotted brown. Fls 225 mm wide. Stems 1.5 m.

(Published in *LYB* 28: 132 (1965).)

***auratum* var. *platyphyllum* ‘Aureolin’ IX(b/c)**

Parentage: a colour form of *auratum* var. *platyphyllum*

S: L.F. Johnson (pre 1954), N: L.F. Johnson

Fls yellow.

(This cv. generally breeds true and thus consists of more than one clone.)

***auratum* var. *platyphyllum* ‘Chastity’ IX(b/c)**

Parentage: (spotted *auratum* var. *platyphyllum* ×

unspotted *auratum* var. *platyphyllum*) F<sub>2</sub>

R: L.F. & D.H. Johnson (c. 1951), N: L.F. & D.H.

Johnson

Tepals white, each with a pale gold ray, tips splashed with crimson, recurved.

(Published in *LYB* 16: 93 (1953).)

***auratum* var. *platyphyllum* ‘Goldie’ IX(b/c)**

Parentage: selection from *auratum* var. *platyphyllum*

S: J.S. Yeates (c. 1952), N: J.S. Yeates

Tepals white, each with yellow ray and a few self-coloured papillae. Stems 1.5-1.9 m.

(Published in Melford *Auratum Lilies* price list, 1955.)

***auratum* var. *platyphyllum* Kimono Group IX(b/b)**

Parentage: seed-raised selections from *auratum* var.

*platyphyllum*

R: Fairdale Nursery (pre 1992), N: Fairdale Nursery

Fls white, each tepal with a gold ray, throat gold; spotted.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

***auratum* var. *platyphyllum* ‘Little Gem’ IX(b/c)**

Parentage: selection from dwarf *auratum* var. *platyphyllum*

S: J.S. Yeates (c. 1953), N: J.S. Yeates

Tepals white with crimson tips; spots crimson. Fls 100-125 mm wide. Stems 0.4-0.6 m.

Syn.: ? ‘Pygmy Pictum’.

***auratum* var. *platyphyllum* ‘Mikado’ IX(b/c)**

Parentage: (spotted *auratum* var. *platyphyllum* × unspotted *auratum* var. *platyphyllum*) F<sub>2</sub>

R: L.F. & D.H. Johnson (c. 1951), N: L.F. & D.H. Johnson

Tepals with very large purple dots on a golden background.

(Published in *LYB* 16: 93 (1953).)

***auratum* var. *platyphyllum* ‘Red Pepper’ IX(b/c)**

Parentage: (spotted *auratum* var. *platyphyllum* × unspotted *auratum* var. *platyphyllum*) F<sub>2</sub>

R: L.F. & D.H. Johnson (c. 1951), N: L.F. & D.H. Johnson

Tepals sprinkled with tiny red dots, mainly in centre and at base.

(Published in *LYB* 16: 93 (1953).)

***auratum* var. *platyphyllum* ‘Shirley Variety’ IX(b/c)**

Parentage: selection from *auratum* var. *platyphyllum*

S: W. Wilks (pre 1903), N: W. Wilks

FCC 1903

Tepals white, each with a pale gold ray and no spots.

Stems 1.9 m.

(Published in *JRHS* 28: ccviii (1903).)

***auratum* ‘Pomegranate’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley, N: A. Buckley

Tepals white, each with a primrose-yellow ray that has a pomegranate-purple edge; white area dotted with red papillae; stigma grey. Tepal-margins somewhat wavy. Aug.

(Published in *Amer. LYB* 1: 49 (1947/48).)

***auratum* ‘Praecox’ IX(b/c)**

Parentage: selection from *auratum*

Heavily spotted, early flowering.

(Raised in Australia.)

***auratum* ‘Queen Bess’ IX(b/c)**

Parentage: selection from *auratum*

(Published in *Buckley Cat.*, 1945. No further details.)

***auratum* ‘Red Band’ IX(b/c)**

See *auratum* var. *rubrum* ‘Red Band’.

***auratum* ‘Red Emperor’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’

S: A. Buckley (pre 1946), N: A. Buckley

Tepals white, each with an orange-yellow ray that is edged with red; strongly red-spotted.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

***auratum* ‘Red Pepper’ IX(b/c)**

See *auratum* var. *platyphyllum* ‘Red Pepper’.

***auratum* ‘Red Selected’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘Rhapsody’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘Roman Gold’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley (pre 1946), N: A. Buckley  
Fls white, each tepal with a broad, pale yellow ray and scattered, pinkish red spots; inner tepals broad.

***auratum* ‘Rose Ivory’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘Rose Queen’ IX(b/c)**

Parentage: selection from *auratum*  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals flushed at tips; papillae rose-pink, numerous; stamens orange. Tepals long, curling. Mid Aug.  
(Published in *Esperanza Lily Gardens Cat.*, 1946.)

***auratum* ‘Rosy Morn’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘Rubies’ IX(b/c)**

Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1945. No further details.)

***auratum* var. *rubrovittatum* Duchartre IX(b/c)**

FCC 1885  
Ray on each tepal deep crimson except at base where it is yellow. Spots large and highly coloured; anthers dark red.

***auratum* var. *rubrovittatum* ‘Alex’ IX(b/c)**

Parentage: selection from *auratum* var. *rubrovittatum*  
S: J.S. Yeates  
Each tepal with a dark red ray.  
(Published in R.E. Harrison, *Know your lilies*, 61 (1970).)

***auratum* var. *rubrovittatum* ‘Apollo’ IX(b/c)**

Parentage: very robust selection from *auratum* var. *rubrovittatum*  
S: J.S. Yeates, N: J.S. Yeates, I: J.S. Yeates (1950)  
PC 1957  
Each tepal with a dark red (59A) ray; heavily spotted with same colour.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name

already used for another lily. Published in *Country Life*, 3 June 1954.)

***auratum* var. *rubrovittatum* ‘Crimson Beauty’ IX(b/c)**

Parentage: selection from *auratum* var. *rubrovittatum*  
S: J. de Graaff (c. 1960), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1966)  
Tepals cherry-red with white margin. Aug.

***auratum* var. *rubrovittatum* ‘Dainty’ IX(b/c)**

Parentage: selection from *auratum* var. *rubrovittatum*  
S: J.S. Yeates (c. 1952), N: J.S. Yeates  
Each tepal with a narrow, warm red central ray; spots few. Opens wider than most *auratum*. Stems short.  
(Published in *Winstone (Merchants) Ltd Cat.*, 1958.)

***auratum* var. *rubrum* Carrière IX(b/c)**

FCC 1881  
Ray on each tepal entirely crimson, very broad; otherwise similar to var. *rubrovittatum*.  
Syn.: *auratum* var. *cruentum*.  
(Exhibited and given FCC as var. *cruentum* Burbidge.)

***auratum* var. *rubrum* ‘Aorangi’ IX(b/c)**

Parentage: selection from *auratum* var. *rubrum*  
S: L.B. Tuffery, N: L.B. Tuffery  
Tepals white, each with a dark red ray; spots carmine, numerous on 3 tepals, sparse on the other 3. Fls up to 300 mm wide; tepals with reflexed tips.  
(Misspelling: ‘Avorange’. Published in *Harrison Cat.*, 1955.)

***auratum* var. *rubrum* ‘Red Band’ IX(b/c)**

Parentage: selection from *auratum* var. *rubrum*  
S: J. de Graaff, N: J. de Graaff  
Each tepal with wide red ray.  
(Published in *Oregon Bulb Farms Cat.*, 1958. This cv. consists of several similar clones.)

***auratum* ‘Ruby Giant’ IX(b-c/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
Tepals white, each with a golden ray that is tipped and blotched with carmine; stigma purplish grey. July to Aug.  
(Published in *Amer. LYB* 1: 45 (1947/48).)

***auratum* ‘Scimitar’ IX(b/c)**

Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1945. No further details.)

***auratum* ‘Serenity’ IX(b/c)**

Parentage: selection from *auratum*  
S: A. Buckley, N: A. Buckley  
Tepals white, lightly marked. Early.  
(Unacceptable name: see note under ‘Serenity’ (Div. I).  
Published in *Esperanza Lily Gardens Cat.*, 1946.)

***auratum* ‘Shah’ IX(b/c)**

Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1945. No further details.)

**auratum 'Shirley Variety' IX(b/c)**  
See *auratum* var. *platyphyllum* 'Shirley Variety'.

**auratum 'Sincerity' IX(-/b)**  
See *auratum* var. *virginale* 'Sincerity'.

**auratum 'Spectacular' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
(Published in *Amer. LYB* 1: 49 (1947/48). No further details.)

**auratum 'Star in the East' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
(Published in *Amer. LYB* 1: 49 (1947/48). No further details.)

**auratum 'Suave' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with a yellow ray that becomes pinkish purple above; very sparse spots of the same colour.

**auratum 'Sunburst' IX(b-c/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
Tepals creamy white, each with an orange ray that is smothered by "Eugenia to Anjou Red" that starts at the point of the ray and "works into" the papillae, covering most of the tepal; nectaries green; stigma pale olive-green. Fls 230 mm wide. Aug.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cultivar Group. Published in *Constable Chelsea Cat.*, 1949.)

**auratum 'Swan' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
Tepals white.  
(Published in *Amer. LYB* 1: 49 (1947/48).)

**auratum 'Tango' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

**auratum 'Thompsonii' IX(b/c)**  
Parentage: selection from *auratum*  
Similar to var. *platyphyllum*.  
(Raised in Australia.)

**auratum 'Thousand Isles' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley (pre 1946), N: A. Buckley  
Tepals white, each with a yellow ray; spots numerous, reddish pink; pollen orange-red.

**auratum 'Tom Thumb' IX(b/c)**  
Parentage: sport found among seedlings of *auratum*

S: J.S. Yeates, N: J.S. Yeates  
Fls pink. Stems 0.3 m.  
(Included in *ILR* (1969).)

**auratum 'Total Victory' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

**auratum var. tricolor Baker IX(b/c)**  
Tepals white, each with a lemon-yellow ray, tinted green towards base; spots white or yellow.

**auratum 'Tricolor Gem' IX(b/c)**  
Parentage: selection from *auratum*  
(Grown in Australia. No further details.)

**auratum 'Triumph' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
Tepals orange.  
(Published in *Amer. LYB* 1: 49 (1947/48).)

**auratum 'Tyre' IX(b/c)**  
Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1945. No further details.)

**auratum 'Valley Opal' IX(b/c)**  
Parentage: *auratum* var. *platyphyllum* × *auratum* var. *virginale*  
R: J. Hoell (1975), G: J. Hoell (1978), N: J. Hoell (1985), I: J. Hoell (1991), REG: J. Hoell (1991)  
Tepals with a white ground, with a conspicuous, strong yellow-green (142A) ray, throat moderate yellow (161B); spots deep purplish red (59B) on two-thirds of each tepal; nectaries vivid yellowish green (140A); pollen moderate reddish brown (166B). Fls 140 mm wide; tepals 110 × 60 mm, margins smooth, tips strongly recurved. Lvs scattered, 145 × 35 mm, dark green. Stems 0.6 m, moderate yellow-green (147C), with c.6 fls. Feb. (Australia).

**auratum 'Victory' IX(b/c)**  
Parentage: selection from *auratum*  
S: A. Buckley, N: A. Buckley  
Fls with pale centre; a heavy and sharply defined 'V' of spinel-red enclosing points of the ray. Early to mid Aug.  
(Published in *Esperanza Lily Gardens Cat.* 1945: 6.)

**auratum 'Violet Ray' IX(b/c)**  
Parentage: selection from *auratum* 'Esperanza'  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

**auratum var. virginale Duchartre IX(b/c)**  
Tepals white, each with a pale gold ray; spots absent or with a few yellow spots. Stems 1.2-2.5 m.

**auratum var. virginale 'Sincerity' IX(-/b)**  
Parentage: derived from *auratum* var. *virginale*

I: R.M. Withers (1962)

White, each tepal with a mimosa yellow (HCC 602/1) stripe (13 mm wide); spots on central third of each tepal; pollen persimmon-orange (HCC 701/1). Fls 190 mm wide. Lvs 175 × 45 mm, mid green. Stems 1.5 m.

***auratum* var. *virginale* ‘Ward’ IX(b/b-c)**

Parentage: selection from *auratum* var. *virginale*  
Fls white, each tepal with a gold ray. Stems 1.5 m. Feb. (Australia).

***auratum* ‘Walter Ward’ VII(-/-)**

Syn. of ‘Walter Ward’.

***auratum* ‘Ward’ IX(b/b-c)**

See *auratum* var. *virginale* ‘Ward’.

***auratum* ‘White Chalice’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley (pre 1946), N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

***auratum* ‘White Emperor’ IX(b/c)**

Parentage: selection from *auratum*  
(Published in *Buckley Cat.*, 1945. No further details.)

***auratum* ‘Wittei’ IX(b/c)**

Parentage: selection from *auratum*  
Tepals white, each with a yellow ray, tips sometimes tinged with reddish brown; spots absent.  
(Published in *Wallace Cat.*, 1900.)

***auratum* ‘Wonder’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Amer. LYB* 1: 49 (1947/48). No further details.)

***auratum* ‘Youth’ IX(b/c)**

Parentage: selection from *auratum* ‘Esperanza’  
S: A. Buckley, N: A. Buckley  
(Published in *Constable Chelsea Cat.*, 1949. No further details.)

**Aurelian Group VI(-/a)**

Parentage: *L. × aurelianense × sargentiae & leucanthum*  
R: C. Yerex (c. 1938), N: C. Yerex  
Fls various colours.  
(Published in *LYB NALS* 1: 96-101 (1947/48). When the term Aurelian Group is used elsewhere in *ILR* it does not necessarily refer to Yerex’s selections; the term has become synonymous with all the hybrids (and their progeny) of a similar parentage.)

***× aurelianense* Debras VI(b-c/a)**

Parentage: *sargentiae × henryi*  
R: E. Debras (c. 1928), N: E. Debras (1932)  
AM 1945  
Inside strong orange (26A), shading to pale yellow (11C) at tepal-tips; outside more or less tinged with pink-

purple; spots and papillae present; pollen dark brown. Fls scented; tepals c. 110 × 22-35 mm, recurved. Lvs scattered. Stems 1.4 m with c.9 fls; bulbils often present. Syn.: Aurelianense strain.

(Published in *LYB* 1: 116 (1932). The original clone is sometimes known as ‘Debras Variety’ to distinguish it from ‘Stooke’s Variety’, a hybrid of the same parentage, raised in England. The description above applies to the original plants and the epithet now covers plants with more variably coloured fls.)

**Aurelianense strain VI(b-c/a)**

Syn. of *L. × aurelianense*  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 47 (1978).)

***× aurelianense* ‘Alaska’ VI(-/c)**

Parentage: *L. × aurelianense × henryi* var. *citrinum*  
R: W.C. Horsford, N: W.C. Horsford, I: F.M. Abbey (1952)  
Tepals white, with pale yellow ray; flecked pale lavender. Stems 1.2-1.5 m.  
(Published in (Gardenside Nursery Cat.), Autumn 1952.)

***× aurelianense* ‘Ava’ VI(-/a)**

Parentage: *L. × aurelianense × L. × aurelianense*  
R: F.C. Stern (c. 1948), N: F.C. Stern  
Tepals white, midveins yellow. Stems up to 1.9 m, with up to 12 fls.  
(Published in *LYB* 21: 38 (1958).)

***× aurelianense* ‘Baltais Mākonis’ VI(-/c)**

Parentage: *henryi × L. × aurelianense*  
R: V.P. Orehovs (between 1970 and 1983), N: V.P. Orehovs  
Fls 125 mm wide, white, centre orange. Stems 0.7 m. Aug.  
(Included in *ILR Third Supplement* as ‘Baltais Maconis’ which is a misspelling.)

***× aurelianense* ‘Bright Cloud’ VI(-/c)**

Parentage: *henryi × L. × aurelianense*  
R: C. Yerex (c. 1952), N: C. Yerex  
Fls white, centre yellow. Stems 1 m. July.  
(Published in *Wand Lily Gardens Cat.*, 1952.)

***× aurelianense* ‘Elsa’ VI(-/a)**

Parentage: *L. × aurelianense × sargentiae*  
R: F.C. Stern (pre 1953), N: F.C. Stern  
PC 1953  
Fls white, tinged with yellow or orange towards base inside; outside tinged with pink-brown to maroon-brown. Tepals broad. Stems with bulbils.  
(Published in *JRHS* 73: lxxvii (1953). The epithet was formed from last syllable of “Aurel” and first two letters of “sargentiae”. The plant died after being cut for exhibition, but the cross was remade - the subsequent selected seedling was called ‘Elsa II’ (q.v.).)

***× aurelianense* ‘Elsa II’ VI(-/a)**

Parentage: *L. × aurelianense × sargentiae*

R: F.C. Stern (c. 1957), N: F.C. Stern  
Fls white, shading to light yellow towards base inside;  
outside tinged with light reddish pink. Stems with  
bulbils.  
(Published in *LYB* 21: 37-38 (1958). This cv. replaced  
'Elsa' (q.v.) after that plant died.)

× ***aurelianense* 'Frietschii Group' VI(-/-)**

Parentage: *henryi* × *sargentiae*  
R: L. Frietsch (1931), N: L. Frietsch  
Tepals pure cream with light yellow veins, centre darker  
yellow.  
(Included in *ILR* (1982) as a cv.)

× ***aurelianense* 'Galina' VI(-/-)**

Parentage: *L. × aurelianense* × *henryi*  
R: V.P. Orehovs (1964), N: V.P. Orehovs  
No further details.  
(Included in *ILR Second Supplement* as 'Galina' which is a  
misspelling.)

× ***aurelianense* 'Gold Dust' VI(c/a)**

Parentage: (*L. × aurelianense* × *henryi*) self-pollinated × *L. × aurelianense* self-pollinated  
R: F.C. Stern (pre 1956), N: F.C. Stern  
AM 1955  
Fls rich apricot, pencilled maroon near base. Tepals 120-  
130 mm long, margins wavy, tips recurved. Lvs dark  
green.  
(Published in *LYB* 19: 145, fig. 27 (1956).)

× ***aurelianense* 'Golden Sunburst Group' VI(a-b/c-d)**

Parentage: *henryi* × *L. × aurelianense*  
R: J. de Graaff (c. 1956), N: J. de Graaff  
Fls golden yellow. Stems 1.2-1.9 m. July to Aug.  
(Published in *Oregon Bulb Farms Cat.*, 1960. Included in  
*ILR* (1982) as Golden Sunburst grex.)

× ***aurelianense* 'Green Eye' VI(-/a)**

Parentage: *L. × aurelianense*, self-pollinated  
R: F.C. Stern (c. 1956), N: F.C. Stern  
Fls white, tepals shading to green at base.  
(Published in *LYB* 20: 141, fig.20 (1957).)

× ***aurelianense* 'Hesara' VI(-/-)**

Parentage: *henryi* × *sargentiae*  
R: Saatzucht Zierpflanzen Erfurt (1983), G: Saatzucht  
Zierpflanzen Erfurt (1986), N: Saatzucht Zierpflanzen  
Erfurt, REG: Institut für Gemüse- und Zierpflanzenbau  
Grossbeeren Erfurt (1994)  
Inside pale yellow (11D) flushed with soft pink, tepal-  
margins soft pink, tips brilliant yellow (13B), throat vivid  
orange-yellow (23A); outside pale yellow (11D), midribs  
dark violet, base brilliant orange-yellow (23B) to light  
yellowish pink (27A); papillae soft lilac; nectaries strong  
yellow-green (144A); pollen yellow-brown. Fls 175 mm  
wide, scented; tepals 105-110 × 25-42 mm, margins  
smooth, tips slightly recurved. Lvs scattered, 125-160 ×  
20 mm, mid green. Stems 1.3 m, dark green, with 17-20  
fls. Mid July.

× ***aurelianense* 'Leonard Messel' VI(-/-)**

Parentage: selection from *L. × aurelianense*  
(Published in *LYB* 18: 30 (1955). Perhaps the same plant  
as 'Remembrance'.)

× ***aurelianense* 'Lightning' VI(-/c)**

Parentage: selection from *L. × aurelianense* Golden  
Sunburst Group  
S: J. de Graaff (c. 1962), N: J. de Graaff  
Inside deep yellow; outside red. Stems 1.9 m.  
(Included in *ILR* (1982) erroneously as 'Lightening'.)

× ***aurelianense* 'Liksna' VI(-/c)**

Parentage: *henryi* × *L. × aurelianense*  
R: V.P. Orehovs (between 1970 and 1983), N: V.P.  
Orehovs  
Fls cream-white, centre orange. Fls 170 mm wide. Stems  
1.2 m. Aug.  
(Included in *ILR Third Supplement* as 'Licsna' which is a  
misspelling.)

× ***aurelianense* 'Remembrance' VI(-/c)**

Parentage: selection from *L. × aurelianense*  
S: L.C.R. Messel, N: L.C.R. Messel  
Similar to *L. × aurelianense*.  
(Published in *JRHS* 78: 77 (1953).)

× ***aurelianense* 'Sally Gilkison' VI(c/-)**

Parentage: *L. × aurelianense* × *henryi*  
R: S.V. Gilkison  
(Bulbs sent to F.C. Stern in 1958. No further details.)

× ***aurelianense* 'Silver Queen' VI(-/-)**

Parentage: derived from *L. × aurelianense*  
R: W.A. Constable Ltd, N: W.A. Constable Ltd  
(Published in *LYB NALS* 1: 74 (1947/48). No further  
details.)

× ***aurelianense* 'Simcoe' VI(-/c-d)**

Parentage: backcross of *L. × aurelianense* with *henryi* &  
*sargentiae*  
R: I. Preston (c. 1953), N: I. Preston  
Fls strong orange (24A), lighter at tepal-tips. Tepals semi-  
reflexed.  
(Published in *CEF Progress Report*, 1949-53.)

× ***aurelianense* 'Stooke's Variety' VI(-/c)**

Parentage: selection from *L. × aurelianense*  
S: J.E.H. Stooke, N: J.E.H. Stooke  
AM 1945  
Fls pale straw-yellow (HCC 604/2), suffused with apricot  
near centre.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name  
already used for another lily. Published in *JRHS* 70: 306  
(1945). The note on *L. × aurelianense* 'Stooke's form' in  
*LYB* 16: 157 (1949) may refer to the same cv., and says  
that the stems are 2.4-2.7 m tall, and bear 14-20 fls.  
However, the photograph (fig.34) shows a plant with fls  
that are trumpet-shaped rather than flat.)

× **aurelianense** ‘**Suvenirs**’ VI(b-c/a-b)  
Parentage: *henryi* × *L. × aurelianense*  
R: V.P. Orehovs (1970-1983), N: V.P. Orehovs  
Fls white, throat reddish. Stems up to 2 m. Sept.  
(Included in *ILR Third Supplement* as ‘Suvenirs’ which is a misspelling.)

× **aurelianense** ‘**Thibadeau**’ VI(c/-)  
Parentage: selection from *L. × aurelianense*  
S: W.A. Constable Ltd (c. 1954), N: W.A. Constable Ltd  
PC 1954  
(Published in *JRHS* 79: 64 (1954). No further details.)

× **aurelianense** ‘**Zitronenbaum**’ VI(c/-)  
Parentage: selection from *L. × aurelianense*  
(Grown in Romania. No further details.)

**Aurelian Sunburst Group** VI(-/c)  
Parentage: derived from Sunburst Group  
R: F.M. Abbey, N: F.M. Abbey, I: F.M. Abbey  
Fls orange. Mid July. Identical to *henryi* except for flowering time.  
(Published in *Gardenside Gossip* 21: 3 (1955). Included in *ILR Fourth Supplement* as Aurelian Sunburst Seedlings grex.)

**Aurelian Sunburst Seedlings** VI(-/c)  
See Aurelian Sunburst Group.

**Aurelian Trumpets Group** VI(b/b)  
Parentage: derived from Aurelian Group  
R: F.M. Abbey, N: F.M. Abbey  
Fls white to soft yellow. July.  
(Published in *Gardenside Gossip* 20: 2 (1954). Included in *ILR Fourth Supplement* as Aurelian Trumpets grex.)

**Aurelian Yellow Trumpets Group** VI(-/a)  
Parentage: selections from Aurelian Group  
S: F.M. Abbey (1940s), N: F.M. Abbey, I: F.M. Abbey  
Fls soft yellow. July.  
(Published in *Gardenside Gossip* 21: 2 (1955). Included in *ILR Fourth Supplement* as Aurelian Yellow Trumpets grex.)

‘**Aurelifolium**’ VI(-/a)  
Parentage: *L. × aurelianense* × *leucanthum* var. *centifolium*  
Fls sulphur-yellow.  
(Published in *Constable Cat.*, 1949.)

‘**Aurelius**’ VI(-/c)  
Parentage: ‘Heidelburg’ × ‘Lednice’  
R: V. Strasser (1982), G: V. Strasser (1985), N: V. Strasser (1989), REG: V. Strasser (1990)  
Inside and outside white, throat red-orange; spots absent; nectaries green; pollen brown. Tepals 105 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 25 mm. Stems 1.5 m, spotted blackish green, with c.25 fls. Late July.

‘**Aureola**’ I(c/-)  
Parentage: (*lancifolium* × unknown) × ‘Connecticut Yankee’

R: D.M. Stone & F.H. Payne (c. 1963), N: D.M. Stone & F.H. Payne  
Tepals vivid yellow (12A); spots absent; tepals recurved. Stems 1 m, black. July.

‘**Aureolin**’ IX(b/c)  
See *auratum* var. *platyphyllum* ‘Aureolin’.

‘**Aureolinbelle**’ VI(-/a)  
Parentage: selection from Golden Trumpet Group  
S: D. Foxwell (pre 1961), N: D. Foxwell (1961)  
AM 1961  
Inside between vivid yellow and brilliant yellow (12A/13A); outside streaked with green. Fls 125 mm wide; tepal-tips reflexed.  
(Published in *LYB* 25: 153 (1962).)

‘**Aureomarginatum**’ IX(b/a)  
See *candidum* ‘Aureomarginatum’.

var. **aureum** IX(c/b)  
See *bakerianum* var. *aureum*.

‘**Aureum**’ I(a/b)  
See *L. × maculatum* ‘Aureum’

‘**Aureum**’ IX(c/d)  
See *pyrenaicum* ‘Aureum’.

‘**Aureum Nigromaculatum**’ I(a/b)  
Syn. of *L. × maculatum* ‘Nigromaculatum’.

‘**Au Revoir**’ I(a/b)  
Parentage: (pink-flowered seedling × ‘Sterling Star’) × (‘Sterling Star’ × Sundrop Group)  
R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside light pink (49C), each tepal flushed with pale purplish pink (56A) at base, tip slightly paler, throat orangy pink; outside coloured as inside; dark spots on basal third of each tepal; nectaries green; pollen orange; stigma purplish red. Fls 160 mm wide; tepals 80 × 20 mm, margins smooth, tips slightly recurved. Stems 1.05 m, green with some darker markings. Early to midseason.

‘**Aurora**’ I(-/-)  
Parentage: ‘Lord Melbourne’ × *L. × maculatum* ‘Yellow Tulip’  
R: G. Errey, probably (pre 1950), N: G. Errey, probably  
No further details.

‘**Aurora**’ VII(-/c)  
See *L. × parkmanii* ‘Aurora’.

‘**Auseklis**’ I(a/-)  
Parentage: red-flowered seedling × ‘Connecticut King’  
R: A. Buķēvics, G: A. Buķēvics, N: A. Buķēvics (1985), I: A. Buķēvics, REG: A. Buķēvics (1987)  
Inside yellow, throat dark yellow; outside pale yellow;

spots small, dark brown, in centre of fl.; nectaries light green; pollen brown. Fls 150 mm wide; tepals 80 × 30 mm, tips not recurved. Lvs scattered, mid green. Stems 1.2 m, with c.12 fls. Early July.

**'Ausma' I(a-b/-)**

Parentage: 'Iluska' × 'Baltā Amālija'

R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)  
Tepals salmon throughout; spots violet, sparse, on half of each tepal; nectaries cream; pollen orange. Fls 120 mm wide; tepals 55 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 0.9 m, brown.

**'Auspicious' VII(-/c)**

See *L. × parkmanii* 'Auspicious'.

**var. australe IX(b-c/a)**

See *brownii* var. *australe*.

**'Austral Gem' VII(-/b)**

Parentage: selection from Atomic Group

R: L. Woodriff, N: B.G. Hayler (c. 1965)  
Tepals white faintly suffused with pink, tips and outside pink; spots few, crimson; nectaries pale green. Tepal-margins slightly ruffled. Stems 1.4 m, with up to 20 fls. Jan. (Australia).  
(An *auratum* type. Raised from imported Woodriff seed.)

**'Australia' VIII(a/b)**

Parentage: seedling J 62 × seedling RS 92-15  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside strong purplish red (54A) on a paler ground; outside strong purplish red (59D) on a paler ground, with a narrow, moderate purplish red (59C) margin, midribs moderate yellow-green (146C), moderate olive-green (146A) at top; spots dark red (59A) on a third of each tepal; papillae absent; nectaries strong yellow-green (143C) with a little pale pink (49D); pollen greyish red (178A); stigma pale orange-yellow (159C). Buds hairy. Fls 160 mm wide; tepals 80 × 35-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 20 mm, dark green. Stems 1.35 m, green, with c.8 fls that fade with age.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Autumn Blaze' VIII(a/b)**

Parentage unknown  
REG: World Flower B.V. (2003)

Inside and outside moderate red (179A/B), midveins strong red (46A) at base; spots few; papillae present; nectaries orange-yellow; pollen red-brown; stigma orange. Tepal-margins very slightly ruffled, tips slightly recurved. Stems c.1.45 m, with 5-8 fls. Early to midseason.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Autumn Color' II(-/l)**

Parentage: *L. × dalhansonii* 'Brocade' × *tsingtauense*

R: E. Robinson (1975), G: E. Robinson (1980), N: E. Robinson (1985), I: E. Robinson (1984), REG: D. Dale (1993)

Inside deep yellow, throat lime-green; outside light buff-yellow, tepal-margins deep yellow; spots very dark maroon, which on opening are a lighter red, giving impression of a red centre; nectaries light green. Fls 70 mm wide; tepals 38 × 15 mm, margins smooth, tips slightly recurved. Lvs whorled, 200 × 50 mm, pale green. Stems 1.2-1.4 m, light green, with 14-20 fls. Early July.

**'Autumn Giant' IX(b/c)**

See *auratum* 'Autumn Giant'.

**Autumn Glory Flares Group VI(-/a)**

Parentage: selections from Aurelian Group

S: C. Yerex, N: C. Yerex

Tepals warm autumn tones of saffron and orange. Semi-trumpet and flaring lilies. Stems 1.5 m. July.  
(Published in *Walter Marx Gardens Cat.*, 1964. Included in *ILR* (1982) as Autumn Glory Flares grex.)

**'Autumn Harvest' II(-/d)**

Parentage: *L. × dalhansonii* 'Brocade' × *L. × hansonii*

R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)

Fls golden-orange, spotted, medium sized. July.

Syn.: 'Golden Harvest'.

(First known in 1973 as 'Golden Harvest' but this name was unacceptable (ICNCP, 2004: Art. 27.1 - name already used for a cultivar Group) and it was renamed. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 25 (1978) as 'Autumn Harvest'.)

**'Autumn Leaves' I(a-b/-)**

Parentage: unnamed seedling × 'Ginger'

R: T.R. Martin (1968), G: T.R. Martin (1970), N: T.R. Martin (1979), I: Borbeleta Gardens (1980), REG: T.R. Martin (1980)

Tepals light bronzed shrimp-pink with copper overlay, tips bronze-pink, throat lighter copper-orange shading to yellow; small spots on basal third of each tepal; nectaries frosty white; pollen mid brown. Tepals 65 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 6 mm, very glossy dark green. Stems 0.4-0.7 m, dark green, with 15-18 fls. July.

**Autumn Prelude Group VII(-/l)**

See *L. × parkmanii* Autumn Prelude Group.

**'Ava' VI(-/a)**

See *L. × aurelianense* 'Ava'.

**Avalanche Trumpets Group VI(-/a)**

Parentage: selections from Aurelian Group with seedling 55-17-0

R: C. Yerex, N: C. Yerex

Tepals pure white to chartreuse. Fls long-tubular, flaring widely. Stems 1.5 m. July to Aug.

(Published in *Kline Cat.*, 1962. Included in *ILR* (1969) as Avalanche Trumpets grex.)

**'Avalon' I(a/b-c)**

Parentage: (Hallmark Group × 'Destiny') F<sub>2</sub>  
 R: Oregon Bulb Farms, Inc. (c. 1978), N: Oregon Bulb Farms, Inc.

Tepals white, with numerous small deep purple spots. Lvs rich dark green. Stems dark, 0.6-1 m, with 6-15 fls.

**'Avant Garde' VII(a-b/b)**

Parentage unknown  
 R: Vletter & Den Haan (pre 1989)

Inside deep/moderate purplish pink (70C/D), tepals with narrow strong purplish pink/deep reddish purple (72A/77A) margins, midveins light greenish yellow (7D); outside yellowish white (155B), tepals with strong purplish pink (72A) margins, midribs strong yellow-green (144B); spots deep purplish red (59B); papillae white; nectaries strong yellow-green (144B); pollen strong reddish orange (169A); stigma moderate purple (79D). Fls 230 mm wide; tepals 120 × 55 mm, margins slightly ruffled, tips recurved. Lvs scattered, 190 × 40 mm. Stems 1.15 m, green, with c.5 fls.

(Granted Dutch PBR (LEL 699) in 1991, but not registered - the stock was destroyed by the raiser.)

**'Avelino' I(a/b)**

Parentage: seedling G 85-15 × 'Nove Cento'  
 R: Gebr. Vletter & Den Haan (1989), G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1994), REG: Gebr. Vletter & Den Haan (1997)

Inside vivid yellow (9A) with vivid orange-yellow (23A) along midveins; outside vivid yellow (9B); spots few, small; papillae present; nectaries yellow-green; pollen light brown; stigma yellow with purple spots. Tepal-margins ruffled, tips strongly recurved. Lvs scattered, mid green. Stems 1.15 m, with dark streaks and spots, with 7-11 fls. Midseason.

**'Ave Mater' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
 R: J. Vasarietis (1988), G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)

Inside white; outside white, midribs greenish; spots absent; nectaries white; pollen brown. Fls 130 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 13 mm, mid green. Stems 0.8 m, green, with c.9 fls. Mid July.

**'Avento' I(a/-)**

Parentage: selection from Coronado Group  
 G: Bischoff Tulleken Leliecultuur B.V. (1974), N: Bischoff Tulleken Leliecultuur B.V. (1979), I: Bischoff Tulleken Leliecultuur B.V. (1979), REG: Bischoff Tulleken Leliecultuur B.V. (1982)

Inside strong orange-yellow (24B) with strong orange (25A) flecks; outside orange; spots small, brown; pollen red-brown. Tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 65 × 11 mm, mid green. Stems 0.5 m, green, with c.5 fls. Mid June.

**'Avenue' VII(-/b)**

Parentage: ('Freedom' × 'Star Gazer') × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1993), I: Bischoff Tulleken Lelies B.V. (1993), REG: Bischoff Tulleken Lelies B.V. (1994)  
 Inside yellowish white (155D), a quarter of each tepal suffused with deep purplish pink (64D), colour stronger at tips; outside yellowish white (155D), suffused with deep purplish pink (64D), edges stronger coloured, midribs yellowish white (155D), tinged with brilliant greenish yellow (151D) and moderate red (183C) at the base, inner tepals strong yellow-green (143B) at tips and generally a stronger colour; spots dark red (187B/C); papillae dark red (187B/C); pollen brownish orange (171B); stigma dark red (187A). Fls 185 mm wide; tepals 100 × 45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 0.6 m, pale green with darker markings, with c.6 fls.

**'Averna' VII(-/b-d)**

Parentage: *auratum* × 'Freedom'

R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside yellowish white (155D), throat strong yellow-green (144C); outside yellowish white (155D), midribs light yellow-green (150D), strong yellow-green (144B) at tips and suffused with light yellow-green (145B) at base; papillae yellowish white (155D) on all but tepal-tips; nectaries light greyish olive (197C), spotted with deep reddish purple (77A); pollen brownish orange (166C). Fls 240 mm wide; tepals 140 × 75 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 42 mm, mid green. Stems 0.88 m, pale green, with c.9 fls. July (under glass).

**'Ave Sol' Div. ?**

Given as a parent of 'Sapnojums'. No further details.

**'Avignon' I(a/b)**

Parentage: unnamed seedling × 'Eurovision'  
 R: Gebr. Vletter & J.A. Den Haan (1980), G: Gebr. Vletter & J.A. Den Haan (1982), N: Gebr. Vletter & J.A. Den Haan (1984), I: Gebr. Vletter & J.A. Den Haan (1984), REG: Gebr. Vletter & J.A. Den Haan (1985)  
 Inside vivid reddish orange (32A), each tepal with an Orient red midvein and tip; outside vivid to strong reddish orange (30B/31A); nectaries violet-red; pollen dark reddish brown. Fls 155 mm wide; tepals 85 × 50 mm, margins smooth, tips recurved. Lvs scattered, 120 × 15 mm, dark green. Stems 0.8-1 m, dark green, with c.7 fls. July.  
 (Published in *Bloembollencultuur*, 1984.)

**'Avita' V(a-b/a)**

See *longiflorum* 'Avita'.

**Avondale Group I(c/d)**

Parentage: contains *amabile*, *dauricum* & *dauidii*

R: N. Copsey, N: N. Copsey

Fls varying from clear yellow, orange, bronze and bicolours to cherry-red mahogany. Stems with 20-30 fls. (Similar to Fiesta Group.)

**'Avorange' IX(b/c)**

Misspelling of *auratum* var. *rubrum* 'Aorangi'.

**'Awatea' VII(-/-)**

Parentage: *speciosum* × unknown

Tepals dark crimson with white margins. Stems 1.5 m.

**'Axl' I(a/b-c)**

Parentage: unnamed seedling × unnamed seedling

R: P. Hoff (1993), G: Hoffgaarde B.V. (1995), N: Hoffgaarde B.V. (1996), I: Hoffgaarde B.V. (1997), REG: Hoff Quality First (1997)

Inside vivid reddish orange (30B), throat brilliant orange (29A); outside strong reddish orange (31A), each tepal a little darker at edges; spots dark red (187A) on basal part of each tepal; papillae few, in the throat; nectaries brilliant orange (29A); pollen strong reddish orange/strong orange (169A/B); stigma deep red (185A). Fls 160 mm wide; tepals 80 × 35-45 mm, margins smooth, tips scarcely recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1.2 m, light green with a little darker marking, and with 2-8 fls.

**'Ayampa' I(b/-)**

Parentage: unknown × ('Connecticut Lemonglow' × unknown) F<sub>2</sub>

R: I. Wiesner (1988), N: I. Wiesner, REG: I. Wiesner (1989)

Inside vivid reddish orange (30B) with purple veining, midribs orange-apricot; outside vivid orange (28B); spots absent; pollen cinnamon. Fls 140 mm wide, semi-globular; tepals 75 × 28 mm, tips slightly recurved; stigma red-purple. Lvs glossy dark green. Stems 0.6 m, deep green, with 4-6 fls. Early July.

**'Ayer's Rock' I(b/-)**

Parentage unknown

R: R.J. Sinclair (1972), G: R.J. Sinclair (1975), N: R.J. Sinclair (1980), I: R.J. Sinclair (1980), REG: R.J. Sinclair (1980)

Inside moderate orange (168C), tepals flushed with strong orange (168A) in apical part, centre and edges strong orange-yellow (163B); outside slightly darker; spots brown in throat; nectaries moderate orange (168C); pollen orange. Fls 110 mm wide; tepals 75 × 25-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 20 mm, pale green. Stems 0.8 m, mottled red-green, with c.6 fls. Dec. (Australia)  
(Grown from mixed Asiatic seed.)

**'Azalia' VIII(a/-)**

See *L. × phildauricum* 'Azalia'.

**'Aztec' VI(b/b)**

Parentage unknown

R: unknown (1965), G: W.T. Craig (1969), N: W.T. Craig (1976), I: B & D Lilies, REG: W.T. Craig (1986)  
Inside brilliant orange-yellow (23B), tepal-edges and throat light orange-yellow (19A); outside of inner tepals more-or-less dark red (183B), outer tepals dark red (183B) on midribs only; spots absent; nectaries strong yellow-green (144A); pollen vivid orange-yellow (21A). Tepals 100 × 27 mm, margins smooth, tips not recurved. Lvs scattered, 135 × 27 mm, dark green. Stems 1.8 m, green, with 15 or more fls. Mid July.

**'Azurra' I(a-b/-)**

Parentage: seedling RS 894 × seedling RS 870

R: Gebr. Vletter & Den Haan (1985), G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1988), I: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1997)

Inside and outside light to pale purplish pink (55C/D) suffused with strong purplish pink (55B); spots few, light yellow/green; papillae present; pollen orange-brown; stigma purple. Tepal-margins ruffled, tips recurved. Lvs scattered, green. Stems 1.1 m, light green with dark markings. Early to midseason.

**'Babeta' I(b-c/b-c)**

Parentage: ('Kytice' × 'Odysseus') × ('Red Echo' × 'Mánés')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka, REG: B. Mičulka (2001)

Inside pale apricot-yellow, throat whitish; outside with pale yellow-green midribs; spots very few; nectaries green, with white-granulated edges; pollen orange-brown; stigma apricot. Fls 115 mm wide, semi-Turk's cap in form; tepals 70 × 38 mm, moderately recurved, margins slightly downcurved; pedicels 70 mm long, slightly brown-spotted. Lvs scattered, 100 × 12 mm, dull mid green. Stems 0.85 m, slightly brown-spotted. Late June.

**'Baby Ivy' Div. ?**

Parentage unknown

R: L. Woodriff, N: L. Woodriff

(Published in *Amer. Lily Soc. Newsl.* 4: 2 (1950). No further details.)

**'Baby Love' VII(a-b/b)**

Parentage: ('Royal Queen' × (*L. × parkmanii* 'Sprite' × 'Star Gazer')) × (*L. × parkmanii* Little Rascal Group × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside yellowish white (155D), midveins brilliant yellow/light greenish yellow (8A/B) fading out into tepals; outside yellowish white (155D), midribs paler than brilliant greenish yellow (151D), with a little reddish brown and strong yellow-green (144C) at base; spots vivid yellow (9B) on two-thirds of each tepal; papillae present; nectaries strong yellow-green (144B); pollen

strong reddish orange (169A); stigma more purple than dark red (59A). Fls 160 mm wide; tepals 100 × 35-50 mm, margins ruffled, tips recurved. Lvs scattered, 100 × 55 mm, mid green. Stems 0.4 m, green with darker markings, with 5-6 fls. July.  
Syn.: 'Little Baby Love'.

**'Baby Pink Bells'** I(c/-)

Parentage unknown: possibly a *cernuum* hybrid  
R: F. Fellner (c. 1980), G: F. Fellner, N: F. Fellner, REG: F. Fellner (2002)

Inside pink, sometimes with a few spots; outside pinkish; nectaries pink; pollen brown; stigma cream, on a very short style that is shorter than the stamens. Fls unusual in being more-or-less bell-shaped (i.e. tepals not spreading), 50-70 mm wide; tepals 55 × 20 mm, margins smooth, tips not recurved. Lvs scattered, 60-70 × 10 mm. Stems 0.6-1 m, red-black, with 10-30 fls in a tall infl. Mid July. (Nomenclatural standard: colour print provided by registrant (WSY 0035251).)

**'Baby Ribbon Pink'** I?(b/-)

Parentage unknown  
I: Blackthorne Gardens (1985)  
Fls baby ribbon pink; with a few darker spots in the centre; pollen absent. Fls semi-double. Stems 0.6 m. July.

**'Baby Robin'** I(c/c)

Parentage: *amabile* var. *luteum* × (*lancifolium* × *cernuum*)  
R: M.E. Rowell (c. 1962), N: M.E. Rowell  
Tepals tan, flushed with pink; spots brownish maroon. Fls the size of *amabile*; tepal-tips slightly recurved.

**'Baby Sun'** I(a/-)

Parentage unknown  
R: A.J. van der Zwet & Sons, I: C. Peerdeman (1970)  
Tepals vivid reddish orange (32A); spots carmine; anthers orange-brown.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 4 (1978).)

**'Baccarat'** I(a/-)

Parentage: (('Destiny' × ('Enchantment' × 'Prosperity') F<sub>2</sub>) × 'Pirate') F<sub>1</sub>  
R: J. Bakker (1974), G: J. Bakker (1976), N: J. Bakker (1982), I: H.J. Bakker (1983), REG: H.J. Bakker (1983)  
Inside vivid yellowish orange (30C), tepal-edges brown-red; outside vivid reddish orange (34A), each tepal with a broad, violet-red flame; spots few, dark; pollen reddish brown.

**'Bacchus'** I(a/-)

Syn. of 'Domschatz'.

**'Bach'** VIII(a/b)

Parentage: *longiflorum* 'White Fox' × seedling W 91-28  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)  
Inside greenish white (155C), throat strong yellow-green

(144C) edged greenish white (155C); outside greenish white (155C), midribs pale greenish yellow (2D) tipped strong yellow-green (144A); spots and papillae absent; nectaries white; pollen brownish orange (171B); stigma moderate red (182A). Fls 185 mm wide; tepals 125 × 50-55 mm, margins smooth; tips slightly recurved. Lvs scattered, 170 × 30 mm. Stems 1.2 m, dark, with 3-7 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

**Backhouse Group** II(c/d)

See *L. × dalhansonii* Backhouse Group.

**'Backview'** I(c/-)

Parentage: 'Edna Kean' × unknown  
R: P.H. Wright (pre 1954), N: P.H. Wright  
Tepals rich red, slightly recurved.  
(Published in *Carrot Valley Nursery Cat.*, 1954: 2.)

**'Baco'** I(a/-)

Parentage: 'Polar Bear' × Sundrop Group  
R: J. Meyles (1976), G: J. Meyles (1978), N: J. Meyles (1986), I: J. Meyles (1986), REG: J. Meyles (1986)  
Inside vivid orange (28B), with orange blotches in the throat; outside strong red (39A), tepals edged vivid reddish orange (30A); spots tiny, in a ring around the throat; nectaries burnt orange; pollen light brown. Fls 140 mm wide; tepals 130 × 15 mm, slightly recurved. Lvs scattered, 130 × 15 mm. Stems 0.6 m, pale green, with c.5 fls. Late June.

**'Badenweiler'** VI(-/c)

Parentage: 'Lady Ann' × 'Henriette'  
R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1982), I: V. Strasser (1985), REG: V. Strasser (1990)  
Inside cream-white, throat orange; outside with green midribs; spots absent; nectaries green; pollen brown. Fls 140 mm wide; tepals 95 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 24 mm, mid green. Stems 1.2 m, brown-green, with c.19 fls. Late July.

**Badminton Red Group** I(c/-)

Parentage: 'Maxwill' × mixed pollen  
R: O. Tanck (1979), G: O. Tanck (1980), N: O. Tanck (1982), I: O. Tanck (1982), REG: O. Tanck (1983)  
Inside vivid reddish orange (30B), tepal-tips vivid yellowish orange (30C), throat vivid yellowish orange (30C); outside vivid yellowish orange (30C), midribs brownish; spots numerous, dark brown on all but extreme tepal-tips; nectaries vivid yellowish orange (30C); pollen moderate reddish orange (171A). Tepals 50 × 20 mm, margins ruffled, tips strongly recurved. Lvs 100 × 10 mm, mid green. Stems 1 m, dark green, with 15-35 fls. July. (Published in *Der Staudengarten* 4: 39 (1981). Included in *ILR Second Supplement* as Badminton Red grex.)

**'Bagira'** I(a/-)

Parentage: 'Svetlana' × unknown  
R: V.A. Volkov (c. 1982), N: V.A. Volkov  
Tepals creamy pink; spots large, violet; pollen brown. Stems 1.3 m, with bulbils. July.  
(The seed parent is probably 'Svetlana' of Kireeva.)

**Bahama Group IV(-/-)**

Parentage: (Bellingham Group × 'Oliver Wyatt') F<sub>1</sub>s & F<sub>2</sub>s  
 R: F. Ewald (pre 1980), N: F. Ewald, REG: F. Ewald (1988)

Tepals yellow and orange; spots brown. Stems 1.4 m. Early July.

(Published in German Lily Group sales list, 1980.)

**'Baheli' I(a/-)**

Parentage: ('Orange Light' × 'Connecticut King') × 'Connecticut King'

R: J. Bakker (1979), G: J. Bakker (1981), N: J. Bakker (1984), I: H.J. Bakker (1984), REG: H.J. Bakker (1985)  
 Inside vivid yellow (12A), throat veined green; outside pale greenish yellow (1D) below, vivid yellow (12A) above; spots brown, in the throat; nectaries primrose-yellow; pollen tangerine-orange. Fls 180 mm wide; tepals 90 × 30 mm. Lvs scattered, 90 × 20 mm, pale green.

Stems 1 m, pale green, with c.7 fls.

(Published in *Bloembollencultuur*, 1984.)

**'Bahia Blanca' VII(a-b/b-c)**

Parentage: 'Casa Blanca' × unnamed seedling

R: Peacock B.V. & Imanse Lelieveredeling B.V. (1991), G: Peacock B.V., N: Peacock B.V. & Imanse Lelieveredeling B.V. (1995), I: Peacock B.V. & Imanse Lelieveredeling B.V. (1995), REG: Peacock B.V. (1997)  
 Inside pale yellow-green (155A), midveins pale yellow-green (155A), fading towards top; outside yellowish white (155D), midribs more-or-less brilliant greenish yellow (151D) towards top, paler towards base and with some reddish brown; spots yellowish white (155D) on two-thirds of each tepal; papillae yellowish white (155D), in the throat; nectaries strong yellow-green (145A); filaments pale green; pollen strong orange (169C); stigma greyish yellow-green (148D) and dark red (187B). Fls 250 mm wide; tepals 145-150 × 50-70 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 45 mm, mid green. Stems 0.8 m, light green, with few fls.

**'Baiaderka' I(a/c)**

Parentage: derived from 'Liudmila' (of Kireeva), 'Rubinovaia' & *cernuum*

R: M.F. Kireeva (1980), N: M.F. Kireeva

Fls strong yellowish pink (43D); anthers pink. Fls 110-130 mm wide. Stems 0.6-0.9 m, green with brown spots, with 12-15 fls. July.

(Unaccepted spelling: 'Bajaderka'; 'Bayaderka'. Published in M.F. Kireeva, *Lilii*, 41 (1984). M.V. Baranova, *Lilii*, 328 (1990) says the fls are out-facing. Included in *ILR Third Supplement* as 'Bajaderka'.)

**'Baiba' I(b/-)**

Parentage: selection from Amālijas Group

R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)

Inside and outside lilac-pink, centre creamy; spots numerous, dark violet on half of each tepal; nectaries cream. Fls 90 mm wide; tepals 50 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 60 × 3 mm, mid green. Stems 0.6 m, green.

**'Baikal Pearl' VII(a/b)**

Parentage: 'Simplon' × 'Canada'

R: De Jong Lelies Holland B.V. (1996), G: De Jong Lelies Holland B.V. (1998), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2003)

Inside yellowish white (155D), midveins with a light greenish yellow (8B) patch towards base; outside yellowish white (155D), midribs strong yellow-green (144B) at base flushed with vivid purplish red (57B), strong greenish yellow (151B) towards top with strong yellow-green (144A) tip; spots and papillae brilliant yellow (8A); nectaries strong yellow-green (144C); pollen strong reddish orange (169A); stigma dark purple (79A). Fls 230 mm wide, fragrant; tepals 160 × 70 mm, margins smooth, tips recurved. Lvs 200 × 46 mm. Stems 1.2 m, green with darker markings, and with c.3-5 fls.

**'Bajaderka' I(a/c)**

Unaccepted spelling of 'Baiaderka'.

**'Bájny Fénix' I(b/b)**

Parentage: 'Ohnivý Fénix' × tetraploid Asiatic

R: J. Kovář, N: J. Kovář, I: J. Kovář (2002), REG: J. Kovář (2002)

Inside red, tepal-tips fading; outside red; spots numerous, large, oval, black, on a third of each tepal; papillae very few; nectaries silver; pollen light brown; stigma pale rose-pink. Tepals 85 × 45 mm, tips slightly recurved; pedicels 100 mm long, very thick, much spotted, with secondary buds. Lvs scattered, 100 × 18 mm, semi-glossy mid green. Stems 1.1 m, very thick, rigid, much spotted with violet-brown, with numerous violet-brown bulbils. Late June. Tetraploid.

(In comparison with 'Ohnivý Fénix', there are fewer spots and the fls are more globular.)

**'Baker' VI(-/a)**

Parentage: *sulphureum* × 'T.A. Havemeyer'

R: S.L. Emsweller (c. 1953), N: S.L. Emsweller

Fls creamy yellow. Stems 1-1.2 m. Aug.

(Published in *USDA Notice of Release and Introduction*, 1953.)

***bakerianum* var. *aureum* Grove & Cotton IX(c/b)**

Tepals rich golden yellow or pale yellow, sometimes brown-yellow or purplish yellow, with numerous red or purple spots. Lvs hairless. W China (Sichuan, Yunnan).

***bakerianum* var. *bakerianum* Collett & Hemsley IX(c/b)**

Inside white, very occasionally tinged with pink; outside flushed with green; spots reddish brown or purple; pollen yellow. Fls 55-65 cm wide, fragrant; tepals up to 75 mm long; tips slightly recurved. Lvs scattered, up to 55 × 12.5 mm. Stems downy or minutely rough at base, green, sometimes flushed with purple-brown, with 1-6 fls. Nepal, N Myanmar, W China (Guizhou, Sichuan, Yunnan).

***bakerianum* var. *delavayi* (Franch.) E.H. Wilson  
IX(c/b)**

Tepals dull olive-green or pale greenish yellow to olive-brown, with reddish-purple-maroon or crimson spots. Lvs hairless. Stems to 1.75 m, with up to 8 fls. N Myanmar, W China.

***bakerianum* var. *rubrum* Stearn IX(c/b)**

Tepals rose-pink or reddish, with red or purple spots. Lvs hairless. W China (Guizhou, Yunnan).

***bakerianum* var. *yunnanense* (Franch.) Sealy  
IX(c/b)**

Fls white or pale pink; spots absent. Lvs white-downy on both surfaces. W China (Sichuan, Yunnan).

Syn.: *yunnanense*.

**‘Bakersfield’ I(a/b)**

Parentage: ((‘Sterling Star’ × unnamed seedling) × ‘Palette’) × yellow-flowered seedling

R: Mak-Leek Inc. (pre 1996), N: Mak-Leek Inc., REG: ICRA (1998)

Tepals bright golden yellow; brushmarks maroon-red. Lvs glossy dark green. Stems 1-1.2 m, dark. Midseason.

**‘Bakker’s Elite’ VI(a/-)**

Parentage: selection from African Queen Group

R: Gebr. N. & B. Laan & Zn (pre 1980), N: Bakker

Fls brilliant orange; nectaries green; pollen red. Tepal-tips slightly recurved. Stems 1 m.

**Bakker’s Green Favourite Group VI(-/a)**

Syn. of Green Magic Group.

**‘Bakker’s Pride’ I(b/-)**

Syn. of ‘Exception’.

**‘Balakirev’ I(a/-)**

Parentage: ‘Connecticut Dream’ × ‘Iolanta’

R: A.V. Otroshko (1990), N: A.V. Otroshko, REG: A.V. Otroshko (1995)

Inside pink, throat cream; spots small, inconspicuous, 2-3 on each tepal; nectaries green, slightly frosted white; pollen strong reddish orange. Fls 120 mm wide; tepals 62 × 20-31 mm, margins slightly ruffled, tips not recurved. Stems 1 m, green. July.

**‘Balalaica’ I(a/b)**

Parentage: ‘Prosperity’ × seedling of Golden Chalice Group

R: T. Plewka (1976), G: A. Jasiński (1981), N: A. Jasiński (1985), I: A. Jasiński (1985), REG: A. Jasiński (1987)

Inside dark yellow, tinted apricot; outside paler; spots blackish mahogany on half of each tepal; nectaries white-downy; pollen reddish brown; stigma dark mahogany. Fls 150 mm wide; tepals 75 × 40-57 mm, the inner thick and very broad, margins smooth, tips not recurved; pedicels 100-150 mm. Lvs scattered, 120 × 12 mm, mid green. Stems 0.8 m, dark green, with 9-11 fls. Early June.

**‘Balance’ I(a/-)**

Parentage: ‘Mont Blanc’ × (‘Sterling Star’ × ‘Aristo’)

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside pale yellow-green (4D), changing to pale yellow-green (155A) with a primrose-yellow flush; outside pale yellow-green (155A) suffused with pale yellow-green (4D), midribs deep purplish pink (58D), tips of outer tepals deep purplish red (59B); spots dark red (187A) on the basal part of each tepal; nectaries brilliant yellow-green (150C), edged brownish orange (165B); pollen strong orange (24A). Fls 160 mm wide; tepals 80 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 0.85 m, with darker markings, and with c.4 fls. June to July (under glass).

(Registered and included in *ILR Eleventh Supplement* as ‘Balance’. This spelling was a mistake made by the registrant and it is here corrected to ‘Balance’.)

**‘Balaton’ VII(a/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside vivid purplish red (57C), throat yellowish white (155D); outside moderate purplish pink (66D); spots strong purplish red (63A); papillae present; nectaries strong yellow-green (144B); pollen strong orange to strong reddish orange (169B/A); stigma light purplish pink (68D). Fls 210 mm wide; tepals 155 × 60 mm, margins slightly ruffled, tips recurved. Lvs scattered, 185 × 60 mm. Stems 1.2 m, green with darker markings, with c.3 fls.

**‘Balder’ I(a/-)**

Parentage: ((‘Enchantment’ × ‘Propensity’) F<sub>2</sub> × ‘Wilja’) F<sub>1</sub> × ‘Connecticut King’

R: J. Bakker (1977), G: J. Bakker (1979), N: J. Bakker (1984), I: H.J. Bakker (1983), REG: H.J. Bakker (1983)

Inside and outside strong orange (25B), flushed with vivid orange-yellow (23A); spots many, small, dark brown, in the throat; pollen tangerine-orange.

Syn.: ‘Barbara’.

(Originally introduced in 1983 as ‘Barbara’, but this epithet was unacceptable (ICNCP, 2004: Art. 27.1 - name already used for another lily) so it was renamed ‘Balder’.)

**‘Baldwin’ I(b/-)**

Parentage: ‘Red Tiger’ × unknown

R: H.O. Beracha, N: H.O. Beracha

Fls red with a few spots. Stems 1-1.2 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

**‘Balence’ I(a/-)**

See ‘Balance’.

**'Baletka' I(a/b-c)**

Parentage: 'Letkis' × 'Advent'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1993),

REG: B. Mičulka (1993)

Inside pale orange-salmon, throat deeper; outside paler with rose-pink midribs; spots sparse, small, dark purple-brown on a quarter of each tepal; nectaries white-granulated; pollen orange-brown; stigma dark purple-brown. Fls 115 mm wide; tepals 80 × 38 mm, margins slightly wavy, inner slightly and outer moderately recurved; pedicels 70 mm long, spotted dark brown. Lvs scattered, 85 × 15 mm, dull dark green. Stems 0.9 m, spotted brown. Early July.

**'Balfourianum' IV(-/d)**Parentage: *roezlii* × *pardalinum*

R: A. Perry (c. 1920), N: A. Perry

Tepals orange-apricot, spotted crimson.

(Published in *JRHS* 46: xl (1921). It is not known whether the seed parent was *roezlii* Purdy (= *pardallinum* subsp. *vollmeri*) or *roezlii* Regel. (= *pardalinum*.)

**'Bali' VII(b/c)**Parentage: pink-flowered seedling × (*L.* × *parkmanii* 'Allegra' × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside yellowish white (155D), throat strong yellow-green (144B); outside yellowish white (155D) tinged with strong yellow-green (144B) at the tepal-tips and base, fading on the midribs, the base also with a dark reddish brown tinge; spots absent; papillae yellowish white (155D) on two-thirds of each tepal; pollen strong brown (172A); stigma greyish yellow-green (148D). Fls 220 mm wide; tepals 120 × 40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 140 × 25 mm, mid green. Stems 0.65 m, mid green, with c.5 fls.

**'Balinka' VI(c/d)**

Parentage: 'Heidelberg' × 'Lednice'

R: V. Strasser (1982), G: V. Strasser (1985), N: V. Strasser (1990), I: V. Strasser (1990), REG: V. Strasser (1991)

Inside vivid yellow (14B); outside vivid yellow (12A), with a light, *henryi*-like marking; nectaries green; pollen brown. Fls 120 mm wide; tepals 100 × 33 mm, margins smooth, tips strongly recurved. Lvs scattered, 130 × 28 mm, dark green. Stems 2 m, dark green, with c.36 fls (including secondary and tertiary buds). Early to late Aug.

**'Ballade' I(a/-)**

Parentage: Asiatic seedling × ('Connecticut Yankee' × unknown)

R: Bischoff Tulleken Leliecultuur B.V. (1974), G: Bischoff Tulleken Leliecultuur B.V. (1977), N: Bischoff Tulleken Leliecultuur B.V. (1981), I: Bischoff Tulleken Leliecultuur B.V. (1982), REG: Bischoff Tulleken Leliecultuur B.V. (1983)

Inside vivid reddish orange (30B), tepal-tips orange,

throat orange; outside carrot-red; with triangular blotches in the throat; nectaries reddish brown; pollen reddish brown. Fls 120 mm wide; tepals 100 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 1 m, green, with c.7 fls. Late June.

**'Balladier' I(a/-)**

Parentage: seedling 1476 × 'Rose Royale'

R: C. Robinson (1977), G: C. Robinson (1981), N: C. Robinson (1986), I: C. Robinson (1986), REG: C. Robinson (1986)

Inside each tepal strong yellowish pink (43D) in apical two-thirds, light greenish yellow (5C) in basal third; outside uniformly strong yellowish pink (43D); spots few, dark brown, deep in throat; nectaries strong yellowish pink (43D); pollen moderate reddish orange (35). Fls 125 mm wide; tepals 85 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 10 mm, mid green. Stems 1.05 m, mid green, with c.12 fls. Early July.

**'Ballerina' II(-/l)**See *L.* × *dalhansonii* 'Ballerina'.**'Ballet' VII(-/d)**See *L.* × *parkmanii* 'Ballet'.**'Ballroom' VIII(a/b)**Parentage: (('Tabasco' × 'Connecticut Yankee') × *dauricum*) × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (2000), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside light yellow (20B), midveins above nectaries strong orange-yellow (24B), throat pale yellow (20D); outside pale yellow (20C), a little stronger coloured towards tepal-edges, outer tepals tipped dark red (187A), midribs strong yellow-green (144C); spots dark red (187A), on basal part of each tepal; a few papillae along the nectaries; nectaries strong orange-yellow (24B); pollen moderate reddish brown (175A); stigma moderate orange (170D). Buds hairy. Fls 210 mm wide; tepals 115 × 45-60 mm, margins scarcely ruffled, tips hardly recurved. Lvs scattered, 215 × 20 mm. Stems 1 m, green with a little darker marking, and with c.5 fls. June. (*A. longiflorum*/Asiatic (LA) hybrid.)

**'Baltā Amālija' Div. ?**

Given as a parent of 'Ausma' and 'Ritenitis'.

**'Balta Brigantina' I(a/b)**

Misspelling of 'Baltā Brigantīna'.

**'Baltā Brigantīna' I(a/b)**

Parentage: 'Baltais Lācis' × 'Shirley'

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)

Inside pale orange-white (159B), with a large, moderate orange-yellow (168D) centre to the fl., midveins violet, throat greenish; outside creamy white; spots few, small, black; nectaries orange; pollen bright orange. Fls 150 mm

wide; tepals 80 × 35 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 1.05 m, dark brown, with c.3 fls. Early July. (Included in *ILR Nineteenth Supplement* as ‘Balta Brigantina’ which is a misspelling.)

**‘Balta Dama’ VI(-/a)**  
Misspelling of ‘Baltā Dāma’.

**‘Baltā Dāma’ VI(-/a)**  
Parentage: *L. × sulphurgale* × a mixture of pollen from white lilies  
R: V.P. Orehovs (c. 1961), N: V.P. Orehovs  
Inside pure white, throat yellowish green; outside with inconspicuous pale brown stripes; pollen orange. Fls 150 × 150 mm. Lvs scattered, up to 100 × 6 mm, dark green. Stems up to 1.5 m. July.  
Syn.: ‘White Lady’.  
(Included in *ILR Second Supplement* as ‘Balta Dama’ which is a misspelling.)

**‘Baltais Lācis’ I(a/b)**  
R: V.P. Orehovs (c. 1987), N: V.P. Orehovs  
Fls cream. Stems 1.1 m.

**‘Baltais Maconis’ VI(-/c)**  
Misspelling of *L. × aurelianense* ‘Baltais Mākonis’.

**‘Baltais Mākonis’ VI(-/c)**  
See *L. × aurelianense* ‘Baltais Mākonis’.

**‘Baltais Stars’ I(b/c)**  
Parentage: derived from repeated crossings of *cernuum* & Asiatic hybrids  
R: V.P. Orehovs (between 1970 and 1983), N: V.P. Orehovs  
Fls 140 mm wide, white; spots few, lilac. Stems 0.8 m. July.

**‘Baltā Pilsēta’ IX(-/d)**  
See *henryi* ‘Baltā Pilsēta’.

**‘Balta Vizma’ I(a/b)**  
Misspelling of ‘Baltā Vizma’.

**‘Baltā Vizma’ I(a/b)**  
Parentage: unnamed seedling × ‘Baltais Lācis’  
R: D.-V. Šķimele (1990), G: D.-V. Šķimele (1992), N: D.-V. Šķimele (1995), REG: D.-V. Šķimele (2001)  
Inside pure white; outside white, midribs brownish pink; spots dark red, small, in the throat; nectaries pale yellow; pollen brownish orange; stigma green. Fls 140 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 65 × 10 mm. Stems 0.65 m, reddish brown, with c.9 fls. Mid July.  
(Published in *Lilium Balticum Lily Register*, 1995.  
Included in *ILR Twentieth Supplement* as ‘Balta Vizma’ which is a misspelling.)

**‘Baltgalvīte’ I(a/-)**  
Parentage unknown  
R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs

(1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)  
Fls white with greenish midribs and a few brown spots in centre of fl.; pollen orange. Fls 130 mm wide; tepals 60 × 29 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1 m, green. Mid July.

**‘Baltic Star’ I(a/b)**  
Parentage unknown  
R: J. Vasarietis (1991), G: J. Vasarietis (1994), N: J. Vasarietis (1997), I: J. Vasarietis (1997), REG: J. Vasarietis (2001)  
Inside white, with a very pale pink band around centre of fl. at level of nectaries; outside white, with very slight pink shading; spots c.20, tiny, dark, level with apical part of nectaries; nectaries white; pollen brown; stigma greyish pale yellow. Fls 180 mm wide; tepals 85 × 37 mm, margins not or very slightly ruffled, tips slightly recurved. Lvs scattered, 75 × 14 mm, dark green. Stems 1 m, green, with c.6 fls. Early July.  
(Published in *Lilium Balticum Lily Register*, 2000.  
Nomenclatural standard: colour print provided by registrant (WSY 0030818).)

**‘Baltic Sunset’ I(a/-)**  
Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (c. 1988), G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)  
Inside and outside vivid orange (28A); spots absent; nectaries white; pollen orange. Fls 150 mm wide; tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 0.9 m, brownish green, with 10-20 fls. Mid July.  
(Published in *Latvian Lily Register*, 1993.)

**‘Baltimore’ VII(a-b/b-c)**  
Parentage: ‘Cascade’ × ‘Muscadet’  
R: Sande B.V., REG: Sande B.V. (2003)  
Inside and outside greenish white (155C), tepal-tips flushed with strong purplish red (55B); spots absent; papillae present; nectaries light green; pollen orange-brown; stigma light purple. Tepals medium length, margins ruffled, tips recurved. Stems tall to very tall. Midseason.  
(The seed parent is unknown (possibly it is *candidum* ‘Cascade’).)

**‘Baltini’ I(a/b)**  
Misspelling of ‘Baltīņi’.

**‘Baltīņi’ I(a/b)**  
Parentage: white-flowered seedling × white-flowered seedling  
R: J. Vasarietis (1982), G: J. Vasarietis (1986), N: J. Vasarietis (1989), I: J. Vasarietis (1989), REG: J. Vasarietis (1992)  
Fls white; spots few, purple, on basal half of each tepal; nectaries white; pollen orange. Fls 130-140 mm wide; tepals 70 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 95 × 13 mm, pale green. Stems 0.8 m, green, with 9-13 fls. Early July.

(Named after the house where the raiser was born. Included in *ILR Eleventh Supplement* as 'Baltini' which is a misspelling.)

**'Balugo'** VII(a-b/-)

Parentage unknown

REG: Bottema Lelie B.V. (2003)

Inside and outside greenish white (155C); spots absent; papillae present; nectaries light green; pollen orange-brown; stigma purple. Tepal-margins smooth, tips scarcely recurved. Stems medium to tall. Midseason.

**'Bal White'** I(a/-)

Parentage: 'Mont Blanc' × unknown

R: E.A. McRae (1983), G: Oregon Bulb Farms, Inc. (1986), N: Cebeco Lilies, Inc. (1996), I: Cebeco Lilies, Inc. (1996), REG: Cebeco Lilies, Inc. (1996)

Inside yellowish white (158A), with a slight light greenish yellow (8C) blush above nectaries, throat light greenish yellow (8C); outside yellowish white (158A); spots very small, very few (0-5), around nectaries; nectaries light greenish yellow (8C) to strong yellow-green (144B); pollen strong orange (24A). Buds white. Fls 140 mm wide; tepals 74 × 41 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 124 × 14 mm, mid green. Stems 0.93 m, strong yellow-green (144A), with c.11 fls (from 12-14 cm bulbs). Early.

Trade designation: WHITE BALLERINA.

**'Bamberg'** VI(a/a)

Parentage: pink-flowered Aurelian seedling × 'Glockenturm'

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1980), REG: V. Strasser (1992)

Inside white, tepal-margins and tips pink, throat yellow; outside dark red (187B); nectaries green; pollen light brown. Tepals 120 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 125 × 11 mm, dark green. Stems 1.4 m, green, with up to 15 fls. Late July to mid Aug.

**'Bambino'** I(a/c)

Parentage: 'Connecticut King' × 'Chios'

R: A. Weinreich (1976), G: A. Weinreich (1979), N: A. Weinreich (1983), REG: A. Weinreich (1988)

Fls brilliant orange to light orange-yellow (25C/D), tepal-tips cream; spots present; nectaries wine-red, anthers small, lacking pollen. Fls 90 mm wide; tepal-tips slightly reflexed. Lvs light green. Stems 0.9 m, light green, infl. with secondary buds. Late June to early July.

(Published in German Lily Group sales list, 1987. Some details have changed since publication in *ILR Eighth Supplement*.)

**'Bananarama'** I(a/b)

Parentage: unnamed seedling × unnamed seedling

R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (2001)

Inside vivid yellow (12A), throat green; outside vivid yellow (9A); a few, small spots and some papillae present; nectaries green; pollen orange-brown; stigma dark purple.

Fls 130 mm wide; tepal-margins smooth, tips slightly recurved. Stems 0.9-1 m, with c.5 fls. Very early.

**'Bandiëra'** VII(-/b-d)

Parentage: 'Star Gazer' × seedling L 447

R: Vletter & Den Haan (1981), G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1989), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1990)

Inside vivid purplish red (57D), midveins tinged with strong red (53B), throat strong yellow-green (143C) edged brilliant yellow (8A); outside deep purplish pink (64D), midribs and base tinged with pale yellow-green (4D); spots few, dark red (187A/B), on each tepal above the throat; nectaries light greenish grey (190C); pollen strong reddish orange (169A). Fls 235 mm wide; tepals 120 × 65 mm, margins smooth, tips strongly recurved. Lvs scattered, 160 × 35 mm, mid green. Stems 1 m, green, with c.5 fls. June.

**'Bandola'** I(a/-)

Parentage unknown

R: Gebr. N. & B. Laan & Zn (1988), G: Gebr. N. & B. Laan & Zn (1990), N: Gebr. N. & B. Laan & Zn (1995), I: Gebr. N. & B. Laan & Zn (1996), REG: Gebr. N. & B. Laan & Zn (1996)

Inside darker than vivid reddish orange (42A), tinged with strong reddish orange (42C) along nectaries; outside vivid reddish orange (42A), tinged with moderate reddish orange (178D) along midribs, base strong orange-yellow (163B); spots dark red (187A), on a third of each tepal; papillae in the throat; nectaries strong yellowish pink (31C); pollen brownish orange (172C); stigma dark red (187B). Fls 170 mm wide; tepals 90 × 35-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 1.5 m, green, with c.5 fls.

**'Bandos'** I(a/-)

Parentage: 'Electric' × 'Bright Beauty'

R: Gebr. N. & B. Laan & Zn (1988), G: Gebr. N. & B. Laan & Zn (1990), N: Gebr. N. & B. Laan & Zn (1995), I: Gebr. N. & B. Laan & Zn (1995), REG: Gebr. N. & B. Laan & Zn (1996)

Inside vivid yellow (9A), midveins strong orange-yellow (17A) shading into tepal, throat vivid yellow (9B); outside vivid/brilliant yellow (9B/C) becoming vivid yellow (9A) towards tepal-edges, tips dark red (187A); spots absent; papillae few, in the throat; nectaries strong yellow-green (144B); pollen strong brown (172A); stigma dark red (187B). Fls 190 mm wide; tepals 115 × 35-50 mm, margins smooth, tips recurved. Lvs scattered, 115 × 20 mm, mid green. Stems 1.25 m, green, with c.7 fls.

**'Banga'** VI(-/l)

Parentage: Trumpet hybrid × *Hemerocallis* sp.

R: V.P. Orehovs (between 1970 and 1983), N: V.P.

Orehovs

Fls yellow, resembling a *Hemerocallis*; plants otherwise lily-like. Stems 0.8 m. July.

(The parentage requires confirmation.)

**'Bangalore' I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Vletter & Den Haan, G: Vletter & Den Haan (1986),  
 N: Vletter & Den Haan (1990), I: Vletter & Den Haan  
 (1991), REG: Vletter & Den Haan (1991)  
 Inside light yellow (15D), flushed with vivid orange-  
 yellow (23A), tepal-edges narrow, strong orange-yellow  
 (24B), tips strong orange (24A); outside pale yellow  
 (18C) with narrow, brilliant orange-yellow (21B) tepal-  
 edges, centre of each tepal suffused with pale yellowish  
 pink (29D), tips of outer tepals moderate red (184B);  
 spots absent; nectaries greyish red (184A); pollen greyish  
 red to dark reddish orange (178A/B). Fls 170 mm  
 wide; tepals 80 × 50 mm, margins smooth, tips slightly  
 recurved. Lvs scattered, 160 × 15 mm, mid green. Stems  
 0.8-1 m, with dark markings, and with c.7-9 fls. July  
 (under glass).

**'Bangkok' VII(a-b/-)**

Parentage: seedling 560 × seedling 89-40  
 R: Vletter & Den Haan Beheer B.V. (1990), G: Vletter &  
 Den Haan Beheer B.V. (1993), N: Vletter & Den Haan  
 Beheer B.V. (1997), I: Vletter & Den Haan Beheer B.V.,  
 REG: Vletter & Den Haan Beheer B.V. (1998)  
 Inside and outside yellowish white (155D); spots absent;  
 papillae present; nectaries green; pollen orange-brown;  
 stigma grey-green, tinged with pale purple. Stems  
 medium to tall, green. Early to midseason.

**'Bantik' I(a/b)**

Parentage: 'Ritenitis' × 'Connecticut Red'  
 R: A.V. Otroshko (1986), G: A.V. Otroshko (1990), N:  
 A.V. Otroshko (1992), I: A.V. Otroshko (1994), REG:  
 A.V. Otroshko (1995)  
 Inside strong purplish red, throat red; outside red, tinged  
 with lilac; spots absent; nectaries light green; pollen  
 absent. Fls double (with 12 tepals and no stamens), 110  
 mm wide; tepals 80 × 40 mm, margins strongly ruffled,  
 tips recurved. Lvs scattered, 100 × 10 mm, dark green.  
 Stems 1.2 m, green, with 7-15 fls. Mid July.

**'Barbados' VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Peacock B.V. & Imanse Lelieveredeling B.V. (1993),  
 G: Testcentrum voor Siergewassen B.V., N: Marklily C.V.  
 (1999), I: Marklily C.V. (1999), REG: Marklily C.V.  
 (2000)  
 Inside strong purplish red/deep purplish pink (64C/D),  
 tepal-edges greenish white (155C), midveins strong  
 red (53B), throat greenish white (155C); outside  
 greenish white (155C) with strong purplish pink (73B)  
 along midribs, outer tepals tipped strong yellow-green  
 (144B/C); spots dark red (59A); papillae greenish white  
 (155C); nectaries strong yellow-green (144B), with a  
 brilliant yellow-green (154C) rim; pollen dark reddish  
 orange (175B); stigma dark purple (79A). Fls 225 mm  
 wide; tepals 130 × 50-70 mm, margins ruffled, tips  
 recurved. Lvs scattered, 180 × 47.5 mm. Stems 1.2 m,  
 light green, with c.6 fls.

**'Barbara' I(b/-)**

Parentage: 'Grace Marshall' × *L. × maculatum*  
 'Mahogany'  
 R: W.C. Horsford (c. 1950), N: W.C. Horsford  
 Fls blood-red, c.150 mm wide. Stems 0.6-1 m, with 9-12  
 fls. Early July.  
 (Published in *LYB NALS* 1: 109 (1947/48).)

**'Barbara' I(a/-)**

Syn. of 'Balder'.

**'Barbara North' I(c/-)**

Parentage: (*lankongense* × 'Maxwill') × ('Edith Cecilia' ×  
 (*lancifolium* var. *flaviflorum* × 'Destiny') × 'Citronella')  
 R: C. North (1973), G: SHRI (1975), N: C. North  
 (1985), I: RHS Lily Group (1985), REG: RHS Lily  
 Group (1986)  
 Inside mid pink, throat paler pink; outside mid pink;  
 spots small, dark red; nectaries dark pink-red; pollen  
 brown. Fls 70 mm wide, slightly scented; tepal-margins  
 smooth, tips strongly recurved. Lvs scattered, 175 × 7  
 mm, mid green. Stems 0.7-0.8 m, with 10 or more fls.  
 Midseason. Allotriploid.

**'Barbaresco' VII(a-b/b)**

Parentage unknown  
 R: Gebr. Vletter & Den Haan, G: Gebr. Vletter & Den  
 Haan (1988), N: Gebr. Vletter & Den Haan (1992), I:  
 Gebr. Vletter & Den Haan (1993), REG: Gebr. Vletter  
 & Den Haan (1993)  
 Inside yellowish white (155D), tepals suffused with  
 moderate purplish red (64A) in apical part, midveins  
 strong purplish red (60B); outside yellowish white  
 (155D) suffused with moderate purplish red (70A), tepal-  
 edges moderate purplish red (70A), tips deep purplish red  
 (61A), outer tepals edged deep purplish red (61A); spots  
 dark red (59A), on a third of each tepal; pollen strong  
 orange (25A); stigma moderate yellow-green (147D). Fls  
 210 mm wide; tepals 130 × 70 mm, margins ruffled. Lvs  
 scattered, 170 × 43 mm, dark green. Stems 1.04 m, mid  
 green, with c.3 fls.

**'Barbarossa' I(c/-)**

Parentage: *leichtlinii* var. *maximowiczii* × 'Tetra  
 Mountaineer'  
 R: V. Strasser (1977), G: V. Strasser (1979), N: V. Strasser  
 (1986), REG: V. Strasser (1986)  
 Fls red-orange; spots purple, on two-thirds of each  
 tepal. Tepal-margins smooth, tips slightly recurved. Lvs  
 scattered, 140 × 13 mm, dark green. Stems 1 m, brownish  
 green, with 10-15 fls. June to July.  
 Syn.: 'Maximount No. 1'.

**'Barber's Pink' I(c/d)**

This was included in *ILR* (1982), but was never intended  
 to be a cv. name, and should be deleted. See note under  
 'Elfros Enticer'.

**'Barbina' VIII(a/b)**

Parentage: 'Snowcap' × 'Longicanda'  
 R: K. Braun, N: K. Braun, I: K. Braun (2001), REG: K.

Braun (2002)

Inside yellowish cream, tepal-centres and throat yellow; outside creamy, midribs cream and green; spots absent; nectaries light green; pollen reddish brown; stigma cream. Fls 140 mm wide; tepals 80 × 37 mm, moderately recurved; pedicels 70 mm long, green. Lvs scattered, 80 × 10 mm, glossy green. Stems 0.75 m, green. Early July. (A *longiflorum*/Asiatic (LA) hybrid.)

**‘Barča’ I(a/c)**

Parentage: ‘Kolovrat’ × ‘Amarone’

R: J. Rezek (2001), N: J. Rezek (2005), I: J. Rezek (2005), REG: J. Rezek (2005)

Inside with deep yellow tepal-tips, centre darker; outside pale yellow, brownish at base; spots few, brown-violet, oblong, on a fifth of each tepal; papillae in throat; nectaries white-granulated; pollen chocolate-brown; stigma dark brown. Fls 160 mm wide; tepals 92 × 48 mm, margins ruffled, tips not recurved; pedicels 85 mm, brown-spotted. Lvs scattered, 115 × 18 mm, glossy dark green. Stems 0.85 m, thick, dotted with violet-brown, with dark green bulbils. Early July. Probably triploid.

**‘Barcarole’ I(a/-)**

Parentage: Asiatic seedling × mixed pollen of a brushmarked seedling & ‘Brushstroke’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Inside and outside vivid yellow (17B); brushmarks large, solid, dark red to blackish red; spots dark red, numerous, tiny, below each brushmark; nectaries soft green; pollen strong red (46A); stigma whitish green. Fls 150 mm wide; tepals 80 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 60 × 12 mm, dark green. Stems 0.7 m, rather dark green, with c.12 fls. Mid July.

**‘Bardolino’ VI(-/-)**

Parentage: white-flowered seedling 9/83 × ‘Glockenturm’

R: V. Strasser (1983), G: V. Strasser (1986), N: V. Strasser (1991), I: V. Strasser (1994), REG: V. Strasser (1996)

Fls white with rose-pink tepal-edges. Tepals 140 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 8 mm, dark green. Stems 1.5 m, green, with c.18 fls. Mid July.

**‘Bari’ I(a/-)**

Parentage: seedling W 481 × seedling W 648

R: Vletter & Den Haan, G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1990), I: Vletter & Den Haan (1991)

Inside yellowish white (155D); outside yellowish white (155D) flushed with moderate reddish orange (42D) towards base, midribs light yellow-green (145C); spots moderate brown (165A), in throat; nectaries dark greyish yellow (199D), edged with dull grey-brown; pollen brownish orange (164A). Fls 160 mm wide; tepals 75 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 105 × 15 mm, mid green. Stems 0.85 m, green with some darker marks, and with c.15 fls. June.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to Barryi Group. However, ‘Bari’ is protected by Dutch PBR (LEL 681) granted in 1991 and although the epithet cannot be registered, it must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Bariton’ I(a/b)**

Parentage unknown

R: Sande B.V. (1994), G: Sande B.V. (1996), N: Sande B.V. (2001), REG: Sande B.V. (2002)

Inside vivid orange (28A/B); outside vivid orange (28B); spots and papillae absent; nectaries orange; pollen red-brown; stigma purple-red. Tepal-margins slightly ruffled, tips recurved. Stems 1.2 m, with c.8 fls. Early.

**‘Barock’ I(b/-)**

Parentage: ‘Aurachglut’ × ‘Chromscepter’

R: V. Strasser (1975), G: V. Strasser (1978), N: V. Strasser (1979), I: V. Strasser (1984), REG: V. Strasser (1997)

Fls yellow-orange, throat yellow. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.2 m, fairly dark green, with up to 20 fls. Late June.

**‘Barolo’ I(a/-)**

Parentage: unnamed seedling × ‘Avignon’

R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1987), N: Vletter & Den Haan, I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside vivid reddish orange (30B), throat strong reddish orange (42B); outside strong reddish orange (32B), tepal-edges vivid reddish orange (32A); spots small, dark red (187A), in the throat; nectaries dark red (187C); pollen brownish orange (172C). Fls 180 mm wide; tepals 85 × 43 mm, margins smooth, tips strongly recurved. Lvs scattered, mid green. Stems 1.1 m. May.

**‘Baronessa’ I(a/c)**

Syn. of ‘Baronesse’.

**‘Baronesse’ I(a/c)**

Parentage: (‘Mont Blanc’ × (‘Bianca’ × ‘Dame Blanche’)) × ‘Nepal’

R: Mak-Leek Inc. (pre 1997), N: Mak-Leek Inc., REG: ICRA (1998)

Fls with a white centre which has a yellow blush, tepal-tips pink; spots deep pink, on basal part of each tepal. Tepal-tips recurved. Stems 0.9-1 m. Midseason.

Syn.: ‘Baronessa’.

(Published in *The Lily Nook Cat.* 1997: 5.)

**‘Barracuda’ VII(-/-)**

Parentage unknown

R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1983), N: Gebr. Mak B.V. (1989), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1989)

Inside deep purplish pink (64D), midveins deep red (60A), tepal-edges yellowish white (155B), throat strong yellow-green (144C); outside strong purplish red to deep purplish pink (59D/64D); dark red (187A) spots and papillae on both sides of midveins; nectaries dark plum-purple; pollen brownish orange (171B). Fls 220 mm wide; tepals

110 × 55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 110 × 50 mm, mid green. Stems 0.7 m, pale green with darker markings, and with c.4 fls. Aug.

#### **'Barred Owl' I(b/-)**

Parentage: ('Connecticut King' × bicoloured seedling XX-9) × darkest reverse bicoloured Windus seedling R: W.S. Summers (1980), G: W.S. Summers (1982), N: W.S. Summers (1993), REG: W.S. Summers (1993) Inside with tepal-tips vivid reddish orange (34A), throat vivid yellow (9B) with a sharp colour break; outside vivid reddish orange (34A); spots absent; nectaries vivid reddish orange (34A); pollen strong orange (25B). Fls 140 mm wide; tepals 86 × 36 mm, margins smooth, tips slightly recurved. Lvs scattered, 132 × 14 mm, dark green. Stems 1.2 m, mid green, with 10-30 fls. Early to mid July.

#### **'Barricade' I(a/-)**

Parentage: ((Olsen hybrid × 'Enchantment') F<sub>2</sub> × 'Pirate') F<sub>1</sub> × ('Orange Light' × 'Connecticut King') F<sub>1</sub> R: J. Bakker (1979), G: J. Bakker (1981), N: J. Bakker (1983), I: Licomba (1984) Inside vivid reddish orange (33A), tepal-tips vivid reddish orange (34A); outside vivid reddish orange (40B) shaded strong red (39A); spots dark brown, few, in the throat and on half of each tepal; nectaries rust-brown; pollen reddish brown. Tepal-margins smooth, tips not recurved. Lvs scattered, 115 × 12.5 mm, dark green. Stems 1.1-1.5 m, dark green, with c.8 fls. (Published in *Bloembollencultuur*, 1984.)

#### **Barryi Group VI(-/-)**

Parentage unknown R: T. Barry, N: F.M. Abbey (pre 1956), REG: (1984) Fls in shades of white, yellow and greenish. Aug. (Aurelian lilies, possibly derived from 'T.A. Havemeyer'. Included in *ILR* (1982) as Barryi grex.)

#### **'Barunka' I(a-b/b-c)**

Parentage: ('Rusalka' (of Mičulka) × unknown) × 'Blizzard' R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004) Inside creamy with a yellowish centre, brownish at nectaries; outside pale pink; nectaries white-granulated; spots small, brownish pink, fairly numerous, on three-quarters of each tepal; pollen chocolate-brown; stigma dark brown. Fls 125 mm wide; tepals 75 × 33 mm, slightly recurved, the outer tepals more so; pedicels 65 mm, shiny brown. Lvs scattered, 85 × 14 mm, dull mid green. Stems 0.9 m, thick, finely brown-dotted. Late June.

#### **'Bashful Lizzie' I(c/-)**

Parentage: unnamed seedling × unnamed seedling R: J. Vasarietis (1984), G: J. Vasarietis (1987), N: J. Vasarietis (1991), I: J. Vasarietis (1991), REG: J. Vasarietis (1992) Inside a mixture of 'autumn colours' (green, orange, yellow, brownish), tepal-tips strong orange (25B); outside vivid yellow (14A) to strong orange (25B);

spots purple-black, on half of each tepal; nectaries greenish white; pollen brown. Fls 110 mm wide; tepals 80 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 9 mm, dark green. Stems 1.1 m, greenish, black below, with c.22 fls in a candelabrum-like infl. Mid July.

#### **'Basic Diamond' VIII(a/b)**

Parentage: seedling 3473.vi-2008.rs zl × seedling LA 93064-14T R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004) Inside with inner tepals moderate purplish pink (68C) with a small pale yellow-green (157C) flame, midveins light yellow-green (144D) colouring towards top, outer tepals very pale purple (69B) with larger pale yellow-green (157C) flame, light yellow-green (144D) along midveins, strong purplish pink (68B) from half way up and surrounding veins, throat light yellow-green (144D); outside with outer tepals deep purplish pink (70C), midribs strong reddish purple (70B) at top, inner tepals very pale purple (73D), strong purplish pink (73B) along midribs; spots and papillae absent; nectaries light yellow-green (144B); pollen moderate reddish brown (175A); stigma brilliant yellow-green (142B). Fls 170 mm wide; tepals 110 × 37-52 mm, margins smooth, tips recurved. Lvs scattered, 155 × 19 mm. Stems 0.85-1.15 m, green with darker marking especially at base, and with 3-8 fls. (*A longiflorum*/Asiatic (LA) hybrid.)

#### **'Basra' I(a/b)**

Parentage unknown R: Fa Jaap Boon (pre 1987), N: Fa Jaap Boon (2002), REG: Fa Jaap Boon (2002) Inside light orange (26C), strong orange (28B) at base, throat light orange; spots and dark purple markings present; pollen red-brown; stigma light orange. Tepal-margins smooth, tips recurved. Stems mid green, with some darker marking.

#### **'Bastia' VII(b/-)**

Parentage: seedling 178 × seedling 211 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (c. 1988), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001) Inside yellowish white (155D), midveins brilliant yellow (9C) at base, throat yellow-green; outside yellowish white (155D); spots dark pink and yellow; papillae present; pollen orange-brown; stigma green, with purple speckling. Stems 1.15 m, light green with darker markings.

#### **'Bastion' I(a/-)**

Parentage unknown R: Peacock B.V. (pre 1993) Inside vivid yellow (9A); outside brilliant greenish yellow (1B), towards tepal-margins brilliant yellow (7A), tips strong yellow-green (143A); spots absent; papillae few, vivid yellow (9A); nectaries pale greenish yellow (2C); pollen dark reddish orange (175C); stigma dark red (187B). Fls 150 mm wide; tepals 90 × 35 mm, margins

smooth, tips slightly recurved. Lvs scattered, 100 × 70 mm. Stems 0.7 m, green, with c.7 fls.

(Granted Dutch PBR (LEL 1165) in 1995, but not registered - the stock was destroyed by the raiser.)

#### **‘Bastogne’ VII(-/b)**

Parentage: ‘Casa Blanca’ × unnamed seedling  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan, I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside light purplish pink (68D), midveins with a light yellow-green (150D) flush on basal half, throat strong yellow-green (145A); outside light purplish pink (62C) on inner tepals, pale purplish pink (62D) on outer tepals, base of inner tepals pale yellow-green (155A); spots deep purplish red (59B), on basal half of each tepal; nectaries greenish white (192D); pollen strong orange (169B). Fls 270 mm wide; tepals 130 × 55 mm, margins smooth, tips strongly recurved. Lvs scattered, 175 × 30 mm, mid green. Stems 1.15 m, pale green, with c.8 fls. June.

#### **‘Batavia’ VII(a-b/-)**

Parentage unknown  
REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside strong purplish pink (73B), each tepal lighter towards base and with edges almost white; outside light purplish pink (73C); spots and papillae present; nectaries yellow-green; pollen red-brown; stigma grey. Tepal-margins ruffled, tips recurved. Stems of medium height, with darker markings. Midseason.

#### **‘Batemanniae’ I(a/b)**

See *L. × maculatum* ‘Batemanniae’.

#### **‘Batetig’ I(b/-)**

Parentage: *L. × maculatum* ‘Batemanniae’ × *lancifolium*  
Fls are the colour of ‘Batemanniae’ and the size of *lancifolium*. Stems c.1 m.  
(Published in *Wada Cat.*, 1939. Epithet is formed from ‘Batemanniae’ and *tigrinum* (= *lancifolium*)

#### **‘Batik’ I(a/-)**

Parentage unknown - possibly derived from *L. × hollandicum*  
R: W. Windus (c. 1957), N: W. Windus  
Fls vivid orange-pink (28A) with brown spots, becoming moderate reddish orange (35A), without spots at tepal-tips; nectaries bordered by moderate reddish orange (35A) in an irregular blotch; anthers chocolate-brown. Fls c.75-85 mm wide; tepals 15-20 mm broad. Stems 1 m.  
(Published in *ILR* (1969).)

#### **‘Batist’ I(a/-)**

Parentage: ‘Mont Blanc’ × white-flowered seedling  
R: W. Paauw & Zn B.V. (1983), G: W. Paauw & Zn B.V., N: W. Paauw & Zn B.V. (1987), I: W. Paauw & Zn B.V. (1987), REG: W. Paauw & Zn B.V. (1988)  
Inside ivory-white, green at base, throat white; outside ivory-white, midribs subtle pale green on a bronze ground; spots few, small, brown, around the throat; nectaries very dark brown; pollen light red-brown. Fls

150 mm wide; tepals 85 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 0.75 m, green tinged with brown, with c.10 fls. Apr. to May (under glass?).

#### **‘Batistero’ VIII(a/b)**

Parentage: seedling LARS 93-12 × seedling AM 95-13  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside moderate purplish red (59C), throat pale greenish yellow (2D); outside moderate purplish red (64A); spots dark red (59A) on basal third of each tepal; papillae moderate purplish red (59C); nectaries strong yellowish green (141C); filaments purplish red; pollen moderate reddish orange (171A); stigma moderate purplish red (70A). Fls 185 mm wide, slightly fragrant; tepals 110 × 50 mm, margins smooth, tips slightly recurved. Lvs 150 × 50 mm. Stems 1.3-1.45 m, reddish brown, with 4-8 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **‘Battle Cry’ I(a/-)**

Parentage unknown  
R: J. Wadepammer (1979), G: J. Wadepammer (1982), N: Borbeleta Gardens (1993), I: Borbeleta Gardens (1993), REG: Borbeleta Gardens (1993)  
Fls vivid reddish orange (43A), tepal-tips and throat deep red; spots absent; brushmarks large, deep purple; nectaries red; pollen red-orange. Tepals 80 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 15 mm, dark green. Stems 0.9 m, deep green, with 10-12 fls. Midseason.  
(Published in *Borbeleta Gardens Cat.*, 1993.)

#### **‘Bavaria’ I(a/-)**

Parentage: (‘Destiny’ × ‘Amber Gold’) × ‘Connecticut King’  
R: V. Strasser (1976), G: V. Strasser (1978), N: V. Strasser (1980), I: V. Strasser (1983), REG: V. Strasser (1985)  
Fls yellow; brushmarks violet; nectaries green; pollen orange. Fls 170 mm wide; tepals 95 mm long, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm. Stems 1.2 m, dark green, with c.20 fls. Early July.  
(Published in *Der Staudengarten*, 1983.)

#### **‘Bayaderka’ I(a/c)**

Unaccepted spelling of ‘Baiaderka’.

#### **‘Bayonne’ VII(b/b)**

Parentage: seedling 521 × seedling 99  
R: Vletter & Den Haan (1987), G: Vletter & Den Haan (1990), N: Vletter & Den Haan (1995), I: Vletter & Den Haan (1995), REG: Vletter & Den Haan (1995)  
Inside yellowish white (155D) tinged with pink, midveins deep red (60A), tepal-tips and margins yellowish white (155D), throat white changing to purplish red; outside yellowish white (155D); medium-sized spots and papillae present; nectaries pale green; pollen orange; stigma green. Tepal-margins smooth, tips slightly recurved. Lvs scattered, green. Stems 1 m, uniformly dark with green spots, and with c.6 fls (from 16-18 cm bulbs).

**'Bayreuth' VI(-/-)**

Parentage: ('Rosenfingerturm' × 'Glockenturm') × 'Glockenturm'

R: V. Strasser (1983), G: V. Strasser (1986), N: V. Strasser (1991), I: V. Strasser (1994), REG: V. Strasser (1996)

Inside yellow, throat yellowish green; outside with green midribs; nectaries green; pollen red-brown. Tepals 130 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 14 mm, dark green. Stems 1.2 m, green, with c.23 fls. Mid July.

**'Bazar' I(a/c)**

Parentage: 'Appleblossom' × 'Wattle Bird'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1991), REG: B. Mičulka (1991)

Inside deep yellow with scarlet streaks in the centre, tepal-tips scarlet, throat with scarlet edge; outside orange-red; spots small, sparse, dark purple-brown, on a quarter of each tepal; some papillae present; nectaries olive-green, white-granulated; pollen brown; stigma brown-red. Fls 120 mm wide; tepals 70 × 34 mm, margins wavy, tips slightly recurved; pedicels green. Lvs scattered, 75 × 9 mm, dull dark green. Stems 0.85 m, green. Mid July.

**'B.C.R.' IX(c/d)**

See *lancifolium* 'B.C.R.'

**'Beacon' I(a/-)**

Parentage: *lancifolium* × *L. × hollandicum*

R: J. de Graaff (c. 1954), N: J. de Graaff

Fls brilliant clear orange, with deep maroon spots near centre. Stems 1-1.2 m. June.

(Published in *ILR* (1969).)

**'Beata' I(a/-)**

Parentage unknown

R: Gebr. Mak B.V. (pre 1989), N: (1989), I: (1989)

Inside white, suffused with deep purplish pink, each tepal with a slight yellow blotch; outside white; spots dark red at base of each tepal; nectaries orange-yellow; pollen reddish orange. Fls 180 mm wide; tepals 92 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 120 × 14 mm. Stems 1.2 m, green with dark markings, and with 7-8 fls.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Beta', as it could be pronounced in the same way.)

**'Beatrice' I(a/-)**

Parentage: 'Pink Champagne' × Hallmark Group

R: A. Weinreich (1983), N: A. Weinreich

Fls pink; spots brown. Stems 0.9 m, black. Early July.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Beatrice'. Listed in German Lily Group sales list, 1985.)

**'Beatrice' Div. ?**

Parentage unknown

R: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn

No further details.

**'Beaudacious' I(a/-)**

Parentage: ('Sterling Star' × brushmarked seedling) × 'Endeavor'

R: Rien Veenstra (1979), G: Oregon Bulb Farms, Inc. (1981), N: Rien Veenstra (1989), I: Oregon Bulb Farms, Inc. (1989), REG: Oregon Bulb Farms, Inc. (1990)

Inside light yellow (18B) to light orange-yellow (22D), tepal-tips strong orange-yellow (22A), throat strong yellow-green (144B); outside pale yellow (20D) to light orange-yellow (22C); spots absent; brushmarks dark red (59A), extending from top of nectary-furrow 20-30 mm towards tepal-centre, c.15 mm wide; nectaries strong yellow-green (144B); pollen moderate reddish orange (178D). Fls 155 mm wide; tepals 80 × 45 mm, margins smooth, tips slightly reflexed. Lvs scattered, 80 × 30 mm, dark green. Stems 1.1-1.2 m, moderate olive-green (147A), with c.6 fls. Midseason.

**'Beau Geste' I(a/c)**

Parentage: red-flowered Asiatic seedling × unknown

R: R.F. Nelson (1976), N: R.F. Nelson (1983), I: R.F. Nelson (1983), REG: R.F. Nelson (1983)

Inside vivid reddish orange (34A); outside vivid reddish orange (34B), midribs darker at base; sparse spots and flesh-coloured papillae in throat; nectaries greyish red (176), white-hairy; pollen dark reddish orange (172B). Tepals 85 × 30 mm, margins smooth, tips slightly reflexed. Lvs scattered, 160 × 8-14 mm, mid green. Stems 1.2 m, mid green, with 25-35 fls. Nov. to Jan. (Australia).

**'Beaujolois' I(b/-)**

Parentage: 'Quadroon' × dark red-flowered seedling

R: F.J. Holmes, N: F.J. Holmes (1976), REG: F.J. Holmes (1976)

Fls strong red (46A); spots small, black; pollen orange. Stems 1 m. July.

(Published in *Lilies and other Liliaceae*, 1976: 89.)

**'Beauregard' I(a/-)**

Parentage: red-flowered seedling × 'Redland'

R: J.C. Ericksen, N: J.C. Ericksen (1975), REG: J.C. Ericksen (1975)

Fls dark red; spots absent. Stems over 0.6 m, with bulbils. Very early.

(Misspelling: 'Boreguard', in *Lilies and other Liliaceae*, 1976: 89. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 4 (1978).)

**'Beautiful Star' I(a/b)**

See *L. × maculatum* 'Beautiful Star'.

**'Beautiful Victoria' VI(c/d)**

Parentage: 'Brno' × 'Caramba'

R: A. Mego (1994), N: A. Mego (2005), I: A. Mego (2005), REG: A. Mego (2005)

Inside white, tepals with apricot centre, throat gold-orange; outside white, midribs green; spots absent; nectaries deep green with yellow edges; pollen brown-red; stigma green. Fls 100 mm wide; tepals 100 × 30 mm, strongly recurved, margins wavy; pedicels 180 mm,

brown-dotted, with secondary buds. Lvs scattered, 220 × 30 mm, dull mid green. Stems 1.5 m, brown-dotted, infl. long. Early July.

**'Beauty' I(a/b)**

See *L. × maculatum* 'Beauty'.

**'Beauty Rose' VIII(b-c/d)**

Parentage unknown

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies

Inside deep rose-pink; papillae darker; nectaries prominent, green. Tepal-margins ruffled, tips strongly recurved. Stems 0.6-1.2 m. Mid Aug.

(An Orienpet (OT) lily. Included in *ILR Nineteenth Supplement* as an unacceptable name: ICNCP, 1995:

Art.17.13 - "rose" is the vernacular name of another genus. However, in 2004 this ICNCP Article was amended and this epithet is now accepted.)

**'Beauty's Baby' VII(-/c)**

Parentage: a pink-flowered Exotic Group × 'Tetra Black Beauty'

R: L. Woodriff (1971), G: L. Woodriff (1974), N: L. Woodriff (1981), I: L. Woodriff (1981), REG: L. Woodriff (1984)

Inside dark mahogany-red, tepal-tips white; outside light green; spots dark mahogany-red; nectaries green; pollen dark brown, fertile. Fls 150 mm wide, flatter and larger than 'Black Beauty'; tepals 75 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 125-150 × 40 mm, mid green. Stems 1.5 m, speckled green and brown, with c.20 fls. Late July.

(Published in *Fairyland Begonia & Lily Cat.*, 1981.)

**'Becia' VIII(a-b/b)**

Parentage: unknown × Longistar Group

R: J. Kapias (1995), G: J. Kapias (1997), N: J. Kapias (2001), I: J. Kapias (2001), REG: J. Kapias (2002)

Inside vivid yellow (15B), throat strong yellow-green (144C); outside light greenish yellow (4C); spots brownish orange (165B), on basal half of each tepal; nectaries pale greenish yellow (2D); pollen greyed orange (165); stigma vivid yellow (15B). Fls 220 mm wide; tepals 120-135 × 38-50 mm, margins slightly waved, tips slightly recurved. Lvs scattered, 150 × 30 mm. Stems 1 m (under glass), mid green, with c.15 fls (including secondaries). Mid July. Reported to be polyploid. (*A longiflorum*/Asiatic (LA) hybrid. Nomenclatural standard: colour print provided by registrant (WSY 0031318).)

**'Beckers Feuerball' I(a/-)**

Parentage unknown

R: Becker (pre 2000), N: Becker

Fls glossy red. Stems 0.9 m. Late June. Polyploid.

(Published in ELG sales list, 2000.)

**'Beckwith Tiger' I(c/-)**

Parentage: 'Sutter's Gold' × *leichtlinii*

R: R.A. Beckwith, G: R.A. Beckwith, N: D.B. Fox

(1982), I: D.B. Fox (1982), REG: D.B. Fox (1982) AM 1982

Inside brilliant yellow (7A); outside brilliant yellow (7B) tinged with reddish on apical midribs; spots even, purple, on two-thirds of each tepal; nectaries paler than tepals; filaments pale yellow; pollen light orange-brown; style pale yellow. Tepals 65 × 15-30 mm, margins smooth, tips strongly recurved. Lvs scattered, 140 × 12 mm, mid green. Stems 1.4-1.5 m, green shaded purple, purple at base, with 8-11 fls. Mid July.

**'Beecher' VII(-/b)**

Syn. of *L. × parkmanii* 'Beecher's Variety'.

**'Beecher's Variety' VII(-/b)**

See *L. × parkmanii* 'Beecher's Variety'.

**'Beerensii' III(c/d)**

See *L. × testaceum* 'Beerensii'.

**'Beethoven' VII(a-b/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside strong purplish pink (68B), each tepal lighter towards base and white towards margin, midveins deep red (53A) at base; outside strong purplish pink (68B); spots and papillae present; nectaries green; pollen red-brown; stigma grey. Tepal-margins ruffled, tips slightly recurved. Stems tall. Early to midseason.

**'Beigeball' VI(-/d)**

Parentage: ('Cayuga' × 'Bright Star') × 'Henrietina'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1991), REG: B. Mičulka (1991)

Inside white, shaded beige, tepal-tips and edges white, centre of fl. pale apricot; outside pale beige, midribs green; spots fine, cinnamon. on two-thirds of each tepal; papillae numerous, fleshy; nectaries yellowish green; pollen pale brown; stigma green. Fls 95 mm wide; tepals 95 × 28 mm, margins slightly wavy, tips strongly recurved; pedicels 100 mm long, spotted mid brown. Lvs scattered, 100 × 29 mm, dull light green. Stems 1.15 m, strongly dotted with black. Late July.

**'Beige Beauty' I(b-c/-)**

Parentage: Futura Group × 'Hawaiian Punch'

R: P.M. Johnson, G: P.M. Johnson, N: Borbeleta Gardens (1979), I: Borbeleta Gardens (1983), REG: J. Wadkamper (1983)

Inside soft beige or ivory-pink; tepal-tips and throat pale yellow (19C); outside pale yellow (19C) with some green; spots large, purple, on basal third of each tepal; nectaries pink; pollen bright brown. Tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 10 mm, dark green. Stems 0.9 m, mid green, with 15-18 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1983.)

**'Beiza' VII(b/b)**

Misspelling of 'Beiza'.

**'Beiza' VII(b/b)**

Parentage unknown

R: Ě. Ieviša (1992), G: Ě. Ieviša (1995), N: R. Krūmiņš (2001), REG: Liliūm Balticum Association (2004)

Inside deep pink, shaded with violet, tepal-margins c. 5 mm wide, white; outside pink with white midribs; papillae cherry-red on four-fifths of each tepal; nectaries light green; pollen brown; stigma light greenish grey. Fls 220 mm wide, slightly scented; tepals 125 × 65 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 190 × 60-70 mm. Stems 1.1 m, green, with 7-8 fls. Late July. (Named after a TV serial. Included in *ILR Twenty-third Supplement* as 'Beiza' which is a misspelling.)

**'Béla' I(a/b)**

Parentage: 'Connecticut King' × seedling G-10

R: Šlechtitelaká Stanice Heřmanův Městec, N: Šlechtitelaká Stanice Heřmanův Městec, REG: Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside pale yellow, deeper in the centre, tepal-tips fading to white; spots moderately numerous, conspicuous, medium sized, ovate, on a quarter of each tepal. Fls 120-150 mm wide; tepals overlapping, slightly recurved; pedicels 60-80 mm long. Lvs scattered, 62-81 × 10-13 mm. Stems 0.75-0.85 m, slightly shaded red-brown, with c.10 fls. Mid June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1992.)

**'Belaia Noch' VI(b-c/d)**Parentage: (*henryi* × Olympic Group) × 'Bright Star'

R: M.F. Kireeva &amp; N.V. Ivanova (1989)

Fls creamy white, throat yellow-orange. Fls fragrant.

Stems up to 1.5 m, with up to 20 fls. July.

(Published in M.F. Kireeva, *Lilii*, 87 (2000).)

**'Belaia Rus' I(a/-)**

Parentage unknown

R: R.R. Rutkovskaya (1985), G: R.R. Rutkovskaya

(1987), N: R.R. Rutkovskaya (1990), I: R.R.

Rutkovskaya (1991), REG: A.V. Otroshko (1995)

Inside greenish white (becoming white on third day of opening); outside white with greenish midribs; spots absent; nectaries light green; pollen yellow. Fls 135 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 0.9-1 m, green, with 6-7 fls. Mid July.

(Unaccepted spelling: 'Belaja Rus'. Published in *Khodzain* no.12 (1993).)

**'Belaia Simfoniia' I(a/-)**

Parentage unknown

R: R.R. Rutkovskaya (1986), G: R.R. Rutkovskaya

(1988), N: R.R. Rutkovskaya (1990), I: R.R.

Rutkovskaya (1992), REG: R.R. Rutkovskaya (1995)

Inside white; outside white with red and greenish tinges; spots small, deep rose-pink on centre of each tepal; pollen yellow. Fls 170 mm wide; tepals 90 × 35 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 85 × 19 mm, dark green. Stems 0.6 m, green, with c.12 fls. Mid July. (Unaccepted spelling: 'Belaja Simphonija'.)

**'Bel Air' I(a/-)**

Parentage unknown

R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1989)

Inside yellowish white, slightly tinged with pale yellow (8D), throat light yellow (10B); outside yellowish white (155D), outer tepals and midribs flushed with light greenish yellow to pale yellow (8C/D); some dark red (187A) spots in the throat; pollen moderate orange (167A). Fls 190 mm wide; tepals 105 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 200 × 15 mm, mid green. Stems 1.1-1.4 m, green, with c.8 fls. June.

**'Belaja' VI(-a)**

Parentage: 'Hoangho' × 'Glockenturm'

R: V. Strasser (1976), G: V. Strasser (1980), N: V. Strasser (1992), I: V. Strasser (1992), REG: V. Strasser (1992)

Inside white, throat yellow; outside tinged with greenish pink; nectaries green; pollen golden yellow. Tepals 150 × 57 mm, margins smooth, tips not reflexed. Lvs scattered, 140 × 12 mm, mid green. Stems 1.3 m, green, with up to 12 fls. Late July to mid Aug.

**'Belaja Rus' I(a/-)**

Unaccepted spelling of 'Belaia Rus'.

**'Belaja Simphonija' I(a/-)**

Unaccepted spelling of 'Belaia Simfoniia'

**'Bel Ami' I(a/b)**

Parentage unknown

Fls pure white; spots absent; stigma green; pollen dark.

Tepal-margins smooth, tips not recurved. Stems 0.6 m.

Midseason. Reported to be tetraploid.

(Raised and named in The Netherlands before 1996.)

**'Belanna' I(a/b)**

Parentage unknown

R: J. Vasarietis (1990), G: J. Vasarietis (1993), N:

J. Vasarietis (1996), I: J. Vasarietis (1996), REG: J.

Vasarietis (2001)

Inside strong purplish red (64B) fading to deep purplish pink (64D); outside strong purplish red (64B) with a band (c.10 mm wide) of deep purplish pink (64D) along each midrib; no noticeable spots; nectaries white on a greenish ground, conspicuous; pollen brownish orange; stigma light green. Fls 190 mm wide; tepals 95 × 35 mm, relatively rather narrow, not or very narrowly waved at margins, tips slightly recurved. Lvs scattered, 100 × 8 mm. Stems 0.9 m, dark green, with c.11 fls. Mid to late July.

(Epithet is a combination of *belle* (= beautiful) and *Anna*. Nomenclatural standard: colour print provided by registrant (WSY 0030817).)

**'Bělásek' I(b/c)**

Parentage: Hallmark Group × unnamed seedling

R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)

Tepals white, throat greenish, midribs brown-red; spots numerous, dark purple on three-quarters of each tepal; nectaries white-frosted; pollen pale brown; stigma beige.

Fls 110 mm wide; tepals 60 × 30 mm, moderately recurved; pedicels brown-dotted. Lvs 80 × 9 mm, dull dark green. Stems 0.9 m, dark at base. Late June.

**‘Belated Guest’ I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1981), G: J. Vasarietis (1985), N: J. Vasarietis (1989), I: J. Vasarietis (1989), REG: J. Vasarietis (1992)

Fls strong yellowish pink (37B); spots few, tiny, black, on basal third of each tepal; nectaries white; pollen brown. Fls 140 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 9 mm, mid green. Stems 0.9 m, brown, with c.10 fls. Late July to early Aug.

**‘Belcanto’ VII(b/b-c)**

Parentage: unnamed seedling × unnamed seedling  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)

Inside very pale purple (69A/B), tepal-edges suffused with moderate purplish red (70A), throat strong yellow-green (144B); outside yellowish white, tepal-edges deep to moderate purplish pink (70C/D), midribs pale yellow-green (155A), tips flushed with brilliant yellow-green (150C); spots and papillae dark red (187B) along tepal-edges; nectaries light grey (191C); filaments green; pollen strong orange (169B); stigma pale green. Fls 240 mm wide; tepals 140 × 45 mm, margins slightly ruffled (outer tepals more so), tips strongly recurved. Lvs scattered, 180 × 30 mm, mid green. Stems 1.35 m, green, with 7-12 fls. May to June (under glass).

**‘Bel Canto’ I(b/-)**

Syn. of ‘Character Part’.

**‘Belek’ I(a/-)**

Parentage: ‘Skaidra Sirds’ × ‘Vanguard’  
R: A.V. Otroshko (1990), N: A.V. Otroshko, REG: A.V. Otroshko (1994)

Inside cream to ivory-white; a few dark spots and pencil-marking in basal half of each tepal; nectaries lime-green; pollen bright red. Tepals 72 × 29-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 20 mm, mid green. Stems 1.1 m, greenish brown, with c.12 fls. Mid July.

**‘Belfast’ I(a/b)**

Parentage: seedling G 93-25 × seedling AJ 94-8  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid yellow (12A), throat light greenish yellow (1C); outside light yellow (10C), midribs light yellow-green (145B), at top strong yellow-green (144B), each tepal-margin vivid yellow (9A); spots and papillae absent; nectaries strong yellow-green (143B); pollen vivid orange-yellow (23A); stigma brilliant greenish yellow (1A) with brownish orange (171B). Fls 195 mm

wide; tepals 115 × 62 mm, margins slightly ruffled, tips slightly recurved. Lvs 140 × 18 mm. Stems 1.4 m, reddish brown, with c.7 fls.

**‘Belgrado’ VII(a/b-c)**

Parentage unknown  
R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside yellowish white (155D) at base of each tepal, changing to light purplish pink (62C) towards tip; outside yellowish white (155D) at base of each tepal, changing to light purplish pink (65D), midribs light purplish pink (65B); spots yellowish white (155D); papillae present; nectaries light yellow-green (145B); pollen moderate reddish orange (171A); stigma light greenish grey (190D). Fls 280 mm wide, slightly scented; tepals 150 × 85 mm, margins ruffled, tips recurved. Lvs scattered, 190 × 53 mm. Stems 1.14 m, with c.3 fls.

**‘Belinda’ I(a/-)**

Parentage: (‘Harmony’ × *dauidii*) × orange-flowered seedlings

R: De Jong Lelies Holland B.V. (c. 1977), N: De Jong Lelies Holland B.V.

Inside vivid reddish orange (30B), tepal-tips vivid yellowish orange (30C), throat vivid reddish orange (30A/B); outside strong yellowish pink (32C); spots few, brown; pollen dark brown. Tepals 55 × 28 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm. Stems 0.8 m, dark, with c.10 fls. July.

**‘Belisana’ I(a-b/b-c)**

Parentage: (‘Parfait’ × ‘Wattle Bird’) × ‘Medulena’  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1998), REG: B. Mičulka (1998)

Inside creamy white, centre yellowish with a light pinkish tone over the nectaries, throat carmine; outside with brownish pink midribs; spots tiny, dark pinkish brown, scattered on a third of each tepal; nectaries white-granulated; pollen brown; stigma brown-carmine. Fls 115 mm wide; tepals 70 × 30 mm, not recurved (or outer tepals slightly recurved); pedicels 40 mm long, heavily spotted red-brown. Lvs scattered, 95 × 12 mm, shiny dark green. Stems 0.9 m, with fine brown spots, and a medium length infl. Late June.

**‘Beliza’ VI(b/a-b)**

Parentage: (‘Oneida’ × unknown) × (‘Lady Alice’ × unknown)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1999), REG: B. Mičulka (1999)

Inside white, throat pale yellow with a little cinnamon dusting; outside very light pink; nectaries yellow-green; pollen brown; stigma green-pink. Fls shortly trumpet-shaped, 150 mm wide, 90 mm long; tepals 120 × 63 mm, tips strongly recurved and slightly twisted; pedicels 80 mm long, strongly brown-spotted. Lvs scattered, 130 × 18 mm, dull dark green. Stems 1 m, spotted brown-red. Early July.

**'Bellada' VI(c/d)**

Parentage: 'Brno' × 'Gold Eagle'

R: K. Braun, N: K. Braun, I: K. Braun (1992), REG: K. Braun (1993)

Inside white, centre yellow, tepal-edges white, throat green; outside with green midribs; small, sparse, yellow-brown dashes on two-thirds of each tepal; nectaries green; pollen brown. Fls 93 mm wide; tepals 98 × 38 mm; pedicels 80 mm long, green, with secondary buds. Lvs scattered, 100 × 19 mm, glossy dark green. Stems 1 m, brown. Mid July.

**'Bella Vista' VII(a/b)**

Parentage: seedling 9020 × seedling 1906

R: Trior Lelie B.V. (1989), G: Trior Lelie B.V. (1993), N: Trior Lelie B.V. (1993), REG: Trior Lelie B.V. (1996)

Inside suffused with strong purplish red (60D) on a yellowish white (155D) ground, tepal-edges and throat yellowish white (155D); outside similarly coloured, midribs light yellow-green (150D) and tinged strong yellow-green (144B) at base and top; spots strong purplish red (60C), on basal part of each tepal; papillae present; nectaries strong yellow-green (144B); pollen strong brown (172A); stigma pale yellow-green (194D). Fls 260 mm wide; tepals 140 × 45-65 mm, margins ruffled, tips recurved. Lvs scattered, 165 × 55 mm, mid green. Stems 1 m, green with darker markings, and with c.5 fls.

**'Belle' VII(-/d)**

Parentage unknown

R: Gebr. Mak B.V. (1982), G: Gebr. Mak B.V. (1985), N: Gebr. Mak B.V. (1989), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1989)

Inside strong purplish red to deep purplish pink (64C/D), midvein glowing orient red, tepal-edges greenish white (155C), throat strong yellow-green (143C) edged brilliant yellow-green (150C); outside light to deep purplish pink (65B/70C), midribs pale yellow (11C) flushed with greyish red (184A) at base; spots deep purplish red (59B) and dark red (187B); pollen strong orange (169C). Fls 285 mm wide; tepals 140 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 190 × 34 mm, mid green. Stems 1 m, green, with c.4 fls. June.

**'Belleblond' VI(b/a-b)**

Parentage: Aurelian Group × hybrid Trumpet lily

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)

Inside lemon-yellow, throat darker, midveins paler; outside pale yellow with whitish tepal-edges; nectaries yellowish green; pollen brown. Fls 130 mm wide, 85 mm long; tepals 130 × 60 mm, thick, moderately recurved; pedicels 60 mm long, spotted dark brown. Lvs scattered, 125 × 10 mm, slightly glossy deep green. Stems 1.15 m, moderately spotted dark violet with silver shading. Mid July.

**'Belle Epoque' VII(b/b-c)**

Parentage: (white-flowered seedling × 'Star Gazer') × (yellow-/white-flowered seedling × 'White Lightning')

R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside moderate purplish pink (62B), throat yellowish white (155B) and strong yellow-green (144C); outside yellowish white (155B), tepal-edges and apical half of inner tepals suffused with moderate purplish pink (62B), midribs light yellow to pale greenish yellow (10C/D); papillae ivory-white in the throat; nectaries deep reddish purple (77A); pollen strong reddish orange (169A); stigma reddish purple. Fls 240 mm wide; tepals 130 × 66 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 180 × 38 mm, mid green. Stems 1.05 m, green with darker markings, and c.7 fls. May (under glass).

**'Bellefleur' I(a/c-d)**

Parentage: 'Gardenja' × white-flowered seedling

R: Mak-Leek Inc. (1991), G: Mak-Leek Inc. (1993), N: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside yellowish white (155D), midveins small, soft yellow, base soft green; outside cream with strong yellow-green (144A/C) markings, midribs strong yellow-green (144B); spots elongated, dark red (187A), on basal quarter to third of each tepal; nectaries soft green; pollen strong orange (24A); stigma close to moderate yellow (161A/B). Fls 150 mm wide; tepals 80 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 10 mm, moderate olive-green (137A/B). Stems 0.5-0.75 m, moderate yellow-green (146B/C), with 4-10 fls. Late June to early July.

**'Belle Vue' VII(b/d)**

See 'Bellevue'.

**'Bellevue' VII(b/d)**

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × *L. × parkmanii* Little Rascal Group

R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1992)

Inside yellowish white (155D), throat strong yellow-green (144C); outside yellowish white (155D), tepal-tips strong yellow-green (144B), midribs pale yellow-green (155A), suffused with moderate purplish red (58A) at the base; papillae few, yellowish white (155D) in the throat; nectaries light purple (78C); pollen moderate orange (167A). Fls 130 mm wide; tepals 70 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 40 mm, mid green. Stems 0.42 m, green with darker markings, and with c.6 fls. June to July.

Trade designation: RASCAL BELLEVUE.

(Included in *ILR Eleventh Supplement* as 'Belle Vue'.

Dutch PBR (LEL 849) were granted to 'Bellevue' so this form of the epithet must be accepted (ICNCP, 2004: Art. 24.4.)

**'Bellezza' VII(-/l)**

Parentage: unnamed seedling × 'Joy'

R: Lybelmex Hillegom B.V. (1984), G: Lybelmex

Hillegom B.V. (1987), N: Lybelmex Hillegom B.V. (1992), I: Lybelmex Hillegom B.V. (1992), REG: Lybelmex Hillegom B.V. (1993)  
Inside yellowish white (155D) suffused with strong purplish red (64C), inner tepals darker, midveins light yellow (10B); outside yellowish white (155D) delicately suffused with strong reddish purple (70B), midribs pale yellow-green (155A) at base, brilliant greenish yellow (151D) at top; spots deep purplish red (187D), on half of each tepal; nectaries light yellow-green (145C); pollen vivid yellow (15A). Fls 180 mm wide; tepals 90 × 48 mm. Lvs scattered, 135 × 33 mm, dark green. Stems 0.85 m, mid green with darker markings, and with c.5 fls.

#### **Bellingham Group IV(c/d)**

Parentage: *humboldtii* × *pardalinum* & *parryi*

R: D. Griffiths (pre 1933), N: D. Griffiths

Fls clear yellow to bright orange and red; most spotted with rusty brown or dark red. Stems 1.3-2.2 m, with 12-30 fls. June to July.

(Published in *USDA Circular* no. 299 (1933).)

#### **'Bellingham Echo' I(a/-)**

Parentage: 'Apricot Supreme' × tall red-flowered seedling (ex LeV. Freimann)

R: LeV. Freimann (1985), G: J. Bodalski (1988), N: J. Bodalski (1994), I: J. Bodalski (1994), REG: J. Bodalski (1994)

Inside orange, tepal-tips and throat vivid reddish orange (30A); outside strong reddish orange (31A); spots dark brown, on a third of each tepal; nectaries orange; pollen moderate brown (165A). Tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 1.6 m, dark brown, with c.14 fls. Early July.

#### **'Bellingham Survivor' IV(c/d)**

Parentage: selection from Bellingham Group

S: D. Griffiths, N: B. Mičulka, I: B. Mičulka (1999),

REG: B. Mičulka (1999)

Inside apricot-yellow, tepal-tips reddish, throat green; outside paler, midribs greenish at base; spots numerous, large, brown-red, on five-sixths of each tepal; nectaries pale green; pollen pale brown; stigma dark purple. Fls 55 mm wide; tepals 85 × 22 mm, strongly recurved; pedicels 110 mm long, green. Lvs whorled and scattered, 100 × 6 mm, dull mid green. Stems 1.15 m, green, with medium-sized infl. Late June.

#### **'Bellinzona' VII(a/b)**

Parentage: seedling 88-131 × 'Vedea'

R: Gebr. Vletter & Den Haan (1993), G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1996), I: Gebr. Vletter & Den Haan (1996), REG: Gebr. Vletter & Den Haan (1996)

Inside yellowish white (155D), with a very pale flush of pale purplish pink (56B); outside similarly coloured with pale yellow-green (155A) midribs, and tinged with a little strong yellow-green (144C) at base and apex; spots absent; papillae few, in the throat; nectaries brilliant yellow-green (150C); pollen strong brown (172A); stigma

brilliant yellow-green (150C). Fls 200 mm wide; tepals 115 × 45-65 mm, margins ruffled, tips recurved. Lvs scattered, 200 × 20 mm, dark green. Stems 1.2 m, green, with 7-14 fls.

(Registered as 'Bellinzone', but in 1998 Dutch PBR (LEL 1385) were granted under the epithet 'Bellinzona', so this latter spelling of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

#### **'Bellinzone' VII(a/b)**

See 'Bellinzona'.

#### **'Bellissimo' VII(a/b)**

Parentage: seedling 686 × seedling 676

R: Vletter & Den Haan (1988), G: Vletter & Den Haan, N: Vletter & Den Haan (1993), REG: Gebr. Vletter & Den Haan (1997)

Inside light purplish pink (62C), a little paler at the base; outside light purplish pink (65B); spots and papillae present; nectaries green; pollen orange-brown; stigma dark purple. Tepals c.168 × 45 mm, margins ruffled, tips recurved. Lvs scattered, c.171 × 33 mm, mid green. Stems 1.3 m, green with dark streaks and spots, and an average of 5.4 fls. Early to midseason.

#### **Bellmaid Group IV(c/-)**

Parentage: Bellingham Group × *L. × burbankii*

'Bridesmaid'

R: D.B. Fox (c. 1968), N: D.B. Fox

Fls golden yellow, suffused with orange, generally turning red with age; spotted in centre. Tepals recurved or reflexed. Stems tall.

#### **'Bellona' I(a/-)**

Parentage: 'Destiny' × seedling 841

R: Gebr. N. & B. Laan & Zn (pre 1975), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1975)

Fls vivid yellow (14A), slightly spotted with red.

Syn.: 'Golden Empress'.

(Published in *Lilies and other Liliaceae*, 1977: 76.)

#### **'Belluno' VI(-/a)**

Parentage: seedling 9/83 × seedling 28/85

R: V. Strasser (1986), G: V. Strasser (1989), N: V. Strasser (1996), I: V. Strasser (1995), REG: V. Strasser (1997)

Inside vivid yellow (12A), tepal-tips yellow, throat greenish yellow; outside reddish brown; nectaries green; pollen yellowish orange. Tepals 125 × 42 mm, very regular, margins smooth, tips not reflexed. Lvs scattered, 160 × 12 mm, dark green. Stems 1.5 m, rather dark green, with c.23 fls. Mid July.

#### **'Bellwyatt' IV(-/l)**

Parentage: Bellingham Group × 'Oliver Wyatt'

R: O. Beutnagel, N: O. Beutnagel, REG: ICRA (1992)

Tepals green at base, yellow in centre, light orange at tip; spots present. Fls 100 mm wide; only outer tepals reflexed. Stems 1.7 m, with 10-12 fls. Mid July.

(Published in German Lily Group sales list, 1991. Epithet is formed from **Bellingham** and **Wyatt**.)

**‘Belmondo’ I(a-b/b-c)**

Parentage: (‘Quinella’ × a white-flowered hybrid) × (‘Juno’ × ‘Honey Creme’)  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1993),  
 REG: B. Mičulka (1993)

Inside lemon-yellow, tepals with a deep yellow centre, throat pale yellow; outside pastel yellow, midribs red-brown; spots small, red-brown, very numerous, on five-sixths of each tepal; nectaries white and brown frosted (the tepals green around the nectaries); pollen chocolate-brown; stigma red-brown. Fls 130 mm wide; tepals 70 × 30 mm, slightly recurved; pedicels 60 mm long, slightly dotted red-brown. Lvs 130 × 9 mm, slightly glossy dark green. Stems 0.85 m, dark green, thick. Late June.

**‘Belmonte’ VII(a-b/-)**

Parentage: ‘Pisaro’ × ‘Acapulco’  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1995), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside strong purplish pink (68B), paler at base; outside a little paler than strong purplish pink (68B); a few large spots and some papillae present; nectaries green; pollen orange-brown; stigma dark purple. Tepal-margins ruffled, tips slightly recurved. Stems 1.2 m, green. Early to midseason.

**‘Beloe Bezmolvic’ I(b/c-d)**

Parentage unknown  
 R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1992)  
 Fls creamy white, 120-130 mm wide. Stems with up to 35 fls. July  
 (Published in M.F. Kireeva, *Lilii*, 69 (2000).)

**‘Belpasso’ VII(a-b/-)**

Parentage unknown  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside deep purplish pink (68A), paler at base, tepal-edges and tips, midveins deep red (53A) at base; outside moderate purplish pink (65A); spots and papillae present; nectaries green, changing to yellow; pollen reddish brown; stigma purple. Stems 1 m, green with dark stripes and spots. Early to midseason.

**Beltsville Group VII(-/d)**

Syn. of *L. × parkmanii* Potomac Group.

**‘Beltsville Tiger’ I(b/-)**

Syn. of ‘Dark Princess’.

**‘Belvedere’ VII(b/b)**

Parentage: seedling 201 × ‘Casa Blanca’  
 R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)  
 Inside moderate purplish pink (62B), throat strong yellow-green (144C); outside strong purplish pink (63C), midribs light yellow-green (145C); spots and papillae

strong purplish red (63B); nectaries strong purplish red (71B); pollen strong reddish orange (169A). Fls 230 mm wide; tepal-tips recurved. Lvs scattered, 160 × 52 mm, mid green. Stems 1.2 m, green, with c.5 fls.

**‘Belwood’ VI(c/a)**

Parentage: ‘Apricot’ × (*henryi* × unknown)  
 R: W.D. Evans (1985), G: W.D. Evans (1989), N: W.D. Evans (1996), I: W.D. Evans (1996), REG: W.D. Evans (1996)

Inside vivid orange (28B); outside light orange (28C); spots absent; papillae vivid orange (28B); nectaries green; pollen yellow-orange. Fls 150 mm wide; tepals 90 × 34 mm, margins smooth, tips recurved. Lvs scattered, 170 × 28 mm, mid green. Stems 1.5 m, mottled dark brown, with c.20 fls. Midseason.

(It is not known whether the seed parent is ‘Apricot’ (of Rohrmeier) or *L. × hollandicum* ‘Apricot’.)

**‘Bendick’ II(c/d)**

Parentage: *martagon* origin  
 Fls mauve-pink with sparse spots. Stems 1.2 m.  
 (Listed in *Honeywood Lilies Cat.*, 1984/85.)

**‘Benedetto’ VI(-/a)**

Parentage: (‘Rosenfingerturm’ × ‘Glockenturm’) × (‘Heidelberg’ × unknown)  
 R: V. Strasser (1988), G: V. Strasser (1991), N: V. Strasser (1994), I: V. Strasser (1994), REG: V. Strasser (1997)  
 Inside and outside white, throat greenish yellow; nectaries green; pollen brown. Tepals 123 × 46 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 10 mm, mid green. Stems 1.5 m, rather dark green, with up to 16 fls. Mid July.

**‘Benediction’ VI(b/b)**

Parentage: selection from self-pollinated Sunshine Flares Group  
 S: C. Yerex (c. 1958), N: C. Yerex  
 Fls vivid yellow (15B), blending to light orange-yellow (16C) at tepal-tips; prominent papillae at centre. Tepal-tips recurved.

**‘Benevento’ VII(a-b/b)**

Parentage unknown  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)  
 Inside whiter than yellowish white (155D), with some pale yellow-green (155A) above nectaries; outside whiter than yellowish white (155D), midribs with a little strong yellow-green (144C) fading towards top and tipped strong yellow-green (144A); spots absent; papillae on up to two-thirds of each tepal, whiter than yellowish white (155D), with a little purple; nectaries strong yellow-green (145A); pollen moderate reddish orange (171A); stigma light yellow-green (145D). Fls 240 mm wide; tepals 135-140 × 50-70 mm, margins ruffled, tips recurved. Lvs scattered, 170-220 × 35-60 mm. Stems 1.2-1.3 m, light green, with c.5 fls.

**BENFICA I(a/b)**

Trade designation of 'Zanlazfica'.

**'Ben Franklin' I(b/-)**

Parentage: (yellow-flowered *dauidii* var. *willmottiae* × unknown) × 'Lemon Queen' (Div. I)

R: L. Lutz (c. 1965), N: L. Lutz

Fls a pastel blend of pink and lavender, with light apricot undertone; midribs green; lightly spotted. Stems 1 m. (Published in *ILR* (1969).)

**Bengalstrain Group I(-/-)**

Parentage unknown

R: H. Hörster, N: H. Hörster

Fls dark red, spotted black.

(Included in *ILR* (1982) as Bengalstrain grex.)

**'Bengal Tiger' I(c/-)**

Parentage: selection from Tiger Group

S: J. de Graaff (pre 1950), N: J. de Graaff

Stems 1.5 m. June to July.

**'Benikoshiki' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Benikoshiki'.

**'Benin' VII(a/b)**

Parentage: seedling 89-59 × seedling 93-14

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside yellowish white (155D), flushed with yellowish white (155B) along midveins; outside with inner tepals yellowish white (155D), midribs strong yellow-green (143C) changing into pale yellow (11D) flush, pale greenish yellow (2D) at top, outer tepals flushed with purple-red at base; spots absent; papillae yellowish white (155D); nectaries strong yellow-green (143C); pollen moderate reddish orange (171A); stigma light purple (81C). Fls 225 mm wide, fragrant; tepals 155 × 48-83 mm, margins strongly ruffled, tips recurved. Lvs scattered, 155 × 40 mm. Stems 1-1.2 m, green, with c.3 fls.

**'Beni-no-izumi' I(b/-)**

Parentage: (*L. × maculatum × medeoloides*) × *L. × maculatum*

R: S. Fujishima (pre 1980), N: S. Fujishima

Fls dark purple-brown.

**'Beni-no-mai' I(a/-)**

Parentage: "Destic Hybrid" × Koshiji-sukashi Group

R: W. Suzuki (1982), N: W. Suzuki

Fls vivid red (44A) with numerous spots. Fls 180 mm wide. Stems 1.5 m, with bulbils. Very late.

(The identity of the seed parent is not known.)

**'Beni-no-tsukasa' I(a/b)**

See *L. × maculatum* 'Beno-no-tsukasa'.

**'Benisugata' I(a/-)**

Parentage: ((*L. × maculatum* 'Chigusa' × 'Sakigake') × (*L. × hollandicum* 'Vermilion Brilliant' × *L. × maculatum*

'Kisukashi')) × ('Hirado' × *L. × hollandicum* 'Vermilion Brilliant')

R: S. Tanabe et al. (1982), N: S. Tanabe et al.

Fls vivid red (44A/45A) with numerous spots. Fls up to 130 mm wide. Stems 0.5-0.7 m. Early.

**'Benjamin' I(a/b-c)**

Parentage: ('Red Carpet' × 'Lemon Glow') × ('Girls Only' × ('Red Carpet' × 'Sun Ray'))

R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1991), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside pale purplish pink (65C/D); outside pale purplish pink (65D); spots and papillae absent; nectaries moderate yellow-green (143D); pollen vivid reddish orange (33B); stigma strong orange (169B/C). Fls 150 mm wide; tepals 85 × 26 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 mm long. Stems 0.44 m, green, with 5-8 fls. June.

**'Ben Red' I(b/-)**

Parentage: Asiatic hybrid × unknown

R: E. Robinson (1975), N: E. Robinson (1981), I: E.

Robinson (1981), REG: Gaybird Nursery (1983)

Fls plain red; spots fine, paler red, around centre; nectaries pale red; pollen brown. Tepals 60 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 8 mm, mid green. Stems 0.6 m, dark green, with c.6 fls.

**'Bento' I(a-b/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside strong purplish pink (62A) ageing to moderate purplish pink (62B); outside between strong purplish pink (62A) and moderate purplish red (62B); spots absent; papillae few; nectaries green changing to pink; pollen orange-brown; stigma purple-red. Tepal-margins ruffled, tips slightly recurved. Stems tall, with reddish markings. Midseason to late.

**'Bentrovato' VII(-c-d)**

Parentage: unnamed seedling × unnamed seedling

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside strong purplish pink (63C), basal half of each tepal with vivid purplish red (61C) veins, throat strong yellow-green (144C) flushed with yellowish white (155B); outside light purplish pink (68D), suffused with strong purplish red/strong purplish pink (63B/C) on outer tepals, base ivory-white; spots dark red (187A/B), on basal half of each tepal; papillae large, white and purplish pink, on the ivory-white flush in the throat; nectaries dark purple (79A); pollen strong reddish orange (169A). Fls 235 mm wide; tepals 110 × 65 mm, margins slightly ruffled, tips strongly recurved; pedicels with some dark spots. Lvs scattered, 140 × 30 mm, mid green. Stems 1.15 m, green with darker markings, and with c.7 fls. June.

**'Beowulf' I(a/b)**

Parentage unknown

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)

Inside deep blood-red. Tepal-margins smooth, tips not recurved. Stems 1 m. Late June.

(Published in *The Lily Garden Cat.*, 1996/97: 14.)**'Bergamo' VII(b/b)**Parentage: ('Star Gazer' × seedling 440) × seedling 524  
R: Gebr. Vletter & Den Haan, G: Gebr. Vletter & Den Haan (1988), N: Gebr. Vletter & Den Haan (1992), I: Gebr. Vletter & Den Haan (1993), REG: Gebr. Vletter & Den Haan (1993)

Inside yellowish white (155B) on basal part of tepals, midveins brilliant greenish yellow (6C) at base, suffused with strong red (47B) above; outside yellowish white (155B) on basal part of tepals, tepals edged moderate purplish pink (70D), midribs strong yellow-green (144A) at base and strong yellow-green (144B) at top, with variegated yellowish white (155B) and strong purplish red (60B/C) along midrib; spots strong purplish red (60B), on two-thirds of each tepal; papillae present; filaments pale green; pollen orange. Fls 230 mm wide; tepals 120 × 70 mm, margins ruffled, tips recurved, the outer more so. Lvs scattered, 190 × 30 mm, dark green. Stems 1.5 m, pale green, with c.12 fls.

**'Berlin' VII(-/d)**

Parentage: 'Star Gazer' × seedling L 115

R: Vletter &amp; Den Haan (1981), G: Vletter &amp; Den Haan (1984), N: Vletter &amp; Den Haan (1989), I: Vletter &amp; Den Haan, REG: Vletter &amp; Den Haan (1990)

Inside light to moderate purplish pink (68D/70D), midveins strong red, deep yellowish pink (39A/B) towards base, outer tepals tinged with strong red (46A), throat strong yellow-green (144C), edged brilliant greenish yellow (3B); outside pale purplish pink (62D), midribs pale yellow-green (4D), tepal-edges strong purplish red (59D); spots dark red (187A/B); pollen strong orange (169B). Fls 240 mm wide; tepals 125 × 50 mm, margins smooth or slightly ruffled, tips not recurved. Lvs scattered, 210 × 38 mm, mid green. Stems 1.15 m, green, with c.6 fls. May.

**'Berliner Charme' I(a/b)**Parentage: pink-flowered Asiatic hybrid × mixed pollen of 'Brushstroke' and yellow-brown brushmarked seedlings  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1994), I: G. Steinbrück (1994), REG: G. Steinbrück (1995)

Inside vivid yellow (13A); outside brilliant yellow (13C); brushmarks fairly small, deep purplish red (59B) and associated spotting on basal third of each tepal; nectaries pale yellow-green (157C); pollen greyish reddish brown (200B); stigma pale yellow-green (196B). Tepals 85 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 13 mm, pale green. Stems 1.2 m, almost black, with up to 17 fls. Late June to early July.

**'Berliner Flamme' I(a/d)**

Parentage: 'King Pete' × 'Wendenschloss'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Fls vivid reddish orange (34A); spots absent; pollen vivid reddish orange (34B); stigma moderate reddish orange (172B). Fls 150 mm wide; tepals 75 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 120 × 15 mm. Stems 0.9 m, mid green, with c.12 fls. Mid July.

**'Berliner Liebe' I(a/c)**

Parentage: 'Mohykán' × 'Connecticut Melon'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2003)

Inside yellowish white (158D), each tepal with a light orange (26C) suffusion in centre towards base; outside yellowish white (158D), midribs strongly beige; spots few, small, deep red (53A), on basal quarter of each tepal; nectaries pale yellow-green (155A), hoary; filaments pale yellow (158A); pollen dark reddish orange (178B); style pale yellow (158A); stigma vivid reddish orange (34B). Fls 120 mm wide; tepals 60 × 35 mm, noticeably broad, margins slightly ruffled, tips not recurved. Lvs scattered, 100 × 15 mm. Stems 0.8 m, dark green, with 5-8 fls. Late June to early July.

(Nomenclatural standard: colour print provided by registrant (WSY 0038771).)

**'Berliner Morgen' I(a/-)**

Parentage unknown

R: G. Steinbrück (pre 1992), N: G. Steinbrück

Fls orange, with red-brown brushmarks.

**'Berliner Morgenpost' I(b/c)**

Parentage: 'Amurgold' × 'Kasan'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Inside moderate red (179A), each tepal with a distinct light orange-yellow (22B) margin and a light orange-yellow (22B) blotch in centre in basal half; outside with the same ground colour and a light orange-yellow (22B) tepal-margins and midribs; spots medium sized, dark red (187A), on basal half of each tepal; nectaries greenish white (157D), suffused with moderate red (184B) at ends; pollen moderate orange (167B); stigma moderate purplish red (59C). Fls 150 mm wide; tepals 80 × 40 mm, the inner broadly ovate, the outer much narrower, margins smooth, tips not recurved. Lvs scattered, 90 × 25 mm. Stems 1.3 m, dark green, with c.12 fls. Mid July. (The *Berliner Morgenpost* is a German newspaper. Nomenclatural standard: colour print provided by registrant (WSY 0024691).)**'Berliner Morgenröte' I(a/c)**

Parentage: 'Dawn Star' × Asiatic seedling

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1996), I: G. Steinbrück (2001), REG: G. Steinbrück (2003)

Inside moderate purplish red (59C), throat flushed with light orange; outside similarly coloured; spots absent; nectaries conspicuous, pale yellow-green (157A); pollen dark brown; stigma pale brown. Fls 150 mm wide; tepals 80 × 30 mm, glossy, margins smooth, tips not recurved. Lvs scattered, 70 × 9 mm. Stems 0.6 m, dark green, with 6-8 fls. Early to mid July.

(Published in ELG sales list, 2001. Nomenclatural standard: colour print provided by registrant (WSY 0038772).)

#### **'Berliner Nacht' I(a/c)**

Parentage: 'Andrea' × 'Willow Wood'

R: G. Steinbrück (1988), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (2001), REG: G. Steinbrück (2003)

Inside moderate red (179A), throat strong red (46A); outside moderate red (179A); spots few, tiny, black, at base of each tepal; nectaries light purple (80D); pollen vivid orange-yellow (23A); stigma light yellowish pink (159A). Fls 120 mm wide; tepals 60 × 32 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 60 mm. Stems 0.7 m, mid green, with c.8 fls. Mid June.

(Published in ELG sales list, 2001. Nomenclatural standard: colour print provided by registrant (WSY 0038769).)

#### **'Berliner Panorama' I(a/b-c)**

Parentage: 'El Paso' × 'Neptunsilber'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2003)

Inside and outside deep pink (48A); spots absent; nectaries grey-white-hoary; pollen orange; stigma deep pink (48A) on a long style; ovary very pale and conspicuous. Fls 160 mm wide; tepals 85 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 16 mm. Stems 1.4 m, dark green, with 8-10 fls. Late June.

(Named after a viewing platform in Potsdamer Platz, Berlin. Nomenclatural standard: colour print provided by registrant (WSY 0038768).)

#### **'Bern' I(a/-)**

Parentage: seedling OR 844 × 'Gran Paradiso'

R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside vivid orange (28A), tepal-tips vivid reddish orange (34A); outside strong orange (30D) with broad, vivid yellowish orange (30C) tepal-edges and strong red (46A) tips; spots few, small, dark red (187A), in the throat on inner tepals only; nectaries dark red (187A); pollen strong reddish orange (169A). Fls 157 mm wide. Lvs scattered, mid green. Stems 0.95 m.

#### **'Bernadette' I(a/b)**

Parentage unknown

R: Mak-Leek Inc. (1990), G: Mak-Leek Inc. (1992), N: Mak-Leek Inc. (1998), REG: Mak-Leek Inc. (2003)

Inside vivid reddish orange (32A/33A); outside vivid reddish orange (32A), midribs strong yellowish pink (32C); spots dark red (187), on basal part of each tepal;

papillae vivid reddish orange (33A) in throat; nectaries vivid reddish orange (32A); pollen absent; stigma dark red (187A). Fls 130 mm wide; tepals 60 × 25-30 mm. Lvs 80 × 15 mm, green. Stems 1 m, green, with 6 fls. Midseason.

#### **'Bernini' VII(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Gebr. Vletter & Den Haan (1986), G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1994), REG: Gebr. Vletter & Den Haan (1997)

Inside strong purplish red (63B) and strong purplish pink (68B), midveins white merging into purple; outside a little paler than strong purplish red (63B); spots and papillae present; nectaries green; pollen dark brown; stigma dark purple. Tepal-margins ruffled, tips recurved. Lvs scattered, mid green. Stems 1.1 m, green with dark streaks and spots, and with 6-7 fls. Midseason.

#### **'Bernsteintiger' I(a/-)**

Parentage: (*lancifolium* × *L. × hollandicum*) × (*dauidii* × *L. × maculatum*)

R: C. Feldmaier (c. 1961), N: C. Feldmaier

Fls brilliant orange-yellow (21B), deepening to pale orange-yellow (24D) at tepal-margins; spotted brown in centre. Tepal-tips recurved.

#### **'Berta' I(b/c-d)**

Parentage: 'Ljivija Stepite' × 'Peaceful'

R: D.-V. Škimele (1994), G: D.-V. Škimele (1997), N: D.-V. Škimele (2000), REG: D.-V. Škimele (2004)

Inside soft apricot, each tepal darker at base and with apricot-pink margins; outside apricot, midribs yellowish pink; spots dark red, few, inconspicuous, on a third of each tepal; nectaries greenish yellow; pollen orange; stigma violet. Fls 150 mm wide; tepals 80 × 50 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 80 × 10 mm. Stems 1.1 m, brownish green, with c. 15 fls. Mid July.

(Published in *Lilium Balticum Lily Register*, 2003.)

#### **'Bertha's Yellow' I(a/-)**

Parentage unknown

N: D. Dale (1994), I: Parkland Perennials (1995), REG: D. Dale (1994)

Inside clear yellow, throat with light green lines; outside shaded brown on inner tepals, with brown midribs on outer tepals; spots absent; nectaries green; pollen absent. Fls c.90 mm wide; tepals 40 × 20 mm. Lvs scattered, 40 × 8 mm, mid green. Stems 1.1 m, brown, with c.14 fls. Early July.

(Purchased as a seedling from E.H. Doerr in 1987.)

#### **'Berwyn' I(b/-)**

Parentage: ((*dauidii* var. *unicolor* × 'Lillian Cummings') × (*dauidii* var. *unicolor* × 'Edith Cecilia')) × 'Skylark' (Div. I)

R: W.D. Evans, N: W.D. Evans (1975), I: Borbeleta Gardens (1978), REG: W.D. Evans (1976)

Fls light greenish yellow (6D), heavily spotted. Lvs dark green. Stems 1 m. July.

(Published in *Lilies and other Liliaceae*, 1976: 89.)

**'Beseno' VIII(b/b)**

Parentage: seedling PH 95-40 × 'Aubade'

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside brilliant yellow (8A), shading to pale yellow (8D) towards tepal-edges, midveins light greenish yellow (8B) towards top, throat light greenish yellow (8B); outside pale yellow-green (155A), shading to light greenish yellow/pale yellow (8C/D) towards tepal-edges, midribs pale yellow (8D), the base strong yellow-green (145B/C), inner tepals a little paler; spots absent; papillae few, on up to about half of each tepal (mainly on inner tepals); nectaries strong yellow-green (144A); pollen strong brown (172A); stigma dark red (187A). Fls 250 mm wide; tepals 150-160 × 30-40 mm, margins smooth, tips strongly recurved. Stems 1.2-1.3 m, light green, with 3-6 fls. (An Orienpet (OT) lily.)

**'Besito' I(a/b-c)**

Parentage: 'Letkis' × 'Advent'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1994), REG: B. Mičulka (1994)

Inside white with a light rose-pink flush around nectaries; outside white, midribs rose-pink and brown; spots medium-sized, moderately numerous, dark red-brown, on two-fifths of each tepal; nectaries green, richly white-hairy; pollen ochre; stigma green. Fls 145 mm wide; tepals 85 × 34 mm, slightly recurved; pedicels 80 mm long, copiously spotted dark red-brown. Lvs scattered, 105 × 18 mm, dark green. Stems 0.9 m, dotted reddish. July.

**'Beskyd' I(b-c/b-c)**

Parentage: (('Hornback's Gold' × 'Rhabus') × 'Apricot Supreme') × white-flowered tetraploid

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)

Inside pale salmon-apricot, tepal-tips and throat paler; outside pale salmon, midribs green-yellow, brownish at base; spots fairly numerous, large, oblong, dark pinkish brown, on a third of each tepal; nectaries white-granulated and ciliate; pollen orange-brown; stigma dark brownish crimson. Fls 130 mm wide; tepals 95 × 47 mm, thick, somewhat recurved; pedicels 100 mm long, thick, dotted. Lvs scattered, 145 × 23 mm, shiny dark green. Stems 0.85 m, very thick, densely spotted dark brown, with a medium-length infl. Early July. Polyploid.

**'Bessie' VII(-/b)**

Parentage unknown

R: L. Woodriff (1958), G: H.J. & R.L. Strahm (1962), N: H.J. & R.L. Strahm (1969), I: H.J. & R.L. Strahm (1972), REG: Strahm's Lilies, Inc. (1981)

Inside deep pink (52C), tepal-tips and margins white, throat green; outside pink; spots deep pink (52B); nectaries green; pollen orange. Fls 220-250 mm wide; tepals 115 × 70 mm, margins ruffled, tips slightly recurved. Lvs scattered, 100 × 25 mm, mid green. Stems

1.1 m, dark reddish brown, with 5-8 fls. Aug. to Sept. (Published in Strahm's sales list, 1972.)

**'Best Friend' VII(a/b)**

Parentage: unnamed seedling × (*L. × parkmanii* 'Journey's End' × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (1999), I: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside moderate purplish pink (66D), midveins yellowish white (155D) at base, deep purplish pink (66C) at top, throat yellowish white (155D); outside moderate purplish pink (70D), midribs yellowish white (155D), light yellow-green (144D) at top; spots vivid purplish red (57B); papillae yellowish white (155D); nectaries light yellow-green (144D); pollen moderate reddish orange/brownish orange (171A/B); stigma very pale green (130D). Fls 250 mm wide, fragrant; tepals 155 × 73 mm, margins ruffled, tips recurved. Lvs scattered, 170 × 37 mm, green. Stems 1.1 m, green with dark markings, and with c.6 fls. July.

**'Bestseller' VIII(a-b/b)**

Parentage: ('Sinai' × *dauricum*) × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside paler than light orange-yellow (22D), midveins from above nectaries light orange-yellow (23B), throat pale orange-yellow (19D); outside pale yellow/pale orange-yellow (19C/D), midribs strong yellow-green (144C); spots dark red (187A), on basal part of each tepal; papillae present near nectaries; nectaries light orange-yellow (24C); pollen strong brown (172A); stigma dark red (187B). Fls 200 mm wide; tepals 130 × 50-65 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 20 mm, mid green. Stems 1 m, green, with 3-6 fls. Buds and outside of tepals hairy. June. (*A. longiflorum*/Asiatic (LA) hybrid.)

**'Beta' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Beta'.

**'Betelguese' VII(a/b)**

Parentage: *auratum* var. *rubrovittatum* × unknown  
G: D.K. Kölli (1976), N: D.K. Kölli (1988), REG: D.K. Kölli (1988)

Inside white, each tepal with a broad, crimson-red ray, tips white, throat green becoming yellowish; outside pinkish white, midribs darker pink becoming green at top; raised papillae and spots darker crimson than the rays, all over tepals except at tips; nectaries green becoming bordered with greenish yellow; pollen red-orange. Fls 240 mm wide; tepals 127 × 70 mm, margins smooth, tips not recurved. Lvs scattered, 178 × 45 mm, dark green. Stems 1.6-1.8 m, dark green tinged with red, with up to 23 fls (some from secondary buds). Late July to mid Aug.

**'Beth Ellen' I(b/-)**

Parentage unknown

R: G. Brown (1977), G: G. Brown (1980), N: G. Brown (1980), REG: G. Brown (1982)

Inside white with pink overlay, tepal-tips white, throat green-yellow; outside deep pink, midribs darker; spots deep pink, almost red, on three-quarters of each tepal; nectaries green; pollen red-brown. Tepals c.40 × 25 mm, margins smooth, tips slightly recurved, downy outside. Lvs scattered, 70 × 20 mm, mid green. Stems 1.25 m, dark green, downy, with c.10-12 fls. Early July.

**'Bethlehem' I(a/-)**

Parentage unknown

R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1989)

Deep pink (51C), each tepal flamed light to pale yellow (18B/C), throat strong purplish red (54A); outside deep pink (51B/C), outer tepals flushed with moderate yellow (160A); spots small, dark red (187A), in the throat; pollen not produced. Fls 155 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 13 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 13 mm, mid green. Stems 0.45 m, green with darker markings, slightly hairy, and with c.5 fls. June.

**'Beth Meyers' I(a/-)**

Parentage: ('White Princess' × unknown) × (unknown × ('Rosabelle' × 'Victoria Meyers'))

R: N.F. Bieniasz (1979), N: N.F. Bieniasz (1984), REG: N.F. Bieniasz (1984)

Fls yellowish white (155B); spots present; nectaries frosty white; pollen dark reddish orange (172C). Tepal-margins smooth. Lvs scattered, dark green. Stems 0.4 m.

**'Betrothed' I(b/-)**

Parentage: ('Connecticut King' × Hallmark Group) × 'Juliana'

R: E.A. McRae (1979), G: Oregon Bulb Farms, Inc. (1982), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)

Inside cream to white, throat golden yellow; outside cream to white; spots absent; nectaries soft lime-green; pollen rusty orange. Tepals 60 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 64 × 15 mm, dark green. Stems 0.9 m, dark mottled brown, with 6-20 fls. Late June.

(Published in *Oregon Bulb Farms Cat.*, 1986/87.)**'Betty' VII(-/b)**See *L. × parkmanii* 'Aroha'.**'Betty Lea' VII(-/l-)**Parentage: (*L. × parkmanii* 'John Lea' × 'Swan Lake') × *L. × parkmanii* 'Excelsior'

R: J.S.B. Lea (1972), G: J.S.B. Lea (1979), N: J.S.B. Lea (1983), REG: J.S.B. Lea (1983)

Inside white, flushed with pink that deepens towards tepal-tips, throat green; outside white, midribs pink;

spotted with deep pink throughout; nectaries brown; pollen rust-red. Tepals 120-140 × 60-70 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 40 mm, mid green. Stems up to 2 m, green, with 15-20 fls. Aug.

**'Betty Sturley' VI(c/d)**Parentage: hybrid involving *henryi* var. *citrinum* (Ypsilanti form)

R: C.K. Kroell (1993), G: C.K. Kroell (1995), N: C.K. Kroell (1997), REG: C.K. Kroell (1997)

Inside white, each tepal with an 8-10 mm-wide ray of brilliant yellow (10A) extending c.20 mm from the top of dark green nectary; outside white, midribs green, extending the full length of each tepal, broader on the outer tepals; heavily papillate, papillae to c.5 mm long, most tipped deep red (185A), distributed from the throat to about the extent of maximum fl. diameter (i.e. leaving the strongly recurved tips unmarked); pollen brownish orange (171B); stigma yellowish grey (194C). Fls of typical *henryi* form, 76 mm wide (unflattened); tepals c.100 × 25 mm (flattened), margins slightly waved. Lvs scattered, c.195 × 25 mm (largest lvs), dark green. Stems c.1.7 m, mid green, with c.18 fls. Late July to early Aug.

**'Beucherts Rote Sternschale' I(a/-)**

Parentage unknown

R: Beuchert (pre 1993), N: Beuchert, REG: Beuchert (1994)

Fls dark red, midveins yellow. Stems 1.3 m. Early July. (Published in German Lily Group sales list, 1993.)

**'Beverly Ann' I(a/c)**

Parentage: unnamed seedling × unnamed seedling

R: R. &amp; H.R. Cocker (1997), G: R. &amp; H.R. Cocker, N: R. &amp; H.R. Cocker, I: R. &amp; H.R. Cocker, REG: R. &amp; H.R. Cocker (2003)

Inside vivid yellow-orange (23A) at base, changing to moderate yellowish pink (37C) above, throat green with pink edge; outside moderate yellowish pink (37C); spots dark maroon on two-thirds of each tepal; nectaries white; pollen orange-yellow; stigma brown. Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 14 mm. Stems 0.9 m, mid green, with 12-15 fls. Midseason.

(Named after one of the raisers' daughters.)

**'Beziers' VII(a-b/-)**

Parentage unknown

REG: Vletter &amp; Den Haan Beheer B.V. (2003)

Inside strong purplish red (64C), midveins at first white, later green at base; outside strong purplish red to deep purplish pink (64C/D); spots and papillae present; nectaries green; pollen red-brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems medium to tall. Very early.

**'Bianca' I(a/-)**

Parentage: sport from 'Joan Evans' × creamy white-flowered seedling of 'Sterling Star'

R: De Jong Lelies Holland B.V., G: De Jong Lelies

Holland B.V. (1975), N: De Jong Lelies Holland B.V. (1978), I: De Jong Lelies Holland B.V. (1979), REG: Licomba (1983)

Inside ivory-white, tepal-tips and throat creamy white (159D); outside white, midribs brick-red; spots fine, grey-brown; nectaries brown/green; pollen moderate orange (168C). Tepals 60-85 × 32 mm, margins ruffled, tips slightly recurved. Lvs scattered, 80-100 × 15 mm, mid green. Stems 1 m, dark brown, with 4-8 fls. July.

### 'Biancaneve' VII(-/d)

Syn. of 'Celica'.

### 'Bicolito' I(a/-)

Parentage: 'Pirate' × seedling 73-40-38

R: J.M. van Tuyl (1979), G: IVT (1981), N: IVT (1987), I: IVT (1987), REG: IVT (1988)

Inside cadmium-orange, flamed brilliant yellow (13B) in throat, changing to strong red (39A) at tepal-tips, tepal-margins orient red, throat moderate red; outside moderate red (180C); spots dark brown, in the throat; pollen moderate red (180B). Fls 150 mm wide; tepals 80 × 30 mm. Lvs scattered, 180 × 20 mm, mid green. Stems 1 m, green, with 5-6 fls.

### 'Bicolor' I(a/b)

See *L. × maculatum* 'Bicolor'.

### 'Biedermeier' I(b/-)

Parentage: (*cernuum* × unknown) × dark red-flowered Asiatic hybrid

R: C. Feldmaier (1975), G: C. Feldmaier (1980), N: C. Feldmaier (1983), I: C. Feldmaier (1983), REG: G. & F. Ewald (1988)

Fls moderate reddish orange (179C); spots dark red, on basal half of each tepal; nectaries dark red; pollen dark orange. Fls 90-100 mm wide; tepals 70 × 28 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 6 mm, dark green. Stems 1.1 m, green, with c.15 fls in a racemose infl. July.

(Published in Gesellschaft der Staudenfreunde, bulb list, 1983.)

### 'Bielka' I(a/c)

Parentage: 'Svetlana' × 'Iolanta'

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls white-pink. Stems 0.7 m.

(The seed parent is probably 'Svetlana' of Kireeva.)

### 'Big Ben' I(a/-)

Parentage: 'Connecticut Yankee' × Asiatic hybrid

R: Piedmont Gardens, N: Piedmont Gardens (1976), I: Piedmont Gardens (1976), REG: Piedmont Gardens (1977)

Fls strong reddish orange (31B) with a few dark brown spots; pollen strong reddish orange (31B). Lvs wide. Stems 1.4-1.5 m. July.

(Published in *Lilies and other Liliaceae*, 1978/9: 105.)

### 'Big Boy' IX(b/a)

See *regale* 'Big Boy'.

### 'Big Mac' I(a/b)

Parentage unknown

R: unknown (pre 1992)

Inside orange-red at tepal-tips, apricot in centre; spots numerous, large, brown-purple, on half of each tepal; nectaries white-granulated; pollen orange. Fls 115 mm wide; tepals 70 × 30 mm, very slightly recurved. Lvs scattered, 70 × 8 mm. Stems 0.7 m, dotted with violet-black at base. Early June.

(Has been grown in the Czech Republic.)

### 'Big Max' I(c/-)

Parentage: ('Connecticut King' × Hallmark Group) × (*leichtlinii* var. *maximowiczii* 'Unicolor' × white-flowered Pastel Group)

R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Inside light orange (28C) shading into light orange (28D) at tepal-tips and in throat; outside light orange (28C/D), deeper along midribs, overlaid with green at base; spots absent; nectaries green; pollen moderate red (179A). Tepals 60-80 × 20-30 mm, mid green. Stems 1-1.5 m, dark green with a slight purple overlay, and with 7-20 fls. Early July.

### 'Bijoux' I(a-b/b-c)

Parentage: 'Polárka' × unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1994), REG: B. Mičulka (1994)

Inside creamy yellow tinted beige, tepal-tips pale pink; outside pale pink, midribs yellow and brown; spots numerous, medium sized, dark brown-crimson, on half of each tepal; nectaries pinkish, granulated; pollen brown; stigma green-brown. Fls 135 mm wide; tepals 85 × 42 mm, moderately recurved; pedicels 60 mm long, copiously brown-spotted. Lvs scattered, 140 × 10 mm, glossy dark green. Stems 0.9 m, green, with a short infl. July.

(Although originally reported as a triploid lily, this cv. has now been shown to be diploid. The pollen parent was said to be ('Tetra Tabasco' × 'Tetra Enchantment') in *ILR Thirteenth Supplement*, but this was corrected in the *Seventeenth Supplement*.)

### 'Bikaver' VI(c/a)

Parentage: 'Schokolade' × unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka, REG: B. Mičulka (2003)

Inside purple-pink with darker veining, throat apricot; outside very dark pink, midribs with brownish tint; pollen brown-orange; stigma whitish. Fls 115 mm wide; tepals 135 × 45 mm, tips strongly recurved; pedicels 35 mm long, slightly spotted. Lvs 110 × 7 mm, dull dark green, dense. Stems 1.15 m, with sporadic spots, and with a short infl. Early July.

### 'Bílá Opava' I(b/b)

Parentage: 'Feuer und Rauch' × 'Sterling Star'

R: J. Dudek, N: J. Dudek, I: J. Dudek (2001), REG: J.

Dudek (2001)

Inside creamy white, tepal-tips paler, throat yellowish; outside creamy with purple midribs at the base; spots purple, numerous, medium sized, on half of each tepal; pollen and stigma brown. Fls 190 mm wide; tepals 90 × 46 mm, tips slightly recurved; pedicels 100 mm long, green. Lvs scattered, 130 × 12 mm, glossy green. Stems 1.4 m, thick, brown. Early July.

**‘Bilbao’ VII(a/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside very pale purple (69D), each tepal with a yellowish white (155D) flame above nectary, throat yellowish white (155D); outside very pale purple (69D), each tepal with a yellowish white (155D) flame; spots yellowish white (155D); papillae present; nectaries strong yellow-green (144C); pollen strong reddish orange (169A); stigma deep purplish red (59B). Fls 210 mm wide, slightly scented; tepals 145 × 85 mm, margins smooth, tips slightly recurved. Lvs scattered, 200 × 53 mm. Stems 1.47 m, light green, with c.4 fls.

**‘Bilina’ VI(b/a)**

Parentage: *leucanthum* var. *centifolium* ‘Black Dragon’ × unknown

R: B. Mičulka (1989), N: B. Mičulka, REG: B. Mičulka (1989)

Inside white, throat pale yellow; outside white with a creamy base; nectaries pale green; pollen bronze-apricot; stigma green. Fls 135 mm wide; tepals 140 × 47 mm, moderately recurved. Lvs scattered, 110 × 10 mm, mid green. Stems 1.2 m, slightly brown-spotted at base. Early July.

**‘Bill’s Special’ I(b/b)**

Parentage unknown

R: A.W.A. Baker (1985), G: H.E.W. Aldiss (1987), N: H.E.W. Aldiss (1988), I: H.E.W. Aldiss (1988), REG: H.E.W. Aldiss (1988)  
PC 1988

Inside deep apricot, throat slightly darker; outside flushed with dusky pink; each tepal with a slight, paler stripe down centre; spots absent; nectaries green; pollen deep orange-yellow. Fls 175 mm wide; tepals 92 × 47 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 17 mm, mid green. Stems 0.78 m, green, reddish at base, with 9 or more fls. Early June to early July.

**‘Bingo’ I(b-c/b)**

Parentage: (‘Odd Ball’ × *wardii*) × ‘Red Carpet’

R: L.D. Marshall (1975), N: Columbia-Platte Lilies (1977), I: Columbia-Platte Lilies (1979), REG: Columbia-Platte Lilies (1980)

Inside vivid reddish orange (33A/B); tepal-tips and throat vivid reddish orange (33A); outside vivid reddish orange (33B); spots and papillae absent; nectaries moderate reddish orange (178C); pollen dark reddish orange (172B). Fls 100 mm wide; tepals 70-90 × 30 mm, slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems

0.4-0.5 m, light reddish to dark purple, with 4-6 fls. June to July.

(There are three cvs with this epithet, but this one (that has been registered) has been selected by the ICRA as accepted (ICNCP, 2004: Art. 26.3).)

**‘Bingo’ I(a/b)**

Parentage: *leichtlinii* var. *maximowiczii* × unknown  
R: Oregon Bulb Farms, Inc. (pre 1962), N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc.

Buds green, soon turning lemon-yellow, tinted bronze at base, opening yellow inside; outside flushed with bronze at base; spots maroon; pollen light orange. Fls 125 mm wide. Stems 1 m, brownish purple, with numerous bulbils. Aug.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for other lilies. Although raised earlier, this ‘Bingo’ only came to the attention of the ICRA after ‘Bingo’ had been registered by Columbia-Platte Lilies.)

**‘Bingo’ I(a/b)**

Parentage: selection from Pastel Group

S: Bischoff Tulleken Lieliecultuur B.V. (1975), N: Bischoff Tulleken Lieliecultuur B.V. (1979), I: Bischoff Tulleken Lieliecultuur B.V.

Inside creamy white, throat creamy yellow; outside creamy yellow; spots brown, small, numerous, on basal half of each tepal; nectaries white; pollen orange-brown. Fls 100 mm wide; tepals 80 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 8 mm, dark green. Stems 0.75 m, dark, with c.6 fls. June.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for other lilies.)

***biondii* Baroni IX(c/d)**

Syn. of *davidii* var. *unicolor*.

**‘Birgi’ VIII(a/b)**

Parentage: seedling BM 95-02 × seedling RS 93-16

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2000), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside strong purplish red (63A), tepal-edges flushed with (59B), throat light yellow-green (144D); outside strong purplish red (68B), changing into strong purplish red (59D) towards tepal-margins; spots very few, dark red (59A); papillae absent; nectaries strong yellow-green (144A); pollen strong orange-yellow (163B); stigma brilliant greenish yellow (3B). Fls 250 mm wide; tepals 150 × 50-73 mm, margins smooth, tips recurved. Lvs scattered, 155 × 28 mm. Stems 1.15-1.40 m, green with darker markings at base, and with 4-5 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Birgit’ I(b/-)**

Parentage: (red-flowered *lancifolium* × unknown) × ‘Marga’

R: A. Winkler (1981), G: A. Winkler (1984), N: A. Winkler (1985), REG: A. Winkler (1991)

Inside strong purplish red (60D), throat light green; outside strong purplish red (60C); spots very small, deep

red (60A), on basal half of each tepal; nectaries frosted; pollen moderate reddish orange (171A). Tepals 105 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 25 mm, dark green. Stems 1.25 m, rather dark green, with c.10 fls. Early July.

#### 'Birma' VII(b/b)

Parentage: unnamed seedling × unnamed seedling  
R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1984),  
N: Gebr. Mak B.V. (1988), I: Gebr. Mak B.V. (1988),  
REG: Gebr. Mak B.V. (1990)

Inside moderate to light purplish pink (62B/C) with pinkish white tepal-edges; outside light purplish pink (62C), midribs deep pink (51B); throat spotted vivid reddish orange (30B); pollen strong orange (24A). Fls 210 mm wide; tepals 95 × 50 mm, margins ruffled, tips strongly recurved. Lvs scattered, 110 × 35 mm, mid green. Stems 0.6 m, green, with c.6 fls.  
Syn.: 'Miss Burma'.

#### 'Birthday' VIII(a/b)

Parentage: seedling 92-136 × seedling 89-50-101-1  
R: World Breeding B.V., N: Liliande B.V. (2003), REG:  
World Breeding B.V. (2004)

Inside brilliant to light yellow (10A/C), lighter towards tepal-tips, midveins yellow at base; outside pale greenish yellow (10D), flushed with red; spots and papillae absent; nectaries green; pollen orange-brown; stigma purple. Fls 200 mm wide; tepal-margins very slightly ruffled, tips recurved. Lvs scattered, dark green. Stems 0.9-1.1 m, green with darker spots and stripes, with 2-10 fls. Late. (An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096390).)

#### 'Birthe's' I(a-b/-)

Parentage: (('Liudmila' × mixed Connecticut cvs) × 'Attila') × 'Blizzard'

R: L. Høpfner (1992), G: L. Høpfner (1994), N: L. Høpfner (1997), REG: L. Høpfner (1997)

Inside pale yellow-green/light yellow-green (4D/150D), throat brilliant yellow (7B); outside pale yellow-green (4D), midribs moderate orange (167A); spots few, dark, on basal quarter of each tepal; nectaries dark green; pollen vivid orange-yellow (23A); stigma light yellow (18A). Fls 150 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 0.75 m, brown, with 8 or more fls. July. (The 'Liudmila' in the seed parent may be 'Liudmila' (of Kireeva) or 'Ludmila' (of Orehovs).)

#### 'Biscaye' VII(-/-)

Parentage unknown

R: Vletter & Den Haan, G: Vletter & Den Haan (1988),  
N: Vletter & Den Haan (1992), I: Vletter & Den Haan (1993),  
REG: Vletter & Den Haan (1993)

Inside suffused with light purplish pink (65B) and moderate purplish pink (65A) on a yellowish white (155B) ground, midveins strong purplish pink (55B), throat yellowish white (155B); outside variegated with yellowish white (155B) and light purplish pink (65B), tepal-edges moderate purplish pink (65A), midribs

strong yellow-green (144B), becoming strong yellow-green (143C) and (143B) at base and tip respectively; spots deep purplish red (61A), on two-thirds of each tepal; pollen brownish orange (171B); stigma moderate purplish pink (186D) and dark purplish pink (186C). Fls 220 mm wide; tepals 105 × 65 mm, margins ruffled, tips slightly recurved. Lvs scattered, 170 × 40 mm, dark green. Stems 0.9 m, pale green, with c.7 fls.

#### 'Bittersweet' I(c/-)

Syn. of 'Fuga'.

#### BIZET VIII(a/b)

Trade designation of 'Zanlabizet'.

#### 'Blackadder' I(b/c)

Parentage: ('Citronella' × *dauidii*) × another seedling of the same cross

R: D.B. Fox, G: D.B. Fox (1968), N: D.B. Fox (1970),  
REG: D.B. Fox (between 1970 and 1982)

Fls strong orange-yellow (17A) to vivid yellow (17C), with slight greenish hue in centre of each tepal near tip, spotted with ovals and dashes. Tepals sometimes slightly recurved. Lvs very dark. Stems 1.5 m, very dark blackish, with c.10-20 fls.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 11 (1978).)

#### 'Black Band' VII(-/b)

Parentage: (*speciosum* var. *rubrum* × *auratum*) × 'Tetra White Henry'

R: L. Woodriff (1975), G: L. Woodriff (1978), N: L. Woodriff (1980), REG: L. Woodriff (1984)

Inside white, each tepal with a black ray, tips white, throat black; outside greenish white; spots dark red, outside the black ray; nectaries black; pollen brown. Fls 200 mm wide; tepals 140 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 125 × 30 mm, dark green. Stems 1.2 m, green, with c.8 fls. Aug.

#### 'Black Bear' I(a/-)

Parentage unknown

R: E.H. Doerr (1969), N: J. Wadekamper (1973), I: J. Wadekamper (1974), REG: J. Wadekamper (1973)

Fls deep purple to black; spots absent; nectaries green; pollen brown. Lvs scattered, dark green. Stems 1 m. July. (Published in *Lilies and other Liliaceae*, 1973/1974: 109.)

#### 'Black Beauty' VIII(b-c/d)

Parentage: *speciosum* var. *rubrum* × *henryi*

R: L. Woodriff (c. 1957), N: L. Woodriff

Fls very dark red, centre green, tepal-margins white. Fls *speciosum* type. Stems 1.2-1.9 m. July to Aug.

Syn.: *speciosum* 'Black Beauty'.

(An Orienpet (OT) lily. Published in *Woodriff Cat.*, 1958. Previously classified in Div. VII.)

#### 'Blackberry Ice' VI(c/a)

Parentage: 'Pink Royal Corona' × a deep pink-flowered trumpet

R: D. Sylvester (1982), G: D. Sylvester (1985), N:

D. Sylvester (1987), I: D. Sylvester (1988), REG: D. Sylvester (1988)

Inside vivid and light purple (80 and 81), tepal-tips light lavender, throat greenish lavender; outside darker purple with a greenish cast on tepal-edges; spots absent; nectararies light green; pollen gold. Fls over 200 mm wide, pleasantly scented; tepals 200-225 × 60 mm, margins smooth, tips recurved. Lvs scattered, 150-175 × 20 mm, mid green. Stems 1.2 m, mid green, with c.27 fls. Late June.

#### **‘Blackberry Intrigue’ I(b/d)**

Parentage: (‘Condamine’ × ‘Summer Night’) × red-flowered seedling

R: A.J. Burnett (1989), G: A.J. Burnett (1991), N: E.E. Fox (1997), I: Fox Lily Ranch (2002), REG: E.E. Fox (2001)

Inside and outside dark red (187A); spots few, dark greyish purple (202A), raised; nectararies dark red (187A); pollen strong brown (172A); stigma dark red (187A). Fls 130 mm wide; tepals 65 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 110 × 12 mm. Stems 0.9 m, heavily mottled (appearing black), with 12-18 fls. Late July.

(The epithet describes the colour.)

#### **‘Black Bird’ I(a/b)**

Parentage: (‘Tip Top’ × Sundrop Group) × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside strong red/deep red (46A/185A), with a small strong orange (25B) mark above each nectary; outside moderate red (179A/B), a little stronger than strong orange-yellow (17A) towards tepal-edges, midribs suffused with strong yellow-green (144B); spots dark red (187A), on two-thirds of each tepal; papillae few, in the throat; nectararies moderate yellowish pink (179D); pollen strong reddish orange (169A); stigma moderate orange-yellow (164B). Buds hairy. Fls 170 mm wide; tepals 90 × 30-40 mm, margins smooth, tips recurved. Lvs scattered, 170 × 12.5 mm, green, hairy, with 3-5 fls. June to July.

#### **‘Black Butterfly’ I(c/d)**

Parentage: Red Knight Group × unknown

R: P.H. Wright and R. Simonet (pre 1964), I: A.J. Porter Fls deep crimson, with a black sheen when first open; *dauidii* var. *willmottiae* type, on long pedicels. Stems 0.9-1.2 m, slender and graceful. July.

#### **‘Black Cloud’ I(a/-)**

Parentage: *L.* × *scottiae* × Preston Group

R: E. Robinson (c. 1960), R: E. Robinson (c. 1960), N: E. Robinson, N: E. Robinson  
Inside with black-red centre, fading to red at tepal-tips; outside paler. Stems 1 m. July.  
(Published in *ILR* (1969).)

#### **‘Black Diamond’ IX(a/b)**

See *philadelphicum* ‘Black Diamond’.

#### **Blackdown Gold Group VI(-/a)**

Parentage: Golden Splendor Group × Temple Group  
R: Blackdown Lilies (1970), G: Blackdown Lilies (1972), N: Blackdown Lilies (1974), I: Blackdown Lilies (1974), REG: Blackdown Lilies (1988)

Inside golden yellow; outside flushed with maroon; pollen brown. Lvs scattered, dark green. Stems 1.6 m, green/brown, with c.10 fls. Mid July.  
(Included in *ILR Seventh Supplement* as Blackdown Gold grex.)

#### **Blackdown Late Gold Group VI(-/a)**

Parentage: selection from Blackdown Gold Group × selection from Blackdown Gold Group

R: Blackdown Lilies, G: Blackdown Lilies (1980), N: Blackdown Lilies (1980), I: Blackdown Lilies (1986), REG: Blackdown Lilies (1988)

Inside yellow; outside flushed with maroon; pollen brown. Lvs scattered, mid green, slightly flushed with maroon. Stems 1 m, usually with a compact infl. Aug.  
(A high percentage come true from seed. Published in *ILR Seventh Supplement* as Blackdown Late Gold grex.)

#### **Blackdown Pink Group VI(-/a)**

Parentage: derived from a wide range of Oregon Bulb Farm lilies similar to ‘Pink Perfection’ (including African Queen Group, Golden Splendor Group, Heart’s Desire Group & First Love Group)

R: D.S. Gardham, N: D.S. Gardham, REG: ICRA (1998)

Pink trumpets, mostly wide-flaring, varying in depth of colour.

(First derived from mixed plantings in the late 1960s/early 1970s, latterly maintained by hand-pollination.)

#### **‘Black Dragon’ IX(b-c/a)**

See *leucanthum* var. *centifolium* ‘Black Dragon’.

#### **Black Dragon Group IX(b-c/a)**

See *leucanthum* var. *centifolium* Black Dragon Group.

#### **‘Black Eyed Cindy’ I(b/-)**

Parentage: unnamed seedling × unnamed seedling  
R: H.R. & R. Cocker (1979), N: H.R. & R. Cocker (1990), REG: H.R. & R. Cocker (1990)

Inside brilliant yellow-green (150C), tepal-tips vivid yellow (13A); outside greenish yellow (151); brushmarks very large, dark red-brown; nectararies brilliant yellow-green (150C); pollen reddish brown. Tepal-margins smooth. Lvs 105 × 27 mm, mid green. Stems 1 m. Syn.: ‘Black Eyed Susan’.

(Originally introduced under the then illegitimate epithet ‘Black Eyed Susan’ (which is the vernacular name of another plant).)

#### **‘Black Eyed Susan’ I(b/-)**

Syn. of ‘Black Eyed Cindy’.

**'Black Glow' I(a/b)**

Parentage: 'Tabasco' × 'Fireball'

R: Mrs A. Andersen (1986), G: Mrs A. Andersen (1989), N: Mrs A. Andersen (1997), I: Mrs A. Andersen (1997), REG: Mrs A. Andersen (1997)

Inside and outside very dark red with a black flush (close to dark red (59A)); spots absent; nectaries greyed red; pollen orange; stigma greyed red. Fls 85 mm wide; tepals 60 × 30 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 90 mm long, mid green. Stems 0.5-0.6 m, brown and green, with c.3-5 fls. Early July. Syn.: 'Blackii'; 'Blackie'.

**'Black Gold' I(a/-)**

Parentage: orange-flowered, brushmarked Asiatic seedling × 'Brushstroke'

R: E.E. Fox (1988), G: E.E. Fox (1990), N: E.E. Fox (1991), I: Fox Lily Ranch (1993), REG: E.E. Fox (1992)

Inside yellow, throat pale celery-green; outside yellow, midribs light brown; brushmarks sharply defined, black/red; spots large, dark black/red, in the throat below brushmarks; nectaries yellow, frosted white; pollen bright gold. Fls 150 mm wide; tepals 72 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 18 mm, pale green. Stems 1.2 m, black, with 10-14 fls. Early July.

**'Black Gold' I(a/b)**

Parentage: 'Sunkissed' × (*pumilum* × bicolour selection from Coronado Group)

R: Columbia-Platte Lilies (1979), G: Columbia-Platte Lilies (1981), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987)

Inside light orange-yellow (16B/C), tepal-tips sometimes brilliant/light yellow (20A/B) in poor light, throat light orange-yellow (16B/C); outside deep bronze (yellow-gold overlaid with heavy plum); a tiny ring of inconspicuous spots (10-15 per tepal) parallel to nectaries; nectaries soft green, with slight straw downiness; pollen greyish red (176A). Lvs scattered, 100-150 × 10-15 mm, dark green overlaid with plum. Stems 1.2-1.5 m, deep bronze-green, with 8-30 fls. Mid June to mid July.

(Rejected for registration due to existence of Blackdown Gold Group, a name that was (at that time) regarded as too similar.)

**'Black Heart Orange' VI(-/c)**

Parentage: *henryi* × unknown

R: L. Woodriff (1950), G: L. Woodriff (1954), N: L. Woodriff (1960), I: L. Woodriff (1961), REG: L. Woodriff (1983)

Fls orange throughout; nectaries black; pollen brown. Tepals 75 × 25 mm, margins smooth. Lvs scattered, 125 × 25 mm, dark green. Stems 1.5 m, brown-speckled, with up to 30 fls. Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 47 (1978).)

**'Black Heart White' VI(b/b)**

Parentage: 'T.A. Havemeyer' × *L. × kewense* 'White Henryi'

R: L. Woodriff (1955), N: L. Woodriff (1960), I: L.

Woodriff (1960), REG: L. Woodriff (1983)

Inside white, centre gold; outside greenish; spots absent; nectaries black; pollen brown. Fls c.200 mm wide; tepals c.150 × 40 mm, margins smooth. Lvs scattered, 125 × 25 mm, dark green. Stems 1.5 m, green, with up to 15 fls. Stems 1.2 m, green. July.

(Classified in *ILR* (1982) as Div. VI(d).)

**'Blackie' I(a/b)**

Syn. of 'Black Glow'.

**'Blackii' I(a/b)**

Syn. of 'Black Glow'.

**'Black Jack' I(a/b)**

Parentage: red-flowered Laan hybrid × red-flowered Laan hybrid

R: Gebr. N. & B. Laan & Zn (1989), G: Gebr. N. & B. Laan & Zn (1991), N: Gebr. N. & B. Laan & Zn (1994), I: Gebr. N. & B. Laan & Zn (1996), REG: Gebr. N. & B. Laan & Zn (1996)

Inside dark red (187A/B) in basal part, apical part deep red (185A); outside dark/deep red (183A/185A), a little paler at tepal-tips, midribs hairy; spots dark red (187A), on basal part of each tepal; papillae few, in the throat; pollen strong brown (172A); stigma dark red (187B). Fls 160 mm wide; tepals 90 × 35-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 20 mm, mid green, with hairy edges. Stems 0.85-1 m, green with a lot of darker marking, and with c.11 fls.

**'Black Joe' I(b/-)**

Parentage: 'Maroonshine' × red-flowered *L. × hollandicum*

R: N.A. Lamb (c. 1960), N: N.A. Lamb, REG: N.A. Lamb (1984)

Fls dark red. Stems 0.9-1 m. July.

(Published in *ILR* (1982).)

**'Black Knight' VII(b/c)**

See *L. × parkmanii* 'Black Knight'.

**'Black Magic' IX(b-c/a)**

See *leucanthum* var. *centifolium* 'Black Magic'.

**Black Magic Group IX(b-c/a)**

See *leucanthum* var. *centifolium* Black Dragon Group.

**'Black Opal' VI(c/b-c)**

Parentage: produced from two seedlings, both derived from 'Black Heart White': one ex G. Jacobs, one ex C. Kroell

R: C.K. Kroell (1985), G: W.T. Craig (1987), N: C.K. Kroell (1996), REG: C.K. Kroell (1997)

Inside pale yellow (18D) in basal third, blending to near white in apical two-thirds, outer tepals often with a 1mm-wide orange edge, inner tepals with a hairline maroon edge, all tepals tipped orange; outside pale orange-yellow (19D), inner tepals with a green midrib, outer tepals with a green band; conspicuous, dark reddish orange (173A) papillae and linear ridges on basal half of each

tepal; nectaries very dark maroon; filaments green; pollen brownish orange (172C); stigma light green. Fls 160-170 mm wide, very lightly scented; tepals 100 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 164 × 28 mm, mid green. Stem 1.4 m, mid green, with c.6 fls. Mid to late July.

#### 'Black-out' I(b/b)

Parentage: (unnamed seedling × 'Pirate Fire') × (*dauricum* × unnamed seedling)

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (1999), I: Bischoff Tulleken Lelies B.V. (2000), REG: Bischoff Tulleken Lelies B.V. (2000)

Inside dark red (187A) on a deep red (185A) ground, midveins (except at apex) dark red (187A), throat moderate red (181A); outside strong red (46A), midribs deep red (185A), outer tepals tipped strong yellow-green (144B); spots dark red (187A), on up to a third of each tepal; papillae absent; pollen deep red (185A); stigma dark red (187A). Fls 165 mm wide; tepals 100 × 40 mm, margins smooth, tips recurved. Lvs scattered, 150 × 20 mm. Stems 1.2 m, light green, with 6-9 fls. June.

#### 'Black Panther' IX(b/c)

See *auratum* 'Black Panther'.

#### 'Black Prince' I(a/-)

Parentage: *L.* × *bollandicum* 'Vermilion Brilliant' × *L.* × *maculatum* 'Atrosanguineum'

R: L.B. Tuffery (c. 1935), N: L.B. Tuffery

Fls dark red.

(Never distributed.)

#### 'Black Prince' II(c/d)

Parentage: derived from *L.* × *dalhanonii* Backhouse Group & other *hansonii* × *martagon* hybrids

R: F.L. Skinner (c. 1944), N: F.L. Skinner, I: F.L. Skinner (1948)

Fls very dark mahogany, almost black, with reddish flush at tepal-edges. All pedicels short and of equal length. Stems 1-1.2 m. July.

(Published in *LYB* 10: 39 (1946). In N America, a commercially available *martagon* masquerades under this epithet: it differs in being much taller, with more fls in a triangular raceme (see E.E. Fox, *Martagon Lilies*, 119 (2006).)

#### 'Black Prince' I(a/-)

Syn. of *L.* × *scottiae* 'Gay Passion'.

#### 'Black Queen' VII(-/b)

See *L.* × *parkmanii* 'Black Queen'.

#### 'Black Satin' I(a/b)

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler (1981), N: B.G. Hayler, I: B.G. Hayler, REG: B.G. Hayler (1985)

Inside and outside deep red (185A) deepening towards centre to dark red (187B); spots absent; nectaries black-red; pollen brown. Tepals 90 × 42 mm, margins smooth,

tips slightly recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 1 m, light green, with c.8 fls. Late Dec. (Australia).

#### Black Swan Group I(b/-)

Parentage unknown

R: R.F. Nelson (1960), G: R.F. Nelson (1963), N: R.F. Nelson (1968), I: R.F. Nelson (1969), REG: R.F. Nelson (1984)

Fls dark red (187A); spots and papillae absent; nectaries dark red (187B); pollen greyish red (178A). Tepals 75 × 30 mm, margins smooth; tips strongly recurved. Lvs scattered, 70 × 6-8 mm. Stems 1 m, green, with c.20 fls. Dec. (Australia).

(Listed in *ILR* (1982) as a cv.)

#### 'Black Tie' VII(a-b/b)

Parentage: (unnamed seedling × (*speciosum* × 'Star Gazer')) × (('Merci' × 'Star Gazer') × red-flowered seedling)

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V., I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (1999)

Inside deep red (60A), shading to strong purplish red (60D) towards tepal-edges, basal part with a yellowish white (155B) edge, apical part with a narrow yellowish white (155B) edge, midveins dark red (59A); outside moderate purplish red (64A) on a white ground, basal part with a greenish white (155B) edge, apical part narrowly edged with yellowish white (155B), midribs light yellow-green (150D), strong yellow-green (143B) at top, tepal-tips strong yellow-green (143A); spots dark red (187A), on two-thirds of each tepal; papillae dark red (187A), in the throat; nectaries strong yellow-green (143C); stigma pale yellow-green (192A). Fls 220 mm wide; tepals 115 × 33-55 mm, margins ruffled, tips recurved. Lvs scattered, 160 × 45 mm, dark green. Stems 1 m, green with dark spots at base, and with c.5-7 fls. July.

#### 'Black Velvet' I(a-b/-)

Parentage: 'Black Butterfly' × 'Byam's Ruby'

R: J.A. Mattas (c. 1969), N: J.A. Mattas

Tepal-centres dark red (187A), lightly self-spotted, tips dark red (187C). Tepal-tips slightly reflexed. Stems 0.6-1 m, with up to 18 fls. Early July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 11 (1978).)

#### 'Blackwatch' I(a/-)

Parentage: 'Sunspot' × 'Connecticut Lemonglow'

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1976), N: Oregon Bulb Farms, Inc. (1983), I: Oregon Bulb Farms, Inc. (1984), REG: Oregon Bulb Farms, Inc. (1984)

Fls glossy dark maroon-red; spots masked by dark ground-colour; nectaries dark red; pollen brown. Tepals 80 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 35 mm, dark green. Stems 1 m, dark mottled brown, with 6-25 fls. Midseason.

**'Blanche Sandy' I(b/-)**

Parentage unknown

R: Wiedmann, N: Wiedmann, REG: ICRA (1997)  
Fls cream, spotted. Stems 1 m, with bulbils. Late July.  
(Published in European Lily Society sales list, 1996.)**'Blancivetta' V(b/a)**See *longiflorum* 'Blancivetta'.**'Blance' I(c/d)**

Parentage: 'Marksův Bronz' × 'Connecticut Lemonglow'

R: Šlechtitelská Stanice Heřmanův Městec, N:  
Šlechtitelská Stanice Heřmanův Městec, REG: (1994)  
Inside deep yellow, centre orange-yellow; spots tiny,  
sparse, brown-purple, on a third of each tepal. Fls 80-90  
mm wide; tepals slightly overlapping. Lvs 70-100 × 10-14  
mm, dark green. Stems 0.7-0.85 m, dark brown-violet,  
thick, with 8-12 fls. Early July.  
(Published in *Listina povolených odrůd okrasných rostlin*,  
MZ Praha, 1991.)**'Blanka' I(a/-)**

Parentage: 'Letkis' × 'Advent'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1995),  
REG: B. Mičulka (1995)  
Inside white, tinted peach, throat white, tepal-centres  
pale beige; outside with brownish midribs; spots  
numerous, large, dark brown-pink, on two-thirds of each  
tepal; papillae numerous, in the throat; nectaries white-  
granulated; pollen brown-orange; stigma pink-brown. Fls  
115 mm wide; tepals 80 × 40 mm, recurved; pedicels 70  
mm long, with dark spots. Lvs scattered, 85 × 16 mm,  
dull yellowish green. Stems 0.75 m, thick, brown-dotted.  
Early July.**'Blankenfelder Juwel' I(b/b)**Parentage: 'Snowcap' × mixed pollen from 'Limpopo',  
'Brushstroke' & 'Impact'R: G. Steinbrück (1991), G: G. Steinbrück (1994), N:  
G. Steinbrück (2003), I: G. Steinbrück (2004), REG: G.  
Steinbrück (2004)  
Inside yellowish white (158D), throat light orange (28C);  
outside very pale yellow, midribs green; spots numerous,  
large, dark purple (79A), on basal half of each tepal;  
nectaries white-hoary; pollen greyish reddish brown  
(200B); stigma yellowish white (156D). Fls 140 mm  
wide; tepals 70 × 40 mm, margins strongly ruffled, tips  
strongly recurved. Lvs scattered, 95 × 16 mm. Stems 1 m,  
dark green, with up to 14 fls. Early July.  
(Nomenclatural standard: colour print supplied by  
registrant (WSY 0096349).)**'Blankenfelder Riese' I(b/c)**Parentage: 'Yukatan' × Feldmaier Asiatic seedling (Fe4)

Inc. (1994), I: Mt Hood Lilies Inc. (1994), REG: Mt  
Hood Lilies Inc. (1996)  
Inside vivid reddish orange (33A/B) shading to vivid  
reddish orange (30A/B); outside vivid yellowish pink  
(30C) to strong yellowish pink (33C); spots few, small,  
inconspicuous, on basal third of each tepal; pollen  
moderate reddish orange/strong brown (171A/172A);  
stigma moderate red/deep pink (180C/D). Fls 150-170  
mm wide; tepal-margins smooth, tips slightly recurved.  
Lvs scattered, 80-120 × 15-25 mm, mid to dark green.  
Stems 0.2-0.5 m, dark green, with c.6-10 fls (from 14-16  
cm bulbs).**'Bledulena' VI(b/a)**Parentage: *regale* 'Royal Gold' × unknownR: B. Mičulka (1983), N: B. Mičulka (1983)  
Inside creamy white, throat yellow to half way; outside  
with pale pink/green midribs; pollen apricot-ochre. Fls  
145 mm wide, 95 mm long; tepals slightly recurved,  
edges gently curled; pedicels sparsely violet-dotted. Lvs  
scattered, 90 × 16 mm. Stems violet-spotted at base.  
Mid July.**'Blega' I(a/c)**

Parentage unknown

R: A. Rech (pre 1986), N: A. Rech, REG: A. Rech (1988)  
Fls yellow with a greenish centre. Fls large. Stems 0.8 m,

with up to 15 fls. Early July.  
(Published in German Lily Group sales list, 1986.)

**‘Blenda’ I(a-b/-)**

Parentage: white-flowered seedling × white-flowered seedling

R: De Jong Beheer B.V. (c. 1988), G: De Jong Beheer B.V. (1992), N: De Jong Beheer B.V., I: De Jong Beheer B.V. (1992), REG: De Jong Beheer B.V. (1994)  
Inside yellowish white (155D), suffused with strong yellow-green (144C) along the nectaries to the tepal-tips, the colour fading toward tips; outside yellowish white (155D), midribs strong yellow-green (144C), fading to the top, the outer tepals (except for edges) with a strong suffusion of strong yellow-green (144C) and tipped strong yellow-green (143A), midribs of inner tepals strong yellow-green (144C); spots very few or absent; papillae absent; pollen moderate orange (167A); stigma dark red (187B). Fls 170 mm wide, tepals 90 × 35 mm, slightly recurved. Lvs scattered, 155 × 20 mm, dark green. Stems 0.6 m, mid green with darker markings, and with c.11 fls.

Syn.: ‘Mika’.

(Registered and included in *ILR Thirteenth Supplement* as ‘Mika’. However, in 1994 Dutch PBR (LEL 1002) were granted to this cv. under the epithet ‘Blenda’ and the latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Blessing’ VII(b/-)**

Parentage: unnamed seedling × unnamed seedling

R: Mak Lelieveredeling B.V. (1984), G: Mak Lelieveredeling B.V. (1987), N: Mak Lelieveredeling B.V. (1992), I: Mak-Leek Inc. (1992), REG: Mak-Leek Inc. (1996)

Inside moderate purplish pink (62B) to strong purplish pink (62A), midveins orange; outside light purplish pink (68D); spots and papillae present; nectaries green; pollen orange-brown; stigma grey. Tepals 144 × 40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 155 × 30 mm, mid green. Stems 1.2 m, dark, with c.7-8 fls. Early.

**‘Blestiashchaia’ I(c/-)**

Parentage: ‘Stroinaia’ × ‘Sestorretskaja’

R: V.A. Grot (c. 1959), N: V.A. Grot

No further details.

(Unaccepted spelling: ‘Blestiashchaja’.)

**‘Blestiashchaja’ I(c/-)**

Unaccepted spelling of ‘Blestiashchaia’.

**‘Blickfang’ I(b/c)**

Parentage unknown

R: H. Böhm (pre 1968), N: H. Böhm

Fls yellow, 120 mm wide; tepals 70 × 28 mm. Lvs 100 × 7 mm. Stems 0.5 m. June.

(Published in B. Miculka, *Odrůdy lilii pěstované u nás*, (1995).)

**‘Blinklicht’ I(b/-)**

Parentage: Burgundy Group × *L. × scottiae* ‘Schuetzenlis’

R: V. Matthé (1978), N: V. Matthé (1981), REG: V.

Matthé (1984)

Fls orange-red, throat a slightly darker red; spots numerous, small, dark red, all over fl.; nectaries silver. Tepals 80 × 28 mm, margins smooth, tips slightly recurved; pedicels branched. Lvs scattered, mid green. Stems 0.95 m, dark green/brown, with 15-20 fls. July.

**‘Blithe Spirit’ I(c/d)**

Parentage: (‘Maxwill’ × ‘Edna Kean’) F<sub>3</sub> × ‘Primrose Lady’

R: G.W. Darby (c. 1963), N: G.W. Darby

Fls a light yellow and pink blend. Stems 1 m. July.

**‘Blitz’ I(a/-)**

Parentage: unnamed seedling × *dauricum*

R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1994)

Inside strong orange (25A/B), midveins vivid orange (28A), throat edged light orange-yellow (25D); outside brilliant orange (26C), edged at base with strong orange (26B), tinged with strong purplish red (59D) and edged strong orange (25A) at tepal-tips; spots dark red (187A), on basal part of each tepal; pollen strong brown (172A); stigma greyish red (184A). Fls 190 mm wide; tepals 90 × 50 mm, tips slightly recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 0.5 m, pale green, with c.5 fls.

**‘Blizzard’ I(a/b)**

Parentage: ‘Mont Blanc’ × white-flowered seedling

R: Gebr. Vletter & J.A. Den Haan (1977), G: Gebr. Vletter & J.A. Den Haan (1979), N: Gebr. Vletter & J.A. Den Haan (1984), I: Gebr. Vletter & J.A. Den Haan (1984)

Inside ivory-white, throat primrose-yellow; outside ivory-white, midribs pale green, currant-red at top; pollen brown. Fls 160 mm wide; tepals 80 × 45 mm, slightly recurved. Lvs scattered, 125 × 20 mm, dark green. Stems 0.7-1 m, green/brown, with c.12 fls. July.

Trade designation: APOLLO.

(Published in *Bloembollencultuur*, 1984 as ‘Apollo’.)

**Blomberg Group VIII(b-c/b-c)**

Parentage: yellow-flowered Trumpet × (‘Black Beauty’ × (*auratum* × *henryi*))

R: H. Dierssen (1998), N: H. Dierssen, I: H. Dierssen, REG: H. Dierssen (2004)

Inside very pale beige-apricot, tepal-centres deeper apricot, tepal-tips and throat whitish; outside with light pink streaks, and greenish midribs on outer tepals; spots brown and yellow, the latter raised, in lines on two-fifths of each tepal; nectaries green; pollen brown; stigma grey. Fls 135 mm wide; tepals 115 × 40 mm, moderately recurved, margins wavy; pedicels 105 mm, densely brown-dotted. Lvs scattered, 90 × 17 mm, dull dark green. Stems 1.25 m, brown-dotted. Mid July.  
(Oriempet (OT) lilies.)

**'Blondie' I(c/-)**

Parentage: 'Sovereign' × 'Lemon Lady'

R: L. Koehler (1954), N: L. Koehler (1955), REG: L. Koehler (1983)

Inside pale lemon-yellow; outside pale lemon-yellow, flushed red; fine maroon spots on basal part of each tepal. Tepals strongly recurved. Lvs scattered, mid green. Stems 1.1-1.2 m. July.

(Included in *ILR* (1969). There are two cvs with this epithet, but this one has been selected by the ICRA as accepted (ICNCP, 2004: Art. 26.3).)

**'Blondie' IX(b/a)**

See *regale* 'Blondie'.

**'Blondýnka' VI(b/a)**

Parentage: Moonlight Group × unknown

R: B. Mičulka, N: B. Mičulka (1984), REG: B. Mičulka (1984)

Inside butter-yellow, throat somewhat darker; outside with light reddish midribs; pollen pale apricot. Fls 140 mm wide; tepals 115 × 38 mm, strongly recurved. Lvs 85 × 8 mm, dull green. Stems 1.2 m, brown-spotted at base, with a crowded infl. Mid July.

**'Blood Auratum' VII(-/a)**

See *L. × parkmanii* 'Blood Auratum'.

**'Bloodstone' I(b/-)**

Parentage: 'Garnet Gem' × 'Maxwill' hybrid

R: E. Robinson (c. 1961), N: E. Robinson

Inside very dark red; outside lighter. Tepals long and narrow. Stems 1.1 m. July.

(Published in *ILR* (1969).)

**'Blood Tiger' I(c/d)**

Parentage: *lanceifolium* × ? red-flowered *L. × hollandicum*

R: L. Woodriff (c. 1954), N: L. Woodriff

Fls blood-red.

(Published in *Woodriff Cat.*, 1958.)

**'Bloody Mary' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: J.C. Koopman (1982), G: J.C. Koopman (1984), N:

J.C. Koopman (1986), I: J.C. Koopman (1986), REG:

J.C. Koopman (1989)

Inside and outside dark red (187B), tepal-tips strong red (46A); spots black; pollen red (sterile). Fls 145 mm wide; tepals 75 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1.15 m, green with darker markings, and with 12-14 fls. June.

**var. *bloomerianum* IX(c/d)**

See *humboldtii* var. *bloomerianum*.

**'Blotchwood' II(a-b/d)**

Parentage: *L. × dalhansonii* × unknown

R: E. Robinson (1970), G: E. Robinson (1976), N: E.

Robinson (1985), I: E. Robinson (1985), REG: ICRA

(1997)

Inside reddish yellow, tepal-tips yellowish, throat yellowish; outside dark yellowish; spots few, near centre of fl.; reddish blotches also present; pollen orange. Tepal-margins smooth, tips slightly recurved. Lvs whorled, mid green. Stems 1.2 m, green, with many fls.

**'Bluebird' IV(c/d)**

Parentage: (*kelloggii* × *pardalinum*) F<sub>2</sub>

R: J. de Graaff (c. 1965), N: J. de Graaff

Fls clear lilac-orange, paler at base; spots vermilion.

**'Blue Eyes' I(a/b)**

Parentage unknown

R: P. Hoff, G: P. Hoff, N: P. Hoff (1993), I: Hoffgaarde

B.V. (1996), REG: Hoffgaarde B.V. (1996)

Inside suffused with moderate/strong purplish red (59C/D) on an ivory-white ground, base pale yellow (8D) fading into tepals, throat with a little deep purplish red (59B); outside moderate/strong purplish red (59C/D) on an ivory white-ground, tinged with strong yellow-green (144C) at base; spots dark red (59A), in the throat; papillae absent; nectaries white-hairy; pollen strong orange (24A); stigma moderate red (185B). Fls 200 mm wide; tepals 115 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 20 mm, mid green. Stems 1.2 m, green with darker markings, and with c.4-5 fls.

Syn.: 'Holecici'.

Trade designation: HOFFRICA® BLUE EYES.

('Blue Eyes' was granted a USPP in 1999. In 2001

European and Australian PBR were granted to this cv.

under the epithet 'Holecici' which must be regarded as a synonym.)

**'Blumenarie' I(a/c)**

Parentage: 'Skywatcher' × 'Luxor'

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N:

G. Steinbrück (1997), I: G. Steinbrück (1999), REG: G.

Steinbrück (1999)

Inside greenish white (155C), each tepal with a brilliant yellow (20A) flash towards base; outside greenish white (155C); spots few, small, moderate red (178A), on basal half and edges of each tepal; nectaries moderate yellow-green (192C); pollen strong red (46A); stigma pale purplish pink (62D). Fls 120 mm wide; tepals 60 × 30 mm, the inner broadly ovate, margins smooth, tips not recurved. Lvs scattered, 75 × 15 mm. Stems 0.8 m, dark green, with c.12 fls. Mid July.

(Published in *Gartenzeitung*, 1997.)

**'Blush' IX(c/d)**

See *martagon* 'Blush'.

**'Blushing Belle' VII(b/c)**

Parentage unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1961),

N: R.L. Strahm (1969), I: H.J. & R.L. Strahm (1971)

Inside white, each tepal with a broad, strong purplish red (54A) ray, tips white, throat strong greenish yellow (151A); outside deep pink on outer tepals, more white on inner tepals; spots scattered, deep red (53); nectaries strong greenish yellow (151A); pollen strong orange

(25B). Fls 200-300 mm wide; tepals 125 × 50 mm, margins smooth to slightly wavy, tips slightly to strongly recurved. Lvs scattered, 175 × 55 mm, dark green. Stems 1.5 m, green, with c.7 fls. Aug. (Misspelling: 'Blushing Bells'. Published in Strahm's sales sheet, 1970. As the fls mature, the purplish red colour spreads out from the ray over the white edge, and the fls turn slightly upwards.)

#### 'Blushing Belles' VIII(a-b/a-b)

Parentage: 'Damson' × Asiatic seedling 75-38-1  
R: L.M. Collicutt & W.G. Ronald (1982), G: L.M. Collicutt (1983), N: Morden Research Center, I: Morden Research Center (1996)

Inside moderate orange (170B), paling to tepal-tips, throat moderate orange to moderate purplish red (186B); outside moderate purplish red (186B), tepal-edges moderate orange (170B); spots absent; nectaries grey-purple; pollen moderate orange (170B). Fls 100 mm wide; tepals 80 × 32 mm, margins smooth, tips slightly recurved. Lvs scattered, 66 × 10 mm, mid green. Stems 0.45-1 m, mid green, with 7-10 fls. Mid July. (Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to 'Blushing Belle'. An Asiatic/Aurelian hybrid. Published in *The Lily Nook Cat.*, 1998: 19.)

#### 'Blushing Bells' VII(b/c)

Misspelling of 'Blushing Belle'.

#### 'Blushing Bride' VI(-/a)

Parentage: Trumpet hybrid  
R: L.B. Tuffery (c. 1966), N: L.B. Tuffery  
Fls light yellow; tepal-margins ruffled, wide, dawn-pink.

#### 'Blushing Maiden' I(a/b)

Parentage: Evans seedling 40-7 × Evans seedling 34-1  
R: W.D. Evans, N: W.D. Evans (1977), I: W.D. Evans (1977), REG: W.D. Evans (1977)  
Light purplish pink (62C), tepal-tips light purplish pink (62C), throat ivory-white; outside with moderate purplish red (186A) stripes fading to moderate yellow (160A) at tepal-tips; spots in throat. Lvs scattered, dark green. Stems 1 m.  
(Published in *Newsl. Ontario Reg. Lily Soc.*, Sept. 1977.)

#### 'Blushing Pink' VII(-/b)

Parentage unknown  
R: J.C. Smit, G: J.C. Smit, N: Van der Salm (Holland), I: Van der Salm (USA) (1987), REG: G. Van der Salm (1989)  
Inside softest pink (or pure white under some conditions), tepal-tips soft pink, throat soft golden yellow; outside soft pink; lightly marked with soft pink, raised spots; nectaries lime-green; pollen reddish brown. Tepals 90 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 45 mm, dark green. Stems 1.6 m, light green, with 6-23 fls. July.

#### 'Boa Vista' VIII(a/b)

Parentage: yellow-flowered seedling × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2004)

Inside vivid yellow (9B), throat pale greenish yellow (1D); outside with outer tepals brilliant yellow (13C), inner tepals light greenish yellow (8B); spots very few, greyish red (178A); papillae vivid yellow (9B); nectaries moderate olive-green (137B); pollen deep orange-yellow (163A); stigma greyish red (178A). Buds hairy. Fls 190 mm; tepals 120 × 44-62 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 170 × 15 mm. Stems 1.22 m, green with darker markings, and with c.5 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Bobby Shafto' VII(b-c/b-c)

Parentage: Coralbee Group × *auratum* 'Archangel'  
R: D.K. Kölli (1983), G: D.K. Kölli (1986), N: D.K. Kölli (1986), REG: D.K. Kölli (1994)  
Inside white, each tepal with a rose-pink or rose-coral central ray, with lighter rose suffusing into the central part, broad white edges and tip; throat rose-pink and white surrounding yellow to green nectaries; outside white; darker rose-pink spots on more than three-quarters of each tepal; nectaries green, bordered yellow; pollen rust-red; stigma pink. Fls 253 mm wide; tepals 155 × 70 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 198 × 58 mm, dark green. Stems 1.5 m, pale green/light apple-green, with 9-10 fls. Early to late Aug.

#### 'Bobin' VIII(a/b)

Parentage: 'Coral Ace' × mixed pollen of 'Abu Hassan' & 'Casio'  
R: K. Braun, N: K. Braun, I: K. Braun (1996), REG: K. Braun (1997)  
Inside crimson-red, tepal-centres tinted orange; outside red, midribs green-brown; brushmarks small, dark red-brown; spots brown, large, scattered, on two-thirds of each tepal; nectaries blackish red; pollen brown-orange; stigma brown. Fls 160 mm wide; tepals 91 × 39 mm, recurved. Lvs scattered, 92 × 16 mm, slightly glossy mid green. Stems 0.85 m, with short infl. Bulbs white. Late June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Bobo' VI(b/a)

Parentage: (*regale* × unknown) × unknown  
R: J. Dudek, N: J. Dudek, I: J. Dudek (2001), REG: J. Dudek (2001)  
Inside white, tepal-edges pinkish, throat yellow-green; outside white, yellow-green at base, midribs greenish with pinkish base; spots absent; nectaries green; pollen yellow-orange; stigma green. Fls 120 mm wide; tepals 120 × 52 mm, margins wavy, tips recurved; pedicels 70 mm long, brown-spotted. Lvs scattered, glossy green. Stems 1.3 m, rigid, with fls in an umbellate infl. Mid July.

#### 'Boehmer's Special' V(b/a)

See *longiflorum* 'Boehmer's Special'.

#### 'Bohemia' I(a/b)

Parentage: 'Connecticut King' × 'Redstart'

R: K. Braun (1979), N: K. Braun  
Inside dull red, throat with pale red frosting; outside red, midribs pale red; spots sparse, medium sized, blackish, on a quarter of each tepal; papillae and nectaries pale red; pollen orange-red. Fls 153 mm wide; tepals 80 × 36 mm, slightly recurved; pedicels slightly hairy, brown-tinged. Lvs scattered, 95 × 14 mm, glossy dark green. Stems 0.7 m, tinged with red-brown. Late June.  
(This cv. has a long flowering period.)

**‘Bohemian Rhapsody’ I(a/-)**

Parentage unknown  
R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V., REG: Hoff Quality First (1993)  
Inside vivid yellowish orange (30C), shading to strong reddish orange (169A) at tepal-tips and to deep red (53A) in the throat; outside deep red (53A) shading to vivid reddish orange (34A) at tepal-tips; spots dark red (187A), on basal part of each tepal; pollen dark reddish orange (175C); stigma strong orange (170A). Fls 175 mm wide; tepals 95 × 38 mm. Lvs scattered, 125 × 17 mm, dark green. Stems 0.92 m, mid green with darker markings, and with c.8 fls.

**‘Bohemia Star’ VI(b/a)**

Parentage unknown  
R: V. Baloun, N: V. Baloun, REG: V. Baloun (1990)  
Inside white, throat yellow; outside with brownish and greenish midribs at the base. Fls 140 mm wide, 100 mm long; tepals 145 × 50 mm, recurved, slightly twisted at tips, margins wavy; pedicels 70 mm long, spotted dark red-brown. Lvs scattered, 100 × 9 mm, dull dark green. Stems 1 m, spotted bluish. Early July.

**‘Bohemien’ VII(-/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)  
Inside greenish white (155C), midveins vivid red (46B), each tepal flamed light purplish pink (63D), throat strong yellow-green (144B) edged light greenish yellow (8B); outside greenish white (155C), midribs and outer tepals suffused with strong purplish red to deep purplish pink (64C/D); spots dark red (187C), in the throat; pollen vivid orange (28B). Fls 260 mm wide; tepals 125 × 57 mm, margins smooth, tips slightly recurved. Lvs scattered, 145 × 25 mm, mid green. Stems 0.85 m, green, with c.7 fls. May (under glass).  
(The spelling of the cv. epithet is deliberate.)

**‘Bohun’ I(a/b)**

Parentage: ‘Redstart’ × ‘Twilight’  
R: J. Bodalski (1981), G: J. Bodalski (1983), N: J. Bodalski (1985), I: J. Bodalski (1987), REG: J. Bodalski (1987)  
Inside red-purple, tepal-tips strong purplish red (60B), throat deep red (60A); outside strong purplish red (60C); spots black, on basal half of each tepal; pollen strong brown (172A). Tepals 95 × 26-38 mm, margins smooth,

tips slightly recurved. Lvs scattered, 130 × 13 mm, dark green. Stems 1.2 m, brown, with c.8 fls. July.

**‘Bohyně Nemesis’ VI(b-c/b)**

Syn. of ‘Nemesis’.

***bolanderi* S. Watson IX(b-c/a)**

Fls deep crimson, occasionally salmon-pink or pale yellow, throat yellowish; greenish at base outside; spots purple or maroon-brown in the throat, darker red or purple on the remainder of each tepal; nectaries green; anthers purple or reddish; pollen yellow-orange or brown; stigma purple. Fls up to 50 mm wide; tepals 30-45 × c.10 mm, tips slightly recurved. Lvs in whorls of up to 12, 30-50 × 10-15 mm, grey-green, up-curved towards tip. Stems up to 1.4 m, grey-green, sometimes speckled with brown, with up to 18 fls. W USA (S Oregon, N California).

**‘Bold Gold’ VI(a/a)**

Parentage: semi-upright yellow-flowered trumpet seedling × semi-upright orange-flowered trumpet seedling  
R: R.B. Hoffman (1990), G: R.B. Hoffman (1992), N: R.B. Hoffman (1993), I: R.B. Hoffman (1993), REG: R.B. Hoffman (1993)  
Inside golden/yellow, throat light yellow/golden; outside golden; spots absent; nectaries light yellow; pollen orange/yellow. Fls 200 mm wide; tepals 100 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm, mid green. Stems 1.5 m, mid green, with 6-10 fls. Aug.

**‘Bold Knight’ I(b/b)**

Parentage unknown  
R: H.E. Sunley (1969), N: H.E. Sunley, I: A.E. Delahey (1970)  
Fls vivid reddish orange (33A), tepals heavily overlaid with vivid red (45A) at centre, moderating at tips; spots dark red (59A) on basal two-thirds of each tepal; nectaries moderate yellowish pink (37C). Outer tepals slightly reflexed, inner flat. Stems 1.2 m, dark. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 11 (1978). Grown from seed sent by P.H. Wright. Listed as tetraploid in *The Lily Nook Cat.*, 1998: 15.)

**‘Bold Venture’ I(b/c)**

Parentage unknown  
R: M.E. Rollinson (1994), G: M.E. Rollinson (1995), N: M.E. Rollinson (1996), I: M.E. Rollinson (1996), REG: M.E. Rollinson (2001)  
Inside vivid reddish orange (30B), each tepal with a 20 mm-long flash of yellowish white (155D) at centre of base; outside vivid yellowish orange (30C); spots dark red (59A), quite bold, on basal half of each tepal; nectaries brilliant greenish yellow (140B); pollen brownish orange (171B); stigma dark red (59A). Fls 170 mm wide; tepals 90 × 42 mm, margins smooth, tips slightly recurved; pedicels 90-160 mm long. Lvs scattered, 130 × 10 mm. Stems 1.5 m, moderate brown (165A) with green undertones, and with 20 or more fls. Jan. (New Zealand). (Nomenclatural standard: colour print provided by registrant (WSY 0029657).)

**'Bolero' I(a/-)**

Parentage: selection from Mid-century Group

S: J. de Graaff, N: J. de Graaff

Fls crimson-brown and mahogany, spotted. Stems 1-1.5 m. June to July.

(Published in *Oregon Bulb Farms Cat.*, 1950.)

**'Bolgaria' Div. ?**

Given as a parent of 'Erlina'. No further details. Probably an error for 'Bolgariia'.

**'Bolgariia' I(a/b)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (pre 1996)

Fls deep ruby-red. Fls 150-160 mm wide. Stems 1.2-1.4 m, with 7-11 fls. July.

(Unaccepted spelling: 'Bolgarija'. Published in M.F. Kireeva, *Lilii*, 33 (2000).)

**'Bolgarija' I(a/b)**

Unaccepted spelling of 'Bolgariia'.

**'Bolid' I(a/-)**

Parentage: 'Zolotoe Leto' × 'Altyn'

R: A.V. Otroshko (1987), N: A.V. Otroshko, REG: A.V. Otroshko (1991)

Fls apricot with a few spots in centre; pollen red. Fls large. Stems 0.8 m.

**'Bologna' I(a/-)**

Parentage: 'Corina' × unnamed seedling

R: Lybelmex Hillegom B.V. (1981), G: Lybelmex Hillegom B.V. (1984), N: Lybelmex Hillegom B.V. (1987), I: Lybelmex Hillegom B.V., REG: De Lijster Hillegom B.V. (1989)

Inside strong red (46A), tepal-tips vivid reddish orange (42A); outside moderate red (179A); spots black; pollen vivid reddish orange (34B). Fls 160 mm wide; tepals 80 × 40 mm. Stems with 6-15 fls. June.

**'Bolos' I(c/-)**

Parentage: 'Destiny' × 'Amber Gold'

R: V. Strasser (1976), G: V. Strasser (1978), N: V. Strasser (1983), I: V. Strasser (1983), REG: V. Strasser (1986)

Fls yellow, throat green; spots heavy, purple, on half of each tepal; nectaries green. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.2 m, almost black, with c.29 fls. June to July.

**'Bolzano' VII(-/b-d)**

Parentage: seedling L 256 × seedling L 447

R: Vletter & Den Haan (1981), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside moderate purplish pink (74D), midveins strong purplish red (63A), tepal-tips ivory-white, throat light yellow-green (145C); outside moderate purplish pink (78D), midribs yellowish white/light yellow-green (155D/150D), inner tepals very pale purple (73D); spots small, deep purplish red (59B), in the throat; pollen

strong reddish orange (169A). Fls 210 mm wide; tepals 130 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 47 mm, mid green. Stems 1.2 m, green with darker markings, and with 3-5 fls. May.

**'Bombay' I(a/-)**

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1994)

Inside vivid reddish orange (32A), throat vivid reddish orange (30B) shading paler at edges; outside strong orange (170A) shading to strong reddish orange (169A) at tepal-margins; pollen moderate reddish brown (175A); stigma dark red (187A). Fls 180 mm wide; tepals 100 × 50 mm, slightly recurved. Lvs scattered, 80 × 13 mm, mid green. Stems 1 m, pale green with dark markings, and with c.6 fls.

**'Bona' I(b/b)**

Parentage: 'Chaco' × 'Connecticut King'

R: K. Braun (1989), N: K. Braun, REG: K. Braun (1990)

Inside apricot, tepal-centre tinted rose-pink; outside flushed with rose-pink; spots sparse, medium sized, brown, on a fifth of each tepal; papillae apricot; nectaries apricot; pollen orange. Fls 140 mm wide; tepals 74 × 30 mm, recurved; pedicels 80 mm long, marked with brown on a green ground. Lvs scattered, 80 × 13 mm, glossy green. Stems 0.8 m, with c.14 fls. Early July.

**'Bonanza' I(b/-)**

Parentage: selection from Mid-century Group

S: J. de Graaff, N: J. de Graaff

Fls orange-yellow. Stems 1-1.5 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1949.)

**'Bonanza Red' VII(-/c)**

See *L. × parkmanii* 'Bonanza Red'.

**Bon Bons Group I(a,b/-)**

Parentage: derived from several Asiatic, pastel-flowered

lilies, predominantly 'Peachblush' & 'Sunrise' hybrids

R: J.F. McRae & L.D. Marshall (1977/78), G: J.F.

McRae (1979/80), N: J.F. McRae & Columbia-Platte

Lilies (1982), I: Columbia-Platte Lilies (1982), REG:

Columbia-Platte Lilies (1984)

A high proportion of pink-tipped bicolours, others pink,

peach or cream; spotting variable; nectaries green or

pink; pollen colour variable. Tepals 60-80 × 20-30 mm,

margins smooth, tips slightly recurved. Lvs scattered,

100-180 × 20-30 mm, mid green. Stems 0.6-0.9 m,

green, some overlaid with dark plum, with 4-7 fls. June.

(Published in *Rex Lilies Cat.*, 1982. Included in *ILR Third Supplement* as Bon Bons grex.)

**'Bonfire' VII(b/b)**

See *L. × parkmanii* 'Bonfire'.

**'Bon Goût' I(a/-)**

Parentage: (Sundrop Group × 'Connecticut King') × ('Golden Coronet' × 'Bingo')

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies

B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside brilliant yellow (9C), each tepal flamed vivid yellow (12A); outside light to pale greenish yellow (10B/D), tepal-edges suffused with brilliant yellow (12B), midribs light yellow-green (145B); spots absent; nectaries greyish red (184A); pollen strong brown (172A). Fls 180 mm wide; tepals 90 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 130 × 13 mm, mid green. Stems 0.8 m, green with darker markings and c.4 fls. Apr. (under glass).

**'Bonnie Ann' VI(-/a)**

Parentage unknown

R: D.F. McPherson (c. 1972), G: D.F. McPherson (1974), N: D.F. McPherson, I: D.F. McPherson (1978), REG: D.F. McPherson (1978)

Inside strong orange (24A); outside with slight bronze tinge. Fls 90 × 130 mm.  
(Published in *Lilies and other Liliaceae*, 1978/9: 106.)

**'Bonnie Jean' I(a/c)**

Parentage: unnamed seedling × unnamed seedling  
R: R.H. Bazett (1989), G: R.H. Bazett (1991), N: R.H. Bazett, I: R.H. Bazett (1997), REG: R.H. Bazett (1997)  
Inside yellowish white (158D), tepal-tips, margins and throat flushed with pale purplish pink (62D); outside pale purplish pink (62D), midribs pale green; spots numerous, small, ruby-red, on basal three-quarters of each tepal; nectaries pale green; filaments purplish pink, white towards base; pollen strong orange (26A); stigma dark. Fls 120 mm wide; tepals 65 × 38 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 10 mm, dark green. Stems 1.1 m, mid green, with c.12 fls. Late June.

**'Bonny' I(c/-)**

Parentage: (down-facing white/pink bicolor × 'Connecticut King') × another clone of same parentage  
R: J.F. McRae (1978), G: Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1984), I: Columbia-Platte Lilies (1984), REG: Columbia-Platte Lilies (1984)  
Fls deep purplish red (58D) except for a strong purplish red (58C) throat; a ring of small spots extends 20 mm above nectaries; nectaries pink/green; pollen moderate reddish brown (166B). Tepals 60-80 × 30 mm, margins slightly ruffled, strongly to moderately reflexed. Lvs scattered, 120-180 × 20 mm, mid green. Stems 0.9-1 m, green, with 5-8 fls. June.  
(Published in *Rex Lilies Cat.*, 1984.)

**'Bon Ton' VII(-/b)**

Parentage: *auratum* × *rubellum*

R: L. Woodriff (1957), G: Strahm (1962), N: H.J. Strahm (196), I: H.J. & R.L. Strahm (1969), REG: Strahm's Lilies, Inc. (1981)

Inside deep red (53C), tepal-tips white, throat light green; outside deep pink; spots strong red (53C), from outer edge of deeper rays to white edges; nectaries chartreuse-green; pollen rusty orange. Fls c.170 mm wide, spicily scented; tepals c.90 × 45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 115 × 25 mm, mid green.

Stems 0.8 m, red-brown, with c.7 fls. July.  
(Published in Strahm's sales sheet, 1969.)

**'Bon Vivat' Div. ?**

Parentage unknown

R: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn

No further details.

**'Bon Voyage' I(a/-)**

Parentage: (unnamed seedling × 'Connecticut King') × 'Aristo'

R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1983), N: Bischoff Tulleken Lelies B.V. (1987), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside vivid orange-yellow (23A), the outer tepals dark red (187A) at tips; outside strong orange (25A); spots dark red (187A), on basal half of each tepal; nectaries dark red (187A); pollen moderate reddish orange (171A). Fls 170 mm wide; tepals 82 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 10 mm, mid green. Stems 0.65 m, with darker markings, and with c.6 fls. June (under glass).

**'Boo' VII(b-c/b-c)**

See *L. × parkmanii* 'Boo'.

**'Boogie Woogie' VIII(a-b/b)**

Parentage: seedling 132-1 × seedling 88-17-1

R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)

Inside pale yellow-green (4D), lighter toward tepal-tips, tepal-margins narrow, red-pink; outside pale yellow-green (4D); spots absent; papillae sparse; nectaries light green; pollen vivid orange (28B); stigma yellow-green. Fls 190 mm wide; tepals 125-130 × 34-54 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 171-240 × 38-65 mm, dark green. Stems 1-1.25 m, green with darker spots and stripes, and with 2-9 fls. Late.  
(An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096392).)

**'Bootleg' I(a/b)**

Parentage unknown

R: H.E. Hoepner (pre 1985), G: S.R. Kaul (1985), N: S.R. Kaul (1993), I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)

Inside strong clear golden orange, apical half of each tepal a lighter yellow; outside greenish orange; spots absent; nectaries orange; pollen rusty orange. Fls 180 mm wide; tepals 95 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 105 × 15 mm, dark green. Stems 0.9 m, mid green, with 10-15 fls. Very early (May to June in Wisconsin).

**'Bora' I(a/-)**

Parentage: 'Prune' × 'Papillon'

R: Gebr. N. & B. Laan & Zn (1977), G: Gebr. N. & B. Laan & Zn (1980), N: Gebr. N. & B. Laan & Zn (1984), I: Gebr. N. & B. Laan & Zn (1984), REG: Gebr.

N. & B. Laan & Zn (1985)

Inside deep pink (51C), throat pale yellow (19C); outside deep pink (51B); spots few, small, maroon-brown, on basal quarter of each tepal; nectaries cream-green; pollen light brown. Fls 160 mm wide; tepals 120 × 60 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1 m, dark green, with c.16 fls. Early June.

#### **‘Bordeaux’ I(a/-)**

Parentage: ((Olsen hybrid × ‘Enchantment’) F<sub>2</sub> × ‘Pirate’) F<sub>1</sub> × (‘Orange Light’ × ‘Connecticut King’) F<sub>1</sub>  
R: J. Bakker (1976), G: H.J. Bakker (1978), N: J. Bakker (1982), I: H.J. Bakker (1983), REG: H.J. Bakker (1983)  
Inside vivid/strong reddish orange (34A/C), flushed with vivid red (43A), throat with Azalea pink midribs; outside vivid/strong reddish orange (34A/C), midribs Spanish orange; spots small, dark brown, in the throat; nectaries Indian lake; pollen red-brown.

#### **‘Boreguard’ I(a/-)**

Misspelling of ‘Beaureguard’.

#### **‘Boris’ I(c/-)**

Parentage unknown

R: A. Weinreich (pre 1999), N: A. Weinreich  
Fls bright yellow; spots many. Stems 1 m. Mid July.  
(Published in ELG sales list, 2000.)

#### **‘Borneo Tiger’ I(c/-)**

Parentage: selection from Tiger Group  
S: J. de Graaff (c. 1951), N: J. de Graaff  
Stems 1.2-1.5 m. July.

#### **‘Bornholm’ II(c/-)**

See *L. × dalhansonii* ‘Bornholm’.

#### **‘Bosanova’ I(a-b/b-c)**

Parentage: (‘Brenda Watts’ × ((*dauricum* × ‘Connecticut King’) F<sub>2</sub> × *pumilum*)) × ((*dauricum* × ‘Connecticut King’) F<sub>2</sub> × ‘Golden Gleam’)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997), REG: B. Mičulka (1997)  
Inside pale rose-pink; outside whitish pink, midribs greenish; spots very few, small, brown-black, on a fifth of each tepal; nectaries white-granulated; filaments pink; pollen brown; stigma beige. Fls 125 mm wide; tepals 75 × 37 mm, margins gently waved, tips moderately recurved; pedicels 85 mm long, slender, brown-dotted. Lvs scattered, 105 × 10 mm, slightly glossy dark green. Stems 0.75 m, thick, green with darker spots at base, and a fairly long infl. Mid June.

#### **‘Bosom-friend’ I(a/-)**

Parentage: brushmarked seedling × brushmarked seedling  
R: J. Vasarietis (1986), G: J. Vasarietis (1989), N: J. Vasarietis (1991), I: J. Vasarietis (1991), REG: J. Vasarietis (1992)  
Fls brilliant yellow (10A); each tepal with a conspicuous, blood-red brushmark and few, if any, accompanying spots; nectaries greenish white; pollen brownish orange.

Fls 130 mm wide; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 0.75 m, brownish green, with c.6 fls. Early July.

#### **‘Bosporus’ I(a/-)**

Parentage: seedling RS 537 × seedling RS 516  
R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), REG: Vletter & Den Haan (1990)  
Inside deep purplish pink (58D); outside moderate to light purplish pink (62B/C), shading to strong purplish red (59D) at tepal-margins; spots many, small, dark red (187A), on basal half of each tepal; pollen vivid reddish orange (34B). Fls 170 mm wide; tepals 80 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 1.45 m, green with some darker marking, and with c.8 fls. May.

#### **‘Boston’ I(a/-)**

Parentage unknown

R: Fa Jaap Boon (1975), G: Fa Jaap Boon (1977), N: Fa Jaap Boon (1984), I: Fa Jaap Boon (1984), REG: Fa Jaap Boon (1986)  
Inside brownish red to capsicum-red, midveins burnt brown-red; outside moderate reddish orange (179C) to violet-red, tepal-edges brown-red; spots dark brown, on half of each tepal; nectaries violet-red; pollen majolica-brown. Fls 150 mm wide; tepals 80 × 50 mm. Lvs scattered, 190 × 10 mm, dark green. Stems 1.75 m, green tinged with brown, with c.9 fls.

#### **‘Botero’ VII(a/b)**

Parentage: seedling PP × seedling 91-66  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside yellowish white (155D), midveins light yellow (10C), throat yellowish white (155D); outside yellowish white (155D), midribs light yellow-green (150D), light yellow (10C) towards top; spots brilliant yellow (10A); papillae present; nectaries brilliant yellow-green (150A); pollen moderate reddish orange (171A); stigma dark red (183A). Fls 230 mm wide; tepals 110 × 40-62 mm, margins slightly ruffled, tips recurved. Lvs 180 × 45 mm. Stems 1 m, light green, with c.8 fls.

#### **‘Botticelli’ I(a/b)**

Parentage: seedling AG 94-2 × seedling AJ 4-12  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)  
Inside vivid orange (28A) on basal half of each tepal, strong orange (25A) towards tip, edged vivid orange (28A), throat pale yellowish pink (27C); outside of inner tepals pale orange-yellow (24D) towards edges changing into vivid orange (28B), edged vivid orange (28A), midribs strong orange-yellow (24B), outside of outer tepals strong orange-yellow (24B), edged vivid orange (28B), midribs brilliant yellow (20A); spots and papillae

absent; nectaries pale yellowish pink (27C); pollen vivid orange (28A); stigma strong reddish orange (42B). Fls 200 mm wide; tepals 110 × 50-65 mm, margins smooth, tips slightly recurved. Lvs scattered, 110-140 × 20-25 mm. Stems 1.3-1.5 m, green, with c.7 fls.

#### **'Boulevard' VII(a-b/b)**

Parentage: ((*L. × parkmanii* 'Allegra' × 'Star Gazer') × *L. × parkmanii* Little Rascal Group) × ((*L. × parkmanii* Little Rascal Group × 'Star Gazer') × 'Merci')

R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside yellowish white (155D), midveins light greenish yellow (8B); outside yellowish white (155D), midribs paler than brilliant greenish yellow (151D), with strong yellow-green (144B) at base and top; spots brilliant yellow (8A), on two-thirds of each tepal; papillae brilliant yellow (8A); nectaries strong yellow-green (144B); pollen moderate reddish orange (171A) and strong orange (25A); stigma dark red (187A/B). Fls 215 mm wide; tepals 120 × 40-55 mm, margins ruffled, tips recurved. Lvs scattered, 170 × 40 mm, mid green. Stems 0.8 m, green with darker markings, and with 4-6 fls. July.

#### **'Bountiful' I(b/b)**

Parentage: ('Pink Tiger' × unknown) × 'Discovery'  
R: A.W.A. Baker (c. 1985), G: A.W.A. Baker (1987), N: A.W.A. Baker (1993), REG: A.W.A. Baker (1993)

Fls pale pink with relatively inconspicuous, small, red spots; pollen brown. Fls 100 mm wide; tepals 80 × 30 mm, margins smooth, tips recurved. Lvs scattered, 115 × 10 mm, dark green, numerous. Stems 0.9 m, with dense brown speckling, 7-11 fls and very numerous, small bulbils. Mid June to mid July.

(The epithet alludes to the many stem-bulbils. It is not known whether the 'Pink Tiger' in the seed parent was raised by Woodriff or Laan.)

#### **'Bounty' I(c/-)**

Parentage: *lancifolium* × (*leichtlinii* var. *maximowiczii* × unknown)

R: J. de Graaff (c. 1959), N: J. de Graaff  
Fls deep yellow. Stems 1.2 m. July.

#### **'Bourbon Brilliant' VIII(a/b)**

Parentage: 'Dame Blanche' (tetraploid form?) × seedling LO 93003.2BT

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Beheer B.V. (2004)  
Inside yellowish white (155D), greenish white (157D) along midveins, throat light yellow-green (142D); outside yellowish white (155D), midribs light yellow-green (144D) at base and top, greenish white (157D) in middle part; spots absent; papillae yellowish white (155D); nectaries light yellow-green (142D); pollen strong reddish-orange (31A); stigma light yellow-green (138D). Fls 270 mm wide, slightly fragrant; tepals 161 × 53-68 mm, margins smooth, tips recurved. Lvs scattered, 190 × 44 mm. Stems 0.9-0.95 m, green with darker markings at

base, and with c.3 fls.

(*A. longiflorum*/Oriental (LO) hybrid. Included in *ILLR Twenty-fourth Supplement* as a *longiflorum*/Asiatic (LA) hybrid.)

#### **'Bourgaei' IX(c/d)**

See *pardalinum* 'Bourgaei'.

#### **'Bower' VI(-/a)**

See *L. × imperiale* 'Bower'.

#### **'Bowie' I(a/-)**

Parentage unknown

R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V., REG: Hoff Quality First (1993)

Inside strong reddish orange (169A) at tepal-tips and edges, shading to vivid orange (28A) above the throat and deep red (53A) in the throat; outside strong reddish orange (34C), tepal-tips vivid reddish orange (34A), brilliant orange (29A) at base, striped deep red (53A) and vivid reddish orange (34A) on the basal parts, outer tepals tipped strong yellow-green (143A); a few papillae present; pollen strong orange (169C); stigma dark red (187A). Fls 190 mm wide; tepals 105 × 50 mm. Lvs scattered, 170 × 20 mm, dark green. Stems 0.9 m, mid green, with c.5 fls.

#### **'Bowlesianum' IV(b/a)**

Parentage: *roezlii* × *washingtonianum*

R: A. Perry (c. 1920), N: A. Perry

Fls lemon-yellow, faintly spotted. Tepals recurved. (Published in *JRHS* 46: xl (1921). Named after E.A.

Bowles. No longer extant. It is not known whether the seed parent was *roezlii* Purdy (= *pardalinum* subsp. *vollmeri*) or *roezlii* Regel. (= *pardalinum*.)

#### **'Bowles' Variety' VI(-/a)**

See *L. × imperiale* 'Bowles' Variety'.

#### **'Brabander' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Brabander'.

#### **'Bradano' VIII(b/b)**

Parentage: seedling PG 95-57 × seedling RH 95-01

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2001), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals light greenish yellow (8C), brilliant yellow (8A) along midveins, outer tepals pale yellow (8D), brilliant yellow (11A) along midveins, tepal-margins light greenish yellow (8B), throat pale yellow (8D); outside with inner tepals pale yellow (8D), tepal-margins light greenish yellow (8C), outer tepals with strong purplish red-flushed (60C) midribs; spots absent; papillae brilliant yellow (8A); nectaries strong yellow-green (144A); pollen orange-brown; stigma dark purple (79A). Fls 210 mm wide, slightly fragrant; tepals 150 × 55-70 mm, margins smooth, tips strongly recurved. Lvs scattered, 170-220 × 30-50 mm, dark green. Stems 1.25-1.5 m, green with darker markings, with c.4 fls. (An Oriempet (OT) lily.)

**'Braga' VII(a-b/c)**

Parentage: seedling 92-35 × seedling RF 94-1

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside deep red to strong purplish red (60A/C), throat yellowish white (155D); outside deep purplish red (61A) on a paler ground, base yellowish white (155D), midribs light greenish yellow (1C), tipped strong yellow-green (144B); spots deep purplish red (59B); papillae same colour as tepals, in the throat; pollen darker than strong brown (172A); stigma green-grey, speckled with purple. Fls 210 mm wide; tepals 115-122 × 40-65 mm, margins slightly ruffled, tips recurved. Lvs scattered, 150 × 40 mm. Stems 1.1 m, green, with c.3 fls.

**'Bramante' VII(a/b)**

Parentage: seedling 92-35 × seedling RF 94-1

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside strong purplish red (60C) with a yellowish white (155D) base; outside strong purplish red (60C) on a white ground, up to about a third of each tepal, with a little yellowish white (155D) at base, midribs at base and top strong yellow-green (145A), fading into tepal; spots deep red (60A), on up to a half of each tepal; papillae in the throat; nectaries strong yellow-green (145A), surrounded by light greenish yellow (8C) and fading into the midvein; pollen moderate reddish brown (175A); stigma yellowish white (158D), speckled dark red (59A). Fls 200 mm wide; tepals 130 × 40-65 mm, margins slightly ruffled, tips recurved. Lvs scattered, 135 × 35 mm. Stems 1-1.2 m, green with lots of darker markings, and with c.3 fls.

**'Bramerton Delight' VII(-/b)**

Parentage: 'Stella Crozier' × 'Tranquil Dawn'

R: G.G. & F.S. Blake (1984), G: F.S. Blake (1988), N: F.S. Blake (1993), I: F.S. Blake (1993), REG: F.S. Blake (1994)

Inside pale purplish pink (56A) shading to pale purplish pink (56C), throat light yellow (14D); outside pale purplish pink (56A) shading to pale purplish pink (56D); lightly spotted moderate purplish red (59C); nectaries moderate yellow-green (143D); pollen greyish red (178A). Fls 200 mm wide; tepals 120 × 70 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 220 × 60 mm, dark green. Stems 2.2 m, moderate yellow-green (147C), with c.15 fls. Jan. to Feb. (Australia).

**'Bramerton Dream' VII(-/b)**

Parentage: 'Stella Crozier' × 'Tranquil Dawn'

R: G.G. & F.S. Blake (1984), G: F.S. Blake (1988), N: F.S. Blake (1993), I: F.S. Blake (1993), REG: F.S. Blake (1994)

Inside pale purplish pink (56C), throat brilliant yellow (14C); outside pale purplish pink (56D); very lightly spotted strong purplish red (61B); nectaries brilliant

yellow-green (142B); pollen greyish red (178A). Fls 150 mm wide; tepals 95 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 220 × 50 mm, dark green. Stems 1.5 m, moderate yellow-green (147C), with c.15 fls. Jan. to Feb. (Australia).

**'Bramford Dawn' I(b/-)**

Misspelling of 'Brampford Dawn'.

**'Bramford Milkmaid' I(b/-)**

Misspelling of 'Brampford Milkmaid'.

**'Brampford Dawn' I(b/-)**

Parentage: dark-flowered seedling × 'Gaiety'

R: F.J. Holmes, N: F.J. Holmes (1976), REG: F.J. Holmes (1976)

Fls strong orange (26B), tepal-tips and centre flushed with strong yellowish pink (38A); fading to salmon-pink; spots dark red.

(Published in *Lilies and other Liliaceae*, 1976: 89 erroneously as 'Bramford Dawn'.)

**'Brampford Gold' I(b/-)**

Parentage: selection from Shakespeare Group

S: G.W. Darby, N: F.J. Holmes (1965), REG: F.J. Holmes (1977)

Inside vivid yellow (12A); outside flushed with moderate reddish orange (178D); spots small, brown. Stems c.1 m, with 10-12 fls.

(Published in *Lilies and other Liliaceae*, 1977: 76.)

**'Brampford Milkmaid' I(b/-)**

Parentage: 'Gaiety' × 'Brampford Rose'

R: F.J. Holmes, N: F.J. Holmes (1976)

Inside light greenish yellow (5D); outside of 3 larger tepals flushed with moderate yellowish pink (31D); spots brown.

(Published in *Lilies and other Liliaceae*, 1976: 89 erroneously as 'Bramford Milkmaid'.)

**'Brampford Rose' I(c/-)**

Parentage: selection from Shakespeare Group

S: F.J. Holmes, N: F.J. Holmes (1975), REG: F.J. Holmes (1975)

Fls strong red (51A), slightly spotted purple brown; a small yellow flush above each nectary. Stems 0.8 m. July.

(Published in *Lilies and other Liliaceae*, 1975: 91.)

**'Brandaris' I(a/-)**

Parentage: unnamed orange-flowered hybrid × unnamed orange-flowered hybrid

R: Gebr. N. & B. Laan & Zn (1986), G: Gebr. N. & B. Laan & Zn (1988), N: Gebr. N. & B. Laan & Zn (1992), I: Gebr. N. & B. Laan & Zn (1992), REG: Gebr. N. & B. Laan & Zn (1993)

Inside vivid reddish orange (32A) along midveins, shading from strong orange (25A) near midveins to vivid yellowish orange (30C) and vivid reddish orange (30B) at tepal-edges; outside vivid yellowish orange (30C) shading to vivid reddish orange (32A) at tepal-edges with strong greenish yellow (153B/C) stripes on and beside the

midveins; spots dark red (187A), in the throat; nectaries moderate reddish orange (35A); pollen moderate reddish brown (166B). Fls 200 mm wide; tepals 100 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 14 mm, dark green. Stems 1.15 m, pale green, with c.9 fs.

Trade designation: LAVA.

### **‘Brandenburger Diplom’ I(a/c)**

Parentage: ‘Diskus’ × ‘Impact’

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1996), I: G. Steinbrück (2001), REG: G. Steinbrück (2003)

Inside light orange (26C) slightly tinged with red, throat suffused with soft pale green in nectary area; outside light orange (26C), midribs soft green; spots few, small, black-red, towards base of each tepal; nectaries soft pink towards margins, white-hoary, with deep furrow; pollen moderate reddish brown (175A); style long, green-white; stigma moderate purplish red (64A). Fls 140 mm wide; tepals 60 × 35 mm, margins smooth, tips not recurved; pedicels long, dark. Lvs scattered, 75 × 14 mm. Stems 0.9 m, black-violet, with 5-8 fs. Mid July.

(Published in ELG sales list, 1999. Nomenclatural standard: colour print provided by registrant (WSY 0038766).)

### **‘Brandenburger Hoffnung’ I(b/c)**

Parentage: ‘Dawn Star’ × Asiatic seedling

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Inside strong greenish yellow (153C), pale yellow (160D) towards tepal-tips; outside moderate yellow (160A); spots many, very small, strong red (46A), on basal half of each tepal; nectaries soft yellow-green; pollen dark reddish orange (175C); style vivid yellow-green (154A); stigma dark red (59A). Fls 150 mm wide; tepals 55 × 30 mm, margins smooth, tips not recurved; pedicels unusually long, horizontal, unbranched. Lvs scattered, 100 × 10 mm. Stems 0.8 m, dark green to black, with c.15 fs. Mid to late July.

### **‘Brandenburger Humor’ I(b/-)**

Parentage: ‘Aelita’ × ‘Zitronenmädchen’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)

Inside yellowish white (158C), throat pale yellow (158A); outside yellowish white (158C); spots many, medium sized, moderate brown (200C), on three-quarters of each tepal; nectaries moderate yellow-green (138C); pollen vivid reddish orange (33A). Fls 120 mm wide; tepals 60 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 70 × 15 mm, mid green. Stems 0.7 m, rather dark green, with c.12 fs. July.

### **‘Brandenburger Nachtigall’ I(a/-)**

Parentage: yellow-/white-flowered Asiatic seedling × mixed pollen of a brushmarked seedling & ‘Brushstroke’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N:

G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Inside and outside greenish white (155C); each tepal with a purplish brushmark and associated spotting on the basal part; nectaries soft green; pollen dark red (187B); stigma moderate red (181B). Fls 150 mm wide; tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm, dark green. Stem 1 m, rather dark green, with c.25-30 fs. Early July.

### **‘Brandenburger Revue’ I(b/c-d)**

Parentage: (‘Medora’ × ‘Mont Blanc’) × Asiatic seedling  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Inside pale yellow (158A), becoming greenish white (157D) towards tepal-tips, throat pale yellow (158A); outside pale yellow (158A); spots absent; nectaries pale greenish yellow (160C); pollen greyish reddish brown (200B); stigma brownish orange (166C). Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm. Stems 0.8 m, dark green to black, with c.10 fs. Mid to late July.

### **‘Brandenburger Rotgold’ I(a/b)**

Parentage: ‘Impala’ × seedling AS12 (ex Weidemann)

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1999), I: G. Steinbrück (2000), REG: G. Steinbrück (2002)

Inside strong orange (168B); spots scattered, tiny, dark reddish orange (175B), on basal quarter of each tepal; nectaries yellowish grey (156C), tinged with soft pink at first; pollen vivid reddish orange (34A); stigma strong reddish orange (169A). Fls 120 mm wide; tepals 82 × 47 mm, margins smooth, tips not recurved. Lvs scattered, 50 × 24 mm. Stems 0.9 m, dark green, with c.7 fs. Mid June.

(Nomenclatural standard: colour print provided by registrant (WSY 0032246).)

### **‘Brandywine’ I(b/-)**

Parentage: ‘Brenda Watts’ × yellow-flowered, spotted seedling of *L. × hollandicum*

R: S.L. Emsweller, N: S.L. Emsweller

Fls strong orange (25A), with oxblood-red (HCC 00823) spots. Fls 75-100 mm wide, with slightly recurved tepals. Stems 1 m. June to July.

(Published in *USDA Notice of Release and Introduction*, 1953.)

### **‘Branko’ VII(b/b)**

Parentage: seedling 91-28 × seedling RM 95-40

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals pale purplish pink (65C), outer tepals very light purple (75C), margins very pale purple (69D), moderate purplish pink (65A) along midveins, throat yellowish white (155D); outside with inner tepals yellowish white (155D) with pale purplish pink (65C), midribs light yellow-green (154D), outer tepals strong

purplish red (63B), light purplish pink (65B) towards margins, midribs light yellow-green (154D); spots absent; papillae few, deep purplish pink (70C); nectaries strong yellow-green (144C); pollen dark reddish orange (172B); stigma moderate yellow-green (139D). Fls 200 mm wide; tepals 130 × 50-70 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 130 × 45 mm, dark green. Stems 0.9-1.2 m, green, darker at base, with 3-6 fls.

**‘Brasil’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Fa A.J. van der Zwet, REG: Fa A.J. van der Zwet (2003)

Inside strong orange-yellow (17A), midveins and area above nectaries strong orange (25A), throat vivid yellow (14A); outside vivid orange-yellow (21A), midribs vivid yellow (17C); spots few, dark red (59A); papillae strong orange (25A); nectaries moderate yellowish green (137D); pollen strong orange (170A); stigma dark red (59A). Fls 165 mm wide; tepals 105 × 60 mm, margins smooth, tips recurved. Lvs 140 × 25 mm. Stems 1.3 m, green, with 5-7 fls.

**‘Brasilia’ I(a-b/b)**

Parentage unknown

R: Vletter & Den Haan (pre 1989)

Inside with inner tepals strong reddish orange/strong yellowish pink (31C/32C) at base, changing to light yellowish pink (27A) towards top, each tepal with a strong orange (169B) patch at base, midveins strong orange (25A), towards top light orange-yellow (16B/C), outer tepals strong orange/strong yellowish pink (169A/B to 32C), pale yellow (18C) towards tip, midveins strong orange (25A), throat deep pink (48A) to strong reddish orange (31A); outside with outer tepals deep pink (52C) at base, pale yellow (18C) towards tip, inner tepals light orange-yellow/light yellowish pink (25D/19B); spots dark red; papillae present; nectaries purple-red; pollen orange-brown; stigma purple-red. Tepals short, margins ruffled, tips recurved. Lvs scattered, of medium length, light green. Stems of medium height to tall, green with some darker markings.

(Granted Dutch PBR (LEL 679) in 1991, but not registered - the stock was destroyed by the raiser.)

**‘Brass Band’ VI(-/a)**

Parentage: Aurelian origin

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls rich yellow. Stems 1.5 m. July.

**‘Bratislava’ IX(a-b/a)**

See *candidum* ‘Bratislava’.

**‘Brauner Bär’ I(b/b)**

Parentage: (‘Pink Champagne’ × unknown) × unknown  
R: C. Feldmaier, N: C. Feldmaier (1972), I: C. Feldmaier (1972), REG: C. Feldmaier (1978)

Fls strong orange (168A) to moderate orange-yellow (168D), with reddish veins and large brown spots in centre; nectaries moderate orange-yellow (168D); pollen orange-brown. Tepals 80 mm long, tips reflexed. Lvs

scattered, bright green. Stems 1.5 m, brown, with long white hairs, and with bulbils.

(Published in *Lilies and other Liliaceae*, 1978/9: 106.)

**‘Brauner Fuchs’ I(a/-)**

Parentage unknown

R: H. Böhm (pre 1987), N: H. Böhm, REG: H. Böhm (1988)

Fls red, with a darker centre and brownish tepal-tips; spots large, dark brown. Fls 130 mm wide.

(Published in German Lily Group sales list, 1987.)

**‘Bravissimo’ I(a/-)**

Parentage: Asiatic seedling × (‘Connecticut King’ × unknown)

R: Bischoff Tulleken Leliecultuur B.V. (1974), G: Bischoff Tulleken Leliecultuur B.V. (1977), N: Bischoff Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken Leliecultuur B.V. (1983), REG: Bischoff Tulleken Leliecultuur B.V. (1983)

Inside brilliant yellow (13B) flushed with green, tepal-tips yellow, throat yellow; outside vivid yellow (9B); spots absent; nectaries yellow-green; pollen bright brown. Fls 110 mm wide; tepals 90 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 0.9 m, green, with c.8 fls. Early July.

**‘Bravo’ I(a/-)**

Parentage: ‘Showboat’ × ‘Red Carpet’

R: E.A. McRae (1975), N: Oregon Bulb Farms, Inc. (1982), I: Oregon Bulb Farms, Inc. (1982), REG: Oregon Bulb Farms, Inc. (1983)

Inside vibrant red to strong red (39A), shading to strong reddish orange (31A) in centre of tepals, tips vibrant red, throat orange-red; outside strong red (39A) overlaid with strong red (47B) on midribs; spots absent; nectaries green; pollen greyish red (178A). Fls 160-180 mm wide; tepals 100 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 50-80 × 30-50 mm, dark green. Stems 1 m, dark purple, with 6-25 fls. Late June.

**‘Bravoure’ VIII(a-b/b)**

Parentage: (unnamed seedling × ‘Sahara’) × (*longiflorum* × ‘Aristo’)

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (1999), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside brilliant yellow (20A), ageing to pale yellow (c.18D), base of midveins orange-green to orange; outside light yellow (18A); spots and papillae present; nectaries orange-green; pollen reddish brown; stigma orange-yellow. Fls 220 mm wide; tepals 110 × 50 mm, margins very slightly ruffled, tips recurved. Lvs scattered, 180 × 20 mm. Stems 0.8 m, with dark spots and stripes, and with 4-6 fls. Early.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Breezand’ VII(-/d)**

Parentage: (white-flowered seedling × ‘Star Gazer’) × (white-flowered seedling × ‘Star Gazer’)

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside deep purplish pink (64D), each tepal with a large ivory-white flame, throat strong yellow-green (145A); outside of outer tepals moderate purplish red (186B), edges yellowish white (155B), midribs pale yellow to yellowish white (158B/C), outside of inner tepals moderate purplish pink (186D) on an ivory ground; some papillae in the throat; nectaries pale yellow-green (183C); pollen strong reddish orange (169A). Fls 270 mm wide; tepals 140 × 55 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 140 × 40 mm, mid green. Stems 0.8 m, green, with c.5 fls. June (under glass).

#### 'Breezer' I(b/b)

Parentage unknown

R: H.E. Hoepner (1987), G: H.E. Hoepner (1988), N: H.E. Hoepner (1991), REG: H.E. Hoepner (1991)  
Inside pure white, with a touch of green deep in the throat; outside white, midribs light green; spots absent; nectaries with a touch of green; pollen orange-bronze. Tepals 44 × 33 mm, margins smooth, tips slightly recurved, rather broad, blunt. Lvs scattered, 85-90 × 7-8 mm. Stems 1.3 m, mid green, with 10-15 fls. Midseason.

#### 'Brenz' VI(a/-)

Parentage: Aurelian seedling × Aurelian seedling

R: V. Strasser (1976), G: V. Strasser (1980), N: V. Strasser (1981), I: V. Strasser (1984), REG: V. Strasser (1997)  
Inside orange; outside red. Tepals 115 mm long, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems rather dark green, with 9-10 fls. Mid July.

#### Bremer Stadtmusikanten Group VII(-/-)

Parentage: derived from *auratum*, *L. × parkmanii* Imperial Crimson Group & 'Swan Lake'

R: A. Schmidt (pre 1983), N: A. Schmidt, REG: A. Schmidt (1988)

Fls white, throat green; midribs light yellow to greenish; more-or-less spotted pink. Fls 180-200 mm wide, pleasantly scented. Stems 1.2-1.8 m. July to Aug. (Published in German Lily Group sales list, 1983. Included in *ILR Seventh Supplement* as Bremer Stadtmusikanten grex.)

#### 'Brenchleyense' IX(a/b)

See *dauricum* 'Brenchleyense'.

#### 'Brenda' I(a/-)

Parentage: 'Rosita' × mixed pink-flowered seedlings

R: K. de Jong (1982), G: De Jong Lelies Holland B.V. (1984), N: De Jong Beheer B.V. (1987), I: De Jong Lelies Holland B.V. (1987), REG: De Jong Beheer B.V. (1988)  
Inside rhodamine-pink, each tepal with a strong to moderate purplish pink (62A/B) flame, throat with ivory-white blotches, base rosy; outside moderate purplish red (64A). Fls 90 mm wide. Stems 0.85 m, with 10-15 fls. June.

#### 'Brenda Watts' I(b/-)

Parentage: Stenographer Group selection from Preston Group

S: I. Preston, N: I. Preston (1939)

Fls brilliant orange-red, spotted dark brown at centre. Fls 140 mm wide; tepal-tips reflexed. Stems 1-1.5 m. June to July.

(Published in *LYB* 8: 156, fig. 25 (1939).)

#### 'Brennero' I(a/-)

Parentage: seedling W 88-4 × seedling W 91-15

R: Gebr. Vletter & Den Haan (1994), G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1997), I: Gebr. Vletter & Den Haan (1997), REG: Gebr. Vletter & Den Haan (1997)

Inside yellowish white (155B) with a small light yellow (12C) spot above each nectary; outside pale yellow-green/yellowish white (155A/B), midveins strong yellow-green (144C), tipped strong yellow-green (144B); spots and papillae absent; nectaries strong yellow-green (143B), with a strong yellow-green (143C) rim; pollen a little stronger in colour than moderate orange (167A); stigma greyish brown (166A). Fls 175 mm wide; tepals 90 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 20 mm, mid green. Stems 1 m, green, with c.2 fls.

#### 'Brenta' VII(a-b/b)

Parentage: seedling RF 94-05 × seedling RM 97-30

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2003), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals dark red (59A/187B), margin in basal third yellowish white (155D), in apical two-thirds yellowish white with moderate purplish red (59C) veins, outer tepals (59B), narrow margin yellowish white (155D), dark red (59A) along midveins, throat yellowish white (155D); outside with inner tepals deep red (60B), margin in basal part veined yellowish white (155D), in apical part narrow, yellowish white (155D), midribs at base with a small moderate red (183C) dot, changing into deep red (60C) with some strong yellow-green (144C) dots; spots absent; papillae deep reddish purple (77A); nectaries light green with a narrow brilliant greenish yellow (1B) edge; pollen moderate orange (172D); stigma brilliant violet (92A). Fls 180 mm wide; tepals 110 × 38-54 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 165 × 35 mm. Stems 1-1.35 m, brownish with green, with c.3 fls.

#### 'Brevifolium' I(a/b)

See *L. × maculatum* 'Brevifolium'.

#### 'Briana' II(c/c)

Parentage: unnamed hybrid × unnamed hybrid

R: F. Tarlton (1987), G: M. Joslin (1996), N: F. Tarlton & W. Kuyt (1999), REG: Parkland Perennials (1999)  
Inside moderate purplish red (186B); outside moderate purplish pink (186D); spots numerous, large, dark red (187A), on basal two-thirds of each tepal, each on a white ground, and a few extending up margins; nectaries

moderate purplish red (186B); pollen strong orange (170A); stigma moderate purplish red (186A). Fls 80 mm wide, slightly scented; tepals 40 × 15 mm, margins smooth, tips not or slightly recurved. Lvs whorled, 100 × 35 mm. Stems 1.2 m, moderate yellowish green (139B), with 8-10 fls. Early July.  
(Nomenclatural standard: colour print supplied by F. Tarlton (WSY 0015382).)

#### **‘Brienne’ I(a/c-d)**

Parentage: ‘Suntan’ × unknown  
R: J.H. Bond (1990), G: J.H. Bond (1992), N: J.H. Bond (1994), I: J.H. Bond, REG: J.H. Bond (1999)  
Inside uniformly vivid yellow (13A); outside brilliant yellow (13B), outer tepals with green midribs which fade to greenish yellow towards top, and with dark green tips; spots very few, small, reddish, towards base of each tepal; nectaries green; pollen brownish orange (172C); stigma greenish yellow. Fls 105 mm wide; tepals 75-80 × 17-28 mm, margins smooth, tips slightly recurved at first, becoming more strongly so with age. Lvs scattered, 152 × 12 mm. Stems 1.2-1.3 m, very dark brown, with up to 42-48 fls in a candelabrum-like infl. Mid July.  
(Named after the registrant’s granddaughter.  
Nomenclatural standard: colour print provided by registrant (WSY 0020834).)

#### **‘Brianza’ I(a/-)**

Parentage: seedling RS 89-36 × seedling RS 91-1  
R: Gebr. Vletter & Den Haan (1994), G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1997), I: Gebr. Vletter & Den Haan (1997), REG: Gebr. Vletter & Den Haan (1997)  
Inside deep red (60A), fading towards tepal-tips, up to a third of each tepal strong purplish red (60B), throat deep red (60A); outside deep red (60A) on a white ground, inner tepals darker towards edges, outer tepals edged deep red (60A); a few dark red (187A) spots and some papillae in the throat; nectaries strong yellow-green (144B), white-hairy; pollen dark reddish orange (175B); stigma dark pink (182C). Fls 160 mm wide; tepals 90 × 35-45 mm, margins smooth, tips not recurved. Lvs scattered, 155 × 30 mm, mid green. Stems 1.2 m, green with some darker markings, and with 4-6 fls.

#### **Bridal Group VII(b-c/-)**

Parentage: a range of hybrids developed from ‘Flamingo’ (of Woodriff), *L. × parkmanii* ‘Journey’s End’, Little Fairies Group & white-flowered *speciosum*  
R: W.F. Doreen (1982), G: W.F. Doreen (1985), N: W.F. Doreen (1987), I: Lilies International Ltd (1987), REG: W.F. Doreen (1987)  
Fl. colour varying from dark pink, rosy pink, shell-pink to white; some fls spotted. Stems c.1 m, with c.10 fls.  
(Published in *ILR Sixth Supplement* as Bridal Series (group).)

#### **Bridal Blush Group VII(-/-)**

Parentage: ‘Flamingo’ (of Woodriff) × a white-flowered *speciosum*  
R: W.F. Doreen (1982), G: W.F. Doreen (1985), N: W.F.

Doreen (1987), I: Lilies International Ltd, REG: W.F. Doreen (1987)

Fls light purplish pink (65B), tepal-tips and outside moderate purplish pink (65A), throat yellowish white (155D); spots absent; papillae present; nectaries strong greenish yellow (151C); pollen strong orange (16A). Tepals 100 × 40 mm, margins ruffled; tips strongly recurved. Lvs scattered, 130 × 50 mm, dark green. Stems 1 m, strong yellow-green (144C), with c.10 fls. Jan. to Feb. (New Zealand).

(Published in *Lilies International Ltd Cat.*, 1987. Included in *ILR Sixth Supplement* as Bridal Blush grex.)

#### **Bridal Bouquet Group VII(-/d)**

Parentage: *L. × parkmanii* ‘Journey’s End’ × selected form from Little Fairies Group  
R: W.F. Doreen (1982), G: W.F. Doreen (1985), N: W.F. Doreen (1987), I: Lilies International Ltd (1987), REG: W.F. Doreen (1987)  
Fls deep to moderate purplish pink (70C/D), tepal-tips strong reddish purple (70B), throat light greenish yellow (8C) to vivid yellow-green (154A); spots deep purplish red (61A), on half of each tepal; nectaries strong yellow-green (144C); pollen strong orange (26A). Tepals 130 × 50 mm. Lvs scattered, 130 × 50 mm, dark green. Stems 1 m, strong yellow-green (144C), with c.10 fls. Jan. (New Zealand).  
(Published in *Lilies International Ltd Cat.*, 1987. Included in *ILR Sixth Supplement* as Bridal Bouquet grex.)

#### **Bridal Showers Group VII(-/-)**

Parentage: ‘Flamingo’ (of Woodriff) × a white-flowered *speciosum*  
R: W.F. Doreen (1982), G: W.F. Doreen (1985), N: W.F. Doreen (1987), I: Lilies International Ltd (1987), REG: W.F. Doreen (1987)  
Inside pure yellowish white (155B), tepal-tips and outside yellowish white (155D), throat brilliant greenish yellow (151D); spots absent; papillae white; nectaries brilliant greenish yellow (151D); pollen strong orange (16A). Tepal-margins ruffled, tips strongly recurved. Lvs scattered, 130 × 50 mm, dark green. Stems 1 m, strong yellow-green (144C), with c.10 fls. Jan. to Feb. (New Zealand).  
(Published in *Lilies International Ltd Cat.*, 1987. Included in *ILR Sixth Supplement* as Bridal Showers grex.)

#### **‘Bridal Veil’ VII(-/d)**

Parentage: (*L. × parkmanii* Opal Group × unknown) × (*L. × parkmanii* Opal Group × unknown)  
R: G.M. Chandler (c. 1972), G: G.M. Chandler (1975), N: K.L. Watkins (1985), I: K.L. Watkins (1985)  
Inside yellowish white (155D), tepal-tips and throat yellowish white (155D); outside white, midribs slightly coloured greyish red (182B); spots evenly distributed, moderate red (183D), on basal half of each tepal; nectaries conspicuous, strong yellow-green (144C); pollen moderate reddish orange (171A). Fls 120 mm wide; tepals 110 × 25-45 mm, outer tepals with ruffled margins, all strongly recurved. Lvs scattered, 170 × 55

mm, mid green. Stems 1.9 m, mid green to grey-green, with 15-20 fls. Feb. to Mar. (Australia).

### 'Bridal White' VII(-/d)

Parentage: pale-flowered seedling of *speciosum* × (*speciosum* var. *album* × unknown)

R: E.C. Genat (1950), G: E.C. Genat (1954), N: E.C. Genat, REG: E.C. Genat (1961)

Fls white, *speciosum* type, 100 mm wide; pedicels 2-flowered. Stems 1.2-1.8 m, with up to 40 fls. Early.

### 'Bridesmaid' IV(-/d)

See *L. × burbankii* 'Bridesmaid'.

### 'Bridgett' I(a-b/-)

Parentage unknown

R: H.E. Hoepner (1985), G: H.E. Hoepner (1989), N: H.E. Hoepner (1992), I: H.E. Hoepner (1992), REG: H.E. Hoepner (1992)

Inside dusty pink/coral-pink, slightly darker in centre of fl.; outside dusty green to pink at tepal-edges; spots absent; pollen mid orange. Tepals 99 × 47 mm, margins smooth, tips slightly recurved. Lvs scattered, 142 × 14 mm, mid green. Stems c.2 m, mid green, with 10-30 fls, including secondary buds, in a well-spaced spike. Midseason.

### Brigadier Group I(a/-)

Parentage: 'Grenadier' (of Kline) × *L. × maculatum* 'Yellow Purity'

R: E.L. Kline (c. 1953), N: E.L. Kline

Fls deep apricot; spots mahogany.

### 'Brigadoon' VIII(-/l)

Parentage: (An Asiatic lily × *longiflorum* 'Slocum's Ace') × mixed pollen of pastel-flowered Asiatics

R: E.A. McRae (1988), G: Van der Salm Bulb Farm, Inc. (1990), N: E.A. McRae (1995), I: Van der Salm Bulb Farm, Inc. (1994), REG: Van der Salm Bulb Farm, Inc. (1995)

Inside softest wine-red, throat soft cream-yellow; outside softest wine-red; spots absent; nectaries softest lime-green; pollen bright reddish brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered. Stems 0.9 m, soft green. Mid to late June.

(A *longiflorum*/Asiatic (LA) hybrid. May have been circulated under the unacceptable epithet 'Kiss Me Kate'.)

### 'Bright Beacon' I(a/-)

Parentage: Mercury Group × unnamed seedling

R: J. Wadkamper, N: J. Wadkamper (1978), I: J. Wadkamper (c. 1980), REG: J. Wadkamper (1978)

Inside red-orange, throat red; outside tan-orange; spots absent; nectaries frosty white; pollen brown. Lvs wide. Stems 1.1 m.

(Published in *Lilies and other Liliaceae*, 1978/9: 106.)

### 'Bright Beauty' I(a/b)

Parentage: 'Ladykiller' × 'Yellow Blaze'

R: Gebr. N. & B. Laan & Zn (1975), N: Gebr. N. & B. Laan & Zn (1982), I: Gebr. N. & B. Laan & Zn (1982),

REG: Laan Lelie B.V. (1982)

Fls brilliant yellow (21C) with strong orange (24A) blotches and spots in throat; nectaries greenish yellow; pollen tangerine brown. Fls 127-130 mm wide; tepals 110 × 70 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 7 mm, mid green. Stems 1.2 m, reddish green, with c.30 fls. July.

(Published in *Bloembollencultuur*, July 1982.)

### 'Bright Brilliant' VIII(a/b)

Parentage: 'Sea Treasure' (tetraploid form?) × 'Dame Blanche' (tetraploid form?)

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)

Inside yellowish white (155D), with a pale yellow (8D) stripe along midveins (more prominent on outer tepals); outside with outer tepals yellowish white (155D), with a pale yellow (8D) stripe along midribs changing into strong yellow-green (144C) towards top, inner tepals with pale yellow (8D) midribs that have some strong yellow-green (144C) at base; spots absent; papillae yellowish white (155D); nectaries strong yellow-green (144B); pollen strong orange (25A); stigma light yellow-green (145C). Fls 295 mm wide, fragrant; tepals 165 × 60-80 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 190 × 45 mm. Stems 0.8-1.1 m, green with darker markings, and with 1-5 fls.

(A *longiflorum*/Oriental (LO) hybrid.)

### 'Bright Cloud' VI(-/c)

See *L. × aurelianense* 'Bright Cloud'.

### 'Bright Diamond' VIII(a/b)

Parentage: 'Esra' × seedling LA 93096-IT

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)

Inside with inner tepals yellowish white (155D), outer tepals yellowish white (155D), with a strong purplish red (59D) flush next to the light yellow-green (144D) throat; outside yellowish white (155D), midribs strong yellow-green (143C) at base and top, middle part flushed with strong purplish red (59D); spots and papillae absent; nectaries strong yellow green (143A); pollen dark reddish orange (175C); stigma light greenish yellow (3C). Fls 235 mm wide, slightly fragrant; tepals 130 × 50-65 mm, margins smooth, tips slightly recurved. Lvs scattered, 195 × 27 mm. Stems 1.1-1.45 m, green with darker markings, and with 2-8 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

### 'Bright Eyes' I(a/-)

Parentage: *bulbiferum* var. *bulbiferum* × (*bulbiferum* var. *bulbiferum* × unknown)

R: B.G. Hayler, G: B.G. Hayler (1978), N: B.G. Hayler, REG: B.G. Hayler (1983)

Inside vivid yellow (13A), tepal-tips vivid reddish orange (40A), throat purple; outside red-brown; spots few, dark, around centre; nectaries white; pollen brown. Tepals 70 × 25 mm, margins ruffled, tips not recurved. Lvs scattered, 90 × 15 mm, dark green. Stems 1 m, green.

Dec. (Australia).

**'Bright Eyes' I(a/b)**

Parentage unknown

R: Cebeco Lilies, Inc. (pre 1997), N: Cebeco Lilies, Inc. Inside white at centre, tepal-tips pink; spots numerous. Stems 0.6-1 m. Late June to July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Bright Future' I(b/-)**

Syn. of 'Gaishas Nakotne'.

**'Bright-joyful' I(a/-)**

Parentage: selection from Zelta Vainags Group

**'Bright Light' I(a/-)**

Parentage unknown

R: T.L. Bartel, N: T.L. Bartel

Fls golden yellow. Stems 1.1 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 41 (1978).)**'Brighton' VI(b-c/d)**

Parentage: 'Lady Alice' × ((henry × 'Gold Eagle') × 'Toni')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1993), REG: B. Mičulka (1993)

Inside white, with a pale orange-beige centre; outside pale beige, tepal-edges white, midribs beige; papillae numerous; nectaries yellowish green; pollen brown; stigma green. Fls 115 mm wide; tepals 100 × 36 mm, margins wavy, tips reflexed; pedicels 80 mm long, slightly spotted with light brown. Lvs scattered, 125 × 25 mm, glossy yellowish green. Stems 1.2 m, black at base, red-dotted above, with secondary fls. Early July.

**'Bright Path' I(b/-)**

Syn. of 'Gaismas Stars'.

**BRIGHT PIXIE® I(a/b)**

Trade designation of 'Ceb Bright'.

**'Bright Star' VI(b-c/c)**

Parentage: selection from Aurelian Group

S: J. de Graaff, N: J. de Graaff

C 1966

Inside ivory-white, each tepal with an apricot-orange flame; outside ivory-white; nectaries green; papillae present; pollen orange-brown; stigma green. Fls slightly scented; tepal-margins smooth to slightly ruffled, tips recurved. Stems 1-1.5 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1959.)**'Bright Tiger' IX(b/c)**See *auratum* 'Bright Tiger'.**BRIGHT YELLOW I(a/b)**

Trade designation of 'Cordelia'.

**'Brigitta' I(a/-)**

Parentage unknown

R: De Jong Lelies Beheer B.V. (pre 1978), N: De Jong Lelies Beheer B.V., REG: De Jong Lelies Beheer B.V.

(1978)

Fls brilliant yellow (7A), spotted dull moderate reddish brown (177A); anthers moderate orange (167A).

(Published in *Lilies and other Liliaceae*, 1978/9: 106.)**'Brigitte Bardot' VII(-/-)**

Syn of 'White Angel'.

**'Brilant Oranz' I(a/b-c)**

Parentage: 'Roter Cardinal' × 'Connecticut King'

R: V. Baloun (1985), N: V. Baloun, REG: V. Baloun (1987)

Inside glowing apricot-orange, throat and tepal-tips apricot; outside paler, midribs greenish; spots small, sparse, dark red, confined to the throat; pollen orange-brown; nectaries white-frosted. Fls 135 mm wide, slightly scented; tepals 75 × 32 mm, slightly recurved; pedicels dark violet-black. Lvs 65 × 6 mm, dark green. Stems 0.7 m, short infl. with c.8 fls. Early July.

**'Brilliant' IX(b-c/d)**See *speciosum* 'Brilliant'.**'Brillante' VII(-/c)**

See note under 'Crown Brilliant'.

**'Brimstone' I(a/-)**Parentage: F<sub>4</sub> seedling from complex 'Gwen Mills' crosses

R: J. Aldred (c. 1969), N: J. Aldred, REG: J. Aldred (1971)

Fls pale yellow-green (4D) overlaid with light greenish yellow (6D) in throat. Stems 1.1 m.

(Published in *Lilies and other Liliaceae*, 1973: 112.)**'Brindisi' VIII(a/b)**

Parentage: seedling lars 92-14 × seedling aj 94-5

R: Vletter &amp; Den Haan Beheer B.V., G: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V., I: Vletter &amp; Den Haan Beheer B.V., REG: Vletter &amp; Den Haan Beheer B.V. (2000)

Inside variegated strong purplish red (60B) on a paler ground, paler towards tepal-tips and edges, midveins from above nectaries brilliant to light yellow-green (150C/D) for c.15 mm, throat light yellow-green (150D); outside strong purplish red (60D) on a white ground, midribs strong yellow-green (144C) with a little strong yellow-green (144A) at base; spots dark red (187B), in the throat; papillae absent; nectaries white-hairy; pollen strong reddish orange (169A); stigma light orange-yellow (19A). Fls 180 mm wide; tepals 110-115 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 30 mm. Stems 1.05-1.2 m, green with darker markings, and with c.4-5 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)**'Brisbane' VII(a-b/b)**

Parentage: 'Acapulco' × unnamed seedling

R: Sande B.V., G: Sande B.V., N: Sande B.V. (1997), I: Sande B.V., REG: Sande B.V. (2001)

Inside strong purplish red/deep purplish red (60D/64D), a little paler at base, midveins yellow-green changing

to red; outside strong purplish pink/light purplish pink (63C/62C); spots and papillae present; nectaries green; pollen orange-brown; stigma purple. Fls 150-200 mm wide; tepal-margins ruffled, tips recurved. Stems 1.2 m, green with dark stripes and spots, and with c.8 fls (from 16-18 cm bulbs). Early to midseason.

#### 'Bristol' I(a/-)

Parentage: seedling G 41 × seedling RS 663

R: Gebr. Vletter & Den Haan (1981), G: Gebr. Vletter & Den Haan (1984), N: Gebr. Vletter & Den Haan (1989), I: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1990)

Inside light to pale purplish pink (62C/D), throat with pale orange-yellow (24D) spots; outside light purplish pink to very pale purple (74C/75D), slightly tinged with light yellow-green (145C); spots few, small, dark red (187A); pollen strong reddish orange (169A). Fls 160 mm wide; tepals 80 × 42 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 14 mm, mid green. Stems 0.95 m, green with darker markings, and with c.6 fls. May.

#### 'Brittania' VII(a-b/b)

Parentage: unnamed seedling × unnamed seedling

R: Trior Lelie B.V. (1994), G: Trior Lelie B.V., N: Trior Lelie B.V., I: Trior Lelie B.V. (1996), REG: Trior Lelie B.V. (1997)

Inside vivid purplish red (57D), with a narrow, yellowish white (155D) tepal-edge which becomes wider towards tip, the colour a little stronger above the nectaries, throat greenish white (155C); outside vivid purplish red (57D) on a greenish white (155C) ground, apical part narrowly edged greenish white (155C), tipped strong yellow-green (144B), midribs pale yellow-green (155A) becoming brilliant/light yellow-green (154C/D) towards top; spots deep red (60A), on basal part of each tepal; papillae yellowish white (155B), in the throat; nectaries strong yellow-green (144C); pollen a little brighter than strong brown (172A); stigma dark purple (79B). Fls 220 mm wide; tepals 110 × 35-55 mm, margins slightly ruffled, tips a little recurved. Lvs scattered, 135 × 35 mm, mid green. Stems 0.9 m, light green, with c.5 fls.

#### 'Brixworth' IX(c/d)

See *martagon* 'Brixworth'.

#### 'Brno' VI(-/c)

Parentage: *henryi* × mixed pollen of 'Bright Star' & Golden Showers Group

R: K. Braun (1981), N: K. Braun

Inside white, throat orange; outside greenish white; spots purple-edged; nectaries green; pollen orange-brown. Fls 130 mm wide; tepal-tips strongly recurved. Lvs large, dark green. Stems 1.2 m. Mid July.

#### 'Broadway' VII(a-b/b-c)

Parentage: (*L.* × *parkmanii* Little Rascal Group × 'Star Gazer') × (*L.* × *parkmanii* 'Allegra' × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V., REG:

Rooyakkers (2004)

Inside very pale purple (75D), very pale purple (76D) around the nectaries and in throat; outside very pale purple (75D), midribs very pale purple (76D) in basal third, strong yellow-green (143C) at base, strong yellow-green (143B) at top; spots strong purplish red (60B); papillae very pale purple (76D); nectaries moderate yellow-green (143D); pollen strong reddish orange (169A); stigma dark purple (79A). Fls 220 mm wide, slightly fragrant; tepals 115 × 50 mm, margins smooth or very slightly ruffled, tips recurved. Lvs 115 × 35 mm, dark green. Stems 1.1 m, green, with c.5-7 fls. Midseason.

#### 'Brocade' II(-/c)

See *L.* × *dalhansonii* 'Brocade'.

#### 'Brockenfeuer' I(a/b)

Parentage: 'Ancona' × 'Sinai'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1998), REG: G. Steinbrück (1998)

Inside and outside vivid reddish orange (34A), each tepal with a rather diffuse area of vivid yellow (13D) above nectary; spots absent; nectaries silvery violet; pollen vivid reddish orange (42A); stigma pale red. Fls 130 mm wide; tepals 60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 6 mm, pale green. Stems 1.1 m, pale green, with up to 16 fls. Late June to early July.

#### 'Brokat' I(a/-)

Parentage: 'Kirschrot' × 'Johannisblut' Group

R: C. Feldmaier (1968), G: C. Feldmaier (1972)

Fls red with orange veins; spots brown. Stems 0.9 m. June to July.

#### 'Bronwen' I(a-b/b)

Parentage: (((*davidii* var. *unicolor* × 'Lillian Cummings') × 'Edith Cecilia') × 'Skylark' (Div. I)) × 'Hawaiian Punch'

R: W.D. Evans (1978), G: W.D. Evans (1981), N: W.D. Evans (1986), I: W.D. Evans (1986), REG: W.D. Evans (1986)

Inside strong purplish red (63B), throat light purplish pink (63D); outside strong purplish pink (63C); spots deep purplish red (61A), in the throat; nectaries strong purplish red (63B); pollen orange. Fls 95 mm wide; tepals 55 × 28 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 11 mm, mid green. Stems 0.9 m, green overlaid with brown, with c.26 fls. Mid to late.

#### 'Bronwen North' I(c/d)

Parentage: (*lankongense* × 'Edith Cecilia') × 'Destiny'

R: C. North (1973), G: SHRI (1975), N: C. North (1985), I: RHS Lily Group (1985), REG: RHS Lily Group (1986)

Inside pale mauve-pink, tepal-tips very pale pink, throat pale pink; outside very pale pink; dark spots and lines in the throat; nectaries dark reddish black; pollen dark red. Fls 80 mm wide, slightly scented; tepal-margins smooth, tips strongly recurved. Lvs scattered, 93 × 18 mm, mid green. Stems 0.8-1 m, with 7 or more fls. Midseason. Allotriploid.

**'Bronz'** I(c/-)  
Syn. of 'Marksüv Bronz'.

**'Bronze Baum'** I(c/-)  
Parentage unknown

R: J. Klein (pre 1987), N: J. Klein, REG: J. Klein (1988)  
Fls bronze, 100 mm wide. Stems 1.5 m, with up to 30 fls (including secondary and tertiary buds). Mid July.  
(Published in German Lily Group sales list, 1987.)

**'Bronze Beauty'** I(a/b)  
Parentage: *L. × maculatum* 'Yellow Tulip' × ('Fantasy' × *dauricum* 'Praecox')  
R: G.M. Chandler (1954), N: G.M. Chandler (pre 1958)  
Fls bronze-red, spotted chocolate-brown. Fls 100 mm wide. Stems 0.8 m.  
(Published in *LYB* 20: 77 (1957).)

**'Bronze Carnival'** VI(b/b)  
Parentage: Aurelian seedling  
R: E. Hickling (1972), G: J. Wadkamper (1974), N: E. Hickling (1974), I: J. Wadkamper (1979), REG: J. Wadkamper (1977)  
Inside white to greenish white; outside bronze; nectaries dark brown; pollen brown. Lvs scattered. Stems 1.2 m. Early July.  
(Published in *Lilies and other Liliaceae*, 1977: 76.)

**'Bronzed Aussie'** VI(-/a)  
Parentage: ('Limelight' × unknown) × unnamed Aurelian Group  
R: M.K. Baldwin (1984), G: M.K. Baldwin (1987), N: M.K. & J.A. Baldwin (1994), I: M.K. & J.A. Baldwin (1994), REG: M.K. & J.A. Baldwin (1994)  
Inside brilliant yellow (20A), shaded deep purplish red (61A) on apical half of each tepal, throat brilliant orange-yellow (21B); outside deep purplish red (61A); nectaries strong yellow-green (143C); pollen strong orange (24A). Fls 120 mm wide; tepals 130 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 152 × 10 mm, mid green. Stems 1.5 m, strong yellowish green (141C), with c.12 fls. Jan. (Australia).

**'Bronzedom'** I(b-c/-)  
Parentage: 'Cleopatra' × 'King Pete'  
R: N. Martschinke (1980), G: N. Martschinke (1984), N: N. Martschinke (1986), REG: N. Martschinke (1991)  
Inside strong to light orange-yellow (22A/B), tepal-tips light orange-yellow (22B), throat light yellow-green (145B); outside strong orange (26B); spots small, dark red (187A/C), in centre of fl.; nectaries light orange-yellow (22B); filaments white at base, reddish above; pollen strong orange (169B/D). Fls 110 mm wide; tepals 90 × 31 mm, margins smooth, tips slightly reflexed. Lvs scattered, 65 × 13 mm, mid green, ciliate. Stems 1.2 m, dark green, with c.10 fls. Early to late Aug.

**'Bronze Fuchs'** I(c/d)  
Parentage: Feldmaier seedling (Fe4) × unnamed Asiatic seedling  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N:

G. Steinbrück (1997), I: G. Steinbrück (1997), REG: G. Steinbrück (1998)  
Inside moderate brown (200D), tepal-tips pale orange-yellow (23D), throat moderate brown (200D); outside pale orange-yellow (23D); spots absent. Fls 150 mm wide; tepals 70 × 30 mm, margins smooth, tips distinctly recurved. Lvs scattered, 85 × 10 mm, dark green. Stems 0.9 m, rather dark green, with up to 10 fls. Mid July.

**'Bronze Light'** I(-/-)  
Parentage: selection from Green Bush Group  
S: W.C. Horsford, N: W.C. Horsford, I: W.C. Horsford (1952)  
Fls deep gold, with veneer of pale bronze.  
(Published in *Horsford Cat.*, 1952.)

**'Bronze Patina'** VI(-/a)  
Parentage: Aurelian seedling  
R: E. Hickling, N: E. Hickling (1975), REG: J. Wadkamper (1978)  
Inside light tan, tepal-tips whitish, throat yellow; outside bronze; spots absent; nectaries green; pollen brown. Tepal-margins slightly ruffled. Lvs scattered, dark green. Stems 1-1.1 m.  
(Published in *Lilies and other Liliaceae*, 1978/9: 106.)

**'Bronze Queen'** I(c/d)  
Parentage: (*davidii* 'Lady Byng' × unnamed seedling) × 'Lemon Queen' (Div. I)  
R: C.F. Patterson (c. 1948), I: Dept. of Horticulture, University of Saskatchewan (1958)  
Fls bronze-yellow; spots present. Stems 1-1.5 m, with up to 30 fls. July.

**'Bronze Spire'** I(c/-)  
Parentage: unknown × probably 'Connecticut King'  
R: W. Windus (1970), N: W. Windus (1973), REG: W. Windus (1973)  
Fls strong orange-yellow (163B) with blotches of vivid reddish orange (34B) in throat; slightly spotted. Fls c.85 mm wide; tepal-margins smooth, tips recurved; pedicels 75 mm long. Lvs 125-150 mm long. Stems 1.5 m, with c.20 fls.  
(Published in *Lilies and other Liliaceae*, 1973/1974: 109.)

**'Bronzeturn'** I(c/c)  
Parentage: 'Rote Kralle' × (Panamint Group × *bulbiferum* var. *croceum*)  
R: A. Rech (pre 1982), N: A. Rech, REG: A. Rech (1988)  
Fls bronze and yellow. Stems 1.2 m. Early July.  
(Published in German Lily Group sales list, 1983.)

**'Bronzine'** I(c/-)  
Parentage unknown  
N: B.G. Hayler, I: B.G. Hayler (1980)  
Inside cream, tepal-tips coppery bronze; spots present. Tepal-tips recurved. Stems 1 m. Dec. (Australia).

**Bronzino Group** I(c/d)  
Parentage: selections from Fiesta Group  
S: J. de Graaff, N: J. de Graaff

Fls amber, sable or chocolate-brown, some bicoloured. Stems 1.2-1.5 m, with up to 40 fls. June to July. (Published in *Oregon Bulb Farms Cat.*, 1959. Included in *ILR* (1960) as Bronzino grex.)

**'Brooklyn'** I(a-b/b)

Parentage unknown

R: Fa Jaap Boon, G: Fa Jaap Boon, N: Fa Jaap Boon, REG: Fa Jaap Boon (2000)

Inside and outside strong orange (25A) shading to vivid orange (28A) at tepal-edges, throat strong/brilliant orange (25B/C); spots and papillae absent; pollen strong orange (169B/C); stigma strong reddish orange (169A). Fls 130 mm wide; tepals 80 × 30-40 mm, margins very slightly ruffled, tips scarcely recurved. Lvs scattered, 180 × 20 mm. Stems 1-1.4 m, light green, with c.6-8 fls.

**'Broombelle'** VI(-/a)

Parentage: 'Starbelle' × unnamed seedling

R: D. Foxwell (c. 1965), N: D. Foxwell

Buds cream overlaid with pink. Fls vivid yellow (9A) with pink midribs.

**'Brotsing'** II(b/-)

Parentage: *L. × dalhansonii* 'Brocade' × *tsingtauense*

R: E. Robinson (1967), N: E. Robinson (1981), I: E. Robinson (1981), REG: E. Robinson (1988)

Inside pale yellow, tepal-tips paler, throat darker; outside creamy yellow; spots absent; nectaries yellow; pollen orange. Tepal-margins ruffled, tips slightly recurved. Lvs whorled, mid green. Stems 1.1 m, green, with c.6 fls.

**'Brown Berry'** IX(a/b)

See *philadelphicum* 'Brown Berry'.

**'Brown Buttercup'** I(a/-)

Parentage: 'Yellow Joy' × unknown

R: F. Fellner (1982), G: F. Fellner (1985), N: F. Fellner (1995), I: Riverside Gardens (1995), REG: F. Fellner (1995)

Inside red, throat yellow-green; outside green; the red turns to yellow bronze with age; spots absent; nectaries green; pollen brown. Fls 100 mm wide; tepals 50 × 25 mm. Lvs scattered, 100 × 15 mm. Stems 0.75 m, green. Mid July.

***brownii* F.E. Brown ex Miellez** IX(b-c/a)

Inside white; outside pinkish purple, sometimes green-tinged; nectaries edged with hairs and papillae; anthers brown; pollen red-brown. Fls fragrant; tepals 120-150 × 25-65 mm, tips recurved. Lvs scattered, 170-300 × 10-25 mm. Stems up to 1 m, flushed with dark purple-brown, with 1-4 fls. China, Myanmar.

***brownii* var. *australe* (Stapf) Stearn** IX(b-c/a)

Fls white, sometimes slightly green-flushed outside. Lvs narrower than in *brownii* itself. Stems to 3 m. SE China, Hong Kong.

***brownii* var. *colchesteri* (van Houtte) Elwes**

IX(b-c/a)

Syn. of *brownii* var. *viridulum*.

***brownii* 'Hong Kong'** IX(b-c/a)

The name has been applied to plants of *brownii* grown from seed collected by a Mr Andrew Tse in Hong Kong. See *LYB NALS* 10: 72-73 (1957).

***brownii* var. *viridulum* Baker** IX(b-c/a)

FCC 1895

Inside opening pale yellow, soon fading to white, throat yellow, fading to white; outside marked with green, outer tepals variably suffused with pink-purple. Fls strongly scented. Stems usually green.

Syn.: *brownii* var. *colchesteri*.

(Exhibited as var. *colchesteri* hort. Wallace ex Van Houtte.

Synge, *Lilies*, p.61 (1980) suggests that this epithet should be discarded because it is confusing.)

**'Brown Ivory'** I(c/d)

Parentage unknown

R: C.F. Patterson, N: C.F. Patterson, I: (pre 1967), REG: C.F. Patterson (1983)

Inside deep ivory and amber, throat with some green; outside pale green and ivory; spots brown on all but the tepal-tips; pollen red-brown. Tepals 100 mm long, margins smooth, very strongly recurved. Lvs scattered, mid green. Stems 1.2 m, dark green, with up to 25 fls. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978). Classified in *ILR* (1982) as Div. I(b).)

**'Brucedale'** VII(-/c)

See *L. × parkmanii* 'Brucedale'.

**'Brukit'** I(a/-)

Parentage: 'Arbat' × 'Connecticut King'

R: A.V. Otroshko (1987), N: A.V. Otroshko, REG: A.V. Otroshko (1991)

Fls soft yellow, with a light brown halo in centre of tepals and a few dark brown spots. Stems 1 m.

**'Brūnactīņa'** I(a/b-c)

Parentage: 'Rotaļa' × seedling 238-S-1

R: Ā. Zorgevics (1985), G: Ā. Zorgevics (1990), N:

Ā. Zorgevics (2005), I: University of Latvia Botanical Garden (2005), REG: Ā. Zorgevics (2005)

Inside strong orange (26B), throat brilliant yellow-green (149B); outside cinnamon, spots brownish; nectaries light purple; pollen light brownish; stigma light purple. Fls 120 mm wide; tepals 70 × 20 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 15 mm, glossy. Stems 1 m, brownish green, with c.9 fls. Bulbs white. Early July. (Nomenclatural standard: colour photograph provided by registrant (WSY 0096415).)

**'Brunello'** I(a/b)

Parentage unknown

R: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1994)

Inside vivid orange (28A), throat vivid orange (28A) shading to light orange (28C) at edges; outside strong orange (30D) shading to vivid yellowish orange (30C) at tepal-edges; pollen strong brown (172A); stigma dark red (187B). Fls 195 mm wide; tepals 105 × 50 mm, margins ruffled, tips recurved. Lvs scattered, 110 × 15 mm, mid green. Stems 1-1.1 m, pale green with darker markings, and with c.12 fls.

**‘Brunette’ IX(b-c/d)**

R: G. Errey (c. 1930), N: G. Errey  
See *speciosum* ‘Brunette’.

**‘Brunswick Beauty’ II(c/c-d)**

See ‘Brunswick’.

**‘Brunswick’ II(c/c-d)**

Parentage: *L. × dalhansonii* Terrace City Group × *tsingtauense*

R: O. Beutnagel (pre 1998), N: O. Beutnagel, REG: ICRA (1999)

Fls orange-yellow with small red spots over the whole fl.; pollen orange-red. Lvs dark green. Stems 1 m, dark green to almost black, with 30 or more fls. Late June.

Syn.: ‘Brunswick Beauty’.

(Published in German Lily Group sales list, 1998.)

The epithet is the old spelling of Braunschweig, where the raiser lives. Often called ‘Brunswick Beauty’ in N America.)

**‘Brushmark-brillant’ I(a/b-c)**

Parentage: unnamed Asiatic seedling × ‘Berliner Morgen’  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2003)

Inside strong orange (169C), shading to pale orange-yellow (159B) at tepal-tips; outside pale apricot; spots numerous, small, dark red (59A) on basal three-quarters of each tepal, brushmarks small, dark red (59A); nectaries pale yellow (158B), hoary; pollen moderate reddish orange (171A); stigma moderate orange (170C). Fls 100 mm wide; tepals 45 × 29 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 14 mm. Stems 0.65 m, dark green, with 5-8 fls. Mid July.

(Published in ELG sales list, 2001. Nomenclatural standard: colour print provided by registrant (WSY 0038765).)

**‘Brushmarkfeuer’ I(a/b-c)**

Parentage: ‘Dawn Star’ × ‘Artistik’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2003), I: G. Steinbrück (2004), REG: G. Steinbrück (2004)

Inside pale yellow-green (157C), throat white tinged with soft orange; outside white; spots large, oval, deep purplish red, on three-quarters of each tepal; brushmarks strong red (46A); nectaries moderate yellow-green (138B); filaments soft yellow; pollen deep red (185A); stigma deep red (185A). Fls 150 mm wide, slightly scented; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm. Stems 0.8 m, green,

with 5-7 fls. Late June.

(Nomenclatural standard: colour print supplied by registrant (WSY 0096351). The pollen parent is probably an error for ‘Artistic’.)

**‘Brushmarkprinz’ I(a/b)**

Parentage: ‘Impala’ × ‘Impact’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1994), I: G. Steinbrück (1994), REG: G. Steinbrück (1995)

Inside brilliant yellow (11A), tepal-tips pale yellow (1C), throat brilliant yellow (11A); outside brilliant yellow (7A); a large, dark red (187B) brushmark on basal half of each tepal with some associated spots towards base; nectaries very light green (130C); pollen reddish brown; stigma light purplish pink (55C). Fls 120 mm wide; tepals 60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 50 × 12 mm, dark green. Stems 0.8 m, almost black, with up to 15 fls. Late June to early July.

**‘Brushmarks’ I(a/-)**

Parentage: ‘Connecticut King’ × (*leichtlinii* var.

*maximowiczii* ‘Unicolor’ × *dauricum*) F<sub>2</sub>

R: E.A. McRae (1970), G: Oregon Bulb Farms, Inc. (1974), N: Oregon Bulb Farms, Inc. (1980), I: Oregon Bulb Farms, Inc. (1981), REG: Oregon Bulb Farms, Inc. (1985)

Inside shades of orange, throat green, tepal-tips and outside orange; oxblood-red blotches on each tepal, sometimes surrounded with spots; nectaries green; pollen brown. Fls 150-180 mm wide; tepals 70 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90-110 × 20 mm, mid green. Stems 1.3 m, light green, with 8-30 fls. Mid to late June.

**‘Brushmarkschau’ I(a/b-d)**

Parentage: ‘Bavaria’ × ‘Willow Wood’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (1998), REG: G. Steinbrück (1999)

Inside strong orange-yellow (22A), throat yellowish white (158C); outside brilliant yellow (20A); a large, long brushmark and small, dark red (183A) spots on half of each tepal; nectaries yellowish grey (156B); pollen dark reddish orange (175C); stigma light yellow-green (151C) on a long style. Fls 150 mm wide; tepals 75 × 35 mm, margins smooth, tips strongly recurved; pedicels long. Lvs scattered, 120 × 15 mm. Stems 0.9 m, mid green, with 15-20 fls. Mid July.

**‘Brushstroke’ I(a/b)**

Parentage: white-flowered, up-facing Asiatic seedling

× (‘Connecticut King’ × (*dauricum* × *leichtlinii* var. *maximowiczii* ‘Unicolor’)) F<sub>2</sub> brushmarked selection

R: J.F. McRae (1976), G: J.F. McRae (1979), N: Columbia-Platte Lilies (1985), I: Columbia-Platte Lilies (1985), REG: Columbia-Platte Lilies (1988)

Pale yellow (8D) (in cool weather or in low light) to pure white (always white by the third day); outside soft cream-white to green-white; each tepal with a conspicuous deep magenta brushmark (20 × 10 mm) extending up from

nectary, deep magenta spots around brushmarks; nectaries cream/green; pollen moderate red (180A). Tepals 60-90 × 30 mm, margins smooth, tips slightly recurved; pedicels erect. Lvs scattered, 100-150 × 20-30 mm, dark green. Stems 1.5-1.8 m, dark green, with 5-15 fls. Late June to early July.

(Published in *Rex Lilies Cat.*, 1985.)

#### **‘Brushtouch’ I(a/b)**

Parentage: ‘Schloss Atzelsberg’ × ‘Silver Bunny’  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1999),  
REG: B. Mičulka (1999)  
Inside creamy white, tepal-tips white, throat yellowish; outside with brownish midribs; dark purple-red brushmarks present but not conspicuous; spots small, dark purple-black spots, on a fifth of each tepal; nectaries olive-green, white-granulated; anthers whitish, without pollen; stigma brownish. Fls 115 mm wide; tepals 80 × 33 mm, not recurved; pedicels 60 mm long, green. Lvs scattered, 90 × 10 mm, dull pale green. Stems 0.75 m, green, thick. Late June.

#### **Bryce Canyon Group VI(-/-)**

Parentage: Tetra Golden Clarion Group × Tetra Golden Clarion Group  
R: R.J. Griesbach (1962-1991), G: R.J. Griesbach, N: E.A. McRae (1995), I: Van der Salm Bulb Farm, Inc. (1995), REG: Van der Salm Bulb Farm, Inc. (1995)  
Inside rich golden yellow, throat lime-green to soft cream; outside reddish brown to oxblood-red; spots absent; nectaries lime-green; pollen soft reddish brown. Fls very large; tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1-1.5 m, dark green. July. Tetraploids.

#### **‘Bubbling Over’ VI(c/d)**

Parentage: (*L. × kewense* ‘White Henryi’ × *henryi*) × *henryi*  
R: C. Helsley (1994), G: C. Helsley (1997), N: C. Helsley (2003), REG: C. Helsley (2003)  
Inside and outside pale yellow (18D), throat strong orange (25A) extending over basal half of each tepal; dots and lines strong brown (172A), on basal half of each tepal; papillae on basal third of each tepal; nectaries mid green; pollen golden brown; stigma green. Fls 80 mm wide, slightly scented; tepals 85 × 20 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 135 × 28 mm. Stems 1.5 m, dark green dotted with dark red-violet, with c.15 fls (and some secondaries) in a long infl. July.

#### **‘Buccaneer’ I(c/d)**

Parentage: ‘Lemon Queen’ (Div. I) × ‘Mega’ × ‘Edith Cecilia’  
R: J. de Graaff (c. 1959), N: J. de Graaff, REG: Oregon Bulb Farms, Inc. (1969)  
Fls yellowish white (158D) with a faint pink flush. Stems 1.2 m. June to July.  
(Published in *LYB* 33: 254 (1970).)

#### **‘Buchaneer’ Div. ?**

Given as a parent of ‘Tiger White’. No further details. Perhaps an error for ‘Buccaneer’.

#### **‘Buchholzer Riese’ I(b/c)**

Parentage: ‘Yukatan’ × Feldmaier Asiatic seedling (Fe4)  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2003)  
Inside moderate red (179A) with soft orange streaks near midveins; outside moderate red (179A); spots many, small, moderate brown (200C), on basal half of each tepal; nectaries yellowish grey (156C); pollen strong brown (172A); stigma dark reddish orange (173A). Fls 150 mm wide; tepals 75 × 31 mm, margins smooth, tips rounded, slightly recurved. Lvs scattered, 82 × 12 mm. Stems 1 m, dark green to dark violet, with 10-12 fls. Mid July.  
(Published in ELG sales list, 2001. Buchholz is an area of Berlin-Pankow, where the registrant grows some of his plants. Nomenclatural standard: colour print provided by registrant (WSY 003876E).)

#### **‘Buchlov’ VI(b-c/b)**

Parentage: (*leucanthum* var. *centifolium* ‘Black Dragon’ × ‘Damson’) × (unknown × ‘Damson’)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002),  
REG: B. Mičulka (2002)  
Inside white, centre and throat apricot; outside with apricot shining through, midribs green; spots absent; nectaries dark green; pollen apricot; stigma greyed brown. Fls 130 mm wide; tepals 115 × 50 mm, margins slightly ruffled, tips moderately recurved; pedicels 120 mm long, thick, slightly spotted. Lvs scattered, 130 × 14 mm, dark green. Stems 1.15 m, spotted brown-red and with a short infl. Mid July.

#### **‘Buckingham’ VII(a/b-c)**

Parentage unknown  
R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2002)  
Inside yellowish white (155D), midveins light greenish yellow (8B), throat yellowish white (155D); outside yellowish white (155D) suffused with pale yellow (11D), some outer tepals suffused with vivid purplish red (57D) and strong yellow-green (143C) at tip; spots light greenish yellow (8B); papillae present; nectaries light green (144C); pollen strong reddish orange (169A); stigma very pale purple (69D). Fls 300 mm wide, slightly scented; tepals 170 × 60 mm, margins ruffled, tips recurved. Lvs scattered, 170 × 48 mm. Stems 1.04 m, green, with c.2 fls.

#### **‘Buckshot’ VII(a/-)**

Parentage: pink-flowered seedling × white-flowered seedling  
R: Mak-Leek Inc. (pre 1997), N: Mak-Leek Inc., REG: ICRA (1998)  
Inside pink and white. Stems 1-1.2 m. Late.  
(First published in *The Lily Nook Cat.*, 1997: 17.)

**'Buckskin' I(a-b/-)**

Parentage unknown

R: V. Weiser (1980), G: V. Weiser (1983), N: V. Weiser (1990), I: Borbeleta Gardens (1991), REG: J. Wadkamper (1993)

Inside brownish orange (166C), throat green; outside darker tan; spots large, brown, in centre half of each tepal; nectaries white on green; pollen brown. Tepals 100 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 95 × 30 mm, mid green. Stems 1 m, dark green, with 8-10 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1991.)**'Budapest' VII(a/b)**

Parentage: seedling 88-9 × seedling 88-75

R: Vletter &amp; Den Haan Beheer B.V., G: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V., I: Vletter &amp; Den Haan Beheer B.V., REG: Vletter &amp; Den Haan Beheer B.V. (2000)

Inside deep purplish pink (64D), becoming strong purplish red (64C) towards tepal-tips, and greenish white (155C) around nectaries, throat greenish white (155C); outside light purplish pink (63D) towards tepal-tips and edges, with a little greenish white (155C) at base, tipped strong yellow-green (144B); spots and papillae dark red (59A); nectaries light yellow-green (144D); pollen brownish orange (171B); stigma light grey (191C). Fls 180 mm wide; tepals 122-135 × 45-65 mm, outer tepal-margins ruffled, tips recurved. Lvs scattered, 190 × 45 mm. Stems 1.2 m, light green, with c.4-6 fls.

**'Buenos Aires' VII(a/b)**

Parentage: seedling 88-222 × seedling 93-13

R: Vletter &amp; Den Haan Beheer B.V., G: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V., I: Vletter &amp; Den Haan Beheer B.V., REG: Vletter &amp; Den Haan Beheer B.V. (2000)

Inside deep to strong purplish pink (73A/B), throat greenish white (155C); outside strong purplish pink (73B) with a little greenish white (155C) at the base, midribs of outer tepals strong yellow-green (144B) at top; spots deep red (60A); papillae pale purplish pink (65D); nectaries strong yellow-green (144C) with light yellow-green (154D) around each nectary; pollen dark reddish orange (175B); stigma very pale purple/dark purple (84D/79B). Fls 215 mm wide; tepals 130 × 55-85 mm, margins very slightly ruffled, tips recurved. Lvs scattered, 165 × 50 mm. Stems 1.1 m, light green, with c.3-5 fls.

**'Buff Pixie' I(a/b)**

Parentage: Pastel Group clone OH 6 × ('Connecticut Lemonglow' × 'Red Carpet')

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)

Inside soft buff-orange; outside flushed with brown; spots very few, tiny, at base of tepals; nectaries green; pollen soft brown. Tepals 70 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 20 mm, mid green. Stems 0.25-0.3 m, light green, with 6-20 fls. June to early July.

**'Buffy' I(b-c/-)**

Parentage: 'Golden Coronet' × unnamed seedling

R: J. Wadkamper (1973), N: Borbeleta Gardens (1975), I: Borbeleta Gardens (1980), REG: Borbeleta Gardens (1981)

Tepal-tips and edges light orange-yellow (24C), middle of tepals moderate yellowish pink (39C), throat buff-green; outside 'green-pink-tan'; spots very few, minute, brown; nectaries greenish; pollen dark orange. Tepals 60 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 12 mm, dark green. Stems 1.2 m, green, with c.24 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1979.)**'Buffy Sparks' I(a/-)**

Parentage unknown

R: J. Wadkamper (1979), G: J. Wadkamper (1982), N: J. Wadkamper (1991), I: Borbeleta Gardens (1991), REG: J. Wadkamper (1993)

Fls pale yellow (19C), throat white; brushmarks small, purple; nectaries green; pollen light brown. Tepals 80 × 20 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 25 mm, mid green. Stems 0.8 m, mid green, with 8-10 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1991.)**'Bugatti' I(a/b)**

Parentage unknown

R: Fa A.J. van der Zwet, REG: Fa A.J. van der Zwet (2003)

Inside vivid reddish orange (34A/33A), midveins vivid red (45A) but in young fls midveins strong yellowish pink (32C), throat light yellowish pink (34C); outside vivid reddish orange (34B), tepals strong red (53C) at base, midribs and tepal-edges strong reddish orange (42C); spots many, strong red (46A); papillae vivid reddish orange (34A/33A); nectaries deep red (53A); pollen moderate red (180A); stigma strong reddish orange (32B). Fls 150 mm wide; tepals 105 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 23 mm. Stems 1.3 m, green, with c.10 fls.

**'Buketnaya' I(a/-)**Parentage: ('Stroinaia' × *davidii* var. *willmottiae*) × ('Enchantment' × 'Byam's Ruby')

R: M.F. Kireeva (1980), N: M.F. Kireeva

Fls orange with small spots. Stems 0.8 m. July.

***bulbiferum* 'Asdrubal' IX(a/b)**Parentage: selection from *bulbiferum*

(Listed by T. Lang &amp; Co. c.1867. Grown in Australia? No further details.)

***bulbiferum* L. var. *bulbiferum* IX(a/b)**

Fls bright orange (rarely orange-yellow), deeper orange towards base, tepal-tips sometimes redder; spots maroon or blackish; papillae at base of tepals; nectaries greenish, hairy; filaments pinkish orange; pollen orange to orange-red; stigma brownish red. Fls 100 cm or more wide; tepals 60-85 × 20-30 mm, narrowed to a claw at base, margins smooth, tips recurved. Lvs scattered, 50-150 ×

c.15 mm, bright green, margins ciliate. Stems 0.4-1.5 m, green, sometimes purple-spotted, sometimes woolly in upper part, with up to 5 (occasionally to 50) fls, and usually with bulbils. Mountains of S & C Europe, S Germany, Scandinavia. June to July.  
Syn.: *bulbiferum* var. *chaixii*.

***bulbiferum* var. *chaixii* (Maw) Stoker IX(a/b)**  
FCC 1877

Syn. of *bulbiferum* var. *bulbiferum*.

***bulbiferum* var. *croceum* (Chaix) Persoon IX(a/b)**  
Fls bright orange, the tepals often deeper orange at tip and base. Stem-bulbils usually absent.  
Syn.: *croceum*; *bulbiferum* var. *giganteum*.

***bulbiferum* var. *giganteum* Terracciano IX(a/b)**  
Syn. of *bulbiferum* var. *croceum*.

***bulbiferum* ‘Orangiste’ IX(a/b)**  
Parentage: selection from *bulbiferum*  
(Listed by T. Lang & Co. c.1867. Grown in Australia? No further details.)

***bulbiferum* ‘Umbellatum’ IX(a/b)**  
Parentage: selection from *bulbiferum*  
(Listed by T. Lang & Co. c.1867. Grown in Australia? No further details.)

**‘Bullfinch’ IV(c/d)**  
Parentage: (*kelloggii* × *pardalinum*) F<sub>2</sub>  
R: J. de Graaff (c. 1965), N: J. de Graaff  
Fls vermilion. Stems 1.2-1.5 m. June to July.

**‘Bullmaid’ IV(-/-)**  
Parentage unknown  
R: N. Martschinke (pre 1992), N: N. Martschinke, REG: N. Martschinke (1994)  
Fls yellow. Stems up to 1.5 m. July.  
(Published in German Lily Group sales list, 1992.)

**‘Bull’s Eye’ I(b/-)**  
Parentage: ‘Connecticut Lemonglow’ × (‘Connecticut King’ × (*dauricum* × *leichtlinii* var. *maximowiczii* ‘Unicolor’)) F<sub>2</sub> brushmarked selection  
R: J.F. McRae (1978), G: J.F. McRae (1981), N: Columbia-Platte Lilies (1985), I: Columbia-Platte Lilies (1985), REG: Columbia-Platte Lilies (1988)  
Inside brilliant yellow (10A) at tepal-tips, light greenish yellow (8B) in the throat; outside light greenish yellow (8B/C); spots absent; each tepal with a deep flush of magenta extending 20 × 10 mm above nectaries (may not appear in shade-grown plants). Tepals 60-80 × 20-30 mm, margins smooth, tips strongly recurved. Lvs scattered, 100-150 × 15-25 mm, mid green. Stems 0.75-1.25 m, mid green, with 5-15 fls (including some secondary buds). Late June.  
(Published in *Rex Lilies Cat.*, 1986.)

**Bullwood Group IV(c/d)**  
Parentage: *pardalinum* var. *giganteum* × pink-flowered

Henry Bolander Group  
R: D.B. Fox, N: D.B. Fox (1967)  
Fls variously coloured peach, orange, red and deep red, usually darkening with age; variously spotted; Stems up to 2.7 m, green.

**‘Bumpers’ I(b/-)**  
Parentage unknown  
R: H.E. Hoepner (pre 1980), G: R. Mitchell & S.R. Kaul, N: R. Mitchell & S.R. Kaul, I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)  
Fls red, with an orange-red flush; spots present; pollen orange. Tepal-margins slightly ruffled. Lvs broad, deep green. Stems 1.5 m, dark brown, with some secondary buds, and with bulbils. June to July.

**‘Bums’ I(a/-)**  
Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1986), G: J. Vasarietis (1989), N: J. Vasarietis (1991), I: J. Vasarietis (1991), REG: J. Vasarietis (1992)  
Inside strong orange (25A); outside strong to brilliant orange (25B/C); each tepal with 2-4 spots, in the throat; nectaries white; pollen absent. Fls 110 mm wide, with 12 tepals; inner tepals shorter and narrower with white tips, outer 60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 15 mm, mid green. Stems 0.5 m, greenish, with 5-6 fls. Mid June.

**‘Bunt 1’ I(-/-)**  
Given as a parent of ‘Raspberry Ripple’. No further details.

**‘Bunting’ IV(c/d)**  
Parentage: (*kelloggii* × *pardalinum*) F<sub>2</sub>  
R: J. de Graaff (c. 1965), N: J. de Graaff  
Cream and lavender orange blotches at centre of each tepal.

× ***burbankii* hort. van Tubergen IV(b/d)**  
Parentage: *pardalinum* × *parryi*  
Fls rich yellow, tepal-tips stained brownish crimson; spots crimson-brown. Fls scented. Lvs whorled. Stems 0.6-2.2 m. July.  
Syn.: *L.* × *pardal-parryi*; ‘Pardal-parryi’.  
(Some of the original plants called *L.* × *burbankii* were reputed to be *washingtonianum* × *pardalinum* (see *JRHS* 24: 33 (1900)), but the epithet is now associated only with plants from the cross between *pardalinum* and *parryi* and back-crosses.)

× ***burbankii* ‘Auburn Maid’ IV(-/a)**  
Parentage: (*pardalinum* × *parryi*) × *parryi*  
R: O.E.P. Wyatt (c. 1947), N: O.E.P. Wyatt, I: W.A. Constable Ltd (1951)  
Tepals auburn, suffused with reddish brown. Fls *parryi* type, with recurved tepals.

× ***burbankii* ‘Bridesmaid’ IV(-/d)**  
Parentage: (*pardalinum* × *parryi*) × *parryi*  
R: O.E.P. Wyatt (c. 1947), N: O.E.P. Wyatt, I: W.A.

Constable Ltd (1949)  
AM 1949

Fls brilliant yellow (15C); spots maroon.

× *burbankii* ‘Country Maid’ IV(-/-)

Parentage: (*pardalinum* × *parryi*) × *parryi*

R: O.E.P. Wyatt (c. 1947), N: O.E.P. Wyatt, I: W.A. Constable Ltd (1952)

Tepals bright red, narrow.

(Published in *Constable Cat.*, Autumn 1952.)

× *burbankii* ‘Dairy Maid’ IV(-/d)

Parentage: (*pardalinum* × *parryi*) × *parryi*

R: O.E.P. Wyatt (c. 1947), N: O.E.P. Wyatt  
PC 1952

Fls pale orange-yellow, slightly spotted.

(Published in *Constable Cat.*, 1951.)

× *burbankii* ‘Fair Maid of Perth’ IV(-/-)

Parentage: (*pardalinum* × *parryi*) × *parryi*

R: O.E.P. Wyatt (c. 1947), N: O.E.P. Wyatt, I: W.A. Constable Ltd (1951)

Fls primrose-yellow, spotted. Tepals recurved.

(Published in *LYB* 13: 169 (1949).)

× *burbankii* ‘Frances Fell’ IV(-/d)

Parentage: *pardalinum* × *parryi*

R: T.S. Ware (c. 1892), N: T.S. Ware

Fls orange, with brighter midribs and brownish spots. Fls ‘flask-shaped’.

(Published in *Gard. Chron.*, ser. 3, 12: 192 (1892).)

× *burbankii* ‘Glory of Alkemade’ IV(-/d)

Parentage: *L.* × *burbankii* × *pardalinum*

R: A.J. van der Zwet & Sons (c. 1949), N: A.J. van der Zwet & Sons

AMH 1949

Fls golden yellow with Saturn red centre. Fls *pardalinum* shape.

× *burbankii* ‘Juan de Fuca’ IV(-/d)

Parentage: *pardalinum* var. *giganteum* × *parryi*

R: D. Griffiths (pre 1948), N: D. Griffiths, REG: (1985)

Fls light vermilion-red, centre gold and spotted with mahogany-red. Stems 1.5-2.2 m, with up to 30 scented fls.

(Published in *B.L. Palmer Lily Cat.*, 1963: 3.)

× *burbankii* Leopard Group IV(-/-)

Parentage: *parryi* × dark, small-flowered form of *pardalinum*

R: J.S. Whall, N: J.S. Whall

Intermediate between parents.

(Published in *JRHS* 24: 34-35 (1900). Included in *ILR* (1982) as Leopard grex. Exhibited at Hybrid Conference, 1900.)

× *burbankii* ‘Maid of Norway’ IV(-/-)

Parentage: (*pardalinum* × *parryi*) × *parryi*

R: O.E.P. Wyatt (c. 1942), N: O.E.P. Wyatt, I: W.A. Constable Ltd (1952)

Fls yellow with a touch of reddish brown. Stems tall. Early. (Published in *Constable Cat.*, Autumn 1952.)

× *burbankii* ‘Mermaid’ IV(-/-)

Parentage: (*pardalinum* × *parryi*) × *parryi*

I: W.A. Constable Ltd (1952)

Fls rich, deep saffron-yellow.

(Published in *Constable Cat.*, 1952.)

× *burbankii* ‘Napier’s Variety’ IV(-/d)

Parentage: *pardalinum* × *parryi*

R: G.S.F. Napier (c. 1930), N: G.S.F. Napier

Fls rich orange and red. Stems 1.9-2.4 m, with 12-20 fls. July.

(Published in *Constable Cat.*, 1935/36: 46.)

× *burbankii* ‘Peter Puget’ IV(-/d)

Parentage: *parryi* × *pardalinum*

R: D. Griffiths (1924), N: D. Griffiths

Fls capuchin-yellow towards base, tepal-tips blotched red; spots black, on two-thirds of tepals; anthers purplish red;

pollen orange. Lvs both whorled and scattered. Stems

1.2-1.5 m, with up to 15 fls. June.

(Published in *USDA Circular* no. 299: 6, t.2 (1933).)

× *burbankii* ‘Red Maid’ IV(-/a)

Parentage: (*pardalinum* × *parryi*) × *parryi*

R: O.E.P. Wyatt, N: O.E.P. Wyatt, I: W.A. Constable Ltd (1952)

Fls red.

(Published in *Constable Cat.*, 1952.)

× *burbankii* ‘Stately Maid’ IV(-/-)

Parentage: (*pardalinum* × *parryi*) × *parryi*

R: O.E.P. Wyatt (c. 1949), N: O.E.P. Wyatt

Fls deep primrose-yellow, almost unspotted.

(Published in *LYB* 13: 169 (1949).)

× *burbankii* ‘Yellow Maid’ IV(c/a-b)

Parentage: *pardalinum* × *parryi*

R: O.E.P. Wyatt, N: O.E.P. Wyatt

AM 1948

Fls vivid yellow (12A), faintly spotted. Lvs whorled.

Stems c.1 m

(Published in *LYB* 12: 89 (1948) where the seed parent was given erroneously as *nevadense*.)

‘Burgos’ I(a/-)

Parentage: unknown × seedling G86-2

R: Gebr. Vletter & Den Haan (1990), G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1997), I:

Gebr. Vletter & Den Haan (1997), REG: Gebr. Vletter & Den Haan (1997)

Inside close to vivid yellow (14B), throat light yellow-green (154D); outside brilliant yellow (12B/13B), tepal-

edges vivid yellow (14B); a few dark red (187A) spots

and papillae in the throat; nectaries vivid yellow (9B);

pollen brownish orange (164A); stigma moderate reddish brown (175A). Fls 180 mm wide; tepals 95 × 30-40

mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 115 × 17.5 mm, mid green, ciliate. Stems 1.1

m, green with some darker markings, and with 14-16 fls.

**'Burgunderglocke'** I(c/-)

Parentage: *cernuum* × unknown

R: A.R. Winkler (pre 1982), N: A.R. Winkler, REG: A.R. Winkler (1988)

Fls burgundy-red, with a yellow stripe on each tepal.  
Stems 1 m. Late June.

(Published in German Lily Group sales list, 1982.)

**Burgundy Group** I(c/d)

Parentage: selections from Fiesta Group

S: J. de Graaff, N: J. de Graaff

Fls cherry-red, claret or burgundy. Stems 1-1.2 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1959.)

**Burgundy Ball Group** I(c/d)

Parentage: *davidii* var. *willmottiae* × unknown

R: R.W. Bemis, N: R.W. Bemis (pre 1978), REG:

Blackthorne Gardens (1984)

Fls in shades of rich red. Tepals strongly recurved, margins smooth. Lvs scattered. Stems 1.2-1.6 m. July.

(Published in *'Deep-Freeze' Lilies Cat.*, 1978/79: 2 and in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978) as Burgundy Ball strain. Included in *ILR* (1982) as Burgundy Ball grex.)

**'Burgundy Rose'** I(c/d)

Parentage: 'Radiant Glow' × 'Edith Cecilia'

R: E. Robinson, N: E. Robinson, I: E. Robinson (1972), REG: E. Robinson (1972)

Fls pale straw-yellow, with red tones throughout, tepal-tips red; heavily spotted in centre. Stems 1.2 m.

(Published in *Lilies and other Liliaceae*, 1973: 114.)

**var. *burmanicum*** IX(c/a)

See *primulinum* var. *burmanicum*.

**'Burmese Tiger'** I(c/-)

Parentage: selection from Tiger Group

S: J. de Graaff, N: J. de Graaff

Fls red. Stems 1.5 m. July.

× ***burnhamense*** H.F. Comber V(-/a)

Syn. of *wallichianum* 'Burnhamense'.

**'Burnhamense'** V(-/a)

See *wallichianum* 'Burnhamense'.

**'Burnham Orange'** I(b/-)

Parentage: *L. × scottiae* × unknown

R: W.A. Constable Ltd (c. 1945), N: W.A. Constable Ltd AM 1945

Fls red-orange, lightly spotted with red-purple at base.

(Published in *JRHS* 70: 275 (1945).)

**'Burnham Special White'** V(b/a)

See *formosanum* 'Burnham Special White'.

**'Burnham Variety'** IX(c/d)

See *lancifolium* 'Burnham Variety'.

**Burnished Gold Group** VI(-/a)

Parentage: *regale* hybrids × Royal Group

R: Blackthorne Gardens (pre 1966), N: Blackthorne Gardens

Fls old gold, 150 × 150 mm. Stems to 1.5 m, with up to 17 fls. July.

**'Burnished Rose'** I(c/d)

Parentage: (*lancifolium* × (*davidii* var. *willmottiae* × *regale*)) × seedling L.37-538-1

R: C.F. Patterson (c. 1945), I: Dept. of Horticulture, University of Saskatchewan (1950)

Fls rose-pink, with coppery orange centre; spots present.

Fls 100 mm wide, scented. Lvs dark green. Stems 1-1.5 m, dark. July.

(Published in *LYB NALS* 5 :66 (1952).)

**'Burnside'** I(a/-)

Parentage: 'Tribute' × unnamed selection A-86-82

R: Rien Veenstra (1983), G: Oregon Bulb Farms, Inc.

(1985), N: Rien Veenstra (1989), I: Oregon Bulb Farms, Inc. (1989), REG: Oregon Bulb Farms, Inc. (1989)

Inside vivid to strong reddish orange (32A/B), throat vivid orange (28A); outside vivid yellowish orange (30C)

to vivid reddish orange (32A); spots absent; nectaries vivid reddish orange (32A); pollen vivid yellowish orange (30C). Fls 160 mm wide; tepals 85 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 ×

12.5 mm, dark green. Stems 1.2-1.4 m, moderate olive-green to moderate yellow-green (147A/B), with c.11 fls.

Midseason.

**'Burnt Orange'** II(-/a)

Parentage unknown

R: unknown, N: D. Dale (1995), I: Parkland Perennials, REG: D. Dale (1995)

Inside brilliant orange-yellow (23B), tepal-tips strong orange-yellow (22A); spots dark red (183B), on central part of each tepal, and much smaller spots on basal third;

nectaries brilliant orange-yellow (23B); pollen vivid orange-yellow (21A). Fls 45 mm wide; tepals 38 × 15 mm, margins smooth, tips slightly recurved. Lvs whorled,

135 × 32 mm, mid green. Stems 1.5 m, moderate olive-green (147A), with c.14 fls. Mid June to early July.

***buschianum*** Loddiges IX(a/c)

Syn. of *concolor* var. *pulchellum*.

**'Butter and Sugar'** II(-/a)

Parentage unknown

R: J.C. Ericksen (pre 1984), G: D. Dale (1989), N:

D. Dale (1993), I: Parkland Perennials, REG: D. Dale (1993)

Inside butter-yellow in tepal centres, cream to white at tips, throat cream; outside white, midribs buff; spots very small, sparse, maroon, at midpoint of each tepal; nectaries cream; pollen rusty orange. Fls 60 mm wide; tepals 35

× 22 mm, margins smooth, tips slightly recurved. Lvs whorled, 150 × 35 mm, dark green, slightly ruffled. Stems

1.5 m, deep green, with 22-24 fls. Early July.

**'Butterball' VI(-/c)**

Parentage: selection from Aurelian Group

S: E.C. Genat (c. 1956), N: E.C. Genat

Fls rich yellow, flecked brown in centre; tepal-tips reflexed. Stems 1.9 m.

**Butterball Group I(c/d)**

Parentage: *davidii* var. *wilmottiae* × unknown

G: R.W. Bemis (pre 1978), N: R.W. Bemis, I: Blackthorne Gardens

Fls in shades of chartreuse and gold. Tepal-margins smooth, tips strongly recurved. Lvs scattered. Stems 1-1.6 m. June to July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv. Published in *'Deep-Freeze' Lilies Cat.*, 1978/79: 2. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978) erroneously as Buttercup strain. Included in error as Buttercup grex in *ILR* (1982).)

**'Butterberg' I(a-b/-)**

Parentage: ('Connecticut King' × 'Chios') × 'Ivory Supreme'

R: N. Martschinke (1981), G: N. Martschinke (1985), N: N. Martschinke (1991), REG: N. Martschinke (1991) Inside light orange-yellow (22C), tepal-margins strong orange (24A), throat brilliant orange-yellow (21B); outside vivid to light yellow (17C/D) and strong yellow-green (144C); spots medium sized, dark red (183B) on basal third of each tepal; nectaries strong yellow-green (144C); pollen strong reddish orange (169A). Tepals 80 × 40 mm, margins smooth, tips slightly recurved; pedicels often with tertiary buds. Lvs scattered, 115 × 17 mm, mid green. Stems 1.4 m, dark green, with up to 36 fls. Early July to early Aug.

**'Buttercup' I(-/b)**

Parentage: 'Lord Melbourne' × (*L. × hollandicum* × unknown)

R: G. Errey (c. 1945), N: G. Errey

Inside creamy yellow, centre tinged apricot; spots dark brown-pink, few, small, on a sixth of each tepal; nectaries green, granulated pale yellow; pollen ochre-apricot. Fls 130 mm wide; tepals 75 × 36 mm, moderately recurved; pedicels 40 mm long. Lvs scattered, 85 × 11 mm, slightly glossy pale green. Stems 0.8 m, brownish at base. Early July.

**'Buttercup' I(a/b)**

Parentage unknown

R: Oregon Bulb Farms, Inc. (pre 1985), N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc.

Inside creamy yellow; spots medium sized, brownish, on basal third of each tepal. Fls 125 mm wide; tepals broad, margins smooth, tips not recurved. Stems 0.6-0.9 m. Late June.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Oregon Bulb Farms Cat.*, 1985/86.)

**'Buttercup' IV(c/d)**

Parentage: selection from Bellingham Group

S: J. de Graaff, N: J. de Graaff

HC 1966

Fls yellow, heavily spotted. Stems 1.2-1.5 m. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Oregon Bulb Farms Cat.*, 1954.)

**Buttercup Group I(c/d)**

Error for Butterball Group (q.v.).

**'Buttercupflare' VI(b/b)**

Parentage: unnamed seedling × unnamed seedling

R: D. Foxwell, N: D. Foxwell (1975), REG: D. Foxwell (1975)

Fls vivid yellow (15A), with some red-brown outside. (Published in *Lilies and other Liliaceae*, 1975: 91.)

**'Buttercurls' VI(-/c)**

Parentage: (*L. × kewense* 'White Henryi' × Golden Clarion Group) × (Yerex ivory-flowered Sunburst Group seedling × white-flowered Sunburst Group seedling)

R: W.T. Craig, G: W.T. Craig, N: W.T. Craig (1987), I: Ozark Mountain Lilies, REG: C. Helsley (1989)

Inside brilliant yellow (13B/C), throat vivid yellow (13A); outside yellow brushed moderate reddish orange (35A); spots absent; nectaries green; pollen strong orange (24A). Fls 150 mm wide; tepals 120 × 30-65 mm, overlapping in centre of fl., margins slightly ruffled, tips strongly recurved. Lvs scattered, 160 × 20 mm, mid green. Stems 1 m, green, brushed purple, with 8-12 fls. Early July.

**'Butterfield' IX(b/a)**

Error for *regale* 'E.C. Butterfield'.

**Butterfield Group VI(-/-)**

Parentage: derived from hybrids of *regale*, *leucanthum* var. *centifolium*, *sulphureum* & *sargentiae*

No further details.

(Raised and named in the USA before 1960.)

**'Butterfly' Div. ?**

Parentage unknown

R: A.J. van der Zwet & Sons, N: A.J. van der Zwet & Sons

Given as a parent of 'Prinses Juliana'. No further details.

**'Butterfly' I(a/-)**

Parentage: 'Cromottiae' × 'Redwing'

R: G.M. Chandler, N: G.M. Chandler (1953), I: G.M. Chandler (1958)

Tepal-tips strong orange (26A) to strong red (45D); spots black. Fls 75 mm wide. Stems up to 1 m.

(Published in *LYB* 20: 77 (1957).)

**'Butternut' I(a/-)**

Parentage: 'Connecticut King' × 'Red Carpet'

R: E.A. McRae (1973), G: Oregon Bulb Farms, Inc. (1976), N: Oregon Bulb Farms, Inc. (1983), I: Oregon Bulb Farms, Inc. (1984), REG: Oregon Bulb Farms, Inc. (1984)

Tepal-tips on inside rich golden yellow, throat green; outside rich golden yellow; spots absent; nectaries green;

pollen soft yellow. Tepals 90 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 30 mm, mid green. Stems 1.2 m, green, with 8-30 fls. June.

**‘Butter Pixie’ I(a/b)**

Parentage: Pastel Group clone OH 6 × selections from (‘Connecticut Lemonglow’ × ‘Red Carpet’)  
R: E.A. McRae (1976), G: Oregon Bulb Farms, Inc. (1980), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1985)

Inside deep, rich golden yellow, tepal-tips rich yellow, throat deep golden yellow; outside rich, golden yellow; traces of spots in centre of fl.; nectaries green; pollen soft yellow. Tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 12 mm, mid green. Stems 0.25-0.3 m, light green, with 8-25 fls. Mid June.

**‘Butterscotch’ I(a/c)**

Parentage: ‘Ambrosia’ × brushmarked seedlings  
R: T. Wadekamper (1978), N: Borbeleta Gardens (1984), I: Borbeleta Gardens (1984), REG: Borbeleta Gardens (1984)

Inside strong orange (25B), tepal-tips pale yellow (19C), throat pale yellow (19C); outside pale yellow (19C); spots few, on basal fifth of each tepal, with some faint brushmark lines; nectaries frosted pale yellow (19C); pollen red-orange. Tepals 55 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 15 mm, mid green. Stems 0.6 m, mid green, with 10-12 fls. Late June. (Published in *Borbeleta Gardens Cat.*, 1984.)

**‘Buttertiger’ I(b/-)**

Parentage unknown  
R: E. Kieslich (1981), N: E. Kieslich  
Fls 110 mm wide; tepals 100 × 36 mm. Lvs scattered, 100 × 10 mm. Stems 0.9 m. (Published in B. Mičulka, *Odrůdy lilií pěstované u nás*, (1995).)

**‘Byam’s Gelbe’ I(a/-)**

See ‘Byam’s Yellow’

**‘Byam’s Red Giant’ I(b/-)**

Parentage: ‘Brenda Watts’ × ‘Cabeli’  
R: P.M. Byam, N: P.M. Byam  
AM 1949, AM 1966  
Fls warm orange-brown, lightly spotted black. Lvs dark green. Stems 1.2 m, with c.7 fls.  
Syn.: ‘Red Giant’.  
(Published in *LYB* 13: 166, fig. 6 (1949).)

**‘Byam’s Ruby’ I(a-b/b)**

Parentage: ‘Brenda Watts’ × ‘Cabeli’  
R: P.M. Byam (c. 1943), N: P.M. Byam  
AM 1966  
Fls blood-red; spots few, indistinct, almost black. Fls 100 mm wide. Stems 0.5-1 m, with up to 18 fls. June to July.  
Syn.: ‘Ruby’.  
(Published in *LYB NALS* 9: 98 (1956).)

**‘Byam’s Yellow’ I(a/-)**

Parentage unknown  
Fls yellow. Stems 0.6 m. Late June.  
(According to Jošt, the epithet should be ‘Byam’s Gelbe’.)

**‘Byjingo’ I(a/-)**

Parentage unknown  
R: B.G. Hayler, G: B.G. Hayler (1981), N: B.G. Hayler (1983), REG: B.G. Hayler (1983)  
Inside vivid red (45A); outside red-brown; spots absent. Tepals 60 × 20 mm, margins smooth, tips not recurved. Lvs scattered, 90 mm long, dark green. Stems 1 m, with c.8 fls. Dec. (Australia).

**‘Bylina’ I(a/b)**

Parentage unknown  
R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1984)  
Fls smoky lilac-pink, almost unspotted. Fls 140-150 mm wide. Stems 1-1.1 m, with 12-15 fls. July.  
(Published in M.F. Kireeva, *Lilii*, 45 (2000).)

**‘Byzantine’ VIII(b-c/c)**

Parentage: derived from *henryi*, *auratum* & a trumpet hybrid  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Inside soft peachy gold; numerous red papillae on three-quarters of each tepal. Tepal-margins slightly ruffled and twisted, tips recurved. Stems 1.2-1.9 m. Early to mid Aug.  
(An Orienpet (OT) lily. Published in *The Lily Garden Cat.*, 1996/97: 20.)

**‘Caballero’ I(a/-)**

Parentage: unnamed seedling × Sundrop Group  
R: Bischoff Tulleken Lelies B.V. (1977), G: Bischoff Tulleken Lelies B.V. (1980), N: Bischoff Tulleken Lelies B.V. (1986), I: Bischoff Tulleken Lelies B.V. (1987), REG: Bischoff Tulleken Lelies B.V. (1986)  
Inside light orange-yellow (25B), throat pale bronze-yellow with a bright orange blotch; outside Spanish orange, midribs chartreuse-green; spots few, brown, around the veins in centre of fl.; nectaries red-brown; pollen reddish brown. Fls 170 mm wide; tepals 80 × 45 mm, slightly recurved. Lvs scattered, 140 × 10 mm. Stems 1 m, pale green, with c.8 fls. June.

**‘Cabaret’ I(a/-)**

Parentage: (‘Connecticut King’ × unknown) × orange-flowered brushmarked seedling  
R: V.E. Bowen (1975), G: V.E. Bowen (1977), N: V.E. Bowen (1988), REG: V.E. Bowen (1988)  
Fls vivid yellow (15A), each tepal with a moderate purplish red (59C) brushmark, surrounded by a few spots of the same colour; nectaries green; pollen brown. Fls 140-145 mm wide; tepals 70 × 35-40 mm, margins smooth, tips not recurved. Lvs scattered, 100-130 × 15-20 mm, mid green. Stems 1.25 m, green, with 15-30 fls. Mid June.

**'Cabeli' I(a/-)**

Parentage: *L. × hollandicum* 'Vermilion Brilliant' × *L. × maculatum* 'Wallacei'

R: F. Broadhead (c. 1930), N: F. Broadhead

Fls deep red.

**'Cabriole' I(c/c-d)**

Parentage: 'Connecticut King' × (orange-flowered seedling from 'Scarlet Robe' × ('Edith Cecilia' × *davidii* var. *unicolor*))

R: C. Robinson (1972), G: C. Robinson (1975), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987), REG: Columbia-Platte Lilies (1988)

Inside light orange-yellow (25D) shading to light or pale orange-yellow (23C/D), a 1 mm-wide ray of strong orange (25B) at tepal-tips, throat brilliant orange (25C) to light orange-yellow (25D); outside brilliant orange to light orange-yellow (25C/D), midribs soft green; spots absent; nectaries soft green, white-downy; pollen moderate reddish brown (177A); stigma orange. Tepals 80-90 × 30-40 mm, margins smooth, tips strongly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 1.2-1.75 m, dark green, with 7-20 fls (including some secondary buds). Late June.

**'Cácorca' VI(c/d)**

Parentage: 'Bright Star' × ('Henrietta' × 'Mimosa Star')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000),

REG: B. Mičulka (2000)

Inside pale yellow, tepal-tips whitish; outside with pale green midribs; spots cinnamon, dust-like, on half of each tepal; papillae on either side of nectaries; nectaries dark green; pollen apricot brown; stigma green. Fls 85 mm wide; tepals 95 × 30 mm, margins wavy, tips strongly recurved; pedicels 90 mm long, slender, brown-dotted, with secondary buds. Lvs scattered, 120 × 30 mm, dull pale green. Stems 0.85 m, thick, rigid, strongly dotted brown-red, and with a short infl. Mid July.

**'Cadans' I(a/-)**

Parentage: 'Sterling Star' × 'Mont Blanc'

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff

Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies

B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1990),

REG: Bischoff Tulleken Lelies B.V. (1991)

Inside yellowish white (155D), tepal-tips light yellow-green (150D); outside yellowish white (155D), the 'tube' slightly suffused with dark yellowish pink (181D); spots dark red (187A), on basal part of each tepal; nectaries spotted dark red (187C); pollen brownish orange (164A). Fls 165 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 15 mm, mid green. Stems 0.76 m, with slightly darker markings, slightly hairy, and with c.6 fls. July (under glass).

**'Cadense' II(b/d)**

Parentage: (*L. × dalhansonii* 'Brocade' × unknown) × unknown

R: E. Robinson (1975), G: E. Robinson (1980), N: E. Robinson (1985), I: E. Robinson (1984), REG: D. Dale (1993)

Inside light yellow with dark yellow tepal-margins; outside light yellow, midribs tan; spots sparse, medium sized, dark maroon, on basal two-thirds of each tepal; nectaries light yellow; pollen golden. Fls 70 mm wide; tepals 37 × 15 mm, margins smooth, tips slightly recurved. Lvs whorled, 140 × 50 mm, dark green. Stems 1 m, black above, dark green at base, with 16-20 fls. Mid July.

**'Cadillac' I(a/c)**

Parentage unknown

R: P. Hoff (1976), G: Hoffgaarde B.V. (1978), N:

Hoffgaarde B.V. (1984), I: Hoffgaarde B.V. (1984), REG:

Hoffgaarde B.V. (1988)

Inside vivid reddish orange (33B); outside vivid reddish orange (33A); spots dark brown, round, in the throat; pollen burnt brownish red. Tepals 90 × 40 mm. Lvs scattered, 130 × 15 mm. Stems 1.1-1.2 m, green with some darker markings, and with 9-16 fls. July.

**'Caesar' IX(b/c)**

See *auratum* 'Caesar'.

**'Caesar's Robe' VII(b/c)**

See *L. × parkmanii* 'Caesar's Robe'.

**Cairngorm Group VI(-/d)**

Parentage: Aurelian Group

R: W.M. Spry (c. 1965), N: W.M. Spry

Fls dark apricot to copper.

(Included in *ILR* (1982) as Cairngorm grex.)

**'Cairo' I(a/-)**

Parentage: seedling RS 516 × seedling W 659

R: Vletter & Den Haan (1981), G: Vletter & Den Haan

(1985), N: Vletter & Den Haan (1989), I: Vletter & Den

Haan, REG: Vletter & Den Haan (1990)

Inside yellowish white (155D), the basal half of inner tepals with a dark red (187B) edge, throat pale yellow-green (4D); outside yellowish white (155B), midribs brilliant yellow-green (150B); spots few, small, dark red (187B), in the throat; pollen strong orange (169D). Fls 155 mm wide; tepals 75 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 145 × 17 mm, mid green. Stems 1 m, green, with c.5 fls. May.

**'Caitlin' VII(b/b-c)**

Parentage: *L. × parkmanii* Little Rascal Group × 'Betelgeuse'

R: D.K. Kölli (1982), G: D.K. Kölli (1986), N: D.K.

Kölli (1994), REG: D.K. Kölli (1994)

Inside white, each tepal with a coral-pink ray suffusing out to a warm pink almost to the edge on the basal half of each tepal, an increasing amount of white shows towards the tips, basal half of tepals with a very narrow dark margin, throat whiter around nectaries; outside white, pink often showing through; spots dark rose-red, on basal two-thirds to three-quarters of each tepal; nectaries yellow-green; filaments white, greenish towards top; pollen rust-red/orange. Fls up to 190 mm wide, with an occasional extra tepal; tepals 107 × 70 mm, margins slightly ruffled, tips recurved. Lvs scattered, up to 153 ×

56 mm, dark green, with brown petioles. Stems 2 m, dark green, with c.15 fls (including secondaries). Late July to late Aug.

#### 'Calabria' I(a/b)

Parentage: 'Nerone' × 'Hir'

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan, I: Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1999)

Inside deep red (185A), tepal-edges dark red (187A), shading into main colour, throat deep red (185A) alongside the nectaries; outside deep red (185A), becoming dark red (187A/B) towards tepal-edges, tepal-tips strong yellow-green (143B) and brilliant greenish yellow (5A); spots dark red (187A), on two-thirds of each tepal; papillae deep red (185A), along the nectaries; nectaries strong yellow-green (143A) and creamy white (159D); pollen strong brown/dark reddish orange (172A/B); stigma greyish red (176A). Fls 190 mm wide; tepals 100 × 35-45 mm, margins ruffled towards the slightly reflexed tepal tips. Lvs scattered, 95 × 15 mm, dark green. Stems 1.6 m, green with pale brownish stripes, with c.3 fls.

#### 'Calais' VIII(a/b)

Parentage: seedling BG 94-10 × seedling G 91-04

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside vivid yellow (12A/13A), tepal-tips vivid yellow (13A), throat brilliant yellow-green (154C); outside vivid yellow (12A), a little darker towards tepal-edges, paler at base, outer tepals tipped strong yellow-green (141A), the colour shading into the tepal; spots few, dark red (187A), in the throat; papillae absent; nectaries brilliant yellow-green (154C), hairy; pollen brownish orange (164A); stigma vivid yellow (14B). Fls 210 mm wide; tepals 125-130 × 40-55 mm, margins hardly ruffled, tips slightly recurved. Lvs scattered, 240 × 30 mm. Stems 1.25 m, green, with c.3 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Calanthe Favourite' VII(-/c)

Parentage: *speciosum* × unknown

R: G.M. Chandler (c. 1949), G: G.M. Chandler (1953), REG: G.M. Chandler (1960)

Inside pale pink, with deeper flush above nectaries; lightly spotted in throat. Fls 115-125 mm wide. Stems 1.2-1.5 m.

Syn.: *speciosum* 'Calanthe Favourite'.

(Published in *Australian Lily Soc. Bull.* 8: 6. Classified in Div. IX in *ILR* (1982) - under *speciosum* 'Calanthe Favourite'.)

#### 'Calanthe Picture' IX(b-c/d)

See *speciosum* 'Calanthe Picture'.

#### 'Caleb' I(a/-)

Parentage: 'Red Carpet' × 'Carol Jean'

R: J. Wadekamper (1990), G: J. Wadekamper (1992), N:

J. Wadekamper (1996), I: Willowood (1997), REG: J. Wadekamper (1996)

Inside and outside deep red (53A), non-fading; spots absent; nectaries strong red (53C); pollen brown. Fls 100 mm wide; tepals 75 × 15 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 10 mm, mid green. Stems 0.5 m, mid green, with c.17 fls. Midseason.

#### 'Calgary' V(b-c/a)

See *longiflorum* 'Calgary'.

#### 'Calgary Tower' I(b/-)

Parentage: ('Bold Knight' × 'Tetra Mountaineer') × ('Pinegos Fire' × 'Tetra Mountaineer')

R: E.E. Fox (1988), G: E.E. Fox (1990), N: E.E. Fox (1993), I: Fox Lily Ranch (1994), REG: E.E. Fox (1994) Inside vivid reddish orange (42A), throat strong reddish orange (42C); outside strong reddish orange (42C), midribs buff; spots very dark maroon, on basal two-thirds of each tepal; nectaries strong reddish orange (42C), frosted; pollen cinnamon. Fls 150 mm wide; tepals 80 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 20 mm, mid green. Stems 1.5 m, green, mottled black, with 18-20 fls. Mid July.

#### 'California' VIII(a/b)

Parentage: seedling J 57 × seedling OR 87-24

R: Gebr. Vletter & Den Haan, G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan, I: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1999)

Inside strong red (53B/C), shading to strong red (53C) at tepal-tips; outside deep red (60A) on a paler ground, stronger coloured towards tepal-edges; spots dark red (187A), on up to a third of each tepal; papillae absent; nectaries strong yellow-green (143A) with a little pale purplish pink (56A); pollen dark reddish orange (175C); stigma deep purplish red (59B). Buds hairy. Fls 190 mm wide; tepals 95 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 25 mm, dark green. Stems 1.1 m, dark green, with c.3 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Californicum' IX(c/d)

See *pardalinum* 'Californicum'.

#### 'Calimero' VII(a/b)

Parentage: ('Royal Queen' × (*L.* × *parkmanii* 'Sprite' × 'Star Gazer')) × (*L.* × *parkmanii* Little Rascal Group × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside yellowish white (155D), suffused with a 'pale bright' strong purplish red (59D) at tepal-tips, midveins light greenish yellow (8B); outside yellowish white (155D), suffused with a 'very pale, bright' strong purplish red (59D) alongside the midribs which are light yellow-green (150D) with brilliant yellow-green (150C) at base and top; spots deep red (185A), brownish orange (172C) and brilliant yellow (7A); papillae present; nectaries

strong yellow-green (144C); pollen strong orange (169C); stigma moderate olive green (137A/B). Fls 145 mm wide; tepals 85 × 40-55 mm, margins ruffled, tips recurved. Lvs scattered, 95 × 50 mm, mid green. Stems 0.55 m, green with some darker markings, and c.8-10 fls. July.

**'Calla' VI(-/a)**

See *L. × imperiale* 'Calla'.

**'Callie' I(c/d)**

Parentage: *callosum* × *amabile* var. *luteum*

R: L.D. Marshall, I: Columbia-Platte Lilies (1990)

Fls deep orange-red. Pollen orange-red. Stems 1.2 m. June.

(Published in *B & D Lilies Cat.*, 1990.)

**'Calliope' IX(b-c/d)**

See *speciosum* 'Calliope'.

***callosum* Siebold & Zucc. IX(c/d)**

Fls orange-red; spots small, black, towards base; pollen orange to orange-red. Fls c. 40 mm wide; tepals 30-40 mm long. Lvs scattered, 80-130 × 3-8 mm. Stems up to 0.9 m, with up to 10 fls. Former USSR (Amur region), China, Taiwan, Korea, Japan.

***callosum* var. *flaviflorum* Makino IX(c/d)**

A variety with yellow fls.

**'Calmar Cloud' II(-/)**

Parentage: *L. × dalhansonii* 'Juanita' × unknown

R: R. Felsky (pre 1980), G: R. Felsky (1986), N: D. Dale (1993), I: Parkland Perennials (1995), REG: D. Dale (1993)

Inside white, tepal-edges broad, cream, throat cream; outside white, midribs pink; spots large, maroon, largely confined to middle of each tepal; nectaries cream; pollen rust-brown. Fls 90 mm wide; tepals 48 × 21 mm, margins smooth, tips slightly recurved. Lvs whorled, 140 × 50 mm, mid green. Stems 1.2-1.5 m, green, mottled black at top, with 16-20 fls. July.

**'Calypso' VI(b-c/b)**

Parentage: complex Aurelian hybrid

R: G.W. Darby, N: G.W. Darby, I: G.W. Darby (1967) PC 1967

Fls apricot. Stems tall.

(Published in *LYB* 31: 146 (1968).)

**'Calypso' VII(-/d)**

Parentage unknown

R: H.J. Strahm (c. 1973), N: H.J. Strahm, I: Strahm's Lilies, Inc.

Inside with a claret-rose ray on each tepal, edges paler; spots present. Fls 150 mm wide. Stems 1.2 m. Aug. to Sept.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 50 (1978).)

**'Camargue' VII(a/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside strong purplish red (64B), midveins yellow at base; outside deep purplish pink (72D); spots and papillae present; nectaries green; pollen dark brown; stigma grey-green flushed with purple-red. Tepal-margins strongly ruffled, tips slightly recurved. Stems tall, with reddish markings. Early.

**'Camaro' VII(-/d)**

Parentage: 'Star Gazer' × unnamed seedling

R: Lybelmex Hillegom B.V. (1981), G: Lybelmex

Hillegom B.V. (1984), N: Lybelmex Hillegom B.V.

(1990), I: Lybelmex Hillegom B.V., REG: De Lijster

Hillegom B.V./Lybelmex Hillegom B.V. (1990)

Inside strong red to deep or moderate purplish red (53C to 59B/C), tepals edged yellowish white (155B), tips yellowish white (155B), throat strong yellow-green (144B) edged yellowish white (155B); outside moderate purplish red (70A), tepals edged greenish white (155C), midribs suffused with light greenish yellow; spots and papillae dark red (187A/B), on basal half of each tepal; nectaries deep purple (79C); pollen strong reddish orange to strong orange (169A/B). Fls 230 mm wide; tepals 110 × 55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 110 × 40 mm, mid green. Stems 0.4 m, green with darker markings, and with c.4 fls. July to Aug.

**CAMBIA VIII(a-b/b)**

Trade designation of 'Zanlabia'.

**'Camborne' I(b/-)**

Parentage: red-flowered *lancifolium* × 'Enchantment'

R: Rosewarne EHS (c. 1969), N: Rosewarne EHS, REG: Rosewarne EHS (1975)

Fls orange-red. Stems 1 m. Early.

(Published in *Lilies and other Liliaceae*, 1975: 91.)

**'Cambridge' I(c/-)**

Parentage unknown

G: H.J. Eaton, N: Rosewarne EHS (1984), I: Lingarden Ltd (pre 1984), REG: Rosewarne EHS (1984)

Inside strong red (46A), tepal-tips strong yellowish pink (33C), throat strong yellowish pink (33C); outside light orange yellow (24C) on strong red (46A); spots black; nectaries vivid yellowish orange (30C); pollen vivid reddish orange (32A). Fls 135-140 mm wide; tepals 83 × 25-40 mm, margins smooth, tips slightly recurved. Lvs 75 × 7-16 mm, moderate olive-green (146A). Stems 0.35 m, green with darker markings (especially near base), and with c.7 fls. July.

(Grown from seed from New Zealand.)

**Cambridge Group I(a/b)**

Parentage: involves *L. × hollandicum*, *davidii* var.

*wilbmottiae*, *dauricum* & *L. × maculatum*

R: L.F. & D.H. Johnson (c. 1949), N: L.F. & D.H. Johnson

Fls ranging from rich yellow-orange to dark mahogany-red. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv. Not brought to the attention of

the ICRA until after 'Cambridge' had been accepted for registration.)

#### 'Cam Comet' VII(c/b)

Parentage: 'Joy' × ? *japonicum*

G: N. Jordan (1997), N: N. Jordan (2004), REG: N. Jordan (2004)

Inside white, each tepal with a vivid yellow (9A) ray; outside white, strong purplish red (63A) near base; papillae soft golden brown; nectaries green; pollen bright red-brown; stigma greyed purple. Fls 205 mm wide, strongly scented; tepals 155 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 155 × 45 mm. Stems 1.3 m, green/brown, with c.7 fls. Early Feb. (Tasmania).

(Grown from seed (contributor unknown) from NZLS Seed List 1994.)

#### 'Cam Criterion' VI(c/a)

Parentage: ('Tetra White Henry' × tetraploid white-flowered trumpet seedling) × (tetraploid *regale* × 'Tetra White Henry')

R: D.B. Schaefer (1990), G: N. Jordan (1994), N: N. Jordan (1998), I: N. Jordan (1998), REG: N. Jordan (1998)

Inside greenish white (155C) with a faint blush, throat vivid yellow (13A); outside greenish white (155C), midribs moderate purplish red (59C); nectaries strong yellow-green (144A); pollen dark reddish orange (175B). Fls 140mm wide, moderately scented; tepals 145 × 30-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 210 × 24 mm, mid green. Stems 2.1 m, green, mottled purple, with up to 30 fls (secondary buds on the lower third of infl.). Late Dec. (Australia). Tetraploid.

#### 'Cameleon' I(a/b)

Parentage: ('Keystone' × dwarf selection from Sundrop Group) × ((Sundrop Group × 'Red Carpet') × ('Harmony' × 'Red Carpet'))

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside vivid yellow (17C), the basal part of each tepal edged brilliant orange-yellow (23B), tips a little paler, throat brilliant yellow (7A) around nectaries and paler at edges; outside brilliant yellow-green (154C), tepals edged vivid orange-yellow (23A), tinged strong yellow-green (143B) at base; spots dark red (187A) on basal part of each tepal; papillae coloured as tepals, in the throat; nectaries pale greenish yellow (2D); pollen dark reddish orange (175C); stigma moderate brown (15A). Buds hairy. Fls 170 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 11 mm, mid green. Stems 0.5 m, mid green with darker markings, and with c.6 fls.

#### 'Camelot' VIII(-/-)

See note under 'Carousel'.

#### Camelot Trumpets Group VI(-/a)

Parentage: selections from Aurelian Group progeny

S: E.L. Kline (c. 1964), N: E.L. Kline

Inside pure white; outside very dark moderate purplish red (58A). Stems 1.5 m. July. Reminiscent of *brownii*. (Included in *ILR* (1969) as Camelot Trumpets grex.)

#### Cameo Group VII(-/b)

Parentage: derived from *auratum* var. *platyphyllum*, *auratum* var. *tricolor*, *japonicum* & *japonicum* var. *album*

R: E.L. Kline (c. 1954), N: E.L. Kline

Fls in pinks and whites, *auratum*-like, fragrant. Stems 1 m. Late June to late July.

(Published in *Kline Cat.*, 1957.)

#### 'Cameo Glow' I(b/-)

Parentage: unnamed seedling × 'White Prince'

R: M.C. Eisel (c. 1977), N: M.C. Eisel, REG: ICRA (1998)

Fls white, underlaid with a pink cast and with a slight cantaloupe-melon colour in the throat; spots absent.

#### 'Camilla' I(a/b)

Parentage: 'Sans Pareil' × 'Montreux'

R: De Jong Beheer B.V. (1992), G: De Jong Lelies (1994), N: De Jong Beheer B.V. (1998), I: De Jong Beheer B.V. (1998), REG: De Jong Lelies Holland B.V. (1999)

Inside strong purplish red (60C) on a paler ground, tepals tinged with strong purplish red (60B) above nectaries; outside strong purplish red (60C) on a paler ground, tepals tipped strong yellow-green (144B); spots few, dark greyish reddish brown (200A); papillae strong purplish red (60C); nectaries strong yellow-green (143B), with a little pale yellow-green (155A); pollen stronger coloured than moderate orange (167A); stigma strong yellow-green (144C). Fls 150 mm wide; tepals 80 × 25-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 10 mm, green. Stems 1.3 m, green, with c. 10-13 fls.

(Nomenclatural standard: colour print provided by registrant (WSY 0022848).)

#### 'Camille' III(c/d)

See *L. × testaceum* 'Camille'.

#### 'Campanile' I(a/-)

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1994)

Inside deep purplish pink (64D) for over a third, shading to a variegation of pale purplish pink (62D) and deep purplish pink (64D) at tepal-tips, throat strong purplish pink (62A); outside moderate and pale purplish pink (62B & D), tepals edged with deep purplish pink (64D), narrowly so at tip, tinged with strong yellow-green (143A) at base, midribs yellowish white (155A), tinged with strong yellow-green (143A) at top; spots dark greyish reddish brown (200A), in the throat; papillae moderate purplish pink (62B), in the throat; pollen orange (167A); stigma pale yellow (11C), suffused with pale red. Fls 190 mm wide; tepals 95 × 53 mm. Lvs scattered, 85 × 13

mm, mid green. Stems 0.85 m, pale green with darker markings, and with c.10 fls.

**‘Campfire’ I(a/-)**

Parentage: selection from Mid-century Group

S: J. de Graaff, N: J. de Graaff

Fls deep red; spots inconspicuous. Lvs dark green. Stems 1-1.2 m, with 6-12 fls. June to July.

(Published in *Oregon Bulb Farms Cat.*, 1949.)

**‘Campinas’ VII(a-b/b)**

Parentage: (‘Star Gazer’ × unknown) × pink-flowered seedling

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2002)

Inside yellowish white (155D) at base of tepals, shading upwards and towards margins to light purplish pink (62B), throat yellowish white (155D); outside yellowish white (155D) at base of tepals, shading upwards to pale purplish pink (65C); spots and papillae present; nectaries strong yellow-green; pollen strong reddish orange to strong orange (169A/B); stigma pale yellow-green (193D). Fls 190 mm wide; tepals 110 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 30 mm. Stems 0.84 m, dark, with c.5 fls. July.

**‘Campione’ VII(-/a)**

Parentage: seedling 87-134 × seedling 90-27

R: Vletter & Den Haan (1993), G: Vletter & Den Haan, N: Vletter & Den Haan (1996), I: Vletter & Den Haan (1996), REG: Gebr. Vletter & Den Haan (1996)

Inside yellowish white (155D), suffused with strong purplish red (59D); outside similarly coloured, midribs brilliant yellow-green (150C), strong yellow-green (144C) at base, the inner tepals paler; spots absent; papillae few, on a third of each tepal; nectaries strong yellow-green (144B); pollen strong orange (169B); stigma greyish yellow-green (191B) and dark red (59A). Fls 240 mm wide; tepals 135 × 50-70 mm, margins strongly ruffled, tips recurved. Lvs scattered, 255 × 45 mm, dark green. Stems 1.2 m, green, with c.6-7 fls.

**‘Camrose’ I(b/-)**

Parentage: ‘Sally Jo Ann’ × (‘Jeanne d’Arc’ × ‘Cheyenne’) R: E.E. Fox (1989), G: E.E. Fox (1991), N: Fox Lily Ranch (1995), I: Fox Lily Ranch (1995), REG: Fox Lily Ranch (1995)

Inside strong purplish pink (62A), each tepal with a central, pale greenish yellow (2D) stripe, throat strong purplish red (63B); outside moderate purplish pink (62B), midribs vivid yellow (17C); spots few, fine, maroon/black on a quarter of each tepal; nectaries frosted white; pollen rusty orange. Fls 125 mm wide; tepals 60 × 26 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 1.12 m, green, with 18-24 fls. Mid July to early Aug.

**‘Camry’ I(a-b/-)**

Parentage: unnamed seedling × unnamed seedling

R: Mak-Leek Inc. (1989), G: Van Zanten Flowerbulbs B.V. (1990), N: Van Zanten Flowerbulbs B.V. (1994), I: Van Zanten Flowerbulbs B.V. & Mak-Leek Inc. (1994), REG: Koninklijke Van Zanten B.V. (1995)

Inside vivid reddish orange (34A), throat vivid orange (28A); outside vivid reddish orange (34A); dark spots on a reasonable area; papillae also present; nectaries purplish red; pollen red-brown; stigma purple. Fls 160 mm wide; tepals 85-95 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 13 mm, mid green. Stems 1.15 m, green with darker markings, and with c.5-8 fls. Midseason.

**‘Canada’ VII(a-b/b)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside and outside yellowish white (155D); outside with green midribs; spots absent; papillae present; nectaries green, the edges becoming purple-red with age; pollen red-brown; stigma dark purple. Tepal-margins slightly ruffled, tips strongly recurved. Stems medium to tall, with c.5 fls. Midseason.

***canadense* L. IX(c/a)**

Fls yellow, orange or red, usually with maroon or purple-brown spots towards base; pollen yellow to red-brown. Tepals 50-85 × 12-20 mm, tips recurved. Lvs mostly in whorls of 6-10, but some scattered, up to 150 × 20 mm. Stems up to 2.5 m, green, with c.10(-20) fls. Eastern N America.

Syn.: *canadense* var. *rubrum*.

***canadense* ‘Chocolate Chips’ IX(c/a)**

See *canadense* var. *editorum* ‘Chocolate Chips’.

***canadense* var. *coccineum* Pursh IX(c/a)**

FCC 1872

Fls dark brick-red, throat yellow and profusely spotted. (Exhibited as *canadense* var. *rubrum* hort. M.W. Skinner in *Flora of North America* 26: 196 (2002) considers that this variety is synonymous with *canadense*.)

***canadense* var. *editorum* Fernald IX(c/a)**

Fls red, with narrower tepals and broader lvs than *canadense* itself.

(M.W. Skinner in *Flora of North America* 26: 196 (2002) considers that this variety is synonymous with *canadense*.)

***canadense* var. *editorum* ‘Chocolate Chips’ IX(c/a)**

Parentage: wild-collected selection of *canadense* var. *editorum*

N: R.M. Adams (1981), I: B & D Lilies (1984), REG: R.M. Adams (1985)

Inside with vivid red (46C) tepal-tips, fading to orange and then to yellow towards the base; outside vivid red (46C); spots large (0.5-3 mm wide). Tepals very slightly recurved. Lvs scattered, mid green. (Collected in the wild by R.M. Adams in 1981.)

***canadense* var. *editorum* ‘Fire Engine’ IX(c/a)**

Parentage: wild-collected selection of *canadense* var. *editorum*

N: R.M. Adams (1981), I: B & D Lilies (1984), REG: R.M. Adams (1985)  
Fls vivid red (46C) outside and on tepal-tips inside, fading to orange and then yellow towards the base; spots 0.5-1.25 mm in diameter; pollen burnt orange. Tepal-margins smooth, tips very slightly recurved. Lvs whorled, mid green.  
(Collected in the wild by R.M. Adams in 1981.)

***canadense* var. *editorum* ‘Melted Spots’ IX(c/a)**

Parentage: wild-collected selection of *canadense* var. *editorum*  
N: R.M. Adams (1981), I: B & D Lilies (1984), REG: R.M. Adams (1985)  
Fls vivid yellow (15B); spots 0.5-2 mm wide, very dense on basal two-thirds of each tepal, so appearing black. Tepal-margins smooth, tips slightly recurved. Lvs whorled. Stems with c.7 fls.  
(Collected in the wild near Madbury, New Hampshire, USA by R.M. Adams in 1981.)

***canadense* var. *editorum* ‘Peaches and Pepper’ IX(c/a)**

Parentage: wild-collected selection of *canadense* var. *editorum*  
N: R.M. Adams (1981), I: B & D Lilies (1984), REG: R.M. Adams (1985)  
Tepals brilliant orange-yellow (23B), with a sprinkling of fine (0.5mm) spots. Tepals recurved. Lvs whorled.  
(Collected in the wild by R.M. Adams in 1981.)

***canadense* var. *editorum* ‘Redwing’ IX(c/a)**

Parentage: stated to be a variant of *canadense* var. *editorum*  
Inside scarlet, throat yellow; spots brown.

***canadense* ‘Fire Engine’ IX(c/a)**

See *canadense* var. *editorum* ‘Fire Engine’.

***canadense* var. *flavorubrum* hort. ex T. Moore IX(c/a)**

Fls deep orange, throat yellow, spotted.

***canadense* ‘Golden Rule’ IX(c/a)**

Parentage: wild form of *canadense*  
Fls pure yellow.  
(Published in *Sandyloam Cat.*, 1944. Found by Mrs M.G. Henry.)

***canadense* var. *immaculatum* Jenkinson IX(c/a)**

Fls yellow; spots absent.

***canadense* ‘Melted Spots’ IX(c/a)**

See *canadense* var. *editorum* ‘Melted Spots’.

***canadense* ‘Peaches and Pepper’ IX(c/a)**

See *canadense* var. *editorum* ‘Peaches and Pepper’.

***canadense* ‘Redwing’ IX(c/a)**

See *canadense* var. *editorum* ‘Redwing’.

***canadense* ‘Roberts’ Ruby’ IX(c/a-d)**

Parentage: selection from *canadense*  
S: W.E. Roberts  
Inside orange-red, basal two-thirds of tepals orange with dense dark brown spots; outside orange-red. Tepals spreading from about half way, tips recurved. Pedicels arched. Lvs whorled. Stems to 2 m or more.

***canadense* var. *rubrum* hort. ex T. Moore IX(c/a)**

Syn. of *canadense*.

***canadense* ‘Ten-gallon Turkscap’ IX(b-c/a-d)**

Parentage: wild-collected selection of *canadense*  
N: R.M. Adams (1981), I: B & D Lilies (1984), REG: R.M. Adams (1985)  
Fls vivid yellow (15B); spots reddish, dense, small (0.5-1 mm wide), on basal third of each tepal. Tepals unusually long and narrow, 80-85 × 10-15 mm, margins smooth, tips slightly recurved. Lvs whorled, mid green.  
(Collected in the wild by R.M. Adams in 1981.)

**‘Canary’ VI(-/c)**

Parentage: Aurelian origin  
R: J. de Graaff (c. 1958), N: J. de Graaff  
Tepals clear yellow, non-fading, broad. Stems 1.2-1.5 m. July.

**‘Canarybelle’ VI(-/a)**

Parentage: selection from Golden Trumpet Group  
N: D. Foxwell (1961)  
Inside vivid yellow (9A); outside with some green and slight red colouring.

**‘Canary Bird’ I(a/-)**

Parentage: (‘Niederheide-star’ × ‘Endeavor’) × (‘Cabaret’ × seedling CP 151)  
R: H. Georgi (1987), G: H. Georgi (1989), N: H. Georgi (1991), REG: H. Georgi (1993)  
Inside canary-yellow, throat greenish yellow; outside greenish yellow, tinged with reddish; brushmark large, blood-red on almost half of each tepal, breaking up into 2 lines extending up tepal on inner tepals, breaking up irregularly below and on basal margins into spots, some darker blackish spots also present; nectaries greenish yellow; filaments yellowish; pollen mid brown; style and stigma yellowish pink. Fls 140 mm wide; tepals 120-125 × 10-15 mm, margins smooth, tips of outer tepals slightly recurved. Lvs scattered, 110-120 × 5-15 mm, dark green. Stems 1-1.1 m, dark green, with 8-12 fls. Early to late July.

**‘Canary Chorus’ I(c/-)**

Parentage unknown  
R: unknown, G: Hartle-Gilman Gardens (c. 1988), N: Hartle-Gilman Gardens, I: Hartle-Gilman Gardens (2000), REG: Hartle-Gilman Gardens (2000)  
Inside vivid yellow (13A), midveins tan; spots few, small, purple; nectaries frosted; very little pollen in dark anthers. Fls 92 mm wide; tepals 62 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 130 × 10 mm. Stems

1.06 m, yellow-green with brown spots, and with up to 38 fls (including secondary buds). Late.

**'Canaryflare'** VI(-/a)

Parentage: selection from Golden Trumpet Group  
N: D. Foxwell (1961)  
Inside vivid yellow (9B); outside with some brown tinting. Tepals broad, flaring.

**'Canary Swing'** II(-/-)

Parentage: (*L. × dalhansonii* 'Brocade' × *martagon* var. *album*) × *hansonii*  
R: E.E. Fox (1985), G: E.E. Fox (1989), N: E.E. Fox (1991), I: Fox Lily Ranch (1994), REG: E.E. Fox (1993)  
Fls bright canary-yellow; spots small to medium sized, maroon, confined to central third of each tepal; nectaries canary-yellow; pollen gold. Fls 60 mm wide; tepals 35 × 12 mm, margins smooth, tips slightly recurved. Lvs whorled, 150 × 35 mm, mid green. Stems 1.4 m, pale green, with 12-18 fls. Early July.

**'Canary Time'** I(a/-)

Parentage: 'Dawn Star' × 'Pumpkin Sweet'  
R: G.C. Keast (1986), G: G.C. Keast (1988), N: G.C. Keast (1990), I: G.C. Keast, REG: G.C. Keast (1991)  
Fls vivid yellow (9B); spots maroon, on basal half of each tepal; nectaries inconspicuous; pollen brown. Fls 180 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 20 mm, dark green. Stems 0.8 m, green, with c.8 fls. Mid Dec. to early Jan. (New Zealand).

**'Canasta'** I(a/-)

Parentage: 'Grand Prix' × 'Pirate'  
R: Bischoff Tulleken Leliecultuur B.V. (1977), G: Bischoff Tulleken Leliecultuur B.V. (1980), N: Bischoff Tulleken Leliecultuur B.V. (1983), I: Bischoff Tulleken Leliecultuur B.V. (1984), REG: Bischoff Tulleken Leliecultuur B.V. (1988)  
Inside strong reddish orange (169A); outside deep red (185A) and moderate red (179B); spots deep red (185A) and dark red (187A); pollen brownish orange (171B). Fls 150 mm wide; tepals 75 × 40 mm, not recurved. Lvs scattered, 64 × 10 mm, mid green. Stems 0.63 m, green with darker spots, and with c.6 fls. June.

**'Canberra'** VIII(a-b/b-c)

Parentage: unnamed seedling × unnamed seedling  
R: Trior Lelie B.V., G: Trior Lelie B.V., N: Trior Lelie B.V. (1994), I: Trior Lelie B.V. (1996), REG: Trior Lelie B.V. (1997)  
Inside strong purplish red (64B) on a paler ground, midveins deep red (60A) shading to yellowish white (155B) towards top, throat yellowish white (155B); outside strong purplish red (64B) on a paler ground, ringed with strong yellow-green (144B) at base, midribs yellowish white (155B) shading into rest of tepal; spots dark red (187B), on basal part of each tepal; papillae yellowish white (155B) and strong purplish red (64B), in the throat; nectaries strong yellow-green (143B), surrounded by a light greenish

yellow (8B) rim; pollen light orange (28D); stigma light brownish grey (201B) with a little moderate purple (79D). Fls 240 mm wide; tepals 120 × 40-60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 175 × 55 mm, mid green. Stems c.0.75 m or more, green, with c.5-7 fls.

**'Candace'** I(a/-)

Parentage unknown  
R: R. Simonet, G: R. Erskine (pre 1985), N: R. Erskine (1990), I: R. Erskine (1990), REG: R. Erskine (1994)  
Inside and outside maroon-red; spots rather faint; nectaries dark red; pollen almost black. Fls 120 mm wide, scented; tepals 70 × 30 mm, margins ruffled, tips not recurved; pedicels 110 mm long. Lvs scattered, 100 × 10 mm, dark green. Stems 0.8 m, green, mottled black, with c.10 fls. Late.

**'Candela'** Div. ?

Given as a parent of 'Sun Jewel'. No further details.

**'Candelabra'** I(b/-)

Parentage unknown  
R: E. Gontarek & J. Wadepammer (1972), N: E. Gontarek, I: J. Wadepammer (1976), REG: J. Wadepammer (1976)  
Fls yellow; spots tepal; nectaries yellow-green; pollen light tan-brown. Tepal-margins smooth. Lvs scattered. Stems 0.8 m. July.  
(Published in *Lilies and other Liliaceae*, 1976: 89.)

**'Candice'** VII(a-b/b)

Parentage unknown  
R: Mak Lelieveredeling B.V. (1984), G: Mak Lelieveredeling B.V. (1987), N: Mak Lelieveredeling B.V. (1988), I: Mak-Leek Inc. (1993), REG: Mak Lelieveredeling B.V. (2001)  
Inside moderate purplish pink (65A), paler at base; outside pale purplish pink (65C); spots and papillae present; nectaries green, changing to yellow; pollen reddish brown; stigma purple. Fls 200 mm wide; tepals 120 × 70 mm, margins slightly ruffled, tips recurved. Lvs scattered, 120 × 65 mm. Stems 0.5 m, green with darker markings, and with c.5 fls. Midseason.

***candidum* L.** IX(b/a)

AGM 1993  
Inside white, yellow at base; pollen yellow. Fls fragrant; tepals 50-80 × 10-40 mm, tips slightly recurved. Lvs scattered, up to 75 × 10 mm. Stems 0.9-2 m, dark red-purple, with 5-20 fls. Greece, former Yugoslavia, SW Turkey, Lebanon, Syria, Israel.

**var. *candidum*** IX(c/d)

See *cernuum* var. *candidum*.

***candidum* 'Aureomarginatum'** IX(b/a)

Parentage: sport from *candidum*  
Lvs with yellow margins.

***candidum* ‘Bratislava’ IX(a-b/a)**

Parentage: sport from *candidum*  
S: J. Hejdu (1972), N: J. Hejdu  
Fls white, 100-120 × 120-150 mm, with 9 well-developed tepals (occasionally 3 further tepals partially developed); broader and more waxy than typical *candidum*.

***candidum* ‘Cascade’ IX(b/a)**

Parentage: selection from *candidum*  
S: J. de Graaff (pre 1947), N: J. de Graaff  
Fls white.  
Syn.: Arctic Group.  
(Published in *Oregon Bulb Farms Cat.*, 1947 as “Arctic Strain”; re-listed in *Oregon Bulb Farms Cat.*, 1948 as ‘Cascade’. This cv. epithet covers several clones of improved *candidum*.)

***candidum* var. *cernuum* Weston IX(b-c/a)**

Syn. of *candidum* ‘Sultan Zamback’.

***candidum* ‘Charles X’ IX(b/a)**

Parentage: selection from *candidum*  
Improved form of *candidum*.  
(Published in *Gard. Chron.*, ser. 3, 95: 230-31, fig.108 (1934). Raised in France, but exact origin unknown.)

***candidum* ‘Flore Pleno’ IX(b/a)**

Syn. of *candidum* var. *plenum*.

***candidum* ‘Maculatum’ IX(b/a)**

Parentage: selection from *candidum*  
(Listed by T. Lang & Co., Australia, pre 1867. No further details.)

***candidum* var. *monstrosum* Vilm. IX(b/a)**

Syn. of *candidum* var. *plenum*.

***candidum* ‘Oregon Hybrid’ IX(-/-)**

Parentage: presumably a selection from *candidum*  
(Published in *R.B. Ware Cat.*, 1946, where it was offered as a new seedling type.)

***candidum* var. *plenum* Weston IX(b/a)**

Fls sterile, unscented, with the centre of each fl. elongating into a shoot with numerous white, overlapping lvs, crowded at tip into a kind of bud.  
Syn.: *candidum* ‘Plenum’; *candidum* ‘Flore Pleno’; *candidum* ‘Plumosus’; *candidum* var. *monstrosum*.  
(A “monstrous” form known in cultivation for at least 300 years.)

***candidum* ‘Plenum’ IX(b/a)**

Syn. of *candidum* var. *plenum*.

***candidum* ‘Plumosum’ IX(b/a)**

Syn. of *candidum* var. *plenum*.

***candidum* var. *purpureum* Weston IX(b/a)**

Fls white, streaked with purplish red. Bulbs also streaked with purplish red.

***candidum* var. *salonikae* Stoker IX(b/a-b)**

Fls more cup-shaped and earlier than the type. Stems almost black.  
Syn.: ‘Salonika Variety’.

***candidum* ‘Sultan Zamback’ IX(b-c/a)**

Parentage: selection from *candidum*  
Fls white, with narrow tepals. Fls tend to droop. Stems almost black.  
Syn.: *candidum* var. *cernuum*; ‘Cernuum’; ‘Samback’.  
(Known in cultivation for over four centuries, see Clusius, *Historia*: 135 (1601).)

***candidum* ‘Variegatum’ IX(b/a)**

Parentage: sport from *candidum*  
Lvs blotched with yellowish white.

***candidum* ‘White Eagle’ IX(b/a)**

Parentage: selection from *candidum* ‘Cascade’  
S: J. de Graaff, N: J. de Graaff (1947), I: J. de Graaff (1947)  
Early flowering, with tall stems and large fls.  
(Published in *Amer. LYB* 1: 106 (1947/48).)

***candidum* ‘White Elf’ IX(b/a)**

Parentage: selection from *candidum* ‘Cascade’  
S: J. de Graaff, N: J. de Graaff (1947), I: J. de Graaff (1947)  
Early flowering, with short stems and medium-sized fls.  
(Published in *Amer. LYB* 1: 106 (1947/48).)

***candidum* ‘White Falcon’ IX(b/a)**

Parentage: selection from *candidum* ‘Cascade’  
S: J. de Graaff, N: J. de Graaff (1947), I: J. de Graaff (1947)  
Late flowering, with tall stems and very large fls.  
(Published in *Amer. LYB* 1: 106 (1947/48).)

**‘Candleflame’ I(a/-)**

Parentage: (‘Chinook’ × ‘Connecticut King’) × up-facing, yellow-flowered Asiatic seedling with heavy wine-red brushmarks  
R: V.E. Bowen (1980), G: Hartle-Gilman Gardens (1982), N: Hartle-Gilman Gardens (1990), I: Hartle-Gilman Gardens (1990), REG: Hartle-Gilman Gardens (1990)  
Inside and outside vivid yellow (17B); each tepal with a large, blood-red brushmark and spots in the central quarter; nectaries green; pollen rust-coloured. Tepals 110 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 20 mm, mid green. Stems 1.1 m, dark green, with 10-14 fls. Late.

**‘Candlelight’ VI(-/a)**

Parentage: Sulphur Group × unknown  
R: L. Lutz (c. 1966), N: L. Lutz  
Fls pale yellow, with a slight green tinge on outside, very large; tepal-margins slightly ruffled.

**‘Candlelight’ I(a/-)**

Syn. of ‘Oregon Candlelight’.

**'Candy' I(a/-)**

Parentage: 'Pirate' × 'Connecticut King'

R: Gebr. Mak B.V. (1977), G: Gebr. Mak B.V. (1979), N: Gebr. Mak B.V. (1982), I: Gebr. Mak B.V. (1983), REG: Gebr. Mak B.V. (1988)

Inside vivid orange (18B), tepals flamed strong orange-yellow (24B), throat vivid orange; outside of inner tepals strong orange (30D), of outer tepals light orange (28B) with a vivid reddish orange (30B) edge; pollen greyish brown (166A). Fls 150 mm wide; tepals 80 × 45 mm, slightly recurved. Lvs scattered, 80 × 20 mm. Stems 0.6 m, pale green with some darker markings, and with 7-8 fls. June.

**'Candy Apple' I(a/-)**

Parentage: 'Red Tiger' × 'Rosabelle'

Fls light red. Stems 1.4 m. July.  
(From Stone & Payne stock.)

**'Candy Bar' VII(-/c)**

See *L. × parkmanii* 'Candy Bar'.

**'Candy Dulfer' I(a/b)**

Parentage unknown

R: P. Hoff, G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V. (1997), REG: Hoffgaarde B.V. (1997)  
Inside vivid yellow/light orange-yellow (16A/B) with a deep pink (51B) suffusion on the apical part of each tepal, throat vivid yellow (15A) and moderate red (47A); outside vivid purplish red (66A/B) on a paler ground, tepal-edges strong orange (24A), tinged with strong yellow-green (143C) at base and tipped strong yellow-green (144B); spots few, dark red (187B), in the throat; papillae dark red (187B); nectaries strong yellow-green (143C) and moderate pink (51D); pollen strong orange (169B); stigma dark red (187B). Fls 220 mm wide; tepals 110 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 0.9-1 m, green, with 4-7 fls.

Trade designation: JUMBO® CANDY DULFER.

**'Candy Floss' VII(-/b)**

See *L. × parkmanii* 'Candy Floss'.

**Candy Frost Group VII(-/d)**

Parentage: hybrids involving *rubellum* & *L. × parkmanii* 'Manawatu'

R: L. Woodriff (pre 1966), S: L. Woodriff & J.M. Shaver  
Inside white; spots pink and crimson. Fls 125-150 mm wide; tepals broad, recurved. Stems 0.9-1.9 m. Aug. to Sept.

(Published in *Rex Bulb Farms Cat.*, 1966/67: 43.)

**'Canillo' VIII(a/b)**

Parentage unknown

R: Peacock B.V. & Imanse Lelieveredelng B.V. (1995), G: Peacock B.V. (1996), N: Peacock B.V. (1997), I: Peacock B.V. (1999), REG: Peacock B.V. & Imanse Lelieveredelng B.V. (2001)

Inside light orange-yellow (19A), more orange at tepal-edges, base orange; outside light yellow (20B); spots and

papillae present; pollen yellow-brown; stigma purple.

Tepal-margins hardly ruffled, tips recurved. Stems green, with darker stripes and spots, and with c.7 fls. Very early to early.

(*A. longiflorum*/Asiatic (LA) hybrid.)

**'Cannes' I(a-b/b)**

Parentage: seedling RS 525 × seedling W 85-6

R: Gebr. Vletter & Den Haan (1986), G: Gebr. Vletter & Den Haan (1988), N: Gebr. Vletter & Den Haan (1993), I: Gebr. Vletter & Den Haan (1996), REG: Gebr. Vletter & Den Haan (1997)

Inside light orange (29B); outside light yellowish pink (29C); small dark spots and orange papillae present; nectaries orange; pollen orange-brown; stigma purple.

Tepal-margins hardly ruffled, tips slightly recurved. Stems 0.8 m, green, with c.7 fls.

**'Canova' I(a/b)**

Parentage: seedling AW 94-02 × seedling W 92-1

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside yellowish white (155D), with some light yellow-green (150D) around the nectaries in the throat; outside yellowish white (155D), midribs light yellow-green (154D) with a little red-brown, outer tepals tipped strong yellow-green (143A); spots absent; papillae few, in the throat; nectaries white, hairy; pollen brownish orange (164A); stigma dark red (183A). Fls 195 mm wide; tepals 105 × 40-55 mm, margins smooth, tips slightly recurved. Stems 1 m, green with darker markings, and with c.6 fls.

**'Cantelope' VI(-/a)**

Error for 'Canteloupe'.

**'Canteloupe' VI(-/a)**

Parentage: Aurelian Group

R: F.J. Holmes, N: F.J. Holmes (1973)

Inside strong orange-yellow (24B); outside green and brown; pollen dark brown. Fls scented. Stems 1.2-1.4 m. (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 29 (1978) erroneously as 'Cantelope'.)

**Canterbury Group VI(-/l)**

Parentage: complex hybrids derived from tetraploid trumpet Aurelians, *L. × sullivanense* 'Sulphur Queen', *sargentiae* (and hybrids involving this), *leucanthum*, *brownii* & *sulphureum* × *henryi*

R: R.T. Moriarty (between 1973 and 1990), G: R.T. Moriarty (1975), N: R.T. Moriarty (1992), I: K. Chamberlain (1993), REG: New Zealand Lily Society (1993)

Fls in wide range of colours from strong orange (25B), brilliant orange-yellow (23B), brilliant yellow (21C) to dark purplish pink (186C) on inside; outside ranging from moderate orange (173C), moderate orange-yellow (165C) to moderate reddish orange (175D) with light yellow-green (145B) to moderate purplish red (186B) midribs; spots absent; nectaries mostly green; pollen

brown-orange to yellow-orange. Fls up to 180 mm wide; tepals up to 170 × 65 mm, margins smooth, tips slightly recurved. Lvs scattered, up to 200 × 30 mm, mid green. Stems 1.5-2 m, light green to purple-green, with 12-14 fls in open, pyramidal infl. Jan. (New Zealand).

**‘Canterbury Belle’ VIII(c/a-b)**

Parentage: (cream-flowered Aurelian × *rubellum*) × *rubellum*

R: W.H. McLaren (1982), G: A.E. Alexander (1990), N: A.E. Alexander (1995), I: A.E. Alexander (1995), REG: A.E. Alexander (1995)

Inside cream, throat yellow-orange; outside cream with some green gold and pink flushing; spots absent; nectaries dark green; pollen bright orange. Fls 100-110 mm wide, spicily scented; tepals up to 120 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 120 × 20 mm, mid green. Stems up to 1.2 m, mid green, with up to 17 fls. Jan. (New Zealand).

**‘Canyon’ IV(-/-)**

Parentage: Bellingham Group × unknown western American hybrid

R: D.B. Fox, G: D.B. Fox (1967), N: D.B. Fox (1970)  
Fls deep red (53A) over orange, giving effect of strong red (46A); throat pale yellow deepening along tepals to orange; spots dark maroon; filaments pale green; pollen orange-brown; stigma tan. Tepal-margins smooth. Lvs whorled, mid green, twisted at tip. Stems 1.5 m. (Fls darken as they mature.)

**‘Canyon Echo’ I(a/c)**

Parentage: up-facing tan-flowered seedling × ‘Wendy’s Choice’

R: E.E. Fox (1991), G: E.E. Fox (1993), N: E.E. Fox (1993), I: Fox Lily Ranch (2003), REG: E.E. Fox (2002)  
Inside light orange-yellow (22B), with large central splashes of moderate reddish brown (171A), throat strong yellowish pink (31C); outside light orange-yellow (22B), midribs greyish red (184A); spots absent; nectaries strong orange (25B), frosted; pollen dark reddish orange (175C); stigma dark reddish orange (175B). Fls 120 mm wide; tepals 60 × 35 mm, margins slightly ruffled, tips not or slightly recurved. Lvs scattered, 100 × 18 mm. Stems 0.8 m, green mottled with black, with 15-17 fls. Late July. (The fl. colour is reminiscent of the Grand Canyon, USA. Nomenclatural standard: hard copy of a scanned colour image provided by registrant (WSY 0034902).)

**‘Capbreton’ I(a/-)**

Parentage: seedling 89-69-82 × unknown

R: World Flower B.V. (1992), G: World Flower B.V. (1994), N: World Flower B.V. (2000), I: World Flower B.V. (2000), REG: World Flower B.V. (2000)  
Inside vivid yellow (14A/B); outside vivid yellow (14B); spots and papillae present; nectaries green; pollen light brown; stigma purple. Fls 150 mm wide; tepals 80 × 50 mm, margins ruffled, tips recurved. Lvs scattered, 140 × 25 mm. Stems 1.1 m, green, with c.7 fls. Very early to early.

**Cape Blanco Group IV(c/?d)**

Parentage: complex hybrids of *occidentale*, *pardalinum* subsp. *vollmeri*, *pardalinum* subsp. *wigginsii*, *columbianum* & *pardalinum*

R: A.D. Reid (c. 1968), N: A.D. Reid, I: Laurie’s Garden (1969)

Fls in shades of yellow-orange, orange and red, variously spotted. Fls small to medium sized. June.

(Published in *ILR* (1969) as Cape Blanco grex. Included in E. Fisher, *Named Lily Hybrids and their Origins*, 27 (1978) erroneously as a clone.)

**‘Cape Cod Marvel’ I(a/-)**

Parentage: derived from ‘Red Torch’, *L. × scottiae* ‘Rose Cup’, ‘Red Carpet’ & ‘Ming’

R: A. Scharf (1982), N: A. Scharf

Fls red, with small yellow stripes. Stems 0.8 m.

**Cape Cod Moonglow Group I(a/-)**

Parentage unknown

R: R.W. Bemis (1960s), N: Blackthorne Gardens, I: Blackthorne Gardens (c. 1982)

Fls yellow, tinged with green. Stems 1.2-1.5 m. July to Sept.

**‘Cape Cod Sunray’ I?(a/-)**

Parentage unknown

I: Blackthorne Gardens (1985)

Fls golden yellow, each tepal with a golden ray. Stems 0.6 m. June.

**‘Cape Cod Sunshine’ I(b/-)**

Parentage unknown

R: R.W. Bemis (1960s), N: Blackthorne Gardens, I: Blackthorne Gardens (c. 1982)

Fls yellow, faintly spotted; pollen absent. Stems 0.6 m. July onwards.

**‘Cape Cod Sunstar’ I?(/-)**

Parentage unknown

R: Blackthorne Gardens (pre 1983), N: Blackthorne Gardens

Fls yellow, slightly overlaid with green, with gold rays along midveins. Stems 0.45-0.6 m. July.

**‘Cape Cod Yankee’ I(a/-)**

Parentage: ‘Connecticut Yankee’ × unknown

R: R.W. Bemis (1960s), N: Blackthorne Gardens, I: Blackthorne Gardens (c. 1982)

Fls apricot-coral; spots absent. Stems 1.2 m. July to Aug.

**‘Cape Cornwall’ I(a/-)**

Parentage unknown

R: H.J. Eaton, N: H.J. Eaton (1970)

Fls strong orange (25A), midribs and base of outer tepals strong brown (172A) to dark reddish orange (172B); spots numerous, dark red (183A/B); papillae grey; pollen vivid orange (28A). Tepals c.90 mm long. Lvs 80 × 5 mm. Stems 0.6 m.

**‘Cape Eagle’ I(a/b)**

See *L. × hollandicum* ‘Cape Eagle’.

**‘Capitol’ VII(-/-)**

Parentage: ‘Merci’ × ‘Freedom’

R: Bischoff Tulleken Leliecultuur B.V. (1980), G: Gebr. De Vries B.V. (1983), N: Trior Lelie B.V. (1985), I: Trior Lelie B.V. (1986), REG: Gebr. De Vries B.V. (1989)

Inside and outside greenish white (155C), marked with dark pink (182D) at base outside; pollen strong orange (169C). Tepals 80 × 45 mm. Lvs scattered, 100 × 30 mm, mid green. Stems 0.45 m, green with darker markings, and with c.5 fls (from 12-14 cm bulbs). July.

**‘Capri’ I(a/b-c)**

Parentage: seedling A 112 × ‘Mont Blanc’

R: Gebr. Vletter & J.A. Den Haan (1977), G: Gebr. Vletter & J.A. Den Haan (1979), N: Gebr. Vletter & J.A. Den Haan (1984), I: Gebr. Vletter & J.A. Den Haan (1984)

Inside pale yellow-green (155A), centre veined green; outside pale greenish yellow (2D) to pale yellow-green (4D), midribs pale green, tepal-tips green; nectaries purple; pollen orange-brown. Lvs scattered, mid green. Stems 0.8 m, mid green, with 9 or more fls. July. (Published in *Bloembollencultuur*, 1984.)

**‘Capriccio’ I(a-b/c)**

Parentage: ‘Lime Ice’ × ‘Argusauge’

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2001)

Inside moderate yellow (162A) with a soft green tinge, throat moderate yellow (162A); outside moderate yellow (162A), midribs whitish yellow-green; spots numerous, small, dark red (183A), on basal three-quarters of each tepal; nectaries strong greenish yellow (153C); filaments brilliant greenish yellow (151D); pollen dark red (183A); style brilliant greenish yellow (151D); stigma strong red (53C). Fls 170 mm wide; tepals 85 × 40 mm, tapering to a narrow tip, margins smooth, tips not recurved. Lvs scattered, clothing stem thickly, 120 × 20 mm. Stems 0.9 m, dark green, with c.18 fls, (including secondary buds), in a large infl. Late June.

(Published in Steinbrück’s bulb list, 2000. The epithet refers to music written by Tchaikovsky. Nomenclatural standard: colour print provided by registrant (WSY 0028879).)

**‘Caprice’ VII(b/c)**

Parentage: ‘Star Gazer’ × mixed pollen

R: K.L. Watkins (1982), G: R.F. Nelson (1987), N: R.F. Nelson (1988), REG: R.F. Nelson (1988)

Inside pinkish red, tepal-edges white, eventually maturing to pinkish red all over, tepal-tips strong red (51A), throat deep red (53A); outside with midribs of outer tepals deep red (185A), otherwise suffused with pink; spots dark red (187A), scattered on basal half of each tepal; nectaries strong yellow-green (144B); pollen strong orange (160B). Tepals 110 × 50 mm, margins ruffled, tips strongly recurved. Lvs scattered, 200 × 50 mm, mid green. Lvs

numerous. Stems 2 m, light olive-grey (197A), with 20-25 fls which are held close to the stem on short pedicels. Feb. (Australia).

**‘Caprice of Nature’ VI(b-c/a)**

Parentage: *leucanthum* var. *centifolium* ‘Black Dragon’ × *leucanthum* var. *centifolium*

R: K. Paszyńska (1984), G: K. Paszyńska (1988), N: K. Paszyńska (1992), I: K. Paszyńska (1992), REG: K. Paszyńska (1992)

Inside white, throat strong yellow; outside strongly suffused with pink; spots absent; nectaries strong yellow; pollen light brown. Fls 130 mm wide, intensely scented; tepal-margins slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 20 mm, mid green. Stems 1.5 m, green, with 10-20 fls in a crown-like infl. Mid July.

**‘Capricorn’ VII(-/-)**

Parentage: *auratum* × unknown

R: Lilies International Ltd, N: Lilies International Ltd  
No further details.

**‘Captain Kidd’ I(a/-)**

Parentage unknown

R: F.L. Skinner, N: F.L. Skinner  
Fls orange.

**‘Captain Marvel’ I(a/-)**

Parentage: derived from ‘Red Torch’, *L. × scottiae* ‘Rose Cup’, ‘Red Carpet’ & ‘Ming’.

R: A. Scharf (1982), N: A. Scharf  
Fls red, with small yellow stripes. Stems 0.8 m.

**‘Caramba’ VI(b-c/d)**

Parentage: *henryi* × Palmer hybrid 56227

R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)  
Inside rich orange; outside paler, midribs beige, greenish at base; papillae large, orange, on a third of each tepal; nectaries dark olive-green; pollen chocolate-brown; stigma green. Fls 145 mm wide, 43 mm long; tepals 95 × 33 mm, thick, margins slightly wavy, tips slightly recurved. Lvs scattered, 165 × 22 mm, glossy mid green. Stems 1.2 m, dotted dark violet-brown, thick. Early Aug.

**‘Carambole’ I(a/-)**

Parentage: ‘Connecticut King’ × Sundrop Group

R: Bischoff Tulleken Lelies B.V. (1977), G: Bischoff Tulleken Lelies B.V. (1980), N: Bischoff Tulleken Lelies B.V. (1986), I: Bischoff Tulleken Lelies B.V. (1987), REG: Bischoff Tulleken Lelies B.V. (1986)

Inside strong orange (24A), with red veins; outside pink below, light orange (24C) above; spots few, tiny, in the throat; nectaries brown; pollen orange. Fls 175 mm wide; tepals 80 × 50 mm, not recurved. Lvs scattered, 100 × 10 mm, pale green. Stems 1 m, pale green, with c.8 fls. June.

**‘Caramella’ I(a-b/b)**

Parentage unknown

REG: World Breeding B.V. (2003)  
Inside strong orange-yellow to moderate yellow

(163B/C), basal part of tepals moderate red (179A); outside moderate to light yellow (163C/D); spots absent; papillae very few; nectaries green; pollen red-brown; stigma orange-yellow. Tepals short, margins hardly ruffled, tips slightly recurved. Stems medium to tall, with c.6 fls. Early to midseason.  
(Said to be a *longiflorum*/Asiatic (LA) hybrid.)

#### 'Caravaggio' VII(a-b/-)

Parentage unknown  
REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen orange-brown; stigma purple. Tepal-margins ruffled, tips strongly recurved. Stems of medium height. Midseason.

#### 'Carbine' VII(-/-)

See *L. × parkmanii* 'Carbine'.

#### 'Carbonia' VII(a/b)

Parentage: seedling 88-99 × seedling 86-282  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2003), REG: Vletter & Den Haan Beheer B.V. (2004)  
Inside with inner tepals strong purplish red (63B), strong purplish red (63A) along midveins, margins light purple (75A), outer tepals strong purplish red (63B), margins strong purplish red (61B), midribs vivid purplish red (61C), throat yellowish white (155B); outside with inner tepals yellowish white (155B) in basal third, becoming strong purplish red (64C), and finally strong purplish red (64B) at top, margins strong reddish purple (70B), midribs light green at base, yellowish white (155D) towards top, outer tepals strong purplish red (63B), towards margins strong purplish red (63A), yellowish white (155B) at base, next to midribs deep purplish pink (64D), midribs strong yellow-green (144C) at base and top, middle part yellowish white (155D); spots absent; papillae deep purplish red (59B); nectaries strong yellow-green (144A) with brilliant yellow (12B) edge; pollen strong orange (25A); stigma moderate yellow-green (138C). Fls 235 mm wide; tepals 130 × 55-75 mm, margins ruffled, tips recurved. Lvs scattered, 160-190 × 45-60 mm, dark green. Stems 0.9 m, light green with some darker markings, and with c.5 fls.  
(The fls become a little paler in colour as they age.)

#### 'Cardigan Bay' I(a/b)

Parentage: 'Primrose Green' × 'Mont Blanc'  
R: P.L. Greenfield (1986), G: P.L. Greenfield (1988/89), N: P.L. Greenfield (1989), REG: P.L. Greenfield (1989)  
Inside creamy white, tepal-tips white, throat cream; outside white; spots small, dark red, around centre of fl.; nectaries green; pollen light brown. Fls 150 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved; sometimes an extra tepal present. Lvs scattered, 125 × 13 mm, dark green. Stems 1 m, green, marbled with purple, with 7 fls (first flowering) including secondary buds, and bulbils. Dec. to Jan. (New Zealand).

#### 'Cardinal' I(c/d)

Parentage: *lancifolium* × *amabile*  
R: J.C. Taylor (c. 1939), N: J.C. Taylor, I: Ontario Agricultural College, Dept. of Horticulture (1947)  
Fls vivid reddish orange (33B), spotted. Stems 1-1.5 m, with 12-15 fls, and with bulbils. July to Aug.  
(Published in *LYB* 10: 46 (1946).)

#### 'Cardinal' IX(b-c/d)

See *speciosum* var. *magnificum* 'Cardinal'.

#### 'Cardinal Beauty' I(c/d)

Parentage: complex hybrid  
R: C.F. Patterson, I: C.F. Patterson (1960)  
Fls moderate reddish orange (35A) in apical half, deep red (53A) in basal half; spots fine, irregular, purple-madder; nectaries vivid yellow-orange (30C). Stems 0.8 m. July.  
Syn.: 'Crimson Beauty'.  
(Introduced under the epithet 'Crimson Beauty', but renamed.)

#### CAREERIST I(a/b)

Trade designation of 'Karjeriste'.

#### 'Caress' I(c/d)

Parentage unknown  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Inside "lemon ice" colour; buds soft pink, the colour remaining as bands on the outside; stigma green; pollen orange. Tepal-margins slightly ruffled, tips distinctly recurved. Lvs bluish green. Stems 0.6-1 m. June.  
(Published in *The Lily Garden Cat.*, 1996/97: 10.)

#### 'Caresa' I(a/-)

Parentage: 'Rosita' × 'Gipsy Queen'  
R: De Jong Beheer B.V. (1985), N: De Jong Beheer B.V. (1990), I: De Jong Beheer B.V. (1990), REG: De Jong Beheer B.V. (1992)  
Inside strong purplish red/deep purplish pink (54A/B), throat with yellowish white (155D) blush; outside moderate purplish red (184D) suffused with pale purplish pink (62D) along the brilliant yellow-green (150B) midribs; spots few, dark red (187B), on the white blush in the throat; nectaries dark red (187A); pollen strong brown (172A). Fls 122 mm wide; tepals 63 × 32 mm, margins smooth, tips strongly recurved. Lvs scattered, mid green. Stems 1.05 m, with c.13 fls. May.

#### 'Caretta' I(c/-)

Parentage: 'Mimosa' × *cernuum*  
R: L.B. Tuffery (c. 1966), N: L.B. Tuffery  
Fls typically *cernuum* in colour. Fls large; tepals broad.

#### 'Carevna' I(a/b)

Parentage: (('Pink Champagne' × 'Connecticut King') × 'Bazar') × ('Dawn Star' × 'Parfait')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000), REG: B. Mičulka (2000)  
Inside creamy, tinged with beige, throat and centre brownish pink; outside white, midribs brownish, pink

at base; spots fairly numerous, large, dark brown-purple, on a third of each tepal; nectaries white-granulated and felted; pollen ochre-brown; stigma purple-red. Fls 140 mm wide; tepals 90 × 40 mm, not recurved, stiff; pedicels 60 mm long, brown-spotted. Lvs scattered, 85 × 17 mm, dull mid green. Stems 0.75 m, much spotted, brown-red at base, with a short infl. Early July.

#### 'Caribbean Pearl' VII(a/c)

Parentage: 'Tiber' × 'Bernini'

R: De Jong Lelies Holland B.V. (1995), G: De Jong Lelies Holland B.V. (1997), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2003)

Inside vivid purplish red (61C), deep purplish pink (66C) towards tepal-margins, throat greenish white (155C); outside of tepals deep purplish pink (66C) in apical two-thirds, yellowish white (155D) in basal third, midribs light yellow-green (144A), strong yellow-green (144D) at top; spots and papillae strong purplish red (60B); nectaries strong yellow-green (143C); pollen dark reddish orange (172B); stigma pale green (189B). Fls 235 mm wide, slightly fragrant; tepals 130 × 70 mm, margins slightly ruffled, tips slightly recurved. Lvs 160 × 47 mm. Stems 1.1 m, green with darker markings, with c.4 fls.

#### 'Carifeo' VIII(a-b/b)

Parentage: seedling BG 94-10 × seedling G 91-04

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside vivid yellow (9A), throat brilliant greenish yellow (151D); outside vivid yellow (9B), midribs strong yellow-green (144C) at base, outer tepal-tips strong yellow-green (144A); spots few, dark red (187A), in the throat; papillae few, along the brilliant greenish yellow (151D), hairy nectaries; pollen strong brown; stigma strong orange-yellow (22A). Fls 190 mm wide; tepals 120 × 40-50 mm, margins smooth, tips recurved. Lvs scattered, 190 × 30 mm. Stems 1.15 m, green, with c.4 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Carillon' VII(a/-)

Parentage: (*L.* × *parkmanii* 'Allegra' × 'Star Gazer') × ('Star Gazer' × 'Merci') × 'Furore')

R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1991), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997), REG: Bischoff Tulleken Lelies B.V. (1997)

Inside yellowish white (155D), midveins yellowish white (155B); outside yellowish white (155D), midribs yellowish white (155B) becoming strong yellow-green (145A) at top, tepal-tips strong yellow-green (143A); spots yellowish white (155D), on basal part of each tepal; papillae yellowish white (155D), in the throat; nectaries strong yellow-green (143C); pollen dark reddish orange (175B); stigma dark purple (79A). Fls 200 mm wide; tepals 100 × 40-60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 35 mm, mid green. Stems 1 m, green, with c.5-6 fls. July.

#### 'Carla Luppi' I(a/-)

Parentage: ('Amber Gold' × 'Kinsen') × ('Amber Gold' × 'Kinsen')

R: Bischoff Tulleken Leliecultuur B.V. (1975), G: Bischoff Tulleken Leliecultuur B.V. (1978), N: Bischoff Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken Leliecultuur B.V. (1983), REG: Bischoff Tulleken Leliecultuur B.V. (1988)

Inside brilliant greenish yellow (5A), tepal-tips light greenish yellow (5C), throat strong yellow-green (145A); outside light greenish yellow (4B), outer tepals flushed with pale yellow (161C); spots dark red (187A); pollen brownish orange (165B). Fls 155 mm wide; tepals 75 × 40 mm, strongly recurved. Lvs scattered, 70 × 10 mm, mid green. Stems 0.55 m, green, with c.8 fls. July.

#### 'Carl Feldmaier' Div. ?

Parentage: Sutter's Gold Group × Olympic Group

R: A. Winkler (pre 1982), N: A. Winkler

No further details.

#### 'Carlie' I(a/b)

Parentage: 'Pirate' × 'Juliana'

R: D.K. Kölli (1983), G: D.K. Kölli (1985), N: D.K. Kölli (1988), REG: D.K. Kölli (1988)

Inside dark raspberry-pink with a conspicuous white flare towards base of each tepal, tepal-tips dark pink, extreme base of each tepal darker rose-pink; outside dark raspberry-pink; spots small, deep wine-red, on and below the white part of each tepal; nectaries greyish green; pollen wine-red. Fls 157 mm wide, often spicily scented; tepals 75 × 32 mm, margins smooth, tips not recurved. Lvs scattered, 81 × 9 mm, dark green. Stems 0.85 m, dark green, with 7-9 fls. Late June to early July.

#### 'Carlton' I(a/b)

Parentage: seedling G 90-17 × seedling G 91-04

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside strong orange (24A), each tepal with a deep red (185A) mark from the base on basal third, throat light yellow-green (154D); outside with midribs light greenish yellow (3D) changing towards edges into vivid orange-yellow (21A), midribs of inner tepals and base of outer tepals moderate reddish brown (166B), fading into the tepal; spots absent; papillae few, in the throat; nectaries white-hairy; pollen dark reddish orange (175B); stigma vivid yellow, with moderate reddish brown (166B) hairs. Fls 180 mm wide; tepals 100 × 35-50 mm, margins smooth, tips not recurved. Lvs scattered, 190 × 20 mm. Stems 1.5 m, green, with c.2 fls.

#### 'Carmel' V(b/a)

Parentage unknown

R: A. Cohen (pre 1999), I: Agricultural Research Organisation, REG: Zabo Plant B.V. (2003)

Inside pale yellow-green (155A) tinged with light yellow-green (145D), midveins strong yellow-green (144A) from the base, fading from strong yellow-green (144B) to

strong yellow-green (144C) on two-thirds of the length, throat strong yellow-green (144B); outside pale yellow-green (155A) tinged with light yellow-green (150D), midribs strong yellow-green (145A), spots and papillae absent; nectaries strong yellow-green (144A); pollen vivid yellow (14A); stigma yellowish grey (194C). Fls 170 mm wide; tepals 195 × 40 mm, margins smooth, tips recurved. Lvs scattered, 245 × 25 mm, dark green. Stems 0.47 m, dark green, with c.6 fls.

Syn.: 'Mt Carmel'.

(In 1999, PBR were granted in Israel to 'Carmel'. In May 2003, European PBR were granted under the epithet 'Mt Carmel', which must be regarded as a synonym.)

#### 'Carmelita' VIII(a/b)

Syn. of 'Yellow Fashion'.

#### 'Carmel Lady' VII(-/c)

Parentage: derived from *auratum*, *rubellum* & *speciosum*

R: E. Mayell (c. 1960), N: E. Mayell, I: A.D. Rothman  
Fls pink.

#### 'Carmen' Div. ?

Parentage unknown

R: P.M. Byam, N: P.M. Byam, I: P.M. Byam

(Published in *LYB* 23: 119 (1960) without description.)

#### 'Carmen' VII(-/c)

See *L. × parkmanii* 'Carmen'.

#### 'Carmen Cita' I(a/b)

Parentage: red-flowered, up-facing Asiatic seedling 359/1 × 'Mont Blanc'

R: G. Thürmer (1987), G: G. Thürmer (1989), N: G. Thürmer (1998), I: G. Thürmer (1999), REG: G. Thürmer (2001)

Inside light orange (28C); outside of outer tepals deep pink (51B), outside of inner tepals light orange (28D); spots numerous, dark red (187B), on basal half of each tepal; nectaries orange-green; pollen deep red (185A). Buds very dark. Fls 120 mm wide; tepals 64 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 10 mm. Stems 0.8 m, rather dark green, with 6-12 fls, and bulbils. Early to mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0030945).)

#### 'Carmen Evans' I(b/c-d)

Parentage: sibling of 'Bronwen'

R: W.D. Evans (1978), G: W.D. Evans (1985), N: W.D. Evans (1992), I: W.D. Evans (1992), REG: W.D. Evans (1992)

Inside dark purplish pink (186C), throat yellowish white (155D); outside moderate purplish red (186B), midribs pale yellow (158B); spots moderate purplish red (186A), only in throat; nectaries green; pollen orange. Fls 90 mm wide; tepals 65 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 10 mm, dark green. Stems 1.1 m, green with a slight brown overlay, and with up to 35 fls. Mid July.

(Named after a granddaughter of the raiser.)

#### 'Carmina' VII(a/b)

Parentage: red-flowered seedling × ('Rosalie' × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2004)

Inside with inner tepals strong purplish red (63A), moderate purplish red (66D) towards margins, base yellowish white (155D), strong red (53B) along midveins, outer tepals strong to vivid purplish red (67A/B), deep purplish red (68A) towards margins, base yellowish white (155D), strong red (46A) along midveins, throat yellowish white (155D); outside with inner tepals strong purplish red (63A), dark purplish pink (186C) towards margins, base light yellow-green (150D) changing into yellowish white (155D), strong purplish red (63A) along midribs, outer tepals moderate purplish red (64B), moderate purplish pink (66D) towards margins, base yellowish white (155D), midribs brilliant greenish yellow (151D) at base, strong purplish red (63A) towards top; spots absent; papillae deep red (60A); nectaries strong yellow-green (144C) with narrow light greenish yellow (1C) edge; pollen deep orange-yellow (163A); stigma greenish white (192D). Fls 225 mm wide, fragrant; tepals 135 × 45-60 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 140 × 35 mm. Stems 0.8-1 m, green, darker at base, with 6-8 fls.

#### 'Carmine Diamond' VIII(a/b)

Parentage: seedling LA 93007-18 × Mixed Asiatic pollen  
R: De Jong Lelies Holland B.V. (1997), G: De Jong Lelies Holland B.V. (1999), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2003)

Inside moderate red (180C/181C), midveins moderate red (180B), throat yellowish white (158D); outside greyish red (182B), midribs greyish red (184A), tepal-margins moderate red (180B); spots dark red (183A), few; papillae deep pink (180D); nectaries deep pink (180D); pollen greyish brown (166A); stigma moderate purplish red (184C). Fls 220 mm wide; tepals 122 × 60 mm, margins smooth, tips recurved. Lvs 170 × 25 mm. Stems 0.9-1.2 m, green with darker markings, with c.4 fls. Late June to July.

(*A longiflorum*/Asiatic (LA) hybrid.)

**Carnival Group VI(c/-)**

Parentage: selections from Aurelian Group

S: C. Yerex (c. 1956), N: C. Yerex

Fls in shades of white, yellow and apricot.

(Published in *Walter Marx Gardens Cat.*, 1957. Included in *ILR* (1982) as Carnival grex.)

**Carnival Flares Group VI(c/a-b)**

Parentage: selections from Aurelian Group

S: C. Yerex (c. 1956), N: C. Yerex

Fls white and cream, centre dark.

(Published in *Walter Marx Gardens Cat.*, 1957. Included in *ILR* (1982) as Carnival Flares grex.)

**'Carnival Queen' VI(b/c)**

Parentage: selection from Aurelian Group

S: C. Yerex (c. 1951), N: C. Yerex

Fls white, each tepal with apricot ray extending almost to tip. Fls large; tepals recurved. Stems 1.2-1.5 m. June.

(Published in *Kline Cat.*, 1963.)

**'Čaro' I(a/c)**

Parentage: ('Wattle Bird' × ('Impact' × unknown)) × ('Accent' × 'Windahloo')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002),

REG: B. Mičulka (2002)

Inside pink, tepal-margins whitish, centre yellowish creamy, throat pale pink; outside pale pink, midribs pale yellow and brownish; brushmarks small, dark brownish crimson (smaller on outer tepals); spots moderately numerous, large, dark crimson-brown, on two-fifths of each tepal; nectaries partially open, pink-granulated; pollen ochre; stigma creamy. Fls 135 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved; pedicels 60 mm long, spotted. Lvs scattered, 90 × 21 mm, dull dark green. Stems 0.85 m, finely spotted brownish, with a moderately long infl. Mid June.

**'Čarodějka' I(a-b/b)**

Parentage: 'Rusalka' (of Mičulka) × brushmarked hybrid

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1998),

REG: B. Mičulka (1998)

Inside yellowish white, tepal-tips and throat white; outside creamy, midribs greenish, tinged with brown at base; brushmarks slight, violet-mahogany; spots fairly numerous, large, violet-red, on two-fifths of each tepal (and some coloured papillae); nectaries green; pollen brown; stigma brownish. Fls 130 mm wide; tepals 75 × 40 mm, slightly recurved; pedicels 65 mm long, green. Lvs scattered, 100 × 12 mm, glossy dark green. Stems 0.95 m, thick, dark green, with a short infl. Late June.

**'Carol' IX(b/c)**

See *auratum* 'Carol'.

**'Carolina Bells' IV(-/-)**

Parentage unknown

R: A.M. Showalter (pre 1978), N: A.M. Showalter

Fls pink, with cream centre; spots dark.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 46 (1978).)

**'Carolina Moon' I(a/-)**

Parentage: ('Peachblush' × unknown) × ('Connecticut King' × unknown)

R: V.E. Bowen (1982), G: V.E. Bowen (1984), N: V.E.

Bowen (1992), I: C. Helsley (1992), REG: V.E. Bowen

(1992)

Inside vivid yellow (9B), shading to vivid yellow (9A) down midveins to throat; outside brilliant yellow (9C) with slight bronzing on outer tepals; spots absent; nectaries green-frosted; pollen dark brown. Fls 160 mm wide; tepals 110 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 25 mm, mid green. Stems 1.35 m, green, with 20-25 fls. Mid to late June.

**'Caroline Mackie' I(b/c-d)**

Parentage unknown

R: C.N. Smith, G: C.N. Smith (1965), N: C.N. Smith, I:

C.N. Smith (1971), REG: C.N. Smith (1971)

Fls deep yellow; spots and papillae absent. Fls 75-100 mm wide. Lvs narrow, *regale* type. Stems 1.2 m.

(Published in *Lilies and other Liliaceae*, 1973: 112.)

**'Caroline Tensen' VII(a-b/b)**

Parentage unknown

R: Peacock B.V. & Imanse Lelieveredeling B.V. (1994),

G: Peacock B.V. (1995), N: Peacock B.V. (1996), I:

Peacock B.V. (1999), REG: Peacock B.V. (2001)

Inside and outside yellowish white (155D); midveins yellow; spots absent; some papillae present; nectaries green; pollen orange-brown; stigma grey, with a purple tinge. Tepal-margins smooth, tips recurved. Stems 1 m, with c.7 fls. Midseason.

**'Carol Jean' I(a/-)**

Parentage: *lancifolium* × *cernuum*

R: R. Simonet, G: F. Fellner, N: F. Fellner, I: Borbeleta

Gardens (1979), REG: J. Wadekamper (1981)

Inside rose-pink, tepal-tips pink, throat pinkish; outside

tan-pink; spots brown, evenly distributed; nectaries light

cream-pink; pollen tan. Tepals 90 × 30 mm, margins

smooth, tips not recurved. Lvs scattered, 80 × 15 mm,

mid green. Stems 0.3 m, tan-green, with c.10 fls. June.

(Published in *Borbeleta Gardens Cat.*, 1979.)

**'Carol Loveday' IV(-/-)**

Parentage: *pardalinum* subsp. *pitkinense* × unknown

R: K.N. Dryden, N: K.N. Dryden (1980), I: K.N.

Dryden (1980), REG: K.N. Dryden (1983)

Fls vivid reddish orange (33A), throat vivid orange-yellow (21A); spots moderate reddish brown (174A); pollen dark reddish orange (172B). Tepal-margins smooth, tips

strongly recurved. Lvs whorled, 140 × 25 mm, mid green. Stems 1.4 m, mahogany to green, with c.20 fls. Late June to July.

#### **‘Carolyn’ VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
R: P.N.A. van den Berg (1990), G: M.A. van den Berg (1993), N: M.A. van den Berg (1998), I: M.A. van den Berg & Zn & J.A. van der Salm de Goede (2001), REG: M.A. van den Berg & Zn & J.A. van der Salm de Goede (2001)

Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen reddish brown; stigma purple. Tepals 140 mm long, margins ruffled, tips recurved. Lvs scattered, 200 × 45 mm. Stems 1.1 m, green, with 2 (from 12-14 cm bulbs) to more than 7 (from 18 cm bulbs) fls. Midseason to late.

#### **‘Carolyn Marie’ I(b/-)**

Parentage unknown

R: H.R. & R. Cocker, N: H.R. & R. Cocker, I: H.R. & R. Cocker (1977), REG: H.R. & R. Cocker (1978)  
Fls deep purplish red (59B), tepal-edges darker; spots black; pollen brown. Tepal-margins slightly ruffled. Stems 0.8-1.1 m.

(Published in *Lilies and other Liliaceae*, 1978/9: 106.)

#### **‘Carolyn Rollison’ II(c/d)**

Parentage unknown

R: R. Erskine, G: R. Erskine (pre 1996), N: R. Erskine (1998), I: R. Erskine, REG: R. Erskine (1998)  
Inside lavender-pink, throat pink; outside pink; spots medium sized, dark purple; nectaries pink; pollen orange. Buds pink. Tepal-margins smooth, tips strongly recurved. Lvs whorled, 130 × 25 mm, mid green. Stems 1.5 m, brownish green, with up to 40 fls which hold their colour for a long period. Early.

Syn.: ‘Lavender Lady’.

(Before 1998 this plant was distributed as ‘Lavender Lady’.)

#### **‘Carousel’ VIII(-/-)**

Parentage: (‘Juliana’ × *longiflorum* ‘Slocum’s Ace’) × (‘Gypsy’ × *longiflorum* ‘Slocum’s Ace’)

R: E.A. McRae (1988), G: Van der Salm Bulb Farm, Inc. (1990), N: E.A. McRae (1995), I: Van der Salm Bulb Farm, Inc. (1995), REG: Van der Salm Bulb Farm, Inc. (1995)

Inside peach-pink, throat soft yellow/gold; outside softer peach pink; raised spots in centre of fl.; nectaries lime-green; pollen rust-coloured. Tepals 100 mm long, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 0.9 m, light green. Late June.

(A *longiflorum*/Asiatic (LA) hybrid. It may have originally been sold under the unacceptable epithet ‘Camelot’.)

#### **‘Carpaccio’ VIII(b/b-c)**

Parentage: seedling PG 96-59 × seedling RH 96-04  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals light greenish yellow (5D), pale

yellow-green (155A) along midveins towards top, outer tepals pale yellow-green (4D), light greenish yellow (8B) on the narrow margins and along midveins, throat pale yellow-green (155A); outside with inner tepals light greenish yellow (5D), pale yellow-green (155A) along midribs, strong yellow-green (144A) at base, outer tepals pale yellow-green (4D/155A), margins light greenish yellow (4C), at base with some strong greenish yellow (151A), along basal two-thirds of each midrib flushed with vivid purplish red (61C) (which fades with age), along apical third brilliant yellow-green (154B), apical fifth with light olive/strong yellow-green (152A/144A); spots absent; papillae brilliant yellow (8A); nectaries strong yellow-green (144A/B); pollen deep orange-yellow (163A); stigma dark purple (79A). Fls 200 mm wide; tepals 120-130 × 45-70 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 150-160 × 20-30 mm, dark green. Stems 1.2 m, dark green, with c.8 fls. (An Orienpet (OT) lily.)

#### **‘Carrara’ VI(-/a)**

Parentage: *leucanthum* var. *centifolium* × *sargentiae*

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls white, throat pale yellow. Stems 1.2-1.9 m. July.

#### **‘Carribean’ VII(a/b)**

Parentage: unknown × seedling 88-171

R: Vletter & Den Haan Beheer B.V. (1994), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside vivid purplish red (57D), midveins vivid purplish red (57C), throat yellowish white (155D); outside of each tepal yellowish white (155D) at base, shading into vivid purplish red (57D), with yellowish white (155D) margin at tip; spots moderate purplish red (58A); papillae present; nectaries strong yellow-green (144B); pollen strong brown (172A); stigma deep reddish purple to dark purple (77A/83A). Fls 250 mm wide; tepals 150 × 80 mm, margins ruffled, tips slightly recurved. Lvs scattered, 200 × 50 mm. Stems 1.1 m, green with darker markings at base, with c.4 fls.

(Despite the erroneous spelling of the epithet, this cv. was deliberately submitted for and granted registration as ‘Carribean’.)

#### **‘Carthago’ I(a-b/b)**

Parentage: seedling G 85-12 × seedling G 86-2

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1991), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside strong orange (24A/25A), the base close to vivid orange-yellow (23A); outside strong orange-yellow (17A); spots and papillae present; nectaries green; stigma yellow and purple; pollen yellow-brown. Tepal-margins slightly ruffled, tips recurved. Stems 0.85-1.2 m, whitish green with dark stripes and spots, and with c.6 fls. Early.

#### **‘Cartouche’ VII(b/b)**

Parentage: ‘Star Gazer’ × unnamed seedling

R: Vletter & Den Haan (1983), G: Vletter & Den Haan

(1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)  
Inside strong purplish red to deep purplish pink (64C/D), midveins strong red (53B), tepal-edges ivory-white, throat strong yellow-green (144B) edged light greenish yellow (5D); outside moderate purplish red (186A), midribs light yellow (160B), tepal-edges ivory-white; spots few, small, dark red (187A/B), on basal half of each tepal; pollen strong orange (170A). Fls 230 mm wide; tepals 120 × 60 mm, margins ruffled, tips strongly recurved. Lvs scattered, 140 × 35 mm, mid green. Stems 1.15 m, green with dark markings, and 7-10 fls. May to June (under glass).

**‘Carved Ivory’ IX(b/c)**  
See *auratum* ‘Carved Ivory’.

**‘Casa Bella’ I(a/b)**  
Parentage: (‘Gran Paradiso’ × ‘Snowstar’) × (‘Aristo’ × unknown)  
R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2002)  
Inside vivid orange (28A), throat light orange (28C); outside light orange (28C) shading to vivid orange (28B) towards tepal-margins; spots absent; papillae present; nectaries strong reddish orange (34C); pollen moderate red (181A); stigma moderate purplish red (59C). Fls 179 mm wide; tepals 110 × 60 mm, margins smooth, tips recurved. Lvs scattered, 105 × 20 mm. Stems 0.85-1.2 m, green with dark markings, with c.5-7 fls. June.

**‘Casabiva’ VII(a/c)**  
Parentage unknown  
R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1989), N: Coöp. Kwekersvereniging “The Originals” U.A. (1993), I: Coöp. Kwekersvereniging “The Originals” U.A. (1993), REG: Coöp. Kwekersvereniging “The Originals” U.A. (1996)  
Inside and outside yellowish white (155D); spots absent; papillae white, numerous; nectaries green; pollen orange-yellow; stigma violet-red. Tepal-margins strongly ruffled, tips strongly recurved. Lvs scattered, mid green. Stems green, with only a little darker marking, and with c.5 fls.

**‘Casa Blanca’ VII(b/b-c)**  
Parentage: selection from *L. × parkmanii* Jamboree Group × seedling of white-flowered Oriental  
R: Vletter & Den Haan (1975), G: Vletter & Den Haan (1978), N: Vletter & Den Haan (1984), I: Vletter & Den Haan (1984), REG: Gebr. Vletter & J.A. Den Haan (1985)  
AGM 1993  
Inside white; outside white with a yellowish white midrib; nectaries violet-red; pollen orange-brown. Fls 170-180 mm wide; tepal-margins ruffled, tips strongly recurved. Lvs scattered, dark green. Stems to 1.1-1.2 m, pale green, with 5-8 fls. July to Aug.  
(Published in *Bloembollencultuur*, 1984.)

**‘Casa Grande’ VII(a/b)**  
Parentage: (*speciosum* × ‘Star Gazer’) × (*L. × parkmanii* ‘Allegra’ × ‘Star Gazer’)  
R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (1992), REG: Rooyakkers B.V. (2004)  
Inside very pale purple (69A), around nectaries and along midveins yellowish white (155D), throat yellowish white (155D); outside of outer tepals light purplish pink (62C), along midribs moderate purplish pink (62B), strong yellow-green (141D) at base and strong yellow-green (144A) at top, outside of inner tepals very pale purple (69D), along midribs yellowish white (155D) at base, with base of midrib light yellow-green (144D); spots and papillae yellowish white (155D); nectaries strong yellow-green (144B); pollen moderate reddish orange (171A); stigma moderate purple (79D). Fls 250 mm wide, fragrant; tepals 145 × 75 mm, margins ruffled, tips recurved. Lvs 237 × 64 mm. Stems 1.3 m, green, with c.7 fls. Midseason.

**‘Casanova’ VII(a/c)**  
Parentage unknown  
R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1989), N: Coöp. Kwekersvereniging “The Originals” U.A. (1993), I: Coöp. Kwekersvereniging “The Originals” U.A. (1993), REG: Coöp. Kwekersvereniging “The Originals” U.A. (1996)  
Inside and outside yellowish white (155D); spots absent, papillae white, numerous; nectaries green; pollen orange-yellow; stigma violet-red. Tepal-margins strongly ruffled, tips recurved. Lvs scattered, mid green. Stems green with a little darker marking, and with c.5 fls.

**‘Casa Rosa’ VIII(b/a)**  
Syn. of ‘Rote Horn’.

**‘Cascade’ IX(b/a)**  
See *candidum* ‘Cascade’.

**‘Cascade’ Div.?**  
Given as a parent of ‘Baltimore’. No further details.  
Perhaps an error for *candidum* ‘Cascade’.

**‘Cascade Queen’ I(a/-)**  
Parentage: (‘Croesus’ × Hallmark Group) × (‘Golden Wonder’ × Hallmark Group)  
R: E.A. McRae (1970), G: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc. (1979), I: Oregon Bulb Farms, Inc. (1979)  
Fls pure white, with a green star in the throat and slight green suffusion outside; copiously spotted lavender; nectaries green; pollen soft golden yellow. Fls 100-120 mm wide; tepals 60 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 10 mm, dark green. Stems 0.9 m, light green, with 4-16 fls. Mid June.  
Syn.: ‘Twinkles’.

**‘Cascading Glory’ II(-/-)**  
Parentage unknown  
R: J.C. Ericksen, G: D. Dale (1990), N: J.C. Ericksen (1993), I: Parkland Perennials (1995), REG: D. Dale (1994)

Inside lemon-yellow, throat yellow; outside yellow, midribs pink; spots fine, maroon on central half of each tepal; nectaries yellow; pollen brown. Fls 50 mm wide; tepals 25 × 12 mm, margins strongly ruffled, tips strongly recurved. Lvs whorled, mid green. Stems 1.3 m, mid green, with c.20 fls. Early July.

#### **‘Caserta’ VIII(b/a)**

Parentage: *longiflorum* ‘White Fox’ × unnamed seedling  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside whiter than 155B, midveins strong yellow-green (144C) fading into tepals; outside whiter than 155B, midribs pale yellow-green (155A), with a brownish red suffusion at base and top; spots and papillae absent; pollen deep orange-yellow (163A); stigma light yellow-green (150D). Fls 160 mm wide; tepals 220 × 55-65 mm, margins slightly ruffled, tips recurved. Lvs scattered, 200 × 25 mm. Stems 1.2-1.35 m, green, with c.3 fls.  
Syn.: *longiflorum* ‘Caserta’.

#### **‘Casey’ I(b/-)**

Parentage: ‘Nutmegger’ × unnamed seedling  
R: P.M. Johnson, N: P.M. Johnson, I: J. Wadekamper (1979)  
Fls deep tan, centre with yellow halo; nectaries green. Stems to 1 m. Late July.

#### **‘Cash’ VII(a/b-c)**

Parentage: ‘New Age’ (Div. VII) × (unnamed seedling × ‘Joy’)  
R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2004)

Inside light purplish pink (73C) in apical two-thirds of each tepal, strong purplish pink (73B) towards margins, above each nectary is a brilliant yellow (12B) spot, at this level the area towards margins is yellowish white (155D), throat yellowish white (155D), outside with inner tepals light purplish pink (73C), towards margins strong purplish pink (73B), yellowish white (155D) at base, midribs brilliant yellow (14C) at base, yellowish white (155D) towards top, strong purplish pink (73B) from two-thirds upwards, outer tepals strong purplish pink (73B), yellowish white (155D) at base, midribs light yellow-green (144C) at base and top, middle part yellowish white (155D); spots absent; papillae yellowish white (155D) and brilliant yellow (12B); nectaries light yellow-green (144C); pollen moderate red/moderate reddish orange (180A/178C); stigma moderate purplish pink (186D). Fls 255 mm, fragrant; tepals 135 × 46-67 mm, margins slightly ruffled, tips recurved. Lvs scattered, 138 × 47 mm. Stems 1-1.15 m, reddish brown with green, with 6-8 fls.

#### **‘Casio’ I(a/b)**

Parentage: ‘Katinka’ × ‘Abu Hassan’  
R: K. Braun (1987), N: K. Braun, REG: K. Braun (1988)  
Yellow-pink bicolor: tepal-tips and base rose-pink,

centre of each tepal yellow; outside with green midribs; spots sparse, medium sized, brown, on half of each tepal; rose-pink papillae also present; nectaries frosted rose-pink; pollen brown. Fls 168 mm wide; tepals 89 × 29 mm, recurved; pedicels 70 mm long, green, some secondaries present. Lvs scattered, 103 × 17 mm, glossy green. Early July.

#### **‘Casper’ I(b/-)**

Parentage: ‘Albipayne’ × ‘Bingo’  
R: L.D. Marshall (1977), G: Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1980), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)  
Inside pale yellow (11D) (in very cool weather) to pure white, tepal-tips with a slight pink flush in very cool weather, throat white; outside pale yellow (11D) to white, overlaid with light plum along midribs; spots absent; nectaries green-white; pollen orange (172), anthers either not opening or only partially dehiscing. Tepals 60-90 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 100-150 × 20-30 mm, dark green. Stems 1-1.8 m, dark green with a plum overlay, and with 7-15 fls (including many secondary buds). Late June.

#### **‘Cassandra’ VII(b/b-d)**

Parentage unknown  
R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1987), N: Licomba (1991), I: Licomba (1991), REG: Licomba (1992)  
Inside yellowish white (155B), midveins light greenish yellow (8B) on basal half of each tepal, throat strong yellow-green (144C); outside yellowish white (155B), midribs pale yellow-green (155A), tinged moderate to light purplish pink (62B/C) at the base; papillae few, yellowish white/greenish yellow, on basal half of each tepal; nectaries green. Fls 235 mm wide; tepals 115 × 55 mm, margins slightly ruffled, tips recurved. Lvs scattered, 150 × 30 mm, mid green. Stems 1.5 m, pale green, with c.6-9 fls. July.  
(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Cassandra’. However, in 1992, Dutch PBR were granted to ‘Cassandra’ and under ICNCP, 2004: Art. 24.4, this epithet must be accepted.)

#### **‘Cassini’ VII(a/b)**

Parentage: seedling 91-27 × seedling RM 95-73  
R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside vivid purplish red (57C), with strong red (53B) stripe along midveins, throat yellowish white (155D); outside light purplish pink (68D), deep purplish pink (68A) along midribs; spots moderate purplish red (59C); papillae present; nectaries strong yellow-green (144C) with light greenish yellow (3D) edges; pollen vivid reddish orange (34B); stigma strong to deep purplish red (60B/71A). Fls 230 mm wide, slightly fragrant; tepals 140 × 80 mm, margins slightly ruffled, tips slightly recurved. Lvs 220 × 48 mm. Stems 1.17 m, green with darker markings, with c.4 fls.  
Syn.: ‘Hermitage’.

**‘Castello’ I(a-b/b)**

Parentage: ‘Tetra Napoli’ × ‘Gran Paradiso’  
 R: Lybelmex Hillegom B.V. (1987), G: Lybelmex Hillegom B.V. (1989), N: Lybelmex Hillegom B.V. (1993), I: Lybelmex Hillegom B.V. (1993), REG: Lybelmex Hillegom B.V. (1997)  
 Inside vivid orange (28B) and strong orange (30C); outside strong orange (30C); a few small spots and some papillae present; nectaries orange; pollen reddish brown; stigma purple. Fls 220 mm wide; tepals 110 × 40 mm, margins smooth to very slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 16 mm, mid green. Stems 1-1.25 m, green with dark stripes and spots, and with 7-9 fls (from 16-18 cm bulbs). June.

**CASTOR VII(-/b)**

Trade designation of ‘Vlemora’.

**‘Casyrá’ I(a-b/b)**

Parentage: ‘Sutter’s Gold’ × unknown  
 R: I. Wiesner, I. I. Wiesner (1989), REG: I. Wiesner (1989)  
 Fls tricoloured: purple-red (HCC 21) on apical half of each tepal, middle of tepal pale yellow (HCC 2), throat cinnamon-pink; a ring of spots on a third of each tepal; papillae white-frosted, in the throat; pollen yellow-brown; stigma pale yellow. Fls 120 mm wide; tepals 65 × 30 mm, margins smooth, tips rounded. Lvs scattered, deep green. Stems 0.6-0.7 m, with 5-6 fls. Late July.

**‘Catalina’ IV(-/-)**

Parentage: Bellmaid Group × (*kelleyanum* × *parryi*)  
 R: D.B. Fox (1969), G: D.B. Fox (1973), N: D.B. Fox (1989), I: D.B. Fox (1990), REG: D.B. Fox (1990)  
 Inside vivid to brilliant yellow (13A/B), darkening a little with age giving orange tints, tepal-tips vivid to brilliant yellow (13A/B), throat yellow shading to green at base; outside yellow with slight orange tints, bright green at base; spots fine, purple-brown; pollen mid brown; stigma dark brown. Fls 70 mm wide, scented; tepals 73 × 17-20 mm, margins smooth, tips fairly strongly reflexed. Lvs whorled in the middle of the stem, scattered above and below, up to 220 × 16 mm, pale to mid green. Stems 1.7 m, green, with 7-10 fls. Early to mid July.

**‘Catalonie’ VII(a/b)**

Parentage: seedling 89-14 × seedling RW 94-20  
 R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)  
 Inside and outside yellowish white (155D); midribs pale yellow-green (4D); spots and papillae present; nectaries strong yellow-green (144C); pollen strong orange (169B); stigma light purplish pink (63D). Fls 210 mm wide, slightly scented; tepals 143 × 55 mm, margins smooth, tips recurved. Lvs scattered, 180 × 50 mm. Stems 0.8 m, light green with darker suffusion at base, with c.3 fls.

**‘Catamaran’ VII(a-b/-)**

Parentage unknown  
 REG: Vletter & Den Haan Beheer B.V. (2003)

Inside strong to moderate purplish pink (73B/65A), each tepal lighter towards base and margin, midveins yellow at base; outside light purplish pink (65B); spots and papillae present; nectaries green; pollen light brown; stigma green, flushed with purple. Tepal-margins ruffled, tips recurved. Stems medium to tall, with reddish markings. Early to midseason.

**‘Catawba’ I(c/-)**

Parentage: complex hybrid involving *lancifolium*, *L.* × *hollandicum*, *L.* × *maculatum* & *dauidii* var. *willmottiae*  
 R: A.E. Simoni (c. 1962), N: A.E. Simoni  
 Fls red, spotted black. Stems 1 m.

***catesbaei* Walter IX(a/b)**

Inside deep yellow, scarlet towards tepal-tips, blotched with maroon towards base; outside greenish; pollen orange-red; stigma dark red. Fls up to 230 mm wide; tepals 50-120 × 10-25 mm, with long claw about a third to half length of tepal, margins of blade often ruffled, tips pointed, recurved. Lvs scattered, adpressed to stem. Stems 0.3-0.9 m, with 1(-2) fls. SE USA.

***catesbaei* var. *asprellum* (Wherry) Stearn IX(a/b)**

Stems rough; lvs crowded about middle of stem.  
 (M.W. Skinner in *Flora of North America* 26: 179 (2002) considers this variety to be synonymous with *catesbaei*.)

***catesbaei* var. *longii* Fernald IX(a/b)**

Differs from the type in the tepals lacking prolonged, recurved tips, in having broader lvs and in the lack of long, linear blades to the bulb-scales.  
 (M.W. Skinner in *Flora of North America* 26: 179 (2002) considers this variety to be synonymous with *catesbaei*.)

**‘Catharina’ V(b/a)**

See *longiflorum* ‘Catharina’.

**‘Cathedral’ VI(c/-)**

Parentage: Aurelian origin  
 R: J. de Graaff (c. 1961), N: J. de Graaff  
 Fls clear yellow. Stems 1.5 m. Late July.

**‘Cathedral Windows’ I(a/b-c)**

Parentage unknown  
 R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
 Inside orange pink, each tepal with a dark red, streaked brushmark below on a yellow ground (the yellow conspicuous as a halo around the brushmark), and some associated, much darker spots. Tepal-margins smooth, tips not or slightly recurved. Stems 1-1.5 m. Late June. (Published in *The Lily Garden Cat.*, 1996/97: 13.)

**‘Catherine’ I(b/d)**

Parentage: *lancifolium* var. *flaviflorum* × unknown  
 R: D.B. Fox (c. 1967), N: D.B. Fox  
 Strong orange-yellow (24B), ageing to strong orange (25B); spotted on basal half, a little in throat. Stems green.

**‘Catherine Biddle’ VI(b-c/a)**

Parentage unknown

G: K.L. Watkins (1976), N: K.L. Watkins (1985), I: K.L. Watkins (1985), REG: K.L. Watkins (1985)

Vivid yellow (13A), throat vivid yellow (14A); outside of outer tepals mostly moderate reddish orange (175D), midribs of inner tepals moderate reddish orange (175D), otherwise vivid yellow (13A); spots absent; nectaries strong yellow-green (141D); pollen moderate orange (167A). Fls 110 mm wide; tepals 110 × 35 mm, margins smooth, tips slightly recurved; lower pedicels usually with 2 fls. Lvs scattered, 170 × 20 mm, dark green. Stems 2 m, dark green, with 15-25 fls. Mid Jan. (Australia).

**‘Catherine Laburi’ I(a/b)**

Parentage: seedling 37-80 × seedlings Y-32 × OA65 - F<sub>2</sub>  
R: Oregon Bulb Farms, Inc. (pre 1997), REG: Cebecco Lilies, Inc. (1998)

Inside soft creamy peach (closest to light orange-yellow (24C)), fading with age and paler in centre of fl.; outside light to pale orange-yellow (24C/D); spots dark red (187A), on basal quarter of each tepal; nectaries pale orange-yellow (24D); filaments soft creamy peach; pollen moderate reddish orange (171A); stigma moderate red (181A) on a soft creamy peach style. Buds dull light red. Fls 155 mm wide; tepals 80 × 45 mm, margins slightly ruffled, tips slightly recurved. Stems c.1 m, with c.9 fls. June.

(Published in *The Lily Nook Cat.*, 1997: 5. Said to be very virus-tolerant and long-lived.)

**‘Catherine the Great’ VIII(c/b)**

Parentage unknown

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)

Inside and outside yellow; pollen very dark. Fls scented, the scent combining Oriental and trumpet qualities. Tepal-margins slightly ruffled, tips reflexed. Stems very vigorous to 1.9 m or more. Late July to early Aug. (An Orienpet (OT) lily. It looks like a golden Oriental.)

**‘Catherine Walton’ VII(c/d)**

Parentage: ‘Tetra Black Beauty’ × *L. × parkmanii* ‘Tetra Journey’

R: LeV. Freimann (1981), G: LeV. Freimann (1983), N: LeV. Freimann (1985), REG: LeV. Freimann (1988)  
Inside strong red (46A), tepal-tips strong red (53C), throat green; outside strong red (46A); spots very few, black; nectaries very dark; pollen brownish black. Tepals 140 × 65 mm, margins smooth, tips slightly recurved. Lvs scattered, 175 × 65 mm, dark green. Stems 1.5-1.9 m, brownish green, with 20-30 fls. Late Aug. to Sept.

**var. *cattaniae* IX(c/d)**

See *martagon* var. *cattaniae*.

**Caucasian Group III(c/a-d)**

Parentage: hybrids involving *monadelphum* & *kesselringianum*

R: H.R. Cocker, N: H.R. Cocker, I: Borbeleta Gardens (1978), REG: H.R. Cocker (1983)

Fls cream to yellow, more or less unspotted or distinctly spotted. Stems 1.1 m. Early.

**var. *caucasicum* IX(c/d)**

See *martagon* var. *caucasicum*.

**‘Cavalese’ VIII(a/b)**

Parentage: seedling Lars 93-4 × seedling RS 93-16  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside strong purplish red (58C), throat pale purplish pink (65D); outside strong purplish pink (63C), shading to strong purplish red (61B) towards the tepal-tips, tips strong yellow-green (145A); spots dark red (187A), on basal part of each tepal; papillae few on inner tepals; nectaries white-hairy; pollen moderate orange (167A); stigma moderate purplish red (58A). Fls 210 mm wide; tepals 120 × 60 mm, margins smooth, tips recurved. Lvs scattered, 200 × 25 mm. Stems 1.4 m, green, with 47- fls. (*A. longiflorum*/Asiatic (LA) hybrid.)

**‘Cavalier’ I(a/-)**

Parentage: ‘Brenda Watts’ × yellow-flowered, spotted seedling of *L. × hollandicum*

R: S.L. Emsweller, N: S.L. Emsweller, I: USDA (1953)

Tepals yellowish orange, spotted dark brown at base. Fls 90-100 mm wide; tepals slightly recurved. Stems to 1.1 m. June to July.

(Published in *USDA Notice of Release and Introduction*, 1953.)

**‘Cavi’ I(a/-)**

Parentage: seedling W 133 × ‘Geneve’

R: Vletter & Den Haan, G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1988), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1991)

Inside pale yellow-green (155A), tepal-tips strong yellow-green (142A), throat suffused with light yellow-green (150D); outside yellowish white (155B), suffused with moderate red (181C) at base and tepal-tips, midribs brilliant yellow-green (150C); spots few, dark red (187B), in the throat on inner tepals only; nectaries brilliant yellow-green (150C) edged moderate orange-yellow (164B); pollen brownish orange (164A). Fls 160 mm wide; tepals 85 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 0.8 m, with dark markings, and with c.8 fls. July (under glass).

**‘Cawdor’ I(a/-)**

Parentage: ‘Russet Ribbons’ × yellow-flowered seedling  
R: M.D. Holloway (1993), G: M.D. Holloway (1994), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)

Inside florescent apricot, darker around tepal-edges and at first with a golden yellow blush, throat slightly darker; outside softer apricot; spots very few, tiny, towards base of tepals; nectaries frosted apricot; filaments apricot; pollen orange. Fls 203 mm wide; tepals 115 × 46 mm, margins

slightly ruffled, tips slightly recurved. Lvs scattered, 163 × 15 mm, dark green. Stems 1.1 m, very dark brown, with up to 23 fls in a large infl. (with at least tertiary buds). Late July to mid Aug.

#### **‘Cayuga’ VI(-/c-d)**

Parentage: seedling 49352 × ‘Moonbeam’  
R: E.F. Palmer (c. 1959), N: E.F. Palmer, I: Horticultural Research Institute of Ontario (1967)  
Fls cream, with apricot-orange centre. Tepals semi-reflexed. Stems 1.1-1.2 m. July.

#### **‘Ceb Beauty’ VIII(a/b)**

Parentage: seedling GH 485 × seedling PATM 1  
R: Cebeco Lilies, Inc. (1987), G: Cebeco Lilies, Inc. (1990), N: Cebeco Lilies, Inc. (1994), I: Cebeco Lilies, Inc. (1994), REG: Cebeco Lilies, Inc. (1995)  
Inside vivid orange (28B); outside brilliant orange (25C) with tepal-edges vivid orange (28B); spots few (5-15 per tepal), small, dark red (187B), on basal third of each tepal; nectaries orange; pollen vivid reddish orange (32A). Buds orange. Fls 145 mm wide, slightly scented; tepals 100 × 50 mm, margins very slightly ruffled, tips slightly recurved. Lvs scattered, 130 × 13 mm, glossy dark green. Stems 1.2 m, yellow-green mottled with maroon spots, with c.22 fls (from 16 cm bulbs), vigorous. July.  
Trade designation: ALADDIN’S® BEAUTY.  
(A *longiflorum*/Asiatic (LA) hybrid. Good vase life.)

#### **‘Ceb Bright’ I(a/b)**

Parentage: seedling 113-81 × seedling A-456-84  
R: Cebeco Lilies, Inc. (1989), G: Cebeco Lilies, Inc. (1991), N: Cebeco Lilies, Inc. (2002), I: Cebeco Lilies, Inc. (2002), REG: Cebeco Lilies, Inc. (2002)  
Inside vivid yellow (9A/B), throat pale greenish yellow (10D); outside light greenish yellow (5D) at base, shading to brilliant yellow (7B) above; spots greyish brown (166A); papillae absent; nectaries creamy white (159D); pollen brownish orange (172C); stigma moderate red (183D). Fls 135 mm wide; tepals 70 × 40 mm, margins smooth, tips recurved. Lvs scattered, 80 × 12 mm. Stems 0.45 m, light green with darker markings, with c.5 fls.  
Trade designation: BRIGHT PIXIE®.

#### **‘Ceb Charm’ VIII(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Cebeco Lilies, Inc. (1990), G: Cebeco Lilies, Inc. (1991), N: Bloembollenbureau Cebeco (1998), I: Bloembollenbureau Cebeco (1998), REG: Bloembollenbureau Cebeco (2001)  
Inside moderate red (181A) on a moderate red/moderate reddish orange (179B/C) ground in basal part, 179B/C in apical part, tepals narrowly edged brownish orange (171B) and with a strong orange (26A) stripe on midvein from above the nectaries, throat moderate yellow (163C) and moderate red (181A); outside moderate red (179B), tepal-edges moderate red (179A), inner tepals a little paler, outer tepals tipped strong yellow-green (143A); spots dark red (187A/B), on basal part of each tepal; papillae absent; nectaries moderate red/moderate reddish orange (179B/C); pollen strong reddish orange (169A);

stigma moderate reddish orange (173B). Fls 185 mm wide; tepals 105-110 × 40-55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 105-110 × 40-55 mm. Stems 1.05 m, light green with darker markings, and with c.7 fls.

Trade designation: ALADDIN’S® CHARM.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **‘Ceb Crimson’ I(a/b)**

Syn. of ‘Crimson Pixie’.

#### **‘Ceb Dandy’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Cebeco Lilies, Inc. (1985), G: Cebeco Lilies, Inc. (1986), N: Bloembollenbureau Cebeco (1998), I: Bloembollenbureau Cebeco (1998), REG: Bloembollenbureau Cebeco (2001)  
Inside light yellow (10C), tepal-tips pale greenish yellow (10D), with a deep/moderate red (185A/B) mark above each nectary, throat pale yellow-green (4D); outside a little paler than pale greenish yellow (10D), light yellow/pale greenish yellow (10C/D) towards tepal-edges, midribs strong yellow-green (144C); spots deep/moderate red (185A/B), in the throat; papillae a few, along the nectaries; nectaries strong yellow-green (144C) and pale yellow-green (4D); pollen vivid orange-yellow (23A); stigma brilliant greenish yellow (7C) with a little dark reddish orange (175B). Fls 150 mm wide; tepals 80-85 × 30-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 15 mm. Stems 0.8 m, green, with c.6 fls.  
Trade designation: DANDY PIXIE®.

#### **‘Ceb Dazzle’ VIII(a-b/b)**

Parentage: derived from seedling GH-403  
R: Cebeco Lilies, Inc. (1987), G: Cebeco Lilies, Inc. (1990), N: Cebeco Lilies, Inc. (1994), I: Cebeco Lilies, Inc., REG: Cebeco Lilies, Inc. (1995)  
Inside vivid yellow (9A/12A), lightening with age to brilliant yellow (9C), tepal-tips vivid yellow (9A), throat pale greenish yellow (9D); outside vivid yellow (9A) on tepal-edges, centre of outer tepals pale yellow (11C), bases pale yellow (8D); spots few (c.5-15), dark red (187A), above and around nectaries and on adjacent margin; nectaries yellow-green; pollen brownish orange (172C). Buds 155 × 35 mm, yellow. Tepals 125 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 180 × 35 mm, mid green. Stems 1-1.3 m, yellow-green, lightly mottled red-purple, with 5-10 fls (from 12-14 cm bulbs). Early.  
Trade designation: ALADDIN’S® DAZZLE.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **‘Ceb Dream’ VIII(a/b)**

Parentage: (*longiflorum* ‘Slocum’s Ace’ × ‘Gold Nugget’) × seedling PAM 2  
R: Cebeco Lilies, Inc. (1987), G: Cebeco Lilies, Inc. (1990), N: Cebeco Lilies, Inc. (1990), I: Cebeco Lilies, Inc. (1994), REG: Cebeco Lilies, Inc. (1995)  
Inside light yellowish pink (36C) with pale yellow (11C/D) tepal-edges when first open, ageing to strong yellowish pink (37) and pale yellowish pink (27C)

edges, throat strong yellowish pink (37B); outside closest to light yellowish pink (36B); spots absent; nectaries yellow-green; pollen two-toned, brown and orange in contrasting dark anthers. Buds light yellow. Fls 160 mm wide; tepals 105 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 12 mm, mid green. Stems 0.62 m, yellow-green, with c.10 fls (from 12-14 cm bulbs). Early.

Trade designation: ALADDIN'S® DREAM.

(*A longiflorum*/Asiatic (LA) hybrid. Good vase life.)

#### 'Ceb Fuzzy' I(a/b)

Parentage: seedling 94-81 × seedling A-107-82

R: Cebeco Lilies, Inc. (1986), G: Cebeco Lilies, Inc. (1995), G: Cebeco Lilies, Inc. (1989), N: Cebeco Lilies, Inc. (1995), REG: Cebeco Lilies, Inc. (1995)

Inside strong purplish red to deep purplish pink (54A/B), throat ivory-white; outside strong purplish red (54A) on inner tepals, strong purplish red (59D) on outer tepals; spots dark red (187A), on basal two-thirds of each tepal, occasionally running up the midvein; nectaries warm pink; pollen moderate reddish brown (175A). Buds green, becoming pink, with white, shaggy hairs. Fls 140 mm wide; tepals 83 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 0.9 m long, mid green, white-hairy. Stems 0.87 m, deep red (185A), white-hairy, with c.6 fls (from 12 cm bulbs). Early.

#### 'Ceb Glow' VIII(a/b)

Parentage: seedling GH-403 × seedling AM 2

R: Cebeco Lilies, Inc. (1987), G: Cebeco Lilies, Inc. (1990), N: Cebeco Lilies, Inc. (1994), I: Cebeco Lilies, Inc. (1994), REG: Cebeco Lilies, Inc. (1995)

Inside and outside vivid yellow (9A), throat pale greenish yellow (9D); spots dark red (187B), c.10-30 above each nectary; nectaries yellow-green; pollen brownish orange (165B). Buds yellow. Fls 190 mm wide; tepals 105 × 57 mm, margins smooth, tips slightly recurved. Lvs scattered, 74-122 × 16-21 mm, mid green. Stems 0.65-0.85 m, yellow-green, vigorous, with 3-7 fls (from 12-14 cm bulbs). Early to midseason.

Trade designation: ALADDIN'S® GLOW.

(*A longiflorum*/Asiatic (LA) hybrid. Good vase life.)

#### 'Ceb Golden' I(a-b/-)

Parentage: 'Golden Pixie' × unknown

R: E.A. McRae (1981), G: Oregon Bulb Farms, Inc. (1984), N: Cebeco Lilies, Inc. (1996), I: Cebeco Lilies, Inc. (1996), REG: Cebeco Lilies, Inc. (1996)

Inside vivid yellow (13A) with strong orange (24A) blush, midveins strong orange (24A), tepal-tips vivid yellow (13A), throat strong orange (24A); outside vivid yellow (13A); spots 3-9, alongside nectaries, on inner tepals only; nectaries yellow-green, with white glandular hairs; pollen strong orange (24A). Buds 70 mm long, gold-coloured. Fls 130 mm wide; tepals 75 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 75 × 14 mm, mid green. Stems 0.3 m, strong yellow-green (144A) with maroon spots, and with c.4 fls (from 12-14 cm bulbs). Very early.

Trade designation: GOLDEN PIXIE®.

(The trade designation is particularly confusing, because McRae's 'Golden Pixie' was used in the parentage of this cv.)

#### 'Ceb Irish' I(a/-)

Syn. of 'Irish Pixie'.

#### 'Ceb Jewel' I(a/b)

Parentage: (seedlings OF-98 × (OB-8 × OA-11)) × unknown

R: E.A. McRae (1984), G: Oregon Bulb Farms, Inc. (1987), N: Cebeco Lilies, Inc. (1996), I: Cebeco Lilies, Inc., REG: Cebeco Lilies, Inc. (1996)

Inside strong purplish red to deep purplish pink (54A/55A), tepal-tips strong purplish red (54A), throat brilliant yellow (13B/C); outside strong purplish red (54A); spots absent; nectaries yellow-green to warm pink; pollen moderate orange (167A). Fls 140 mm wide; tepals 80 × 42 mm, tips slightly recurved. Lvs scattered, 60-70 × 6-8 mm, mid green. Stems 0.37 m, strong yellow-green (144A) with maroon spots, and with c.6 fls (from 10-12 cm bulbs). Very early (and long-lasting).

Syn.: 'Ceb Juel'.

Trade designation: JEWEL PIXIE®.

(In 1998, a USPP was granted to 'Ceb Jewel'. The following year Dutch PBR (LEL 1452) were granted under the epithet 'Ceb Juel' which, being a later epithet, must be regarded as a synonym.)

#### 'Ceb Juel' I(a/b)

Syn. of 'Ceb Jewel'.

#### 'Ceb Latte' I(a/b)

Parentage unknown

R: Oregon Bulb Farms, Inc. (1987), G: Oregon Bulb Farms, Inc. (1989), N: Cebeco Lilies, Inc. (1996), I: Cebeco Lilies, Inc. (1998), REG: Cebeco Lilies, Inc. (1998)

Fls double: inside 2- or 3-toned, with a varying amount of dark red (closest to deep red (53A)) at the tepal-edges and tips and sometimes half way down midveins, midveins and red-flushed area with varying amounts of light yellowish pink (27A) to light orange (28C), throat light orange (28C) and/or light yellowish pink (27A); outside 3-toned, tepal-edges deep red (53A), midribs strong yellow-green (144A), with light yellowish pink (27A) alongside; spots absent; nectaries strong yellow-green (144A); pollen absent; stigma strong yellowish pink (34D). Fls 110 mm wide, with 12 tepals, the inner 6 smaller with sterile anthers at their tips; tepals 52-67 × 25-32 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 83 × 13 mm. Stems c.0.6 m, yellow-green with maroon spots, and 5 or more fls. Late June to July. Trade designation: STRAWBERRY VANILLA LATTE. (Published in *The Lily Nook Cat.*, 1997: 4.)

#### 'Ceb Magic' VIII(a/b)

Parentage: (*longiflorum* 'Slocum's Ace' × 'Chiefwood') × seedling PAM 2

R: Cebeco Lilies, Inc. (1987), G: Cebeco Lilies, Inc. (1990), N: Cebeco Lilies, Inc., I: Cebeco Lilies, Inc.,

REG: Cebeco Lilies, Inc. (1995)

Inside strong to vivid orange (25A/28B); outside vivid orange (28A) at edges, shading to light orange-yellow (24C) in the centre; spots dark red (187B), on basal third of each tepal; nectaries orange; pollen strong orange (169C). Fls 200 mm wide, scented; tepals 120 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 110-160 × 18-35 mm, mid green. Stems 0.97 m, yellow-green, with c.5 fls (from 12-14 cm bulbs). Early.

Trade designation: ALADDIN'S<sup>®</sup> MAGIC.

(A *longiflorum*/Asiatic (LA) hybrid. Good vase life. Fl. colour does not fade with age.)

#### 'Ceb Moon' I(a/b)

Parentage: unnamed seedling × unnamed seedling

R: Cebeco Lilies, Inc. (1981), G: Cebeco Lilies, Inc. (1982), N: Bloembollenbureau Cebeco (1996), I: Bloembollenbureau Cebeco (1996), REG: Bloembollenbureau Cebeco (2001)

Inside brilliant greenish yellow (6A), paler towards tepal-tips; outside light greenish yellow (8B), midribs strong yellow-green (143C) fading towards top which is tipped with strong yellow-green (143A); spots and papillae absent; nectaries strong yellow-green (143B); pollen dark reddish orange (175C); stigma dark reddish orange (175B). Fls 170 mm wide; tepals 90 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 25 mm. Stems 0.5 m, green, with c.3 fls.

Trade designation: MOON PIXIE<sup>®</sup>.

#### 'Ceb Paint' I(a/b)

Parentage: unnamed seedling × unnamed seedling

R: Cebeco Lilies, Inc. (1989), G: Cebeco Lilies, Inc. (1990), N: Bloembollenbureau Cebeco (1998), I: Bloembollenbureau Cebeco (1998), REG: Bloembollenbureau Cebeco (2001)

Inside vivid yellow (12A), with a strong red (53B) mark above each nectary, throat brilliant yellow (7A), a little paler at the edges; outside brilliant greenish yellow (7C), tepals narrowly edged vivid yellow (13A), tipped strong yellow-green (143A); spots absent; papillae few, vivid yellow (12A), in the throat; nectaries strong yellow-green (143A); pollen strong brown (172A); stigma greyish red (176A). Fls 160 mm wide; tepals 85 × 25-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 12 mm. Stems 0.6 m, green, with 3-6 fls.

Trade designation: PAINTED PIXIE<sup>®</sup>.

#### 'Ceb Quest' VIII(a/b)

Parentage: (*longiflorum* 'Slocum's Ace' × unnamed seedling) × seedling PAM 2

R: Cebeco Lilies, Inc. (1987), G: Cebeco Lilies, Inc. (1990), N: Cebeco Lilies, Inc. (1994), I: Cebeco Lilies, Inc. (1994), REG: Cebeco Lilies, Inc. (1995)

Inside moderate purplish red to dark purplish pink (186A/C), throat pale yellow (158B); outside moderate purplish red (186A/B); spots dark red (187B), long, ovate, in linear trails on basal half of each tepal; nectaries purplish pink; pollen strong orange (169B). Fls 180 mm wide; tepals 110 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 135 × 8 mm, mid green.

Stems 0.8 m, yellow-green, with 5-10 fls (from 12-14 cm bulbs). Very early.

Trade designation: ALADDIN'S<sup>®</sup> QUEST.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Ceb Sun' VIII(a/b)

Parentage: seedling GH-403 × seedling AM 2

R: Cebeco Lilies, Inc. (1987), G: Cebeco Lilies, Inc. (1990), N: Cebeco Lilies, Inc. (1994), I: Cebeco Lilies, Inc. (1994), REG: Cebeco Lilies, Inc. (1995)

Inside vivid yellow (9A), throat light greenish yellow (8C); outside vivid yellow (9A); spots dark red (187B) above nectaries and forming a dark margin above the claw of the inner tepals; nectaries yellow-green; pollen strong orange (168B). Buds yellow. Fls 225 mm wide; tepals 120 × 60 mm, thick, strongly overlapping, margins smooth, tips slightly recurved. Lvs scattered, 160 × 40 mm, mid green. Stems 1.15 m, yellow-green, lightly mottled red-purple, with 5-10 fls (from 12-14 cm bulbs). Early to midseason.

Trade designation: ALADDIN'S<sup>®</sup> SUN.

(A *longiflorum*/Asiatic (LA) hybrid. Good vase life.)

#### 'Ceb Wine' VIII(a/b)

Parentage: seedling 79-186 × seedling PAM 2

R: Cebeco Lilies, Inc. (1987), G: Cebeco Lilies, Inc. (1990), N: Cebeco Lilies, Inc. (1994), I: Cebeco Lilies, Inc. (1994), REG: Cebeco Lilies, Inc. (1995)

Inside between strong and moderate purplish red (54A/58A), throat pale yellow-green (155A); outside deep pink (185D); spots absent; nectaries rose-pink to yellow-green; pollen moderate reddish brown (166B). Fls 130 mm wide; tepals 90 × 42 mm, strongly overlapping, margins smooth, tips slightly recurved. Lvs scattered, 75 × 12 mm, mid green. Stems 0.86 m, yellow-green, faintly mottled red-purple, with 5-10 fls (from 12-14 cm bulbs). Early.

Trade designation: ALADDIN'S<sup>®</sup> WINE.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Cecil' VIII(a/b)

Parentage unknown

R: Testcentrum voor Siergewassen B.V., N: Marklily C.V. (2001), REG: Marklily C.V. (2004)

Inside with inner tepals pale yellow-green (4D), light greenish yellow (5C) on margins and along midveins, margins and basal half of each tepal with dark red (187A/187B) spots, with outer tepals similar but lacking the light greenish yellow (5C) along midveins (young fls are light yellow (10B), brilliant yellow (8A) on margins and along midveins), throat pale yellow-green (4D) with dark red (187B) spot; outside greenish white (157D), flushed with pale yellow-green (4D) at base and along midveins, tepal-margins vivid yellow (9A) with dark red (187B) spots, tip strong yellow-green (144A), (young fls are pale yellow (8D), tepal-margins vivid yellow (9A) with spots; spots (see above); papillae absent; nectaries strong yellow-green (144B); pollen light olive-brown/light yellowish brown (199B/C); stigma strong greenish yellow (151C). Buds hairy. Fls 215 mm wide; tepals 137-144 × 45-65 mm, margins smooth to slightly

ruffled, tips slightly recurved. Lvs scattered, 180 × 16 mm, dark green. Stems 1.1-1.5 m, green, with 3-5 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Cecily' VI(-/a)

Parentage: (*leucanthum* var. *centifolium* × *regale*) × Golden Clarion Group  
R: C.W. Davidson (1959), G: C.W. Davidson (1963), N: C.W. Davidson, I: C.W. Davidson (1966)  
Inside vivid orange-yellow (23A); nectaries brilliant yellow-green (149C); stigma brilliant yellow-green (149C). Fls 177 mm wide, 125 long, scented. Lvs 220 mm long, parsley-green. Stems 1.5 m.

#### 'Ceke' VII(-/c)

Parentage: *L.* × *parkmanii* 'Salmon Jewels' × 'Starfire'  
R: D.K. Kölli (1983), G: D.K. Kölli (1987), N: D.K. Kölli (1994), REG: D.K. Kölli (1994)  
Inside salmon-coral, each tepal with a deeper coral central ray, very narrow tepal-margins and tips white, throat white blending out to salmon surrounding the nectaries; outside salmon; spots fairly small, rose-red (sometimes coalescing), on basal half of each tepal; nectaries yellow-green; pollen rust-coloured; stigma green. Fls 225-250 wide, not strongly scented; tepals 145-152 × 54 mm, margins smooth, tips of inner tepals very slightly recurved, tips of outer tepals much more strongly recurved; pedicels long. Lvs scattered, 152-202 × 25-57 mm, dark green, with brown petioles. Stems 1.3 m, light apple-green, mottled with grey flecks, and with up to 11 fls. Late July to early Aug.

#### 'Celebration' I(c/-)

Parentage: seedling 79-177 × unnamed seedling  
R: J. Wadekamper (1979), G: J. Wadekamper (1982), N: J. Wadekamper (1992), I: Borbeleta Gardens (1992), REG: J. Wadekamper (1993)  
Fls vivid red (44A), throat green; spots absent; nectaries white; pollen brown. Tepals 70 × 20 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 20 mm, dark green. Stems 1 m, dark green, with 15-17 fls. Late.  
(Published in *Borbeleta Gardens Cat.*, 1992.)

#### Celebrity Group VII(-/d)

Parentage: ('Allegro' × (*L.* × *parkmanii* Potomac Group × (*japonicum* × *auratum*))) F<sub>2</sub>  
I: Oregon Bulb Farms, Inc. (c. 1976), REG: Oregon Bulb Farms, Inc. (1976)  
Fls soft shell-pink; spots absent. Lvs broad. Stems 1.2-1.5 m., with 8-14 fls. Aug.  
(Published in *Lilies and other Liliaceae*, 1977: 76 and included in *ILR* (1982) as Celebrity grex.)

#### 'Celebrity Time' I(b-c/-)

Parentage: 'White Prince' × white-flowered seedling  
R: Hartle-Gilman Gardens (1982), G: Hartle-Gilman Gardens (1984), N: Hartle-Gilman Gardens (1991), I: Hartle-Gilman Gardens (1992), REG: Hartle-Gilman Gardens (1992)  
Inside yellowish white (155B); outside beige/brown,

tinged with pink and pale yellow; spots dark brown, on central third of each tepal, which has a thin, brown line around almost the whole edge; nectaries green; pollen yellow/brown. Tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 13 mm, mid green. Stems 1.04 m, green/brown, with 9-12 fls. Midseason.  
(Published in *Hartle-Gilman Gardens Cat.*, 1992.)

#### 'Celerity' VI(c/d)

Parentage: *L.* × *aurelianense* × (*leucanthum* var. *centifolium* × *sargentiae*)  
R: G.W. Darby (c. 1954), N: G.W. Darby  
Fls deep champagne-buff.

#### 'Celeste' VII(-/b)

Parentage: (*auratum* × unknown) × 'Doris Russell'  
R: M.G. Gardiner (1968), G: M.G. Gardiner (1971), N: M.G. Gardiner (1978), I: K.L. Watkins (1979), REG: (1979)  
Inside yellowish white (155D), throat strong yellow-green (144C); outside yellowish white (155D), midribs strong yellow-green; spots white, elongated, on each tepal to within 30 mm of tip; papillae white; nectaries light yellow-green (145C); pollen dark reddish orange (173A). Fls 150 mm wide; tepals 115 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, pale green, 105 × 55 mm. Stems 1.5-1.7 m, pale green, with c.16 fls. Jan. to Feb. (Australia).

#### Celestial Group VI(-/a)

Parentage: Aurelian Group × unknown  
R: J.M. Shaver, N: J.M. Shaver  
Fls yellow to orange. Stems 1.5-1.9 m. Aug.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 46 (1978) as Celestial Hybrids.)

#### 'Celestial Snow' I(a-b/-)

Parentage: 'White Prince' × 'Snow Lark'  
R: Hartle-Gilman Gardens (1981), G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1989), I: Hartle-Gilman Gardens (1989), REG: Hartle-Gilman Gardens (1990)  
Inside and outside yellowish white (158C), with a gold flush in centre of tepals inside, midribs green; spots few, small, dark, in centre third of each tepal over the gold flush; pollen reddish brown. Tepals 73 × 28 mm, slightly recurved. Lvs scattered, 101 × 10 mm, mid green. Stems 0.87 m, mid green, with 15-16 fls. Midseason.

#### Celian Group I(c/d)

Parentage: derived from 'Edith Cecilia' & other *cernuum* hybrids  
R: J.C. Ericksen (c. 1963), N: J.C. Ericksen  
Fls chalk-white, candy-pink, rose-pink to plum purple (mainly pastel colours), with darker or lighter pencilling. Stems 1-1.2 m.

#### 'Celica' VII(-/d)

Parentage: 'Montana' × unnamed seedling  
R: Lybelmex Hillegom B.V. (1984), G: Lybelmex Hillegom B.V. (1987), N: Lybelmex Hillegom B.V.

(1991), I: Lybelmex Hillegom B.V. (1991), REG: Lybelmex Hillegom B.V. (1992)  
Inside yellowish white (155D), midveins pale yellow-green (155A), throat light yellow-green (145C); outside yellowish white (155D), light purplish pink (62C) towards base, midribs pale yellow-green (155A); papillae pale yellow-green (155A), on basal part of each tepal; nectaries dark purple (79A); pollen brownish orange (172C). Fls 230 mm wide; tepals 110 × 70 mm, margins smooth, tips strongly recurved. Lvs scattered, 190 × 40 mm, mid green. Stems 1.15 m, pale green, with c.6 fls. June to July.  
Syn.: ‘Biancaneve’.  
(Registered and included in *ILR Eleventh Supplement* as ‘Biancaneve’, but in 1992 Dutch PBR (LEL 754) were granted under the epithet ‘Celica’: this latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

### **Celica Group I(a/-)**

Parentage: ‘Pumpkin Sweet’ × ‘Unique’  
R: G.C. Keast (1989), G: G.C. Keast (1990), N: G.C. Keast (1992), REG: G.C. Keast (1992)  
Inside and outside French rose (HCC 520), throat flushed with light green; spots tiny, maroon, in centre of each tepal; nectaries frosted; pollen brown. Fls 160 mm wide; tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 9 mm, mid green. Stems 1.2 m, black, with c.5 fls. Early to mid Jan. (New Zealand).

### **‘Celine’ I(a-b/c)**

Parentage: unnamed seedling × unnamed seedling  
R: Hoffgaarde B.V. (1992), G: Hoffgaarde B.V. (1994), N: Hoffgaarde B.V. (1997), I: Hoffgaarde B.V. (1998), REG: Hoffgaarde B.V. (2001)  
Inside light orange, darker towards tepal-base; outside light orange-yellow (25D); numerous dark spots on basal third of each tepal; some papillae present; nectaries green; pollen orange; stigma purple. Fls 170 mm wide; tepals 120 × 30 mm, margins smooth or very slightly wavy, tips recurved. Lvs scattered, attenuate, 100 × 15 mm. Stems 0.9-1.1 m, green, with 6-9 fls (from 14-16 cm bulbs). Early.  
Trade designation: HOFFFRICA® DION.

### **Centennial Group VII(-/b)**

Parentage: *auratum* vars. × mixture of *L. × parkmanii* Potomac Group, *L. × parkmanii* ‘Jillian Wallace’ & *speciosum* hybrids  
R: E.L. Kline (c. 1956), N: E.L. Kline  
Fls bright pink to carmine-red, tepal-margins generally white; spots deep red. Tepal-tips recurved.  
(Published in *Greenock Farms Cat.* 1958/59: 12.)

### **‘Centennial Pink’ I(b/-)**

Parentage: ‘Edith Cecilia’ × Preston Group  
R: E. Robinson (c. 1962), N: E. Robinson  
Inside rose-pink, with straw-yellow centre; outside light. Tepals semi-reflexed. Stems 0.6-1 m. Aug.  
(Published in *ILR* (1969).)

### **‘Centerfold’ I(a-b/b)**

Parentage unknown  
R: Mak-Leek Inc. (1990), G: Mak-Leek Inc. (1993), N: Mak-Leek Inc. (2000), I: Euro Lelie B.V. (2003), REG: Mak-Leek Inc. (2003)  
Inside yellowish white (155D) with dark red (187B) stripy brushmarks; outside yellowish white (155D); spots and papillae present; nectaries green; pollen light brown; stigma purple. Fls 170 mm wide; tepals 90 × 45 mm, margins smooth to very slightly ruffled, tips slightly recurved. Lvs 140 × 15 mm. Stems 0.95-1 m., with 5-9 fls (from 14-16 cm bulbs). Midseason.

### **‘Center Stage’ I(a/c)**

Parentage unknown  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Inside peach-pink with a yellowish base on which darker spots are scattered. Tepal-margins smooth, tips slightly recurved. Stems 1-1.2 m. Mid June.  
(Published in *The Lily Garden Cat.*, 1996/97: 4.)

### **centifolium Stapf IX(b-c/a)**

Syn. of *leucanthum* var. *centifolium*.

### **var. centifolium IX(b-c/a)**

See *leucanthum* var. *centifolium*.

### **‘Centifolium Hybrids’ VI(-/a)**

See Olympic Group.

### **× centigale Woodcock VI(-/a)**

Parentage: *leucanthum* var. *centifolium* × *regale*  
R: J. Couatts (1923)  
Intermediate between the parents, but tepals more recurved than in *regale*. Lvs shiny dark green.

### **× centigale ‘Uncle Mark’ VI(-/a)**

Parentage: *regale* × *leucanthum* var. *centifolium*  
R: Lord Limerick (pre 1984), N: J. & E. Parker-Jervis, I: J. & E. Parker-Jervis  
Inside white; outside rose-madder; scented. Stems 1.5 m, with 6-8 fls.

### **× centigale Yosemite Group VI(b/a)**

Parentage: *leucanthum* var. *centifolium* (tetraploid) × second and third generation tetraploid *regale*  
R: R.J. Griesbach (1962 onwards), G: R.J. Griesbach, N: E.A. McRae (1994), I: Van der Salm Bulb Farm, Inc. (1994), REG: Van der Salm Bulb Farm, Inc. (1994)  
Inside pure white to cream, throat golden yellow; spots absent; outside pure white to cream; nectaries lime-green; pollen soft yellow-gold. Fls large; tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.5 m, very strong, dark green. Late June to July.

### **Centisargale Group VI(-/a)**

Parentage: *leucanthum* var. *centifolium* × *L. × imperiale*  
R: LeV. Freimann (pre 1942), N: LeV. Freimann  
Outside lemon-yellow to deepest chocolate-brown, with

pink veining showing through to face of fl. Stems 1.5-2.7 m. (Published in *Amer. LYB* 1942: 84. Included in *ILR* (1982) as *Centisargale* grex.)

**‘Centurion’ I(b-c/b-c)**

Parentage unknown

R: L. Woodriff (1975), G: L. Woodriff (1977), N: Bowman Creek Farm (1981), REG: Bowman Creek Farm (1981)

Fls red-orange, throat red; a moderate number of small, black spots on basal third of each tepal; nectaries red; pollen rust-coloured. Fls 120 mm wide; tepals 90 × 35 mm, margins smooth, tips strongly reflexed. Lvs scattered, 145 × 10 mm, dark green. Stems 1 m, red-brown, with c.25 fls. Mid June.

**‘Ceres’ VI(-/a)**

Parentage: *leucanthum* var. *centifolium* × *sargentiae*

R: G.W. Darby (c. 1965), N: G.W. Darby

Inside white; outside dark greenish brown. Stems with numerous bulbils.

**‘Ceriba’ I(b/-)**

Misspelling of ‘Ceriba’.

**‘Ceriba’ I(b/d)**

Parentage: selection from Vasares Priekis Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls light orange-red; spots brown. Fls 125 mm wide, scentless. Lvs long, dark green. Stems up to 1.5 m, with 13-15 fls. June to July.

Syn.: ‘Hope’.

(Misspelling: ‘Tseriba’. Published in *LYB* 33: 78 (1970) and included in *ILR* (1982) as ‘Ceriba’, which is also a misspelling.)

**‘Ceriņu Violetā’ VI(-/a)**

Parentage: *L. × centigale* × *sargentiae*

R: V.P. Orehovs (c. 1957), N: V.P. Orehovs

Fls violet-pink, dark violet in bud. Stems 1.5 m. July to Aug.

(Published in *LYB* 33: 76 (1970) and included in *ILR* (1982) as ‘Zerinu Violeta’ which is a misspelling.)

**‘Cerinzars’ I(b/b)**

Misspelling of ‘Ceriņzars’

**‘Ceriņzars’ I(b/b)**

Parentage: ‘Mantojums’ × ‘Monte Rosa’

R: D.-V. Šķimele (1994), G: D.-V. Šķimele (1996), N:

D.-V. Šķimele (1999), REG: D.-V. Šķimele (2001)

Inside bright pink with a yellowish pink base, throat pink; outside bright pink, midribs brownish green; spots few, inconspicuous, dark brown, in the throat; nectaries green; pollen orange; stigma lilac-red. Fls 135 mm wide; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 10 mm. Stems 0.75 m, dark green. Late June to early July.

(Published in *Lilium Baltricum Lily Register*, 1999.

Included in *ILR Twentieth Supplement* as ‘Cerinzars’ which is a misspelling.)

**‘Cerise’ I(a/-)**

Parentage: ‘Roter Cardinal’ × ‘Prominence’

R: Gebr. N. & B. Laan & Zn (1979), G: Gebr. N. &

B. Laan & Zn (1981), N: Gebr. N. & B. Laan & Zn

(1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr.

N. & B. Laan & Zn (1985)

Fls red; spots deep purple, over whole of tepals; nectaries light red; pollen brown. Fls 140 mm wide; tepals 85 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 20 mm, dark green. Stems 1.1 m, green, with c.10 fls. July.

**Cerise Beauty Group VII(-/b)**

Parentage: *speciosum/auratum/rubellum* hybrids

R: R.W. Bemis, N: R.W. Bemis, I: R.W. Bemis, REG:

R.W. Bemis (1985)

Fls cerise-pink, tepal-edges white; nectaries green, often with gold edge. Lvs scattered. Stems 1.2-1.5 m. Mid July to Aug.

(Published in *Blackthorne Gardens Cat.*, 1966/67.)

**cernuum Komarov IX(c/d)**

Fls shiny lilac, pink-purple or sometimes white; spots purple; nectaries with papillate margins; pollen lilac. Fls fragrant; tepals 35-50 × 7-12 mm Lvs scattered, 50-150 (-180) × 1-5 mm, densely crowded in middle part of stem, upper part almost leafless. Stems 0.6-1(-1.5) m, green or marked with purple-brown, with up to 14 fls. June to July. Korea north to eastern former USSR.

**‘Cernuum’ IX(b-c/a)**

Syn. of *candidum* ‘Sultan Zambak’.

**cernuum var. candidum Nakai IX(c/d)**

Fls white, with faint purple spots at base.

**cernuum ‘Matsu-no-hikari’ IX(-/d)**

Parentage: selection from *cernuum* seedling

S: S. Fujishima (1960), N: S. Fujishima

Fls bright orange-red, large. Stems 1 m.

**‘Cerri B’ VI(-/a)**

Parentage: Aurelian hybrid seedling × Golden Clarion Group

R: R.C. Crawford, G: Montana State University, N: D.C.

Merkely (1978), I: Borbeleta Gardens (1979), REG: J.

Wadekamper (1981)

Inside brilliant yellow (8A/10A), throat green; outside tan over yellow (appearing purplish); spots absent; nectaries green; pollen yellow-orange. Fls scented; tepals 120 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 1 m, blue-green, with 8-10 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1979. Named for Mrs Breen, then President of State Garden Clubs.)

**‘Čert’ I(b-c/b)**

Parentage: ‘Connecticut Red’ × ‘Connecticut

Lemonglow’

R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B.

Mičulka (1984)

Fls dark red-brown, fading to bronze, with a yellow tongue over each nectary; spots small, sparse, violet, on a fifth of each tepal; pollen ochre. Fls 125 mm wide; tepals 85 × 37 mm, irregularly recurved, twisted. Lvs 110 × 12 mm, glossy dark green. Stems 0.8 m. Early July.

**‘Certes’ VI(-/a)**

Parentage: selection from Aurelian Group

S: E.C. Genat (c. 1955), N: E.C. Genat

Fls apricot, stained with crimson outside. Apical half of each tepal reflexed.

**‘Červená Karkulka’ I(b-c/d)**

Parentage: derived from Preston Group

R: J. Marks (pre 1969), G: V. Jošt, N: V. Jošt, I: V. Jošt (1975), REG: V. Jošt (1984)

Inside strong orange (25B) in centre; outside vivid reddish orange (34A); spots numerous, small, dark red (187A), on half of fl.; nectaries violet, white-frosted; pollen vivid reddish orange (30A). Fls 66 mm wide; tepals 56 × 25 mm, strongly recurved; pedicels dotted dark brown. Lvs 90 × 4 mm, dark green. Stems 1.4 m, spotted with dark violet. Bulbs tinged with pink. Early July.

**‘Červená Pagoda’ I(c/d)**

Parentage: derived from Preston Group

R: J. Marks (pre 1969), G: J. Marks, N: J. Marks, I: B. Mičulka (1983), REG: B. Mičulka (1984)

Inside orange-red, throat orange; outside paler, midribs reddish; spots small, red-brown, numerous, on half of each tepal; nectaries pale orange, frosted; pollen orange-red. Fls 75 mm wide; tepals 70 × 27 mm, strongly recurved. Lvs 80 × 4 mm, dark green. Stems 1 m, violet-spotted. Late June.

**‘Červenka’ I(c/d)**

Parentage: *L. × scottiae* ‘Roter Prinz’ × ‘Troika’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1985), REG: B. Mičulka (1985)

Inside orange-red, throat apricot, an apricot flare over each nectary; outside red-orange, midribs purple; spots numerous, medium sized, dark violet, on two-thirds of each tepal; nectaries pink-frosted; pollen brown. Fls 70 mm wide; tepals 75 × 30 mm, strongly recurved; pedicels dark violet-brown. Lvs 100 × 6mm, dull dark green. Stems 1.2 m, brown at base. Early July.

**‘Cervia’ I(a/c)**

Parentage: seedling RS 91-23 × seedling AM 95-07

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals light purplish pink (63D) with strong purplish red (63B) stripes, each nectary with a strong purplish red (63B) spot at top end, outer tepals more blue-pink than 63B, throat brilliant yellow-green (142B), yellowish white (155D) towards margin; outside light purplish pink (63D), very pale purple (69B) along midribs; spots absent; papillae strong purplish red (63B); nectaries brilliant yellow-green (142B); pollen moderate reddish brown (175A); stigma light yellow-green (142C).

Fls 165 mm wide; tepals 85 × 45-55 mm, margins smooth, tips recurved. Lvs scattered, 95 × 15 mm, light green. Stems 0.95-1.2 m, green with darker markings, and with c.6 fls.

**‘Česká Elita’ I(b/c)**

Parentage: ‘Connecticut Lemonglow’ × yellow-flowered brushmarked seedling

R: J. Hloušek, N: J. Hloušek, I: J. Hloušek (1990), REG: J. Hloušek (1993)

Inside pale yellow; outside greenish; spots sparse, medium sized, auburn; brushmarks medium sized, mahogany; nectaries green; pollen yellow-brown; stigma brownish. Fls 70 mm wide; tepals 70 × 40 mm, recurved; pedicels 100 mm long. Lvs scattered, 65 × 18 mm, glossy green. Stems 0.7 m, green. Early July.

**‘České Dueto’ I(b-c/c)**

Parentage unknown

R: J. Scholze (c. 1984), N: J. Scholze, REG: J. Scholze (1986)

Inside pale brownish orange, tepal-tips paler, edges yellow, a small, yellow flare over each nectary; outside apricot, midribs yellow; spots sparse, small, dark brown, in the throat; nectaries green; pollen ochre-brown; stigma purple. Fls 125 mm wide; tepals 95 × 40 mm, curled and twisted, slightly recurved; pedicels green, with secondary buds. Lvs 65 × 16 mm, glossy green. Stems 0.9 m, spotted with brown below. Early July.

**‘Český Krystal’ I(b/-)**

Parentage: ‘Sun Ray’ × ‘Pink Tiger’

R: K. Braun (1983), N: K. Braun, REG: K. Braun (1988)

Inside creamy, throat greenish; outside slightly rose-pink; spots sparse, medium/large, red-brown, on two-thirds of each tepal. Fls 151 mm wide; tepals 89 × 33 mm, recurved; pedicels 103 mm long, brownish, with some secondary buds. Lvs scattered, 103 × 19 mm, slightly glossy green. Stems 0.75 m. Early July. (It is not known whether ‘Pink Tiger’ (pollen parent) was raised by Woodriff or Laan.)

**‘Chablis’ VII(a-b/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside and outside yellowish white (155D); spots absent; papillae present; nectaries yellow-green; pollen red-brown; stigma dark purple. Tepal-margins strongly ruffled, tips slightly recurved. Stems medium height. Early to midseason.

(Production ceased in 1997.)

**‘Cha Cha’ I(b/-)**

Given as a parent of ‘Maksis’, ‘Exotic Sister’ and ‘Exotic Star’. The registration forms for the latter two cvs say that ‘Cha Cha’ is an Asiatic with out-facing, orange, spotted fls, from V.P. Orehovs.

**‘Cha Cha Cha’ I(a/b)**

Parentage: (seedling A-217-77 × ‘Juliana’) × unknown

R: Cebeco Lilies, Inc. (pre 1998), N: Cebeco Lilies, Inc.,

REG: ICRA (1998)

Inside pinkish, with numerous red spots. Buds hairy. Tepals slightly recurved. Stems 0.6-1 m. Early to midseason.

(Published in *The Lily Nook Cat.*, 1998.)

**‘Chaco’ I(b/-)**

Parentage: seedling 39-66 × Mercury Group

R: Gebr. N. & B. Laan & Zn (pre 1975), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1975)  
Fls moderate pink (49B); spotted.

(Published in *Lilies and other Liliaceae*, 1977: 76.)

**‘Chagall’ VII(a/b)**

Parentage: seedling 88-196 × seedling RF 94-4

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside moderate purplish red (58A), midveins strong red (53B) above nectaries and fading towards top, throat whiter than yellowish white (155D); outside moderate purplish red (58A) on a paler ground, whiter than 155D at base, midribs light yellow-green (154D); spots and papillae strong purplish red (59D); nectaries strong yellow-green (144B), surrounded by light greenish yellow (8B); pollen strong reddish orange (169A); stigma pale yellow-green (157A), speckled with purple. Fls 230 mm wide; tepals 130-140 × 50-70 mm, margins ruffled, tips recurved. Lvs scattered, 170-200 × 34-40 mm. Stems 1.25 m, light green with a little darker marking, and with c.3 fls.

**var. *chaixii* IX(a/b)**

See *bulbiferum* var. *chaixii*.

***chalcedonicum* L. IX(b-c/d)**

Fls bright red or orange-red; spots absent; papillae towards base; pollen reddish. Fls faintly scented; tepals 50-70 mm long. Lvs scattered, margin ciliate so lvs appear silver-edged, lower spreading, upper adpressed to stem. Stems 0.45-1.5 m, with up to 12 fls. Greece, S Albania.

Syn.: *heldreichii*.

***chalcedonicum* var. *maculatum* hort. Constable ex**

**Gard. Chron. IX(b-c/d)**

AM 1930

Fls rich scarlet, spotted black-maroon or deep purple.

**‘Challenger’ I(a/b)**

Parentage: selection from complex *cernuum* × *lancifolium* hybrid

S: J. de Graaff (c. 1966), N: J. de Graaff

Fls cherry-red and orange; spots dark. July.

(Published in *ILR* (1969).)

**‘Chambertin’ VII(a/b)**

Parentage: ‘Trento’ × ‘Barbaresco’

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V.,

I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside dark red (187C), with a little yellowish white (155D) in the throat; outside dark red (187D) on a pale green ground, tepal-tips strong yellow-green (144A); spots dark red (187A), at the basal edge of each tepal; papillae few, in the throat; nectaries strong yellow-green (144A); pollen strong orange (169B); stigma dark red (187A). Fls 210 mm wide; tepals 120 × 40-55 mm, margins slightly ruffled, tips recurved. Lvs scattered, 160 × 60 mm, mid green. Stems 1.25 m, pale green with a little darker marking, and with c.3-5 fls.

**‘Chameleon’ II(-/-)**

Parentage unknown

R: Devonian Botanical Gardens, G: R. Erskine (1975), N: R. Erskine (1975), I: R. Erskine (1975), REG: R. Erskine (1996)

Inside pink changing to yellow, throat lime-green; outside pink; spots numerous, fairly large, dark purple; nectaries yellow; pollen golden. Fls 70 mm wide; tepals 45 × 25 mm, margins smooth, tips slightly recurved. Lvs whorled, 160 × 15 mm, mid green. Stems 1.65 m, brownish green, with c.32 fls. Early.

(This cv. flowers when very young, compared to its siblings.)

**‘Chameleon Gem’ VII(-/b)**

See *L. × parkmanii* ‘Chameleon Gem’.

**‘Chamonix’ VII(-/d)**

Parentage unknown

R: Gebr. Mak B.V. (1982), G: Gebr. Mak B.V. (1985), N: Gebr. Mak B.V. (1989), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1989)

Inside yellowish white (155D), midveins broad, strong red (53B), tepal-tips light yellow-green (150D), throat strong yellow-green (144C) edged light greenish yellow (4B); outside yellowish white (155B), midribs light greenish yellow to pale yellow-green (4C/D), outer tepals marked strong purplish red (64B) at base; spots deep purplish red (59B), on whole of each tepal; pollen strong orange (169C). Fls 325 mm wide; tepals 150 × 80 mm, margins smooth, tips strongly recurved. Lvs scattered, 190 × 42 mm, mid green. Stems 0.85 m, green, with 4-5 fls. June.

**‘Champagne Diamond’ VIII(a/b)**

Parentage: seedling LA 93007-24 × ‘Sancerre’ (tetraploid form?)

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)

Inside pale yellowish pink (27C), light yellowish pink (27B) towards tepal-margins, tips light orange (29B), throat strong yellow-green (144C); outside pale yellowish pink (27C/D), tepal-margins light yellowish pink (29C), along midribs with a moderate red/moderate purplish pink (182A/186A) stripe fading towards top into moderate purplish pink (186B) on a light ground; spots and papillae absent; nectaries pale yellowish pink (27D); pollen dark red/strong brown

(187A/172A); stigma moderate reddish orange (173B). Fls 205 mm wide, fragrant; tepals 112-117 × 49-64 mm, margins smooth, tips recurved. Lvs scattered, 153 × 20 mm. Stems 1.1-1.15 m, brown-red, green towards top, with 2-9 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

### 'Champagne Lady' VI(-/a)

Parentage unknown

R: D.F. McPherson, G: D.F. McPherson (1972), N: D.F. McPherson, I: D.F. McPherson (1978), REG: D.F. McPherson (1978)

Fls white, throat brilliant greenish yellow (4A). Fls 150 × 110 mm.

(Published in *Lilies and other Liliaceae*, 1978/9: 106.)

### Champlain Group VI(-/a)

Parentage: derived from *L. × imperiale* Shelburne Group, *L. × imperiale* 'Shellman' & *leucanthum* var. *centifolium*

R: F.M. Abbey, N: F.M. Abbey

Fls pink and yellow. Stems 1.2 m.

(Published in *Gardenside Nursery Cat.*, 1948.)

### 'Chance' I(b/c)

Parentage: unnamed seedling × unnamed seedling

R: Lybelmex Hillegom B.V. (1992), G: Lybelmex Hillegom B.V., N: Van den Bos Breeding B.V., I: Van den Bos Breeding B.V. (2000), REG: Van den Bos Breeding B.V. (2000)

Inside strong yellowish pink (32D), outer tepals with strong yellowish pink (32C) veins, midveins light orange (29B), throat pale orange-yellow (23D); outside pale yellowish pink (29D), light yellowish pink (29C) towards tepal-edges, midribs with a greenish suffusion; spots dark red (187A), in the throat; papillae absent; nectaries slightly hairy; pollen moderate reddish brown (166B); stigma moderate purplish red (184D). Fls 155 mm wide; tepals 80-85 × 35-45 mm, margins ruffled, tips recurved. Lvs scattered, 145 × 25 mm. Stems 1.55 m, light green, with c.7 fls.

### CHANEL I(a-b/b-c)

Trade designation of 'Holebebe'.

### 'Chanson' I(a/-)

Parentage: unnamed seedling × 'Staccato'

R: Gebr. Mak B.V. (1984), G: Gebr. Mak B.V. (1986), N: Gebr. Mak B.V. (1989), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1989)

Inside vivid to strong reddish orange (42A/B); outside strong reddish orange (42B), tepal-margins vivid reddish orange (42A); spots dark red (187A), on basal half of each tepal; pollen vivid reddish orange (32A). Fls 175 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 13 mm, mid green. Stems 1.2 m, green, with 7-9 fls. May.

### 'Chantal' VI(c/-)

Parentage: *lancifolium* × unknown

R: J. Koeman (pre 1972), N: J. Koeman, REG: J. Koeman (1973)

Fls vivid yellow (14B), spotted strong brown.

(Published in *Lilies and other Liliaceae*, 1973/1974: 109.)

### 'Chanticleer' I(a/-)

Parentage: Preston Group seedling × Preston Group seedling

R: L. Lutz (pre 1967), N: L. Lutz (1968)

Fls red, with deep red centre zone and orange nectary-furrows; spots present. Stems 0.4-0.6 m. July.

(Published in *ILR* (1969).)

### 'Chantilly' VI(b/a)

Parentage unknown

R: L. Woodriff (1975), G: L. Woodriff (1977), N:

Bowman Creek Farm (1982), REG: Bowman Creek Farm (1982)

Apricot throughout; spots absent; nectaries apricot; pollen orange. Tepals 120 × 40 mm, margins smooth, tips slightly recurved, 3 with a tepaloid flap on inner surface.

Lvs scattered, 120 × 10 mm, dark green. Stems 0.9 m, green, with 10 fls. Late July.

### 'Chapeau' VII(b/-)

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside moderate purplish pink (65A), each tepal white towards base; outside light purplish pink (68D); spots and papillae present; nectaries green changing to yellow; pollen orange-brown; stigma green. Tepal-margins slightly ruffled, tips recurved. Stems medium to tall, with reddish markings. Early to midseason.

(Production ceased in 1997.)

### 'Character Part' I(b/-)

Parentage: Tango Group seedling × Tango Group seedling

R: J. Vasarietis (c. 1984), G: J. Vasarietis (1989), N: J. Vasarietis (1993), REG: J. Vasarietis (1993)

Inside vivid yellow (17C) with light yellow (17D) tepal-tips and throat; outside light yellow (17D); spots purple, on two-thirds of each tepal; nectaries white; pollen brownish orange. Fls 130 mm wide; tepals 70 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 9 mm. Stems 1.05 m, green, with c.13 fls. Early July. Syn.: 'Bel Canto'.

(First released as 'Bel Canto'.)

### 'Charade' I(a/-)

Parentage: 'Bellona' × 'Gold Lode'

R: Gebr. N. & B. Laan & Zn (1981), G: Gebr. N. & B. Laan & Zn (1983), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)

Fls vivid yellow (14B), flushed with buttercup-yellow, midveins yellow-green at base; outside vivid yellow (13A), midribs buttercup-yellow; spots deep purple or brown; nectaries yellow; pollen brown-red. Fls 150 mm wide; tepals 80-100 × 45 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 120-150 × 15-20 mm, dark green. Stems 0.7-1.2 m, green, with 8-14 fls. June.

**‘Chardin’ I(a/c)**

Parentage unknown

R: Vletter &amp; Den Haan Beheer B.V., G: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V. (1999), I: Vletter &amp; Den Haan Beheer B.V., REG: Vletter &amp; Den Haan Beheer B.V. (2001)

Inside a little darker than light yellowish pink (29C), with a light orange (29B) mark above each nectary, throat pale yellowish pink (29D); outside light yellowish pink (29C), midribs brilliant yellow-green (154B/C), tipped dark red (187A); spots dark red (187A); papillae light to pale yellowish pink (29C/D); nectaries pale yellowish pink (29D); pollen greyish brown/strong brown (166A/172A); stigma moderate purplish red (186B). Fls 175 mm wide; tepals 95 × 40–60 mm, margins slightly ruffled, tips recurved. Lvs scattered, 135 × 22 mm. Stems 1.2–1.25 m, green with a little darker marking, and with c.6 fls.

**‘Chardonnay’ VIII(-/a)**

Parentage: seedling N 66 × seedling W 90-7

R: Vletter &amp; Den Haan, G: Vletter &amp; Den Haan, N: Vletter &amp; Den Haan (1995), I: Vletter &amp; Den Haan, REG: Vletter &amp; Den Haan (1997)

Inside yellowish white (155D), midveins green-yellow; spots and papillae absent; nectaries green; pollen yellow-brown; stigma yellow-green. Tepal-margins ruffled, tips slightly recurved. Lvs scattered, mid green. Stems 1.15 m, green with darker stripes and spots, and with 4–6 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

**‘Charente’ VIII(b/b)**

Parentage: seedling PG 95-57 × seedling RH 97-07

R: Gebr. Vletter &amp; Den Haan, N: Gebr. Vletter &amp; Den Haan (2001), REG: Vletter &amp; Den Haan Beheer B.V. (2004)

Inside pale greenish yellow (9D), brilliant yellow (9C) along midveins, tepal-margins light yellow (11B), throat yellowish white (155D); outside with outer tepals pale yellow-green (4D), midribs light yellow-green (145D) at base, area next to midribs vivid purplish red (57C) (absent in younger fls), inner tepals pale yellow-green (4D), midribs light yellow-green (145D) at base, margin pale greenish yellow (9D); spots absent; papillae vivid yellow (9B); nectaries strong yellow-green (144C); pollen strong brown (172A); stigma light purple (77C). Fls 210 mm wide, fragrant; tepals 140 × 50–80 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 175 × 41 mm, light and mid green. Stems 1.05–1.1 m, green with darker markings, and with c.5 fls. (An Orienpet (OT) lily.)

**‘Charisma’ I(a/-)**

Parentage: ‘Cinnabar’ (Div. I) × ‘Red Carpet’

I: Oregon Bulb Farms, Inc. (c. 1976), REG: Oregon Bulb Farms, Inc. (1977)

Fls intense orange, each tepal with a broad yellow ray; spots absent. Tepal-tips slightly reflexed. Stems 0.3 m. June.

(Published in *Lilies and other Liliaceae*, 1977: 76.)**‘Charity’ VI(-/a)**

Parentage: Aurelian Group

R: J. de Graaff (c. 1962), N: J. de Graaff

Inside light golden yellow; outside light green. Stems 1.5 m. July.

**‘Charkovčanka’ I(a-b/-)**

Parentage unknown

R: N.S. Nezovibatko (pre 1981), N: N.S. Nezovibatko

Fls creamy white, outer tepals narrower, tips recurved; spots numerous, on two-thirds of each tepal; anthers poorly developed.

**‘Charlene’ II(c/d)**Parentage: (*martagon* × unknown) × unknown

R: unknown, G: F. Tarlton (c. 1984), N: F. Tarlton

(1988), I: Honeywood Lilies, REG: F. Tarlton (1988)

Inside vivid yellow (14A); outside brilliant yellow (11A); spots many, small, dark, on middle half of each tepal; nectaries vivid yellow (14A); pollen strong orange (25A). Tepals 40 × 17 mm, margins smooth, tips moderately recurved. Lvs whorled, 95 × 28 mm, mid green. Stems 1.07 m, mid to dark green, with 12–14 fls. June.

**‘Charleston’ I(a/-)**

Parentage: (‘Connecticut King’ × ‘Joan Evans’) × (‘Enchantment’ × ‘Connecticut King’)

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc.

(1978), N: Oregon Bulb Farms, Inc. (1986), I: Oregon

Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)

Inside clear white, with a vivid yellow (12A) ray (10–20 mm wide) above nectaries, tips and edges also vivid yellow (12A), throat vivid yellow (12A); outside light yellow-green (2C); unspotted or with 5–15 very tiny and inconspicuous spots parallel to nectaries; nectaries green; pollen brilliant orange-yellow (23B). Fls 150–190 mm wide; tepals 90 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 1.1 m, light green, with 8–35 fls. Mid to late June.

**‘Charles T. Russell’ VI(-/-)**

Parentage unknown

R: Unknown (pre 1964)

Given as a parent of ‘Goldspire’; no further information.

**‘Charles Turner’ IX(b/c)**

FCC 1870

See *auratum* ‘Charles Turner’.**‘Charles X’ IX(b/a)**See *candidum* ‘Charles X’.**‘Charlotta’ I(a/b)**

Parentage: ‘Ivanka’ × ‘Connecticut King’

R: K. Vereš, N: K. Vereš, I: K. Vereš (1988), REG: K.

Vereš (1993)

Inside red, tinted with orange in centre; outside orange-red, midribs dark red; spots absent; nectaries dark olive; pollen orange-red; stigma dark red. Fls 150 mm wide; tepals 80 × 20 mm, very slightly recurved; pedicels 70 mm long, slightly spotted, with secondary buds. Lvs

scattered, 80 × 15 mm, glossy green. Stems 0.85 m, spotted brown and with numerous, brown bulbils and secondary buds. Early July.

**‘Charlotte Bonham Carter’ I(b/-)**

Parentage unknown

G: D.M. Simmons (1960s), N: D.M. Simmons (1986),

I: D.M. Simmons, REG: D.M. Simmons (1986)

Inside vivid yellow (9A); outside vivid to brilliant yellow (9B/C), midribs tinged with reddish at base; spots dark red (59A), on one- to two-thirds of each tepal; nectaries yellowish white; anthers almost black. Fls c.80 mm wide; tepals 70-75 × 23-33 mm, margins smooth, tips strongly recurved. Lvs scattered, up to 110 × 20 mm, pale green. Stems up to 1.5 m, reddish purple, spotted green, with up to 6 fls. Mid Aug.

(A chance seedling found in the registrant’s garden.

Nomenclatural standard: herbarium specimen provided by registrant (WSY 0004189).)

**‘Charlotte’s Web’ I(b/-)**

Parentage: ‘Ambrosia’ × brushmarked seedling

R: T. Wadekamper (1978), G: T. Wadekamper (1980),

N: T. Wadekamper (1984), I: Borbeleta Gardens (1984), REG: Borbeleta Gardens (1984)

Fls bright yellow; brushmarks brown; spots few, brown; nectaries whitish; pollen brown. Tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 20 mm, mid green. Stems 0.6 m, mid green, with 12-15 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1984.)

**‘Charm’ I(a/b-c)**

Parentage unknown

R: J. Boon (pre 1982), N: J. Boon, REG: J. Boon (1983)

Inside strong orange (25A), midveins marigold; outside brilliant orange (25C), midribs strong orange (25A); spots small, brown; nectaries majolica-brown; pollen rust-brown. Stems 1.1 m, with 6-14 fls.

**‘Charmain’ I(c/-)**

Parentage: *dauidii* × unknown

Fls unspotted.

(Misspelling: ‘Charmaine’. Published in *LYB* 12: 42

(1948) as ‘Charmain’; in *Dunhampton Lily Fields Cat.*, 1951/52 as ‘Charmaine’. Included in *ILR* (1982) as ‘Charmaine’, but ‘Charmain’ was published first and is the correct epithet. Possibly of Australian origin.)

**‘Charmaine’ I(c/-)**

Misspelling of ‘Charmain’.

**‘Charme’ I(a/b)**

Parentage: red-flowered, up-facing Asiatic seedling (359/1) × ‘Mont Blanc’

R: G. Thürmer (1987), G: G. Thürmer (1989), N: G. Thürmer (1999), I: G. Thürmer (1999), REG: G. Thürmer (2001)

Inside light orange-yellow (24C), tepal-tips pale orange-yellow (24D), throat strong orange (25A); outside light orange (29B); spots small, deep red (185A), on basal

third of each tepal; nectaries orange; pollen moderate red (179A). Fls 120 mm wide; tepals 65 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 65 × 8 mm. Stems 0.8 m, rather dark green, hairy, with 6-10 fls, and some bulbils. Early to mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0030338).)

**‘Charmeur’ VII(-/c)**

Parentage: ‘Coralbee’ × ‘Star Gazer’

R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff

Tulleken Lelies B.V. (1981), N: Bischoff Tulleken Lelies

B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1989),

REG: Bischoff Tulleken Lelies B.V. (1994)

Inside deep red (60A) in basal part, shading to strong purplish red (60B/C) at tepal-edges and to strong purplish red (60D) in apical part which is edged yellowish white (155B), midveins deep red (60A) at base, fading towards top, throat with a little yellowish white (155B); outside flamed strong reddish purple (70B) on a yellowish white (155B) ground, midribs yellowish white (155B) suffused with strong reddish purple (70B), strong yellow-green (144B) at top; spots dark red (187B), on two-thirds of each tepal; papillae dark red (187B), in the throat; pollen strong orange (169B); stigma light greyish olive (197C). Fls 220 mm wide; tepals 110 × 40 mm. Lvs scattered, 100 × 35 mm. Stems 0.45 m, pale green, with c.4 fls.

**‘Charmian’ I(c/-)**

Parentage: second generation seedling from *L. × maculatum* ‘Batemanniae’

R: G.M. Chandler (c. 1944), N: G.M. Chandler

Fls apricot. Stems up to 1.5 m, with over 20 fls.

(Published in *LYB* 10: 60 (1946).)

**‘Chartres’ I(a/-)**

Parentage: unknown × ‘Firebright’

R: A. Weinreich (1972), N: A. Weinreich (1976), I: A.

Weinreich (1976), REG: A. Weinreich (1985)

Inside strong red (46A), with a short ray of vivid orange (28B) in basal part of each tepal; outside vivid red (46B); spots numerous, medium sized, dark greyish purple (202A), on two-thirds of each tepal; nectaries frosted strong purplish red (60C); pollen strong brown (172A). Fls 105 mm wide; tepals 78 × 36 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 7 mm, dark green. Stems 0.7 m, dark violet, with c.7 fls. Late June. (Published in *Liliárská ročenka*, 1983.)

**‘Chartreuse’ VI(-/a)**

Parentage: Aurelian Group

R: F.J. Holmes, N: F.J. Holmes (1975), REG: F.J. Holmes (1975)

Inside cream, with central strong yellow-green (144B) zone extending down tepals; outside strong yellow-green (144A). Stems 1 m. July to Aug.

(Published in *Lilies and other Liliaceae*, 1975: 91.)

**‘Chartreusebelle’ VI(-/a)**

Parentage: unnamed seedling × unnamed seedling

R: D. Foxwell, N: D. Foxwell (1975), REG: D. Foxwell

(1975)

Inside pale greenish yellow (2D), deepening to brilliant greenish yellow (2B) in throat; outside with some pea-green.

(Published in *Lilies and other Liliaceae*, 1975: 91.)

### **Chartreuse Giant Group I(a-b/-)**

Parentage: *lancifolium* var. *flaviflorum* × *wilsonii* var. *flavum*

R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens, I: Blackthorne Gardens

Fls yellow-green; spots few, maroon, in centre of fl. Fls c. 150 mm wide. Lvs dark green. Stems 1.2-1.5 m.

### **'Chastity' IX(b/c)**

See *auratum* var. *platyphyllum* 'Chastity'.

### **'Chatta Hoochee' I(a-b/-)**

Parentage unknown

R: Mak-Leek Inc. (1991), G: Mak-Leek Inc. (1993), N: Mak-Leek Inc. (2002), I: Euro Lelie B.V. (2002), REG: Mak-Leek Inc. (2003)

Inside strong pink (54C), base greenish white (155C); outside deep purplish pink to strong pink (54B/C); spots and papillae present; nectaries green; pollen light brown; stigma pink with purple spots. Fls 140 mm wide; tepals 70-80 × 37.5-40 mm, margins slightly ruffled, tips slightly recurved. Lvs 120 × 12.5 mm. Stems 0.65 m, with some dark markings, with 8 fls. Early.

### **'Cheeky Monkey' I(a/c)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V. (1989), G: Vletter & Den Haan Beheer B.V. (1991), N: Zabo Plant B.V. (2000), I: Vletter & Den Haan Beheer B.V. (1995), REG: Zabo Plant B.V. (2001)

Inside brilliant yellow (20A) on a light yellow (20B) ground, tepal-tips strong orange (25A), throat pale yellow (18D); outside of inner tepals pale yellow (18D), edges light yellow (18A), midribs deep yellowish pink (47C); outside of outer tepals pale yellow (18D) suffused with deep yellowish pink (47C), edges vivid orange-yellow (21A), the base deep yellowish pink (47C); spots absent; papillae negligible; nectaries light yellow (18B); pollen vivid reddish orange (32A); stigma vivid orange (28B). Fls 170 mm wide; tepals 100 × 40-50 mm, margins slightly ruffled, tips recurved. Lvs scattered, 100-130 × 15-25 mm. Stems 1.1-1.25 m, green with darker markings, and with c.7 fls.

### **'Cheerful Charlie' I(a-b/-)**

Parentage: seedling Barber 23 × unknown

R: A.J. Porter, N: A.J. Porter (1970), I: A.J. Porter (1976), REG: A.J. Porter (1975)

Bicolour, throat light yellow (10C) fading to white, tepal-tips and outside deep red (53A); lightly spotted; nectaries deep red (53A); pollen strong orange (168A). Lvs moderate olive-green (146A), long, slender. Stems 1.6 m. July.

(Published in *Lilies and other Liliaceae*, 1975: 91.)

### **'Cheerfulness' I(c/-)**

Parentage: 'John Izzard' × 'Harmony'

R: G.W. Darby (c. 1965), N: G.W. Darby

Fls light orange. Tepals broad. Stems with a few bulbils.

### **'Cheerio' I(a/-)**

Parentage: *L. × scottiae* × unknown

R: G.M. Chandler (c. 1945), N: G.M. Chandler

Fls light orange-yellow, flushed with orange at tepal-tips; lightly spotted.

### **'Cheers' Div. ?**

Parentage unknown

(Published in *Amer. Lily Soc. Newsl.* 4 (3) 1951. No further details)

### **'Cheetah' IX(b/c)**

See *auratum* 'Cheetah'.

### **Chehalem Group VI(-/a)**

Parentage: *henryi* × various Asiatic species

R: C. Yerex (c. 1950), N: C. Yerex

Fls white, cream or yellow, with apricot or pale green throats. Stems 1.5-1.9 m. July.  
(Published in *Kline Cat.*, 1950.)

### **'Cheney Josette' I(b/b-c)**

Parentage: 'Catherine Laburi' × 'Sutherland Flamethrower'

R: D.J. Hay (2001), G: D.J. Hay (2003), N: D.J. Hay (2004), REG: D.J. Hay (2004)

Inside pink with gold overtones; outside pink; spots small, at base of tepals, surrounding nectaries; nectaries white; pollen orange; stigma pink. Fls 126 mm wide; tepals 63 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 68 × 12 mm. Stems 0.45-0.5 m, dark brown, with c.6 fls. Midseason.  
(Nomenclatural standard: colour print supplied by registrant (WSY 0096412).)

### **'Cheops' I(a/b)**

Parentage: seedling G 93-13 × seedling AJ 96-4

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside strong orange (24A), tepal-margins and tips vivid yellow (15A), each tepal with a large vivid orange-pink (28A) spot above throat, throat light yellow-green (145D); outside brilliant yellow (13C), at base strong yellowish green (141C), at tip with a deep yellowish green (141A) spot, midribs a streak of strong orange-yellow (22A); spots absent; papillae vivid orange-pink (28A); nectaries strong yellowish green (141C); pollen greyish red (176A); stigma deep purplish red (59B). Fls 150 mm wide, slightly fragrant; tepals 110 × 35 mm, margins smooth, tips slightly recurved. Lvs 155 × 16 mm. Stems 1.3 m, green, with c.7 fls.

### **'Cherbourg' VII(a/b)**

Parentage: seedling A 4 B × seedling RM 94-8

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den

Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside yellowish white (155D), midveins brilliant yellow (9C), with pale greenish yellow (9D) alongside; outside yellowish white (155D), pale yellow-green (4D) along midribs, and strong greenish yellow (151A) towards top; spots and papillae brilliant yellow (9C); nectaries strong yellow-green (144C); filaments pale green; pollen strong reddish orange (169A); stigma dark purple (79A). Fls 240 mm wide, slightly fragrant; tepals 155 × 57 mm, margins slightly ruffled, tips recurved. Lvs scattered, 220 × 43 mm, dark green. Stems 1.2 m, light green, with 4-7 fls.

**‘Cherie’ I(b/-)**

Parentage: Harlequin Group × ‘Hawaiian Punch’  
R: J. Wadkamper (c. 1976), N: J. Wadkamper (1978), REG: J. Wadkamper (1978)  
Fls dark pink, throat pink; small, peppered spots present; nectaries greenish; pollen red. Tepal-margins slightly ruffled. Lvs scattered, broad. Stems 1 m.  
(Published in *Lilies and other Liliaceae*, 1978/9: 106.)

**‘Cherimac’ I(c/-)**

Parentage unknown  
R: B.G. Hayler (1980), G: B.G. Hayler, N: B.G. Hayler (1985), I: B.G. Hayler (1985), REG: B.G. Hayler (1986)  
Fls strong red (47B) throughout; papillae few, small, red; nectaries green-yellow; pollen brown. Tepals 55 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 150 × 12 mm, mid green. Stems 1.2 m, purple-green, with c.25 fls. Dec. (Australia).  
Syn.: ‘Cherrygee’.  
(Published in *Golden Ray Gardens Cat.*, 1985.)

**‘Cherished’ I(a/-)**

Parentage unknown  
R: Van der Salm (Holland), G: Van der Salm (Holland), N: Van der Salm (Holland), I: Van der Salm (Holland) (1984), REG: G. Van der Salm (1989)  
Inside pink, tepal-tips deep purplish pink (68A), throat cream-gold; outside deep purplish pink (68A); spots in centre of fl. only; nectaries rich rose-pink; pollen brown. Tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 0.8 m, light green, with 7-30 fls. June.

**‘Chernova’ II(-/c)**

Parentage: *L. × dalhansonii* ‘Rosalinda’ × unknown  
R: R. Felsky (pre 1980), G: R. Felsky (1987), N: D. Dale (1993), I: Parkland Perennials (1995), REG: D. Dale (1993)  
Inside creamy white in the basal half, tepal-tips red-purple, throat pink; outside red-purple; spots numerous, medium sized, on white part of tepals; nectaries pink; pollen rusty gold. Fls 80 mm wide; tepals 35 × 20 mm, margins smooth, tips slightly recurved. Lvs whorled, 140 × 34 mm, mid green. Stems 0.8(-1.2) m, light green, mottled black, with 28-32 fls. Early July.

**‘Cherokee’ I(a-b/-)**

Parentage: (*bulbiferum* var. *croceum* × *L. × maculatum* ‘Mahogany’) × *dauidii* var. *willmottiae*  
R: E.F. Palmer (1943), N: E.F. Palmer  
Fls brick-red, dotted maroon. Stems 1.2-1.5 m. July.  
(Published in *Kline Cat.*, 1952.)

**‘Cherry’ IX(b-c/d)**

See *speciosum* ‘Cherry’.

**‘Cherry Blossom’ VII(-/)**

Parentage: ‘Joy’ × (‘Star Gazer’ × *L. × parkmanii* ‘Allegra’)  
R: Lybelmex Hillegom B.V. (1984), G: Lybelmex Hillegom B.V. (1987), N: Lybelmex Hillegom B.V. (1990), I: Lybelmex Hillegom B.V., REG: De Lijster Hillegom B.V./Lybelmex Hillegom B.V. (1990)  
Inside deep purplish pink (72D) with an ivory-white blush, throat strong yellow-green (143C), each tepal flamed brilliant yellow (13C); outside yellowish white (155D) suffused with strong reddish purple (72C), tips of outer tepals suffused with brilliant yellow-green (150C); spots dark red (187C), along the ivory-white blush; nectaries pale yellow-green (196B); pollen strong orange (169B). Fls 225 mm wide; tepals 100 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 105 × 25 mm, mid green. Stems 0.4 m, dark, with c.2 fls. Aug.

**‘Cherry Cloud’ VI(-/a)**

Parentage unknown  
R: E. Hickling, G: E. Hickling, N: C. Helsley (1989), I: Ozark Mountain Lilies, REG: C. Helsley (1989)  
Inside white, throat brilliant yellow (10A); outside moderate purplish red to dark purplish pink (186B/C), midribs moderate purplish red (186A); spots absent; nectaries green; pollen golden brown. Fls 120 mm wide; tepals 130 × 25-50 mm, margins smooth, tips strongly recurved. Lvs scattered, 140 × 10 mm, dark green. Stems 1 m, green brushed with burgundy, upper stem and lvs moderate purplish red (186B), with c.12 fls. Late June.

**‘Cherrygee’ I(c/-)**

Syn. of ‘Cherimac’.

**‘Cherry Giant’ IX(b/c)**

See *auratum* ‘Cherry Giant’.

**‘Cherry Glow’ VI(b/a)**

See *L. × imperiale* ‘Cherry Glow’.

**‘Cherry Jubilee’ I(b/b)**

Parentage: Red Knight Group × unknown  
R: W.S. Summers (1976), N: W.S. Summers (1979), I: Borbeleta Gardens (1980), REG: (1980 or 1981)  
Fls cherry-red, with fine red spots; pollen light brown. Tepal-margins smooth. Lvs dark green. Stems 1.2 m. Early to midseason.

**‘Cherry Marble’ II(c/d)**

Parentage: ‘Towering Delight’ × *martagon* var. *cattaniae*  
R: E.E. Fox (1984), G: E.E. Fox (1990), N: E.E. Fox (1990), I: Fox Lily Ranch (1994), REG: E.E. Fox (1992)

Inside deep maroon red at tepal-tips, giving way to spots haloed in white, the white haloes merging randomly over the middle third of each tepal where spots are most numerous, throat pink; outside of outer tepals white, outside of inner tepals maroon-red, with white midribs; spots maroon-red, ranging from tepal-tips to below the pink and white nectaries; pollen cinnamon, turning to yellow. Fls 50 mm wide; tepals 40 × 15 mm, margins smooth, tips strongly recurved. Lvs whorled, 110 × 55 mm, mid to dark green. Stems 1.35 m, dark green mottled with black, with 18-28 fls. Late June to early July.

#### **‘Cherry Smash’ I(a/-)**

Parentage: ‘Dunkirk’ × ‘Charisma’

R: L.D. Marshall (1977), G: Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988) Inside moderate to strong red (47A/B); outside strong red (47B); spots inconspicuous, self-coloured, on basal third of each tepal; nectaries soft red; pollen greyish red (178A). Tepals 60-90 × 25-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-150 × 15-20 mm, dark green. Stems 1-1.2 m, dark green, with 5-10 fls. Mid June.

#### **‘Cherry Supreme’ VI(-/a)**

See *L. × imperiale* ‘Cherry Supreme’.

#### **‘Cherry Tip’ IX(b/c)**

See *auratum* ‘Cherry Tip’.

#### **‘Cherry Wheels’ VIII(-/l)**

Parentage: red-flowered Asiatic seedling with bowl-shaped fls × (‘Mont Blanc’ × (*longiflorum* × ‘Sterling Star’))  
R: E.E. Fox (1990), G: E.E. Fox (1992), N: E.E. Fox (1994), I: Fox Lily Ranch (1995), REG: E.E. Fox (1995) Inside strong purplish red (60B) with a vivid yellow (17B) ray along centre of each tepal, throat yellow overlaid with cherry; outside strong purplish red (60D), midribs strong orange-yellow (17A); spots maroon-black, on central yellow part of each tepal; nectaries white; pollen vivid reddish orange (41A). Fls 120 mm wide; tepals 60 × 28 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 12 mm, pale green. Stems 1.2 m, green mottled brown, with 32-42 fls (including secondary and tertiary buds). Late July to late Aug.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **‘Cherrywood’ IV(-/l)**

Parentage: *pardalinum* var. *giganteum* × pink-flowered Henry Bolander Group  
R: D.B. Fox (1964), G: D.B. Fox (1968), N: D.B. Fox (1982), I: D.B. Fox (1982), REG: D.B. Fox (1982) Inside strong red (46A) in sun, in shade inner tepals strong reddish orange (42B), outer tepals vivid reddish orange (42A), throat strong orange (24A) (in shade strong orange/strong orange-yellow (23A/B)), green at base; outside paler due to a superficial whitish sheen; spots deep magenta-brown, widely distributed over throat; nectaries green; pollen mid brown; style whitish; stigma brown. Fls c.85 mm wide, tepal-tips partially recurved. Lvs whorled. Stems c.2 m, mid green. Early July.

#### **‘Cherub’ I(a/-)**

Parentage: ‘Harmony’ × ‘Red Carpet’

R: E.A. McRae (1974), G: E.A. McRae (1977), N: E.A. McRae (1981), I: E.A. McRae (1982), REG: E.A. McRae (1983)

Fls soft orange; spots numerous, tiny, brown; nectaries white; pollen brown. Fls 140 mm wide; tepals 110 × 35-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-120 × 20 mm, mid green. Stems 0.35 mm, light green, with 6-30 fls. Mid to late May.

#### **‘Cherubim’ VI(b/b)**

Parentage unknown

R: E. Hickling, G: E. Hickling, N: E. Hickling, I: Ozark Mountain Lilies, REG: C. Helsley (1989)

Inside light greenish yellow (8B) at tepal-tips blending to brilliant yellow (8A), throat vivid yellow (14B); outside light greenish yellow (8B); spots absent; nectaries strong yellow-green (144B); pollen golden brown. Fls 150 mm wide; tepals 130 × 35-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 20 mm, mid green. Stems 2 m, green, lightly brushed dark purple, with c.18 fls (including secondaries on lower pedicels). Late June.

#### **‘Chesapeake Charm’ I(a/b)**

Parentage: ‘Lime Frost’ × ((‘Chinook’ × ‘Connecticut King’) × ‘Cabaret’)

R: V.E. Bowen (1986), G: V.E. Bowen (1988), N: V.E. Bowen (1999), I: E.A. McRae (2000), REG: V.E. Bowen (2000)

Inside pale yellow-green (4D), throat vivid yellow (17B); outside pale yellow-green (4D); each tepal with an oxblood-red brushmark surrounded by a gold flush (the gold flush extending for up to a third of the length of all tepals); a few brown spots around the pale yellow-green (4D) nectaries; pollen light brown. Fls 120 mm wide; tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 20 mm, glossy dark green. Stems 1.15 m, dark green, with 10-12 fls. Mid June.  
(Published in E.A. McRae’s sales list, 1999.)

#### **‘Chesapeake Dawn’ I(a/b)**

Syn. of ‘Chesapeake Dream’.

#### **‘Chesapeake Daybreak’ I(a/-)**

Parentage: (‘Ambrosia’ × (‘Appleblossom’ × ‘Sunrise’)) × ‘Connecticut King’

R: V.E. Bowen (1985), G: V.E. Bowen (1987), N: V.E. Bowen (1997), REG: V.E. Bowen (1997)

Inside brilliant yellow (7B), tepals heavily flushed with vivid orange-yellow (23A) from the nectaries to near tips, throat 23A; outside of inner tepals brilliant yellow (7B), all midribs green, outside of outer tepals green and bronze; slight, dark brown spots around nectaries; nectaries frosted green; pollen golden brown. Fls 160 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 50-60 × 15-20 mm, dark green with a strong sheen. Stems 1 m, mid green, with c.8-10 fls. Early to mid June.

**‘Chesapeake Dream’ I(a/b)**

Parentage: ‘Lime Frost’ × ‘White Prince’

R: V.E. Bowen (1987), G: V.E. Bowen (1989), N: V.E. Bowen (1999), I: E.A. McRae (1999), REG: V.E. Bowen (2000)

Inside pale greenish yellow (2D) shading to light yellow-green (2C) at tepal-edges, flushed with strong orange-yellow (24B) from nectaries to the mid point of each tepal, throat strong orange-yellow (24B); outside pale yellow-green (4D); spots very few, dark brown, near nectaries on inner tepals only; nectaries pale greenish yellow (2D); pollen dark brown. Fls 150 mm wide; tepals 75 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 30 mm. Stems 1.25 m, dark green, with 10-14 fls. Late June.

Syn.: ‘Chesapeake Dawn’.

(Published in E.A. McRae’s sales list, 1999. Published in error as ‘Chesapeake Dawn’ in *Willowood Cat.*, 1999.)**‘Chesapeake Moonstone’ I(a/-)**

Parentage: ‘Lime Frost’ × unnamed seedling

R: V.E. Bowen (1985), G: V.E. Bowen (1987), N: V.E. Bowen (1997), REG: V.E. Bowen (1997)

Inside light greenish yellow (4C), tepal-tips pale yellow-green (4D), throat 4C; outside pale yellow-green (4D), midribs green, outer tepals green/bronze at base and with outside colour showing through to inside; spots absent; nectaries green; pollen mid brown. Fls 140 mm wide; tepals 80 × 40-50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 80 × 40 mm, mid green. Stems 1 m, mid green, with 10-14 fls. Mid June.

**‘Chesapeake Pearl’ I(a/-)**

Parentage: ‘Lime Frost’ × (‘Green Reflections’ × ‘Peachblush’)

R: V.E. Bowen (1986), G: V.E. Bowen (1988), N: V.E. Bowen (1997), REG: V.E. Bowen (1997)

Inside pale yellow-green (4D), throat light greenish yellow (4C); outside of outer tepals green, outside of inner tepals pale yellow-green (4D) and with green midribs; spots very few, tiny, surrounding nectaries on inner tepals only; nectaries frosted green; pollen orange. Fls 160 mm wide; tepals 80 × 30-35 mm, margins smooth, tips not recurved. Lvs scattered, 80-90 × 20-25 mm, mid green. Stems 1.25 m, dark green, with 10-12 fls. Mid June.

**‘Chesapeake Sunset’ I(a/-)**Parentage: (‘Connecticut Dream’ × Windus seedling of *leichtlinii*) × unnamed seedling

R: V.E. Bowen (1987), G: V.E. Bowen (1989), N: V.E. Bowen (1997), REG: V.E. Bowen (1997)

Buds bronze-red. Inside vivid yellow (12A), extensively flushed with strong orange (24A) from the nectaries to half of each tepal, throat vivid yellow (12A); outside bronze-red on midribs, outside of outer tepals completely bronze-red; spots absent; nectaries green; pollen mid brown. Fls 140 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 15-20 mm, dark green. Stems 1.25 m, dark green, with 12-14 fls. Late June.

**‘Cheyenne’ I(b/-)**

Parentage: ‘Red Spire’ × ‘Crimsonia’

R: L.D. Marshall (1975), G: L.D. Marshall (1977), N: L.D. Marshall/Columbia-Platte Lilies (1981), I: Columbia-Platte Lilies (1984), REG: Columbia-Platte Lilies (1984)

Inside deep red (mahogany-red in hot weather), giving overall effect of strong red (46A), tepal-tips strong red (46A), throat vivid reddish orange (34A); outside deep red (60A) overlying vivid reddish orange (34A) to give ‘black-red’ effect; spots few, small, in centre only; nectaries greenish red; pollen dark red (183A). Tepals 60-80 × 20-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120-180 × 20-30 mm, dark green. Stems 0.6-1.2 m, black-red in cool weather, with 5-8 fls. June. (Published in *Rex Lilies Cat.*, 1984.)

**‘Chianti’ I(a/b-c)**

Parentage: seedling RS 512 × seedling RS 84-5

R: Vletter &amp; Den Haan (1983), G: Vletter &amp; Den Haan (1986), N: Vletter &amp; Den Haan (1989), I: Vletter &amp; Den Haan, REG: Vletter &amp; Den Haan (1990)

Inside strong pink (48D), margins of inner tepals light yellowish pink (27A); outside with inner tepals moderate purplish pink (54D), outer tepals pale purplish pink (56C/D), midribs light yellow-green (154D); spots few, deep red (185A), in the throat on inner tepals; pollen orange. Fls 155 mm wide; tepals 75 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 42 × 10 mm, mid green. Stems 0.9-1.1 m, green, with c.9 fls. May.

**‘Chiasso’ VIII(a/b)**

Parentage: seedling J 57 × seedling RS 89-41

R: Gebr. Vletter &amp; Den Haan, G: Gebr. Vletter &amp; Den Haan, N: Gebr. Vletter &amp; Den Haan, I: Gebr. Vletter &amp; Den Haan, REG: Gebr. Vletter &amp; Den Haan (1999)

Inside strong purplish red (63B), tepal-edges and tips strong purplish red (63A); outside strong purplish red (63B) on a paler ground, tepal-edges strong purplish red (63A); spots few, dark red (187A); papillae absent; nectaries strong yellow-green (144B) with a little pale pink (49D); pollen moderate orange (167A); stigma light yellow-green (154D). Fls 210 mm wide; tepals 105 × 45-60 mm, margins slightly ruffled at tips, tips slightly recurved. Lvs scattered, 150 × 40 mm, dark green. Stems 1.3 m, green with darker markings, and with c.3 fls. (*A longiflorum*/Asiatic (LA) hybrid.)

**‘Chicago’ I(a/b-c)**

Parentage unknown

R: Hoffgaarde B.V. (1980), G: Hoffgaarde B.V. (1983), N: Hoffgaarde B.V. (1988), I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1989)

Inside brilliant yellow (12B), throat light greenish yellow (4B); outside light greenish yellow (8B); some fine, dark brown spots; pollen brownish orange (172C); nectaries dark purple (79A); pollen brownish orange (172C). Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1.4-1.5 m, green, with 5-15 fls. July.

**'Chicago Red' I(a/-)**

Parentage unknown

R: R.A. Prochaska, G: R.A. Prochaska, N: Hartle-Gilman Gardens (1993), I: Hartle-Gilman Gardens (1994), REG: Hartle-Gilman Gardens (1994)

Inside moderate reddish orange (35A); outside strong yellowish pink (35C); spots dark maroon, of variable size; nectaries moderate reddish orange (35A); pollen red-orange. Tepals 85 × 39 mm, margins smooth, tips slightly recurved. Lvs scattered, 114 × 16 mm, moderate olive-green (137A). Stems 1.2 m, moderate olive-green (137B), with c.10 fls. Midseason.

(Published in Hartle-Gilman Gardens list, 1994.)

**'Chicora' I(c/c-d)**

Parentage: *lankongense* × 'Peachblush'

R: J.F. McRae (1974), G: J.F. McRae (1976), N:

Columbia-Platte Lilies (1981), I: Columbia-Platte Lilies (1981), REG: Columbia-Platte Lilies (1984)

Inside light purplish pink (62C), throat strong purplish pink (62A); outside strong purplish red (60D), tepal-margins white; a few spots in centre, with small rays of spots on extension of nectary-furrows; nectaries green; filaments with a tendency to be tepaloid; pollen dark red (187A). Tepals 50-60 × 15-20 mm, margins smooth, tips strongly recurved. Lvs scattered, 100-120 × 20 mm, mid green. Stems 1-1.5 m, green overlaid with light purple, with 6-20 or more fls. June.

(Published in *Rex Lilies Cat.*, 1982.)

**'Chief Chinook' I(a/b)**

See *L. × hollandicum* 'Chief Chinook'.

**'Chief Red Cloud' VII(b-c/b)**

See *L. × parkmanii* 'Chief Red Cloud'.

**'Chief Solano' I(c/-)**

Parentage: (*lancifolium* × *L. × hollandicum*) × Mid-century Group

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls orange-red. Stems 1-1.2 m. July.

(Published in *ILR* (1969).)

**'Chiefswood' I(a,b/-)**

Parentage: unnamed hybrid × 'Ginger'

R: T.R. Martin, N: T.R. Martin, I: T.R. Martin (1973)

Fls orange-red, more-or-less unspotted. Tepals rounded. Stems 1.2-1.5 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 5 (1978).)

**'Chieftain' I(a/b-c)**

Parentage unknown

R: L. Woodriff (1975), G: L. Woodriff (1977), N:

Bowman Creek Farm (1981), REG: Bowman Creek Farm (1981)

Tepals red, with faint orange flare; basal two-thirds heavily spotted black; nectaries dark red; pollen rust-coloured. Fls 170 mm wide; tepals 85 × 33 mm, margins smooth, tips slightly recurved. Lvs scattered, 135 × 15

mm, dark green. Stems 0.75 m, green, shaded brown, with c.15 fls (including secondary and tertiary buds).

Late June.

**'Chigusa' I(a/b)**

See *L. × maculatum* 'Chigusa'.

**'Chilcoot' I(b/-)**

Parentage: 'Snowbird' × unknown

R: J.C. Ericksen (1978), G: J.C. Ericksen (c. 1982), N:

J.C. Ericksen, REG: J.C. Ericksen (1992)

Inside white, marked yellow on each tepal; outside white; nectaries white; pollen light yellow. Fls 100 mm or more wide; tepals 80 × 65 mm, margins smooth, tips slightly recurved. Lvs scattered, c.125 × 20 mm, mid green. Stems c.1 m, green, with 8-12 fls. Mid to late July.

**'Chili' VII(a/b)**

Parentage: seedling 88-111 × seedling RM 95-34

R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter

& Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside moderate purplish pink to strong purplish red (63B/64C), midveins deep red (53A), throat yellowish white (155D); outside moderate purplish pink (66D); spots deep red (53A); papillae present; nectaries strong yellow-green (144A); pollen greyish brown (166A); stigma very pale purple (85D). Fls 250 mm wide; tepals 145 × 55 mm, margins slightly ruffled, tips recurved. Lvs scattered, 200 × 55 mm. Stems 0.97 m, light green with darker markings, with c.3 fls.

**'Chiloquin' VI(b/b-c)**

Parentage unknown

R: C. Yerex (pre 1980), N: C. Yerex, REG: E.A. McRae (1982)

Inside soft yellow, each tepal with a golden yellow ray, and pure white tip; outside light green; spots absent. Tepal-margins smooth, tips slightly recurved. Stems 1.5 m, green. Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 47 (1978). Included in *ILR* (1982) as Div. VI(d).)

**'Chiloquin Yellow' VI(-/c)**

Parentage: Aurelian Group

R: L. Woodriff?, N: L. Woodriff?

Fls white, with orange nectary-star in centre.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 47 (1978).)

**'Chiméra' I(a/b)**

Parentage: Yellow Blaze Group × 'Connecticut King'

R: V. Baloun (1987), N: V. Baloun, REG: V. Baloun

(1989)

Inside pale yellow, centre yellow tinted with brownish, throat whitish; spots large, moderately numerous, dark brown-purple, on half of each tepal; sparse papillae present in the throat; nectaries green, white-frosted; pollen ochre-yellow. Fls 130 mm wide; tepals 80 × 32 mm, slightly recurved; pedicels 50 mm long, thick,

slightly dark-dotted. Lvs scattered, 80 × 18 mm, glossy pale green. Stems 0.9 m, densely spotted dark brown at base. Early July.

#### **‘Chimes’ I(c/d)**

Parentage: ‘Brenda Watts’ × ‘Coronation’  
R: P.M. Byam (c. 1958), N: P.M. Byam  
Fls vivid yellow (13A), with high gloss. Stems and bracts almost black.

#### **‘China’ I(a/b)**

Parentage: (pink-flowered seedling × ‘Connecticut King’) × (cream-flowered seedling × ‘Connecticut King’)  
R: Columbia-Platte Lilies (1980), G: Columbia-Platte Lilies (1982), N: J.A. Mak (1988), I: Mak-Leek Inc. (1994), REG: Mak-Leek Inc. (1997)  
Inside with light purplish pink (65B) tepal-tips, centre of each tepal suffused with ivory-white, basal two-thirds of each tepal with a deep to strong purplish red (71A/B) hairline margin, throat pale purplish pink (65C/D); outside pale purplish pink (65D) shading into cream at base, midribs slightly deeper pink; spots small, deep to strong purplish red (71A/B), on basal third of each tepal; nectaries soft green overlaid with light plum; pollen absent. Fls up to 125 mm wide, double, with 9-12 overlapping tepals, the innermost 3 sometimes reverting to form soft pink filaments without anthers; tepals 70 × 25-35 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 0.75 m, green, with 8-15 fls. Late.  
(Published in *Parkland Perennials Cat.*, 1996. Fl. colour and stem height are slightly affected by temperature and light levels.)

#### **‘China Doll’ I(a/-)**

Parentage: *L. × scottiae* ‘Schuetzenlis’ × ‘Red Carpet’  
R: J. Wadepammer (1979), G: J. Wadepammer (1981), N: J. Wadepammer (1992), I: Borbeleta Gardens (1992), REG: J. Wadepammer (1993)  
Fls vivid reddish orange (43A), throat green; spots few, scattered, black; nectaries red; pollen brown. Tepals 80 × 22 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 20 mm, mid green. Stems 0.8 m, green, with 10-12 fls. Very late.  
(Published in *Borbeleta Gardens Cat.*, 1992.)

#### **‘Chinatown’ VIII(b/c)**

Parentage: ‘Swing’ × ‘Enchantment’  
R: J. Vanheusden (1996), G: J. Vanheusden (1998), N: J. Vanheusden, REG: J. Vanheusden (1998)  
Inside very light yellow, the centre of each tepal blushed orange, throat light green; outside greenish yellow; spots dark red, on about half of each tepal; nectaries light yellow; pollen dark orange; stigma dark red. Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 20 mm, dark green. Stems 0.6 m, dark green, with c.5-6 fls. Late June to early July.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **‘Chinchilla’ VII(-/c)**

Parentage: selection from Atomic Group

S: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1979)  
Fls pure white; nectaries greenish. Fls *auratum*-type, 200 mm wide. Stems up to 2 m. Jan. (Australia).

#### **‘Chineseflare’ VI(-/a)**

Parentage: selection from Yellow Trumpet Group  
N: D. Foxwell  
Fls light yellow (20B), outside with some brown and green tinting. Tepals broad.

#### **‘Chinook’ I(a/b-c)**

Parentage: ((‘Lemon Queen’ (Div. I) × ‘Mega’) × ‘Edith Cecilia’) × ‘Enchantment’  
R: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1972), REG: Oregon Bulb Farms, Inc. (1972)  
Fls pale apricot-buff; fine dark spots on basal third of each tepal. Fls up to 120 mm wide. Stems 1.1-1.2 m, with up to 20 fls.  
(The previous lily registered under this epithet by de Graaff (see *ILR* (1969) p. 35), was never introduced and the stock was destroyed. The clone described here was published in *Lilies and other Liliaceae*, 1973/1974: 113.)

#### **Chinook Group VII(-/b)**

See × *parkmanii* Chinook Group.

#### **‘Chios’ Div. ?**

Given as a parent of ‘Bambino’, ‘Butterberg’, ‘Norgart’s Darling’ and ‘Raschoetz’. No further details.

#### **Chippendale Group I(b-c/c-d)**

Parentage: Southern Belles Group × ‘Alpenglow’ and other pink-flowered Asiatics  
R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)  
Inside deep to strong purplish pink (67C/D), tepal-tips deep purplish pink (67C), throat strong purplish pink (67D) or sometimes shading to white; outside strong purplish pink (67D); spots varying from absent to many, small, deep magenta, combined with *lankongense*-type marbling; nectaries green, with white and pink margins; pollen dark red (183A) to greyish reddish brown (200B), most clones pollen-sterile. Fls scented; tepals 80-100 × 25-30 mm, margins smooth, tips strongly recurved. Lvs scattered, 100-150 × 15-25 mm, dark green. Stems 1.25-1.75 m, dark green, with 8-20 fls. Late June.  
(Clones checked are all triploids: 2n = 36.)

#### **‘Chippewa Star’ I(b/b)**

Parentage: seedling from Moose Range Group  
R: V. Weiser, N: V. Weiser (1979), I: Borbeleta Gardens (1981), REG: Borbeleta Gardens (1981)  
Inside dark red, tepal-tips red, throat orange; outside deep brown-red; spots dark; nectaries orange; pollen reddish orange. Tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 15 mm, mid green. Stems 1.5 m, dark green to blackish, with c.24 fls. June to July.  
(Published in *Borbeleta Gardens Cat.*, 1981.)

**'Chiquita' I(a/-)**

Parentage: 'Earl of Rochester' × yellow-flowered Tiger Group seedling

R: J. Wadkamper, N: J. Wadkamper (1975), I: J. Wadkamper (1976), REG: J. Wadkamper (1976)

Inside canary-yellow, throat light yellow-green, tepal-tips clear yellow; outside darker yellow; spots large, oval, brown; nectaries yellow-green; pollen brown. Stems 1 m, with over 20 fls. July.

(Published in *North Star Lily Society Newsl.*, Sept. 1975.)

**'Chiron' I(b/b)**

Parentage unknown

R: unknown, G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1995), I: Hartle-Gilman Gardens (1995), REG: Hartle-Gilman Gardens (1995)

Inside vivid yellow (9A); outside shades of brilliant yellow (7A) to light greenish yellow (7D); c.12 spots on basal quarter of each tepal; nectaries dark green; pollen rust-coloured. Fls 150 mm wide; tepals 80 × 21 mm, very glossy, margins smooth, tips slightly recurved. Lvs scattered, 170 × 20 mm, darker than moderate olive-green (147A). Stems 1.44 m, moderate olive-green (146A), with c.30 fls (including secondaries whose pedicels diverge at c.45 degrees). Mid July.

**'Chitana' I(-/b)**

Parentage unknown

R: S.A. Eicher-Lorka (pre 1981), N: S.A. Eicher-Lorka  
Fls reddish bronze.

**'Chivalry' I(a/b)**

Parentage: derived from hybrids of yellow-flowered, brushmarked seedlings

R: Cebeco Lilies, Inc. (pre 1998), N: Cebeco Lilies, Inc., REG: ICRA (1998)

Inside strong pink, with a creamy halo near the centre. Tepals slightly recurved. Stems 0.8 m. Midseason.

**'Chiyono Haru' VII(-/d)**

Parentage: *speciosum* var. *rubrum* × Oriental hybrid raised by Sakata

R: Sakata Co. (1974), I: Sakata Co. (1981)

Fls purplish red, tepal-margins white. Fls 200 mm wide, sweetly scented. Stems 1.8 m. Late.

(Published in *Sakata Cat.*, 1981.)

**'Chiyo-no-hikari' I(a/-)**

Parentage: selection from hybrids involving *L. × maculatum*, *lancifolium* var. *flaviflorum*, 'Enchantment' & 'Destiny'

R: S. Fujishima (1968), N: S. Fujishima

Fls yellow.

**'Chloe' I(a/-)**

Parentage: up-facing yellow-flowered Asiatic × 'Connecticut King'

R: R.F. Nelson (1980), G: R.F. Nelson (1984), N: R.F. Nelson (1985), I: R.F. Nelson (1985), REG: R.F. Nelson (1986)

Inside yellow, with strong orange tones towards base

of tepals, throat brilliant yellow-green (154B); outside strong greenish yellow (151A); spots absent; nectaries brilliant yellow-green (154B); pollen strong orange-yellow (163B). Fls 160 mm wide; tepals 85 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 15 mm, dark green. Stems 0.8 m, dark green, with 8-10 fls. Dec. (Australia).

**var. *chloraster* IX(b-c/a)**

See *leucanthum* var. *chloraster*.

**'Chocolate Canary' I(c/-)**

Parentage unknown

R: Hartle-Gilman Gardens (1982), G: Hartle-Gilman Gardens (1984), N: Hartle-Gilman Gardens (1991), I: Hartle-Gilman Gardens (1992), REG: Hartle-Gilman Gardens (1992)

Inside vivid yellow (12A), throat blushed moderate reddish orange (175D); outside moderate reddish brown (175A); spots very few, very small, in centre of throat area of each tepal; nectaries greenish; pollen dark brown. Tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 1.06 m, mid green, with 16-21 fls (including secondaries). Midseason to late.

(Published in *Hartle-Gilman Gardens Cat.*, 1992.)

**'Chocolate Chips' IX(c/a)**

See *canadense* var. *editorum* 'Chocolate Chips'.

**'Chocolate Marine' I(b/-)**

Parentage: 'Maureen' (of Summers) × mixed pollen  
R: W.S. Summers, G: F. Buell (1983), N: F. Buell (1990), REG: F. Buell (1992)

Inside light orange-yellow (24C); outside pale orange-yellow (23D); spots small, purple, on half of each tepal; raised papillae also present; pollen dark brown. Fls 175 mm wide; tepals 100 × 40 mm, margins smooth. Lvs scattered, 90 × 22 mm, dark green. Stems 1.5 m, moderate brown (200C), with many bulbils.

**'Chocolate Soldier' I(b/-)**

Parentage: 'Maureen' (of Summers) × mixed pollen  
R: W.S. Summers, G: F. Buell (1983), N: F. Buell (1990), REG: F. Buell (1992)

Inside vivid reddish orange (30B); outside moderate orange (171D); spots large, black; papillae present; pollen dark brown. Fls 140 mm wide; tepals 120 × 40 mm, margins smooth. Lvs scattered, c.35 mm wide, dark green. Stems 1.9 m, greyish reddish brown (200B). July.

**'Chohniy Drozd' I(a/b)**

Parentage: 'Metro' × 'Baiaderka'

R: A.V. Otroshko (1991), N: A.V. Otroshko, REG: A.V. Otroshko (1994)

Inside blackish red, throat darker, tepal-tips paler; spots small, inconspicuous; pollen brown. Fls 150 mm wide. Stems 1.6 m, black, with a long infl. (with secondary buds). Mid July.

**‘Chokaschin’ I(a/-)**

Parentage: ‘Roter Cardinal’ × ‘Tetra Mountaineer’  
 R: V. Strasser (1974), G: V. Strasser (1976), N: V. Strasser (1978), I: V. Strasser (1980), REG: V. Strasser (1986)  
 Fls red throughout, apart from orange-red throat. Fls 150 mm wide. Lvs scattered, 150 × 18 mm, dark green. Stems 0.9 m, dark green, with c.10 fls. July. Triploid.  
 Syn.: ‘Rokardmount Number 1’.

**‘Chopin’ I(a/b-c)**

Parentage: seedling RS 87-44 × seedling RS 89-14  
 R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1996), I: Vletter & Den Haan (1996), REG: Vletter & Den Haan (1996)  
 Inside strong pink/moderate purplish pink (54C/D) on an ivory-white ground, with a little pale yellow (8D) above nectaries; outside a little stronger coloured than inside; spots dark red (187B), in the throat; papillae absent; nectaries strong yellow-green (144B); pollen strong brown (172A); stigma dark red (187B). Fls 190 mm wide; tepals 115 × 35-50 mm, margins smooth or very slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 1-1.3 m, pale green with a little darker marking, and with 5-9 fls.

**‘Chotoku’ VII(-/c)**

Parentage unknown  
 R: M.A. van den Berg, N: M.A. van den Berg, REG: M.A. van den Berg (1988)  
 Tepals flamed strong purplish red (58B) on a light purplish pink (73C) ground and with a narrow white border, tips white, throat rosy white; outside of outer tepals strong purplish pink (73B), of inner tepals paler; red spots in the centre; pollen orange. Fls 160 mm wide; tepals 80 × 35 mm, strongly recurved. Lvs scattered, 130 × 35 mm. Stems 0.65 m, pale green with some darker markings, and with c.6 fls.

**‘Chrisie’ I(a/-)**

Parentage: ‘Duet’ × ‘Unique’  
 R: G.R. Meyer (1993), G: G.R. Meyer (1995), N: G.R. Meyer (1996), REG: G.R. Meyer (1996)  
 Inside strong yellowish pink (34D), the middle of each tepal strong orange (25B), throat strong reddish orange (34C); outside strong yellowish pink (34D); spots absent; nectaries grey-white; pollen red (179); stigma brown. Fls 120 mm wide; tepals 70 × 30-35 mm. Lvs scattered, 100 × 15 mm, dark green. Stems 1.05 m, dark green, with c.12 fls. Early to mid July.  
 (It is not known whether the seed parent is ‘Duet’ of Bischoff Tulleken or of Columbia-Platte.)

**‘Christabel’ VII(-/c)**

See *L. × parkmanii* ‘Christabel’.

**‘Christine Olive’ VI(-/a)**

Parentage: selection from Havemeyer hybrid involving *L. × sulianense* ‘Sulphur Queen’ & *leucanthum* var. *centifolium*  
 R: H.E. Barry (c. 1958), N: H.E. Barry

Fls deep gold. Lvs dark green. Stems 1.1 m. Mid Jan. (New Zealand).  
 (The above description was provided by the registrant, and replaces that published in *ILR* (1982))

**‘Christmas Day’ VI(c/-)**

Parentage: unnamed Aurelian seedling × unnamed Aurelian seedling  
 R: K. Mills, N: K. Mills (1969)  
 Fls cream, shading to flaming orange and emerald green in centre. Lvs dark green. Stems 1.2-1.9 m.

**‘Christmas Joy’ I(a/c)**

Parentage unknown  
 R: J.F. Freeman, N: Marks & Spencer plc (2000), I: Winchester Growers Ltd (2000), REG: Winchester Growers Ltd (2000)  
 Fls white throughout; spots absent; pollen absent; stigma reddish brown. Fls 90 mm wide; tepals 45 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 30 mm. Stems 0.4 m (under glass), green. May to June.

**‘Christmas Red’ I(a/b)**

See *L. × hollandicum* ‘Christmas Red’.

**‘Christmas Star’ I(a/-)**

Parentage: *davidii* × yellow-flowered *concolor*  
 R: L.B. Tuffery, N: L.B. Tuffery  
 Fls yellow with very few spots. Flowering at Christmas (New Zealand).

**‘Chromess’ VI(-/a)**

Parentage: (*leucanthum* var. *centifolium* × unknown) × *L. × aurelianense*  
 R: A.D. Harrison (c. 1966), N: A.D. Harrison  
 Fls light chrome-green throughout, with clear green midribs. Fls large; tepal-tips reflexed.

**‘Chromscepter’ Div. ?**

Given as a parent of ‘Barock’. No further details.

**‘Chubby’ IX(c/b)**

See *auratum* ‘Chubby’.

**‘Cidlina’ I(c/-)**

Parentage: *davidii* var. *wilmottiae* × unknown  
 R: V. Jošt, N: V. Jošt (1971), I: V. Jošt (1978), REG: V. Jošt (between 1978 and 1981)  
 Fls vivid reddish orange (32A); spots numerous, small, crimson. Stems 0.4-0.6 m.

**‘Cielavina’ I(a/-)**

Misspelling of ‘Cielaviņa’.

**‘Cielaviņa’ I(a/-)**

Parentage unknown  
 R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)  
 Fls light salmon-orange; lilac spots in centre of fl.; nectaries white; pollen orange. Fls 150 mm wide. Lvs scattered, dark green. Stems 0.7 m, green.

(Included in *ILR Sixth Supplement* as 'Cielavina' which is a misspelling.)

***ciliatum* P.H. Davis IX(c/d)**

Fls cream or pale yellow, finely spotted with purplish brown towards base; pollen orange-red. Fls rather unpleasantly scented; tepals 40-55 mm long, tips hairy. Lvs scattered, up to 125 × 12 mm, margin long-ciliate. Stems 0.6-1.6 m, often with cobwebby hairs in upper part, and with up to 20 fls. NE Turkey.

**'Cilla' VII(-/b)**

See *L. × parkmanii* 'Cilla'.

**'Cinderella' I(a/-)**

Parentage: selection from Zelta Vainags Group  
No further details.

**'Cinderella' IX(b-c/d)**

See *speciosum* 'Cinderella'.

**'Cinnabar' IX(b/c)**

See *auratum* 'Cinnabar'.

**'Cinnabar' VIII(a-b/b)**

Syn. of 'Mount Hood'.

**'Cinnabar' I(a/-)**

Parentage: selection from Mid-century Group  
S: J. de Graaff (1941), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1950)  
Fls maroon. Stems 1-1.2 m. June to July.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for other lilies. Published in *Oregon Bulb Farms Cat.*, 1950.)

**'Cinnamine' VI(-/a)**

Parentage: selection from Aurelian Group  
S: C. Yerex (c. 1954), N: C. Yerex  
Fls brilliant orange-yellow (23B), blending outwards to vivid yellow (15B) at tepal-margins and tips. Fls cinnamon-scented. Stems 1.2-1.5 m. July.

**'Cinnamon Bear' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
R: E.E. Fox (1989), G: E.E. Fox (1992), N: E.E. Fox (1994), I: Fox Lily Ranch (1994), REG: E.E. Fox (1994)  
Inside and outside light orange (28D), with dark red (darker than 59A) circular brushmarks, otherwise unmarked; nectaries light orange (28D); pollen vivid orange (28B). Fls 180 mm wide; tepals 95 × 52 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 12 mm, mid green. Stems 0.82 m, green, lightly mottled black, with 6-10 fls. Mid July.

**'Cinnamon Toast' I(a/b)**

Parentage unknown  
R: A.J. Porter (1979), G: A.J. Porter (1981), N: Honeywood Lilies (1984), I: Honeywood Lilies (1984)  
Inside pale yellow (158B), the outer tepal-edges brilliant yellow (11B), tips pale yellow (158B), throat pale

yellow (11C); outside yellowish white (158C), the outer tepal-edges light to pale yellow (11B/C); light spotting of dark red (183A) evenly on basal two-thirds of each tepal; nectaries light yellow (11B). Fls 120 mm wide; tepals 75 × 40 mm, margins smooth, tips recurved. Lvs 100 × 15 mm, mid green. Stems 0.9 m, mid green, with 10-15 fls. July.

(Published in *Honeywood Lilies Cat.*, 1984/85.)

**'Circus' I(-/-)**

Parentage: selection from Egmont Group  
S: R.E. Harrison (pre 1970), N: R.E. Harrison  
Fls orange with broad tepals. Stems 0.6-1 m, with 15-20 fls.

**'Circus World' VI(b/b)**

Parentage unknown  
R: W.T. Craig, G: W.T. Craig, N: C. Helsley (1998), I: C. Helsley, REG: C. Helsley (2003)  
Inside white, throat vivid yellow (14A) extending through basal two-thirds of each tepal; outside white with broad strong yellow-green (145A) bands along midribs; papillae very few on basal third of tepals; nectaries strong yellow-green (144B); pollen strong orange (24A); stigma green. Fls 160 mm wide; tepals 120 × 28-40 mm, margins slightly ruffled, tips slightly recurved; lower pedicels with secondary buds. Lvs scattered, 170 × 20 mm. Stems 1 m, mid green lightly blotched with darker green, with c.8 fls. Early July.

**'Citadela' VI(b-c/a)**

Parentage: (Copper King Group × unknown) × ('Danaj' × ('Oneida' × orange-flowered trumpet lily))  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside bright yellow; outside with dark mahogany midribs; spots absent; nectaries green; pollen ochre; stigma greyish. Fls 115 mm wide, 70 mm long; tepals 110 × 40 mm, margins smooth, tips somewhat recurved; pedicels 60 mm long, brown-spotted. Lvs 115 × 10 mm, dull dark green. Stems 1.25 m, thick, much spotted with dark brown. Early July.

**var. *citrinum* IX(c/d)**

See *henryi* var. *citrinum*.

**'Citrinum' I(a/b)**

See *L. × maculatum* 'Citrinum'.

**'Citrolirion' VI(b/b)**

Syn. of 'Green Goddess'.

**'Citron' I(-/-)**

Parentage: *L. × maculatum* 'Yellow Tulip' × 'Lord Melbourne'  
R: G. Errey (probably pre 1950), N: G. Errey  
No further details.

**'Citron' I(a/b)**

See *L. × hollandicum* 'Citron'.

**‘Citron’ I(c/-)**

Parentage unknown

R: J. Marks (pre 1970), N: J. Marks

Fls lemon-yellow, spotted.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for other lilies.)

**‘Citron’ VI(-/d)**

Parentage unknown

R: V.P. Orehovs (pre 1979), N: V.P. Orehovs

No further details.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for other lilies.)

**‘Citronella’ IX(b/c)**See *auratum* ‘Citronella’.**‘Citronella’ Div. ?**

Given as a parent of several Div. I lilies raised by D.B. Fox, A.D. Harrison, L. Lutz, C. North, De Jong Lelies B.V. and Gebr. N. & B. Laan. It is unlikely to be *auratum* ‘Citronella’, and more likely to be an error for the Div. I Citronella Group.

**Citronella Group I(c/d)**

Parentage: selections from Fiesta Group

S: J. de Graaff, N: J. de Graaff

Fls golden and lemon-yellow, with small, black spots; pollen orange. Stems 1.2 m, with up to 30 fls. July. (Published in *Oregon Bulb Farms Cat.*, 1958. Included in *ILR* (1960) as Citronella grex. It is probable that all ‘Citronella’ given in the parentage of other lilies refer to plants from this Group.)

**‘Citronelle’ VI(c/d)**Parentage: (Aurelian Group × *henryi* var. *citrinum*) × *henryi* var. *citrinum*

R: E.C. Genat (c. 1954), N: E.C. Genat

Fls citron-yellow, with dark markings. Stems 1.9 m, with up to 40 fls. Late Jan. (Australia).

(Published in *LYB* 20: 78 (1957).)**‘Citroni Karaliene’ I(a/-)**

Misspelling of ‘Citronu Karaliene’.

**‘Citroniņš’ I(a/-)**

Parentage: ‘Connecticut Bronze’ × unknown

R: T. Gertsons, G: T. Gertsons, N: T. Gertsons (1983), I: T. Gertsons, REG: T. Gertsons (1987)

Inside lemon-yellow, throat green; outside dark yellow; pollen light orange. Tepals 85 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.4 m, green, with c.14 fls. Mid July.

**‘Citronkoks’ I(a/b)**

Parentage unknown

R: J. Vasarietis (1991), G: J. Vasarietis (1994), N: J. Vasarietis (2001), I: J. Vasarietis (1997), REG: J. Vasarietis (2002)

Inside brilliant yellow (7A); outside each tepal with a 10 mm-wide edge of brilliant yellow (7A), shading into

brilliant yellow (8A) along midribs; spots absent; nectaries light yellow; pollen brown; stigma greyish. Fls 160 mm wide; tepals 85 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 14 mm. Stems 1.2 m, green, with c.10 fls. Mid July. (Published in *Lilium Balticum Lily Register*, 2000. Nomenclatural standard: colour print provided by registrant (WSY 0032315).)

**‘Citronu Henrijs’ IX(-/d)**See *henryi* ‘Citronu Henrijs’.**‘Citronu Karaliene’ I(a/-)**

Parentage: selection from Zelta Vainags Group

S: V.P. Orehovs (pre 1953), N: V.P. Orehovs

Fls orange-yellow.

Syn.: ‘Queen Citrona’.

(Misspelling: ‘Tsitronu Karaline’. Published in *LYB* 33: 80 (1970) and included in *ILR* (1982) as ‘Citroni Karaliene’, which is also a misspelling.)

**‘Citrus Pride’ I(c/-)**

Parentage: (‘Sovereign’ × unknown) × (‘Sovereign’ × unknown)

R: E. Robinson (c. 1955), N: E. Robinson

Fls bright lemon-yellow, heavily spotted brown. Tepals slightly reflexed. Stems 0.8 m. July.

**‘City Lights’ II(b-c/d)**Parentage: *L. × dalhansonii* Terrace City Group × *tsingtauense*

R: H.D. Cogan, N: H.D. Cogan (1980), REG: H.D. Cogan (1980)

Inside light orange-yellow (23C), tepal-tips strong orange-yellow (22A); outside pale greenish yellow (9D), midribs green; spots strong orange (169B); pollen strong pink (48C). Fls 85 mm wide. Lvs scattered above, whorled below. Stems 0.75-0.8 m, slender. June.

**‘City of Haarlem’ I(-/-)**Parentage: *davidii* var. *wilmottiae* × *L. × hollandicum*

R: A.J. van der Zwet &amp; Sons (1958), N: A.J. van der Zwet &amp; Sons

AMH 1958

Fls brilliant garnet-brown.

**‘Civil Warrior’ I(a/b-c)**

Parentage: rose-pink/red-flowered, male sterile, out-facing Asiatic (ex Hoepner) × yellow-flowered, up-facing brushmarked Asiatic

R: R. Mitchell II (1987), G: R. Mitchell II (1989), N: R. Mitchell II (1991), I: R. Mitchell II (1997), REG: R. Mitchell II (1998)

Inside and outside yellowish orange; each tepal with a dark red brushmark, bordered by lines and spots; nectaries dark red; anthers developing but without pollen; stigma orange. Fls 200 mm wide; tepals 105 × 35 mm, margins slightly and narrowly ruffled, tips slightly recurved. Lvs scattered, 102 × 12 mm, mid green. Stems 1.25 m, brownish green, with up to 30 fls (including secondary buds). Midseason.

**‘Clackamas’ VII(c/c)**

Parentage: ‘Harbor Star’ × white-flowered hybrid  
R: J. Bodalski (1984), G: J. Bodalski (1987), N: J. Bodalski (1994), I: J. Bodalski (1994), REG: J. Bodalski (1994)

Inside white, throat strong yellow-green (144C); outside white, midribs on basal two-thirds of each tepal brilliant yellow (14C); moderately spotted dark red (59A) on basal two-thirds of each tepal; pollen strong reddish orange (169A). Tepals 110 × 45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 25 mm, mid green. Stems 1.3 m, green, with c.13 fls. Aug.

**‘Clair de Lune’ VI(-/c)**

Parentage: unknown × seedling 47-38

R: C. Yerex (c. 1967), N: C. Yerex

Tepals brilliant yellow (12B), blending to white at tips, strongly reflexed with curled edges.

**‘Claire’ I(a/-)**

Parentage: red-flowered seedling (ex IVT) × unnamed seedling

R: P.N.A. van den Berg (1990), G: M.A. van den Berg (1993), N: M.A. van den Berg (1998), REG: M.A. van den Berg & Zn & J.A. van der Salm de Goede (2001)  
Inside strong red (46A), paler towards tepal-tips, dark red at base; outside vivid reddish orange (34A); spots and papillae present; nectaries orange-red; pollen reddish brown; stigma dark purple. Fls 180 mm wide; tepals 90 × 36 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 18 mm. Stems 0.85 m, green with dark stripes and spots, and with 7-9 fls (from 16-18 cm bulb). Very early to early.

**‘Claire of Calanthe’ VII(-/-)**

Parentage: *speciosum* ‘Radiance’ × unknown  
R: G.M. Chandler (c. 1949), G: G.M. Chandler (1952), REG: G.M. Chandler (1960)

Inside pale pink; lightly spotted with deep pink around white nectaries. Fls 115-125 mm wide. Stems 1.2 m.  
Syn.: *speciosum* ‘Claire of Calanthe’.  
(Classified in Div. IX in *ILR* (1982).)

**‘Clara Bow’ I(a/d)**

Parentage: ‘Redstart’ × ‘Enchantment’  
R: I.D. Parsons, N: I.D. Parsons (1969), REG: I.D. Parsons (1971)

Inside dark red, throat orange; outside buff. Stems short. (Published in *Lilies and other Liliaceae*, 1973: 112.)

**‘Clara C. Bangs’ VI(-/-)**

Parentage unknown  
R: S.M. Bucknell, N: S.M. Bucknell (1973), I: S.M. Bucknell (1976), REG: S.M. Bucknell (1977)  
Inside light yellow (10B), throat deep yellow, tepal-tips clear yellow; outside apricot; spots absent; nectaries green; pollen vivid orange-yellow (23A). Tepal-margins ruffled. Lvs blue-green. Stems 1.5 m.  
(Published in *Lilies and other Liliaceae*, 1977: 76.)

**‘Claren’ I(b-c/c-d)**

Parentage: ‘Pink Tiger’ (Woodriff) × mixed pollen of various *cernuum* hybrids

R: R. Pappo (1967), G: R. Pappo (1970), N: R. Pappo (1995), I: R. Pappo (1995), REG: R. Pappo (1995)

Inside salmon-pink, throat salmon-orange; outside purple-pink in bud, opening with a purple-pink to salmon pink stripe on each tepal; spots slightly elongated, purple-pink, on basal three-quarters of each tepal; nectaries light green; pollen brown. Fls 100 mm wide; tepals 90 × 20 mm, margins smooth, tips recurved; pedicels long. Lvs scattered, 100-150 × 12 mm, dark green. Stems 1-1.5 m, dark green with purple spots, slightly hairy, with 6-8 fls and often some bulbils. June to July.

**‘Clarion’ VI(c/a)**

Parentage unknown

R: L. Woodriff (1965), G: L. Woodriff (1967), N: Bowman Creek Farm (1981), REG: Bowman Creek Farm (1981)

Fls yellow; spots absent; nectaries green; pollen orange. Fls 130 mm wide; tepals 120 × 40 mm, margins smooth, tips slightly reflexed. Lvs scattered, 120 × 10 mm, dark green. Stems 0.9 m, green, with c.20 fls. Late July.

**‘Clarissia’ VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
R: De Jong Lelies Holland B.V. (1989), G: De Jong Lelies Holland B.V. (1991), N: De Jong Lelies Holland B.V. (1997), I: De Jong Lelies Holland B.V. (1999), REG: De Jong Lelies Holland B.V. (2000)

Inside deep/strong purplish pink (68A/B), midveins on outer tepals strong red (53B), throat greenish white (155C); outside of inner tepals moderate purplish pink (65A) on a white ground, midribs strong purplish red (63B), outside of outer tepals strong purplish red (60C), with a strong yellow-green (144B) suffusion on the midribs and tipped strong yellow-green (144B); spots dark red (59A); papillae dark red (59A) tipped greenish white (155C); nectaries strong yellow-green (144B), ageing to near light yellow-green (154D); pollen strong brown (172A); stigma very pale purple (76D) suffused with deep reddish purple (77A). Fls 200 mm wide; tepals 175 × 50 mm, margins ruffled, tips recurved. Lvs 120 × 35-55 mm. Stems 1.4 m, light green, with c.5 fls.

**‘Clarity’ IX(c/d)**

See *davidii* ‘Clarity’.

**‘Clark’s Orange’ I(c/-)**

Parentage unknown

N: F.M. Abbey

Fls bright orange-red, spotted black. Stems 1 m. June. (Published in *Greenside Nursery Cat.*, 1944. Found in a garden in Rutland, Vermont (USA), and named after the raiser, a Mrs Clark.)

**‘Classic’ IX(b/c)**

See *auratum* ‘Classic’.

**‘Classy Lassic’ I(a/-)**

Parentage: ‘Top Clas’ × ‘Juliana’

R: J.F. McRae (1976), G: J.F. McRae (1978), N: Columbia-Platte Lilies (1984), I: Columbia-Platte Lilies (1984), REG: Columbia-Platte Lilies (1984)

Inside tepal-tips deep purplish pink (58D), middle of tepals light greenish yellow (4C) to pale yellow-green (4D), throat brilliant to light greenish yellow (4A/B); outside light greenish yellow (4C) to green; spots medium sized in centre half of tepals; nectaries cream/pink; pollen moderate reddish orange (171A). Tepals 60-80 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-180 × 20 mm, mid to dark green. Stems 0.5-0.7 m, green, with 5-8 fls. June. (Published in *Rex Lilies Cat.*, 1984.)

**‘Claude Shride’ II(c/d)**

Parentage unknown

R: C.L. Shride, G: C.L. Shride, N: H.R. Cocker (pre 1980), REG: H.R. Cocker (1980)

Fls dark red (187B), with few yellow-orange spots. Buds whitish. Tepals ruffled. Lvs whorled, mid green. Stems 1.2-1.9 m. June.

**‘Claudia’ I(a/-)**

Parentage unknown

R: SENS Ltd (1975), G: SENS Ltd (1985), N: SENS Ltd (1985), I: SENS Ltd (1985), REG: SENS Ltd (1985)

Inside vivid yellowish orange (30C) to strong orange (30D), midribs vivid reddish orange (32A), centre carrot-red; outside strong yellowish pink (32C/D), midribs vivid reddish orange (34B) in inner tepals, moderate reddish orange (35B) edged Chinese-coral in outer tepals; spots dark brown; nectaries ruby-red; pollen reddish brown. Fls 140 mm wide; tepals 80 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 10 mm, mid green. Stems 0.75 m, dark, with c.4 fls. (Published in *Bloembollencultuur*, 1985.)

**‘Claudius’ VI(b/a)**

Parentage: white-flowered polyploid trumpet hybrid × tetraploid trumpets and Aurelians

R: J. Kovář, N: J. Kovář, I: J. Kovář (2002), REG: J. Kovář (2002)

Inside white, with three-quarters of throat apricot-yellow; outside with rosy midribs; nectaries green; pollen apricot-brown; stigma grey. Fls fragrant; tepals 140 × 55 mm, slightly recurved; pedicels 140 mm long, very thick, finely spotted, with secondary buds. Lvs scattered, 140 × 20 mm, dark and slightly shiny green. Stems 1.4 m, grey-green, thick, finely spotted. Bulbs red-brown. Early July. Tetraploid.

**‘Clean White’ VII(a-b/-)**

Parentage unknown

R: Hoffgaarde B.V. (pre 1993)

Inside yellowish white (155D), midveins brilliant yellow (13C) changing into white; outside yellowish white (155D); spots few; papillae present; nectaries green; pollen sterile; stigma green. Tepal-margins strongly ruffled, tips strongly recurved. Lvs scattered, of medium

length. Stems short to medium height, green with darker stripes and spots, with a small number of fls.

(Granted Dutch PBR (LEL 1127) in 1995, but not registered - the stock was destroyed by the raiser.)

**‘Clearbrook’ VIII(b-c/b)**

Parentage: (*henryi* × unnamed trumpet) × ‘Canterbury Belle’

R: A.E. Alexander (1999), G: A.E. Alexander (2001), N: A.E. Alexander (2002), I: A.E. Alexander (2002), REG: A.E. Alexander (2002)

Inside white with a golden throat; outside white, flushed green at base; spots absent; nectaries green; pollen orange; stigma dull yellow. Fls 150 mm wide; tepals 100 × 35 mm, margins smooth, tips recurved. Lvs scattered, 110 × 15 mm. Stems 1.1 m, black, with c.8 fls in a racemose infl. Jan. (New Zealand).

(An Orienpet (OT) lily. Clearbrook is the place where the registrant lives in Christchurch, New Zealand. Nomenclatural standard: colour print provided by registrant (WSY 0032256).)

**‘Clearlight’ I(a/b-c)**

Parentage: ‘Connecticut King’ × *wilsonii*

R: L. Woodriff (1974), G: L. Woodriff (1976), N: Bowman Creek Farm (1981), I: Bowman Creek Farm (1981), REG: Bowman Creek Farm (1981)

Inside lemon-yellow with dark yellow blending in centre; outside yellow; spots absent; nectaries light green; pollen rust-orange. Fls 140 mm wide; tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 25 mm, dark green. Stems 0.9 m, green, with 15 fls. Mid July.

**‘Cleopatra’ VI(b-c/a)**

Parentage: selection from Aurelian Group

S: C. Yerex (c. 1947), N: C. Yerex

Fls golden yellow. Stems 1.2-1.5 m. July. (Published in *LYB NALS* 1: 99, fig. 3 (1947/48). Classified as Div. VI(d) in *ILR* (1982).)

**‘Climax’ IX(b-c/d)**

See *speciosum* ‘Climax’.

**‘Clio’ IX(b-c/d)**

See *speciosum* ‘Clio’.

**var. *clivorum* IX(c/d)**

See *speciosum* var. *clivorum*.

**CLOISTER CELL I(a/b)**

Trade designation of ‘Klostercelle’.

**‘Close Up’ VIII(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside moderate purplish red/deep pink (185C/D), with a little light yellow-green (154D) above the nectaries;

outside deep pink (185D), each tepal edged moderate red (185B) on a paler ground, midribs strong yellow-green (144B) at base, fading towards top, tipped strong yellow-green (144A); spots moderate red (185B) on up to a quarter of each tepal; papillae deep pink (185D), in the throat; nectaries deep pink (185D); pollen moderate reddish brown (175A); stigma moderate orange and moderate orange-yellow (167A&D). Fls 240 mm wide; tepals 120 × 45-60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 200 × 20 mm. Stems 0.9 m, green, with 3-4 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Cloth of Gold’ I(a/-)**

Parentage: *L.* × *hollandicum* × *L.* × *maculatum*  
Fls Nankeen-yellow, almost unspotted.  
(Published in *JRHS* 26: 366 (1901/02).)

**‘Cloud Cap’ I(c/-)**

Parentage: (down-facing, white/pink bicolor × ‘Connecticut King’) × another clone of similar parentage  
R: J.F. McRae (1978), G: Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1984), I: Columbia-Platte Lilies (1984), REG: Columbia-Platte Lilies (1984)  
Inside white, throat with a 20 mm-wide soft pink flush; outside soft pink (in cool weather); spots medium sized, magenta-black, forming a ring extending 20 mm from nectaries; nectaries green; pollen deep orange-yellow (163A). Tepals 60-80 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 120-180 × 20 mm, dark green. Stems 0.8-1 m, green, with 5-8 fls. June.  
(Published in *Rex Lilies Cat.*, 1984.)

**‘Cloud Nine’ I(a/-)**

Parentage: ((white-flowered seedling × Panamint Group) × (‘Snow Bunting’ × unknown)) × yellow-green-flowered Asiatic seedling  
R: J.A. Mattas, G: J.A. Mattas (1975), N: J.A. Mattas (1976), REG: J.A. Mattas (1977)  
Fls brilliant yellow-green (150C) fading to white, throat with circle of spots at base; nectaries green; pollen brown. Lvs dark green. Stems 0.8 m.  
(Published in *Lilies and other Liliaceae*, 1977: 77.)

**‘Clown’ I(b/b-c)**

Parentage: (‘Atilla’ × ‘Red King’ (Div. I)) × ‘White Prince’  
R: J. Bodalski (1989), G: J. Bodalski (1991), N: J. Bodalski (1994), I: J. Bodalski (1994), REG: J. Bodalski (1994)  
Inside strong reddish orange (42B); outside vivid reddish orange (42A); spots few, purple, on basal third of each tepal below deep red (53A) brushmarks; nectaries white; pollen strong brown (172A). Tepals 75 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 15 mm, dark green, hairy. Stems 1.2 m, dark brown, with c.25 fls. Early July.

**‘Club House’ VIII(-/-)**

Parentage: (unnamed yellow-flowered seedling × ‘Sahara’) × (*longiflorum* × ‘Aristo’)  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff

Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997), REG: Bischoff Tulleken Lelies B.V. (1997)  
Inside vivid/brilliant orange-yellow (23A/B), throat pale orange-yellow (23D); outside brilliant/light orange-yellow (23B/C), tepal-tips dark red (187A), midribs strong yellow-green (144A) at base and top, shading into tepal; spots dark red (187B) on a third of each tepal; papillae pale orange-yellow (23D) in the throat; nectaries pale orange-yellow (23D); pollen brownish orange (166C); stigma light yellow (17D). Fls 220 mm wide, buds and outside of tepals hairy; tepals 115-120 × 45-65 mm, margins smooth, tips slightly recurved. Lvs scattered, 205 × 20 mm, mid green. Stems 0.75 m, green, with c.3 fls. June.

(A *longiflorum*/Asiatic (LA) hybrid. Registered as ‘Clubhouse’ but in 1998 Dutch PBR were granted to this cv. as ‘Club House’. Under ICNCP, 2004: Art. 24.4, ‘Club House’ becomes the accepted cv. epithet.)

**‘Clubhouse’ VIII(-/-)**

See ‘Club House’.

**‘Coachella’ IV(-/-)**

Parentage: *L.* × *burbankii* ‘Yellow Maid’ × Bullwood Group  
R: D.B. Fox (1967), G: D.B. Fox (1971), N: D.B. Fox (1983), I: D.B. Fox (1983), REG: D.B. Fox (1983)  
Inside vivid orange-yellow (23A), slightly darker on midveins, throat green; outside more-or-less brilliant orange-yellow (23B); fine, magenta-brown spots from throat to mid tepal; pollen mid brown. Fls 85-90 mm wide; tepals 86 × 22 mm, margins smooth, tips slightly recurved. Lvs usually whorled, c.170 × 25 mm, mid green. Stems 1.5-2 m, mid green, with 5 or more fls. July.

**‘Cobra’ I(a-b/-)**

Parentage unknown  
R: Peacock B.V. (pre 1991), G: Peacock B.V., N: Peacock B.V., I: Peacock B.V.  
Inside strong purplish red (54A), midveins pale yellow (11C); outside strong pink (54C); spots and papillae present, nectaries strong purplish red (54A); pollen orange-brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems of medium height, green with darker markings. Very early to early.  
(An application for registration of ‘Cobra’ was received in July 2003, but was rejected because of confusion with COBRA (trade designation of ‘Zantricotob’). However this lily was granted Dutch PBR (LEL 640) in 1991 and so although the epithet is not registered, it must be accepted (ICNCP, 2004: Art. 24.4). A letter received from KAVB in 2001 gave the information that ‘Cobra’ is no longer in production.)

**COBRA VII(a/b)**

Trade designation of ‘Zantricotob’.

**‘Coburg’ VI(b/b)**

Parentage: yellow-flowered Aurelian seedling × orange-flowered Aurelian seedling

R: V. Strasser (1973), G: V. Strasser (1977), N: V. Strasser (1980), I: V. Strasser (1985), REG: V. Strasser (1997)  
Inside light orange-yellow (16B); outside with 3 tepals yellow and 3 tepals reddish brown. Tepals 120 mm long, tips slightly recurved. Lvs scattered, dark green. Stems 1.7 m, rather dark green, with up to 15 fls. Mid July.

**var. *coccineum* IX(c/a)**  
See *canadense* var. *coccineum*.

**var. *coccineum* IX(b-c/d)**  
See *speciosum* forma *coccineum*.

**'Coccineum' IX(c/d)**  
See *amabile* 'Coccineum'.

**'Cockatoo' IV(-/-)**  
Parentage: 'Shuksan' × *L. × burbankii*  
R: O.E.P. Wyatt, N: O.E.P. Wyatt  
Tepals red and orange, pointed, tips flushed with pink.  
Syn.: 'Painted Lady'.  
(Published in *Constable Lily Cat.*, Autumn 1951.  
Originally called 'Painted Lady'.)

**'Cock Pheasant' IV(-/-)**  
Parentage: 'Shuksan' × *L. × burbankii*  
R: O.E.P. Wyatt, N: O.E.P. Wyatt  
Fls rich red, centre paler; profusely spotted. Stems 1.5-2.2 m.  
(Published in *Constable Lily Cat.*, Autumn 1951.)

**'Cock Robin' IV(-/-)**  
Parentage: 'Shuksan' × *L. × burbankii*  
R: O.E.P. Wyatt, N: O.E.P. Wyatt  
Tepals red, shading to brown at tips, reflexed.  
Syn.: 'Golden Eagle'.  
(Published in *Constable Lily Cat.*, Autumn 1951.)

**'Cocktail' I(a/-)**  
Parentage: pink-flowered seedling × 'Connecticut King'  
R: Bischoff Tulleken Leliecultuur B.V. (1976), G: Bischoff Tulleken Leliecultuur B.V. (1979), N: Bischoff Tulleken Leliecultuur B.V. (1983), I: Bischoff Tulleken Leliecultuur B.V. (1985), REG: Bischoff Tulleken Lelies B.V. (1985)  
Inside light pink (50D), tepal-tips strong pink (54C), throat with orange buff blotches edged Spanish orange; outside moderate pink (51D) with a brown-yellow flush; brown spots around the centre; nectaries violet-red; pollen red-brown. Tepals 75 × 40 mm. Lvs scattered, 90 × 15 mm, dark green. Stems 1.2 m, pale green, with c.12 fls. June.

**'Coco' I(a/b)**  
Parentage unknown  
R: P. Hoff (1992), G: Hoffgaarde B.V. (1993), N: Hoffgaarde B.V. (1994), REG: Hoffgaarde B.V. (1997)  
Inside yellowish white (155B), throat brilliant yellow (8A); outside yellowish white (155B), tepal-tips dark red (187A), midribs strong/light yellow-green (144C/D); spots few, dark red (187A), in the throat; papillae absent; nectaries strong yellow-green (144A/B), white-hairy;

pollen dark reddish orange (175B/C); stigma pale beige bronze. Fls 175 mm wide; tepals 100-110 × 40-50 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 130 × 20-25 mm, mid green. Stems 1.1-1.2 m, green, with 6-8 fls.  
Trade designation: **HOFFRICA® COCO**.

**'Cocoa Paradise' I(a/b)**  
Parentage: 'Blizzard' × 'Redstart'  
R: W. Kuligowski (1990), G: W. Kuligowski (1993), N: W. Kuligowski (1997), I: W. Kuligowski (1997), REG: W. Kuligowski (1998)  
Inside cocoa-beige, throat pink-bronze; outside violet-bronze; spots dark brown on basal third of each tepal; nectaries beige-green; pollen dark bronze; stigma pale beige-bronze. Fls 125 mm wide; tepals 80 × 32 mm, margins not or only very slightly wavy, tips slightly recurved. Lvs scattered, 100 × 12 mm, mid green. Stems 0.73 m, brown, with 10-14 fls and some bulbils. Mid to late July.  
(Published in Kuligowski's sales list, Autumn 1998.)

**'Coda' I(a/b-c)**  
Parentage: ('Connecticut King' × Hallmark Group) × ('Connecticut King' × Hallmark Group)  
R: Columbia-Platte Lilies (1976), G: Columbia-Platte Lilies (1978), N: Columbia-Platte Lilies (1982), I: Columbia-Platte Lilies (1982), REG: Columbia-Platte Lilies (1984)  
Inside vivid to brilliant yellow (9B/C), tepal-tips brilliant yellow (9C), throat vivid yellow (9B), with a vivid orange-yellow (21A) flush in cool weather; outside brilliant yellow (9C) to pale greenish yellow (9D); unspotted; nectaries green; pollen strong brown (172A). Tepals 50-60 × 15-20 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-120 × 20 mm, mid green. Stems 0.6-0.9 m, green, with a plum overlay in cool weather, with 5-8 fls. July.  
(Published in *Rex Lilies Cat.*, 1982.)

**'Cognac I' I(c/-)**  
Parentage: *lancifolium* × unknown  
R: J. Giffei (pre 1989), N: J. Giffei, REG: ICRA (1998)  
Fls cognac-coloured. Stems 1.5 m, black, with a dense infl. and bulbils. Late July.  
(Published in German Lily Group sales list, 1989.)

**'Cognac III' I(c/-)**  
Parentage: *lancifolium* × unknown  
R: J. Giffei (pre 1989), N: J. Giffei, REG: ICRA (1998)  
Fls cognac-coloured. Stems 1.8 m, with a more loose infl. than 'Cognac I', bulbils present. Late July.  
(Published in German Lily Group sales list, 1989.)

**'Cohoe' I(b/-)**  
Parentage: complex hybrid  
R: C.F. Patterson (c. 1961), I: Dept. of Horticulture, University of Saskatchewan (1969)  
Tepals strong yellowish pink (32D) in basal half, apical half deep yellowish pink (39B), blending to give overall colour associated with Cohoe salmon; basal third of tepals

with few, fine spots. Tepals half reflexed. Stems 1 m. July. (Published in *ILR* (1969).)

**‘Coletta’ I(a/-)**

Parentage unknown

R: De Jong Beheer B.V. (1988), G: De Jong Beheer B.V. (1990), N: De Jong Beheer B.V. (1990), I: De Jong Beheer B.V. (1992), REG: De Jong Beheer B.V. (1996)  
Inside strong purplish pink (55B) on a pale yellow-green (155A) ground, with some pale yellow (11D) above nectaries, throat pale yellow/pale yellow-green (11D/155A) suffused with moderate purplish red (58A); outside strong purplish pink (55B) on a white ground, suffused with moderate purplish red (59C) at base, outer tepals with a strong yellow-green (144A) midrib suffusing out into the tepal, inner tepals with a little light yellow-green (144B) at tip; spots dark red (187A), near the nectaries; papillae absent; pollen strong reddish orange (169A); stigma light yellow (162C). Fls 150 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 25 mm, mid green. Stems 1.2 m, green, darker green at lf-nodes, with 10-12 fls.

**‘Colibri’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1991), N: Bischoff Tulleken Lelies B.V. (1997), I: Bischoff Tulleken Lelies B.V. (1998), REG: Bischoff Tulleken Lelies B.V. (2001)  
Inside yellowish white (155B), each tepal with a little strong yellow-green (145A) above the nectaries; outside yellowish white (155B), midribs strong yellow-green (145A), tipped strong yellow-green (143A); a few, dark red (187A) spots, together with white (155B) papillae, in the throat; nectaries yellowish white (155B); pollen vivid orange (28A); stigma dark red (183A). Fls 180 mm wide; tepals 85 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 10 mm. Stems 0.7 m, green, with 5-8 fls. June.

**‘Colleen’ I(a/-)**

Syn. of ‘Jeanne d’Arc’.

**‘Collonia’ I(a/d)**

Parentage: ‘Exception’ × ‘Heidi’

R: G. Thürmer (1986), G: G. Thürmer (1988), N: G. Thürmer (2002), I: G. Thürmer (2002), REG: G. Thürmer (2001)

Inside light orange (28C), tepal-tips light orange (28D), throat light orange (28C); outside light orange (28D); spots numerous, uniformly sized, dark red (183A), on at least the basal half of each tepal; nectaries greenish; pollen deep red (185A). Tepals 70 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 110 × 10 mm. Stems 1 m, almost black, with c.20 fls. Mid to late July. (Nomenclatural standard: colour print provided by registrant (WSY 0030949).)

**‘Colombo’ I(a-b/b)**

Parentage: seedling G 426 × seedling OR 843

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den

Haan, REG: Gebr. Vletter & Den Haan (1994)  
Inside suffused with vivid reddish orange (34A), less bright at tepal-edges, tepal tips tinged with dark red (187C), midveins vivid reddish orange (34A) shading to deep purplish red (187D) at top; outside variegated strong and moderate reddish orange (42C & D), tepal-edges strong reddish orange (42B), the base tinged with moderate orange (170B), tepal-tips dark greyish reddish brown (200A); a few, dark greyish reddish brown (200A) spots in the throat, together with some papillae, coloured as tepals; pollen dark reddish orange (175B); stigma moderate red (180A). Fls 160 mm wide; tepals 80 × 45 mm, margins smooth, tips recurved. Lvs scattered, 105 × 13 mm. Stems 0.9-1.1 m, dark, with 8-12 fls.

**‘Colonna’ VII(b/c-d)**

Parentage: seedling 327 × ‘Casa Blanca’

R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside greenish/yellowish white (155C/D), slightly suffused with strong purplish pink (63C) along apical part of midveins, light greenish yellow (8C) on basal parts, throat strong yellow-green (144C); outside greenish white (155C), midribs pale yellow-green (4D); spots light greenish yellow (8C); papillae brilliant yellow/light greenish yellow (8A/B), on basal part of each tepal; nectaries greenish white (192D); filaments green; pollen brownish orange (171B). Fls 225 mm wide; tepals 110 × 60 mm, margins somewhat ruffled, tips strongly recurved. Lvs scattered, 190 × 35 mm, mid green. Stems 1.15 m, green, with c.6-11 fls.

Syn.: ‘Unter den Linden’.

**‘Colorado’ I(a/-)**

Parentage unknown

R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1990)  
Inside greyish red (184A), each tepal with a moderate orange (168C) flame; outside moderate red (185B) with centre of tepals moderate purplish red (185C); spots dark red (187A), on basal half of each tepal; pollen strong orange (169B). Fls 210 mm wide; tepals 110 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 25 mm, mid green. Stems 1.55 m, mid green, with c.9 fls. June.

**‘Colorama’ I(a/b)**

Syn. of ‘Colorondo’.

**‘Colorondo’ I(a/b)**

Parentage: ‘Cannes’ × ‘Gironde’

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside vivid orange (28A), a little paler towards tepal-tips; outside strong/light orange-yellow (24B/C) on a paler ground, tepals narrowly edged vivid orange (28A), tipped strong yellow-green (143A); spots and papillae absent; nectaries moderate olive-green (137A), with a little

pale orange-yellow (24D); pollen strong reddish orange (169A); stigma strong brown (172A) and light orange-yellow (24C). Fls 180 mm wide; tepals 90 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 1-1.15 m, green, with 6-8 fls (from 14-16 cm bulbs).

Syn.: 'Colorama'.

(Registered as 'Colorama' in 1999, but PBR were granted in 2000 under the epithet 'Colorondo', which (under ICNCP, 2004: Art. 24.4) becomes the accepted epithet.)

#### 'Color Parade' VII(b/b)

Parentage: unnamed seedling × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside vivid purplish red (57D) on a paler ground, midveins slightly stronger coloured, each tepal with a brilliant yellow (10A) mark above the strong yellow-green (143B) nectary, throat yellowish white (155B); outside vivid purplish red (57B) on a yellowish white (155B) ground, base yellowish white (155B), midribs strong yellow-green (143C) shading to light yellow-green (150D) towards the strong yellow-green (143B) top; spots few, moderate purplish red (64A), on up to a third of the edges of each tepal; papillae yellowish white (155B), in the throat; pollen strong/moderate reddish orange (169A/171A); stigma greyish yellow-green (194A). Fls 220 mm wide; tepals 110 × 35-55 mm, margins ruffled, tips strongly recurved. Lvs scattered, 170 × 60 mm. Stems 1.1 m, light green, with c.4 fls. July.

#### 'Colosseo' I(a/b)

Parentage unknown

R: Hoffgaard B.V., G: Hoffgaard B.V., N: Hoffgaard B.V., I: Hoffgaard B.V., REG: Hoffgaard B.V. (1989)  
Inside deep yellowish pink (39B), each tepal flamed brilliant yellow (15C), the centre of flame strong orange (24A), throat moderate red (47A); outside moderate orange-yellow (168D) to moderate orange (170D) with irregular, strong red (47B) tepal-edges; spots dark red (187A), on basal half of each tepal; pollen greyish red (178A). Fls 210 mm wide; tepals 105 × 55 mm, margins smooth, tips strongly recurved. Lvs scattered, 100 × 13 mm, mid green. Stems 1-1.2 m, green with darker markings, and with 5-8 fls. July.  
Syn.: 'Holeq'.

#### 'Colourful' VII(a/-)

Parentage unknown

R: J.W.A. van der Wereld & Zn B.V., G: J.W.A. van der Wereld & Zn B.V., N: J.W.A. van der Wereld & Zn B.V. (1993), I: J.W.A. van der Wereld & Zn B.V. (2002), REG: J.W.A. van der Wereld & Zn B.V. (2002)

Inside deep red (60A), deep purplish pink (64D) towards tepal-tips, tepal-edges yellowish white (155D), midveins yellow changing to red; outside pale purplish pink (62D); spots and papillae present; pollen orange-brown; stigma green. Tepal-margins ruffled, tips recurved. Stems green with dark stripes and spots. Midseason.

#### 'Coltrane' VII(-/c)

Parentage: unnamed seedling × unnamed seedling  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)

Inside pale purplish pink (56B/C) on an ivory-white ground, midveins pale greenish yellow (2D), throat strong yellow-green (143C); outside yellowish white/very pale purple (155B/75D), midribs light greenish yellow (1C); spots deep purplish red (59B), on a large part of each tepal; papillae in the throat; pollen strong orange (25A). Fls 220 mm wide; tepals 105 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 170 × 30 mm, mid green. Stems 1 m, green, with c.6 fls. May (under glass).

#### *columbianum* Leichlin ex Duchartre IX(c/d)

Fls yellow to orange-red, usually bright orange; spots small, purplish red or maroon, towards base of each tepal; anthers orange-yellow, rarely red; pollen deep yellow. Fls 50-75 mm wide; tepals 35-65 × 8-12 mm; pedicels long, arching. Lvs in whorls of 5-13, the upper scattered, 50-140 × 12-40 mm, glossy pale green. Stems 0.6-2.5 m, with 6-10(-40) fls. July to Aug. Western N America (S Canada to N California)

#### *columbianum* var. *ingramii* hort. IX(c/d)

Larger plant with bigger fls, more deeply coloured than those of *columbianum* itself.

#### 'Columbus' VII(a-b/b)

Parentage unknown

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan, I: Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1999)

Inside and outside greenish white (155C), midribs strong yellow-green (144C), with some pale greenish yellow (10B) alongside; spots greenish white (155C) and brilliant yellow (7A), on up to two-thirds of each tepal; papillae greenish white (155C) and brilliant yellow (8A), in the throat; nectaries strong yellow-green (144C); pollen strong reddish orange (169A); stigma moderate purplish red/deep pink (185C/D). Fls 230 mm wide; tepals 115 × 45-55 mm, margins of outer tepals ruffled at tip, tips recurved. Lvs scattered, 180 × 40 mm, dark green. Stems 1.25 m, green, with c.3-7 fls.

#### 'Comanche' I(a/-)

Parentage: complex hybrid of *lanceifolium*, *L.* × *hollandicum*, *L.* × *maculatum* & *davidii* var. *willmottiae*  
R: A.E. Simoni (c. 1962), N: A.E. Simoni  
Fls dark orange, spotted black. Stems 1.2 m.  
(Published in *ILR* (1969).)

#### 'Combat' VII(a/-)

Parentage: seedling N 13 × 'Gironde'  
R: Gebr. Vletter & Den Haan, G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan, I: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1999)  
Inside and outside yellowish white (155D), midribs pale yellow-green (144D); spots dark red (187A), towards

base of each tepal; papillae absent; nectaries strong yellow-green (144B), white-hairy; pollen moderate brown (165A); stigma brilliant yellow (13B) with a little moderate red (183C). Fls 230 mm wide; tepals 140 × 50-65 mm, margins slightly ruffled, tips recurved. Lvs scattered, 125 × 22 mm, mid green. Stems 1.15 m, mid green, with c.5-6 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Comet I’ I(b-c/d)**  
Syn. of ‘Robinson’s Comet’.

**‘Comet II’ I(b-c/-)**  
Syn. of ‘Reta’s Comet’.

**‘Commodore’ I(a/-)**  
Parentage: ‘Connecticut King’ × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1981), N: Bischoff Tulleken Lelies B.V. (1984), I: Bischoff Tulleken Lelies B.V. (1986)  
Inside light greenish yellow (5C); outside pale greenish yellow, midribs greenish; spots oxblood-red, in centre of throat; nectaries pale brown; pollen creamy green. Fls 180 mm wide; tepals 80 × 50 mm, slightly recurved. Lvs scattered, 110 × 10 mm, mid green. Stems 1 m, green, with c.6 fls. June.

**‘Como’ V(b/a)**  
Parentage: *longiflorum* ‘Gelria’ × seedling Lfl 84-18  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)  
Inside greenish/yellowish white (155C/D), the midveins in the throat light yellow-green (145C); outside with a greenish white (155C) ‘tube’ and yellowish white tepals; spots absent; nectaries pale yellow-green (155A); pollen vivid yellow (13A). Fls 140 mm wide; tepals 175 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 205 × 25 mm, mid green. Stems 0.9 m, green, with 4-5 fls.

**‘Comoro’ VIII(b/b)**  
Parentage: seedling PH 95-48 × ‘Aubade’  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)  
Inside vivid yellow (9B) on basal three-quarters, light greenish yellow (5D) at tepal-tips, throat vivid yellow (12A); outside pale yellow (8D), tepal-edges light greenish yellow (8B), midribs with a little yellow-green (150B); spots absent; papillae vivid yellow (12A); pollen darker than moderate orange (171C); stigma darker than dark red (187A). Fls 210 mm wide; tepals 135-145 × 50-72 mm, margins slightly ruffled, tips recurved. Lvs scattered, 170 × 40 mm. Stems 0.9-1.2 m, light green with darker markings, and with 3-6 fls.  
(An Orienpet (OT) hybrid.)

**forma compactum IX(b-c/d)**  
See *speciosum* forma *compactum*.

**‘Compass’ I(a/b)**  
Parentage: ‘Connecticut King’ × unnamed Asiatic seedling  
R: Bischoff Tulleken Leliecultuur B.V. (1977), G: Bischoff Tulleken Leliecultuur B.V. (1980), N: Bischoff Tulleken Leliecultuur B.V. (1984), I: Bischoff Tulleken Leliecultuur B.V., REG: Bischoff Tulleken Leliecultuur B.V. (1985)  
Inside strong orange-yellow (24B), throat marigold-orange; outside tangerine-orange, midribs orange-buff; spots tiny, dark brown, in the throat; nectaries burnt orange; pollen reddish brown. Fls 160 mm wide; tepals 70 × 35 mm, margins smooth, tips of outer tepals recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 0.75-0.9 m, green, with 6-8 fls (from 14-16 cm bulbs).

**‘Comtesse’ VII(-/c)**  
Parentage: pink-flowered seedling × (‘Star Gazer’ × *L.* × *parkmanii* ‘Allegra’)  
R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1993)  
Inside yellowish white (155D), midveins pale yellow-green (155A); outside yellowish white (155D), midribs pale yellow-green (155A) suffused with brilliant greenish yellow (151D) at the top; papillae yellowish white (155D) and pale yellow-green (155A), on two-thirds of each tepal; pollen moderate orange (167A); stigma light yellow-green (145C). Fls 165 mm wide; tepals 95 × 36 mm, margins ruffled, tips slightly recurved. Lvs scattered, 173 × 33 mm, dark green. Stems 0.7 m, pale green, with c.8 fls.

**‘Conamara’ I(a/b)**  
Parentage: seedling AM 95-12 × seedling AW 94-09  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2000), REG: Vletter & Den Haan Beheer B.V. (2004)  
Inside with inner tepals with a large yellowish white (155B) spot changing towards margins and top into light purplish pink (65B), at margins and top moderate purplish pink (65A), outer tepals more moderate purplish pink (65A) at top, throat yellowish white (155D) changing into strong purplish pink (67D) towards edge; outside with inner tepals moderate purplish pink (65A) in basal half and along margins, apical half pale purplish pink (65C), midribs strong yellow green (144C) at top, outer tepals light purplish pink (65B) with narrow moderate purplish pink (65A) margins, light yellow-green (144D) along midribs, strong yellow-green (143C) towards top; spots few, on papillae, deep purplish red (59B); papillae yellowish white (155D); nectaries strong yellow-green (143C); pollen vivid reddish orange (30B); stigma deep yellowish pink (43C). Fls 175 mm wide; tepals 95 × 36-54 mm, margins smooth, tips slightly recurved; pedicels hairy at base. Lvs scattered, 115 × 17 mm. Stems 0.85-1.4 m, green with darker markings, and with c.8 fls.

**‘Con Amore’ VII(b/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)

Inside light to pale purplish pink (62C/D), changing to greenish white (155C) lower down tepals, throat strong yellow-green (144C); outside light purplish pink (62C/63D), midribs pale yellow (8D); spots dark red (59B), on basal half of each tepal; papillae present; pollen strong reddish orange/strong orange (169A/B). Fls 200-210 mm wide; tepals 95 × 60 mm, margins slightly ruffled, tips recurved. Lvs scattered, 135 × 30 mm, mid green. Stems 1.05 m, green, with 6-8 fls. May (under glass).

**‘Conan’ I(a/b-c)**

Parentage: ‘Kolovrat’ × ‘Amarone’  
 R: J. Rezek (2001), N: J. Rezek (2005), I: J. Rezek (2005), REG: J. Rezek (2005)

Inside dark purple-red, centre of tepals blackish; outside wine-red with green tepal-tips; spots absent; nectaries white-granulated; pollen dark purple; stigma dark purple. Fls 190 mm wide; tepals 115 × 49 mm, scarcely recurved; pedicels 100 mm, dark green. Lvs scattered, 120 × 18 mm, glossy dark green. Stems 1 m, very thick, dark green. Early July. Probably triploid.

**‘Conca d’Or’ VIII(b/b)**

Parentage: seedling PH 95-40 × ‘Aubade’  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside brilliant greenish yellow (6A), shading to pale yellow-green (4D) towards tepal-edges and tips, throat pale yellow-green/light greenish yellow (4D/5D); outside pale yellow-green (4D), midribs brilliant yellow-green (150C); spots absent; papillae brilliant greenish yellow (6B); nectaries strong yellow-green (144B); pollen moderate reddish brown (175A); stigma dark red (187A). Fls 275 mm wide; tepals 160 × 52-85 mm, margins slightly ruffled, tips recurved. Lvs scattered, 240 × 40-60 mm. Stems 1.1-1.2 m, light green, with 2-8 fls. July. (An Orienpet (OT) lily.)

**‘Conchita’ I(a/b-c)**

Parentage unknown  
 R: B.G. Hayler, G: B.G. Hayler (1980), N: B.G. Hayler, I: B.G. Hayler, REG: B.G. Hayler (1985)

Inside mostly light yellowish pink (36C), tepal-tips and throat moderate purplish pink (62B); outside light purplish pink (62C); spots few, black, on darker area of throat; nectaries green-white; pollen brown. Fls 130 mm wide; tepals 75 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1 m, green, with c.15 fls. Late Dec. (Australia). (Published in *Golden Ray Gardens Cat.*, 1985.)

***concolor* Salisbury IX(a/c)**

Fls bright orange-red; spots absent; anthers orange-red. Fls up to 85 mm wide, fragrant; tepals 30-40 × 7-10

mm, tips slightly recurved; each pedicel with 2 bracts at base. Lvs scattered, 70-90 × 5-15 mm, dark green. Stems 0.3-0.9 m, green, variably flushed with purple, slightly downy, with up to 10 fls. July. C China.

***forma concolor* IX(b-c/d)**

See *speciosum* *forma concolor*.

***var. concolor* IX(c/a)**

See *nepalense* *var. concolor*.

***concolor* var. *coridion* (Siebold & De Vriese) Baker IX(a/c)**

AM 1927

Fls citron-yellow, spotted purplish brown. June to July. Mongolia.

***concolor* var. *coridion* ‘Nihon-ki-himeyuri’ IX(a/c)**

Parentage: selection from *concolor* var. *coridion*  
 (Given as a parent of *concolor* Miura-ki-himeyuri Group. Grown in Japan before 1981.)

***concolor* ‘Dropmore’ IX(a/c)**

Parentage: *concolor* var. *concolor* × *concolor* var. *pulchellum*  
 R: F.L. Skinner, N: F.L. Skinner, I: F.L. Skinner (1926)  
 AM 1927

Fls bright scarlet, as *concolor* itself but more vigorous. Stems 0.3 m, with 10-12 fls. (Published in *JRHS* 53: lxii (1928).)

***concolor* var. *matsuanum* Makino IX(a/c)**

Fls scarlet, with dark red spots below the middle. Fls 60 mm wide. Stems 0.4 m.

***concolor* Miura-ki-himeyuri Group IX(a/c)**

Parentage: *concolor* var. *pulchellum* ‘Tosa-himeyuri’ × *concolor* var. *coridion* ‘Nihon-ki-himeyuri’  
 R: F. Miura (1981), N: F. Miura  
 Fls vivid yellow (14A); spots numerous, small, purplish red. Fls 70 mm wide. Stems 0.8-0.9 m. Late.

***concolor* ‘Nihon-ki-himeyuri’ IX(a/c)**

See *concolor* var. *coridion* ‘Nihon-ki-himeyuri’.

***concolor* ‘Ohime’ IX(a/c)**

Parentage: selection from *concolor*  
 Larger tepals of a deeper colour than in *concolor* itself. (Originated via Yokohama Nursery Co., before 1899.)

***concolor* forma *okihime* E.H. Wilson IX(a/c)**

Syn. of *concolor* ‘Okihime’.

***concolor* ‘Okihime’ IX(a/c)**

Parentage: selection from *concolor*  
 Fls pure yellow; spots absent; anthers reddish. Fls larger than in *concolor* var. *coridion*.  
 Syn.: *concolor* forma *okihime*.  
 (Illustrated in the Yokohama Nurs. Co., *Lilies of Japan*, t.38, (1907).)

**concolor var. partheneion (Siebold & De Vriese) Baker IX(a/c)**

Fls red, streaked green and yellow, with a few black spots.

**concolor var. pulchellum (Fisch.) Regel IX(a/c)**

Fls vermilion, through apricot to orange-red; spots present; anthers orange. Buds hairy. Stems green, hairless. NE Asia.

Syn.: *buschianum*.

**concolor var. pulchellum 'Tosa-himeyuri' IX(a/c)**

Parentage: a form of *concolor* var. *pulchellum*

(Given as a parent of *concolor* Miura-ki-himeyuri Group.

Grown in Japan pre 1981.)

**concolor var. stictum Stearn IX(a/c)**

Fls scarlet; spots small, maroon-black, towards base of tepals.

(Increases by the splitting of the bulbs.)

**concolor 'Tosa-himeyuri' IX(a/c)**

See *concolor* var. *pulchellum* 'Tosa-himeyuri'

**'Concorde' I(a/b)**

Parentage: selection from Sundrop Group

S: Gebr. Vletter & J.A. Den Haan (pre 1976), N: Gebr.

Vletter & J.A. Den Haan, REG: Gebr. Vletter & J.A.

Den Haan (1976)

Fls lemon-yellow, throat somewhat greenish; spots brownish red; anthers red-brown; stigma orange-red.

Margins of outer tepals slightly ruffled. Stems 0.8 m, with 5-8 or more fls. June to July.

(Published in *Lilies and other Liliaceae*, 1976: 90.)

**'Condamine' I(a/-)**

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler (1977), N: B.G. Hayler

(1983), I: B.G. Hayler (1983), REG: B.G. Hayler (1983)

Inside dark red (187B), throat black-red; outside red;

spots few, darker; nectaries white. Tepals 60 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 8 mm. Stems with c.8 fls. Dec. (Australia).

**'Condor' I(a/b)**

Parentage: (*bulbiferum* var. *croceum* × 'Firecracker') × 'Sinai'

R: K. Braun (1987), N: K. Braun (1989), REG: K. Braun (1989)

Inside yellow-orange, tepal-tips yellow-orange, throat and centre orange; outside with green midribs; spots large, brown-red, on two-thirds of each tepal; papillae pale; nectaries yellow-orange; pollen brown-red; stigma orange. Fls 158 mm wide; tepals 86 × 47 mm, slightly recurved; pedicels 64 mm long, hairy. Lvs scattered, 76 × 18 mm, glossy dark green. Stems 0.7 m., green, hairy. Early July.

**'Condor Diamond' VIII(a/b)**

Parentage: ((seedling 1032-88-RSWI × 'Michella') × 'Esra') × seedling LA 93019-2T

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)

Inside brilliant yellow (7A), throat light greenish yellow (1C); outside light greenish yellow (4C), brilliant greenish yellow (6A) towards tepal-margins, light yellow-green (142C) at base; spots few, dark red (59A); papillae absent; nectaries strong yellow-green (143C); pollen strong brown (172A); stigma strong purplish red (60B) on greenish ground. Fls 185 mm wide; tepals 125 × 42-58 mm, margins smooth, tips slightly recurved. Lvs scattered, 143 × 18 mm. Stems 1.2-1.35 m, green with darker markings, and with 2-8 fls.

(*A longiflorum*/Asiatic (LA) hybrid.)

**'Conductor' I(b/-)**

Syn. of 'Dirigents'.

**'Conflict' I(a/-)**

Parentage: 'Enchantment' × red-flowered *martagon* type seedling from Preston Group

R: A.C. McKillop (c. 1957), N: A.C. McKillop

Fls bright blood-red.

**'Congo Capers' II(-/-)**

Parentage: *martagon* var. *cattaniae* × ('Black Prince' (Div. II) × unnamed red-flowered seedling)

R: J.C. Ericksen (pre 1980), G: D. Dale, N: D. Dale

(1993), I: Parkland Perennials, REG: D. Dale (1993)

Inside deep dark beetroot-red/purple, throat light pink-

purple; outside deep dark beetroot red/purple; spots

medium sized, deep dark purple, in the throat; nectaries

deep purple; pollen rust-brown. Fls 45 mm wide; tepals

35 × 14 mm, margins smooth, tips strongly recurved. Lvs whorled, 170 × 25 mm. Stems 1.65 m, black, with c.42 fls (some lower pedicels with secondary buds). Late June to early July.

**'Connecticut Beauty' I(a/b)**

Parentage: 'Connecticut Lass' × 'Keystone'

R: Piedmont Gardens, N: Gebr. Vletter & J.A. Den Haan

(1975), I: Gebr. Vletter & J.A. Den Haan (1976), REG:

Gebr. Vletter & J.A. Den Haan (1978)

AGM 2002

Fls brilliant yellow (13C), throat and tepal-margins pale

yellow (11D); spots few, dark brown on basal third of

each tepal; nectaries strong yellow-green (142A); anthers

strong orange (168B). Stems 0.9-1 m, with 8-12 fls (from 16-18 cm bulbs). Late June to July.

Trade designation: MEDAILLON (misspelling:

MEDALLION).

(Piedmont Gardens sold the entire stock to Gebr. Vletter

& Den Haan in 1976 who renamed it 'Medaillon' for

sale in Europe. Both the epithets 'Connecticut Beauty'

and 'Medaillon' were registered in 1978 before the ICRA

knew they were the same cv. The AGM was awarded

to 'Medaillon'. Published in *Lilies and other Liliaceae*,

1978/9: 106 as 'Connecticut Beauty' and in the same

publication p. 111 as 'Medaillon'. However, the latter

epithet must be regarded as a trade designation.)

**'Connecticut Bronze' I(a/-)**

Parentage: (*lancifolium* × unknown) × 'Connecticut Morn'

R: D.M. Stone & F.H. Payne (c. 1965), N: D.M. Stone & F.H. Payne  
Fls orange-yellow (23B/C) with a few small spots. Stems 1.2 m. July.  
(Published in *ILR* (1969). An article by F.H. Payne in *Liliář* 4: 7-11 (1972) says that the parentage is Unknown X 'Connecticut Morn'.)

**'Connecticut Code' I(a/-)**

Parentage: ('Nutmegger' x unknown) X 'Connecticut King'  
R: Piedmont Gardens (c. 1977), N: Piedmont Gardens (1978), I: Piedmont Gardens (1978), REG: Piedmont Gardens (1978)  
Fls brilliant greenish yellow (5A), tepal-tips light greenish yellow (5C), throat brilliant greenish yellow (5B); spotted and streaked; nectaries brilliant yellow-green (154C); pollen moderate orange (168C). Tepal-margins ruffled. Stems 1.1 m.  
(Published in *Lilies and other Liliaceae*, 1978/9: 107.)

**'Connecticut Dream' I(a/-)**

Parentage: 'Connecticut Lass' X 'Keystone'  
R: D.M. Stone & F.H. Payne (1967), N: Piedmont Gardens (1973), I: Piedmont Gardens (1973), REG: Piedmont Gardens (1973)  
Inside brilliant yellow (7B), throat brilliant yellow (7A); outside brilliant greenish yellow (6C); spots absent; nectaries strong green-yellow (151C); pollen greyish brown (166A). Lvs wide. Stems 0.8 m. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 41 (1978); *Lilies and other Liliaceae*, 1978/9: 107.)

**'Connecticut Glow' I(a/-)**

Parentage: 'Red Tiger' X 'Nubian'  
R: D.M. Stone & F.H. Payne, N: D.M. Stone & F.H. Payne (c. 1967)  
Fls near deep purplish red (59B), shading to near dark red (59A) at tepal-edges.  
(Published in *ILR* (1969).)

**'Connecticut King' I(a/b)**

Parentage: 'Connecticut Lass' X 'Keystone'  
R: D.M. Stone & F.H. Payne, N: D.M. Stone & F.H. Payne (c. 1967)  
Fls brilliant orange-yellow (23B), tepal-tips brilliant yellow (12B); spots absent; nectaries brilliant yellow-green (150B); pollen orange. Tepal-margins smooth, tips somewhat recurved. Lvs scattered. Stems 0.8-1 m, with 5-14 fls. Late June to July.  
(Published in *ILR* (1969).)

**'Connecticut Lass' I(b/-)**

Parentage: (*lancifolium* x unknown) X 'Connecticut Yankee'  
R: F.H. Payne, N: F.H. Payne (c. 1965)  
Fls brilliant yellow-green (154B); male sterile. Stems 0.8 m. July.  
(Published in *ILR* (1969).)

**'Connecticut Lemonglow' I(b-c/e)**

Parentage: 'Connecticut Lass' X 'Keystone'  
R: D.M. Stone & F.H. Payne, N: D.M. Stone & F.H. Payne (c. 1965)  
Fls vivid yellow (13A) to brilliant yellow (13B), each tepal chartreuse-green at base; spots absent. Lvs dark green. Stems 1.5 m. July.  
Syn.: 'Gold Coast'.  
(Published in *ILR* (1969).)

**'Connecticut Maid' I(b/-)**

Parentage: (*lancifolium* x unknown) X 'Connecticut Yankee'  
R: F.H. Payne, N: F.H. Payne (c. 1965)  
Fls brilliant greenish yellow (6A); spots absent; nectaries brilliant yellow-green (149A). Stems 1.2 m. July.  
(Published in *ILR* (1969).)

**'Connecticut Marshal' I(a/-)**

Parentage: (*lancifolium* x unknown) X 'Connecticut Yankee'  
R: D.M. Stone & F.H. Payne, N: D.M. Stone & F.H. Payne (c. 1967)  
Fls strong orange (30D), with heavy midribs; spots absent.  
(Published in *ILR* (1969).)

**'Connecticut Melon' I(a/-)**

Parentage: 'Connecticut Yankee' X 'Edith Cecilia' hybrid  
R: Piedmont Gardens (1966), N: Piedmont Gardens (1978), I: Piedmont Gardens (1978), REG: Piedmont Gardens (1978)  
Inside three-toned melon-orange, light at tepal-tips, darkest at centre; outside orange with some green on outer tepals, midribs green, on inner tepals only; spots present; nectaries strong orange (25B); pollen greyed red. Tepal-margins slightly ruffled. Lvs twisted. Stems 1 m. Early to mid season.  
(Published in *Lilies and other Liliaceae*, 1978/9: 107.)

**'Connecticut Minstrel' I(c/-)**

Parentage: 'Connecticut Bronze' X unknown  
R: Piedmont Gardens (1967), N: Piedmont Gardens (1978), I: Piedmont Gardens (1978), REG: Piedmont Gardens (1978)  
Fls yellow-orange, tepal-tips vivid orange-yellow (23A), throat strong orange (168B); outside orange-yellow (24B/C); spots brown; nectaries brilliant orange-yellow (21B); pollen moderate greyed orange (167A). Lvs moderately wide. Stems 1 m.  
(Published in *Lilies and other Liliaceae*, 1978/9: 107.)

**'Connecticut Morn' I(a/-)**

Parentage: 'Connecticut Yankee' X 'Connecticut Bronze'  
R: F.H. Payne (c. 1966), N: D.M. Stone & F.H. Payne (1967), I: D.M. Stone & F.H. Payne (1967), REG: Piedmont Gardens (1973)  
Inside light orange (28C), tepal-tips strong reddish orange (31B); outside light orange (28C), midribs green; spots very small; nectaries light orange (28C); pollen strong reddish orange (169A). Tepal-margins ruffled.

Stems 1.1 m. July.

(According to F.H. Payne in *LYB* 30: 48-49 (1976), the parentage is ('Nutmegger' × an unspotted, yellow-flowered *L. × hollandicum*) × 'Connecticut Yankee'. He described the fls as being a blend of flame, rose, pink and apricot, and unspotted. The raiser, in *Liliád* 4: 7-11 (1972) said that the parentage is (*dauricum* × *concolor*) × 'Connecticut Yankee'. It is possible that several crosses were given this epithet and only one was registered.)

#### 'Connecticut Princess' I(b/-)

Parentage: (*lancifolium* × unknown) × 'Connecticut Yankee'

R: F.H. Payne (c. 1967), N: D.M. Stone & F.H. Payne  
Fls brilliant greenish yellow (6B); spots absent; nectaries brilliant yellow-green (142B). Stems 1.2 m. July.

(Published in *ILR* (1969). According to F.H. Payne in *LYB* 30: 48-49 (1976), the parentage is ('Nutmegger' × an unspotted, yellow-flowered *L. × hollandicum*) × 'Connecticut Yankee'.)

#### 'Connecticut Queen' I(a/-)

Parentage: (*lancifolium* × unknown) × 'Connecticut Yankee'

R: F.H. Payne (c. 1967), N: D.M. Stone & F.H. Payne  
Inside brilliant greenish yellow (6C), with pink flecks by the green nectaries. July.

(According to F.H. Payne in *LYB* 30: 48-49 (1976), the parentage is ('Nutmegger' × an unspotted, yellow-flowered *L. × hollandicum*) × 'Connecticut Yankee'.)

#### 'Connecticut Red' I(a/b-c)

Parentage: 'Red Tiger' × 'Nubian'

R: D.M. Stone & F.H. Payne (c. 1967), N: D.M. Stone & F.H. Payne

Fls deep red (185A), 75 mm wide. Stems 1-1.2 m. Dec. (Australia).

(Published in *ILR* (1969).)

#### 'Connecticut Star' I(a/-)

Parentage: 'Yellow Blaze' × a short, yellow-flowered, unspotted form of *L. × hollandicum*

R: Piedmont Gardens (1970), N: Piedmont Gardens (1978), I: Piedmont Gardens (1978), REG: Piedmont Gardens (1978)

Inside brilliant yellow (7A), throat vivid yellow (17B); outside light greenish yellow (4B), midribs green; spots few, small, purple; nectaries brilliant greenish yellow (1B); pollen moderate reddish orange (178C). Tepal-margins ruffled. Lvs wide. Stems 1.2 m. Late.

(Published in *Lilies and other Liliaceae*, 1978/9: 107.)

#### 'Connecticut Yankee' I(c/c-d)

Parentage: *lancifolium* var. *flaviflorum* × 'Gold Urn'

R: D.M. Stone (c. 1957), N: D.M. Stone, I: D.M. Stone  
PC 1974

Fls orange-red, almost unspotted. Stems 1.2 m, with 15-20 fls. July.

(Published in *Bull. NALS* 12 (2), (1959).)

#### 'Connection' I(a/-)

Parentage: 'Sterling Star' × 'Duet' (of Bischoff Tulleken)

R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1983), N: Bischoff Tulleken Lelies B.V. (1987), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside pale greenish yellow (2D), throat brilliant greenish yellow (6C); outside yellowish white (155B) suffused with light yellow-green (150D), midribs strong yellow-green (143A/B); spots few, small, dark red (187A), in the throat; nectaries dark pink (182C); pollen moderate orange (167A). Fls 190 mm wide; tepals 90 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 155 × 17 mm, mid green. Stems 1.4 m, green, with c.8 fls. May (under glass).

#### 'Conquest' I(a/-)

Parentage: *lancifolium* × *L. × hollandicum*

R: J. de Graaff (c. 1954), N: J. de Graaff

Fls lemon-yellow, spotted. Stems 1.9 m. July.

(Published in *ILR* (1969).)

#### 'Conquistador' I(a/-)

Parentage: (unnamed seedling × 'Roter Cardinal') × 'Avignon'

R: Mak Lelieveredeling B.V. (1986), G: Mak Lelieveredeling B.V. (1988), N: Mak-Leek Inc. (1997), I: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside vivid reddish orange (34A), with vivid orange (28A) and vivid reddish orange (24A) stripes near the nectaries; outside vivid reddish orange (34A); spots and papillae present; nectaries orange; pollen red-brown; stigma purple-red. Fls 135 mm wide; tepals 90 × 45 mm, margins ruffled, tips recurved. Lvs scattered, 120 × 12.5 mm, mid green. Stems 0.85-1.2 m, green with darker markings, and with c.7 fls (from 12-14 cm bulb). Midseason. Tetraploid.

(Registered as 'Conquistador' and included in *ILR Sixteenth Supplement*. However, Dutch PBR were granted under the epithet 'Conquestador', so this latter spelling of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

#### 'Conquistador' I(a/-)

See 'Conquestador'.

#### 'Constance' IV(-/-)

Parentage: ('Shuksan' × *parryi*) × ('Shuksan' × *parryi*)

R: C.L. Shride (c. 1945), N: C.L. Shride

Fls cadmium orange; spots maroon, small, mainly at base of each tepal. Tepals slightly reflexed, less so than in 'Shuksan'. Lvs whorled. Stems up to 1.5 m, with up to 20 fls.

(Published in *Lilylore* No. 3 (1955).)

#### 'Constance Spry' VI(-/a)

Parentage: *L. × aurelianense* × *leucanthum* var. *centifolium*

R: W.A. Constable Ltd, N: W.A. Constable Ltd

Inside creamy white, centre green overlaid with gold; outside flushed with purple-brown. Lvs 230 × 12 mm, light green. Stems up to 2.7 m, with 6-9 fls.

(Published in *Constable Cat.*, Autumn 1950.)

**CONSTANTA VII(b/b)**

Trade designation of 'Zantriconst'.

**'Constellation' I(a/-)**

Parentage: 'Sterling Star' × probably Yellow Blaze Group  
R: V. Matthé (1978), G: V. Matthé (1980), N: V. Matthé (1986), REG: V. Matthé (1986)

Inside pale yellow fading to ivory; outside ivory with tan midribs; spots big, plum-purple, in an even pattern on two-thirds of each tepal, and a plum-purple hair-line around a third of each inner tepal; nectaries green; pollen rust-brown. Fls 140 mm wide; tepals 75 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 10 mm, mid green. Stems 0.8 m, dark green, brown at base, with c.10 fls. Late July.

**'Content' I(a/-)**

Parentage: 'Pirate' × Sundrop Group  
R: Bischoff Tulleken Leliecultuur B.V. (1976), G: Bischoff Tulleken Leliecultuur B.V. (1979), N: Bischoff Tulleken Leliecultuur B.V. (1983), I: Bischoff Tulleken Leliecultuur B.V. (1985), REG: Bischoff Tulleken Leliecultuur B.V. (1985)

Inside strong orange (25B), throat cadmium-orange; outside nasturtium-orange; spots chocolate-brown, on over half of each tepal; pollen red-brown. Fls 140 mm wide; tepals 70 × 5 mm. Lvs scattered, 90 × 8 mm, dark green. Stems 1.25 m, dark green, with c.7 fls. Early June. Trade designation: B.V. (Published in *Bloembollencultuur*, 1984.)

**'Contessa' I(b/-)**

Parentage: Preston Group × unknown  
R: L. Lutz, N: L. Lutz (1970), REG: L. Lutz (1969)  
Fls vivid red (45A), throat vivid red (45B); spots small, black, moderately dense. Stems 0.8 m. July. (Published in *LYB* 33: 254 (1970).)

**'Contrails' I(a-b/b)**

Parentage: pink-flowered spotted Asiatic seedling × ('Discovery' × 'Pink Tiger') × white-flowered unspotted tetraploid Asiatic seedling  
R: A.J. Burnett (1991), G: A.J. Burnett (1992), N: A.J. Burnett, I: A.J. Burnett (2000), REG: A.J. Burnett (2000)  
Inside creamy white (159D), throat light yellow-green (154D) either side of light yellow-green (150D) nectaries; outside of outer tepals dark pink (182D), outside of inner tepals with dark pink (182D) midribs; 5-10, small, moderate red (185B) spots scattered around nectaries; pollen strong brown (172A); stigma light yellow-green (150D). Fls 186 mm wide; tepals 87 × 41 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 15 mm. Stems 1.1 m, greyish yellow-green (196A), with up to 28 fls. July.

(Named after the **condensation trails** made in the sky by highflying jet aircraft. The seed parent was obtained from Irmgaard Jurke of Lloydminster, Sask., Canada. The seedling used in the pollen parent came from Dick Thomas. It is not known whether 'Pink Tiger' (in pollen parent) was raised by Woodriff or Laan. Nomenclatural standard: colour print provided by registrant (WSY 0025873).)

**'Contrast' VIII(a-b/b-c)**

Parentage: seedling 819-1 × seedling 90-033-1  
R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)  
Inside pale yellow-green (155A), each tepal with a vivid red (57A) flame from nectary upwards; outside pale yellow-green (155A) with some purple red; spots and papillae present; nectaries yellow-green; filaments yellow-green; pollen red-brown; style yellow-green; stigma purple, spotted. Fls 170 mm wide; tepal-margins slightly ruffled, tips strongly recurved. Lvs scattered, dark green. Stems 0.9-1.1 m, green with darker spots and stripes, and with 2-7 fls. Very late. (Nomenclatural standard: colour print supplied by registrant (WSY 0096391).)

**'Cool Breeze' I(a/b)**

Parentage: unnamed hybrid × unnamed hybrid  
R: F. Tarlton (1975), G: F. Tarlton (1979), N: F. Tarlton (1980), I: F. Tarlton (1993), REG: F. Tarlton (1994)  
Inside and outside pale yellow-green (4D), throat light greenish yellow (4B); c.20, small, purple spots on basal quarter of each tepal; nectaries light greenish yellow (4B); pollen moderate reddish orange (171A). Fls 90 mm wide; tepals 65 × 28 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 8 mm, mid green. Stems 0.8 m, light green, with 6-8 fls. Late July.

**'Coolhurst Hybrid' I(a/-)**

See *L. × hollandicum* 'Coolhurst Hybrid'.

**'Coomal' I(-/b-c)**

Parentage: *bulbiferum* var. *croceum* × (*concolor* × unknown)  
R: E.C. Genat (c. 1954), N: E.C. Genat  
Fls old gold with a few dark brown spots.

**'Copaya' VII(a/b)**

Parentage: seedling 88-07-2 × seedling 89-225-3  
R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)  
Inside vivid purplish red/deep purplish pink (67B/C), midveins vivid yellow (12A) at base changing into purplish red; outside deep to strong purplish pink (68A/B); spots dark purple-red on basal half of each tepal; papillae present; nectaries green; pollen strong reddish orange (31A); stigma grey-green. Fls 190-230 mm wide; tepals 130-135 × 45-63 mm, margins ruffled, tips slightly recurved. Lvs scattered, 110-253 × 30-38 mm, dark green. Stems 0.85-1.1 m, green with darker spots and stripes, and with 2-9 fls. Midseason. (Nomenclatural standard: colour print supplied by registrant (WSY 0096394).)

**'Copellia' VII(-/b)**

Parentage: Pink Glory Group (Div. VII) × *nobilissimum*  
R: E.A. McRae (1967), G: Oregon Bulb Farms, Inc. (1970), N: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)  
Inside deep to moderate purplish pink (66C-D), which suffuses out from the midveins to deep to strong purplish

pink (68A/B), tepal-edges 10-20 mm wide, white; outside white, with a soft blush of pink in bud stage, midribs soft green; spots 5-20, tiny, on each inner tepal; nectaries apple-green; pollen moderate red (179A). Fls 180-230 mm wide; tepals 100 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 70 mm, dark green. Stems 0.9 m, light green, with 5-30 fls. Mid Aug.

#### **Copper Corona Group VI(b/b)**

Parentage: selections from Corona Group  
S: C. Yerex, N: C. Yerex, I: C.A. Best (1958)  
Fls in various shades. Tepals partially reflexed.  
(Published in *Greenock Farms Cat.* 1958: 12.)

#### **'Copper Face' I(b/-)**

Parentage: ('Coronation' × unknown) × ('Coronation' × unknown)  
R: E. Robinson (c. 1956), N: E. Robinson  
Fls bronze-copper red, moderately spotted. Fls large.  
Stems 1 m. July.  
(Published in *ILR* (1969).)

#### **Copper Flares Group VI(a,b/-)**

Parentage: selection from Aurelian Group  
S: C. Yerex, N: C. Yerex, I: C.A. Best  
Fls in copper tones. Stems 1.2-1.5 m.  
(Published in *Greenock Farms Cat.* 1985: 17. Included in *ILR* (1982) as Copper Flares grex.)

#### **'Copper Glow' I(a-b/b)**

Parentage: selection from Egmont Group  
N: R.E. Harrison, I: R.E. Harrison (pre 1970), REG: ICRA (1998)  
Fls coppery bronze; spots on lower half of each tepal.  
Stems 1 m, with 12-18 fls.

#### **'Copper Gold' I(b/-)**

Parentage: 'Radiant Glow' × 'Edith Cecilia'  
R: E. Robinson, N: E. Robinson (1971), I: E. Robinson (1971), REG: E. Robinson (1971)  
Inside bright yellow; outside reddish, and in centre; spots present. Stems 0.8-1 m. July.  
Syn.: 'Red Gold'.  
(Published in *Lilies and other Liliaceae*, 1973: 112.)

#### **'Copper Head' IX(c/d)**

See *superbum* 'Copper Head'.

#### **'Copper Kettle' I(-/-)**

Parentage: selection from Egmont Group  
N: R.E. Harrison, I: R.E. Harrison (1970), REG: ICRA (1998)  
Fls coppery bronze, deepening to a coppery red centre.  
Stems 1-1.9 m, with 20 or more fls.

#### **Copper King Group VI(-/a)**

Parentage: selections from Golden Clarion Group  
S: J. de Graaff (c. 1958), N: J. de Graaff  
Inside orange-tinted gold; outside coppery maroon-red.  
Fls up to 200 mm wide. Stems 1.5-1.9 m, with up to 24 fls. July.

(Published in *Oregon Bulb Farms Cat.*, 1959. Included in *ILR* (1982) as Copper King grex.)

#### **Copper Princess Group VI(-/a)**

Parentage unknown  
R: C. Yerex, N: C. Yerex, I: Rex Bulb Farms (1967)  
Fls in deep tones of orange and copper.  
(Published in *ILR* (1982) as Copper Princess grex.)

#### **'Coppertone' I(a/b)**

Parentage: unnamed bicolor seedling × 'Connecticut King'  
R: F. Fellner (1977), G: F. Fellner (1980), N: F. Fellner (1991), I: F. Fellner (1991), REG: F. Fellner (1991)  
Inside coppery, throat with light frosting; outside green; spots few; nectaries white; pollen brown. Fls 125 mm wide; tepals 60 × 30 mm. Lvs scattered, 150 × 10 mm. Stems 1.1 m, light green, with 10-20 fls. Late July.

#### **'Coquet' I(a/-)**

Parentage: *bulbiferum* var. *croceum* × 'Connecticut Yankee'  
R: E. Hickling (1973), N: E. Hickling (1975), I: J. Wadkamper (1976), REG: J. Wadkamper (1976)  
Fls yellow-orange, slightly dark-spotted; nectaries light green; pollen brown. Tepals 50 mm wide, margins smooth. Lvs wide, dark green. Stems 1.1 m, with over 20 fls. June to July.  
Syn.: 'Suzeraine'.  
(Published in *Lilies and other Liliaceae*, 1976: 90.)

#### **'Coral Ace' Div. ?**

Given as a parent of 'Bobin'. No further details.

#### **'Coralbee' Div. ?**

Given as a parent of 'All Right' and 'Charmeur', both raised by Bischoff Tulleken Lelies B.V. No further details. Almost certainly an error for Coralbee Group.

#### **Coralbee Group VII(-/b-c)**

Parentage unknown  
R: L. Woodriff (1957), G: H. J. & R.L. Strahm (1961), N: R.L. Strahm (1972), I: H.J. & R.L. Strahm (1972), REG: Strahm's Lilies, Inc (1981)  
Inside varying coral-pink tones or white, tepals sometimes with strong red (39A) rays, throat green; outside pale; spots moderate red (47A); nectaries chartreuse-green; pollen orange. Fls 200-250 mm wide, slightly scented; tepals 100 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 50 mm, dark green. Stems 1-1.5 m, green, with c.8 fls. Aug. to Sept.  
(Published in *Rex Bulb Farms Cat.*, 1972. Listed in *ILR* (1982) as a cv. but it is, and probably always has been, a Group.)

#### **'Coral Fashion' VIII(a-b/b)**

Parentage: ((*longiflorum* 'Slocum's Ace' × 'Sterling Star') × 'Red Carpet') × 'Red Carpet'  
R: J.F. McRae (1983), G: J.F. McRae (1985), N: Mt Hood Lilies Inc. (1996), I: Mt Hood Lilies Inc. (1996), REG: Mt Hood Lilies Inc. (1996)

Inside strong red/deep yellowish pink (47B/C) deepening to strong red (53B/C); outside strong red (53C/D); spots magenta; stigma moderate yellowish pink (33D) to white; pollen moderate reddish brown/dark reddish orange (175A/B). Fls 150-200 mm wide; tepal-margins smooth, tips not or very slightly recurved. Lvs scattered, 100-150 × 20-40 mm, mid to dark green. Stems 1-2 m, dark green, with 8-20 fls (from a 14-16 cm bulbs). Late June. Syn.: 'Princept'.

(A *longiflorum*/Asiatic (LA) hybrid. Despite being registered in *ILR Sixteenth Supplement* as 'Princept', the grant of a USPP (1994) under the epithet 'Coral Fashion' now means that the latter epithet must be used as the accepted cv. epithet (ICNCP, 2004: Art. 24.4). Dutch PBR were granted in 1997 under the epithet 'Princept', which becomes a synonym.)

#### 'Coralie' I(-/-)

Parentage: *davidii* var. *willmottiae* × *L. × hollandicum*  
R: A.J. van der Zwet & Sons (c. 1950), N: A.J. van der Zwet & Sons  
AMH 1957  
Fls deep tomato-red with a garnet-brown sheen.

#### 'Coraline' VI(-/c)

Parentage: selection from Aurelian Group  
S: J. de Graaff, N: J. de Graaff  
Fls white shaded with apricot-coral inside. Tepals broad, slightly recurved. Stems 1.2-1.9 m. Aug.  
(Published in *Walter Marx Gardens Cat.*, 1956.)

#### Coral Mist Group VII(-/b)

Parentage unknown  
R: Strahm Bulb Farm (pre 1982), N: Strahm Bulb Farm  
Fls in pastel, coral-like colours: mostly pinks and crimsons, some lavenders and white. Stems 1-2.2 m. July to Aug.  
(Published in *Rex Bulb Farms Cat.*, 1973.)

#### 'Coral Pearl' VII(a/b)

Parentage: 'Melbourne' × 'Opus One'  
R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)  
Inside moderate purplish red (186C), yellowish white (155D) above nectaries and on narrow tepal-margins, throat yellowish white (155D); outside with outer tepals moderate purplish red/moderate purplish pink (186C/D), yellowish white (155D) at base and on narrow margins, midribs strong yellow-green (143C) at base changing into moderate orange (170D); spots few, strong purplish red (61B); papillae yellowish white (155D) and strong purplish red (61B); nectaries strong yellow-green (143C); pollen deep orange-yellow (163A); stigma light greenish grey (188C). Fls 240 mm wide, slightly fragrant; tepals 145 × 47-70 mm, margins ruffled, tips recurved. Lvs scattered, 170 × 28 mm. Stems 1.1-1.3 m, green, with 4-7 fls.

#### 'Coral Pixie' I(a/-)

Parentage: pink-flowered Asiatic seedling × 'Peachblush'  
R: E.A. McRae (1976), G: Oregon Bulb Farms, Inc.

(1980), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)  
Inside deep purplish pink to strong pink (54B/C), deepening at tepal-margins, throat with a light to pale orange-yellow flush; outside strong red (51A), flushed with green along midribs; spots tiny, magenta, in a ring at extreme centre of fl.; nectaries green; pollen strong reddish orange (169A). Fls 130-150 mm wide; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 5 mm, mid green. Stems 0.35 m, light green, with c.25 fls. June.

#### 'Coral Princess' I(a/b)

Parentage: 'Connecticut King' × 'Enchantment'  
R: P.L. Jannotta (1986), G: P.L. Jannotta (1987), N: P.L. Jannotta (1989), REG: P.L. Jannotta (1990)  
Inside bright orange, tepal-tips orange, throat a paler shade which extends along midveins; outside dull orange; spots few, darker, on basal third of each tepal; nectaries light orange; pollen brown. Fls 140-160 mm wide; tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 115-125 × 17-20 mm, mid green. Stems 1-1.1 m, brownish, with up to 29 or more fls. June to July.

#### 'Coral Queen' VII(a-b/b-c)

Parentage unknown  
R: Bischoff Tulleken Lelies B.V.  
Inside light purple (80D), midveins light yellow (10B) at base, changing to deep purplish red (61A) at top, throat yellowish white (155B); outside variegated yellowish white (155B), light purple (80D) and strong reddish purple (70B), tepal-tips strong yellow-green (143A), midribs strong yellow-green (143C) at base, changing upwards to yellowish white (155B), and strong yellow-green (144C) at top; spots deep purplish red (61A) on two-thirds of each tepal; papillae light yellow (10C) in the throat; pollen dark reddish orange (175B); stigma dark red (187A). Fls 230 mm wide; tepals 130 × 60 mm, margins ruffled, tips slightly recurved. Lvs 180 × 50 mm, mid green. Stems 0.62 m, green with darker markings, and with c.4 fls.  
(Fa H.J.A. Rooyakkers B.V. submitted this cv. for registration in 1994, but this was refused because the epithet had already been used. However, the registrant was granted Dutch PBR (LEL 1005) in 1994, and so the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

#### 'Coral Queen' IX(b-c/d)

See *speciosum* 'Coral Queen'.

#### Coral Reef Group V(b/a)

See *longiflorum* Coral Reef Group.

#### 'Coral Seas' I(b/-)

Parentage: 'Edith Cecilia' × unknown  
R: E. Robinson (1969), N: E. Robinson  
Inside straw-coral, throat lighter; outside shaded lavender; slightly spotted. Stems 1.2 m. July.  
(Published in *ILR* (1969) Addenda.)

**‘Coral Sunrise’ I(a/b)**

Parentage unknown

R: Van der Salm (Holland) (pre 1997), N: Van der Salm (Holland), REG: ICRA (1998)

Fls peach-pink with an ivory to gold centre. Stems 1 m.

Late June to July.

(The fl. colour varies widely with temperature.)

**‘Corazon’ VIII(-/-)**

Parentage: unnamed seedling × unnamed seedling

R: Peacock B.V. &amp; Imanse Lelieveredeling B.V.

(1993), G: Peacock B.V., N: Peacock B.V. &amp; Imanse Lelieveredeling B.V. (1996), I: Peacock B.V. &amp; Imanse Lelieveredeling B.V., REG: Peacock B.V. (1997)

Inside brilliant greenish yellow (6B/C); outside pale greenish yellow (2D), tepal-edges brilliant greenish yellow (6B), midveins strong yellow-green (143A/B), base with a little red-brown, strong brown (172A) at top; spots few, dark red (187A), in the throat; papillae absent; nectaries moderate olive-green (137A) with light greenish yellow (1C) alongside; pollen a little stronger than deep orange-yellow (163A); stigma moderate reddish brown (175A). Fls 170 mm wide; tepals 90 × 35-55 mm, margins smooth, tips of outer tepals slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 1 m, green with a little darker marking, and with c.7 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

**‘Corda’ VII(a/b)**

Parentage unknown

R: Gebr. Vletter &amp; Den Haan, N: Gebr. Vletter &amp; Den Haan (2002), REG: Vletter &amp; Den Haan Beheer B.V. (2004)

Inside moderate purplish red (186B), tepal-margins narrow, strong reddish purple (70B), deep pink (48A) along midveins, throat greenish white (155C); outside with outer tepals moderate purplish red/deep purplish pink (186B/70C), greenish white (155C) at base, midveins strong yellow-green (144C) at base, moderate pink (35D) towards top, inner tepals dark purplish pink (186C), greenish white (155C) at base, strong reddish purple (70B) towards margins, midribs strong yellow-green (144C) at base, moderate pink (35D) towards top; spots absent; papillae dark red/deep purplish red (59A/B); nectaries strong yellow-green (144B), brilliant yellow (10A) towards midveins; pollen vivid yellowish pink (28A); stigma greyish yellow-green (148D). Fls 200 mm wide, strongly fragrant; tepals 125 × 60 mm, margins smooth to ruffled, tips slightly recurved. Lvs scattered, 170 × 38 mm, dark green with lighter veins. Stems 1-1.5 m, light green with darker markings, and with c.8 fls. (Colour of fls becomes paler with age.)

**‘Cordelia’ I(a/b-c)**Parentage: *wilsonii* var. *flavum* × ‘Connecticut King’

R: E.A. McRae (1972), G: Oregon Bulb Farms, Inc. (1975), N: Oregon Bulb Farms, Inc. (1982), I: Oregon Bulb Farms, Inc. (1983), REG: Oregon Bulb Farms, Inc. (1985)

Fls vivid yellow (12A) with a vivid orange-yellow flush (20 × 20 mm) along the midvein of each tepal,

throat gold; spots magenta, small, and inconspicuous, in a narrow ring parallel to the green nectaries; pollen moderate orange (167A). Fls 150-180 mm wide; tepals 70 × 40 mm, margins smooth to slightly ruffled, tips slightly recurved. Lvs scattered, 80-120 × 15-20 mm, glossy dark green. Stems 1-1.7 m, mottled soft purple, with 8-30 fls. Early July.

Trade designation: BRIGHT YELLOW.

**‘Cordoba’ VII(a-b/b)**

Parentage unknown

R: Sande B.V. (1990), G: Sande B.V. (1993), N: Sande B.V. (1997), I: Sande B.V. (2000), REG: Sande B.V. (2001)

Inside greenish white (155C), midveins yellowish white (155B); outside yellowish white (155B), changing to yellowish white (155D) towards tepal-edges, midribs strong yellow-green (144A) fading towards the top, tipped strong yellow-green (144A); spots yellowish white (155D), in the throat; papillae yellowish white (155D), on up to three-quarters of each tepal; nectaries strong yellow-green (144A); pollen strong orange (169B) and brownish orange (171B); stigma light brownish grey (201A). Fls 240 mm wide; tepals 120 × 50-70 mm, margins ruffled, tips slightly recurved. Lvs scattered, 180 × 40 mm. Stems 0.8 m, light green, with c.3-7 fls.

**CORELLI VIII(a/b)**

Trade designation of ‘Zanlarelli’.

**‘Corfinio’ VII(a/b)**

Parentage: seedling 88-75 × seedling RF 94-1

R: Vletter &amp; Den Haan Beheer B.V., G: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V. (1999), I: Vletter &amp; Den Haan Beheer B.V., REG: Vletter &amp; Den Haan Beheer B.V. (2001)

Inside deep purplish red (59B), throat deep purplish red (59B) on a white ground; outside deep/moderate purplish red (59B/C) with white at the base, midribs light yellow-green (145D) shading to strong yellow-green (145A) at top; spots dark red (59A), on up to half of each tepal, and papillae, in the throat; nectaries strong yellow-green (144B) surrounded by light greenish yellow (8C); pollen strong reddish orange (169A); stigma moderate yellowish green/moderate yellow-green (138A/B). Fls 190 mm wide; tepals 130-140 × 45-65 mm, margins of outer tepals ruffled, tips recurved. Lvs scattered, 135-175 × 45-65 mm. Stems 0.9-1.25 m, light green with darker markings, and with c.2-5 fls.

**‘Corianne’ I(a/b)**

Parentage unknown

R: F. Tarlton (1966), G: F. Tarlton (1970), N: F. Tarlton (1979), I: J. Wadekamper (1980), REG: J. Wadekamper (1980)

Pink and cream bicolor; tepal-tips strong pink (50C), shading through light yellow (18B) to light orange-yellow (19A) by nectaries; outside strong pink (50C); small spots of dark red (187B) on creamy parts; nectaries pale yellow-green (155A); pollen vivid reddish orange (33B). Fls 120 mm wide; tepals c.60 × 30 mm, slightly recurved,

margins smooth. Lvs scattered, 65 × 8 mm, mid green. Stems 0.9-1 m, pale to mid green, with up to 18 fls. June to July.  
(Published in *Borbeleta Gardens Cat.*, 1980.)

**var. coridion IX(a/c)**  
See *concolor* var. *coridion*.

**‘Corina’ I(a/b)**  
Parentage: ‘Cinnabar’ (Div. I) × (*davidii* × ‘Radostnaia’)  
R: De Jong Lelies Beheer B.V. (pre 1978), N: De Jong Lelies Beheer B.V., REG: De Jong Lelies Beheer B.V. (1978)  
Fls vivid reddish orange (42A) with jasper-red flush, centre speckled dark brown; nectaries whitish; anthers reddish brown. Outer tepal-margins slightly ruffled. Stems 0.6-1 m, with 10-12 fls (from 16-18 cm bulbs). June.  
(Published in *Lilies and other Liliaceae*, 1978/9: 107.)

**‘Corinthe’ I(a/b)**  
Parentage unknown  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside strong orange (24A), tepal-edges strong orange (25A), throat light yellowish pink (29C); outside brilliant orange (29A), tepal-edges vivid orange (29B), midribs light yellow (18A); spots and papillae absent; nectaries light yellowish pink (29C), hairy; pollen strong reddish orange (169A); stigma strong red (46A). Fls 130 mm wide; tepals 80 × 40 mm, margins smooth, tips recurved. Lvs scattered, 155 × 20 mm. Stems 1.5 m, dark, with c.9 fls.

**‘Corneil’s Yellow’ II(c/d)**  
Parentage unknown  
R: E.A. Corneil (pre 1975), G: E.A. Corneil, N: L.M. Barber (2005), REG: L.M. Barber (2005)  
Inside vivid yellow (14B), throat brilliant yellow (14C); outside vivid yellow (14B), midribs strong yellow-green (144A); spots moderate red (179A), evenly distributed on whole tepal surface; nectaries strong yellow-green (144A); pollen deep orange-yellow (163A); stigma brilliant yellow (14C). Fls 51 mm wide, slightly scented; tepals 37 × 16 mm, margins smooth, tips recurved. Lvs whorled, 160 × 45 mm. Stems 1.3 m, strong yellow-green (144A), with c.11 fls in a pyramidal infl. June.  
(Misspelling: ‘Cornell Yellow’. Named in memory of the raiser.)

**‘Cornelli’ VII(-/-)**  
Parentage: unknown *speciosum* var. *rubrum* type  
G: S. Schoon, N: S. Schoon (1984), I: S. Schoon (1984), REG: S. Schoon (1985)  
Fls white, each tepal with a carmine-rose midvein and currant-red blotch, throat with cardinal-red spots; outside white to transparent rosy white; nectaries majolica-brown; pollen reddish brown. Fls 160 mm wide; tepals 70 × 35 mm, margins slightly ruffled, tips not recurved. Lvs 130 × 25 mm, mid green. Stems 1 m, pale green, with c.11 fls. Aug.

**‘Cornell Yellow’ II(c/d)**  
Misspelling of ‘Corneil’s Yellow’.

**‘Corner Pink’ VII(-/b)**  
Parentage: (*speciosum* var. *rubrum* × *auratum*) × *rubellum*  
R: L. Woodriff (1975), G: L. Woodriff (1978), N: L. Woodriff (1980), I: L. Woodriff (1980), REG: L. Woodriff (1984)  
Fls pink; spots reddish brown; nectaries green; pollen brown. Fls 150 mm wide; tepals 90 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 125 × 25 mm, mid green. Stems 1.2 m, green, with c.12 fls. May.

**‘Cornfield’ VI(b/b)**  
Parentage: selection from Aurelian Group  
S: E.C. Genat (c. 1953), N: E.C. Genat  
Fls maize-yellow; spots absent. Fls slightly bell-shaped. Stems 1.9 m.  
(Published in *LYB* 20: 78 (1957).)

**Cornish Group I(a,b/-)**  
Parentage: crimson-flowered Cambridge Group × ‘Joan Evans’ or ‘Destiny’  
R: Rosewarne EHS, N: Rosewarne EHS (1974), I: Rosewarne EHS (1974)  
Fls ranging from red to bronze and orange. Stems up to 1 m.

**‘Cornwall’ VII(a/-)**  
Parentage: ‘Star Gazer’ × ‘Joy’  
R: Gebr. Vletter & Den Haan (1990), G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1997), I: Gebr. Vletter & Den Haan (1997), REG: Gebr. Vletter & Den Haan (1997)  
Inside strong purplish red (60D), the colour in the midvein fading towards top, throat yellowish white (155B); outside deep red to strong purplish red (60A/C), tinged strong yellow-green (143C) at base, midribs pale yellow-green (155A) to light greenish yellow/pale yellow-green (4C/D), strong yellow-green (143C) at top, tepals tipped strong yellow-green (143A); spots dark red (187B), on basal part of each tepal; papillae deep red/strong purplish red (60A/D), in the throat; nectaries strong yellow-green (144B), with a brilliant yellow (11A) rim; pollen strong orange (168A/B); stigma dark red (187A). Fls 220 mm wide; tepals 125 × 45-60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 35 mm, mid green. Stems 0.95 m, green with slight darker markings, and with 2-3 fls.

**‘Corona’ I(a/-)**  
Syn. of ‘Atilla’.

**Corona Group VI(-/a,b)**  
Parentage: selections from Aurelian Group  
S: C. Yerex, N: C. Yerex, I: A.D. Rothman (1952)  
Fls copper, ivory or gold. Stems 1.2-1.9 m. July.  
(Published in *Strawberry Hill Cat.*, 1952/53.)

**Coronado Group I(a,b/-)**Parentage: *lanceifolium* × *L. × hollandicum*

R: J. de Graaff (c. 1948), N: J. de Graaff

Fls yellow, orange or red. Stems 1 m. June.

Syn.: Rainbow Group.

(Published in *Oregon Bulb Farms Cat.*, 1950 as Rainbow Hybrids; in *LYB* 21: 59 (1958) as 'Coronado' strain, but without description; in *ILR* (1960).)**'Coronation' I(c/c-d)**

Parentage: selection from Stenographer Group

S: I. Preston, N: I. Preston (1938)

AM 1945

Fls vivid yellow (15A) or cadmium orange, faintly suffused with reddish orange at tepal-tips; spots small, maroon; anthers creamy yellow; pollen dull brown. Stems 1-1.5 m, with up to 25 fls. July.

(Published in *LYB* 7: 173 (1938).)**'Corrado' VI(c/b)**

Parentage unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1999),

REG: B. Mičulka (1999)

Inside deep orange-apricot, tepal-tips paler; outside with mahogany midribs; pollen apricot-brown; stigma pale green. Fls 150 mm wide; tepals 115 × 45 mm, margins coarsely wavy, tips moderately recurved; pedicels 70 mm long, spotted. Lvs scattered, 125 × 12 mm, dull mid green. Stems 1.25 m, spotted with dark brown. Early July.

**'Corrida' I(a/b)**

Parentage: seedling OR 84-31 × seedling W 84-8

R: Vletter &amp; Den Haan Beheer B.V. (1987), G: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V. (1992), I: Vletter &amp; Den Haan Beheer B.V., REG: Ruiter Bloembollen B.V. (1998)

Inside light greenish yellow (5C) in the basal part, strong red/deep pink (51A/B) towards tepal-tips, throat strong red (51A); outside dark red and moderate purplish red (59A &amp; C) on a paler ground, with a little strong yellow-green (143C) at base, tepals narrowly edged moderate orange (168C) and tipped strong yellow-green (143C); spots and papillae absent; nectaries pale yellow-green (155A); pollen moderate reddish brown (175A); stigma dark red (187B). Fls 180 mm wide; tepals 90 × 30-45 mm, margins smooth, tips recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 0.95-1.05 m, green, with 10-14 fls (from 14-16 cm bulbs). Midseason to late.

**'Corsage' I(b/b-c)**

Parentage: ('Lemon Queen' (Div. I) × unknown) × 'Edith Cecilia'

R: J. de Graaff (c. 1961), N: J. de Graaff

Inside pale pink, with a white centre; outside yellowish ivory and rose-pink; pollen absent; spots tiny, deep maroon, on basal half of each tepal; stigma pink. Stems 1.2 m. July.

(Published in *ILR* (1969).)**'Corsair' I(a/-)**

Parentage: selection from Fighter Group

S: I. Preston, N: I. Preston

Fls cadmium-orange, flushed with red. Stems 1 m. July.

(Published in *LYB* 10: 43 (1946).)**'Corsaro' VII(b/b)**

Parentage: 'Trento' × 'Barbaresco'

R: Gebr. Vletter &amp; Den Haan, G: Gebr. Vletter &amp; Den Haan, N: Gebr. Vletter &amp; Den Haan, I: Gebr. Vletter &amp; Den Haan, REG: Gebr. Vletter &amp; Den Haan (1999)

Inside dark red (187C), tepals fading towards edges, throat with a little yellowish white (155B); outside moderate purplish red (64A) and deep purplish red (187D), base with a little yellowish white (155B), tepal-tips strong yellow-green (143A); spots dark red (187A), on basal part of each tepal; papillae yellowish white (155B) and deep purplish red (187D); pollen strong orange (169B); stigma a little stronger than deep purplish red (187D). Fls 220 mm wide; tepals 115 × 45-60 mm, margins ruffled towards tips, tips slightly recurved. Lvs scattered, 115 × 45-60 mm, dark green. Stems 1.3 m, green, with c.2-6 fls.

**'Corsica' I(a/b-c)**

Parentage: 'Pirate' × unknown

R: Van der Salm Bulb Farm, Inc. (1979), G: Van der Salm Bulb Farm, Inc. (1980), N: Van der Salm Bulb Farm, Inc. (1981), I: Van der Salm Bulb Farm, Inc. (1987), REG: Van der Salm Bulb Farm, Inc. (1988)

Inside moderate purplish pink (54D) with orange-buff blotches in the throat and a moderate red (181C) centre; outside light purplish pink (62C), tepal-edges light pink (50D); spots and veins moderate red in the throat; nectaries moderate red; pollen dark reddish orange (175C). Fls 170 mm wide; tepals 80 × 40 mm. Lvs scattered, 180 × 20 mm, pale green. Stems 1-1.25 m, dark green, with 6-20 fls. Late June to July.

**'Corso' VII(a/b)**

Parentage unknown

R: Vletter &amp; Den Haan Beheer B.V., G: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V., I: Vletter &amp; Den Haan Beheer B.V., REG: Vletter &amp; Den Haan Beheer B.V. (1999)

Inside moderate/strong purplish red (64A/B) on a paler ground, throat yellowish white (155B) and light greenish yellow (8C) alongside the strong yellow-green (143C) nectaries; outside strong purplish red (64B) with a little moderate purplish red (64A) on a paler ground, base with a little yellowish white (155B), midribs strong yellow-green (145A), tipped strong yellow-green (143A); spots deep red (60A), on basal part of each tepal; papillae yellowish white (155B) tipped with deep red (60A), in the throat; stigma moderate purplish red and moderate purplish pink (186C &amp; D); pollen moderate reddish orange (171A). Fls 240 mm wide; tepals 120 × 50-70 mm, margins ruffled, tips slightly recurved. Lvs scattered, 120 × 50-70 mm, mid green. Stems 1.25 m, green with slight darker markings, and with c.4-6 fls.

Trade designation: VLETCOR.

**‘Corte’ VII(b-c/b)**

Parentage: seedling RM 94-41 × seedling RM 97-08  
 R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2003), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals strong purplish red (60B/C), moderate purplish red (70A) towards margins, outer tepals strong purplish red (60C/71B), throat greenish white (155C); outside with inner tepals strong reddish purple (70B), moderate to strong purplish red (64A/B) towards tip, midribs strong yellow-green (144C) at base changing into greenish white (157D), outer tepals deep to strong purplish red (71A/B), base strong yellow-green (144C), margins greenish white (155C) at base, pale yellow-green (155A) along midribs, strong yellow-green (144A) at top; spots absent; papillae dark red (187C); nectaries strong yellow-green (144A) with brilliant yellow (10A) edge; pollen strong brown (172A); stigma light purple (77C). Fls 210 mm wide; tepals 135-140 × 52-65 mm, margins slightly ruffled, tips recurved. Lvs scattered, 145 × 34 mm, dark green. Stems 0.85-1.2 m, light green with darker markings, with 3-4 fls.

**‘Cortina’ I(a/-)**

Parentage: *bulbiferum* × ‘Connecticut King’  
 R: K. Weidemann (1974), G: V. Strasser (1978), N: V. Strasser (1978), REG: V. Strasser (1997)  
 Fls yellow throughout except for a red throat. Tepal-margins smooth. Stems 0.9 m, pale green.

**‘Cortona’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
 Inside dark red (187A), tepals becoming dark red (187B) towards tip, and with a dark red (187A) edge, throat deep red (185A) and brilliant greenish yellow (151D); outside a little paler than deep red (185A), towards the tepal-edges stronger than dark red (187B), the edge dark red (187A), midribs dark red (183A), outer tepals a little stronger coloured; spots absent, but a few papillae in the throat; nectaries moderate purplish red (186B); pollen strong brown (172A); stigma dark red (187A). Buds hairy. Fls 195 mm wide; tepals 110 × 35-45 mm, margins ruffled, tips recurved. Lvs scattered, 190 × 20 mm. Stems 1.3 m, green with dark markings, and with 7-8 fls.

**‘Coruña’ I(a/-)**

Parentage: ‘Rosa’ × ‘Esther’  
 R: Gebr. N. & B. Laan & Zn (1989), G: Gebr. N. & B. Laan & Zn (1991), N: Gebr. N. & B. Laan & Zn (1996), I: Gebr. N. & B. Laan & Zn (1996), REG: Gebr. N. & B. Laan & Zn (1996)  
 Inside vivid orange (28A), throat brilliant/light orange (29A/B); outside vivid yellowish pink (30C); dark red (187A) spots and a few papillae in the throat; nectaries coloured as tepals, hairy; pollen vivid reddish orange (32A); stigma dark red (187B). Fls 150 mm wide; tepals 90 × 40-50 mm, margins smooth, tips hardly recurved.

Lvs scattered, 125 × 20 mm, mid green. Stems 1.3 m, pale green with darker markings, and with c.9 fls. June.

**‘Corvara’ VII(a-b/b-c)**

Parentage: seedling 89200 × seedling 86119-27  
 R: Sande B.V., REG: Sande B.V. (2003)  
 Inside dark red/deep red (187C/53A); outside between deep purplish pink (66C) and moderate purplish red (186B); spots and papillae present; nectaries dark red; pollen red-brown; stigma purple. Tepals medium to long, margins ruffled, tips strongly recurved. Stems 1-1.3 m, with some darker markings. Midseason to late.  
 Trade designation: RIO NEGRO.

Parentage: seedling BW 94-03 × seedling CW 98-2  
 R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1999), REG: Vletter & Den Haan Beheer B.V. (2004)  
 Inside yellowish white (155D) flushed with light pink, throat yellowish white (155D); outside yellowish white (155D), midribs strong yellow-green (143B) at base with moderate red (179B) flush; spots and papillae absent; nectaries strong yellow-green (143B); pollen light brown; stigma light greenish yellow (1C). Fls 165 mm wide, slightly fragrant; tepals 110 × 60 mm, margins smooth, tips recurved; pedicels hairy at base. Lvs scattered, 135 × 28 mm. Stems 1.1-1.3 m, green with some darker markings at top, and with c.6 fls.

**Cosmic Group VI(-/c)**

Parentage: ‘Honeydew’ × *henryi* Latgales Group  
 R: N.A. Miroshniczenko (c. 1979), N: N.A. Miroshniczenko  
 Fls ranging from white and cream to dark orange. Stems up to 1.7 m. July.

**‘Cosmic Blast’ I(a/b)**

Parentage: seedling A-75 × B5 × BMK × seedling A-282-86  
 R: Oregon Bulb Farms, Inc. (pre 1997), REG: Cebece Lilies, Inc. (1998)  
 Inside light yellow (15D) with darker tepal-edges, throat pale yellow (20C) from top of nectaries down to claw; outside light yellow (15D) with vivid yellow (15A) tepal-edges; brushmarks dark red (187C/A); spots dark red (187A), on basal third of each tepal, mostly below brushmark and above the pale yellow nectaries; pollen dark reddish orange (173A); stigma pale yellow (20C). Fls

110 mm wide; tepals 75 × 33 mm, margins smooth, tips strongly recurved. Lvs scattered, 98 × 10 mm. Stems 1 m, dark, with c.12 fls. Midseason.

**‘Cosmonaut Leonov’ VI(-/c)**

Parentage: selection from Cosmic Group

S: N.A. Miroshniczenko (c. 1979), N: N.A.

Miroshniczenko

Fls with 3 tepals yellow, the other 3 intense orange. Stems 1.4 m. July.

**‘Cosmonaut Sevastianov’ VI(-/c)**

Parentage: selection from Cosmic Group

S: N.A. Miroshniczenko (c. 1979), N: N.A.

Miroshniczenko

Fls pale cream, with small spots. Stems 1.5 m. July.

**‘Cosmonaut Tereshkova’ VI(-/c)**

Parentage: selection from Cosmic Group

S: N.A. Miroshniczenko (c. 1979), N: N.A.

Miroshniczenko

Fls pure white with a green star at centre. Stems 1.2 m. July.

**‘Cosmopolitan’ VII(b/-)**

Parentage: (*L. × parkmanii* ‘Journey’s End’ × ‘Star Gazer’) × (‘Joy’ × unknown)

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff

Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies

B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1995),

REG: Bischoff Tulleken Lelies B.V. (1997)

Inside vivid purplish red (67B) on a paler ground, midveins strong purplish red (67A) fading towards top, tepal-tips with a little vivid purplish red (67B), throat yellowish white (155B); outside strong/vivid purplish red (67A/B) on a paler ground, some yellowish white (155B) at base and tipped strong yellow-green (143A), midribs strong yellow-green (143C) and pale yellow-green (155A), shading strong yellow-green (144C) at top; spots dark red (187B), on basal part of each tepal; papillae yellowish white (155B) and dark red (187B), in the throat; nectaries strong yellow-green (143C); pollen strong reddish orange (169A); stigma moderate purple. Fls 230 mm wide; tepals 120 × 40-55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 180 × 30 mm, mid green. Stems 1 m, green, with 6-7 fls. July.

**‘Costa’ I(a/b)**

Parentage unknown

N: Sande B.V. (2001), REG: Brandenburg-Elshof B.V. (2005)

Inside light greenish yellow (4C) to pale yellow-green (4D); outside pale yellow-green (4D); spots and papillae absent; nectaries green; pollen brown; stigma yellow-green. Tepal-margins slightly ruffled, tips slightly recurved. Lvs scattered, dark green. Stems 1.1-1.25 m, green with darker markings, and with 3-6 fls. Midseason to late.

**‘Costa del Sol’ I(a/b)**

Parentage unknown

R: Laan Lelie B.V., N: Lily Company B.V. (2000), REG:

Lily Company B.V. (2004)

Inside with each tepal brilliant yellow (13C) in basal half and deep pink (47C) in apical half; outside of inner tepals strong pink (50C), deep pink (47D) towards edges, outer tepals deep pink/moderate red (48A/181B), midribs deep pink (47D); spots dark red (187A) on basal part of tepals; papillae absent; nectaries yellowish white (155D); pollen brownish orange/moderate orange (164A/167A); stigma moderate red (179A). Fls 130 mm wide; tepals 72.5 × 30-40 mm, margins smooth, tips slightly recurved. Lvs 87.5 × 15 mm, light green. Stems 0.6 m, with some darker markings, with c.11 fls.

(Nomenclatural standard: colour print supplied by registrant (WSY 0096364).)

**‘Costa Rica’ VII(-/c)**

Parentage: ‘Expression’ × ‘Casa Blanca’

R: W. Paauw & Zn B.V. (1991), G: W. Paauw & Zn B.V.

(1992), N: W. Paauw & Zn B.V. (1993), I: Peacock B.V.

& Imanse Relieverdeling B.V. (1993), REG: W. Paauw

& Zn B.V. (1996)

Inside strong purplish red (59D) on a yellowish white (155D) ground, towards base and along midveins yellowish white (155D); outside yellowish white (155D), suffused with very pale, strong purplish red (59D), midribs yellowish white (155D), outer tepals with a narrow yellowish white (155D) edge; spots varying from none to many, yellowish white (155D) papillae in basal part of fl.; nectaries strong yellow-green (144C); pollen strong orange (169B); stigma dark red (187A) on a pale yellow-green (193B) ground. Fls 250 mm wide; tepals 135 × 40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 210 × 55 mm, mid green. Stems 1.2 m, pale green, with c.5 fls. Midseason.

**‘Côte d’Azur’ I(a/b-c)**

Parentage unknown

R: Vletter & Den Haan (1978), G: Vletter & Den Haan (1980), N: Vletter & Den Haan (1984), I: Vletter & Den Haan (1984), REG: Gebr. Vletter & J.A. Den Haan (1985)

Inside Neyron-rose, midveins deep/strong purplish pink (55B/A), throat strong purplish pink (55A); outside neyron-rose to spinel-red, tepal-edges cherry; spots tiny, light red-brown, in centre of fl. on a pale pink ground; nectaries yellow-brown; pollen pale reddish brown. Fls 130 mm wide; tepals 65 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 15 mm, mid green. Stems 0.7-0.9 m, green/brown, with 8-11 fls (from 14-16 cm bulbs). July.

(Published in *Bloembollencultuur*, 1984.)

**‘Côte d’Ivoire’ VIII(a/b)**

Parentage: seedling PG 95-32 × seedling RH 95-19

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den

Haan Beheer B.V., N: Vletter & Den Haan Beheer

B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG:

Vletter & Den Haan Beheer B.V. (2001)

Inside brilliant yellow (9C), changing into light greenish yellow (5D) towards tepal-tips, throat brilliant yellow (9C); outside pale yellow-green (4D), changing to light

greenish yellow (5D) at tepal-edges, midribs of outer tepals light yellow-green (154D) suffused with deep pink (185D); spots absent; papillae vivid yellow (9A); nectaries strong yellow-green (144B); pollen greyish brown (166A); stigma pale yellow-green (193A). Fls 220 mm wide; tepals 120-130 × 45-65 mm, margins slightly ruffled, tips recurved. Lvs scattered, 170 × 35 mm. Stems 1.1-1.2 m, dark, with few fls.  
(An Orienpet (OT) lily. This lily was registered as given here, although the correct spelling of the country is Côte d'Ivoire.)

#### 'Côte d'Or' I(a/-)

Parentage: unnamed seedling × 'Parma'  
R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1990), I: Vletter & Den Haan. REG: Vletter & Den Haan (1991)  
Inside vivid yellow (9A), throat strong yellow-green (143B); outside vivid yellow (9B) suffused with light yellow-green (145B); spots absent; pollen brownish orange (172C). Fls 170 mm wide; tepals 90 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 155 × 18 mm, mid green. Stems 1.45 m, green with darker markings, and with c.9 fls. May (under glass).

#### 'Coulance' VII(-/d)

Parentage: *L. × parkmanii* Everest Group × 'Star Gazer'  
R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1990)  
Inside yellowish to greenish white (155B/C), midvein strong purplish red (58C) surrounded by a moderate purplish pink (66D) flush, throat brilliant yellow-green (149B); outside greenish white (155C), midribs pale yellow-green (155A); spots and papillae moderate purplish red (59C), in the throat; pollen strong reddish orange (169A). Fls 210 mm wide; tepals 100 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 39 mm, mid green. Stems 0.8 m, pale green, with c.5 fls.

#### 'Country Dawn' I(a/-)

Parentage: 'Devotion' × unknown  
R: P. Whipple (pre 1983), N: P. Whipple, I: Borbeleta Gardens  
Fls light yellowish pink (36A); spots brown; pollen brown. Stems 0.8 m.  
Syn.: 'Friendship' (Div. I).

#### 'Country Fest' I(b-c/-)

Parentage unknown  
R: H.E. Hoepner (pre 1985), G: H.E. Hoepner & S.R. Kaul, N: S.R. Kaul (1993), I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)  
Inside strong orange; outside red; anthers and spots the same colour as the outside in bud. Tepals long, recurved. Lvs broad, dark green. Stems 1.8 m, dark reddish brown, with secondary fls in a long, well-spaced infl. July.

#### 'Country Maid' IV(-/-)

See *L. × burbankii* 'Country Maid'.

#### 'Country Star' VIII(a-b/b)

Parentage: ((Sundrop Group × 'Connecticut King') × (Panamint Group × 'Sterling Star')) × (*longiflorum* × 'Aristo')  
R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1993), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside light orange-yellow (22C) and nasturtium-orange, becoming paler, throat brilliant orange (25C); outside pale orange-yellow (23D), each tepal with light orange-yellow (23C) margin; spots and papillae present; nectaries orange-pink; pollen red-brown; stigma very pale orange. Tepal-margins smooth, tips slightly recurved. Lvs scattered, green. Stems 1.05 m, green without darker markings, and with 3-6 fls (from 16 cm bulbs). Early.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Country Sunshine' I(a/-)

Parentage: *lanceifolium* var. *flaviflorum* 'Yellow Tiger' × 'Connecticut Yankee'  
R: J. Wadekamper (1983), G: J. Wadekamper (1986), N: J. Wadekamper (1991), I: Borbeleta Gardens (1991), REG: J. Wadekamper (1993)  
Tepals brilliant yellow (10A), throat lime-green; spots few, brown, towards base of each tepal; nectaries green; pollen mid brown. Tepals unusually wide, 80 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 20 mm, mid green. Stems 0.95 m, mid green, with 12-14 fls. Midseason.  
(Published in *Borbeleta Gardens Cat.*, 1991.)

#### 'Country Tyme' I(a/-)

Parentage unknown  
R: P. Whipple, N: P. Whipple (1979), I: Borbeleta Gardens (1980), REG: Borbeleta Gardens (1981)  
Inside light yellow (18A) to pale yellow (18C), tepal-tips light yellow (18A), throat ivory-buff; outside tannish ivory; spots brown, on half of each tepal; nectaries ivory; pollen light rust-brown. Tepals 80 × 40 mm, margins ruffled, tips not recurved. Lvs scattered, 120 × 12 mm, mid green. Stems 1 m, light green, with c.30 fls. July.  
(Published in *Borbeleta Gardens Cat.*, 1980.)

#### COUPLET VIII(a/b)

Trade designation of 'Zanlacoup'.

#### 'Courier' VIII(a/b)

Parentage: seedling N 64 × seedling G 90-05  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside brilliant greenish yellow (2B), midveins from above nectaries strong yellow-green (144C), throat light yellow-green (145C); outside pale yellow-green (4D), midribs pale greenish yellow (1D), up to a quarter along midvein of outer tepals suffused strong red (46A) and tipped strong

yellow-green (143B); spots and papillae absent; nectaries greenish, white-hairy; pollen brownish orange (165B); stigma greyish red (178A). Fls 170 mm wide; tepals 110 × 55 mm, margins smooth, tips recurved. Lvs scattered, 180 × 15 mm. Stems 1-1.2 m, green with darker markings in basal part, and with 5-6 fls. June to July.  
(*A longiflorum*/Asiatic (LA) hybrid.)

**‘Couronne d’Or’ I(a/b)**

Parentage unknown  
R: Vletter & Den Haan (1973), G: Vletter & Den Haan (1975), REG: J. Menting (1989)  
Inside vivid yellow (12A), flushed with vivid yellow (14B); outside vivid yellow (9A/B); some small, dark red (187A) spots in the throat; pollen strong to moderate orange (168B/C). Fls 160 mm wide; tepals 80 × 40 mm, not recurved. Lvs scattered, 70 × 6 mm, mid green. Stems 0.65-0.9 m, green with darker markings, and with 7-9 fls (from 16-18 cm bulbs).

**‘Cover Girl’ VII(-/c)**

See *L. × parkmanii* ‘Cover Girl’.

**‘Cover Girl’ I(a/b-c)**

Syn. of ‘Isis’.

**‘Cowichan’ I(b/-)**

Parentage: complex of *lancifolium*, *L. × hollandicum*, *L. × maculatum* & *davidii* var. *wilmottiae*  
R: A.E. Simoni (c. 1962), N: A.E. Simoni  
Tepals red; spots black. Stems 0.6-1 m.  
(Published in *ILR* (1969).)

**‘Cranberry Dancer’ II(c/d)**

Parentage unknown  
R: unknown, G: E.E. Fox (1989), N: E.E. Fox (1990), I: Fox Lily Ranch (1993), REG: E.E. Fox (1992)  
Inside tepal-tips and apical third cranberry-red, the central third yellow partially overlaid with cranberry spots, the basal third deep yellow; outside midribs plum-coloured, with plum-coloured tips turning to deep yellow at the centre of each tepal; spots medium sized, on the central third of each tepal, spilling onto the back at the midpoint; nectaries deep yellow; pollen deep yellow. Fls 50 mm wide; tepals 40 × 15 mm, margins smooth, tips slightly recurved. Lvs whorled, 110 × 55 mm, mid green. Stems 1.6 m, green, with c.24 fls. Late June to early July.

**‘Cranberry Pinwheel’ I(a-b/-)**

Parentage: G. Jacobs seedling R/J-1 × H. Jacobi seedling 1090  
R: J. Wadkamper (1979), G: J. Wadkamper (1982), N: Borbeleta Gardens (1993), I: Borbeleta Gardens (1993), REG: Borbeleta Gardens (1993)  
Tepals vivid red (44A), with narrow, orange lines radiating down the centre; spots absent; nectaries orange; pollen brown. Tepals 90 × 25 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 12 mm, dark green. Stems 1 m, greenish brown, with 15-17 fls. Late.  
(Published in *Borbeleta Gardens Cat.*, 1993.)

**‘Cranberry Star’ I(a-b/-)**

Parentage: Wadkamper late red-flowered seedling × ‘White Prince’  
R: J. Wadkamper (1980), G: J. Wadkamper (1982), N: E. Reed (1992), I: Borbeleta Gardens (1993), REG: J. Wadkamper (1993)  
Tepals vivid reddish orange (44B), each with a white ray; spots absent; nectaries white; pollen orange-brown. Tepals 80 × 20 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 15 mm, mid green. Stems 1.2 m, mid green, with 8-10 fls. Midseason.  
(Published in *Borbeleta Gardens Cat.*, 1993.)

**‘Crans Montana’ I(a/c)**

Parentage: ‘King Pete’ × ‘Berliner Morgen’  
R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)  
Inside light yellowish pink (26D) except for brilliant orange-yellow throat; small, dark red spots and some brushmark stripes on basal half of each tepal; nectaries yellowish grey (156A); pollen deep red (185A); stigma brownish orange (166C). Fls 140 mm wide; tepals 85 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 27 mm. Stems 1.1 m, black, with 8-10 fls. Mid July.  
(Crans Montana is a village in Switzerland.  
Nomenclatural standard: colour print provided by registrant (WSY 0024699).)

**‘Crazy Horse’ VII(b/-)**

Parentage unknown  
R: C. Hogewoning (pre 1993), REG: D. Kromhout & C. Hogewoning (2002)  
Inside of inner tepals very pale purple (73D), inside of outer tepals light purplish pink (62C), base of midveins strong purplish red; outside yellowish white (155D); spots and papillae present; pollen light brown; stigma green. Tepal-margins ruffled, tips recurved. Stems with dark markings. Midseason to late.

**‘Cream Beauty’ VI(c/a)**

Parentage: *L. × sulphurgale* × *leucanthum* var. *centifolium*  
R: Gebr. N. & B. Laan & Zn (pre 1976), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1976)  
Tepals light yellow (10B), throat light primrose-yellow; anthers orange.  
(Published in *Lilies and other Liliaceae*, 1976: 90.)

**‘Creamcheese’ I(a/-)**

Parentage unknown  
R: Fa P. Hoff & Zn (1978), G: Fa P. Hoff & Zn (1980), N: Hoffgaarde B.V. (1986), I: Hoffgaarde B.V. (1987), REG: Hoffgaarde B.V. (1987)  
Inside brilliant yellow (12B), throat primrose-yellow with green veins; outside light yellow to pale greenish yellow (10C/D); tiny brown spots in the throat; nectaries buff-yellow; pollen dark reddish brown. Fls 160 mm wide; tepals 80 × 35 mm. Lvs scattered, 160 × 20 mm. Stems 1 m, dark green, with c.9 fls.

**'Creamland' VI(b/a)**

Parentage: 'Golden Spur' × 'Honeydew'  
 R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B. Mičulka (1984)  
 Butter-white over a quarter of throat; outside whitish with pale yellow-green midribs; pollen ochre-apricot. Fls 145 mm wide; tepals 125 × 40 mm, strongly recurved. Lvs 110 × 11 mm, more-or-less glossy. Stems 1.4 m, strongly violet-spotted. Mid July.

**'Creamlight' VI(b/a)**

Parentage: 'Honeydew' × unknown  
 R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B. Mičulka (1984)  
 Inside creamy yellow, throat pale yellow; outside with green midribs; pollen ochre-brown. Fls 165 mm wide; tepals 140 × 40 mm, strongly recurved. Lvs 110 × 9 mm, slightly glossy pale green. Stems 1.4 m, slightly brown-dotted at base. Mid July.

**'Cream Orchid' I(b/-)**

Parentage: Preston seedling 0-25 × 'Edith Cecilia'  
 R: E. Robinson, N: E. Robinson, I: E. Robinson (1972), REG: E. Robinson (1972)  
 Tepals with creamy straw centre and pink-lavender tips; heavily spotted in centre. Stems 1 m.  
 (Published in *Lilies and other Liliaceae*, 1973: 114. In E. Fisher, *Named Lily Hybrids and their Origins*, 12 (1978) the seed parent is given as 'Radiant Glow'.)

**'Cream Pastel' I(b/-)**

Parentage: selection from Pastel Group  
 S: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1979)  
 Fls deep cream, lightly spotted. Stems 1 m. Dec. (Australia).

**'Cream Puff' VI(b/a)**

Parentage unknown  
 R: G.E. Holland, N: G.E. Holland  
 Fls cream.  
 (Published in *Lilyhaven Cat.*, 1959.)

**'Cream Star' IX(-/-)**

See *auratum* 'Cream Star'.

**'Cream Tiger' I(b/-)**

Parentage: (*lancifolium* × 'Discovery') × (Citronella Group × *lancifolium* var. *flaviflorum*)  
 R: Gebr. N. & B. Laan & Zn (1975), G: Gebr. N. & B. Laan & Zn (1977), N: Gebr. N. & B. Laan & Zn (1979), I: Gebr. N. & B. Laan & Zn (1979), REG: Gebr. N. & B. Laan & Zn (1983)  
 Inside creamy yellow, tepal-tips cream, throat creamy yellow; outside green-yellow; spots maroon; nectaries green; pollen brown. Tepals 60 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 4-5 mm, mid green. Stems 1.2 m, mid green. July.

**'Cream Tiger' I(b/-)**

Syn. of 'Torino'.

**'Cream Wax' Div. ?**

Parentage unknown  
 R: Blackthorne Gardens (pre 1982)  
 Fls pale cream. Stems c.1 m, with bulbils. July to Aug.

**'Creamy Belles' VIII(a-b/-)**

Parentage: *L. × aurelianense* × unnamed Asiatic selected by C. Robinson  
 R: L.M. Collicutt (1988), G: L.M. Collicutt (1989), N: Morden Research Center (1996), I: Morden Research Center (1996), REG: Morden Research Center (1997)  
 Inside pale orange-yellow (16D) with a vivid yellow (9B) centre and throat; outside greyish red (182B) suffused to pale orange-yellow (16D); very few, light spots at base of each tepal; nectaries green; pollen strong orange (170A). Fls 130 mm wide; tepals 100 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 20 mm, mid green. Stems 0.86 m, mid green, with 6-9 fls. Mid July. (An Asiatic/Aurelian hybrid.)

**'Creamy Luck' I(a/b)**

Parentage: 'Blizzard' × 'Katinka'  
 R: L. Høpfner (1991), G: L. Høpfner (1994), N: L. Høpfner (1997), REG: L. Høpfner (1997)  
 Inside pale orange-yellow/creamy white (159C/D), throat light orange-yellow (19A); outside pale orange yellow/creamy white (159C/D) with light midribs; spots few, small, pink, deep in the throat; nectaries light orange-yellow (19A); pollen vivid reddish orange (34A); stigma light yellow (18A). Fls 150 mm wide; tepals 75 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 15 mm, dark green (135A). Stems 0.95 m, dark green (135A), with 8 or more fls. July.

**'Creation' VI(a/b)**

Parentage: ('Pink Bouquet' × 'Star Gazer') × unnamed seedling  
 R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)  
 Inside strong to light purplish pink (63C/D), midveins strong red (53B), surrounded by a flame-shaped, moderate purplish pink (66D) area, throat strong yellow-green (145A) edged light greenish yellow (3C); outside light purplish pink (65B) suffused with strong purplish pink (63C) on outer tepals, midribs yellowish white (158C); spots dark red (187A/B) on all but the tips of each tepal; nectaries very pale purple (76D); pollen strong orange (168B). Fls 250 mm wide; tepals 120 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 60 mm, mid green. Stems 0.9-1.1 m, dull green, with c.5 fls (from 14-16 cm bulbils), 8+ (from 20 cm bulbils). July (under glass).

**'Crema Bella' VIII(a-b/b)**

Parentage: (unnamed seedling × 'Sahara') × (*longiflorum* × 'Aristo')  
 R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2001),

REG: Bischoff Tulleken Lelies B.V. (2001)

Inside light yellow (18A), tepal-edges and midveins suffused with brilliant orange-yellow/brilliant yellow (21B/C) (fading towards top on veins), throat lighter than light yellow-green (154D); outside light yellow (14D), changing into light yellow (21D) towards tepal-edges; spots dark red (187B) on up to a third of each tepal; papillae a few beside nectaries; nectaries pale yellow (18D); pollen strong reddish orange (169A); stigma light yellow (18A). Fls 210 mm wide; tepals 135 × 45-60 mm, margins slightly ruffled, tips recurved. Lvs scattered, 180-190 × 15-30 mm. Stems 0.8 m, green with a little darker marking, and with c.3 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **‘Creme Brulée’ I(a/b)**

Parentage: speckled-flowered seedling (ex Latvia) × speckled-flowered seedling (ex Wadekamper)  
R: J. Wadekamper (1994), G: J. Wadekamper (1996), N: J. Wadekamper (1998), I: Willowood (2000), REG: J. Wadekamper (1999)  
Inside yellow at base, each tepal with an intense brown blotch and brown speckles, throat green-gold; outside yellow, midribs brown, brown speckling on outer tepal-edges; nectaries green gold; pollen brown. Fls 150 mm wide; tepals 80 × 38 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 12 mm, dark green. Stems 0.65 m, dark brown, with c.8 fls. Midseason.  
(This spelling (rather than Crème Brûlée) is the deliberate choice of the registrant.)

#### **‘Crème de la Crème’ VI(b-c/b)**

Parentage: Aurelian hybrid × *L. aurelianense* Golden Sunburst Group  
Fls cream with a golden throat, scented. Stems 1-1.5 m. (Listed in *Oregon Bulb Farms Cat.* 1986.)

#### **‘Creme Delight’ I(a/-)**

Parentage unknown  
R: B.G. Hayler, G: B.G. Hayler (1979), N: B.G. Hayler (1983)  
Inside pale yellow (11D), each tepal with a small, brilliant yellow (13B) patch and cream tip, throat cream; outside cream and green; spots few, brown, on centre of tepals; nectaries grey; pollen light brown. Tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 10 mm, mid green. Stems 0.75 m, green, with 7-9 fls. Nov. (Australia).

#### **‘Creme Rispe’ I(c/-)**

Parentage: an “improved” *davidii* × Hallmark Group  
R: N. Martschinke, N: N. Martschinke (1976), I: N. Martschinke (1976), REG: N. Martschinke (1978)  
Inside pale yellow (19C), throat pale yellow (19C) and strong orange-yellow (24B), tepal-tips pale yellow (19C), tepal-margins deep red (53A); outside vivid yellow-green (154A); slightly spotted deep red (53A); nectaries pale; pollen vivid reddish orange (34A). Stems 1.8 m.  
(Published in *Lilies and other Liliaceae*, 1978/9: 107.)

#### **‘Creme Zwerg’ I(b/-)**

Parentage unknown  
R: J. Klein, N: J. Klein, REG: J. Klein (1997)  
Fls cream with a pink centre. Stems 0.4 m, with up to 7 fls. Very early.  
(Published in European Lily Society sales list, 1995.)

#### **‘Cremona’ I(a/-)**

Parentage: (‘Byam’s Yellow’ × Panamint Group) × ‘Connecticut King’  
R: V. Strasser (1977), G: V. Strasser (1980), N: V. Strasser (1981), I: V. Strasser (1984), REG: V. Strasser (1997)  
Fls yellow (as in ‘Connecticut King’) with orange flecks in the throat. Tepal-margins smooth, tips not recurved. Lvs scattered, dark green. Stems almost black, with up to 10 fls. Early July.

#### **‘Creole’ V(-/a)**

See *longiflorum* var. *eximium* ‘Creole’.

#### **‘Creole White Lady’ V(b/a)**

See *longiflorum* ‘Creole White Lady’.

#### **‘Crescendo’ I(a/b)**

Parentage: Asiatic seedling × (‘Connecticut King’ × unknown)  
R: Bischoff Tulleken Leliecultuur B.V. (1974), G: Bischoff Tulleken Leliecultuur B.V. (1977), N: Bischoff Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken Leliecultuur B.V. (1983), REG: Bischoff Tulleken Leliecultuur B.V. (1983)  
Inside brilliant yellow (13B), tepal-tips yellow, throat sap-green; outside canary-yellow, midribs primrose-yellow; rather coarse spots over the whole fl.; nectaries reddish brown; pollen strong orange (26A). Fls 130 mm wide; tepals 110 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 11 mm, dark green. Stems 0.9-1 m, dark, with 12-14 fls (from 16-18 cm bulbs). Late June.

#### **‘Crest’ IV(-/d)**

Parentage: selection from complex *parryi* × *humboldtii*  
R: J. de Graaff (c. 1963), N: J. de Graaff  
Fls yellow and old rose.

#### **‘Crete’ I(a/-)**

Parentage: ‘Pirate’ × unknown  
R: Van der Salm (Holland), G: Van der Salm (Holland), N: Van der Salm (Holland), I: Van der Salm (Holland), REG: G. Van der Salm (1989)  
Fls strong purplish pink (62A) throughout, except for strong purplish pink (63C) in the throat; spots absent; nectaries white; pollen chocolate-brown. Tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 0.9 m, dark green, with 8-40 fls. June.

#### **‘Cricket’ I(a/b)**

Parentage: ‘Crimsonia’ × ‘Charisma’  
R: L.D. Marshall (1977), G: Columbia-Platte Lilies (1980), N: L.D. Marshall (1982), REG: Columbia-Platte

Lilies (1988)

Inside vivid reddish orange (34A/B), shading into moderate red (179B) to moderate reddish orange (179C) as fl. ages (more brownish orange in hot weather), tepal-tips vivid reddish orange (34B); outside vivid to strong reddish orange (34B/C); spots absent; a streak of gold, 20 × 3-4 mm, extends above nectaries in warm sunny weather; nectaries soft orange-red; pollen moderate red (179A). Tepals 70-90 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-150 × 20 mm, dark green. Stems 0.6-0.8 m, dark green with a plum overlay, and with 4-8 fls. Mid June.

**‘Crimson Beauty’ I(c/-)**

Syn. of ‘Cardinal Beauty’.

**‘Crimson Beauty’ IX(b/c)**

See *auratum* var. *rubrovittatum* ‘Crimson Beauty’.

**‘Crimson Bute’ VII(-/b)**

Parentage unknown

R: Sun Valley Bulb Farms, Inc., N: J. Kirsch (1975), I: Sun Valley Bulb Farms, Inc. (1975), REG: (1975)  
Inside uniform rose-red, with inconspicuous spots; outside red. Stems 1 m. June.  
(Published in *Lilies and other Liliaceae*, 1975: 91.)

**‘Crimson Chalice’ I?(-/b)**

Parentage unknown

R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens  
Fls garnet-red.

**Crimson Dream Group VII(-/b)**

Parentage: derived from hybrids involving *speciosum*, *auratum* & *rubellum*

R: R.W. Bemis, N: R.W. Bemis

Stems 1.5 m. July to Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 48 (1978) as Crimson Dream strain and included in *ILR* (1982) as Crimson Dream grex, Div. VII(a).)

**Crimson Elegance Group VII(-/l-)**

Parentage: *L. × parkmanii* ‘Journey’s End’ × crimson-flowered seedling

N: Fairdale Nursery (1992), REG: Van der Salm Bulb Farm, Inc. (1992)

Fls in shades of rich crimson, with crimson throat and various patterns of spotting.

**‘Crimson Flag’ VII(-/l-)**

Parentage: *speciosum* seedling 494 × *L. × parkmanii* ‘Jillian Wallace’

R: G. Errey (c. 1956), N: G. Errey

Tepals rich red, broad.

(Published in *LYB* 20: 79 (1957).)

**‘Crimson Giant’ IX(b-c/d)**

See *speciosum* ‘Crimson Giant’.

**‘Crimson Glory’ VIII(-/a)**

Parentage: Aurelian seedling × sister seedling of ‘Crimson Lady’

R: Y. Asano (pre 1982), N: Y. Asano

Tepals deep red (60A), edged white. Late July. Triploid.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Crimson Glory’ IX(b-c/d)**

See *speciosum* ‘Crimson Glory’.

**‘Crimsonia’ I(b/-)**

Parentage: *L. × hollandicum* × ‘Maxwill’

R: Gebr. N. & B. Laan & Zn (c. 1965), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1969)

Fls vivid reddish orange (34B), with a vivid reddish orange (34A) flush and small black spots. Stems 0.6-0.8 m. July.  
(Published in *LYB* 33: 254 (1970).)

**‘Crimson King’ VII(-/b)**

Parentage: ‘Crimson Queen’ × *auratum* var. *platyphyllum* ‘Aureolin’

R: L.F. Johnson, N: L.F. Johnson

Fls red. Lvs broad.

**‘Crimson King’ VII(-/d)**

Parentage: *speciosum* seedling 494 × *L. × parkmanii* ‘Jillian Wallace’

R: G. Errey (c. 1956), N: G. Errey

Tepals dark maroon. Stems 1.2 m.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *LYB* 20: 79 (1957).)

**‘Crimson King’ I(a/b)**

See *L. × maculatum* ‘Crimson King’.

**‘Crimson Lady’ VIII(-/d)**

Parentage: *speciosum × auratum × speciosum × henryi*

R: Y. Asano (pre 1982), N: Y. Asano

Tepals deep red (60A), edged white. Similar in shape to ‘Black Beauty’ but larger and with curled tepals. Early Aug.

(An Orienpet (OT) lily. Previously classified in Div. VII.)

**‘Crimson Noble’ I(a/b)**

Parentage unknown

R: R.A. Prochaska, G: R.A. Prochaska, N: Hartle-Gilman Gardens (1995), I: Hartle-Gilman Gardens (1995), REG: Hartle-Gilman Gardens (1995)

Inside deep red (185A); outside similar but paler; spots inconspicuous, shiny, black, on three-quarters of each tepal; nectaries white-frosted, forming a conspicuous star-shaped centre to the fl.; pollen rust-coloured. Fls 198 mm wide; tepals 100 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 166 × 10 mm, moderate olive-green (137A). Stems 1.17 m, moderate olive-green (147A), with up to 13 fls on long pedicels. Midseason.

**‘Crimson Pennant’ VII(-/-)**  
See *L. × parkmanii* ‘Crimson Pennant’.

**‘Crimson Picture’ VII(-/-)**  
See *L. × parkmanii* ‘Crimson Picture’.

**‘Crimson Pixie’ I(a/b)**  
Parentage: ‘Charisma’ × (*dauricum* × *bulbiferum* var. *croceum*)  
R: E.A. McRae (1976), G: Oregon Bulb Farms, Inc. (1979), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)  
Inside vivid reddish orange (43B to 43A/B), tepal-margins and tips vivid reddish orange (33A/B), throat vivid reddish orange (43B); outside vivid reddish orange (34B) to strong reddish orange (34C); spots absent; pollen dark orange. Fls 120-170 mm wide; tepals 100 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 0.4-0.6 m, dark-mottled, with 6-25 fls. Early June to July.  
Syn.: ‘Ceb Crimson’.  
(In 1989, a USPP was granted to ‘Crimson Pixie’. In 2000, Dutch PBR (LEL 1541) were granted under the epithet ‘Ceb Crimson’ which, being later, must be regarded as a synonym.)

**‘Crimson Queen’ VII(b/b)**  
Parentage: reputed to be *auratum* var. *platyphyllum* × *speciosum* ‘Melpomene’, but thought by some to be a form of *auratum*  
R: unknown  
Each tepal with a wide crimson ray. Fls *auratum* type. Stems 1.2 m. Aug.  
Syn.: *auratum* ‘Crimson Queen’.  
(Published in *Wallace Cat.* 1902: 9.)

**‘Crimson Queen’ I(c/-)**  
Syn. of ‘Tiger Queen’.

**‘Crimson Royal’ VII(-/b)**  
See *L. × parkmanii* ‘Crimson Royal’.

**‘Crimson Song’ I(a/c)**  
Parentage: ‘Lily Simonet’ × (‘Eden Fire’ × ‘Quadroon’)  
R: E.E. Fox (1986), G: E.E. Fox (1988), N: E.E. Fox (1991), I: Fox Lily Ranch (1994), REG: E.E. Fox (1993)  
Inside crimson or bright red, each tepal with a prominent, lemon-yellow streak above the nectaries, throat crimson; outside crimson at tepal-edges, cream on either side of midribs; spots numerous, small, black, on the basal two-thirds of each tepal; nectaries lemon-yellow, frosted; pollen golden rust-coloured. Fls 200 mm wide; tepals 90 × 35 mm, margins very slightly ruffled, tips very slightly recurved. Lvs scattered, 190 × 22 mm, mid green. Stems 1 m, black mottled green (including pedicels), with 8-16 fls in a pyramidal infl. Mid July.

**‘Crimson Star’ VIII(-/a)**  
Parentage: *regale* ‘Royal Gold’ × *speciosum*  
R: Y. Asano (pre 1982), N: Y. Asano  
Tepals deep purplish red (59B), broadly edged white.

Fls strongly scented. Lvs pale green. Late July. Similar to ‘Crimson Glory’ but smaller.

**‘Crimson Sun’ I(a/-)**  
Parentage unknown  
R: Sun Valley Bulb Farms, Inc. (1977), N: Sun Valley Bulb Farms, Inc. (1979), I: Sun Valley Bulb Farms, Inc. (1979), REG: Sun Valley Bulb Farms, Inc. (between 1979 and 1981)  
Inside moderate red (179A), throat strong orange (24B); outside moderate red (179A) and strong reddish orange (169A); spots black; nectaries moderate red (179A) at top, moderate red (179B) at base; pollen greyish red (178A). Tepals 80 mm long. Lvs ovate-elliptic, moderate olive-green (146A). Stems 0.3-0.4 m.  
(Included in *ILR* (1982) as Div. VI(b).)

**‘Crimson Tiara’ VII(-/b)**  
See *L. × parkmanii* ‘Crimson Tiara’.

**‘Crinolene’ VI(-/a)**  
Parentage unknown  
R: B.G. Hayler (c. 1960), G: B.G. Hayler (1963), N: B.G. Hayler, I: B.G. Hayler (1965)  
Inside fuchsia-purple (HCC 28/3) fading to rose-madder (HCC 25/3) at tepal-tips, throat brilliant yellow-green (149B); outside purplish red; nectaries pale green; pollen rust-brown. Fls *regale* type, 125 mm wide. Stems 1.5 m.

**var. *crocatum* IX(a-b/a)**  
See *parvum* var. *crocatum*.

***croceum* Chaix IX(a/b)**  
Syn. of *bulbiferum* var. *croceum*.

**var. *croceum* IX(a/b)**  
See *bulbiferum* var. *croceum*.

**‘Croesus’ I(a/-)**  
Parentage: selection from Mid-century Group  
S: J. de Graaff (1941), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (c. 1949)  
Tepals vivid orange-yellow (23A) with black spots at base. Stems 1.2 m. July.  
(Published in *Oregon Bulb Farms Cat.*, 1954. *Hayler Cat.* 1966 says fls are out-facing.)

**‘Croft’ V(b/a)**  
See *longiflorum* ‘Croft’.

**‘Cromottiae’ I(b/-)**  
Parentage: *bulbiferum* var. *croceum* × *davidii* var. *willmottiae*  
R: J.E.H. Stooke, N: J.E.H. Stooke  
AM 1932  
Fls orange-red; spots black.  
(Published in *Gard. Chron.*, ser. 3, 92: 31, fig. 16 (1932).)

**‘Croquinum’ I(a/-)**  
Parentage: (*bulbiferum* var. *croceum* × *L. × maculatum* ‘Quilp’) × *lancifolium* ‘Splendens’

R: J.E.H. Stooke (c. 1937), N: J.E.H. Stooke  
(Published in *LYB* 6: 137 (1937), without further details.)

**‘Crovidii’ I(a/-)**

Parentage: *bulbiferum* var. *croceum* × *dauidii* var. *willmottiae*

R: J.E.H. Stooke (c. 1937), N: J.E.H. Stooke  
PC 1937

Fls orange-red.

(Published in Woodcock & Coutts, *Lilies: their culture and management*, 112, fig. 65 (1935).)

**‘Crown Brilliant’ VII(-/c)**

Parentage: ‘Star Gazer’ × unknown

R: J.C. Kuilboer (1983), G: J.C. Kuilboer (1985), N: P. Hopman & Zn B.V. (1994), I: J.C. Kuilboer (1992), REG: P. Hopman & Zn B.V. (1994)

Inside strong purplish red (60D) on a yellowish white (155D) ground, colour fading towards tepal-margins, tips and margins yellowish white (155D), except for a strong purplish red (60D) margin on a third of each tepal, midveins strong red (53B); outside suffused with strong purplish red (60D) on a yellowish white (155D) ground, midribs yellowish white (155A) with a suffusion of brilliant greenish yellow (151D), tipped strong yellow-green (144B); spots dark red (187A) on two-thirds of each tepal; pollen strong orange (168A/B); stigma moderate purple (79D). Fls 270 mm wide; tepals 130 × 74 mm, margins ruffled, tips strongly recurved. Lvs scattered, 165 × 38 mm, dark green. Stems 0.7 m, pale green, with c.8 fls.

(May have been distributed as ‘Brilliante’.)

**‘Crown Emerald’ VII(-/c)**

Parentage: ‘Star Gazer’ × unknown

R: J.C. Kuilboer (1983), G: J.C. Kuilboer (1985), N: P. Hopman & Zn B.V. (1994), I: J.C. Kuilboer (1992), REG: P. Hopman & Zn B.V. (1994)

Inside moderate purplish red (64A), fading at tepal-tips, on a yellowish white (155D) ground, suffused with deep red (53A) along midveins; outside with a strong suffusion of moderate purplish red (64A) on a yellowish white (155D) ground, midribs slightly suffused with moderate purplish red (64A), tips light yellow-green (145B); spots dark red (187C) on two-thirds of each tepal; pollen vivid orange-yellow (23A); stigma moderate olive green (147A). Fls 225 mm wide; tepals 110 × 55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 41 mm, dark green. Stems 0.74 m, pale green, with c.6 fls.

**Crown Jewel Group I(-/)**

Parentage: selections from Futura Group

S: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens, I: Blackthorne Gardens

Fl. colours range from gold to blood-red. Stems to 1 m. Early.

(Published in *Blackthorne Gardens Cat.*, 1982.)

**‘Crown Princess’ IX(b-c/d)**

See *speciosum* var. *album* ‘Crown Princess’.

**‘Crowquilt’ I(a/-)**

Parentage: ‘Cromottiae’ × unknown

R: J.E.H. Stooke (pre 1935), N: J.E.H. Stooke

(Published in *LYB* 4: 116 (1935), without further details.)

**‘Crowquinum’ I(-/)**

See *L. × hollandicum* ‘Crowquinum’.

**Crow’s Group VI(-/a)**

Parentage: *L. × sulphurgale* × *L. × imperiale* ‘George C. Creelman’

R: J.W. Crow (pre 1933), N: J.W. Crow

Fls greenish yellow, cream and pale yellow.

(Exhibited by Constable at 1933 Lily Conference.)

**‘Crow’s Triumph’ VI(-/a)**

**var. *cruentum* IX(b/c)**

See *auratum* var. *rubrum*.

**‘Cruentum’ IX(b/b)**

See *auratum* ‘Cruentum’.

**‘Cruentum’ IX(b-c/d)**

See *speciosum* ‘Cruentum’.

**‘Crusader’ I(a/-)**

Parentage: seedling of Preston Group × unknown

R: G.M. Chandler (c. 1949), G: G.M. Chandler (1951), REG: G.M. Chandler (1960)

Inside blood-red; spots absent. Fls 115 mm wide. Stems 0.8 m, with up to 10 fls in an umbellate infl.

(Published in *ILR* (1969).)

**‘Crystal Baby’ I(a-b/b-c)**

Parentage: seedling A-534-86 × seedling 90-83-042-1

R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)

Inside pale yellowish pink (158D), lighter towards tepal-tips; outside pale yellowish pink (158D); spots and papillae absent; nectaries green; pollen brown; stigma purple. Tepals rather short and narrow, margins slightly ruffled, tips slightly recurved. Lvs dark green. Stems short, green with darker spots and stripes. Very early.

**‘Crystal Blanca’ VII(a-b/b)**

Parentage: ‘Casa Blanca’ × seedling OR 087

R: J.W.A. van der Wereld (1989), G: J.W.A. van der Wereld (1993), N: J.W.A. van der Wereld (1999), I: J.W.A. van der Wereld (1999), REG: J.W.A. van der Wereld (2001)

Inside and outside yellowish white (155D); no spots, but papillae present; nectaries green; pollen reddish brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems 1.3 m, green, with c.7 fls. Midseason.

**‘Crystal Lady’ VII(a/b)**

Parentage: seedling 88.87 × seedling 84.103.2

R: World Flower B.V. (1993), G: World Flower B.V. (1995), N: World Flower B.V. (2000), REG: World

Flower B.V. (2001)

Inside paler than light purplish pink (73C), each tepal paler towards base, tips and margins, with light yellow (12C) along midveins, throat yellow; outside very pale purple (73D); many spots on basal half of each tepal; papillae near the base; nectaries green; pollen brown-red; stigma speckled dark purple on a paler ground. Tepal-margins heavily ruffled, tips recurved. Stems 1.1 m, with c.6 fls. Early.

#### **‘Crystal Light’ VII(a-b/-)**

Parentage: ‘Pompei’ × ‘Pink Paradise’

R: World Flower B.V. (1994), G: World Flower B.V. (1996), N: World Flower B.V. (2000), REG: World Flower B.V. (2001)

Inside vivid purplish red (57D), light yellow (10C) at base, throat yellow to orange-yellow; outside deep to moderate purplish pink (70C/D); spots and papillae present; nectaries green; pollen orange-brown; stigma grey with purple specks. Tepal-margins ruffled, tips slightly recurved. Stems 1.2 m, green. Early to midseason.

#### **‘Crystal Star’ VII(a-b/b)**

Parentage: ‘Stardrift’ × seedling 103.30

R: World Flower B.V. (1993), G: World Flower B.V. (1995), N: World Flower B.V. (2000), REG: World Flower B.V. (2001)

Inside deep red/strong purplish red (60A/B), with vivid purplish red (57C) along midveins, each tepal paling towards tip, base and margin, tips vivid purplish red (57C), base yellowish white (155D), throat deep red/strong purplish red (60A/B); outside strong to light purplish pink (63C/D); spots and papillae present; nectaries green; pollen red-brown; stigma purple. Tepal-margins ruffled, tips slightly recurved. Stems 1.25 m, with c.6 fls. Midseason.

#### **‘Cuba Libre’ VIII(a/b)**

Parentage: red-flowered seedling × (*longiflorum* × ‘Aristo’)

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (1999), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2000)

Inside vivid reddish orange (34A) on a strong reddish orange (169A) ground, throat strong yellowish pink (34D); outside strong yellowish pink (31C), changing to strong reddish orange/strong yellowish pink (31C/D) towards tepal-edges, outer tepals a little darker, midribs dark reddish orange (178B) and a little darker at the base; spots dark red (187A) on a third of each tepal; papillae few, in the throat; nectaries strong yellowish pink (34D) hairy; pollen strong brown (172A); stigma dark red (187C). Fls 180 mm wide; tepals 105-110 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 20 mm. Stems 1.1 m, green with a little darker marking, and with c.3 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **‘Cuban Night’ I(-/b)**

Parentage: (*dauricum* × unknown) × red-flowered seedling

R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Outside deep red/strong red (53A/46A), deep red (60A) towards tepal-margins, throat strong red (46A); outside moderate red (181A), deep red (53A) towards tepal-margins, with a small orange brown stripe (170B) with a dark green (141A) spot at tepal-tips; spots dark red (187A); papillae absent; pollen moderate reddish orange (173B); stigma dark purple (79A). Fls 180 mm wide; tepals 113 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 20 mm, green. Stems 1.3 m, green, with 5 fls. June.

#### **‘Cucumber’ IX(b/c)**

See *auratum* ‘Cucumber’.

#### **‘Cum Laude’ I(a)**

Parentage: ‘Connecticut King’ × Asiatic seedling

R: Bischoff Tulleken Leliecultuur B.V. (1977), G: Bischoff Tulleken Leliecultuur B.V. (1980), N: Bischoff Tulleken Leliecultuur B.V. (1984), I: Bischoff Tulleken Leliecultuur B.V., REG: Bischoff Tulleken Leliecultuur B.V. (1985)

Inside strong orange-yellow (24B), with vivid reddish orange (34A) blotches around the throat, throat cadmium-orange; outside light orange-yellow (23C), tepals edged tangerine-orange; nectaries Chinese-coral; pollen brownish red. Fls 150 mm wide; tepals 70 × 40 mm. Lvs scattered, 70 × 10 mm, pale green. Stems 0.75 m, pale green, with c.8-9 fls.

#### **‘Cupid’ VI(-/a)**

Parentage: *leucanthum* var. *centifolium* × (*auratum* × *japonicum*)

R: F.L. Skinner (pre 1959), N: F.L. Skinner

Fls white, tepal-edges pink. Stems 1.5 m. Late July to Aug. (Published in *Skinner’s Nursery Cat.*, 1959.)

#### **‘Cupid’s Gift’ I(c/-)**

Parentage unknown

R: R.A. Prochaska, G: R.A. Prochaska, N: Hartle-Gilman Gardens, I: Hartle-Gilman Gardens (1995), REG: Hartle-Gilman Gardens (1995)

Inside strong purplish pink (55B), tepal-tips light purplish pink (55C), throat moderate red (181C) and pale yellow (162D); outside a blend of red and purplish (185) colours; spots large, dark purple, on basal third of each tepal; nectaries pink-frosted; pollen rust-red. Fls 165 mm wide; tepals 85 × 42 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 146 × 21 mm, moderate olive-green (137B). Stems 1.2 m, dark green, with c.10 fls. Midseason.

#### **‘Curie’ VII(a/b)**

Parentage: (pink-flowered seedling × ‘Red Diamond’) × ‘Kissproof’

R: Lybelmex Hillegom B.V. (1989), G: Lybelmex Hillegom B.V. (1992), N: Lybelmex Hillegom B.V. (1996), REG: Lybelmex Hillegom B.V. (1997)

Inside strong purplish red (60B/C), tepals-tips and narrow edges yellowish white (155D), throat also yellowish white (155D), midveins deep red (185A), this colour shading strongly into the tepal; outside strong purplish red (60C), tepal-tips, base and narrow edges yellowish white (155D), midribs strong yellow-green (144B), with a little darker markings; spots dark red (187A & B); papillae yellowish white (155D) in the throat; nectaries near strong yellow-green (144A); filaments pale green; pollen strong orange (169B); stigma close to dark purple (79B). Fls 250 mm wide; tepals 135-145 × 50-60 mm, margins scarcely ruffled, tips strongly recurved. Lvs scattered, 160 × 55 mm, dark green. Stems 1 m, green, with 4-6 fls. July to Aug.

**‘Curli’ V(b/a)**

See *longiflorum* ‘Curli’.

**‘Cyberspace’ I(a/b-c)**

Parentage: (‘Gran Paradiso’ × ‘Compass’) × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside strong orange (25B), throat strong orange-yellow (24B); outside strong orange-yellow (24B), strong orange (25B) towards tepal-margins, midribs strong greenish yellow (151B); spots absent; papillae strong orange (25A); nectaries moderate yellow-green (139C); pollen moderate reddish brown (174A); stigma brilliant orange (25C). Fls 225 mm wide; tepals 120 × 60 mm, margins smooth, tips recurved. Lvs scattered, 130 × 19 mm, green. Stems 1.2-1.5 m, green with darker markings at base, and with 7 fls. June.

**‘Cyganka’ I(a/-)**

Parentage: ‘Cinnabar’ (Div. I) × Coronado Group

R: K. Mynett & A. Wilkońska (1973), G: K. Mynett & A. Wilkońska (pre 1996), N: K. Mynett & A. Wilkońska, I: Research Institute of Pomology & Floriculture (1997), REG: Research Institute of Pomology & Floriculture (1997)

Inside vivid red (44A), throat vivid red (45A); outside vivid reddish orange (44C); spots few, deep dark brown, in the throat; nectaries green; pollen dark bronze; stigma dark bronze. Fls 120 mm wide; tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 8 mm, mid green. Stems 0.75 m, deep green, with 7-8 fls per stem. Mid June.

**‘Cymbeline’ VII(-/b)**

Parentage: *auratum* × seedling of *L.* × *parkmanii* type

R: G.M. Chandler (c. 1951), G: G.M. Chandler (1954), N: G.M. Chandler, REG: G.M. Chandler (1961)

Inside soft pink; spots deep red; nectaries green. Fls *auratum* type, 215 mm wide. Stems 1.5 m. Feb. (Australia).

**‘Cymbray’ VII(-/b)**

Parentage: ‘Cymbeline’ × dark red-flowered *auratum*

R: G.G. & F.S. Blake (1969), G: G.G. & F.S. Blake

(1973), N: G.G. & F.S. Blake (1985), I: G.G. & F.S. Blake (1985), REG: G.G. & F.S. Blake (1985)

Inside very pale purple (69C), tepal-margins white, throat deep purplish red (59B); outside moderate red (181A) at base, shading to moderate purplish red (184D); heavily spotted dark red (59A); nectaries brilliant yellow-green (149A); pollen moderate reddish orange (171A). Fls 280 mm wide; tepals 155 × 73 mm, margins ruffled, tips slightly recurved. Lvs 205 × 45 mm, dark green. Stems c.2 m, moderate yellow-green (147C), with c.24 fls. Feb. (Australia).

**‘Cynthia’ Div. ?**

Given as a parent of ‘Goldsucher’, ‘Schieker’ and ‘Schönholzer’. No further details.

**‘Cyprián’ VI(b-c/d)**

Parentage: ‘Holubice’ × unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)

Inside pale apricot-beige, tepal-tips and margins paler; outside pale beige, midribs green-yellow, green at base; spots rusty, sporadic; papillae in lines; nectaries deep green; pollen brown; stigma green. Fls 150 mm wide; tepals 115 × 43 mm, very recurved, margins roughly wavy, sometimes twisted; pedicels 125 mm long, with red-brown dots. Lvs 125 × 14 mm, dull dark green, dense. Stems 1.45 m, slightly dotted with red-brown. Mid July.

**‘Cyrus Gates’ IV(-/d)**

Parentage: selection from Bellingham Group

S: R. Kessler (c. 1918), N: R. Kessler

Inside cadmium-orange, black-spotted in throat, becoming reddish and larger further up each tepal and tending to fuse into red blotches towards the tip, tepals greenish at base; outside similar but spots at edges only; anthers dull yellow; pollen orange-red. Lvs mostly whorled, dull above, glossy beneath, wavy. Stems 1-2.2 m, pale green, with 12-20 fls. July. (Published in *USDA Circular* no. 299: 8 (1933). The parents are thought to be *pardalinum* and *humboldtii* var. *ocellatum*.)

**‘Czardas’ I(a/b)**

Parentage unknown

R: H. Hörster, N: H. Hörster, I: Borbeleta Gardens (1978)

Bicolour of rich red and yellow-orange. Tepals not recurved. Stems 1.2 m, with many fls. Early July.

**‘Czardasfürst’ I(a/c-d)**

Parentage: ‘Paul Köpke’ × ‘Brauner Bär’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Fls strong orange (168A); spots very numerous, medium sized, moderate red (185B), on basal three-quarters of each tepal; nectaries greenish white (157D); pollen dark red (187A); stigma moderate orange (167A). Fls 160 mm wide; tepals 90 × 45 mm, margins smooth, tips not

recurved. Lvs scattered, 100 × 20 mm. Stems 1.4 m, dark green, with c.16 fls. Late July.  
(Nomenclatural standard: colour print provided by registrant (WSY 0024680).)

**‘Czarna Greczynka’ VII(a/c)**

Parentage unknown

R: J. Wiśniewski (1986), G: J. Wiśniewski (1991), N: J. Wiśniewski (1993), I: W. Peryt, REG: J. Wiśniewski (1993)  
Inside dark red (59A), throat brilliant yellow-green (150B); outside moderate purplish red (70A); spots dark red (59A), on basal three-quarters of each tepal; nectaries strong yellow-green (143C); pollen strong brown (172A). Fls 210 mm wide; tepals 138 × 58 mm, margins smooth, tips slightly recurved. Lvs scattered, 225 × 48 mm, dark green. Stems 1.82 m, moderate yellow-green (137C), with c.11 fls. July.

**‘Dachstein’ VI(b/b)**

Parentage: ‘Bamberg’ × ‘Glockenturm’

R: V. Strasser (1983), G: V. Strasser (1986), N: V. Strasser (1991), I: V. Strasser, REG: V. Strasser (1991)  
Inside white, throat yellow; outside pink; pollen brown. Tepals 135 × 40 mm, margins smooth, tips not reflexed. Lvs scattered, 140 × 10 mm, dark green. Stems 1.2 m, dark green, with c.20 fls. Mid July.

**‘Dačuks’ VII(b/c)**

Parentage unknown

R: Ē. Ieviņa (1994), G: R. Krūmiņš (1998), N: R. Krūmiņš (2000), REG: Liliūm Balticum Association (2004)  
Inside pink; outside whitish pink, midribs brownish green to pale green; spots cherry-red, on two-thirds of each tepal; nectaries light greyish green; pollen yellowish brown; stigma greyish green. Fls 230 mm wide; tepals 150 × 65 mm, margins slightly ruffled, tips recurved. Lvs scattered, 230 × 50 mm. Stems 1.1-1.2 m, green, with 8-9 fls. Late July.

**‘Dagmar’ I(a/b-c)**

Parentage: ‘Rusalka’ (of Mičulka) × cream-flowered brushmarked seedling

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1992), REG: B. Mičulka (1992)  
Inside creamy white, with a yellowish centre, throat whitish; outside whitish, midribs brown-red; spots and short lines fairly numerous, large, dark red-brown, on two-fifths of each tepal; nectaries white-frosted; pollen brownish; stigma dark red-purple. Fls 140 mm wide; tepals 80 × 40 mm, not recurved; pedicels 80 mm long, thick, heavily spotted dark red-brown. Lvs scattered, 100 × 18 mm, dark green. Stems 0.95 m, thick, dark green, brownish at base. Early July.

× ***dalbansonii* II(c/d)**

Misspelling of *L. × dalbansonii*.

**‘Daiļruna’ I(a/b)**

Parentage unknown

R: J. Vasarietis (1989), G: J. Vasarietis (1992), N:

J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J. Vasarietis (1999)

Inside strong pink (49A) on basal part, becoming light pink (49C) to pale yellowish pink (27A) at tepal-margins and tips, base of throat light pink (49C); outside pale pink, almost white; spots numerous, tiny, purple, on basal two-thirds of each tepal; nectaries white on a greenish ground; pollen orange; stigma greyish brown. Fls 150 mm wide; tepals 80 × 36 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 10 mm, dark green. Stems 0.9 m, green, with 12 fls (including secondary buds). Late June to early July.

Trade designation: ELOCUTION.

(Published in *Lilium Balticum Cat.*, 1996. Nomenclatural standard: colour print provided by registrant (WSY 0023029).)

**‘Daina’ I(a/b)**

Parentage: red-flowered seedling × ‘Connecticut King’

R: A. Buķēvics, N: A. Buķēvics (1985), I: A. Buķēvics  
Inside orange; outside paler orange; spots few, brown; nectaries cream; pollen brown. Fls 130 mm wide; tepals 75 × 30 mm, tips slightly recurved. Stems 0.9 m, with c.10 fls. Early July.

**‘Dainty’ IX(b/c)**

See *auratum* var. *rubrovittatum* ‘Dainty’.

**‘Dainty Lass’ VI(-/a)**

See *L. × imperiale* ‘Dainty Lass’.

See *L. × dalbansonii* ‘Dairy Maid’.

**‘Dairy Maid’ IV(-/d)**

See *L. × burbankii* ‘Dairy Maid’.

**‘Daivalen’ VIII(a/-)**

Parentage unknown

R: Koninklijke Van Zanten B.V., G: Koninklijke Van Zanten B.V., N: Koninklijke Van Zanten B.V., I: Koninklijke Van Zanten B.V., REG: Koninklijke Van Zanten B.V. (2003)  
Inside vivid orange (28B); outside strong orange (25A); spots and papillae absent; nectaries orange; pollen orange; stigma purple. Tepal-margins ruffled, tips recurved. Stems tall to very tall, green with darker stripes and spots. Midseason to late.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Dakar’ I(a-b/b)**

Parentage: (Hallmark Group × ‘Nutmegger’ × ‘Abendglühen’) × (‘Connecticut Yankee’ × ‘Windahloo’)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka, REG: B. Mičulka (2003)

Inside and outside golden yellow, throat paler, greenish; brushmarks mahogany; spots red-brown, scarce, dash-like, on a quarter of each tepal; nectaries with yellow dust; pollen ochre; stigma pale brown. Fls 120 mm wide; tepals 90 × 48 mm, tips scarcely recurved. Lvs 80 × 9 mm, mid green, slightly shiny, dense. Stems 0.55 m, green, thick. Late June.

**‘Daladier’ VIII(b/b)**

Parentage: seedling PG 95-32 × ‘Aubade’

R: Gebr. Vletter &amp; Den Haan, N: Gebr. Vletter &amp; Den Haan (2002), REG: Vletter &amp; Den Haan Beheer B.V. (2004)

Inside with inner tepals light yellow (10C), midveins brilliant yellow (8A), apical two-thirds of each tepal with area next to midveins pale yellow-green (155A), outer tepals light yellow (10C), brilliant yellow (8A) along midveins, throat pale greenish yellow (10D); outside with inner tepals light yellow/pale greenish yellow (10C/D), midribs light greenish yellow (4C) with adjacent area pale yellow-green (155A), outer tepals pale yellow-green (4D), margins pale greenish yellow (10D), midribs strong yellow-green (144B) in apical half, light yellow/pale greenish yellow (10C/D) at base with weak moderate purplish red (59C) flush; spots absent; papillae many, brilliant yellow (8A); nectaries strong yellow-green (144A); pollen strong orange (25A); stigma very pale purple (97D). Fls 200 mm wide, fragrant; tepals 110-130 × 45-70 mm, margins slightly ruffled, tips recurved. Lvs scattered, 130 × 20-30 mm. Stems 1-1.5 m, brown-red, green towards top, with 3-4 fls.

(An Oripenet (OT) lily. The younger fls are more yellow.)

**‘Dalai Lama’ I(b/-)**

Parentage: ‘Nutmegger’ × unnamed seedling

R: P.M. Johnson, N: P.M. Johnson, I: Borbeleta Gardens (1981), REG: Borbeteta Gardens (1981)

Inside brilliant yellow (20A) on tepal-tips, throat yellow-green; outside tan; spots brown, on two-thirds of each tepal; nectaries frosted green; pollen brown. Tepals 85 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 17 mm, mid green. Stems 1.1 m, dark green, with 12-14 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1981.)**‘Dälderis’ I(a/c)**

Parentage unknown

R: A. Krūmiņš (pre 1999), N: A. Krūmiņš

Inside yellow, basal half of each tepal covered by a chocolate-red blotch of coalesced spots, breaking up into spots; pollen orange-brown; stigma whitish. Tepal-margins smooth, tips not recurved.

**‘Dalhanex’ II(c/d)**See *L. × dalhansonii* ‘Dalhanex’.**‘Dalhanse’ II(-/-)**Parentage: *L. × dalhansonii* × *tsingtauense*

R: E. Robinson (c. 1964), N: E. Robinson

Fls smoky lavender with paler centre; spots absent. Stems 1-1.5 m. July.

(Unacceptable name: ‘Dalhanse’ (being formed from *dalhansonii* and *tsingtauense*) is not acceptable under ICNCP, 2004: Art. 19.13 - after 1959 a name must be in any language other than Latin.)

**× *dalhansonii* Powell II(c/d)**Parentage: original clone raised from *martagon* var.*cattaniae* × *hansonii*

R: C. Baden Powell (pre 1890), G: C. Baden Powell (1890)

Inside maroon, flushed with orange in tepal-centres; heavily spotted. Stems 1.3-1.6 m. June to July.

(Misspelling: *L. × dahlhansonii*. Published in *Garden* 44: 260, t.927 (1893). The epithet is derived from var. *dalmaticum* = syn of var. *cattaniae* and *hansonii*. It is the correct botanical hybrid epithet for all hybrids between *martagon* and *hansonii*. The original clone had chestnut-brown fls with gold spots, and stems 1-1.5 m.)

**× *dalhansonii* ‘Ariel’ II(-/-)**Parentage: (*hansonii* × *martagon*) F<sub>2</sub>

R: J. de Graaff (c. 1965), N: J. de Graaff

Fls orange-yellow. Stems 1.2 m. June.

**× *dalhansonii* ‘Aristocrat’ II(-/-)**Parentage: (*martagon* × *hansonii*) F<sub>2</sub>

R: G.E. Backhouse (c. 1964), N: G.E. Backhouse

Inside ivory, lightly spotted; outside with yellowish green stripes; anthers dark brown. Tepals slightly reflexed. June to July.

(Published in *LYB* 28: 132 (1965).)**× *dalhansonii* Backhouse Group II(c/d)**Parentage: *hansonii* × *martagon*

R: R.O. &amp; S.E. Backhouse (late 1890s), N: R.O. &amp; S.E. Backhouse

Fls in shades of cream, pink, wine and yellow; spots dark. June to July.

**× *dalhansonii* ‘Ballerina’ II(-/-)**Parentage: *martagon* × *hansonii*

R: B.L. Palmer, N: B.L. Palmer, I: B.L. Palmer (1958)

Fls chrome-yellow, with a few maroon spots. Stems 1-1.2 m. June to July.

(Published in *B. Palmer Lily Cat.*, 1958: 5.)**× *dalhansonii* ‘Bornholm’ II(c/-)**Parentage: *martagon* var. *cattaniae* ‘Album Superbum’ × *hansonii*

R: N. Martschinke (pre 1987), N: N. Martschinke, REG: N. Martschinke (1988)

Fls cream, green in centre; spots absent. Tepals only slightly reflexed, tips hairy. Stems up to 1.7 m. Late June.

**× *dalhansonii* ‘Brocade’ II(-/-)**Parentage: selection from *L. × dalhansonii* Backhouse Group

S: Backhouse (pre 1923), N: Backhouse

Fls orange-yellow suffused with rosy pink; spots chocolate-brown to maroon. Stems 1.5 m. June.

(Published in *Wallace Cat.* 1923: 3.)**× *dalhansonii* ‘Dairy Maid’ II(-/d)**Parentage: selection from *L. × dalhansonii* Backhouse Group

S: G.E. Backhouse, N: G.E. Backhouse

Fls creamy yellow, heavily spotted in throat.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name

already used for another lily. Published in *Wallace & Barr Cat.*, 1957.)

× ***dalhansonii* ‘Dalhanex’ II(c/d)**

Parentage: selection from *L. × dalhansonii*

S: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1992),

REG: B. Mičulka (1992)

Inside brown-red, tepal-edges golden, centre ochre brownish; outside pale old rose; spots few, small, dark red-brown, in a golden halo; pollen pale brown; stigma dark purple. Fls 50 mm wide; tepals 35 × 15 mm; pedicels dotted dark violet. Lvs whorled, 90 × 35 mm. Stems 1.2 m, slightly spotted at base. Late June.

× ***dalhansonii* ‘Dereham Variety’ II(-/d)**

Parentage: *hansonii* × *L. × dalhansonii*

R: H. Wormald (c. 1931), N: H. Wormald

Fls deep maroon, paling to orange at base; spots brown. Tepals recurved.

(Published in *Gard. Chron.*, ser. 3, 100: 35 (1936).)

× ***dalhansonii* ‘Desdemona’ II(-/l)**

Parentage: complex *hansonii* × *martagon* hybrid

R: J. de Graaff (c. 1963), N: J. de Graaff

Fls pale lilac.

× ***dalhansonii* ‘Dusky Chief’ II(-/l)**

Parentage: (*hansonii* × *martagon*) × *martagon* var. *cattaniae*

R: L.B. Tuffery (c. 1954), N: L.B. Tuffery

Fls deep mahogany; spots absent.

× ***dalhansonii* ‘Early Bird’ II(c/c-d)**

Parentage: selection from *L. × dalhansonii* Backhouse Group

S: G.E. Backhouse, N: G.E. Backhouse

Fls yellow-ochre (between HCC 07/2 & 07/1), flushed with magenta-pink (HCC 027/3); spots erythrite-red (HCC 0027).

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Earlibird’. Published in *Wallace & Barr Cat.*, 1957.)

× ***dalhansonii* ‘Ellen Field’ II(-/l)**

Parentage: *hansonii* × *martagon* var. *cattaniae*

R: W. Bentley, N: W. Bentley, I: D.M. Simmons (1968) PC 1968

Fls glistening rich red, with green centres. Tepals long, narrow, widely spaced.

(Published in *LYB* 32: 88, 135, fig.19 (1969).)

× ***dalhansonii* ‘Emily Harrison’ II(-/d)**

Parentage: *L. × dalhansonii* Backhouse Group × *martagon* var. *cattaniae*

R: A.D. Harrison (c. 1963), N: A.D. Harrison

Fls rich purple maroon; spots absent; *martagon* type.

× ***dalhansonii* Fairy Jewel Group II(-/l)**

Parentage: *martagon* × *hansonii*

R: R.W. Bemis, N: R.W. Bemis, REG: R.W. Bemis (1985)

Fls ranging in colour from white to yellow, pink or lavender. Lvs whorled, dark green. Stems 1.2-1.5 m, with up to 70 fls. June.

(Published in *Blackthorne Gardens Cat.*, 1966/67; ‘Deep-Freeze’ *Lilies Cat.*, 1966/67: 2.)

× ***dalhansonii* ‘Golden Green’ II(b/-)**

Parentage: *L. × dalhansonii* × *L. × dalhansonii* ‘Brocade’

R: E. Robinson, G: E. Robinson (1979), N: E. Robinson (1977), I: E. Robinson (1977), REG: E. Robinson (1978)

Inside golden yellow, throat with ring of reddish spots and clear yellow centre; outside with greenish black midribs. Stems 1.2 m.

(Published in *Lilies and other Liliaceae*, 1978/9: 108.)

× ***dalhansonii* ‘Golden Orb’ II(-/l)**

Parentage: *martagon* × *hansonii*

R: R.O. Backhouse (pre 1923), N: R.O. Backhouse AM 1923

Fls light straw-yellow with maroon spots.

(Published in *Gard. Chron.*, ser. 3, 73: 367 (1923).)

× ***dalhansonii* ‘Guinea Gold’ II(-/l)**

Parentage: *hansonii* × *martagon*

R: F.L. Skinner, N: F.L. Skinner, I: F.L. Skinner (1940)

Fls buttercup-yellow, spotted with brown; buds pink.

Stems 1.2-1.5 m. July.

(Published in *LYB* 10: 39 (1946).)

× ***dalhansonii* ‘Honeyboy’ II(-/l)**

Parentage: *martagon* var. *cattaniae* × *hansonii*

R: K. Kiel, N: K. Kiel, I: K. Kiel (1978), REG: K. Kiel (1978)

Inside vivid orange-yellow (23A), throat brilliant yellow (20A); outside light yellow (20B); spots large, dark red (187A/B); nectaries strong yellow-green (143C); pollen orange-yellow (21). Stems 0.8 m.

(Published in *Lilies and other Liliaceae*, 1978/9: 109.)

× ***dalhansonii* ‘Indian Chief’ II(-/d)**

Parentage: sport from *L. × dalhansonii* ‘Marhan’

S: G.E. Backhouse (1956), N: G.E. Backhouse

Fls glistening bronze, blotched red-black. Fls *martagon* type.

(Published in *Wallace & Barr Cat.*, 1961 (as Motley Type in 1959 cat.))

× ***dalhansonii* ‘Ivory Gem’ II(c/d)**

Parentage: *L. × dalhansonii* ‘Juanita’ × *L. × dalhansonii* ‘Brocade’

R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)

Inside creamy white; outside pink; sparsely lilac-spotted; pollen deep yellow. Fls large. Stems 1.2-1.5 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 26 (1978).)

× ***dalhansonii* ‘Jacques S. Dijt’ II(c/d)**

Parentage: (*martagon* var. *album* × *hansonii*) × *martagon* var. *album*

R: H.C. Dijt, N: H.C. Dijt

AMH 1952, FCCH 1954

Fls creamy yellow; spots purple; pollen orange-red. Fls *martagon* type. Stems 1.9 m. June to July.

Syn.: 'J.S. Dijt'.

(Published in *JRHS* 75: xcvi (1950).)

× *dalbansonii* 'Juanita' II(-/c-d)

Parentage: derived from *martagon* and *hansonii*

R: F.L. Skinner (pre 1954), N: F.L. Skinner

Inside white; outside pink; spots pink; buds pink. Tepals flared rather than recurved. July.

(Published in *Skinner's Nursery Cat.*, 1954.)

× *dalbansonii* 'Juliet' II(-/d)

Parentage: complex *martagon* × *hansonii* hybrid

R: J. de Graaff (c. 1963), N: J. de Graaff

Fls deep yellow. June to July.

× *dalbansonii* 'Jupiter' II(c/d)

Parentage: *L.* × *dalbansonii* 'Marhan' × *martagon* var. *album*

R: H.C. Dijt (c. 1949), N: H.C. Dijt

AMH 1949

Fls cinnamon-yellow, tepal-edges rosy brown; spots brown.

× *dalbansonii* 'Lemon Queen' II(-/l)

Parentage: (*hansonii* × *martagon*) × *martagon* var. *album*

R: L.B. Tuffery (c. 1953), N: L.B. Tuffery

Fls lemon-yellow; spots absent.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

× *dalbansonii* 'Mahdi Group' II(-/l)

Parentage: spotted, white-flowered *L.* × *dalbansonii* × *martagon* var. *album*

R: F. Ewald (1972), G: G. & F. Ewald (1976), N: G. & F. Ewald (1979), I: G. & F. Ewald (1979), REG: G. & F. Ewald (1979)

Fls white; spots absent; nectaries yellow; pollen yellow. Tepals 50 × 35 mm, slightly recurved. Lvs whorled, mid green. Stems up to 1.7 m, green, with c.40 fls. June.

(Published in *LYB NALS* 30: 42 (1977). Included in *ILR* (1982) as Mahdi greg.)

× *dalbansonii* 'Marble Queen' II(-/l)

Parentage: (*hansonii* × *martagon*) × *martagon* var. *album*

R: L.B. Tuffery (c. 1953), N: L.B. Tuffery

Fls pure white; spots purplish.

× *dalbansonii* 'Marhan' II(c/d)

Parentage: *martagon* var. *album* × *hansonii*

R: C.G. van Tubergen (1886), N: C.G. van Tubergen

FCC 1898, AMH 1914

Fls orange, spotted reddish brown. Stems 1.5-1.9 m. June to July.

Syn.: *L.* × *marhan*.

(Published in *Tubergen Cat.* 1895: 40.)

× *dalbansonii* 'Marhanex' II(c/d)

Parentage: selection from *L.* × *dalbansonii* 'Marhan' hybrids

S: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1992), REG: B. Mičulka (1992)

Inside orange brownish, each tepal with a pale apricot centre, reddish tips and a pale yellow/beige base; outside with greenish and yellowish midribs; spots fairly numerous, small, dark brown, on three-quarters of each tepal; pollen brown; stigma dark violet. Fls 60 mm wide; tepals 40 × 17 mm. Lvs whorled, 120 × 47 mm, dull green. Stems 1.2 m, spotted. Mid June.

× *dalbansonii* 'Maroon Velvet' II(c/d)

Parentage: *L.* × *dalbansonii* × (*martagon* × *hansonii*)

R: G.E. Holland (c. 1959), N: G.E. Holland

Fls very dark maroon, with velvety sheen. Fls *martagon* type. Stems 1.2 m. July.

(Published in *Lilyhaven Cat.*, 1939.)

× *dalbansonii* 'Marta' II(c/d)

Parentage: *hansonii* × *martagon*

R: V.P. Orehovs (between 1970 and 1983), N: V.P. Orehovs

Fls yellow-orange with dark spots. Stems 1 m. June.

× *dalbansonii* 'Mary Swaythling' II(-/l)

Parentage: *L.* × *dalbansonii* 'Sutton Court' × (*martagon* × *hansonii*)

R: Lord Swaythling (c. 1929), N: Lord Swaythling

AM 1936

Fls yellow.

(Published in *LYB* 5: 65 (1936).)

× *dalbansonii* 'Mondschein' II(-/d)

Parentage: complex *L.* × *dalbansonii* 'Marhan' × *martagon* var. *album* hybrid

R: H. Fuchs (pre 1985), N: H. Fuchs, REG: H. Fuchs (1988)

Fls creamy white; spots absent. Stems 1.2-1.5 m, with up to 50 fls. June to July.

(Published in German Lily Group sales list, 1985.)

× *dalbansonii* 'Motley' II(-/d)

Parentage: selection from *L.* × *dalbansonii* Backhouse Group

S: G.E. Backhouse (c. 1959), N: G.E. Backhouse

Fls maroon, with flecks of yellow and orange and darker spots.

× *dalbansonii* 'Mrs R.O. Backhouse' II(c/d)

Parentage: *hansonii* × *martagon*

R: R.O. Backhouse (c. 1921), I: R. Wallace & Co.

AM 1921

Inside orange-yellow; outside slightly flushed with magenta-pink; spots purple, sparse. Lvs whorled. Stems 1.5-1.9 m. June.

(Published in *Gard. Chron.*, ser. 3, 69: 313 (1921).)

× *dalbansonii* 'Neozhidannost' II(-/l)

Parentage: *L.* × *dalbansonii* Paisley Group × *martagon* var. *cattaniae*

G: B.G. Kazakov (1984), N: B.G. Kazakov (1991), I: Polissad Ltd (1993), REG: B.G. Kazakov (1995)

Inside dark cherry-red, throat pink; outside light crimson; spots cherry-red, surrounded by yellow; nectaries white; pollen light brown. Fls 75 mm wide; tepals 40 × 18 mm, margins smooth, tips slightly recurved. Lvs whorled, 200 × 35 mm, mid green. Stems 1.5-1.7 m, green, with 14-17 fls. June.

× *dalbanonii* 'Ophelia' II(-/d)

Parentage: complex *martagon* × *hansonii* hybrid  
R: J. de Graaff (c. 1964), N: J. de Graaff  
Fls pale lilac with white centre; outside pink. June.

× *dalbanonii* 'Orchid' II(-/d)

Parentage: *martagon* var. *album* × *hansonii*  
I: L.B. Tuffery  
Fls white, with faint purple spots.

× *dalbanonii* Painted Lady Group II(-/d)

Parentage: derived from hybrids of *martagon* and *hansonii*  
R: E.L. Kline, N: E.L. Kline  
Fls white, with a few maroon spots, through shades of yellow, brown, tangerine and lavender, with garnet spots. Stems 1.2-1.5 m. June.  
(Published in *Kline Wholesale Cat.*, 1947.)

× *dalbanonii* Paisley Group II(-/d)

Parentage: *martagon* var. *album* × *hansonii*  
R: J. de Graaff (c. 1955), N: J. de Graaff  
Fls yellow-orange, lilac-purple, tangerine or mahogany, all with tiny maroon dots. Stems 1-1.5 m.

× *dalbanonii* 'Paisley Showers' II(-/l-)

Parentage: selection from *L. × dalbanonii* Paisley Group  
S: J. de Graaff, N: J. de Graaff  
(Oregon Bulb Farms have not been able to trace this epithet (*in litt.* 1983). At one time de Graaff adopted the practice of publishing a name, without having a plant on to which base it.)

× *dalbanonii* 'Primadonna' II(-/l-)

Parentage: *martagon* × *hansonii*  
R: B.L. Palmer, N: B.L. Palmer, I: B.L. Palmer (1962), REG: B.L. Palmer (1984)  
Fls rose-pink, centre white, spotted with rose-pink; turning uniform creamy pink in sun. Stems 0.8-1 m, with 20-30 fls.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 45 (1978).)

× *dalbanonii* 'Prisilla' II(c/d)

Parentage: *martagon* × *hansonii*  
R: unknown  
Fls pink turning white, with purple spots.  
(Published in *Skinner Nursery Cat.*, 1940.)

× *dalbanonii* 'Queen of Night' II(c/d)

Parentage: sport from *L. × dalbanonii* 'Jupiter'  
S: H.C. Dijt (c. 1964), N: H.C. Dijt  
Fls glowing brownish ruby-red, centre light yellow (11B); striped and spotted with ruby-red.  
(There is a possibility that the correct epithet is 'Königin der Nacht', but this epithet has not been traced.)

× *dalbanonii* 'Redwine' II(-/l-)

Parentage: *L. × dalbanonii* × *L. × dalbanonii* 'Juanita'  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)  
Fls dark wine-purple to wine-red, finely spotted.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 26 (1978).)

× *dalbanonii* 'Romeo' II(-/d)

Parentage: (*martagon* var. *album* × *hansonii*) F<sub>2</sub>  
R: J. de Graaff (c. 1964), N: J. de Graaff  
Fls clear lilac. June to July.

× *dalbanonii* 'Rosalinda' II(c/d)

Parentage: (*martagon* × *hansonii*) F<sub>2</sub>  
R: F.L. Skinner (pre 1978), N: F.L. Skinner, REG: F.L. Skinner (1983)  
Fls rose-pink with light red spots. Tepal-margins smooth, tips recurved. Stems with 15-20 fls. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 45 (1978).)

× *dalbanonii* 'Saint Nicholas' II(c/d)

Parentage: *martagon* var. *album* × *hansonii*  
R: R. James, N: R. James  
AM 1951  
Inside vivid orange-yellow (23A); outside paler; spots present. (Misspelling: 'St Nicholas'. Published in *Constable Cat.*, 1931/32.)

× *dalbanonii* 'Sceptre' II(-/l-)

Parentage: selection from *L. × dalbanonii* Backhouse Group  
R: unknown  
Fls orange, shaded with pinkish buff; spots profuse, small, dark. Stems 1-1.5 m. June.  
(Published in Woodcock & Stearn, *Lilies of the World*, 148 (1950).)

× *dalbanonii* 'Schönholzer Heide' II(c/d)

Parentage: *martagon* var. *cattaniae* × *hansonii*  
R: G. Steinbrück (1988), G: G. Steinbrück (1992), N: G. Steinbrück (2000), I: G. Steinbrück (1997), REG: G. Steinbrück (2000)  
Inside strong orange-yellow (22A), tepal-tips light orange-yellow (23A); outside slightly paler; spots numerous, medium sized, strong purplish red (72A) spots on basal three-quarters of each tepal; pollen moderate orange (168C); stigma pale yellow (161C). Fls 80 mm wide, slightly scented; tepals 60 × 22 mm, margins smooth, tips strongly recurved. Lvs whorled. Stems 1.25 m, dark green, with c.15 fls. Mid June.  
Syn.: 'Goldstar'.  
(For meaning of epithet see 'Schönholzer Stolz'.  
Nomenclatural standard: colour print provided by registrant (WSY 0024696).)

× *dalbanonii* 'Shaftesbury Hybrid' II(-/l-)

Parentage: contains *martagon*, *martagon* var. *album* & *hansonii*  
R: A. Dunston (c. 1939), N: A. Dunston  
Inside crimson-purple; outside gold.  
(Published in *LYB* 8: 165 (1939).)

× ***dalbansonii* Shantung Group II(-/d)**

Parentage: selections from *L. × dalbansonii* Backhouse Group

S: G.E. Backhouse, N: G.E. Backhouse

Fls pinkish mauve, slightly spotted, *martagon* type. Taller than most Backhouse Group.

(Published in *Wallace and Barr Cat.*, 1957. Included in *ILR* (1982) as Shantung grex.)

× ***dalbansonii* 'Sunset Glow' II(c/d)**

Parentage: (*martagon* × *hansonii*) F<sub>2</sub>

R: F.L. Skinner (pre 1954), N: F.L. Skinner

Fls pink, shading to yellow in centre. Stems 1.2-1.5 m. June.

(Published in *Skinner's Nursery Cat.*, 1954.)

× ***dalbansonii* 'Sutton Court' II(-/)**

Parentage: *martagon* var. *album* × *hansonii*

R: Backhouse, N: Backhouse

Inside pale yellow (11C); outside with faint shading of strong purplish red (63C); slight spotting of strong purplish red (63B). Stems 1.5 m. June.

(Published in *Gard. Chron.*, ser. 3, 78: 190, fig. 74 (1925).)

× ***dalbansonii* Terrace City Group II(-/)**

Parentage: *martagon* var. *album* × *hansonii*

R: N.E. Pfeiffer (1936-37), N: N.E. Pfeiffer (1959), I: Borbeleta Gardens (1976), REG: N.E. Pfeiffer (1983)

Fls gold and pink. Stems 1.5 m. June.

(Published in *NALS LYB* 12: 57-60 (1959).)

× ***dalbansonii* 'White Beauty' II(-/d)**

Parentage: *martagon* var. *album* × *hansonii*

N: H.C. Dijt (c. 1952)

AMH 1952

Fls ivory-white, *martagon* type.

× ***dalbansonii* 'W.O. Backhouse' II(-/)**

Parentage: (*martagon* × *hansonii*) F<sub>2</sub>

R: G.E. Backhouse, N: G.E. Backhouse, I: G.E. Backhouse (1964)

Fls deep orange with numerous brown spots. Tepals fairly reflexed. Stems with 15-17 fls.

(Published in *LYB* 28: 135 (1965).)

'Dali' VII(b/b)

Parentage: 'Barbaresco' × 'Towny'

R: Gebr. Vletter & Den Haan, G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan, I: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1999)

Inside strong purplish red (60D), throat with a little yellowish white (155D); outside moderate purplish red (64A) on a paler ground, midribs strong/light yellow-green (144C/D), with a little yellowish white (155D) at base; spots dark red (187C), on basal part of each tepal; papillae few, in the throat; nectaries strong yellow-green (144C); pollen strong orange (169B); stigma light yellow-green (145D). Fls 210 mm wide; tepals 120 × 45-64 mm, margins ruffled, tips recurved. Lvs scattered, 195 × 40 mm, mid green. Stems 1.35 m, green with a little darker

marking, and with c.3 fls.

(Published in *ILR Nineteenth Supplement* as Div. VIII, in error.)

'Dalibor' I(a/b)

Parentage: (unknown × 'Monte Rosa') × ('Accent' × 'Windahloo')

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside rich pink, base of throat paler; outside hairy, tepal-centres paler, midribs green-yellow; spots pale brown, small, moderately numerous, on two-fifths of each tepal; nectaries white-granulated; filaments crimson; pollen apricot-brown; style brown; stigma brownish. Buds hairy. Fls 140 mm wide; tepals 82 × 36 mm, margins up-turned, tips slightly recurved; pedicels 45 mm long, green. Lvs scattered, 115 × 9 mm, dull mid green. Stems 0.75 m, green, thick, with a medium-sized infl. Early June.

var. ***dalmaticum* IX(c/d)**

See *martagon* var. *cattaniae*.

'Dame Blanche' VII(b/b)

Parentage: 'Merci' × unnamed selection

R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1983), N: H.J.A. Rooyakkers B.V. (1987), I: H.J.A. Rooyakkers B.V. (1989), REG: H.J.A. Rooyakkers B.V. (1990)

Inside greenish to yellowish white (155C/D), throat light yellow-green (145B); outside greenish white (155C), midribs pale yellow-green (4D); papillae ivory-white, on inner tepals; nectaries deep reddish purple (77A); filaments green; pollen strong reddish orange (169A). Fls 215 mm wide; tepals 110 × 55 mm, margins smooth to slightly ruffled, tips strongly recurved. Lvs scattered, 125 × 35 mm, mid green. Stems 0.6 m, green, with c.6-7 fls. July.

'Damson' VI(-/a)

Parentage: Aurelian Group × selection from *leucanthum*

R: J. de Graaff (c. 1954), N: J. de Graaff

Fls plum-purple, 180 mm wide; spots absent. Tepal-tips reflexed. Stems 1.2-1.5 m. July.

'Dana' I(a/b)

Parentage: 'Connecticut Red' × 'Odysseus'

R: Šlechtitelaká Stanice Heřmanův Městec, N:

Šlechtitelaká Stanice Heřmanův Městec, REG:

Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside dark red, each tepal with a small, dark orange flame over nectary; spots moderately dense, medium sized, on half of each tepal. Buds very hairy. Fls 129-150 mm wide; tepals broad, overlapping, slightly wavy-edged; pedicels 58-81 mm long. Lvs scattered, 70-105 × 8-15 mm, glossy dark green. Stems 0.7-1 m, red-brown, hairy, with c.15 fls. Mid June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1993.)

**'Danaj'** VI(b-c-d)

Parentage: 'Lady Alice' × 'Gold Eagle'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997),

REG: B. Mičulka (1997)

Inside clear orange with paler stripes along midveins; outside yellow, greenish at base; spots absent; nectaries dark olive-green; filaments pale green; pollen chocolate-brown; stigma green. Fls 145 mm wide; tepals 105 × 40 mm, margins slightly waked, tips moderately recurved; pedicels 80 mm long, dark green. Lvs scattered, 105 × 27 mm, pale green. Stems 1.15 m, lightly marbled black, with a moderately long infl. Mid July.

**'Dance Gypsy'** I(a/b)

Parentage unknown

R: R.A. Prochaska (1985), G: Hartle-Gilman Gardens (1987), N: Hartle-Gilman Gardens (1994), I: Hartle-Gilman Gardens (1994), REG: Hartle-Gilman Gardens (1994)

Inside deep pink (51B), throat light orange (28C); outside deep pink (51B); spots small to large, dark, ovate, on basal two-thirds of each tepal; nectaries peach-coloured, frosted; pollen pinkish red-orange. Tepals 84 × 39 mm, margins ruffled, tips slightly recurved. Lvs scattered, 152 × 16 mm, mid green. Stems 1.3 m, dark green, with c.11 fls. Midseason.

(Published in Hartle-Gilman Gardens list, 1994.)

**'Dancing Colleen'** I(c/-)

Parentage: (Hallmark Group × 'White Prince') × rose-pink-flowered selection from Harlequin Group

R: R.A. Prochaska (1986), G: R.A. Prochaska (1988), N: R.A. Prochaska (1989), REG: R.A. Prochaska (1995)

Inside white, tepal-tips and edges rose-pink; outside rose-pink; light spots in centre of fl.; nectaries olive; pollen brown. Fls 60 mm wide; tepals 50 × 20 mm, margins ruffled, tips strongly recurved. Lvs scattered, 60 × 15 mm, mid green. Stems 1 m, green.

**'Dancing Doll'** II(-/-)

Parentage unknown

R: J.C. Ericksen (pre 1984), G: D. Dale (1990), N: D. Dale (1990), I: Parkland Perennials, REG: D. Dale (1993)

Inside white, throat cream; outside porcelain-white, midribs purple-pink; spots small, maroon, on half of each tepal, some showing through to the outside; nectaries lime-green; pollen rust-coloured. Fls 65 mm wide; tepals 35 × 20 mm, margins smooth, tips slightly recurved. Lvs whorled, 120 × 30 mm. Stems 1 m, black, with 12-16 fls. Early July.

**'Dancing Queen'** VII(-/b)

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × unnamed up-facing seedling

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1992)

Inside greenish to yellowish white (155C/D), basal half of each tepal with a light yellow (10B/C) midvein,

throat strong yellow-green (144C); outside yellowish white (155B), midribs pale yellow-green (4D) becoming light greenish yellow (4C) at top; papillae moderate red (184B) on apical part of tepals and vivid to brilliant yellow (9B/C) in the throat; nectaries yellowish white (156D), slightly spotted strong purplish red (72A); pollen moderate reddish orange (171A). Fls 290 mm wide; tepals 135 × 65 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 185 × 48 mm, mid green. Stems 0.95 m, green with darker markings, and with c.4 fls.

**'Dancis'** I(-/-)

Parentage unknown

R: J. Vasarietis (pre 1999), N: J. Vasarietis

Inside purplish pink, throat darker, each tepal with a white flare above throat, this area with conspicuous dark spots, inner tepals with a broad base and with a dark margin in basal third. Tepal-margins smooth, tips slightly recurved.

**'Dandolo'** VII(a/b)

Parentage: seedling 87-122 × seedling 87-69

R: Vletter & Den Haan Beheer B.V. (1993), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside deep purplish pink (66C), each tepal with a yellowish white (155D) flame above nectary, basal third of midveins light greenish yellow (5D), throat yellowish white (155D); outside light purplish pink (65B), each tepal with a very pale purple (69D) flame and moderate purplish pink margin, midribs dark greyish yellow (199D) flushed with red; spots light greenish yellow (5C); papillae present; nectaries strong yellow-green (144C); pollen strong orange (169B); stigma very pale green (192B) with some moderate purplish red (64A). Fls 215 mm wide, slightly scented; tepals 125 × 73 mm, margins ruffled, tips recurved. Lvs scattered, 180 × 54 mm. Stems 1.25 m, green with darker markings, with c.5 fls.

**'Dandy'** I(a/b)

Parentage: 'Carol Jean' × ('Sterling Star' × 'Connecticut King')

R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1983), N: Bischoff Tulleken Lelies B.V. (1987), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside moderate yellowish pink (33D), tepal-tips light yellowish pink (36A) changing to moderate pink (35D), throat yellowish grey (156A) edged greyish yellow-green (197D); outside light yellowish pink (36C) with strong greenish yellow (153B/C) stripes along midribs; spots moderate reddish brown (177A), on basal part of each tepal; nectaries moderate red (184B); pollen moderate reddish orange (178C). Fls 150 mm wide; tepals 80 × 38 mm, margins smooth, tips not recurved. Lvs scattered, 105 × 15 mm, mid green. Stems 0.8 m, green with some darker markings, and with c.6 fls. June (under glass).

**'Dandy Lion'** I(b/b)

Parentage unknown

R: J. Wadekamper (1982), G: J. Wadekamper (1984),

N: J. Wadekamper (1987), I: Borbeleta Gardens (1987), REG: Borbeleta Gardens (1988)

Fls golden yellow with scattered brown spots on basal half of each tepal on a slightly darker ground; nectaries green; pollen brown. Tepals 100 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 18 mm, dark green. Stems 0.5 m, dark green, with c.8 fls. Early to mid June. (Published in *Borbeleta Gardens Cat.*, 1987.)

**DANDY PIXIE® I(a/b)**

Trade designation of 'Ceb Dandy'.

**'Danesmere' I(-/-)**

See *L. × manglesii* 'Danesmere'.

**'Danesmere Variety' I(-/-)**

See *L. × manglesii* 'Danesmere Variety'

**'Dani Arifin' VIII(a/b)**

Parentage: 'Unique' × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2000)

Inside strong purplish red (54A), with pale yellow (161) above nectaries, throat strong purplish red (54A) with light yellow (162C) alongside the nectaries; outside strong purplish red (60D) on a paler ground, tepals edged strong red (53B), with a little light yellow-green (145B) at base; spots dark red (187A), on basal part of each tepal; papillae few, strong purplish red (54A), in the throat; nectaries strong purplish red (54A); pollen greyish red (178A); stigma dark yellowish pink (181D). Fls 210 mm wide; tepals 110 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 210 × 25 mm. Stems 0.9 m, dark green, with c.3 fls.

Syn.: 'Mrs Dani Arifin'.

(A *longiflorum*/Asiatic (LA) hybrid. Registered as 'Mrs Dani Arifin' and included in *ILR Nineteenth Supplement*, but in the same year European PBR were granted under the epithet 'Dani Arifin', so this latter form of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Daniëla' I(a/-)**

Parentage: 'Bianca' × 'White Prince'

R: De Jong Beheer B.V. (1985), N: De Jong Beheer B.V. (1990), I: De Jong Beheer B.V. (1990), REG: De Jong Beheer B.V. (1992)

Inside and outside yellowish white (155B), outer tepals with small, strong yellow-green (144C) tips; spots few, small, deep purplish red (71A), in the throat on inner tepals only; nectaries pale yellow-green (4D); pollen strong orange (24A). Fls 165 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 12 mm, mid green. Stems 1.45 m, green, with c.7-8 fls.

**'Dante' VIII(a/b)**

Parentage: seedling J 57 × 'Gironde'

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V.,

I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside greenish white (155C) shading to light greenish yellow (5D) at tepal-edges; outside greenish white (155C), tepals narrowly edged light greenish yellow (5D), midribs strong yellow-green (144B/C), moderate reddish brown (174A) at top; spots and papillae absent; nectaries strong yellow-green (143C), with a little greenish white (155C); pollen dark greyish reddish brown (200A); stigma strong greenish yellow (151B). Tepal-margins smooth, tips nor or very slightly recurved. Lvs scattered, 115 × 15 mm, dark green. Stems 1.2 m, green with darker spots, and with 3-5 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

**'Danubia' VI(b-c/a)**

Parentage: 'Amethyst' × 'Ekzotika'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside pale pink on a creamy ground, tepal-margins veined pink, throat yellow; outside with each tepal base brownish and margin veined pink, midribs pinkish; nectaries green; pollen chocolate-brown; stigma brown. Fls 125 mm wide; tepals 135 × 47 mm, rigid, thick, tips strongly recurved; pedicels 80 mm long, profusely spotted. Lvs 100 × 9 mm, dull pale green. Stems 105 m, moderately thick, dotted with dark brown. Mid July.

**'Danuta' I(b/b)**

Parentage unknown

R: J. Białobłocka & F. Marat (1985)

Inside yellow. throat greenish; outside paler yellow, midribs brownish; spots dark red-brown, moderately numerous on three-quarters of each tepal; nectaries green, white-granulated; pollen ochre-orange; stigma brown-red. Fls 115 mm wide; tepals 75 × 28 mm, moderately recurved, margins ruffled; pedicels 50 mm, slender, brown. Lvs scattered, 80 × 9 mm, dull mid green. Stems 0.75 m, dark brown. July.

(Published in B. Mičulka, *Odrůdy lilii pěstované u nás*, (1995), p. 39.)

**'Daphne Rolls' I(c/d)**

Parentage: ('Maxwill' × 'Edna Kean') F<sub>3</sub> × 'Dark Princess'

R: G.W. Darby (c. 1958), N: G.W. Darby

PC 1958

Fls vivid reddish orange (30B) spotted black.

(Published in *LYB* 22: 132 (1959).)

**'Darina' I(a/b)**

Parentage: 'Connecticut King' × seedling C-15

R: Šlechtitelaká Stanice Heřmanův Městec, N:

Šlechtitelaká Stanice Heřmanův Městec (1992), REG:

Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside scarlet-red, with a darker centre, throat rich orange; spots small, sparse, on a third of each tepal. Fls 120-140 mm wide, with overlapping tepals; pedicels 60-100 mm long. Lvs 85-105 × 9-13 mm, dark green. Stems 1 m, green, with c.22 fls. Mid June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1992.)

**'Darja' I(b/b-c)**

Parentage: 'Wattle Bird' × 'Heloma'

R: B. Mićulka (pre 1988), N: B. Mićulka, REG: B. Mićulka (1988)

Inside apricot-salmon, tepal-tips and throat paler, darker over nectaries; outside deep salmon; spots moderately numerous, fairly large, greyed purple, on a quarter of each tepal; papillae in the throat; nectaries white; pollen orange. Fls 120 mm wide; tepals 80 × 40 mm, slightly to strongly recurved; pedicels brown. Lvs scattered, 70 × 12 mm, slightly glossy mid green. Stems 0.95 m. Mid July.

**'Dark Beauty' I(a/-)**

Parentage unknown

R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V.

Inside strong purplish red (54A) on a pale yellow-green (155A) ground, tepals stronger coloured at tips and with a pale yellow-green (155A) margin; outside moderate purplish pink (54B) at base, shading to deep purplish pink at tip and margin of each tepal, a third of each tepal white-edged, midribs strong yellow-green (144C); spots dark red (187A) on basal part of each tepal; pollen moderate orange (167A); stigma dark red (187B/C). Fls 170 mm wide; tepals 96 × 45 mm, tips slightly recurved. Lvs scattered, 77 × 12 mm. Stems 0.82 m, dark, with c.8 fls.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Dark Beauty' IX(b/c)**

See *auratum* 'Dark Beauty'.

**'Darkest Favorite' I(c/-)**

Parentage: *davidii* var. *wilmottiae* × *lancifolium* 'Splendens'

R: A.J. van der Zwet & Sons, N: A.J. van der Zwet & Sons, I: A.J. van der Zwet & Sons (1950)

AMH 1950, FCCH 1951

Fls deep tomato-red with garnet-brown gloss.

**'Darkest of All' I(a/-)**

See *L. × hollandicum* 'Darkest of All'.

**Darkest Red Group IX(b-c/d)**

See *speciosum* var. *magnificum* Darkest Red Group.

**Darkest Red Selections IX(b-c/d)**

See *speciosum* var. *magnificum* Darkest Red Group.

**'Dark Eyes' I(b/c)**

Parentage: 'Edna Kean' self-pollinated × 'Edna Kean'

R: P.M. Byam (c. 1947), N: P.M. Byam

Fls garnet-red, flushed with oxblood-red, deepening at base of tepals; spots very fine, more-or-less black. Stems to 1.1 m, with up to 32 fls. July.

(Published in *LYB NALS* 9: 98 (1956).)

**'Dark Gleam' I(c/d)**

Syn. of 'Dark Gold'.

**'Dark Gold' I(c/d)**

Parentage: *pumilum* × unknown

R: A.J. Porter (pre 1963)

Inside golden orange; outside tinged reddish. Stems 0.9 m. Early July.

Syn.: *pumilum* 'Dark Gold'; 'Dark Gleam'.

(Published in *Honeywood Lily Cat.*, fall 1963.)

**'Dark Heather' I(b/-)**

Parentage: Panamint Group × 'Pirate'

R: A. Berliński (1983), G: A. Berliński (1985), N: A. Berliński (1985), I: W. Peryt (1991), REG: W. Peryt (1993)

Inside and outside strong purplish red (71B), throat moderate purplish red (58A), striped; black spots on basal quarter of each tepal; nectaries moderate purplish red (58A); pollen brown. Fls 120 mm wide; tepals 65 × 36 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 8 mm, dark green. Stems 0.55 m, purple-brown, with c.8 fls. June to July.

**'Darkie' VII(b/c)**

Parentage: selection from 'Crimson Queen'

S: J.S. Yeates (c. 1953), N: J.S. Yeates

Tepals deep red (185A) with 3 mm-wide white edge.

Syn.: *auratum* 'Darkie'.

**'Dark Moon' I(a-b/c)**

Parentage: Simonet Asiatic unnamed seedling × mixed pollen from Fellner Asiatic seedlings

R: J.J. Brown (1991), G: J.J. Brown (1992), N: J.J. Brown (2005), I: Manitoba Regional Lily Society (2005), REG: J.J. Brown (2005)

Inside dark red (187A), tepal-tips dark red (187B); outside similar but with slightly less lustre; spots darker than dark red (187A), raised; nectaries dark red (187A) with a silver glow; pollen dark brown; stigma dark crimson-brown. Fls 150 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved; pedicels 110-180 mm long. Lvs scattered, thick, 150 × 15 mm, dark green. Stems 1.5 m, brownish green, with 17 or more fls. Mid July.

(Published in *Manitoba Regional Lily Soc. Newsletter* 22(3): 8 (2005). Fls do not fade with age, but the density of the colour is affected by sunlight. Nomenclatural standard: colour print supplied by registrant (WSY 0096425).)

**'Darkness' I(-/-)**

See *L. × manglesii* 'Darkness'.

**'Dark Passion' I(c/d)**

Parentage: dark red-flowered seedling × unknown

R: L. Høpfner (1990), G: L. Høpfner (1992), N: L. Høpfner (1997), I: L. Høpfner, REG: L. Høpfner (1997)

Inside shiny deep red (53A), throat slightly darker; outside deep red (53A) shaded moderate reddish orange (35A) in the middle; spots many, black, on basal half of each tepal; nectaries orange; pollen vivid reddish orange (33A); stigma deep red (53A). Fls 80 mm wide; tepals 80 × 25 mm, margins not or very slightly wavy, tips

recurved. Lvs scattered, 120 × 8 mm, mid green. Stems 1.3 m or more, green with black markings, and with 12-15 fls. July.

**‘Dark Pink Flamboyant’ VI(-/a)**

Parentage: developed from *L. × aurelianense* seed  
R: F.M. Abbey (c. 1960), N: F.M. Abbey  
Fls pink and yellow. Stems 1.5 m. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 46 (1978).)

**‘Dark Princess’ I(b/-)**

Parentage: ((*L. × maculatum* ‘Wallacei’ × *L. × maculatum* var.) × (*L. × maculatum* var. × *L. × maculatum* ‘Batemanniae’)) × triploid *lancifolium*  
R: S.L. Emsweller (c. 1964), N: S.L. Emsweller  
Fls vivid reddish orange (33B) with numerous purple-black spots coalescing at tepal-margins to give a black border. Fls 100-125 mm wide, with strongly recurved tepals. Stems 1-1.2 m, dark purplish brown. July.  
Syn.: ‘Beltsville Tiger’.  
(Published in *Strawberry Hill Cat.*, 1954.)

**‘Dark Ruby’ I(c/-)**

Parentage: *dauidii* × ‘Tuffery’s Ruby’  
R: L.B. Tuffery (c. 1946), N: L.B. Tuffery  
Fls dark red.  
(Published in *Dunhampton Lily Fields Cat.*, 1948.)

**‘Dark Star’ I(b/c)**

Parentage: ‘Summer Night’ × seedling (75-6) of ‘Rochester’  
R: R. & H.R. Cocker (1997), G: R. & H.R. Cocker, N: R. & H.R. Cocker, I: R. & H.R. Cocker, REG: R. & H.R. Cocker (2003)  
Inside darker than dark red (59A), tepal-tips slightly lighter; outside dark red (59A); spots dark, slightly raised; nectaries pinkish white; pollen dark brown; stigma maroon. Fls 125 mm wide; tepals 65 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 9 mm. Stems 1.4 m, dark green, with 12-15 fls. Midseason. (Nomenclatural standard: colour print supplied by registrant (WSY 0096344).)

**‘Darling’ VII(-/-)**

Parentage unknown  
R: Trior Lelie B.V. (1981), G: Trior Lelie B.V. (1983), N: Trior Lelie B.V. (1985), I: Trior Lelie B.V. (1989), REG: Trior Lelie B.V. (1989)  
Inside strong to vivid purplish red (61B/C), midveins flushed with strong red (53B), throat strong yellow-green (143C) and edged light greenish yellow (8B); outside deep purplish pink (64D); spots dark red (187A/B), on basal half of each tepal; pollen strong orange (168A). Fls 195 mm wide; tepals 95 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 22 mm, mid green. Stems 0.35 m, green with darker markings, and with c.10 fls. July.

**‘Darwin’ I(a/-)**

Parentage: seedling OR 93-02 × seedling G 91-4  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den

Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside strong orange (25A), throat strong orange (25A/B); outside light orange-yellow (22B), shading to strong orange (25A/B) at tepal-edges, midribs suffused with strong yellow-green (144B); spots and papillae absent; nectaries white-hairy; pollen moderate reddish brown (175A); stigma deep red (185A). Fls 190 mm wide; tepals 110 × 35-55 mm, margins smooth, tips not recurved. Lvs scattered, 140-190 × 30-40 mm. Stems 1.15 m, green, with c.6 fls.  
Syn.: ‘Dublin’.

(Originally named ‘Dublin’ (*ILR Nineteenth Supplement*), but this cv. was granted European PBR (no. 8445) as ‘Darwin’ and so this latter epithet takes precedence (ICNCP, 2004: Art. 24.4).)

**‘Dassa’ VII(a/b)**

Parentage unknown  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals yellowish white (155D), each tepal with a light greenish yellow (7D) flame in basal half, outer tepals similar but with a vivid purplish red (57D) streak at tip (which disappears with age); outside with inner tepals yellowish white (155D), outer tepals yellowish white (155D), midribs strong yellow-green (144C) at base changing into light yellow-green (150D), at top strong yellow-green (143B), area next to midribs flushed with vivid purplish red (57D); spots absent; papillae many, brilliant yellow (7A); nectaries strong yellow-green (144C); pollen strong orange (25A); stigma light greenish (190C). Fls 235 mm wide, fragrant; tepals 125 × 57-75 mm, margins ruffled, tips recurved. Lvs scattered, 180 × 69 mm. Stems 1-1.1 m, green with darker markings, dark at base, with c.3 fls.

**forma *daugava* IX(c/d)**

See *martagon* var. *daugavense*.

**var. *daugava* IX(c/d)**

See *martagon* var. *daugavense*.

**‘Daugava’ VI(b/a)**

Parentage: ‘Damson’ × seedling L-27  
R: Ā. Zorgevics (1980), G: Ā. Zorgevics (1984), N: Ā. Zorgevics (2004), I: Ā. Zorgevics (2004), REG: Ā. Zorgevics (2004)  
Inside light purple (78C), throat strong yellow-green (141D), each tepal with a spear-shaped sulphur spot near the base; outside mid purple; nectaries whitish; pollen light orange; stigma brownish purple. Fls 140 mm wide, strongly scented; tepals 130 × 40 mm, margins smooth, tips slightly recurved. Lvs whorled, 70 × 10 mm. Stems 1.2 m, grey-green, with c.9 fls. Bulbs purple. Late July to early Aug.  
(The Daugava is a Latvian river. Nomenclatural standard: colour print supplied by registrant (WSY 0096368).)

**DAUGHTER-IN-LAW I(a/b)**  
Trade designation of 'Vedekla'.

**'Daughter of Fialkovaya' I(b/-)**  
Syn. of 'Doch Fialkovaya'.

**'Dauntless' I(a/-)**  
Parentage unknown  
R: P. Whipple, G: P. Whipple (1978), N: P. Whipple (1979), I: Borbeleta Gardens (1983), REG: Borbeleta Gardens (1983)  
Inside deep red (53A), throat a darker deep red (53A); outside strong red (53C); black spots in centre half of tepals; nectaries deep red (53A); pollen rust-brown. Tepals rather narrow, 66 × 19 mm, margins smooth, tips slightly recurved. Lvs scattered, 83 × 9 mm, mid green. Stems c.0.6 m, dark green, with 15-22 fls. Midseason.  
(Published in Borbeleta list, 1983.)

***dauricum* Ker Gawl. IX(a/b)**  
Fls red to orange-red, yellow towards base; spots brownish red; papillae present; nectaries hairy; pollen red. Fls up to 100 mm wide; tepals 50-100 × 15-35 mm, narrowed to claw at base, tips slightly recurved. Lvs scattered, 50-150 × 5-35 mm, margins often with cobwebby hairs. Stems to 0.75 m, green with red-brown spots and with white cobwebby hairs in upper part, with up to 6 fls. NE Asia.  
Syn.: *davuricum*; *pensylvanicum*.

***dauricum* 'Brenchleyense' IX(a/b)**  
Parentage: selection from *dauricum*  
Fls blood red-crimson, spotted black. Stems 0.6-0.8 m. June  
(Found in a garden at Brenchley, Kent.)

***dauricum* 'Kongojo' IX(a/b)**  
Parentage: selection from wild *dauricum*  
N: T. Ueshima (c. 1910)  
Fls pure yellow.

***dauricum* 'Kusuda' IX(a/b)**  
Parentage: selection from wild *dauricum*  
Fls orange.  
(Grown in Japan.)

***dauricum* var. *luteum* R.W. Wallace IX(a/b)**  
Fls yellow; spots black. June.

***dauricum* 'Nishiki-ori' IX(a/b)**  
Parentage: selection from *dauricum*  
N: T. Ueshima (pre 1920)  
Fls orange-red.

***dauricum* 'Praecox' IX(a/b)**  
Parentage: selection from *dauricum*  
Fls soft apricot.  
(Published in *Constable Cat.*, 1942.)

***dauricum* forma *rebutense* IX(a/b)**  
A dwarf form with stems c. 0.15 m, bearing 1-3 orange fls with dark spots. Rebut Island, Japan.

(The original publication has not been seen by the ICRA, who has been unable to find the authority for this name.)

***dauricum* 'Wadai' IX(a/b)**  
Parentage: selection from *dauricum*  
N: K. Wada, I: K. Wada (pre 1935)  
Fls apricot-yellow, spotted brown. Stems up to 0.3 m, with up to 20 fls.  
(Published in *Wada Cat.*, 1935. Collected on an island in N Japan. Consists of more than one clone.)

***dauricum* var. *wilsonii* IX(a/b)**  
Given as a parent of 'Mrs Dwight Eisenhower'. The name does not appear to have been validly published and no description has been found.

**'David Bowes Lyon' I(c/-)**  
Parentage: ('Progenitor' × *lanceifolium* var. *flaviflorum*) × 'Marlyn Ross'  
R: G.W. Darby (c. 1964), N: G.W. Darby  
Fls lemon-yellow with dark spots. Tepals semi-recurved.  
(Published in *LYB* 28: 133 (1965).)

***dauidii* Duchartre IX(c/d)**  
Fls red or orange-red; spots deep purple, raised, over whole tepal area except tip; papillae on basal part of each tepal; nectaries edged with white hairs; filaments pale pink; anthers purplish orange; pollen orange or red; stigma purple. Buds usually hairy. Tepals 50-80 × 8-25 mm; pedicels horizontal. Lvs scattered, 60-100 × 2-4 mm, dark green. Stems 1-1.4 m, green, usually marked with brown-purple, downy especially in lower part, usually with cobwebby hairs at the lf-bases, and with 5-20 fls. W China.  
Syn.: *thayerae*.

***dauidii* 'Clarity' IX(c/d)**  
Parentage: selection from *dauidii*  
S: W.A. Constable Ltd (c. 1949), N: W.A. Constable Ltd  
Fls orange; spots absent.  
(Published in *Constable Cat.*, Autumn 1949.)

***dauidii* Davimottiae Group I(c/d)**  
Parentage: *dauidii* × *dauidii* var. *willmottiae*  
R: I. Preston (c. 1922), N: I. Preston  
AM 1931  
Syn.: *L.* × *davimottiae*; Ottawa Group.  
(*dauidii* 'Lady Byng' is a named clone of this Group.)

***dauidii* 'Lady Byng' IX(c/d)**  
Parentage: selection from *dauidii* Davimottiae Group  
S: I. Preston (c. 1930), N: I. Preston  
AM 1931  
Fls rich orange-vermilion; spots deep purple. Fls c.50 mm wide; pedicels horizontal. Stems 0.6-1 m, with up to 50 fls. July.

***dauidii* var. *macranthum* Raffill IX(c/d)**  
Syn. of *dauidii* 'Macranthum'.

**‘davidii’ ‘Macranthum’ IX(c/d)**

Parentage: selection from *davidii*

S: C.P. Raffill, N: C.P. Raffill

Fls bright orange; lower pedicels with 2-3 fls. Stems up to 1.9 m.

Syn.: *davidii* var. *macranthum*.

(This comes true from seed and thus plants of this cv. epithet are not a single clone.)

**‘davidii’ ‘Oriole’ I(c/d)**

Syn. of ‘Oriole’.

**‘davidii’ ‘Queen Charlotte’ IX(c/d)**

Parentage: selection from *davidii*

S: Messrs Horsford (pre 1933), N: Messrs Horsford

Fls salmon-red with paler throat; spots profuse.

(Published in *Constable Cat.*, 1935/36. First shown at Lily Conference, 1933.)

**‘davidii’ ‘Rex’ IX(c/d)**

Parentage: selection from *davidii*

S: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1971)

Fls brilliant orange, larger than *davidii* itself. Stems 0.6-1

m. Dec. (Australia).

**‘davidii’ var. ‘unicolor’ (Hoog) Cotton IX(c/d)**

Fls paler than *davidii* itself, with or without inconspicuous reddish or pale purple spots. Lvs very crowded and longer than in *davidii* itself. Stems short, usually under 1 m, with only 10-15 fls.

Syn.: *biondii*.

**‘davidii’ var. ‘willmottiae’ (E.H. Wilson) Raffill IX(c/d) FCC 1912**

Fls orange with black spots; pedicels drooping. Lvs to 6 mm broad, the lf-axils usually lacking hairs. Stems 1.2-2.2 m, arching rather than erect, purple-spotted, with up to 40 fls.

Syn.: *sutchuenense*.

**‘David’s Glory’ VI(-/c)**

Parentage: ‘T.A. Havemeyer’ × *henryi*

R: C.W. Davidson (c. 1960), N: C.W. Davidson

Fls strong orange (30D); pollen brown. Fls 125 mm

wide. Lvs very waxy, glossy. Stems 1.9-2 m.

× **‘davidmottiae’ anon. I(c/d)**

Syn. of *davidii* Davimottiae Group.

**Davimottiae Group I(c/d)**

See *davidii* Davimottiae Group.

**‘Da Vinci’ VII(a/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside strong purplish pink (68B), with yellow along nectaries, midveins green at base; outside light purplish pink (73C); spots and papillae present; nectaries green; pollen light brown; stigma purple. Tepal-margins strongly ruffled, tips recurved. Stems medium to tall, with reddish markings. Early to midseason.

(Production ceased in 1997.)

**‘Davos’ I(a/-)**

Parentage: seedling W 84-2 × seedling W 88-13

R: Vletter & Den Haan (1990), G: Vletter & Den Haan,

N: Vletter & Den Haan (1997), I: Vletter & Den Haan

(1997), REG: Vletter & Den Haan (1997)

Inside yellowish white (155B), outside white (155B, tepals tipped moderate brown (165A), midribs strong yellow-green (145A), strong yellow-green (144B) at top; spots absent; papillae yellowish white (155B); nectaries strong yellow-green/yellowish white (143C/155B); pollen a little stronger than brownish orange (164A); stigma greyish red (184A). Fls 180 mm wide; tepals 90 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 25 mm, mid green. Stems 1 m, green, with 7-8 fls.

**‘davuricum’ E.H. Wilson IX(a/b)**

Syn. of *dauricum*.

**‘davuricum’ ‘Incomparable’ I(a/b)**

See *L. × hollandicum* ‘Incomparable’.

**‘davuricum’ var. ‘venustum’ (Kunth) E.H. Wilson I(a/b)**

Syn. of *L. × maculatum*.

(Included in Div. I because, although *davuricum* was published as a species, this variety is a synonym of *L. × maculatum* ‘Venustum’ which is placed in Div. I.)

**‘Dawn’ VII(-/l-)**

Parentage: *speciosum* × unknown

S: R.H. Ashcroft (pre 1947), N: R.H. Ashcroft

Fls pale pink, with white tepal-edges and crimson spots; nectaries pale green; pollen chocolate-brown. Stems 1.5 m, greenish purple.

Syn.: *speciosum* ‘Dawn’; ‘Ashcroft’s Dawn’.

(Published in *LYB* 11: 79 (1947). Included in *ILR* (1960) as *speciosum* ‘Dawn’.)

**‘Dawnette’ VII(-/l-)**

Parentage: ‘Dawn’ × unknown

R: G. Errey (pre 1962), N: G. Errey

More vigorous than ‘Dawn’, and with smaller fls. Fls pale pink, lightly spotted with deeper pink. Stems 1.2 m.

Syn.: *speciosum* ‘Dawnette’.

(Raised in Australia.)

**‘Dawn Glow’ I(a/-)**

Parentage unknown

Bicolour: rich peach-pink tepals changing to a cream base; spots dark, on cream part of each tepal; pollen brown. Tepal-margins smooth, tips not recurved. Lvs scattered. Stems 1 m, green.

(Published in *Dunhampton Lily Fields Cat.*, 1967, where it was said to have come from Oregon Bulb Farms.)

**Dawn Pink Trumpets Group VI(-/a)**

Parentage: selections from Aurelian Group

S: C. Yerex, N: C. Yerex

Fls in deep shades of rose-pink. Stems 1.5-1.9 m. July to Aug.

(Published in *Kline Cat.*, 1958.)

**'Dawn Pixie' I(a/-)**

Parentage: 'Peachblush' × ('Prince Charming' (Div. 1) × 'Harmony')

R: E.A. McRae (1976), G: Oregon Bulb Farms, Inc. (1980), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)  
 Inside moderate purplish red (59C) shading to strong purplish red (59D) just parallel to nectaries, tepal-tips strong purplish red (59D), throat vivid to brilliant orange-yellow (23A/B); outside deep purplish pink (58D), with a green flush along midribs and at tepal-tips; spots copious, medium to large, elongated, magenta, sometimes merging. Fls 140-160 mm wide; tepals 80 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 11 mm, dark green. Stems 0.6 m, green, with 6-30 fls. Mid June.

**'Dawn's Blush' VII(-/c)**

Parentage: (*speciosum* × *auratum*) × (*speciosum* × *auratum* × *rubellum*)

R: H.J. Strahm (1961), N: R.L. Strahm (1968), REG: R.L. & H.J. Strahm (between 1968 and 1980)  
 Inside light peach-pink, throat and tepal-tips light salmon; outside pink; rose-pink spots on two-thirds of outer tepals; nectaries apple-green; pollen orange. Tepal-margins ruffled, tips slightly recurved. Stems 1 m. Aug. (Published in *Rex Bulb Farms Cat.*, July 1969.)

**'Dawn's Glow' VI(-/a)**

Parentage: Aurelian Group seedling × 'Golden Clarion'  
 R: R.C. Crawford, G: Montana State University, N: D.C. Merkely (1978), I: Borbeleta Gardens (1979), REG: Borbeleta Gardens (1981)

Inside pale lime-yellow, throat yellow-green; outside lime-yellow, tinged with red at base; spots absent; nectaries green; pollen brown-orange. Tepals 100 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 8 mm, dark green. Stems 1-1.2 m, blue-green, with up to 22 fls. July to Aug. (Published in *Borbeleta Gardens Cat.*, 1979.)

**'Dawn Star' I(b/-)**

Parentage unknown

R: W. Windus, N: J. Wadkamper (1976), I: J. Wadkamper (1976), REG: J. Wadkamper (1976)  
 Inside light yellow to cream, throat yellow-green, tepal-tips lighter cream; outside yellow-green, tepal-margins deeper yellow-green; slightly spotted with red-brown; nectaries green; pollen light tan. Lvs dark green. Stems 0.7-1 m. July. (Published in *Lilies and other Liliaceae*, 1976: 90.)

**'Dawn Tone' I(a/-)**

Parentage: 'Dawn Star' × 'Pumpkin Sweet'  
 R: G.C. Keast (1986), G: G.C. Keast (1988), N: G.C. Keast (1990), I: G.C. Keast, REG: G.C. Keast (1991)  
 Inside and outside maize-yellow (607), throat green; spots maroon, on basal half of each tepal; pollen brown. Fls 140 mm wide; tepals 70 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 20 mm. Stems 0.7 m, green, with c.20 fls. Mid Dec. to mid Jan. (New Zealand).

**'Daybreak' VI(-/b)**

Parentage: 'Sundance' × 'Dark Pink Flamboyant'  
 R: T.R. Martin, G: T.R. Martin, N: T.R. Martin (1976), I: T.R. Martin (1976), REG: T.R. Martin (1976)  
 Inside light yellow (12C); outside flushed with deep pink (180D), tepal-edges deep pink (180D); spots absent; pollen mid reddish brown. Lvs mid to dark green. Stems 1.2-1.5 m. Mid to late July. (Published in *Lilies and other Liliaceae*, 1976: 90.)

**'Daydream' I(a/-)**

Parentage: 'Connecticut Queen' × 'Sunrise'  
 R: E.A. McRae (1975), G: Oregon Bulb Farms, Inc. (1978), N: Oregon Bulb Farms, Inc. (1984), I: Oregon Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc. (1985)  
 Inside pink overlaid with soft yellow, the pink more intense at tepal-tips, throat soft green-yellow; outside suffused with soft yellow-pink; spots absent; nectaries lime-green; pollen soft yellow. Fls 100-120 mm wide; tepals 60 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 1 m, light green, with 8-20 fls. Late June.

**'Dayspring' I(a/-)**

Parentage: (('Lemon Queen' (Div. I) × 'Mega') × 'Edith Cecilia') F<sub>2</sub> × 'Croesus'  
 I: Oregon Bulb Farms, Inc. (c. 1976), REG: Oregon Bulb Farms, Inc. (1977)  
 Fls yellow, with gold blotch and slight brown spotting. Lvs glossy dark green. Stems 1 m, with up to 20 fls. June. (Published in *Lilies and other Liliaceae*, 1977: 77.)

**'Daytona' VIII(a-b/c)**

Parentage: seedling 10.229-1 × seedling 88-01  
 R: World Breeding B.V. (1994), N: World Breeding B.V. (2001), I: World Breeding B.V. (2001), REG: World Breeding B.V. (2002)  
 Inside strong orange (25A) on a strong orange (25B) ground, throat moderate orange-yellow (168D); outside strong orange (25A) on a strong orange (25B) ground, darker towards tepal margins; spots few, moderate red (181A); papillae absent; nectaries strong yellow-green (144A); pollen moderate reddish brown (175A); stigma moderate red (181A). Fls 180 mm wide; tepals 115 × 55 mm, margins smooth, tips recurved. Lvs scattered, 135 × 40 mm. Stems 1.13 m, green, with c.5 fls. (*A longiflorum*/Asiatic (LA) hybrid.)

**'Dazzler' I(b-c/-)**

Parentage: (almost unspotted seedling of Tiger Group × unspotted yellow-flowered seedling of *L. × hollandicum*) × ((unspotted Tiger Group × *L. × hollandicum*) × 'Gold Urn')  
 R: L. Koehler (1974), N: L. Koehler (1975), I: J. Wadkamper (1976), REG: J. Wadkamper (1976)  
 Fls brilliant orange throughout; spots absent; nectaries light orange; pollen brown. Stems 1 m. July. (Published in *Lilies and other Liliaceae*, 1976: 90.)

**‘Dean Gregory’ VI(b/a)**

Parentage: selection from Saint Paul’s Group  
S: R.C. Paget (c. 1966), N: R.C. Paget  
Fls white, throat yellow; anthers golden brown. Buds pinkish brown, 175 mm long. Tepals c.65 mm wide.

**‘Dean Inge’ VI(-/a)**

Parentage: selection from Saint Paul’s Group  
S: R.C. Paget (c. 1966), N: R.C. Paget  
Fls white, tepal-edges light pink; anthers chocolate-brown. Tepals c.65 mm wide. Buds deep maroon, 150 mm long.

**‘Dean Matthews’ VI(-/a)**

Parentage: selection from Saint Paul’s Group  
S: R.C. Paget (c. 1966), N: R.C. Paget  
Fls white with pale pink shading, throat deep yellow almost to mouth; anthers golden brown. Buds pinkish brown, 150 mm long.

**‘Dean Sullivan’ VI(-/a)**

Parentage: selection from Saint Paul’s Group  
S: R.C. Paget (c. 1966), N: R.C. Paget  
Fls white, tepal-edges pink, throat green and yellow; anthers golden brown. Tepals 50 mm wide. Buds flushed with pink, c.140 mm long.

**‘Deauville’ VII(a/b)**

Parentage: seedling 88-111 × seedling 92-48  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside strong purplish red (63A) in basal two-thirds, strong purplish red (63B) in apical third, midveins strong purplish pink (63A), strong purplish pink (63C) towards tepal-margins and tips, throat yellowish white (155D); outside vivid purplish red (57D) flushed with yellowish white (155D); spots dark red (59A); papillae present; nectaries strong yellow-green (143C); pollen strong brown (172B); stigma light yellow-green (138D). Fls 285 mm wide; tepals 145 × 75 mm, margins ruffled, tips recurved. Lvs 170 × 45 mm. Stems 1.1 m, light green, with c.3 fls.

**‘Debonair’ VII(-/c)**

Parentage: *L. × parkmanii* ‘Mater’s Pet’ × ‘Tranquil Dawn’  
R: G.G. & F.S. Blake (1982), G: G.G. & F.S. Blake (1986), N: F.S. Blake (1987), I: F.S. Blake (1987), REG: F.S. Blake (1987)  
Fls yellowish white (155D); midribs moderate purplish pink (70D); a light spotting of moderate purplish pink (70A); nectaries light yellow-green (144D); pollen greyish red (178A). Fls 180 mm wide; tepals 110 × 50 mm, margins ruffled, tips very slightly recurved. Lvs scattered, 220 × 60 mm, mid green. Stems 1.8 m, greyish yellow-green (148C), with c.17 fls. Feb. to Mar. (Australia).

**‘Debora’ I(a/b)**

Syn. of ‘Diabora’.

**‘Debra Jeanne’ I(a/c)**

Parentage: ‘Sutter’s Gold’ × ‘Unique’  
R: S.T. Dunville (1989), G: S.T. Dunville (1991), N: S.T. Dunville (1998), REG: S.T. Dunville (1998)  
Inside pale yellow (19C), throat cream, with a tinge of orange at apical edge, with crepe texture; outside pale yellow (19C), midribs broad, greenish, outer tepals with small brown tips; spots numerous, oblong, dark burgundy, on basal two-thirds of each tepal; nectaries green; filaments pale yellow pollen bright deep orange; stigma red. Fls 110 mm wide; tepals 65-67 × 25-35 mm, rather broad, margins smooth, tips not or scarcely recurved. Lvs scattered, 88 × 12 mm, moderate yellow-green (146B). Stems 1 m, mid green. Early to mid July. (Named after the raiser’s daughter.)

**‘Debras Variety’ VI(c/-)**

See note under *L. × aurelianense*.

**‘Debrezin’ VI(-/d)**

Parentage: ‘Heidelberg’ × ‘Lednice’  
R: V. Strasser (1982), G: V. Strasser (1985), N: V. Strasser (1989), I: V. Strasser (1990), REG: V. Strasser (1991)  
Inside and outside white, throat yellow; nectaries green; pollen brown. Fls 160 mm wide; tepals 107 × 32 mm, margins smooth, tips not reflexed. Lvs scattered, 170 × 20 mm, dark green. Stems 1.3 m, dark green, with c.21 fls. Late July to mid Aug.

**‘Debutante’ I(b/-)**

Parentage: ‘Sunrise’ × ‘Red Carpet’  
R: E.A. McRae (1974), N: Oregon Bulb Farms, Inc. (1982), I: Oregon Bulb Farms, Inc. (1983), REG: Oregon Bulb Farms, Inc. (1983)  
Inside strong red (53C) fading to strong purplish red (59D), throat soft rose-pink; outside strong red (53C); spots absent; nectaries green; pollen gold. Fls 140-160 mm wide; tepals 90 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, pale green. Stems 0.4 m, light green, with 5-16 fls. Late May to early June.

**‘Declaration’ I(a/-)**

Parentage: ‘Ardent’ × ‘Roter Cardinal’  
R: Gebr. N. & B. Laan & Zn (1979), G: Gebr. N. & B. Laan & Zn (1981), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)  
Fls red; spots brown, on whole tepal-surface except tips; nectaries light red; pollen brown. Fls 150 mm wide; tepals 85 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 25 mm, dark green. Stems 1.5 m, dark green, with c.14 fls. July.

**‘Decorum’ I(a/b)**

See *L. × maculatum* ‘Decorum’.

**‘Decoy’ I(a/b-c)**

Parentage: (*L. × maculatum* × unknown) × unknown  
R: G.M. Chandler, G: G.M. Chandler (1954), N: G.M. Chandler, REG: G.M. Chandler (1961)

Inside vivid reddish orange (40B), with deeper flush on tepal-edges and vivid orange-yellow (23A) around nectaries; lightly spotted. Fls semi-double, 125 mm wide. Stems 0.3-1 m.  
(Published in *ILR* (1969).)

**'Deep Image' I(a/-)**

Parentage: seedling from Golden Chalice Group  
R: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1976)  
Fls deep orange. Stems 1 m.

**'Dee Simmons' VI(b/b)**

Parentage: ('Air Drop' × (*henryi* × 'T.A. Havemeyer')) × orange-flowered trumpet  
R: G.W. Darby (1960), N: G.W. Darby, I: G.W. Darby (1964)  
Fls creamy white with a red-orange central zone.  
(Published in *LYB* 28: 133 (1965).)

**'Deimos' I(a/b)**

Parentage: 'Gelber Mandarin' × mixed pollen of 'Chinook', 'Evina' & 'Longicanda'  
R: K. Braun, N: K. Braun, I: K. Braun (1996), REG: K. Braun (1997)  
Inside apricot, throat slightly greenish; outside apricot, midribs greenish; spots absent; nectaries apricot; pollen brown; stigma red. Fls 154 mm wide; tepals 110 × 40 mm, slightly recurved; pedicels 90 mm long, thick, green. Lvs scattered, 140 × 20 mm, glossy dark green, held horizontally. Stems 0.85 m, brownish, with secondary fls in the infl. Bulbs white. Early July.

**'Deja' I(a/b)**

Parentage: derived from repeated crossings of *cernuum* & Asiatic hybrids  
R: V.P. Orehovs (between 1970 and 1983), N: V.P. Orehovs  
Fls white with black spots. Stems 0.7 m. July.

**'Déjà-vu' I(a/-)**

Parentage unknown  
R: P. Hoff (1992), G: Hoffgaarde B.V. (1995), N: Hoffgaarde B.V. (1996), I: Hoffgaarde B.V. (1997), REG: Hoffgaarde B.V. (1997)  
Inside light purplish pink (65B) on a paler ground, throat yellowish white (155B); outside light/pale purplish pink (65B/C) on a paler ground, suffused with strong yellow-green (143C) at tip and base, midribs moderate yellow (160C) fading towards top; spots dark red, on a third of each tepal; papillae yellowish white (155B) and dark red (187A), in the throat; nectaries strong yellow-green (143C); pollen moderate orange (167A); stigma dark reddish orange (173A). Fls 180 mm wide; tepals 90 × 30-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 0.8 m, green, with c.4-6 fls.  
Trade designation: JUMBO® DEJA VU.

**'Dekolta' I(a/b-c)**

Parentage: 'Letkis' × 'Mohykán'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1994),

REG: B. Mičulka (1994)

Inside glowing pale salmon-apricot, prominently brownish orange around nectaries, tepal-tips paler; outside darker, midribs spotted light rose-pink at base; spots small, sparse, dark red-brown, on a quarter of each tepal; nectaries pinkish, hairy; pollen deep orange; stigma scarlet. Fls 125 mm wide; tepals 85 × 42 mm, margins slightly wavy, tips medium recurved; pedicels 80 mm long, dotted dark brown. Lvs scattered, 120 × 12 mm, glossy mid green, strongly recurved. Stems 0.95 m, green. July.

**'Dekora' I(a/c)**

Parentage: 'Rusalka' (of Mičulka) × cream-flowered, brushmarked selection  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1994), REG: B. Mičulka (1994)  
Inside pale lemon-yellow, tepal-tips paler; outside slightly yellowish, midribs mahogany-tinged; spots small, sparse, dark scarlet-brown, on a quarter of each tepal; nectaries green, white-hairy; pollen apricot-brown; stigma old rose. Fls 135 mm wide; tepals 80 × 30 mm, not recurved. Lvs scattered, 105 × 18 mm, deep green. Stems 1.05 m, green. July.

**var. *delavayi* IX(c/b)**

See *bakerianum* var. *delavayi*.

**'Delhi' I(a/-)**

Parentage: unknown × seedling OR 87-13  
R: Vletter & Den Haan (1991), G: Vletter & Den Haan, N: Vletter & Den Haan (1996), I: Vletter & Den Haan (1996), REG: Vletter & Den Haan (1997)  
Inside vivid reddish orange (32A); outside strong orange (26B) and vivid reddish orange (32A), tepal-tips strong yellow-green (145A), base moderate olive-green (146A); spots absent; papillae vivid reddish orange (32A) in the throat; nectaries light orange (29B) surrounded by a vivid yellowish pink (30C) rim and with vivid reddish orange (33A) above the nectaries; pollen greyish red (178A); stigma dark red (187A). Fls 180 mm wide; tepals 100 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 1.15 m, green with some darker marking, and with c.13 fls.

**'Deliana' VIII(b/a)**

Parentage: LA hybrid × *longiflorum* 'Lorina'  
R: De Jong Lelies Holland B.V. (1993), G: De Jong Lelies Holland B.V. (1995), N: De Jong Lelies Holland B.V. (2001), I: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2001)  
Inside pale yellow (8D), midveins light greenish yellow (8C), tepal-edges brilliant yellow (8A); outside pale yellow (8D), midribs light greenish yellow (8C) and with brilliant yellow (8A) edges, at base a little strong yellow-green (144B); spots and papillae absent; pollen a little darker than brownish orange (172C); stigma vivid yellow (13A). Fls 140 mm wide, paling with age; tepals 150 × 42-60 mm, margins smooth, tips recurved. Lvs scattered, 120 × 25 mm. Stems 1-1.25 m, green with a little darker marking, and with 3-5 fls. June to July.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Delicious' I(a/-)**

Parentage: 'Edna Kean' × unknown  
 R: A.J. Porter (c. 1963), N: A.J. Porter  
 Fls golden orange with some spots at base of tepals. Fls scented. Stems 1 m. July to Aug.  
 (Published in *ILR* (1969).)

**'Delight' I(b/d)**

Parentage unknown  
 R: Columbia-Platte Lilies (pre 1997), N: Columbia-Platte Lilies  
 Inside deep magenta-pink. Tepals loosely reflexed. Stems 1 m. Late June to July.  
 (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cultivar Group.)

**Delight Group VI(-/a,b)**

Parentage: selections from Aurelian Group  
 S: R.B. Ware, N: R.B. Ware  
 Stems 0.6 m. July.  
 (*Greenock Farms Cat.*, 1956 gives C. Yerex as the raiser, and describes the fls as bowl-shaped and semi-trumpet-shaped, creamy white with yellow and apricot throats and stems 1.5-2.2 m. July to Aug. Included in *ILR* (1982) as Delight grex.)

**'Delightfully Pink' I(a/b)**

Parentage: 'Unique' × unnamed seedling  
 R: M.D. Holloway (1992), G: M.D. Holloway (1993), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)  
 Inside bright pink, darker towards centre of each tepal and at tip, margins narrow, creamy, outer tepals with a creamy flush streaked up the centre; inside light pink, with a strong, raised furrow from nectaries to tepal-tip; spots absent; nectaries frosted green; pollen gold. Fls 170 mm wide, scented; tepals 95 × 21 mm, dark green. Stems 0.71 m, mid green, with c.5 fls. Mid July to mid Aug.

**'Delisle Dandy' I(b/-)**

Parentage: 'Rochester' × 'Sungod'  
 R: E. Sanders (1991), G: E. Sanders (1993), N: E. Sanders (1994), I: E. Sanders (1995), REG: E. Sanders (1996)  
 Inside dark red (187A), tepal-tips dark red (187C); outside dark red (187C), midribs strong greenish yellow (151A); black spots on basal half of each tepal; nectaries deep purplish red (187D); style and filaments dark red (187A); pollen dark reddish orange (175C); stigma light yellow-green (145C). Fls 170 mm wide; tepals 84 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 114 × 13 mm, mid green. Stems 1.35-1.83 m, moderate olive-green (146A) with dark red (187B) flecks, and with 39-52 fls on long pedicels. Mid July to late Aug.

**'Delmonden Beauty' VII(-/b)**

See *L. × parkmanii* 'Delmonden Beauty'.

**'Delmonden Ruby' VII(-/d)**

See *L. × parkmanii* 'Delmonden Ruby'.

**Del Norte Group IV(c/d)**

Parentage: *kelloggii* × *pardalinum*  
 R: J. de Graaff (1968), N: J. de Graaff  
 Fls varying from pink to fuchsia-pink, burgundy and crimson; spots black. Fls sweetly scented. Stems 1.5-1.9 m, with c.20 fls. July.  
 (Published in *ILR* (1969) Addenda as Del Norte grex.)

**'Delos' VII(a/b)**

Parentage unknown  
 R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)  
 Inside with inner tepals dark/moderate purplish pink (186C/D), midveins light greenish yellow (3C) changing into moderate purplish pink (66D) towards top, throat greenish white (157D), outer tepals dark/moderate purplish pink (186C/D), area next to midveins deep purplish pink (70C), midveins light greenish yellow (3C) changing to moderate purplish pink (65A) towards top; outside with inner tepals light purple/very light purple (75B/C), narrow margin light purple (75A), base yellowish white (155D), midribs strong yellow-green (144C), outer tepals moderate purplish pink (186D), base yellowish white (155D), area next to midribs light yellowish pink (36B), midribs light yellow-green (145B); spots absent; papillae brilliant greenish yellow (3A) and vivid red (57A); nectaries strong yellow-green (144C); pollen dark reddish orange (175B); stigma greenish white (192D). Fls 214 mm wide, fragrant; tepals 135 × 54-75 mm, margins smooth to slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 59 mm. Stems 0.9-1.2 m, green with darker markings, with c.3 fls.

**'Delphi' I(a/-)**

Parentage: 'Chinook' × (*lankongense* × unknown)  
 R: Gebr. N. & B. Laan & Zn (1975), N: Gebr. N. & B. Laan & Zn (1982), I: Gebr. N. & B. Laan & Zn (1982)  
 Inside yellow-orange, shaded carmine pink, tepal-tips reddish pink, throat pale yellow-bronze; outside green/pink; spots few, small, purple; nectaries yellow-green; pollen brown. Tepals 110 × 35-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 5-7 mm, dark green. Stems 0.9 m, dark green, with 10-18 fls. Late June.

**'Delta' I(a-b/-)**

Parentage: (Sundrop Group × 'Sterling Star') × yellow-flowered, brushmarked seedling  
 R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1981), N: Bischoff Tulleken Lelies B.V. (1986), I: Bischoff Tulleken Lelies B.V. (1988)  
 Inside vivid yellow (15A), throat vivid yellow (9B); outside vivid yellow (15A), each tepal flamed light greenish yellow (3C); brushmarks small, spotted dark red (187B); nectaries green; pollen brownish orange (165B); stigma dark red (59A). Fls 150 mm wide; tepals 75 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 16 mm. Stems 0.9 m, green with darker markings, and with 6-10 fls. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

### 'Delta' IX(c/d)

See *leichtlinii* var. *maximowiczii* 'Delta'.

### 'Demelza' VII(-/-)

Parentage: *speciosum* var. *rubrum* 'Uchida' × Imperial Pink Group

R: K. de Jong (1973), G: De Jong Lelies Holland B.V. (1976), N: De Jong Beheer B.V. (1980), I: De Jong Lelies Holland B.V. (1977), REG: De Jong Beheer B.V. (1988) Inside light purplish pink (62C), with a rosy white centre, tepal-bases yellow-green; outside light purplish pink to very pale purple (73C/D), midribs strong purplish red (63B); spots pale pink, on middle of each tepal; papillae white, near centre of fl.; pollen light red-brown. Fls 190 mm wide; tepals 90 × 40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 130 × 25 mm, pale green. Stems 0.75 m, green, with 7-8 fls. Aug.

### 'Demeter' VII(a/b)

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside vivid purplish red (57C), towards margins strong purplish red (64C), along nectaries with a little light orange-yellow (16C), along midveins vivid purplish red (57B), throat yellowish white (155D); outside with inner tepals vivid purplish red (57D), towards margins vivid purplish red (67B), yellowish white (155D) at base, midribs brilliant yellow-green (142B) at base, up to half their length deep purplish pink (58D), outer tepals strong purplish red (63A), yellowish white (155D) at base, midribs brilliant yellow-green (142B) at base, up to half their length deep purplish pink (58D); spots absent; papillae light orange-yellow (16C) and strong purplish red (60B); nectaries strong yellow-green (144C); pollen deep orange-yellow (163A); stigma very pale green (192C). Fls 230 mm wide, slightly fragrant; tepals 140 × 50-75 mm, margins slightly ruffled, tips recurved. Lvs scattered, 165 × 37 mm. Stems 1.1-1.2 m, lower third brownish, upper two-thirds green with brownish markings, and with c.7 fls.

### 'Denali' I(b/-)

Parentage unknown

R: H.E. Hoepner (pre 1985), G: H.E. Hoepner & S.R. Kaul, N: S.R. Kaul (1993), I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)

Fls strong orange; spots maroon, from centre to apical third of each tepal; anthers strong orange; stigma nearly white. Lvs very broad, mid green. Stems 1.6 m, thick, dark green. July to Aug.

### 'Denár' I(a/b-c)

Parentage: ('Tabasco' × 'Brandywine') × Sundrop Group  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997), REG: B. Mičulka (1997)

Inside shining apricot, throat darker; nectaries white-

frosted; filaments apricot; pollen ochre-brown; stigma pale brownish pink. Fls 145 mm wide; tepals 75 × 45 mm, slightly recurved; pedicels 65 mm long, spotted with dark red-brown. Lvs scattered, 95 × 11 mm, glossy dark green. Stems 0.75 m, thick, dotted with very dark red-brown, red-black at base, with a short infl. Early July.

### 'Dendera' VII(-/-)

Parentage: unnamed seedling × 'Joy'

R: Mak Lelieveredeling B.V. (1984), G: Mak Lelieveredeling B.V. (1988), N: Mak Lelieveredeling B.V. (1990), I: Mak Lelieveredeling B.V. (1990), REG: Mak Lelieveredeling B.V. (1996)

Inside strong purplish pink (62A/63C); outside moderate purplish pink (62B); spots numerous; papillae present; nectaries green, changing to yellow; pollen pale brown; stigma grey. Tepal-margins ruffled, tips recurved. Stems short to medium, green with darker stripes and speckles, with 3-6 fls (3-5 from 12-14 cm bulbs), 4-6 (from 14-16 cm bulbs).

### 'Denia' I(b/-)

Parentage: 'Peach Blossom' × 'Red Carpet'

R: M. van Egmond (1983), G: M. van Egmond (1985), N: M. van Egmond (1990), I: M. van Egmond (1990), REG: van Egmond Callantssoog B.V. (1994)

Inside pale yellow-green (155A), strong purplish pink (55B) and pale greenish yellow (1D), the basal half of each tepal pale greenish yellow (9D), midveins strong orange-yellow (17A), throat pale pink (49D); outside yellowish white (155D), midribs light yellow-green (145B/C), edged light purplish pink (62C) and tipped strong yellow-green (145A); spots dark red (187A); pollen dark reddish orange (172B); stigma brilliant yellow (10A). Fls 110 mm wide; tepals 75 × 35 mm. Lvs scattered, 100 × 13 mm, mid green. Stems 0.43 m, pale green, with c.7 fls.

### 'Denisa' I(a/b)

Parentage: 'Connecticut King' × Pastel Group

R: Šlechtitelaká Stanice Heřmanův Městec, N: Šlechtitelaká Stanice Heřmanův Městec (1992), REG: Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside deep yellow, tepal-centre apricot; spots large, dense, conspicuous, on half of each tepal, extending more sparsely to two-thirds of each tepal. Fls 140-160 mm wide, with overlapping tepals; pedicels 65-75 mm long. Lvs 72-92 × 10-13 mm, dark green. Stems 0.85-0.95 m, dark red-brown, with c.14 fls. Mid June. (Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1992.)

### 'Denise' I(b/-)

Parentage: *davidii* × *lancifolium*

R: R. Simonet, G: F. Fellner, N: F. Fellner, I: Borbeleta Gardens (1980), REG: Borbeleta Gardens (1981)

Inside red to orange-red, throat deep red; outside wine-red; spots absent; nectaries white; pollen orange-red. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.8 m, mid green, with c.12

fls. June.

(Published in *Borbeleta Gardens Cat.*, 1980.)

**'Denver' I(a/b)**

Parentage: seedling OR 92-23 × seedling AW 94-4

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside pale orange-yellow (23D), brilliant orange-yellow (23B) above nectaries and towards tepal-margins, throat pale orange-yellow (19D); outside pale yellow (20D), midribs light yellow-green (144D), light orange-yellow (23C) towards tepal-margins; spots few, moderate purplish red (59C); papillae brilliant orange-yellow (23B); nectaries strong yellowish green (141C); pollen strong reddish orange (169A); stigma moderate reddish brown (166B). Fls 175 mm wide; tepals 100 × 55 mm, margins smooth, tips slightly recurved. Lvs 155 × 15 mm. Stems 1.4-2 m, green with darker markings, with c.6 fls.

**'Dereham Variety' II(-/d)**

See *L. × dalhansonii* 'Dereham Variety'.

**'Desdemona' II(-/-)**

See *L. × dalhansonii* 'Desdemona'.

**'Desert Dawn' VI(b-c/a)**

Parentage: 'Tundra' × 'Honeydew' × 'Tundra' self-pollinated

R: P.L. Greenfield (1985), G: P.L. Greenfield (1987), N: P.L. Greenfield (1989), REG: P.L. Greenfield (1989)

Inside intense deep yellow (almost non-fading); outside yellow, suffused with green along midribs and towards base; spots absent; nectaries green; pollen brown. Tepals 130 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 118 × 12 mm, dark green. Stems 1 m, green with some purple marbling, and c.3 fls (second year of flowering). Jan. (New Zealand).

**'Desert Rose' I(a/c)**

Parentage: 'Black Cloud' × unknown

R: E. Robinson, N: E. Robinson, I: E. Robinson (1972), REG: E. Robinson (1972)

Fls pinkish with pale orange frosted centre. Fls 175 mm wide. Stems 0.8 m.

(Published in *Lilies and other Liliaceae*, 1973: 114.)

**'Desert Song' VIII(a/b)**

Parentage: ('Pirate' × *longiflorum* 'Slocum's Ace') × mixed pollen of pastel-flowered Asiatics

R: E.A. McRae (1988), G: Van der Salm Bulb Farm, Inc. (1990), N: E.A. McRae (1994), I: Van der Salm Bulb Farm, Inc. (1994), REG: Van der Salm Bulb Farm, Inc. (1994)

Inside soft orange-red, throat darker orange; outside soft orange-red; traces of spots in centre of fl. only; nectaries soft orange; pollen chocolate-brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 0.7 m, soft green. Mid June.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Desert Storm' I(b/c)**

Parentage: unnamed seedling × unnamed seedling

R: Tim Zimmerman (1986), G: Tim Zimmerman (1988), N: Tim Zimmerman (1993), I: Tim Zimmerman (1995), REG: Tim Zimmerman (1995)

Inside deep blood-red, throat green; outside reddish green; spots absent; nectaries greenish yellow; pollen brownish yellow. Buds reddish green. Fls 170 mm wide; tepals 80 × 35 mm, margins smooth, tips fairly strongly recurved. Lvs scattered, 130 × 12 mm, mid green. Stems 1 m, black, with c.13 fls. Early to mid July.

**'Desert Sunset' I(a/-)**

Parentage: unnamed late, yellow-flowered seedling ex Wadekamper × 'Firedance'

R: J. Wadekamper (1979), G: J. Wadekamper (1981), N: Borbeleta Gardens (1993), I: Borbeleta Gardens (1993), REG: Borbeleta Gardens (1993)

Inside and outside vivid orange-yellow (23A), throat strong orange (24A); spots orange; nectaries yellow; pollen brown. Tepals 85 × 20 mm, margins smooth, tips not recurved. Lvs scattered, 75 × 15 mm, mid green. Stems 1 m, green, with c.12 fls. Very late.

(Published in *Borbeleta Gardens Cat.*, 1993.)

**'Deshima' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: G. Van der Salm (1982), G: G. Van der Salm (1983), N: G. Van der Salm (1988), I: G. Van der Salm (1988), REG: Van der Salm (1988)

Inside strong purplish red (59D), throat moderate purplish red (59C); outside moderate purplish red (186A/B); spots small, purplish red to black, on basal half of each tepal; pollen strong reddish orange (169A). Fls 170 mm wide; tepals 80 × 35 mm, slightly recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 0.95 m, green with darker spots, with c.5 fls. June to July.

**'Desire' I(b/-)**

Parentage: 'Roter Cardinal' × 'Tetra Mountaineer'

R: V. Strasser (1974), G: V. Strasser (1976), N: V. Strasser (1980), I: V. Strasser (1981)

Inside blood-red; outside red. Lvs broad, dark green. Stems 1-1.1 m, dark green, with up to 21 fls. Mid July. Triploid.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Desirée'. Registration was applied for in 1986, and refused.)

**'Desirée' I(a/-)**

Parentage: Asiatic seedling × 'Connecticut King'

R: Bischoff Tulleken Leliecultuur B.V. (1974), G: Bischoff Tulleken Leliecultuur B.V. (1977), N: Bischoff Tulleken Leliecultuur B.V. (1980), I: Bischoff Tulleken Leliecultuur B.V. (1982), REG: Bischoff Tulleken Leliecultuur B.V. (1983)

Inside vivid yellow (9B), each tepal with a strong orange (25B) flame, tips yellow, throat yellow-green; outside vivid to brilliant yellow (9B/C); spots chocolate-brown in and around throat; nectaries dark reddish brown; pollen tangerine-orange. Fls 120 mm wide; tepals 100 × 25 mm,

margins smooth, tips slightly recurved. Lvs scattered, 90 × 9 mm, mid green. Stems 1 m, dark, with c.5 fls. Late June.

#### **'Desperado' I(a/b)**

Parentage: ('Chinook' × 'Wattle Bird') × 'Endeavor'  
R: B. Mićulka, N: B. Mićulka, I: B. Mićulka (2003),  
REG: B. Mićulka (2003)

Inside greenish on opening, becoming yellow, throat pale green; outside paler; brushmarks dark crimson-brown, medium to large; spots dark crimson-brown, few, small, on a quarter of each tepal; nectaries white-granulated; pollen brown; stigma whitish. Fls 125 mm; tepals 75 × 37 mm, rigid, margin slightly waved, tips scarcely recurved; pedicels 65 mm long, slender, slightly spotted. Lvs 80 × 10 mm, glossy yellowish green. Stems 0.9 m, moderately thick, slightly spotted with pale brown. Late June.

#### **'Despina' I(c/-)**

Parentage: Panamint Group × 'Connecticut King'  
R: V. Strasser (1977), G: V. Strasser (1980), N: V. Strasser (1981), I: V. Strasser (1989), REG: V. Strasser (1990)  
Fls vivid yellow (14A) throughout. Lvs scattered, 110 × 20 mm, mid green. Stems 1.2 m, dark green, with c.38 fls. July.

#### **'Dessert Star' VIII(a/c)**

Parentage: 'Swing' × 'Reinesse'  
R: J. Vanheusden (1995), G: J. Vanheusden (1997), N: J. Vanheusden (1998), REG: J. Vanheusden (1998)  
Inside light yellow, throat light green/yellow; outside light yellow; heavy dark red spots on two-thirds of each tepal; nectaries light green; pollen dark brown; stigma orange-brown. Fls 120 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly reflexed. Lvs scattered, 50 × 15 mm, mid green. Stems 0.4 m, dark green, with c.8-10 fls. Late June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **'Destiny' I(a/b)**

Parentage: *amabile* var. *luteum* × 'Valencia'  
R: J. de Graaff (c. 1949), N: J. de Graaff, I: Oregon Bulb Farms, Inc.  
AM 1958  
Fls vivid yellow (12A); spots brown. Fls up to 150 mm wide; tepals-tips reflexed. Stems 0.8-0.9 m, with 7-10 fls. June.  
(Published in *Oregon Bulb Farms Cat.*, 1954.)

#### **'Detmold' VIII(b-c/b-d)**

Parentage: yellow-flowered Trumpet × ('Black Beauty' × (*auratum* × *henryi*))  
R: H. Dierssen (1997), N: H. Dierssen, I: H. Dierssen, REG: H. Dierssen (2004)  
Inside dark crimson, tepal-edges and tips cream, throat yellow; outside whitish with pink shining through, midribs greenish at base; spots dark brown-crimson, numerous, medium sized to large, on two-thirds of each tepal; nectaries yellow-green; pollen brown; stigma pale green. Fls 160 mm wide; tepals 115 × 40 mm, reflexed, margins wavy; pedicels 115 mm, thick, strongly brown-

dotted, with secondary buds. Lvs scattered, 155 × 36 mm, dull mid green. Stems 1.15 m, thick, strongly brown-dotted. Mid July.  
(An Orienpet (OT) lily.)

#### **'Detroit' I(a/b)**

Parentage: seedling OR 90-9 × seedling OR 89-5  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside vivid red (46B/45C), throat vivid yellowish orange (30C); outside moderate red (180A), tepal-margins vivid red (45A), tips with a moderate yellow-green (138B) spot; spots absent; papillae vivid yellowish orange (30C); nectaries moderate yellow-green (148A); pollen dark red (183B); stigma vivid reddish orange (33B). Fls 185 mm wide; tepals 113 × 55 mm, margins smooth but some tepals with notched margins, tips slightly recurved. Lvs 175 × 20 mm. Stems 1.45 m, green with darker markings, with c.7 fls.

#### **'Devon Butter' I(c/-)**

Parentage: Citronella Group (improved) × Citronella Group (improved)  
R: Blackdown Lilies (1972), G: Blackdown Lilies (1974), N: Blackdown Lilies (1976), I: Blackdown Lilies (1976), REG: Blackdown Lilies (1988)  
Fls primrose-yellow, outside with a maroon flush at base; spots dark maroon; pollen dark brown. Buds hairy. Tepals thick, margins smooth, tips strongly recurved. Lvs scattered, dark green, broad for a Fiesta Group derivative. Stems 0.7 m, dark maroon, very hairy when young, with c.15 fls (and frequent secondary buds), and usually with a few large bulbils. Early July.  
(Citronella Group (improved) is stated to be Citronella Group with 'added improved colour and form from *L. lancifolium*'.)

#### **Devon Dawn Group VII(b/c)**

Parentage: 'Skyline' × mixed pollen of 'Red Empress' & *L. × parkmanii* 'Red Dragon'  
R: Blackdown Lilies (1984), G: Blackdown Lilies (1986), N: Blackdown Lilies (1988), I: Blackdown Lilies (1987), REG: Blackdown Lilies (1988)  
Fls in a range of colours, mostly pink-flushed, some with gold rays and some pure white, a few with a coral-pink flush, more intense around tepal-edges. Stems 1.2 m, with large fls. Late July to Aug.  
Syn.: Pacific Group.  
(Parents are apparently virus-resistant. Published in *ILLR Seventh Supplement* as Devon Dawn grex. Introduced in 1987 as Pacific Hybrids. This latter name is unacceptable (ICNCP, 2004: Art. 27.1 - name already used for another Group).)

#### **'Devon Dots' II(-/-)**

Parentage unknown  
R: Devonian Botanical Gardens, G: R. Erskine, N: R. Erskine (1975), I: R. Erskine (1975), REG: R. Erskine (1996)  
Inside rich pink, throat pinkish white; outside pink;

spots dark purple to nearly black, on most of each tepal; nectaries pink; pollen pinkish yellow. Fls 80 mm wide; tepals 40 × 15 mm, margins smooth, tips slightly recurved. Lvs whorled, 160 × 45 mm, mid green. Stems 1.5 m, brownish green, with up to 30 fls. Early.

#### **Devon Gems Group I(a/-)**

Parentage: (Cornish Group × 'Destiny') × 'Connecticut King'

R: Blackdown Lilies (1984), G: Blackdown Lilies (1985), N: Blackdown Lilies (1986), I: Blackdown Lilies (1987), REG: Blackdown Lilies (1988)

Fls in a wide range of colours from cream, lemon, gold, orange, red, and maroon to purple; some spotted. Stems c.1 m. July.

(Published in *ILR Seventh Supplement* as Devon Gems grex.)

#### **'Devonia' I(b/-)**

Parentage: *wilsonii* × *davidii*

R: L.B. Tuffery, N: L.B. Tuffery

Fls dark red.

#### **'Devonshire Cream' I(b-c/d)**

Parentage: Shakespeare Group × *lancifolium* var. *flaviflorum*

R: F.J. Holmes, N: F.J. Holmes (1974)

Fls pale greenish yellow (1D), heavily spotted with purple; pollen brown. Lvs dark. Stems 1.1 m, dark, with 7-10 fls, and with bulbils. Aug.

#### **'Devon Tea' VI(-/a)**

Parentage unknown

R: D.F. McPherson (pre 1964), G: D.F. McPherson (1966), N: D.F. McPherson, I: D.F. McPherson (1972), REG: D.F. McPherson (1972)

Fls pale yellow (11D), deepening in throat to brilliant yellow (7B); buds dark red (59A). Lvs dark green. (Published in *Lilies and other Liliaceae*, 1973: 114.)

#### **'Devotion' VII(b/b-c)**

Parentage unknown

R: Peacock B.V. & Imanse Lelieveredeling B.V., G: W. Paauw & Zn B.V., I: Peacock B.V., REG: W. Paauw & Zn B.V. (1995)

Inside yellowish white (155D), up to two-thirds of each midvein pale greenish yellow (10D); outside yellowish white (155D), midribs white, the outer suffused with light yellow-green (150D); spots absent; papillae vivid yellow (12A), on two-thirds of each inner tepal; nectaries close to brilliant greenish yellow (151D); pollen strong orange (24A); stigma yellowish grey (156C). Fls 230 mm wide; tepals 135 × 45 mm, margins of outer tepals ruffled, tips strongly recurved. Lvs scattered, 150 × 40 mm, mid green. Stems 0.77 m, pale green, with c.2-7 fls. Late.

#### **'Dewberry' II(c/c)**

Parentage: pink-flowered seedling × ('Roja' × 'Morning Melody')

R: E.E. Fox (1993), G: E.E. Fox (1998), N: E.E. Fox

(1999), I: Fox Lily Ranch (2004), REG: E.E. Fox (2004) Inside moderate purplish red (59C), throat strong purplish red (58C); outside white over pink with strong purplish red tepal-edges (59D); spots dark red (187B), small, scattered on basal third of each tepal; nectaries light orange-yellow (23C); pollen strong orange (170A); stigma white tinged with green. Fls 76 mm wide; tepals 38 × 20 mm, margins smooth, tips not recurved. Lvs whorled, 140 × 62 mm. Stems 1.4 m, light green, with 14-18 fls. Late June to early July.

(Named after a small town in Alberta, Canada.)

Nomenclatural standard: colour print supplied by registrant (WSY 0096367.)

#### **'Dezdemoná' I(a/b)**

Parentage unknown

Fls pearly yellow in basal half, pearly pink towards tepal-tips. Tepal-margins smooth.

(Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to 'Desdemona'. Published in M.F. Kireeva, *Lilii*, 66 (2000).)

#### **'Diablanca' VII(-/b)**

Parentage unknown

R: Fa J. Dignum & Zn (1977), G: Fa J. Dignum & Zn (1979), N: Fa J. Dignum & Zn, I: Fa J. Dignum & Zn, REG: Fa J. Dignum & Zn (1986)

Fls white throughout except for a green throat; spots absent; nectaries white; pollen orange-brown. Fls 280 mm wide; tepals 150 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 200 × 60 mm, mid green. Stems 1.1 m, green, with c.6 fls (from 16-18 cm bulbs).

#### **'Diabóra' I(a/b)**

Parentage unknown

R: De Jong Beheer B.V. (1993), G: De Jong Lelies Holland B.V. (1997), N: De Jong Beheer B.V. (1998), I: De Jong Lelies Holland B.V. (1998), REG: De Jong Lelies Holland B.V. (1999)

Inside vivid reddish orange (43A) and vivid red (45C), tinged with dark red (187A) above nectaries, fading towards tepal-tips; outside vivid red (45C) on a paler ground, midribs moderate orange (167C); spots few, dark red (187A), in the throat; papillae moderate yellowish pink (33D) along the nectaries; nectaries moderate brown (165A) and moderate yellowish pink (33D); pollen strong brown (172A); stigma a little stronger than dark red (187A). Fls 190 mm wide; tepals 90 × 25-40 mm, margins smooth, tips strongly recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 1.05 m, green with dark spots, and with c.6 fls.

Syn.: 'Debora'.

(Registered as 'Debora' and included in *ILR Nineteenth Supplement*. However, in 2001 it was granted Dutch PBR (LEL 1734) as 'Diabóra'. Under ICNCP, 2004: Art. 24.4, the cv. name must be changed to 'Diabóra'.)

#### **'Diadeem' I(a/-)**

Parentage: seedling RS 686 × 'Sancerre'

R: Vletter & Den Haan Beheer B.V. (1984), G: Vletter & Den Haan Beheer B.V. (1986), N: Vletter & Den Haan

Beheer B.V. (1992), I: Vletter & Den Haan Beheer B.V. (1990)

Inside yellowish white (158C) suffused with strong purplish pink (55B) towards tepal-tips, throat strong yellow-green (143C) edged purplish pink; outside pale purplish pink (55D) with light purplish pink (55C) tepal-edges, midribs suffused with pale greenish yellow (10D); spots few, small, dark red (187A), in the throat; nectaries deep purplish red (59B); pollen dark reddish orange/brownish orange (172B/C). Fls 175 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 0.85 m. May. (Unacceptable name: ICNCP, 1980; Recommendation 13 Ah - name too similar to 'Diadem'.)

**'Diadem' I(a/b)**

Syn. of *L. × maculatum* 'Leonard Joerg'.

**'Diadema' I(a/b)**

Parentage unknown

Fls white; each tepal with a purple brushmark.

(Published in M.F. Kireeva, *Lilii*, 62 (2000).)

**'Diamonds' VII(b/b)**

Parentage: unnamed seedling × yellow-flowered seedling of *L. × parkmanii* Little Rascal Group

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside whiter than greenish white (155C), up to three-quarters of each midvein light greenish yellow (5C/D), throat whiter than 155C; outside whiter than 155C, midribs light yellow-green (154D) with strong yellow-green (144A) at top; spots and papillae light greenish yellow (5C); nectaries strong yellow-green (144B); pollen strong reddish orange (169A); stigma dark purple (79A). Fls 135 mm wide; tepals 80 × 40-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 55 mm. Stems 0.3-0.65 m, light green, with c.11 fls. July to Aug

**'Diana' I(b/-)**

Parentage: *lancifolium* var. *flaviflorum* × unknown

R: D.B. Fox (c. 1967), N: D.B. Fox

Vivid yellowish orange (30C), fairly densely spotted to three-quarters of throat, but few spots actually in throat. Tepals recurved. Stems dark, shiny, hairless.

**'Diana' I(a/b)**

Parentage: 'Stroinaia' × mixed pollen of Mid-century Group

R: M.F. Kireeva (1975), N: M.F. Kireeva

Fls dark crimson; spots dark, on basal third of each tepal; filaments red; anthers smoky violet with red-brown pollen. Fls 130-140 mm wide. Stems 0.7-0.9 m, with 9-12 fls. June to July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in M.F. Kireeva, *Lilii*, 48 (1984).)

**'Diana' I(b/-)**

Parentage: *cernuum* × *lancifolium*

R: R. Simonet & F. Fellner (pre 1980), N: R. Simonet & F. Fellner, I: Borbeleta Gardens (1980)

Inside ivory-white; outside brownish; spots brown, on basal half of tepals; pollen brown. Tepals broad, slightly recurved. Infl. large, pyramidal.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Borbeleta Gardens Cat.*, 1980.)

**Diana Group VI(b/b)**

Parentage: Aurelians

R: J.M. Shaver, N: J.M. Shaver

Fls white, yellow or orange.

**'Diane Elizabeth' I(a/b-c)**

Parentage unknown

R: C.K. Kroell (c. 1982), G: C.K. Kroell (c. 1994), N: C.K. Kroell (1996), REG: C.K. Kroell (1997)

Inside moderate red (185B) at centre of fl., shading to moderate purplish red (185C) at tepal-tips, each tepal with a very narrow (1 mm wide), lighter edge, throat moderate red (181B); outside deep pink on inner tepals, outer tepals a blend of light yellow-green (145A) and moderate red (181C); spots purple, some with lighter halos, on about a third of the basal part of each tepal; nectaries moderate red (181B); pollen strong orange (26A). Fls 150 mm wide; tepals 90 × 35 mm, with a marked sigmoid curvature, margins smooth, tips slightly recurved. Lvs scattered, 120-140 × 10-15 mm, mid green. Stems 1.2 m, mid green, with c.9 fls. July.

**'Dianne' VII(-/b)**

Parentage: seedling of *L. × parkmanii* Lavender Lady Group × unknown

R: J.S. Yeates, N: C.N. Smith (1956), I: C.N. Smith (1956)

Fls white, with small, lavender flush above each green nectary; spots lavender. Fls 150-200 mm wide, *auratum* type. Stems 1 m, with 10-20 fls.

Syn.: *auratum* 'Dianne'; *auratum* 'Dianthus'.

(Published in Smith's Bulb List, 1956, as *auratum* 'Dianthus'.)

**'Dianthus' VII(-/b)**

See 'Dianne'.

**'Diarosa' VII(-/b)**

Parentage unknown

R: Fa J. Dignum & Zn (1977), G: Fa J. Dignum & Zn (1979), N: Fa J. Dignum & Zn, I: Fa J. Dignum & Zn, REG: Fa J. Dignum & Zn (1986)

Inside pink-white, tepal-tips white, throat dark rose-pink; outside pink-white; spots rose-pink, on almost the whole of each tepal; nectaries rose-pink; pollen orange-brown. Fls 240 mm wide; tepals 140 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 230 × 50 mm, mid green. Stems 1.1 m, green, with c.7 fls (from 16-18 cm bulbs).

**'Diblík' I(b/-)**

Parentage: 'Redstart' × 'Connecticut King'  
 R: B. Mičulka (c. 1982), N: B. Mičulka, REG: B. Mičulka (1984)  
 Inside deep yellow, throat blotched reddish brown, otherwise pale yellow-green; outside greyed pale pink; spots large, violet-red, in the throat; nectaries pale yellow, frosted; pollen brown. Fls 95 mm wide; tepals 75 × 28 mm, tips slightly recurved. Lvs 90 × 10 mm, dull green. Stems 1.1 m, brown-spotted, with bulbils. Mid July.

**'Dienvidniece' I(c/-)**

Parentage: selection from Sapņotāja Group  
 S: V.P. Orehovs (post 1957), N: V.P. Orehovs  
 Fls chestnut-orange.  
 (Misspelling: 'Dienvidnietse'. Published in *LYB* 33: 79 (1970).)

**'Dienvidnietse' I(c/-)**

Misspelling of 'Dienvidniece'.

**'Dieppe' I(a/b)**

Parentage: *L.* × *hollandicum* × *davidii* var. *willmottiae*  
 R: F.L. Skinner (pre 1974), N: F.L. Skinner, I: F.L. Skinner, REG: F.L. Skinner (1983)  
 Fls dark red throughout, with yellow underlay in centre of tepals; spots maroon on basal two-thirds of each tepal; nectaries deep red; pollen orange. Tepals 80 × 30 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 65 × 8 mm, mid green. Stems 0.6-1 m or more, mid green, with up to 10 fls. July.  
 (Published in Skinner Nursery List, 1974.)

**'Dietlinde' I(a/-)**

Parentage unknown  
 R: A. Weinreich (1966), N: A. Weinreich (1982), I: A. Weinreich (1982), REG: A. Weinreich (1984)  
 Inside brilliant yellow (13B); outside, vivid yellow (12A); spots small, dark red (187A), in the throat; nectaries light yellow (10B), white-frosted; pollen deep orange-yellow (163A). Fls 150-160 mm wide; tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 97 × 11 mm, dark green. Stems 0.75 m. July.

**'Difference' VII(a/b)**

Parentage: seedling 87-125 × seedling 89-51  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V. (pre 1997), N: Vletter & Den Haan Beheer B.V. (2000), I: Vletter & Den Haan Beheer B.V. (2000), REG: Vletter & Den Haan Beheer B.V. (2000)  
 Inside yellowish white (155D), pale greenish yellow (9D) at base; outside yellowish white (155D); spots and papillae present; nectaries yellow-green; stigma grey with a purple flush; pollen pale brown. Tepal-margins very slightly ruffled, tips recurved. Stems 1.2 m, green, with c.7 fls. Early to midseason.

**'Dignity' IX(b/c)**

See *auratum* 'Dignity'.

**'Dillenburg' VI(-/a)**

Parentage: Aurelian Group  
 R: A.J. van der Zwet & Sons, N: A.J. van der Zwet & Sons, I: A.J. van der Zwet & Sons (1952)  
 AMH 1952  
 Fls copper-orange, faintly spotted.  
 (Published in *ILR* (1982) without Division classification.)

**'Diminutive' I(b/-)**

Parentage: ivory-flowered selection from Pastel Group × (*pumilum* × bicolour selection from Coronado Group)  
 R: L.D. Marshall (1975), G: L.D. Marshall (1977), N: J.F. McRae & Columbia-Platte Lilies (1984), I: Columbia-Platte Lilies (1984)  
 Inside white, tepal-tips strong to deep purplish pink (58C/D), throat cream to white; outside soft pink; spots tiny, magenta, in a small ring; nectaries green; pollen brownish orange (165B). Fls slightly fragrant; tepals 40-50 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-150 × 20 mm, dark green. Stems 0.5-0.7 m, dark plum, with 5-10 fls. June.  
 (Published in *Rex Lilies Cat.*, 1984.)

**'Dimsdale's Variety' IV(-/d)**

See *L.* × *pardaloidii* 'Dimsdale's Variety'.

**'Dimsdale's Yellow' IX(c/d)**

See *pardalinum* 'Dimsdale's Yellow'.

**'Dinky Toy' I(a/-)**

Parentage unknown  
 R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V., REG: Hoff Quality First (1993)  
 Inside and outside yellowish white (155D), tepal-tips strong yellow-green (144A) outside; spots dark red (187A); pollen absent; stigma dark red (187B). Fls 98 mm wide; tepals 60 × 25 mm. Lvs scattered, 105 × 20 mm, dark green. Stems 0.57 m, mid green with darker markings, and with c.12 fls.

**'Dionysos' VII(-/l)**

Parentage: selection from *L.* × *parkmanii* Little Rascal Group × *nobilissimum*  
 R: J.M. van Tuyl (1978), G: J.M. van Tuyl (1981), N: J.M. van Tuyl (1985), I: IVT (1985), REG: IVT (1985)  
 Inside with ivory-white ground, flamed a deep yellowish pink (43C), tepal-tips barium-yellow, throat primrose-yellow; outside of outer tepals strong purplish pink (55B), edged white, outside of inner tepals pinkish white, with a primrose-yellow midrib; spots currant-red., on two-thirds of each tepal; pollen brownish orange (171B). Fls 220 mm wide; tepals 115 × 50 mm, margins smooth, tips recurved. Lvs scattered, 200 × 35 mm, mid green. Stems 1.25 m, mid green, with c.5-6 fls.

**'Diora' VII(a/b)**

Parentage: seedling 8830 × seedling 9920  
 R: Trior Lelie B.V. (1988), G: Trior Lelie B.V. (1992), N: Trior Lelie B.V. (1992), I: Trior Lelie B.V., REG: Trior Lelie B.V. (1996)

Inside suffused with strong reddish purple (70B) on a yellowish white (155D) ground, basal part of each tepal narrowly edged moderate purplish red (70A), throat yellowish white (155D); outside similarly coloured, midribs strong yellow-green (144B at base, 144A at top); spots dark red (59A), on basal part of each tepal; papillae yellowish white (155D) and dark red (59A), in the throat; nectaries strong yellow-green (144C); pollen dark reddish orange (175B); stigma moderate purplish red (185C). Fls 200 mm wide; tepals 100 × 40-60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 45 mm, mid green. Stems 1.2 m, green, with c.4-7 fls.

**'Diploid' IX(c/d)**

See *lancifolium* 'Diploid'.

**DIPLOMA I(b/b)**

Trade designation of 'Diplomande'.

**'Diplomande' I(b/b)**

Parentage unknown

R: J. Vasarietis (1986), G: J. Vasarietis (1989), N: J. Vasarietis (1992), I: J. Vasarietis (1995), REG: J. Vasarietis (2001)

Inside light yellow (18A), slightly shaded pink towards base; outside light yellow (18A); spots few, variably sized, black, on basal third of each tepal; nectaries white; pollen almost black. Fls 150 mm wide; tepals 85 × 43 mm, the inner broadly ovate, margins smooth, tips slightly recurved. Lvs scattered, 115 × 18 mm. Stems 0.9-1 m, green, with 12-18 fls. Mid July.

Trade designation: DIPLOMA.

(Published in *Lilium Balticum Cat.*, 1996.)

**'Diplomat' I(a/-)**

Parentage: ('Orange Light' × unknown) × 'Connecticut King'

R: C. Robinson, N: C. Robinson (1979)

Fls vivid orange (28B), lighter at base outside; spots absent; nectaries light green; pollen orange-red. Lvs up to 130 × 13 mm, dark green, 5-veined. Stems 1.1 m. Midseason.

**'Dipo Lolo' VIII(a/b)**

Parentage: pink-flowered seedling × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V., REG: Bischoff Tulleken Lelies B.V. (2004)

Inside pale purplish pink (65D), each tepal with moderate/light purplish pink (65A/B) flush along midvein in basal half, changing towards top into stripe along midvein, throat strong yellow-green (144C) with greenish white (157D) edges; outside with all midribs hairy, inner tepals pale purplish pink (65C), light yellow-green (144D) along midribs, outer tepals pale purplish pink (65D), margins strong purplish red/pink (63B/C), with strong yellow-green (144C) stripe/flush along midveins, at top a little dark purple (79A); spots dark purple (79A); papillae few; nectaries yellowish white (158D); pollen strong brown (172A); stigma dark greenish yellow (152D) with little strong purplish

red (59D) stripes. Fls 150-195 mm wide; tepals 122 × 47-65 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 26 mm, dark green. Stems 0.7-0.8 m, green, with c.3 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Dirigents' I(b/d)**

Parentage: selection from Vasaras Prieks Group

S: V.P. Orehovs (1959), N: V.P. Orehovs

Fls orange-red with large spots. Lvs very long and narrow.

Syn.: 'Conductor'.

(Published in *LYB* 33: 78 (1970).)

**'Disco' I(a/-)**

Parentage: 'Pepper' × 'Sterling Star'

R: Bischoff Tulleken Leliecultuur B.V. (1976), G:

Bischoff Tulleken Leliecultuur B.V. (1979), N: Bischoff

Tulleken Leliecultuur B.V. (1983), I: Bischoff Tulleken

Leliecultuur B.V. (1984), REG: Bischoff Tulleken

Leliecultuur B.V. (1988)

Inside vivid reddish orange (34A) to strong orange (169B), throat vivid reddish orange (42A); outside vivid reddish orange (34A/B); spots chocolate-brown; pollen greyish brown to moderate reddish brown (166A/B). Fls 150 mm wide; tepals 75 × 45 mm. Lvs scattered, 70 × 10 mm. Stems 0.6 m, pale green with dark spots, and with 6-8 fls. June.

**'Discoteca' I(a/b)**

Parentage: (('Mont Blanc' × ('Sterling Star' × 'Aristo')) × 'Côte d'Azur') × (unnamed seedling × 'Blizzard')

R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997), REG: Bischoff Tulleken Lelies B.V. (1997)

Inside strong purplish pink (63C), each tepal with 2 pale yellow-green (155A) spots above the throat; outside strong purplish red (63B) on a paler ground, tepal-tips strong yellow-green (144C); spots few, dark red (187A), in the throat; papillae absent; nectaries pale yellow-green (157A); pollen a little brighter than vivid reddish orange (32A); stigma strong red (39A). Fls 155 mm wide; tepals 75 × 25-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 10 mm, mid green. Stems 0.7 m, green, with c.13 fls. June.

**'Discovery' I(c/d)**

Parentage: ('Lemon Queen' (Div. I) × 'Mega') × 'Edith Cecilia'

R: J. de Graaff (c. 1962), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1966)

Inside old rose-lilac, base soft pink on white at base, tepal-tips darker; outside pink with silvery sheen; spots deep crimson. Fls 120 mm wide. Stems 1 m. July.

**'Diskus' I(a/c)**

Parentage: red-flowered, bowl-shaped Asiatic hybrid × Tiger Group

R: C. Feldmaier (1968), N: C. Feldmaier (1973), I: C. Feldmaier (1978), REG: C. Feldmaier (1978)

Shining vivid reddish orange (30B), with a few brown

spots in centre; nectaries white; pollen dark orange. Tepals 75 mm long. Lvs bright dark green. Stems 1 m, green. (Published in *Lilies and other Liliaceae*, 1978/9: 108.)

#### ***distichum* Nakai IX(b-c/d)**

Fls orange or pale orange-red; spots dark; pollen orange-red. Fls 50-80 mm wide; tepals up to 35 × 8 mm, base narrowed into a claw. Lvs usually in 1-2 whorls, sometimes with a few scattered lvs above, up to 150 × 40 mm, dark green. Stems up to 1 m, with up to 10 fls. July. Eastern former USSR, Korea, NE China. (The fls are slightly irregular, with the 2 lowest tepals spreading outwards and apart from one another.)

#### **'Distinction' I(-/-)**

Parentage: 'Enchantment' × 'Fire King' (Div. I)  
R: F. Rijnveld & Sons (c. 1950), N: F. Rijnveld & Sons AMH 1960  
Fls vivid orange (28A); spots brown, on basal half of each tepal; anthers deep brown. Pedicels purple-brown. Stems 0.5 m, with a pyramidal infl.

#### **'Dita' I(a/b)**

Parentage: 'Connecticut King' × seedling E-90  
R: Šlechtitelaká Stanice Heřmanův Městec (1990), N: Šlechtitelaká Stanice Heřmanův Městec, REG: Šlechtitelaká Stanice Heřmanův Městec (1994)  
Fls orange, tepal-tips and edges paler; conspicuous spots on a quarter of each tepal. Buds strikingly hairy. Fls 120-140 mm wide, with broad, overlapping tepals that have slightly wavy margins; pedicels 50-80 mm long. Lvs scattered, 70-90 × 9-12 mm, dark green. Stems 0.8 m, thick, green, mottled red-brown at base, with 8-14 fls. Early July.

#### **'Diva' I(a/-)**

Parentage unknown  
R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1994)  
Inside vivid orange (28B), throat brilliant orange (25C); outside light orange (28D) shading to vivid orange (28B) at tepal-edges, midribs tipped strong yellow-green (144B); spots dark red (187A), on a third of each tepal; pollen moderate reddish brown (175A); stigma dark red (187B). Fls 190 mm wide; tepals 95 × 45 mm. Lvs scattered, 95 × 20 mm, mid green. Stems 0.85 m, pale green, with c.10 fls.

#### **'Dixie' II(-/d)**

Parentage: derived from *L. × dalhansonii* Painted Lady Group  
R: N. Atkinson (c. 1964), N: N. Atkinson  
Fls small, erythrite-red (HCC 0027). Stems 1.1 m, with 18 or more fls.

#### **'Dixiebelle' VII(b/d)**

Parentage unknown  
R: B.G. Hayler (1970), N: B.G. Hayler (1979), I: B.G. Hayler (1979), REG: B.G. Hayler (1980)  
Fls white overlaid with light purplish pink (55C); papillae

deep purplish pink (55A) on basal half; nectaries green; pollen light tan. Fls 150 mm wide; tepals 100 × 50 mm, strongly recurved. Lvs scattered, 130 × 50 mm, dark green. Stems 1.5 m, light green, with c.15 fls. Feb. (Australia). (Published in *Gold Ray Gardens Cat.*, 1980.)

#### **'Dixiland' I(a/b-c)**

Parentage: 'Bazar' × 'Red King' (Div. I)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1998), REG: B. Mičulka (1998)  
Inside orange-red, centre of tepals apricot-orange, throat tinted with carmine; outside more strongly tinted with carmine, midribs yellow-brown; numerous papillae and large, ovate, black spots on three-quarters of each tepal; nectaries white-granulated; pollen brown; stigma whitish. Fls 130 mm wide; tepals 80 × 42 mm, slightly recurved; pedicels 50 mm long, green. Lvs scattered, 105 × 13 mm, dark green, slightly shiny. Stems 0.95 m, thick, green, with a short infl. Early July.

#### **'Dizzy' VII(a-b/b-c)**

Parentage: unnamed seedling × (unnamed seedling × 'Star Gazer')  
R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside yellowish white (155D) with strong purplish red (60D) stripe along midveins, tepal-tips white, throat deep red (60A); outside yellowish white (155D); a large number of red spots and some papillae present; nectaries dark red to almost black; pollen orange; stigma purplish pink. Tepal-margins smooth or slightly ruffled, tips slightly recurved. Lvs scattered, green. Stems 1 m, green, with c.5-8 fls. Midseason.

#### **'Dnevnaya Zvezda' I(a/c)**

Parentage: 'Nochka' × 'Sniegurochka'  
R: B.P. Guzhavin (1982), N: B.P. Guzhavin  
Fls pale pink with purple spots. Stems up to 1.2 m. June.

#### **'Doberaner Münster' I(b/d)**

Parentage: 'Dawn Star' × wine-red-flowered, Asiatic seedling  
R: G. Steinbrück (1988), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)  
Inside moderate red (180A), tepal-tips dark yellowish pink (181D); spots small, moderate reddish brown (175A), on basal three-quarters of each tepal; a small, pale flash above nectaries; pollen greyish brown (166A); stigma dark purple (79A). Fls 140 mm wide; tepals 80 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 110 × 15 mm. Stems 1 m, dark green, with c.15 fls. Early to mid July. (Nomenclatural standard: colour print provided by registrant (WSY 0024685).)

#### **'Dobroe Utro' I(a/b-c)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1997)  
Fls cream with small brownish spots at base. Fls 130-140  
mm wide. Stems 0.8-0.9 m, with 9-12 fls. July.  
(Published in M.F. Kireeva, *Lilii*, 69 (2000).)

**'Doch Dauruskaja' I(a/-)**

Unaccepted spelling of 'Doch Daurskoi'.

**'Doch Daurskoi' I(a/-)**

Parentage: selection from Tsvetaevoi Group  
S: Z.N. Tsvetaeva (c. 1940), N: Z.N. Tsvetaeva  
Fls orange-red, becoming yellowish pink; spots dark,  
linear. Fls scented; tepals *dauricum*-like.  
Syn.: 'Daughter of Dauricum'.  
(Unaccepted spelling: 'Doch Dauruskaja'; Docz Daurskoj';  
'Dotch Daurskoi'; 'Doch Daurskoj'. Published in *Lilies  
and other Liliaceae*, 1975: 28.)

**'Doch Daurskoj' I(a/-)**

Unaccepted spelling of 'Doch Daurskoi'.

**'Doch Fialkovaja' I(b/-)**

Unaccepted spelling of 'Doch Fialkovoi'.

**'Doch Fialkovaya' I(b/-)**

Unaccepted spelling of 'Doch Fialkovoi'.

**'Doch Fialkovoi' I(b/-)**

Parentage: 'Fialkovaia' × *dauricum*  
R: Z.N. Tsvetaeva (c. 1940), N: Z.N. Tsvetaeva  
Fls orange-red, shaded with violet, centre yellow; spots  
brown; pollen ochre-brown; stigma violet. Fls 90-110  
mm wide, with a delicate fragrance. Lvs 80-100 × 15-20  
mm, margins downy. Stems 1-1.2 m, green, downy, with  
(3-)8-12(-20) fls. May to June.  
Syn.: 'Daughter of Fialkovaya'.  
(Unaccepted spelling: 'Doch Fialkovaya'; 'Doch  
Fialkovaja'; 'Doch Fialkovoj'; 'Docz  
Fialkovoi'. Published in *LYB* 33: 74 (1970) as 'Doch  
Fialkovaya'. Belongs to Tsvetaevoi Group.)

**'Doch Fialkovoj' I(b/-)**

Unaccepted spelling of 'Doch Fialkovoi'.

**'Doch Iolanty' I(a/-)**

Parentage unknown  
Fls pale pink.  
(Published in M.F. Kireeva, *Lilii*, 51 (2000).)

**'Doch Tigrovoi' I(b/-)**

Parentage: 'Stroinaia' × *lancifolium*  
R: V.A. Grot (1959), N: V.A. Grot  
Fls orange-red with brown spots. Stems 1.5 m, with  
bulbils.  
(Unaccepted spelling: 'Doch Tigrovoj'.)

**'Doch Tigrovoj' I(b/-)**

Unaccepted spelling of 'Doch Tigrovoi'.

**'Doctor Abel' I(c/-)**

Parentage: selection from Fiesta Group

S: J. de Graaff (c. 1950), N: J. de Graaff  
Fls dark red. Tepals recurved. Stems 1.2-1.9 m. July.  
(Published in *Oregon Bulb Farms Cat.*, 1951. Misspelling:  
'Dr. Abel'.)

**'Doctor Dale Cleary' VI(b-c/c)**

Parentage: *rosthornii* × 'Buttercurls'  
R: K. Swoszowski-Tran, G: K. Swoszowski-Tran, N: K.  
Swoszowski-Tran, REG: K. Swoszowski-Tran (2004)  
Inside melon-orange, deeper orange towards centre  
of each tepal; outside yellow-orange becoming lighter  
(banana-yellow) towards tepal-edges; spots nutmeg- or  
cinnamon-coloured; papillae pronounced; nectaries  
greenish yellow; pollen cinnamon-red; stigma pale  
green. Fls 110 mm wide, slightly scented; tepals 95 × 25  
mm, margins slightly ruffled, tips slightly recurved. Lvs  
scattered, 145 × 14 mm. Stems 0.75 m, apple-green, with  
c.8 fls in a pyramidal infl. July.  
(Published in *Lilies and related plants 2003-2004*: 105,  
112 (2004). Nomenclatural standard: colour print  
supplied by registrant (WSY 0096385).)

**'Doctor George Clark' I(a/b)**

Parentage: *dauricum* var. *luteum* × *L. × maculatum*  
'Aureum'  
N: L. Vasseur (c. 1946), I: L. Vasseur (1946)  
Fls golden apricot. Stems 0.4 m.  
(Published in *Lilies and related plants 2003-2004*: 105,  
112 (2004). Nomenclatural standard: colour print  
supplied by registrant (WSY 0096385).)  
(Misspelling: 'Dr. George Clark'. Published in *LYB NALS*  
2: 110 (1949).)

**'Doctor Porter' I(a/b)**

Parentage: *bulbiferum* var. *croceum* × selected 'Earlibird'  
hybrid  
R: E. Kieslich, G: Hillcrest Harmony Flowers (1987), N:  
D. Putland, REG: Hillcrest Harmony Flowers (1998)  
Inside strong orange (25A), throat vivid reddish orange  
(30B); outside vivid orange (29B); spots small, strong red  
(46A), on basal two-thirds of each tepal; papillae frosted;  
nectaries moderate yellow-green (139C); pollen moderate  
reddish orange (171A); stigma vivid orange (28B). Fls  
146 mm wide; tepals 85-90 × 30-45 mm, margins very  
slightly ruffled, tips not or slightly recurved. Lvs scattered,  
100 × 16 mm, dark green. Stems 1.1 m, moderate brown  
(200C) over strong yellow-green (143B), with 15-22 fls.  
Late June to mid July.

**'Doctor Yu' I(b/-)**

Parentage unknown  
R: J. Wadekamper (1973), N: J. Wadekamper (1980),  
I: Borbeleta Gardens (1981), REG: Borbeleta Gardens  
(1982)  
Inside vivid reddish orange (33B), throat orange-red;  
outside tannish orange-red; spots purple, on half of each  
tepal; nectaries frosted orange-red; pollen brown. Tepals  
85 × 42 mm, margins smooth, tips not recurved. Lvs  
scattered, 130 × 12 mm, dark green. Stems 1.3 m, tan-  
green, with c.30 fls. July.  
(Published in *Borbeleta Gardens Cat.*, 1981.)

**'Document' Div. ?**

Given as a parent of 'Roter Cardinal'. No further details. Perhaps an error for 'Dokument'.

**'Docz Daurskoj' I(a/-)**

Unaccepted spelling of 'Doch Daurskoi'.

**'Docz Fialkovoij' I(b/-)**

Unaccepted spelling of 'Doch Fialkovoi'.

**'Doeskin' I(c/d)**

Parentage: 'Albipayne' × 'Connecticut King'  
R: L.D. Marshall (1977), G: Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1985), I: Columbia-Platte Lilies (1985), REG: Columbia-Platte Lilies (1988)  
Inside light yellowish pink (26D) to light orange (28C/D), paler in hot/sunny weather, tepal-tips light yellowish pink (26D), throat paling to near white; outside softest buff; spots absent; nectaries white, downy; pollen moderate red (180A). Tepals 60-80 × 20-30 mm, margins smooth, tips strongly recurved. Lvs scattered, 100-150 × 10-30 mm, dark green. Stems 0.75-1.5 m, deep green, with 5-20 or more fls. Late June.  
(The seed parent, 'Albipayne', is an unregistered albino clone introduced by Henry Payne.)

**'Dokument' I(a/b)**

Parentage unknown  
R: Gebr. N. & B. Laan & Zn (pre 1982), N: Gebr. N. & B. Laan & Zn  
Inside vivid reddish orange (30C), throat strong orange (30D); outside strong orange (30D); spots dark red (187A) on half of each tepal; nectaries white-orange; pollen strong reddish orange (169A). Fls 127 mm wide; tepals 88 × 41 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 75 × 11 mm, mid green. Stems 0.6 m. July.

**DOLCE VIII(a/b)**

Trade designation of 'Zanlace'.

**'Dolce Vita' VII(-/-)**

Parentage: unnamed seedling × unnamed seedling  
R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1983), N: Gebr. Mak B.V. (1984), I: Oriental Express (1987), REG: Oriental Express (1989)  
Inside deep purplish pink (64D/70C), outer tepals edged with moderate purplish red (70A); outside deep purplish pink (70C); papillae dark red (187A), on basal half of each tepal; nectaries light yellow-green (144D); pollen deep orange-yellow (163A). Fls 220 mm wide; tepals 105 × 60 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 30 mm, mid green. Stems 0.4-0.45 m, green with darker spots, and with c.3 fls.

**'D'Oléron' VII(-/d)**

Parentage: 'Star Gazer' × seedling L.122  
R: Vletter & Den Haan (1981), G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside deep to strong purplish pink (64D/68B), midvein

in basal half of each tepal light greenish yellow (8B/C), throat strong yellow-green (144C); outside deep to moderate purplish pink (70C/D), midribs pale greenish yellow (2D); spots few, deep purplish red (59B), on basal half of inner tepals; pollen vivid orange (28A). Fls 200 mm wide; tepals 100 × 35 mm, outer with ruffled margins, tips slightly recurved. Lvs scattered, 150 × 37 mm, mid green. Stems 1.25 m, pale green, with 5-7 fls. May.

**'Dolley Madison' I(a/-)**

Parentage: ('Enchantment' × Hallmark Group) × 'Sterling Star'  
R: E.A. McRae (1960s), G: Oregon Bulb Farms, Inc. (1970), N: Oregon Bulb Farms, Inc. (1970), I: Oregon Bulb Farms, Inc., REG: North American Lily Society (1983)  
Inside white; outside white suffused with green to buff; spots many, brown, small; nectaries green; pollen yellow. Tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 5-10 mm, pale green. Stems 0.9-1 m, green, with 5-20 fls. June.

**'Dolly' I(c/-)**

Parentage: 'Edith Cecilia' × 'Byam's Ruby'  
R: R.P.H. Clas (1967), G: R.P.H. Clas (1969), N: R.P.H. Clas (1970), REG: North American Lily Society (1983)  
Inside deep/strong pink (48B/C), tepal-tips more intense, throat soft golden yellow; outside deep/strong pink (48B/C), spots magenta, small, each with a halo, nectaries green; pollen dark/moderate reddish orange (173A/B). Tepals 60 × 15 mm, margins ruffled, tips strongly recurved. Lvs scattered, 80 × 7 mm, mid green. Stems 1.2 m, mottled, with 5-18 fls. Late June to July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

**'Dolorosa' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis, G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)  
Inside and outside pale orange-yellow (24D), tepal-edges narrow, black; spots tiny, black, on a quarter of each tepal; nectaries white; pollen black. Fls 80 mm wide; tepals 65 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 150 × 15 mm, dark green. Stems 1.5-1.7 m, black, with 10-18 fls. Mid July.  
(Published in *Latvian Lily Register*, 1993.)

**'Dominador' I(a/-)**

Parentage: selection from Coronado Group × selection from Coronado Group  
R: Bischoff Tulleken Leliecultuur B.V. (1975), G: Bischoff Tulleken Leliecultuur B.V. (1978), N: Bischoff Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken Leliecultuur B.V. (1983), REG: Bischoff Tulleken Lelies B.V. (1985)  
Brilliant orange (25C) with a strong orange (169D) flush, throat Saturn red; outside moderate orange (170C) and Spanish orange; spots violet-red, on half of each tepal; pollen chocolate-brown. Fls 130 mm wide; tepals 80 × 40

mm. Lvs scattered, 95 × 15 mm, mid green. Stems 1 m, green, with 6-7 fls. May.

(Published in *Bloembollencultuur*, 1984.)

### 'Domingo' I(a/-)

Parentage: ('Lemon Lode' × unnamed seedling) × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1994)

Inside brilliant yellow (7A), throat brilliant greenish yellow (6C) fading to tepal-edges; outside light greenish yellow (7D) shading to brilliant greenish yellow (7C) at tepal-edges; spots dark red (187A), on basal parts of each tepal; pollen strong orange (169C); stigma dark red (187B). Fls 180 mm wide; tepals 100 × 50 mm. Lvs scattered, 95 × 15 mm. Stems 0.95 m, pale green with darker markings, and with c.5 fls.

### Dominion Aurelians Group VI(b/c)

Syn. of Vineland Aurelians Group.

### 'Dominion Monarch' IX(-/b)

See *auratum* 'Dominion Monarch'.

### 'Dominique' VII(-/c)

Parentage unknown

R: Sun Valley Bulb Farms, Inc. (1973), N: Sun Valley Bulb Farms, Inc. (1980), I: Sun Valley Bulb Farms, Inc. (1980), REG: Sun Valley Bulb Farms, Inc. (1980)

Inside moderate purplish pink (66D), throat deep purplish pink (54B); outside light purplish pink (65B); spots only in throat; nectaries strong yellow-green (145A); pollen strong reddish orange (31A). Tepals 125-150 mm long, margins slightly ruffled. Lvs elliptic, moderate olive-green (137A). Stems 0.4 m.

Syn.: 'Fascination'.

### 'Domino' I(b/b)

Parentage: 'Sun Ray' × 'Showboat'

R: K. Braun (1986), N: K. Braun, REG: K. Braun (1990) Inside with the centre of tepals orange-yellow, tips red, throat orange-red; outside red; spots absent; papillae red; nectaries red; pollen brown-red. Fls 120 mm wide; tepals 76 × 30 mm, recurved; pedicels 65 mm long, green. Lvs scattered, 73 × 10 mm, light green. Stems 0.7 m, green, with c.6 fls. Early July.

### 'Domino' I(c/-)

Parentage: 'Palomino' × 'Discovery'

R: K. Mynett & A. Wilkońska (1979), G: K. Mynett & A. Wilkońska (1982), N: K. Mynett & A. Wilkońska, I: Research Institute of Pomology & Floriculture

Inside strong orange-yellow (24B), throat strong orange (25B); outside light orange-yellow (22C); spots absent; nectaries green; pollen light bronze; stigma dark bronze. Fls 100 mm wide; tepals 75 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 95 × 7 mm, mid green. Stems 0.8 m, mid green, with c.18 fls. Mid July (for a period of over 3 weeks).

(Registered with the Polish Research Centre for Cultivars under no. 0164. Not registered with the ICRA because the name is already used for another lily (ICNCP, 2004: Art. 27.1).)

### 'Domschatz' I(a/b)

Parentage: Barber seedling No. 3 × 'Robin Hood'

R: A. Weinreich (pre 1989), N: A. Weinreich, REG: A. Weinreich (1990)

Fls cognac-coloured; slightly spotted on basal two-thirds of each tepal; pollen dark. Stems 1.2-1.4 m, dark, with a loosely spaced infl. Early July.

Syn.: 'Bacchus'.

(Published in German Lily Group sales list, 1989.)

### 'Donald Ineson' I(a/-)

Parentage: ( *davidii* ×  *dauricum*) ×  *wilsonii* var.  *flavum*

R: A.D. Harrison (c. 1962), N: A.D. Harrison

Fls clear bright orange; spots brown.

### 'Donatello' VIII(a/b)

Parentage: seedling LAW 93-19 × seedling AW 94-9

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside whiter than yellowish white (155D), throat light yellow-green (145B) which shades towards the edges to whiter than 155D; outside of inner tepals whiter than 155D, midribs pale greenish yellow (1D); outside of outer tepals whiter than 155D, midribs light yellow-green (150D) and tipped brilliant yellow-green (150C); spots and papillae absent; nectaries light yellow-green (145D); pollen brownish orange (164A); stigma light greenish yellow (3D). Fls 180 mm wide; tepals 110 × 50-65 mm, margins smooth, tips recurved. Lvs scattered, 120 × 25 mm. Stems 1.2-1.25 m, green, with 4-7 fls.

(*A longiflorum*/Asiatic (LA) hybrid.)

### 'Donato' VIII(a-b/b)

Parentage unknown

R: Testcentrum voor Siergewassen B.V., N: Marklily C.V. (2001), REG: Marklily C.V. (2004)

Inside with inner tepals moderate purplish red (186B), margins strong purple (77B), yellowish white (155D) around nectaries, along midveins strong purplish red (63A), at base on yellowish white (155D) ground with some strong orange-yellow (163B), outer tepals similar but margins moderate purplish red (186A), throat yellowish white (155D); outside with inner tepals moderate purplish red /dark purplish pink (186B/C), margins strong purple (77B), yellowish white (155D) around nectaries, midribs strong yellow-green (144A) at base, changing up to a sixth into light yellow-green (144B), apical five-sixths strong red (53B), outer tepals moderate purplish red (186B) in basal half, moderate purplish red (186A) in apical half, margins deep purplish red (59B), flushed with strong orange-yellow (163B) along midribs which are moderate olive-green (146A) at top; spots absent; papillae strong purplish

red (60C); nectaries strong yellow-green (144A); pollen dark reddish orange (175B); stigma dark red (187A/B). Fls 250 mm wide; tepals 160 × 40-70 mm, margins ruffled, tips recurved. Lvs scattered, 170-230 × 35-45 mm, dark green. Stems 1.4-2.05 m, green with darker markings, and with 5-8 fls. (An Orienpet (OT) lily.)

#### 'Donau' VIII(a-b/b)

Parentage: Asiatic seedling × (*longiflorum* × 'Aristo')  
R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1993), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside light orange-yellow (23C/24C), paler towards tepal-tips, throat strong orange-yellow (24B); outside light orange-yellow (23C); spots purplish, near centre of fl.; nectaries orange-green; pollen brown-red; stigma orange, tinged with green. Fls 260 mm wide, up-facing; tepals 130 × 50 mm, margins smooth, tips very slightly recurved. Lvs scattered, green. Stems 0.9 m, green, with 2-6 fls. Early to midseason.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Don Camillo' I(a/b)

Parentage: seedling AM 96-28 × seedling AM 96-40  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals strong purplish pink (63C) with light purplish pink (73C) stripes, margins strong purplish pink (73B), outer tepals strong purplish pink (63C), margins strong purplish pink (73B), throat yellowish white (155B); outside with inner tepals strong purplish pink (63C), deep purplish pink (64D) towards margins, midribs light purplish pink (63D) surrounded by very pale purple (73D), outer tepals light purplish pink (62C), moderate purplish pink (62B) towards margins, strong purplish pink (62A) at margins, along midribs light yellow-green (150D), at top strong yellow-green (144C); spots absent; papillae yellowish white (155B); nectaries strong yellow-green (143C); pollen vivid yellowish pink (28A); stigma strong purplish red (59D). Fls 160 mm wide; tepals 102 × 40-53 mm, margins smooth, tips very slightly recurved. Lvs scattered, 135 × 25 mm. Stems 1.2-1.4 m, brownish red, with c.9 fls.

#### 'Don Fernando' I(a/c)

Parentage: 'Diskus' × 'Impact'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1997), REG: G. Steinbrück (1999)

Inside moderate pink (35D); outside slightly darker; spots very few, very small, deep purplish red (61A), at base of tepals; pollen dark red (59A); stigma deep purplish red (61A). Fls 130 mm wide; tepals 65 × 30 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 75 × 12 mm, glossy dark green. Stems 0.7 m, dark green, with 8-10 fls. Late June.

#### 'Don José' I(b/b)

Parentage: 'Dawn Star' × orange-flowered Asiatic seedling

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1998)

Inside moderate yellow (161A), tepal-tips pale greenish yellow (10D), throat brilliant yellow-green (150A); outside greenish yellow; spots many, small, deep purplish red (71A), on basal half of each tepal; nectaries brilliant yellow-green (150A); pollen vivid reddish orange (34B); stigma deep purplish red (59B). Fls 150 mm wide; tepals 65 × 25 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 60 × 8 mm, dark green. Stems 0.9 m, almost black, with up to 13 fls. Early to mid July.

#### 'Don Juan' I(c/-)

Parentage: *lancifolium* × unknown

R: J. Koeman, I: P.J.M. Hoff (1966), REG: (1969)

Fls vivid reddish orange (34B), reddish orange (33B) in centre; spots deep brown.

(Published in *LYB* 33: 255 (1970). This cv. was registered before the existence of the earlier cv. with the same epithet was known to the ICRA.)

#### 'Don Juan' I(a/-)

Parentage: selection from ? *L. × hollandicum*

Salmon-pink, shading to orange scarlet; spots present. Stems 0.75 m.

(Published in *Barr & Sugden Cat.*, 1877.)

#### 'Don Kosaken' I(b/d)

Parentage: 'Lime Ice' × 'Vater Zille'

R: G. Steinbrück (1992), G: G. Steinbrück (1994), N: G. Steinbrück (1998), I: G. Steinbrück (1998), REG: G. Steinbrück (1998)

Inside light orange (26C) suffused with soft salmon-pink towards tepal-margins; outside paler than inside, midribs very prominent; spots numerous, medium sized, deep purple (83B), on three-quarters of each tepal; nectaries grey-white; pollen strong purplish red (71B); stigma moderate purplish red (184C). Fls 120 mm wide; tepals 60 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 91 × 11 mm, mid green. Stems 0.8 m, rather dark green, with up to 12 fls. Early to mid July.

#### 'Donna' I(a/-)

Parentage: 'Connecticut King' × 'Winesap'

R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1986), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1988)

Inside moderate pink (51D), throat deep pink (51B); outside light yellowish pink (36B), outer tepals flushed with light yellow-green (145C) and with moderate pink margins; spots chocolate-brown; pollen vivid orange-yellow (23A). Fls 140 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, 140 × 15 mm, mid green. Stems 1.25 m, green, with c.8 fls. July.

**'Donna Sylvester' I(b-c/c)**

Parentage: (pink-flowered seedling × Fiesta Group) × 'Red Bird'

R: D. Sylvester (1976), G: F. Fellner (1978), N: F. Fellner (1987), REG: F. Fellner (1987)

Inside yellow; outside reddish; spots dark; pollen brown. Fls 125 mm wide; tepals thick. Stems 0.75-1 m, with 8-10 fls. Mid July.

**'Don Quichotte' VIII(a/-)**

Parentage: (unnamed seedling × ('Esther' × 'Montreux')) × (*longiflorum* × pink-flowered seedling)

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside yellowish white (155B) in basal part, apical part light purplish pink (65B), with a very pale flush of pale purplish red (65C) on tepal-edges and midveins towards base; outside deep purplish pink (64D), shading to moderate purplish pink (62B) towards the yellowish white (155B) tepal-edges, tinged with strong yellow-green (143C) at base and with a pale golden yellow flush on 2 tepals; yellowish white (155B) spots and dark red (187A) papillae on basal part of tepals; nectaries strong yellow-green (143A) surrounded by pale yellow-green (155A); pollen moderate reddish brown (175A); stigma light green yellow (3C). Fls 170 mm wide; tepals 110 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 0.55 m, mid green, with c.4 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Don Vincenzo' VII(-/-)**

Parentage: pink-flowered seedling × 'Star Gazer'

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1989)

Inside deep to moderate purplish pink (66C/D), midveins big, deep red (53A), tepal-edges yellowish white (155D), throat light yellow-green (145B) edged light greenish yellow (8B); outside strong purplish red (64B/C), tepal-edges yellowish white to very pale purple (155D/69A), midribs flushed with light greenish yellow to pale yellow (8C/D); spots dark red (187A); pollen strong orange (169C). Tepals 130 × 55 mm, margins of outer tepals ruffled, tips strongly recurved. Lvs scattered, 125 × 40 mm, mid green. Stems 0.6 m, green with darker markings, and with c.4 fls. July.

**'Dora Pinnow' I(b/-)**

Parentage: *lancifolium* var. *flaviflorum* × various yellow-flowered hybrids

R: N.A. Lamb (c. 1960), N: N.A. Lamb, REG: N.A. Lamb (1984)

Fls yellow with dark spots. Lvs scattered, dark green. Stems 1.8 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

**'Dordogne' VII(a/b)**

Parentage: seedling 88-108 × 'Barbaresco'

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1996), I: Vletter & Den Haan, REG: Vletter & Den Haan Beheer B.V. (1999)

Inside moderate purplish red (58A), paler at base, midveins yellow; outside moderate purplish red (58A); spots and papillae present; nectaries green; pollen reddish brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems 1.35 m, green, with c.7 fls. Early to midseason.

Trade designation: VLETDOR.

**'Dore' I(a/-)**

Parentage: unnamed brushmarked seedling × unnamed brushmarked seedling

R: J. Vasarietis, G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)

Inside and outside brilliant orange (29A); spots reddish purple, on half of each tepal together with a narrow, reddish purple brushmark; nectaries white; pollen orange-brown. Fls 140 mm; tepals 80 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm, mid green. Stems 0.7 m, green, with c.7 fls. Mid July.

(Published in *Latvian Lily Register*, 1993.)

**'Dorien' I(a/-)**

Parentage unknown

R: Peacock B.V., G: Peacock B.V., N: Peacock B.V. (1988), I: Peacock B.V., REG: Peacock B.V. (1990)

Inside yellowish white (155B), flushed with pale yellow (11D); outside yellowish white (155D), with light yellow-green (159D) midribs and flushed with dark pink (182D); spots dark red (187A), in the throat; pollen strong orange/moderate reddish brown (168A/166B). Fls 165 mm wide; tepals 80 × 37 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 11 mm, mid green. Stems 0.9 m, green with slight, darker markings, and with c.10 fls. May (under glass).

**'Dori Jo' I(a-b/-)**

Parentage unknown

R: F. Fellner, G: F. Fellner, N: F. Fellner, I: Borbeleta Gardens (1982), REG: Borbeleta Gardens (1982)

Inside pink, tepal-centres green, tips pink, throat white; outside reddish pink; spots reddish, scattered over cream centre and into the pink part of each tepal. Buds white-woolly. Tepal-margins smooth, tips not recurved. Stems 0.6-0.8 m, covered with white woolly hairs, and with c.10 fls. July.

**'Doris' I(a-b/-)**

Parentage: 'Parfait' × 'Wattle Bird'

R: B. Mičulka (pre 1989), N: B. Mičulka, REG: B. Mičulka (1989)

Inside pale yellow, tepal-tips pink; outside with pale beige midribs; spots small, dark brown-purple, scattered on a quarter of each tepal; nectaries pink, creamy-granulated; throat with sparse papillae; pollen chocolate-brown; stigma beige. Buds sparsely hairy; pedicels 100 mm long,

slightly spotted. Lvs scattered, 110 × 12 mm, glossy dark green. Stems 1.1 m, with brown spots, numerous at base, sparse at top. Early July.

**‘Doris Russell’ VII(b/b)**

Parentage: ‘Kosciusko’ × sister seedling of ‘Kosciusko’  
R: E.C. Genat, N: E.C. Genat (1961), I: E.C. Genat (1964)

Fls pure white; spots absent; yellow flush around green nectaries; pollen brown. Fls 190 mm wide; tepal-tips reflexed. Lvs mid green. Stems 1.7 m. Feb. (Australia).

**‘Doris Wharton’ I(a/c)**

Parentage: ‘Geneve’ × ‘Merryspring’

R: D.J. Hay (1997), G: D.J. Hay (1999), N: D.J. Hay (2001), REG: D.J. Hay (2001)

Inside pink with an orange gold blush from the centre of each tepal to base, fading to produce a cream stripe down the centre of each tepal, throat pink; outside pink; spots few, dark, near the throat; nectaries pink; pollen rust-orange; stigma pink. Fls 131 mm wide; tepals 63 × 35 mm, margins smooth, tips very slightly recurved. Lvs scattered, 83 × 15 mm, glossy. Stems 0.78 m, dark green, with c.7 fls. Midseason.

(Nomenclatural standard: colour print provided by registrant (WSY 0031600).)

**DORNENVÖGEL VII(-/c)**

Trade designation of ‘Thornbirds’.

**‘Dorothy’ VII(-/l-)**

See *L. × parkmanii* ‘Dorothy’.

**‘Dorothy Krist’ VII(b/d)**

See *L. × parkmanii* ‘Dorothy Krist’.

**‘Dotch Daurskoi’ I(a/-)**

Unaccepted spelling of ‘Doch Daurskoi’.

**‘Dotch Fialkowoy’ I(b/-)**

Syn. of ‘Doch Fialkovay’.

**‘Dot Com’ I(a/c)**

Parentage: ‘Latvia’ × pink-flowered seedling

R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2001), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside light purplish pink (65B), throat light yellowish pink (36B); outside of inner tepals light yellowish pink (36A), midribs light yellow-green (150D), shading to brilliant yellow-green (150A) at top and with light purplish pink (65B) alongside; spots dark red (59A) on basal part and along apical tepal-edges inside, on outside of inner tepals for up to two-thirds of the length, and on outside of outer tepals from base towards top; papillae absent; nectaries light yellowish pink (36B); pollen vivid orange-yellow (23A); stigma moderate purplish red (59C). Fls 200 mm wide; tepals 110 × 30–40 mm, margins smooth, tips recurved. Lvs scattered, 100–130 × 15–30 mm. Stems 1–1.2 m, green, with 5–9 fls. June.

Syn.: ‘Dot.com’.

(Registered in *ILR Twentieth Supplement* as ‘Dot.com’, but the epithet had to be changed to ‘Dot Com’ after Dutch PBR (LEL 2118) were granted under the latter form of the epithet in May 2004 (ICNCP, 2004: Art. 24.4).)

**‘Dot.com’ I(a/c)**

Syn. of ‘Dot Com’.

**‘Dots & Dashes’ I(a/c)**

Parentage unknown

R: R. & H.R. Cocker, G: R. & H.R. Cocker, N: R. & H.R. Cocker (1998), REG: R. & H.R. Cocker (1999)  
Inside vivid yellow (12A); outside light yellow (12C); a dark red (187) brushmark towards the base of each tepal, with numerous lines of spots and dashes on three-quarters of each tepal; nectaries green; pollen dark reddish orange (175C). Fls 150 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 mm long. Stems 1 m, mid green, with 6–10 fls. Midseason. (The form and spelling of the epithet is deliberate. Nomenclatural standard: colour print supplied by registrant (WSY 0015648).)

**‘Double Apricot’ I(a/b)**

See *L. × maculatum* ‘Double Apricot’.

**‘Double Delight’ VII(a/b)**

Parentage: ((*L. × parkmanii* ‘Allegra’ × *L. × parkmanii* Little Rascal Group) × (*L. × parkmanii* Little Rascal Group × ‘Star Gazer’)) × ((*L. × parkmanii* ‘Allegra’ × ‘Star Gazer’) × (*L. × parkmanii* Little Rascal Group × ‘Star Gazer’))

R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside yellowish white (155D), midveins from above nectaries brilliant yellow (8A), the colour shading out into tepals; outside yellowish white (155D), midribs a little paler than brilliant greenish yellow (151D), with some strong yellow-green (144A) at base and top; spots vivid yellow (9A), on basal part of each tepal; papillae present; nectaries strong yellow-green (144A); pollen vivid orange-yellow (23A); stigma dark purple (79A). Fls 210 mm wide; tepals 130 × 35–60 mm, margins ruffled, tips recurved. Lvs scattered, 190 × 45 mm, mid green. Stems 1.25 m, green, with c.7 fls.

**‘Double Queen’ I(a/b)**

See *L. × maculatum* ‘Double Queen’.

**‘Double Scarlet’ I(a/b)**

See *L. × maculatum* ‘Double Scarlet’.

**‘Double Surprise’ VII(a-b/-)**

Parentage unknown

R: Jan de Wit & Zn B.V. (1998), N: Jan de Wit & Zn B.V. (2001), I: Jan de Wit & Zn B.V. (2000), REG: Jan de Wit & Zn B.V. (2001)

Inside deep purplish pink (66C), throat very pale purple (69D); outside yellowish white (155D) at base shading to moderate purplish pink (66D), midribs very pale mauve (69D); spots dark red (187C); papillae absent; nectaries strong yellow-green (144A), surrounded by light greenish yellow (4B); pollen absent; stigma light yellow-green (145D). Fls double, 170 mm wide; tepals 95 × 40-45 mm, margins slightly ruffled, tips recurved. Lvs scattered, 165 × 50 mm. Stems 1 m, light green with a little darker marking, and with c.5 fls. June.

(Published in *Bloembollencultuur*, May 2001.)

#### **'Double Whisky' VIII(a/b)**

Parentage: ('Sinai' × unknown) × (*longiflorum* × 'Aristo')  
R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside strong orange-yellow (22A), light orange-yellow (22B) towards tepal-margins, tips strong orange (25A), midveins light orange-yellow (22B); outside brilliant yellow (20B), tepal-margins brilliant orange-yellow (21B), tips strong orange-yellow (24B) with a small strong reddish orange (34C) spot; nectaries moderate yellowish green (137D); pollen dark reddish orange (178B); stigma dark red (59A). Fls semi-double, 150 mm wide; tepals 105 × 55 mm, margins smooth to very slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 25 mm, green. Stems 1.2 m, green with darker markings, with 7-9 fls. June  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **'Douglas Foxwell' VI(b/b)**

Parentage: unnamed seedling × unnamed seedling  
R: D. Foxwell, N: D. Foxwell (1975), REG: D. Foxwell (1975)

Fls pale yellow (12D), deepening in centre to vivid yellow (12A); outside slight pea-green.

(Published in *Lilies and other Liliaceae*, 1975: 91.)

#### **'Douglas Ingram' IV(c/d)**

Parentage: selection from Bellingham Group  
S: D. Griffiths (c. 1933), N: D. Griffiths

Fls orange-red, tepal-tips dull red, throat cadmium; spots black, small in throat, larger and more red towards tepal-tips, those at tips surrounded by a clear zone on a red ground; anthers dull yellow; pollen cadmium-yellow. Tepals slightly recurved. Lvs mostly in whorls, dull above, glossy beneath, wavy. Stems 1.2-1.5 m, dark green or bronze, with 15-20 fls. July.

(Printed in *USDA Circular* no. 299: 11 (1933). The parents are thought to be *pardalinum* and *humboldtii* var. *ocellatum*.)

#### **'Dove of Peace' I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1982), G: J. Vasarietis (1986), N: J. Vasarietis (1992), I: J. Vasarietis (1990), REG: J. Vasarietis (1992)

Fls pure white, except for a few, tiny spots on basal quarter of each tepal; nectaries white; pollen brown. Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips

very slightly recurved. Lvs scattered, 135 × 10 mm, mid green. Stems 0.7-0.85 m, green, with 7-10 fls. Early July. Syn.: 'La Paloma'.

(Originally named 'La Paloma' in 1990, but renamed and registered as 'Dove of Peace'.)

#### **'Dover' I(a/b)**

Parentage unknown

R: M.A. van den Berg (pre 1988), N: M.A. van den Berg (2002), REG: M.A. van den Berg (2002)

Inside vivid orange (28A) at base, becoming more vivid reddish orange (30A) towards tepal-tips, throat orange; outside orange, becoming yellow towards tepal-tips, midribs green; markings black with purple-red margins; spots and papillae present; pollen brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems dark green above with dark spots, base brown with green spots. Early.

#### **'Downingii' V(-/a)**

See *longiflorum* var. *takeshima* 'Downingii'.

#### **'Dozch Fialkovoï' I(b/-)**

Unaccepted spelling of 'Doch Fialkovoï'.

#### **'Dr. Abel' I(c/-)**

Misspelling of 'Doctor Abel'.

#### **'Dragonette' I(a/-)**

Parentage: *bulbiferum* var. *croceum* × 'Connecticut Yankee'

R: E. Hickling, N: E. Hickling, I: J. Wadkamper (1976), REG: J. Wadkamper (1976)

Fls bright red-orange; spotted; nectaries yellow-green; pollen brown. Lvs wide, dark green. Stems 1.1 m. July. (Published in *Lilies and other Liliaceae*, 1976: 90. The entry under this epithet on p. 77 of *Lilies and other Liliaceae*, 1977 was an error and should be ignored.)

#### **'Dragoon' VIII(b-c/a)**

Parentage: *longiflorum* × *leucanthum* var. *centifolium* 'Black Dragon'

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)

Inside white, throat greenish; outside suffused with brownish pink; anthers poorly developed; style prominent, with a large, green stigma. Tepal-margins smooth, at least outer tepals recurved at tip and somewhat twisted. Stems 1-1.2 m, with at least 10 fls. July.

(Published in *The Lily Garden Cat.*, 1996/97: 16. E.A. McRae in *Lilies*, 155 (1998) says that this cv. was hybridized by Dan Clark using *longiflorum* 'Ace' (= 'Slocum's Ace') as the pollen parent.)

#### **'Draiskuliga' I(b/-)**

Parentage: selection from Jautrie Berni Group

S: V.P. Orehovs, N: V.P. Orehovs

Fls dull red.

(Published in *LYB* 33: 79 (1970) and included in *ILLR* (1982) as 'Dreis Kuliga' which is a misspelling.)

**‘Draudziba’ I(a/-)**  
Misspelling of ‘Draudziba’.

**‘Draudziba’ I(a/-)**  
Parentage: selection from Jūras Zvaigzne Group  
S: V.P. Orehovs, N: V.P. Orehovs  
Fls orange.  
(Published in *LYB* 33: 80 (1970) and included in *ILR* (1982) as ‘Draudziba’ which is a misspelling.)

**‘Dream’ I(a/b)**  
Parentage: (*lankongense* × unknown) × ‘Abendglühen’  
R: Gebr. N. & B. Laan & Zn (1976), G: Gebr. N. & B. Laan & Zn (1978), N: Gebr. N. & B. Laan & Zn (1980), REG: Gebr. N. & B. Laan & Zn (1980)  
Fls light pink (49C), centre pale orange-yellow (23D); spots dark brown; anthers burnt orange. Stems 0.5 m.  
(Published in *Bloembollencultuur*, July 1980.)

**‘Dreamaway’ I(a/-)**  
Parentage unknown  
R: H. Peters, N: H. Peters (1982), I: Borbeleta Gardens (1983), REG: J. Wadepkamper (1983)  
Inside deep pink (48A), throat light pink; outside vivid red (46C); spots brown, very few; nectaries blushed orange; pollen bright tan. Tepals 80 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 1.2 m, dark green, with 7-9 fls. Late.

**‘Dreamcatcher’ VIII(a-b/b-c)**  
Parentage unknown  
R: Sande B.V., N: Fa Q.J. Vink & Zn (2003), REG: Fa Q.J. Vink & Zn (2005)  
Inside strong purplish red/deep purplish pink (54A/B); outside deep purplish pink/strong pink (54B/C); spots few; papillae present; nectaries light green; pollen red-brown; stigma orange-pink. Tepals short, margins slightly ruffled, tips slightly recurved. Lvs scattered. Stems small to mid height, green with darker markings. Early to midseason.  
(A *longiflorum*/Asiatic (LA) hybrid according to the registrant. However, in the opinion of B. Mičulka (*in litt.* 7 March 2007), it should be in Div. I.)

**Dreaming Group I(c/-)**  
Syn. of Sapņotāja Group.

**Dreaming Bells Group VI(c/d)**  
Parentage: (*regale* × ‘Pink Perfection’) × mixed pollen  
R: O. Tanck (1979), G: O. Tanck (1981), N: O. Tanck (1982), I: O. Tanck (1982), REG: O. Tanck (1983)  
Fls light yellow (17D), each tepal with a 5 mm-wide, strong orange-yellow (17A) strip from throat to tip; outside with a reddish brown flush at base (especially in bud); spots absent; nectaries strong orange-yellow (17A), with a green rib; pollen brown. Tepals 120-150 × 40-50 mm, margins smooth, tips slightly recurved. Lvs whorled, 100 × 12 mm, mid green. Stems 1.5 m, dark green and brown, with 10-15 fls. July.  
(Published in *Der Staudengarten* (4): 39 (1981). Included in *ILR Second Supplement* as Dreaming Bells grex.)

**‘Dreamland’ I(a/b)**  
Parentage unknown  
R: L. Woodriff, G: L. Woodriff, N: Ont Wikkeling Lelie Cultuur B.V. (1981), I: Ont Wikkeling Lelie Cultuur B.V. (1983), REG: Ont Wikkeling Lelie Cultuur B.V. (1985)  
Inside brilliant greenish yellow (6A), throat blotched cadmium-orange; outside brilliant greenish yellow (5A), midribs green-yellow; dark brown spots around centre; nectaries majolica-brown; pollen red-brown. Fls 160 mm wide; tepals 80 × 45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 100 × 15 mm, pale green. Stems 0.95-1 m, with 6-12 fls.  
(Published in *Bloembollencultuur*, 1984.)

**‘Dreamtime’ I(b-c/d)**  
Parentage unknown  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Fls soft peach to apricot. Tepal-margins not or very slightly ruffled, tips slightly to distinctly recurved. Stems 1.2-1.5 m, with a long infl. June.  
(Published in *The Lily Garden Cat.*, 1996/97: 8.)

**‘Dream Valley’ VII(-/b)**  
Parentage: *L. × parkmanii* ‘Frosty Morn’ × ‘Apricot Belle’ or *L. × parkmanii* ‘Jillian Wallace’  
R: J. Hoell (1981), G: J. Hoell (1985), N: J. Hoell (1988), REG: J. Hoell (1988)  
Inside strong red (41B), tepal-tips light greenish yellow (4C), throat vivid orange (28B); outside strong pink (52D); spots vivid red (45B), on two-thirds of each tepal. Fls 150 mm wide, only very slightly scented; tepals 80 × 40 mm, mid green. Stems 1.8 m, green with purple spots, and with 22-25 fls (including some secondary buds). Jan. (Tasmania).

**‘Dreamy’ VIII(a/b)**  
Parentage: pink-flowered Asiatic seedling × (*longiflorum* × ‘Aristo’)  
R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1996)  
Inside moderate purplish red (184C) on a dark yellowish pink (181D) ground, with some moderate red (184B) above nectaries, throat yellowish white (155B); outside moderate purplish red (184C/D) on a yellowish white ground (edges a little stronger coloured), midribs strong yellow-green (144B); outside of tepals (and buds) white-hairy; spots deep red (185A), on basal part of each tepal; papillae present in throat; nectaries pale yellowish pink (29D); pollen strong brown; stigma light yellow (15D). Fls 210 mm wide; tepals 120 × 50-75 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 20 mm, mid green. Stems 1 m, green with a little darker marking towards top, and with 3-6 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Dreis Kuliga’ I(b/-)**  
Misspelling of ‘Draskuliga’.

**‘Dresdener Gelbe’ I(a/b)**

Parentage: ‘Connecticut King’ × ‘Redbird’

R: G. Thürmer (1980), G: G. Thürmer (1982), N: G. Thürmer (1986), I: G. Thürmer (1986), REG: G. Thürmer (2001)

Inside vivid yellow (12A), throat reddish; outside vivid yellow (12A), inner tepals with reddish midribs, outer tepals darker; spots absent; nectaries greenish; pollen strong brown (172A). Tepals 90 × 40 mm, margins smooth, tips quite strongly recurved. Lvs scattered, 120 × 22 mm, glossy. Stems 1.2 m, rather dark green, with 12-15 fls. Early to mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0030946).)

**‘Dresdener Romanze’ VI(-/-)**

Parentage unknown

R: H. Böhm (pre 1981), N: H. Böhm, REG: ICRA (1996)

Fls creamy white. Stems 1.4-1.7 m. Early to mid June.

**‘Dresdner Sommer’ I(a/b)**

Parentage: ‘Connecticut King’ × ‘Orange Kandelaber’

R: G. Thürmer (1982), G: G. Thürmer (1983), N: G. Thürmer (1986), I: G. Thürmer (1995), REG: G. Thürmer (2001)

Inside vivid orange (28B); outside strong orange (25A); spots dark red (187A), on basal quarter of each tepal; nectaries orange; pollen strong reddish orange (169A). Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips not or very slightly recurved. Lvs scattered, 110 × 20 mm. Stems 1.2 m, rather dark, with 10-18 fls. Early to mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0030333).)

**‘Drew Castle’ I(b-c/-)**

Parentage: ‘Hartford’ × rose-pink-flowered, up-facing Asiatic

R: R.A. Prochaska (1988), G: R.A. Prochaska (1990), N: R.A. Prochaska (1990), REG: R.A. Prochaska (1995)

Inside peach, throat white; outside greenish orange; spots few, minute; pollen absent. Fls 60 mm wide; tepals 50 × 20 mm, margins ruffled, tips slightly recurved. Lvs scattered, 60 × 15 mm, dark green. Stems 1.5 m, brown, with c.20 fls. Late June to mid July.

**‘Drewitzer Brillant’ I(a/c)**

Parentage: ‘Impala’ × seedling AS 12

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Strong orange-yellow (24B) throughout; spots absent; nectaries grey-white; pollen strong brown (172A). Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 22 mm, dark green. Stems 0.8 m, pale green, with c.15 fls. Late June to early July.

**‘Drewitzer Chic’ I(b/d)**

Parentage: Asiatic seedling × Asiatic seedling

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N:

G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1998)

Inside and outside yellowish white (155D), throat with a slight green suffusion; spots medium sized, dark red (187B), on basal third of each tepal; nectaries soft green; pollen dark brown; stigma pale yellow. Fls 140 mm wide; tepals 80 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 130 × 15 mm, dark green. Stems 0.8 m, rather dark green, with up to 8 fls. Late June to early Aug.

Syn.: ‘Quecksilber’.

**‘Drewitzer Weisse’ I(b/b)**

Parentage: Asiatic seedling × white-flowered Asiatic seedling

R: G. Steinbrück (1990), G: G. Steinbrück (1993), N: G. Steinbrück (1996), I: G. Steinbrück (1997), REG: G. Steinbrück (1997)

Inside yellowish white (156D), throat pale orange-yellow (159C); outside yellowish white (156D); spots absent; nectaries soft white-green; pollen deep purplish red (61A). Fls 140 mm wide; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 15 mm, dark green. Stems 0.8 m, almost black, with 20-25 fls. Mid July.

**‘Dr. George Clark’ I(a/b)**

Misspelling of ‘Doctor George Clark’.

**‘Drika’ I(a/-)**

Parentage unknown

R: Fa Jaap Boon (pre 1984), REG: Fa Jaap Boon (1986)

Inside vivid reddish orange (30B) and gleaming burnt orange; outside strong orange (30D), tepal-edges nasturtium-red; spots tiny, dark brown, in the throat; nectaries brick-red; pollen red-brown (171B). Fls 155 mm wide; tepals 80 × 40 mm. Lvs scattered, 130 × 15 mm, mid green. Stems 1.5 m, green, with c.13 fls. (Published in *Bloembollencultuur*, 1984.)

**‘Drives Prieciga’ I(a/-)**

Misspelling of ‘Dzivespriecigā’.

**‘Drives Priesida’ I(a/-)**

Misspelling of ‘Dzivespriecigā’.

**‘Drogheda’ I(a/-)**

Parentage: ‘Connecticut King’ × greenish white-flowered, unspotted seedling

R: V. Matthé (1980), G: V. Matthé (1982), N: V. Matthé (1986), REG: V. Matthé (1986)

Fls bright yellow throughout; spots absent; nectaries green; pollen rust-brown. Fls 140 mm wide; tepals 75 × 38 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 12 mm, mid green. Stems 0.8-0.9 m, dark green, purplish at base, with 15-20 fls. July.

**‘Dropmore’ IX(a/c)**

See *concolor* ‘Dropmore’.

**'Dropmore Gold' I(b/-)**

Parentage: *dauidii* var. *willmottiae* × unknown  
 R: F.L. Skinner (c. 1951), N: F.L. Skinner  
 Fls golden yellow. Stems 0.6 m. June.  
 (Published in *Skinner's Nursery Cat.*, 1955.)

**'Dropmore Oriole' I(c/-)**

Parentage: 'Oriole' × *dauidii*? seedling  
 R: F.L. Skinner (c. 1951), N: F.L. Skinner  
 Fls pale orange-yellow. Stems 1.9 m. July.  
 (Published in *Skinner's Nursery Cat.*, 1951.)

**'Druzhba' I(a/-)**

Parentage: 'Russian Scope' × 'Connecticut King'  
 R: B.P. Guzhavin, N: B.P. Guzhavin (1982)  
 Fls bright orange; small spots in throat. Stems 0.9 m.

**'Druzhnaja' I(a/-)**

Parentage: 'Lilian Cummings' × mixed pollen of  
 'Connecticut Queen', 'Connecticut King' & 'Sun Ray'  
 R: V.A. Volkov (c. 1981), N: V.A. Volkov  
 Fls bright orange with a few large spots in the throat;  
 pollen red-brown. Stems 0.9-1 m. July.

**'Dublin' I(a/-)**

Syn. of 'Darwin'.

**'Dubonet' I(b/d)**

Parentage: 'Talisman' × *pumilum*  
 R: V. Baloun (1982), N: V. Baloun, REG: V. Baloun  
 (1987)  
 Inside orange; outside apricot, midribs pale brown-  
 green; numerous, large, dark red-brown spots on three-  
 quarters of each tepal; nectaries pale orange; pollen  
 orange-brown. Fls 75 mm wide; tepals 70 × 30 mm,  
 slightly twisted. Lvs 100 × 6 mm, dark, slightly glossy  
 green. Stems 0.45 m, slender, dotted dark brown at  
 base, and with c.8 fls. Early July.

***duchartrei* Franch. IX(c/d)**

Inside white, streaked and spotted with purple; outside  
 white, often slightly flushed with purple, green or  
 purplish at base; fls turn reddish or purplish with age;  
 nectaries green, with white-frosted margins; anthers  
 yellow; pollen orange; stigma green. Fls c.50 mm wide,  
 fragrant; tepals up to 55 × 30 mm. Lvs scattered, 50-100  
 × 10-15 mm, dark green. Stems 0.6-1 m, sometimes  
 more, green or purplish brown, often white-hairy at lf-  
 bases, with up to 12 fls. July to Aug. W China.  
 Syn.: *farreri*.

**'Duchess' I(b/-)**

Parentage: *amabile* × *L. × maculatum* 'Yellow Purity'  
 R: F.L. Skinner, N: F.L. Skinner  
 Fls vivid orange-yellow (21A), heavily spotted brown. Fls  
 125 mm wide. Stems 0.4 m, with 2-6 fls.

**'Duet' I(a/-)**

Parentage: ('Sutter's Gold' × *L. × maculatum*) ×  
 'Connecticut King'  
 R: Bischoff Tulleken Leliecultuur B.V. (1975), G:

Bischoff Tulleken Leliecultuur B.V. (1978), N: Bischoff  
 Tulleken Leliecultuur B.V. (1981), I: Bischoff Tulleken  
 Leliecultuur B.V. (1983), REG: Bischoff Tulleken Lelies  
 B.V. (1985)

Inside light greenish yellow (3D), each tepal flamed light  
 yellow (21C); outside light greenish yellow (3D), midribs  
 pale green; nectaries burnt orange; pollen tangerine-  
 orange. Fls 170 mm wide; tepals 85 × 42 mm. Lvs  
 scattered, 130 × 15 mm, mid green. Stems 1 m, green,  
 with 11-12 fls. Early June.  
 (Published in *Bloembollencultuur*, 1984.)

**'Duet' I(-/-)**

Parentage unknown  
 R: Columbia-Platte Lilies (pre 1996), N: Columbia-  
 Platte Lilies  
 Buds deep rose-pink, opening white with a deep rose-  
 pink centre; very few darker spots. Tepal-margins smooth,  
 tips not recurved. Stems 1-1.2 m. Late June.  
 (Unacceptable name: ICNCP, 2004: Art. 27.1 - name  
 already used for another lily. Published in *The Lily  
 Gardens Cat.*, 1996/97: 4.)

**DUET VII(b/b-d)**

Trade designation of 'Vlebur'.

**'Duha' I(a/b)**

Parentage: 'Karát' × mixed pollen of 'Egina' & 'Abu  
 Hassan'  
 R: K. Braun, N: K. Braun, I: K. Braun (1996), REG: K.  
 Braun (1997)  
 Inside red at tepal-tips, yellow in middle section of each  
 tepal, red and yellow in the throat; outside red and  
 yellow, midribs green; scattered, small, brown spots on  
 a third of each tepal; nectaries yellow; pollen cinnamon;  
 stigma red. Fls 120 mm wide; tepals 62 × 31 mm, slightly  
 recurved; pedicels 70 mm long, brownish. Lvs scattered,  
 70 × 10 mm, dull mid green. Stems 0.7 m, brown. Bulbs  
 white. Early July.

**'Dukát' I(c/-)**

Parentage: 'Amber Gold' × Bronzino Group  
 R: V. Jošt (1968), N: V. Jošt (1977), I: V. Jošt (1978),  
 REG: V. Jošt (between 1978 and 1981)  
 Fls vivid orange-yellow (23A), tepal-tips vivid orange  
 (28A); spots dark crimson on basal half of tepals; pollen  
 brown. Stems 0.3-0.6 m. Midseason.

**'Duke of Sutherland' I(a/-)**

Parentage: selection from ? *L. × hollandicum*  
 Fls orange-red, shading to bright yellow. Stems 0.6 m.  
 (Published in *Barr & Sugden Cat.*, 1875.)

**'Duke of Wellington' I(a/-)**

Parentage: selection from ? *L. × hollandicum*  
 Fls crimson shading to yellow. Stems 0.75 m.  
 (Published in *Barr & Sugden Cat.*, 1875.)

**DULCINEA I(a/b)**

Trade designation of 'Dulcinea'.

**'Dulcineja' I(a/b)**

Parentage unknown

R: J. Vasarietis (1989), G: J. Vasarietis (1992), N: J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J. Vasarietis (1999)

Inside strong purplish pink (63C), with an indistinct area of very pale red-purple on either side of each nectary, throat strong purplish red (63B); outside light purplish pink (63D); spots tiny, purple, on basal third of each tepal; nectaries white; pollen brownish orange; stigma greyish brown. Fls 150 mm wide; tepals 82 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 7 mm, mid green. Stems 0.9 m, greyish green, with c.11 fls. Early July. Trade designation: DULCINEA. (Published in *Lilium Balticum Cat.*, 1996. Nomenclatural standard: colour print provided by registrant (WSY 0023030).)

**'Dunkelherzige Orange' I(a/-)**

Parentage unknown

R: H. Gerke (pre 1988), N: H. Gerke, REG: H. Gerke (1990)

Fls orange. Stems 1.1 m, with c.15 fls. July. (Published in German Lily Group sales list, 1988.)

**'Dunkirk' I(b/d)**Parentage: *L. × hollandicum* × *dauidii* var. *willmottiae*  
R: F.L. Skinner, N: F.L. Skinner, I: F.L. Skinner (1944) AM 1950

Fls glowing mahogany-red, each tepal with a yellow blotch near nectary; spots small, dark. Stems 0.6-1.2 m. July. (Published in *LYB NALS* 2: 113 (1949).)

**'Dusky' VII(-/b)**

Parentage: selection from Zealandia Group

S: L.B. Tuffery (c. 1966), N: L.B. Tuffery

Fls dark mauve-lavender turning to dusky lavender. Fls and lvs of *auratum* var. *platyphyllum* type. Stems tall.

**'Dusky Chief' II(-/l-)**See *L. × dalhansonii* 'Dusky Chief'.**'Dusky Maid' V(-/l-)**Parentage: *longiflorum* × *formosanum*(Published in *LYB* 13: 15 (1949). Raised in Australia.)**'Dutch Album' IX(b-c/d)**See *speciosum* 'Dutch Album'.**'Dutch Glory' V(b/a)**See *longiflorum* 'Dutch Glory'.**'Dutchman's Gold' VII(-/b)**Parentage: *auratum* × unknown

R: L. Woodriff (1957), G: H.J. &amp; R.L. Strahm (1961), N: R.L. Strahm (1972), I: H.J. &amp; R.L. Strahm (1972), REG: Strahm's Lilies, Inc. (1981)

Inside white, each tepal with a vivid yellow (17B) rays; outside white with gold midribs; spots strong orange (24A) along part of ray-edges; nectaries green; pollen

strong reddish orange (31A). Fls 200-225 mm wide; tepals 100 × 50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 120 × 45 mm, pale green. Stems 1.2 m, green, with 5-8 fls. Aug. (Published in Strahm's sales list, 1972.)

**'Dwarf Orange' IX(c/d)**See *pardalinum* 'Dwarf Orange'.**'Dymezaty Korall' I(a/-)**

Parentage: 'Svetlana' × 'Iolanta'

R: B.P. Guzhavin (1984), N: B.P. Guzhavin

Fls smoky pink with purple spots; pollen brown. Stems 1.4 m, with bulbils. July.

(The seed parent is probably 'Svetlana' of Kireeva.)

**'Dynamico' VIII(a/b)**Parentage: *longiflorum* × (('Golden Coronet' × 'Bingo') × 'Montreux')

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1993), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside moderate purplish red (59C) on a pale yellow (8D) ground, basal third of each tepal with less purplish red colouring, throat pale yellow (8D) with strong yellow-green (144C) alongside the hairy nectaries; outside strong purplish red (59D) on a pale yellow (8D) ground, suffused with strong yellow-green (144C) along midribs; dark red (187A) spots on basal part of each tepal; papillae (coloured as the tepal) near the nectaries; pollen vivid orange-yellow (23A); stigma dark red (187B). Fls 190 mm wide, erect; tepals 120 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 135 × 15 mm, mid green. Stems 0.8-1 m, mid green, with c.5 fls. July. (A *longiflorum*/Asiatic (LA) hybrid.)

**'Dynamite' VII(a/b)**

Parentage: ('Star Gazer' × unnamed seedling) × (unnamed seedling × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside strong red (53B) changing to strong purplish red (54A), tepal-edges light purplish pink (63D), throat yellowish white (155D) and light purplish pink (63D); outside of inner tepals light purplish pink (63D), midribs strong purplish red (63B); outside of outer tepals strong purplish red (63A), lighter at edges; spots dark red (59A); papillae yellowish white (155D) and light purplish pink (63D) to dark red (59A); nectaries light yellow-green (145B); pollen strong reddish orange (169A); stigma light yellow-green (138D). Fls 200 mm wide; tepals 125 × 35-70 mm, margins slightly ruffled, tips recurved. Lvs scattered, 140 × 50 mm. Stems 1-1.2 m, green with darker markings, and with c.5-7 fls. July.

**'Dynamo' I(a/-)**

Parentage: 'Connecticut King' × ('Rubinovaia' × 'Destiny')

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)  
Fls red, with a greenish nectary-star in the centre; spots absent. Stems 0.7 m.

**'Dynasty' VII(a/-)**

Parentage unknown

R: Gebr. Vletter & Den Haan (1988), G: Burger & de Blank B.V. (1990), N: Vletter & Den Haan (1993), I: Burger & de Blank B.V. (1997), REG: Burger & de Blank B.V. (1997)

Inside moderate purplish pink (65A), tepal-tips yellowish white (155B), with a little brilliant greenish yellow (6B) above the nectaries which shades into brilliant/light orange-yellow (23B/C) towards the tip, throat yellowish white (155B); outside light purplish pink (65B), midribs light greenish yellow (4C), tipped strong yellow-green (144B) and with a little strong yellow-green (143B) at the base; spots deep red (60A), on basal half of each tepal; papillae few, yellowish white (155B), in the throat; nectaries strong yellow-green (144B); pollen strong reddish orange (169A); stigma yellow-green (195D). Fls 170 mm wide; tepals 90 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 20 mm, mid green. Stems 0.6-0.85 m, green with some darker marking, and with 2-4 fls. July.

**'Dyon' I(a/-)**

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1994)  
Inside vivid yellow (12A), throat light greenish yellow (1C) shading into main tepal colour; outside light greenish yellow (8B) shading to vivid yellow (12A) at tepal-edges, midribs suffused with strong yellow-green (144B) and with narrow lines of moderate reddish brown (175A); spots dark red (187A), in the throat; pollen dark reddish orange (175C); stigma dark red (187A). Fls 160 mm wide; tepals 90 × 50 mm. Lvs scattered, 150 × 18 mm, mid green. Stems 1.15 m, pale green, with c.9 fls.

**'Dzelme' VI(b/b)**

Parentage: *henryi* × *regale*

R: Ā. Zorgevics (1970), G: Ā. Zorgevics (1974), N: Ā. Zorgevics (1975), I: Ā. Zorgevics (1980), REG: Ā. Zorgevics (1987)

Inside creamy apricot, tips and outside light apricot, throat creamy; spots absent; nectaries light green; pollen brown. Fls 120 mm wide; tepals 110 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 64 × 6 mm, mid green. Stems 0.8 m, dark green, with c.8 fls. Late July to mid Aug.

**'Dzeltena Henry' IX(-/d)**

Misspelling of 'Dzeltenais Henrijs'.

**'Dzeltenais Henrijs' IX(-/d)**

See *henryi* 'Dzeltenais Henrijs'.

**'Dzeltenais Sapis' I(a/b)**

Parentage: 'Monaco' × 'Gran Paradiso'

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode

(2000), REG: A. Balode (2000)

Inside vivid yellow (12A) with a brilliant greenish yellow (1A) centre to the fl.; outside greenish yellow; spots absent; nectaries light green; pollen light brown. Fls 160 mm wide; tepals 90 × 55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 130 × 15 mm. Stems 0.9 m, dark green with brown streaks, and with c.5 fls. Mid July.  
(Fls of 'triangular form', with thick tepals. It may be a polyploid.)

**'Dzhanka' I(c/-)**

Parentage: selection from Sapņotāja Group

No further details.

**'Dzimentene' VI(b/a)**

Parentage unknown

Fls pale yellow with greenish midribs. Fls 120-160 × 100-120 mm; tepal-tips slightly recurved. Stems 1 m. July. (Published in *Cvetovodstvo* 2: 21 (1981). Raised in the Baltic Republics before 1979.)

**'Dzintars' I(a/b)**

Parentage: Golden Chalice Group × mixed pollen from Mid-century Group

R: Ā. Zorgevics (1970), G: Ā. Zorgevics (1974), N: Ā. Zorgevics (1975), I: Ā. Zorgevics (1980), REG: Ā. Zorgevics (1987)

Fls bright yellow throughout; spots absent; nectaries light green; pollen dark brown. Fls c. 120 mm wide; margins smooth, tips strongly recurved. Lvs scattered, 70 × 15 mm, mid green. Stems 1.1-1.2 m, dark green, with c.5 fls. Mid July.

(This entry replaces the one in *ILR Fifth Supplement*. Published in *Dārzs un Drava* 7 (1986).)

**'Dzirkstele' I(b/c)**

Parentage unknown

R: J. Vasarietis (1988), G: J. Vasarietis (1991), N: J. Vasarietis (1993), I: J. Vasarietis (1993), REG: J. Vasarietis (1998)

Centre of each tepal inside strong orange (24A), shading towards tips, base and margins to vivid reddish orange (32A); outside strong reddish orange (32B); spots absent; nectaries white; pollen brown. Fls 180 mm wide; tepals 90 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 12 mm, mid green. Stems 0.9 m, green, with 7-10 fls. Mid June.

Trade designation: SPARK GLITTER.

(Published in *Lilium Balticum Cat.*, 1996.)

**'Dzīvespriecīgā' I(a/-)**

Parentage: selection from Zelta Vainags Group

S: V.P. ŀrehovs (pre 1960), N: V.P. ŀrehovs

Fls golden orange.

(Misspelling: 'Drives Priesidā'; 'Drives Priecīgā'. Published in *LYB* 30: 80 (1970) and included in *ILR* (1982) as 'Dzives Priecīgā' which is also a misspelling. Published correctly in V.D. Grot, *Lilii* (1996).)

**‘Dzives Prieciga’ I(a/-)**  
Misspelling of ‘Dzivespriecigā’.

**‘Dzives Prieks’ I(b/-)**  
Parentage: selection from Vasaras Prieks Group  
S: V.P. Orehovs (post 1956), N: V.P. Orehovs  
Fls orange-red.  
(Published in *LYB* 33: 78 (1970).)

**‘E.A. Bowles’ I(a/b)**  
See *L. × maculatum* ‘E.A. Bowles’.

**‘Earliana’ I(a/b)**  
Parentage: ‘Preview’ × ‘Stellar Gleam’  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003),  
REG: B. Mičulka (2003)  
Inside apricot, each tepal with a crimson-red tip, throat  
crimson-red; outside pale apricot-yellow; spots dark  
crimson-red, oval, many, medium sized; papillae white;  
nectaries white-granulated; pollen orange-brown; stigma  
old rose. Fls 130 mm wide; tepals 80 × 35 mm, tips  
slightly recurved; pedicels 50 mm long, brownish, thick,  
very hairy. Lvs 70 × 10 mm, slightly glossy. Stems 0.55  
m, pale green, slightly spotted. Early July.

**‘Earlibird’ I(b/-)**  
Parentage: from seed labelled “Preston Hybrids F<sub>2</sub>”  
R: A.J. Porter (c. 1956), N: A.J. Porter  
Fls apricot, with fine dark spots at base. Stems 0.8 m.  
June.  
(Published in *Honeywood Lilies Cat.*, 1956. *Botrytis*-  
resistant)

**‘Earl of Rochester’ I(a/-)**  
Parentage: (‘Gold Urn’ × *lancifolium* var. *flaviflorum*  
‘Yellow Tiger’) × unspotted, yellow-flowered *L. ×*  
*hollandicum* hybrid  
R: E. Tesca (pre 1971), N: E. Tesca, REG: E. Tesca  
(1971)  
Fls large, deep yellow; spots absent. Stems 1 m, with 15-  
20 fls. July.  
(Published in *Lilies and other Liliaceae*, 1973: 112.)

**‘Earl’s Pleasure’ VII(b-c/b)**  
Parentage: *auratum* var. *platyphyllum* × ‘Joy’  
R: K. Swoszowski-Tran (1993), G: K. Swoszowski-  
Tran (1999), N: K. Swoszowski-Tran (2002), I: K.  
Swoszowski-Tran (2002), REG: K. Swoszowski-Tran  
(2002)  
Inside pink-rose fading to near white at tepal-tips, each  
tepal with a deep magenta red ray; outside pale pink  
to yellowish white; spots and some papillae numerous,  
maroon, raised, on basal half to two-thirds of each tepal;  
nectaries chartreuse-green; pollen brick red; stigma pale  
green. Fls 150 mm wide, strongly scented; tepals 110-130  
× 45 mm, margins slightly ruffled, tips slightly recurved.  
Lvs scattered, 140 × 40 mm. Stems 1.3 m, green slightly  
marked purple, with 5-8 fls. Midseason to late.  
(Nomenclatural standard: colour print provided by  
registrant (WSY 0033599).)

**‘Earl’s Red’ I(b/-)**  
Parentage unknown  
R: E. Tesca, G: E. Tesca, N: R. & H.R. Cocker (1989),  
REG: R. & H.R. Cocker (1989)  
Fls strong red (46A); spots small, inconspicuous, darker  
red, on basal third of each tepal; nectaries strong red  
(46A); pollen bright red. Tepals 75 × 35 mm, margins  
smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm,  
mid green. Stems 1 m, reddish green, with 12-15 fls. July.

**‘Early Autumn’ I(a/-)**  
See note under Early Autumn Group.

**Early Autumn Group I(a/-)**  
Parentage unknown  
R: J. Petruske, N: J. Petruske, REG: J. Petruske (1997)  
Fls yellow over ochre-yellow to orange. Stems 1.2 m. Late  
July to early Aug.  
(Published in European Lily Society sales list, 1996. The  
entry (as a clone) in *ILR Sixteenth Supplement* was based  
on incomplete/erroneous data.)

**‘Early Bird’ II(c/c-d)**  
See *L. × dalhansonii* ‘Early Bird’.

**‘Early Dawn’ I(c/d)**  
Parentage: (‘Maxwill’ × ‘Edna Kean’) F<sub>3</sub> × ‘Primrose  
Lady’  
R: G.W. Darby (c. 1963), N: G.W. Darby  
Fls light yellow and pink blend.

**‘Early Dazzler’ I(a/b)**  
See *L. × maculatum* ‘Early Dazzler’.

**‘Early Forcer’ VII(-/-)**  
Parentage unknown  
R: Bischoff Tulleken Lelies B.V., REG: Fa H.J.A.  
Rooyakkers B.V. (1994)  
Inside greenish white (155C), with a diffuse moderate  
purplish red (58A) flush; outside with a greenish white  
(155C) ground, marked pale greenish yellow (2D) along  
midribs and with a diffuse moderate purplish red flush,  
midribs strong yellow-green (143A) at base and strong  
yellow-green (144B) at top; papillae self-coloured in the  
throat; pollen dark reddish orange (175B); stigma pale  
yellow-green (193B). Fls 185 mm wide; tepals 80 × 45  
mm. Lvs scattered, 130 × 35 mm. Stems 0.52 m, pale  
green, with c.6 fls.

**‘Early Glory’ IX(b/c)**  
See *auratum* ‘Early Glory’.

**‘Early Radiance’ IX(-/-)**  
See *speciosum* ‘Early Radiance’.

**‘Early Reliance’ IX(b-c/d)**  
See *speciosum* ‘Early Reliance’.

**‘Early Rose’ VII(b/b)**  
Parentage unknown  
Fls pale pink with darker spots, scented. Stems 0.4-0.6 m.

Late June to July.  
(Listed in *Blackdown Lilies Cat.*, spring 1998.)

**'Early Splendor' VII(-/-)**

Parentage unknown

R: Sun Valley Bulb Farms, Inc., N: Sun Valley Bulb Farms, Inc. (1976), I: Sun Valley Bulb Farms, Inc. (1976), REG: Sun Valley Bulb Farms, Inc. (between 1976 and 1981)

Inside light reddish purple (74C), throat strong purplish red (63A); outside strong purplish red (63A); very lightly spotted in centre; nectaries strong yellow-green (145A); pollen strong reddish orange (31A). Tepals 100-125 mm long. Lvs moderate olive-green (146A), elliptic. Stems 0.4 m.

**'Early Sunrise' I(a/-)**

Parentage: 'Country Tyme' × up-facing, brushmarked, yellow-flowered Asiatic seedling

R: Hartle-Gilman Gardens (1982), G: Hartle-Gilman Gardens (1984), N: Hartle-Gilman Gardens (1990), I: Hartle-Gilman Gardens (1990), REG: Hartle-Gilman Gardens (1990)

Inside vivid yellow (14B); outside pale yellow (11C); red-brown spots and lines on half of each tepal; nectaries green; pollen yellow. Tepals 75 × 40 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 1.25 m, mid green, with 12-15 fls. Midseason.

**'Earth Angel' VII(-/b)**

Parentage: white-flowered *auratum* × gold band *auratum* hybrid

R: L. Woodriff (1973), G: L. Woodriff (1975), N: Bowman Creek Farm (1981)

Inside white, each tepal with a gold ray that fades towards top; outside white and pale yellow; spots many, gold and white, raised; nectaries green; pollen rust-coloured. Fls 220 mm wide; tepals 145 × 65 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 160 × 45 mm, dark green. Stems 0.6 m, green to lavender, with c.10 fls. Early July.

**'Easily' VIII(a-b/b)**

Parentage: seedling E819-2 × seedling 88.22-1

R: World Breeding B.V., N: World Breeding B.V. (2001), REG: World Breeding B.V. (2004)

Inside vivid yellow (9B), lighter towards tepal-tips; outside brilliant yellow/pale greenish yellow (9C/D), greenish at base; spots brown-red; papillae present; nectaries green; filaments pale green; pollen (28B); stigma green with purple spots. Fls 200 mm wide; tepals 120-135 × 34-54 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 83-220 × 38-85 mm, dark green. Stems 0.8-1.25 m, green, with 2-9 fls. Early to midseason.

(An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096393).)

**'Easter Bonnet' VIII(-/-)**

Parentage: ('Connecticut King' × *longiflorum* 'Slocum's Ace') × mixed pollen of pastel-coloured Asiatics

R: E.A. McRae (1988), G: Van der Salm Bulb Farm, Inc. (1990), N: E.A. McRae (1994), I: Van der Salm Bulb Farm, Inc. (1994), REG: Van der Salm Bulb Farm, Inc. (1994)  
Inside and outside bright buttercup-yellow, throat bright lime-green; traces of spots surrounding the nectary-furrows only; nectaries lime-green; pollen chocolate-brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1 m, soft green. Late June. (A *longiflorum*/Asiatic (LA) hybrid. Published in *Wayside Cat.*, Autumn 1994.)

**'Easter Bunny' VII(b/b)**

Parentage: *nobilissimum* × *speciosum*

R: R.P.H. Clas, I: Oregon Bulb Farms, Inc. (1969), REG: Oregon Bulb Farms, Inc. (1969)

Fls light purplish pink to pale purplish pink (65B/C), with darker midribs and narrow white tepal-margins widening at tips; green central star surrounded by patch of white; pollen very dark brown. Buds spurred. Fls spicily scented; tepal-margins wavy. Lvs long and wide. Stems 0.6-1.2 m. Early Aug.

(Published in *Lilies and other Liliaceae*, 1977: 77. Here and in E.A. McRae, *Lilies*, 108 (1998) the seed parent is given as *alexandrae*, which is a syn. of *nobilissimum*.)

**'Easter Early' V(b/a)**

Parentage: *formosanum* var. *pricei* × ? *longiflorum*

R: L. Woodriff (c. 1958), N: L. Woodriff

Fls similar to *longiflorum*, but with brown exterior and fragrance of *formosanum*.

**'Easter Gold' VIII(a/a-b)**

Parentage unknown

Inside deep yellow, throat bronze; outside bronze; pollen deep yellow. Fls scented. Stems 1-1.2 m. Early July.

(A *longiflorum*/Asiatic (LA) hybrid. Published in *New Zealand Lily Soc. Bull.*, July 1996. Probably raised by J.F. McRae.)

**'Easter Joy' I(a/-)**

Parentage unknown

Fls brilliant orange; spots reddish on basal half of each tepal; nectaries white; pollen reddish. Tepal-margins smooth, tips slightly reflexed. Stems c.1 m. Midseason. (Raised in Holland before 1980.)

**'Eastern Jewel' VII(a/c)**

Parentage unknown

R: L.G. Farina, N: L.G. Farina, I: L.G. Farina (1972), REG: L.G. Farina (1973)

Fls white with red spots, and green star in centre. Stems 1.2 m. (Published in *Lilies and other Liliaceae*, 1973/1974: 109.)

**'Easter Parade' V(b/a)**

See *longiflorum* 'Easter Parade'.

**'Ebony' I(c/d)**

Parentage: *amabile* × *davidii*

R: J. de Graaff (c. 1963), N: J. de Graaff

Fls dark bronze. Stems 1 m. July.

**'E.C. Butterfield' IX(b/a)**

See *regale* 'E.C. Butterfield'.

**'Echo' I(a/b-c)**

Parentage: 'Ambrosia' × brushmarked seedling  
R: T. Wadekamper (1978), G: T. Wadekamper (1980),  
N: T. Wadekamper (1983), I: Borbeleta Gardens (1984),  
REG: Borbeleta Gardens (1984)

Fls vivid orange (28B); small spots and lines on half of each tepal; nectaries frosty white; pollen orange. Tepals 85 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 75 × 15 mm, mid green. Stems 0.6 m, mid green, with 12-15 fls. June to July.

(Published in *Borbeleta Gardens Cat.*, 1984.)

**'Eclipse' VII(-/b)**

Parentage: 'Pink Virtuoso' × 'Star Gazer'

R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1981), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1988),  
REG: Bischoff Tulleken Lelies B.V. (1994)

Inside strong purplish red (60D) on a yellowish white (155D) ground, midveins deep red to strong purplish red (60A/B) shading to strong purplish red (60D) at top, tepals variably edged yellowish white (155D), tips yellowish white (155D), throat yellowish white (155D) shading into the rest of the tepal; outside yellowish white (155D) suffused with strong purplish red (60D), midribs pale yellow-green (155A) suffused with strong purplish red (60D), tinged with strong purplish red (60C) at base, tepals variably edged and also tipped yellowish white (155D), outer tepals tipped strong yellow-green (144B); spots dark red (187B), on three-quarters of each tepal; pollen strong orange (169B); stigma dark red. Fls 220 mm wide; tepals 110 × 50 mm. Lvs scattered, 130 × 40 mm. Stems 0.75 m, pale green, with c.4 fls.

**'Eclipse' I(a/b)**

Parentage: 'Impact' × seedling A-89-82

R: Oregon Bulb Farms, Inc., I: Cebeco Lilies, Inc. (pre 1998)

Inside and outside brilliant yellow (8A); spots absent; brushmarks moderate red (183C/D); nectaries yellow-green; pollen brownish orange; stigma dark reddish orange (178B). Fls 110 mm wide; tepals 62 × 33 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 7 mm. Stems 0.6-1 m, yellow-green, with 6 or more fls. Late June to July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Ecstasy' I(b/-)**

Parentage: *lancifolium* 'Splendens' × *wilsonii*

R: L.B. Tuffery (c. 1951), N: L.B. Tuffery

Fls apricot; spots absent.

**'Ed' VII(b/b-c)**

Parentage unknown

R: Gebr. Mak B.V., N: Gebr. Mak B.V., REG: Gebr. Mak B.V. (1993)

Inside greenish white (155C), midveins yellowish white

(155B); outside greenish white (155C), midribs yellowish white (155B) becoming light greenish yellow (5D) towards top and tipped strong yellow-green (145A); spots dark red (59A), on a third of each tepal; pollen strong orange (169B). Fls 140 mm wide; tepals 70 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 60 mm, mid green. Stems 0.43 m, pale green, with c.10 fls.

Syn.: 'Mr Ed'.

**'Edelweiss' V(b/a)**

See *longiflorum* 'Edelweiss'.

**'Eden' VI(b-c/d)**

Parentage: 'Miriam' × white-flowered Aurelian

R: R. Pappo (1968), G: R. Pappo (1971), N: R. Pappo (1995), I: R. Pappo (1995), REG: R. Pappo (1995)

Inside light yellow to white, throat deep green; outside mostly white with some yellow; spots absent; papillae pronounced, white/yellow; nectaries dark green; filaments green; pollen orange to orange-brown. Fls 100-125 mm wide; tepals 130 × 30-40 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 110 × 25 mm, mid green. Stems 1.9 m, green with purple markings, and with 6-8 fls. July to Aug.

**'Eden Fire' I(a/-)**

Parentage: seedling from Stenographer Group × 'Redbird'

R: H. Jacobi, N: H. Jacobi (1974), I: H. Jacobi (1974),  
REG: H. Jacobi (between 1974 and 1981)

Inside deep red (53A); outside vivid red (45C); lightly spotted; nectaries light purplish pink (65B); pollen greyish red (178A). Lvs narrow, dark green. Stems 1.2 m. (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 5 (1978).)

**'Edit' V(-/-)**

Parentage: derived from *longiflorum*

R: V. Naor (1987), N: V. Naor, REG: V. Naor (1999)

Fls white throughout. Lvs medium length, directed upwards, light green. Stems tall. Early.

**'Edith' I(a/-)**

Parentage: (Hallmark Group × 'Uncle Sam') × 'Connecticut King'

R: Oregon Bulb Farms, Inc. (1972), G: Oregon Bulb Farms, Inc. (1975), N: Oregon Bulb Farms, Inc. (1980), I: Melridge Inc./Oregon Bulb Farms, Inc. (1981), REG: Oregon Bulb Farms, Inc. (1981)

Inside soft cream; outside cream to soft yellow; spots few, small, black, near centre; nectaries green; pollen brown. Fls 150 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.2 m, green, with 8-25 fls. July.

Syn.: 'Aleida'.

**'Edith Cecilia' I(c/-)**

Parentage: 'Oriole' × seedling 37-538-1

R: C.F. Patterson (c. 1944), N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1952)

AM 1955

Fls orange-buff (HCC 507/3), each tepal flushed with begonia (HCC 619/2) at tips, with small, black spots near base. Stems 1 m, with c.18 fls. July.  
(*LYB* 19: 145 (1956) gives the parentage as *cernuum* × *davidii* var. *willmottiae*.)

**‘Edith Lady Londonderry’ VI(-/a)**

Parentage: *L. × aurelianense* × *leucanthum* var. *centifolium*  
Fls creamy white, flushed with pale to deep yellow; anthers chocolate-brown. Lvs 130 × 10 mm. Stems tall. (Printed in *Constable Cat.*, 1950.)

**‘Edith Piaff’ I(a/-)**

Parentage unknown  
R: Fa P. Hoff & Zn (1980), G: Fa P. Hoff & Zn (1982), N: Fa P. Hoff & Zn (1984), I: Hoffgaard B.V. (1986), REG: Hoffgaard B.V. (1986)  
Inside pink, midveins short, red, tepal-edges yellow, throat blotched orange with dark brown spots; outside pink with pale orange tepal-margins; nectaries brown; pollen light red-brown. Fls 150 mm wide; tepals 70 × 35 mm, rather strongly recurved. Lvs scattered, 110 × 10 mm. Stems 0.8 m, pale green, with c.7 fls.

**var. editorum IX(c/a)**

See *canadense* var. *editorum*.

**‘Edmund L. Klagy’ VI(-/c)**

Parentage: ‘T.A. Havemeyer’ × unknown  
R: T. Barry (c. 1941), N: T. Barry  
Vivid orange (28A), lightly spotted reddish brown. Fls large; tepals semi-recurved. Stems 1.9 m. Aug.  
(Misspelling: ‘Edmund L. Klegy’. Published in *Kline Cat.*, 1943.)

**‘Edmund L. Klegy’ VI(-/c)**

Misspelling of ‘Edmund L. Klagy’.

**‘Edna Kean’ I(b/-)**

Parentage: selection from Stenographer Group  
S: I. Preston, N: I. Preston (1939)  
Fls between grenadine-red and scarlet, with bay-green spots. Stems 1-1.2 m. July.  
(Published in *LYB* 8: 157 (1939).)

**‘Edvarda’ I(a/-)**

Parentage unknown  
R: D.-V. Škimele (pre 1999), N: D.-V. Škimele  
Fls white, throat yellowish; spots brownish, on basal quarter of each tepal; stigma reddish. Tepal-margins smooth, tips recurved.

**Egmont Group I(a,b/-)**

Parentage: complex hybrids derived from at least *wilsonii*, diploid *lanCIFolium*, Preston Group, ‘Enchantment’, ‘Grenadier’ (of Chandler) & *bulbiferum* var. *croceum*  
R: F.D. Chambers (early 1950s), N: R.E. Harrison, I: R.E. Harrison  
Fls mostly reds, oranges and orange-yellows. Stems 0.6-1 m. Early.

**‘Egon Becker’ I(b/-)**

Parentage unknown  
R: Becker (pre 2000)  
Inside pale yellow; outside darker. Tepal-tips slightly reflexed. Stems 1.5 m. July.  
(Published in ELG sales list, 2000.)

**‘Egypt’ VII(a/b)**

Parentage unknown  
R: Mak Lelieveredeling B.V., REG: Levenslust B.V. (1994)  
Inside yellowish white (155B) suffused with light purple (80D), midveins light yellow (10C) towards the base with narrow lines of moderate purplish red (59C), yellowish white (155B) towards the top, throat yellowish white (155B); outside yellowish white (155B) suffused with light purple (80D), midribs yellowish white (155B) suffused with strong yellow-green (144C) towards top; spots pale greenish yellow/brilliant yellow (10D/13B), in the throat and strong purplish red (59C) spots on basal part of each tepal; pollen strong brown (172A); stigma moderate red (183D). Fls 200 mm wide; tepals 95 × 50 mm, margins ruffled, tips recurved. Lvs scattered, 105 × 50 mm. Stems 0.48 m, pale green with only a little darker marking, and with c.6 fls.

**‘Eiffel’ VII(a-b/-)**

Parentage: (‘Camaro’ × ‘Montana’) × (*rubellum* × unnamed seedling)  
R: Lybelmex Hillegom B.V. (1988), G: Lybelmex Hillegom B.V. (1991), N: Lybelmex Hillegom B.V. (1996), REG: Lybelmex Hillegom B.V. (1997)  
Inside strong purplish red (60D), midveins deep red (60A), lighter towards top, tepal-tips, edges and throat yellowish white (155D); outside strong purplish red (64B) on a paler ground, tepals narrowly edged yellowish white (155D), midribs light yellow-green (150D) shading to strong yellow-green (144B) at top; spots dark red (59A), on two-thirds of each tepal and on the yellowish white (155D) papillae in the throat; nectaries strong yellow-green (144B); pollen moderate reddish orange/brownish orange (171A/B); stigma dark pink (182C), edged moderate red (183C). Fls 230 mm wide; tepals 120 × 45-70 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 45 mm, mid green. Stems 1.2 m, with c.7 fls. July to Aug.

**‘Eiforiia’ I(a/b)**

Parentage unknown  
R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1991)  
Fls pale apricot-yellow; spots fine, brownish, on centre of each tepal; pollen orange-red. Fls 130-140 mm wide; tepal-margins smooth, tips scarcely recurved. Stems 0.9-1 m, with 10-14 fls. July.  
(Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to ‘Eiforija’. Published in M.F. Kireeva, *Lilii*, 57 (2000).)

**‘Eiforija’ I(a/b)**

Parentage unknown  
R: J. Vasarietis (1989), G: J. Vasarietis (1992), N:

J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J. Vasarietis (1999)

Inside vivid orange-yellow (21A) on basal two-thirds of each tepal, with a sharp transition to the vivid reddish orange (42A) apical third, throat deep reddish purple (77A); outside vivid reddish orange (34A); spots very sparse, tiny, on basal fifth of each tepal; nectaries purplish violet; pollen dark brown; stigma nearly black. Fls 120 mm wide; tepals 53 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 65 × 7 mm, dark green. Stems 0.4 m, green, with c.5 fls. Mid June.

Trade designation: EUPHORIA.

(Published in *Lilium Balticum Cat.*, 1996. Nomenclatural Standard: colour print provided by registrant (WSY 0023031).)

#### 'Eilath' VIII(a-b/b)

Parentage: seedling LARS 93-12 × seedling AW 95-7 R; Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2000), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside deep red (60A), with a little dark red (59A) along tepal-edges, throat strong purplish red (65C) changing into deep red (60A); outside pale purplish pink (65C) at base, becoming moderate purplish red (58A) at tepal-tips; spots dark red (187A), on inner tepals only; papillae absent; pollen brownish orange (164A); stigma deep purplish red (59B). Fls 160 mm wide; tepals 120 × 45-60 mm, margins slightly wavy towards tips, tips recurved. Lvs scattered, 160 × 30 mm. Stems 1.1-1.2 m, green with some darker markings, and with 3-7 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Eileen North' I(c/-)

Parentage: (*lankongense* × 'Edith Cecilia') × ('Cardinal' (Div. I) × (*lancifolium* var. *flaviflorum* × 'Enchantment')) R: C. North (1973), G: SHRI (1975), N: C. North (1985), I: RHS Lily Group (1985), REG: C. North (1986)

Fls deep rose-pink; spots small, darker pink, often around tepal-margins; nectaries pink; pollen dark red. Fls slightly scented; tepals 75 × 32 mm, margins smooth, tips strongly recurved. Lvs scattered, mid green. Stems 0.85-1 m. Midseason. Allotriploid.

#### 'Eileen Raffill' I(a/-)

See *L. × scottiae* 'Eileen Raffill'.

#### 'E.J. Fallu' I(c/d)

Parentage: *lancifolium* 'Flore Pleno' × *L. × maculatum* 'Wallace'

R: G. Errey (c. 1949), N: G. Errey

Fls pure apricot; spots absent. Fls *lancifolium* shape. (Published in *Ball Cat.*, 1949.)

#### 'Ekabnile' I(c/-)

Parentage: selection from Sapņotāja Group  
No further details.

#### 'Ekabpiliete' I(c/-)

Misspelling of 'Jēkabpiliete'.

#### 'Ekrāns' VI(b-c/b)

Parentage unknown

R: V.P. Orehovs (pre 1999), N: V.P. Orehovs

Fls white with strong yellow on basal third of each tepal, the yellow continuing up the midveins to about halfway; spots absent; nectaries green; pollen orange; stigma pale green. Tepal-margins smooth or very slightly wavy, tips recurved.

#### 'Ekstera' VII(b/c)

Parentage unknown

R: Ē. Ieviņa, G: Ē. Ieviņa, N: Ē. Ieviņa (pre 1997), REG: Liliūm Balticum Association (2004)

Inside white; outside with light yellowish brown to white midribs; papillae white; nectaries greyish green; pollen reddish brown; stigma violet. Fls 170 mm wide; tepals 100 × 53 mm, margins ruffled, tips recurved. Lvs scattered, 140 × 30 mm. Stems 0.85 m, green, with 7-8 fls. July to Aug.

#### 'Ekzotika' VI(c/a-b)

Parentage: selection from Gaviles Group

S: V.P. Orehovs (c. 1969), N: V.P. Orehovs

Fls pale greenish yellow; pollen orange-brown. Fls 150-160 mm wide, fragrant; tepal-margins smooth, tips recurved. Lvs scattered. Stems 1-1.2 m. July.

#### 'Elaine' VII(-/c)

See *L. × parkmanii* 'Elaine'.

#### 'Elaine Garrad' II(-/-)

Parentage: selection from Port Sunlight Group

S: D.S. Marriott (1977), G: D.S. Marriott (1984), N:

D.S. Marriott (1984), REG: D.S. Marriott (1984)

Inside white, throat green; outside white tinged with purple, midribs green; purple spots on basal half of tepals; nectaries green; pollen orange-brown. Tepals 40 × 15 mm, margins smooth, tips strongly recurved. Lvs scattered, 50-60 × 8 mm, dark green. Stems over 0.6 m, dark green, purplish at base. June.

#### 'Elaine Llenos' I(a/-)

Parentage: 'Connecticut King' × ('Rosabelle' × 'Victoria Meyers')

R: N.F. Bieniasz (1979), G: N.F. Bieniasz (1984), N: N.F. Bieniasz (1985), REG: N.F. Bieniasz (1985)

Inside vivid yellow (14B), tepal-tips moderate orange (171D), throat moderate orange (171C); outside moderate orange-yellow (167D) to moderate red (179B) with some green; spots moderate brown (165A), on basal half of tepals; nectaries moderate orange (171D), frosted; pollen moderate orange (167A). Fls 150 mm wide; tepals 75 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 10 mm, mid green. Stems 1.1 m, mid green, with c.20 fls. Midseason.

#### 'Elan' I(a/-)

Parentage: (Sundrop Group × 'Sterling Star') × pink-flowered seedling

R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1981), N: Bischoff Tulleken Lelies B.V. (1986), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1990)  
Inside vivid yellow (9B), with a blush of vivid orange-yellow (21A), throat vivid yellow-green (154A); outside vivid yellow (9B), flushed with brilliant greenish yellow (1B); spots dark red (187A), on basal half of each tepal; pollen moderate orange (167A). Fls 180 mm wide; tepals 85 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 130 × 13 mm, mid green. Stems 1.2 m, green, with 9-11 fls.

**‘Elba’ I(a/b)**

Parentage unknown  
R: J. Boon (pre 1982), N: J. Boon, REG: J. Boon (1983)  
Inside light yellowish pink (27A), midveins light orange (28C), tepal-tips strong pink (48D), edges apricot; outside moderate pink (35D) fading to strong yellowish pink (34D); spots numerous, dark reddish brown, in throat; nectaries rose-pink; pollen burnt red-brown. Stems 0.9 m, with 6-11 fls (from 16-18 cm bulbs).

**‘Elbperle’ I(a/b)**

Parentage: ‘Enchantment’ × ‘Sonnenkranz’  
R: G. Thürmer (1980), G: G. Thürmer (1981), N: G. Thürmer (1985), I: G. Thürmer (1995), REG: G. Thürmer (2001)  
Inside vivid orange (28A) throughout; outside vivid reddish orange (30A); spots relatively few, dark red (187A), on basal quarter of each tepal (more on inner than on outer tepals); nectaries strong bluish green (127C); pollen deep red (185A). Buds orange-green. Fls 160 mm wide; tepals 80 × 45 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 120 × 18 mm. Stems 0.95 m, rather dark green, with 7-14 fls. Early to mid July.  
(Nomenclatural standard: colour print provided by registrant (WSY 0030341).)

**El Carlen Group I(-/-)**

Parentage: hybrids of ‘Old Hollandicum’  
R: C. Feldmaier, E. Leichliter, L.D. Marshall & F.H. Payne (pre 1977), N: L.D. Marshall, I: Piedmont Gardens, REG: L.D. Marshall (1984)  
Fls in varied colours (mostly red, pink or orange, with some yellow markings). Very early.

**‘El-da-how’ IV(-/-)**

Parentage: selection from Bellingham Group  
S: D. Griffiths, N: D. Griffiths  
(Published in *LYB NALS* 6: 44 (1953), without further details.)

**‘Eldorado’ I(a/b)**

Parentage unknown  
R: Fa P. Hoff & Zn (1973), G: Fa P. Hoff & Zn (1975), N: Fa P. Hoff & Zn, I: Fa P. Hoff & Zn, REG: Fa P. Hoff & Zn (1983)  
Inside vivid yellow (12A), tepal-edges narrow, reddish brown, tips strong orange (170A), throat with rust-brown

veins; outside vivid reddish orange (34B) fading to brown with a tawny yellow flush; heavily spotted; nectaries light grey-brown; pollen reddish brown. Fls 200 mm wide. Lvs scattered, 160 × 8 mm, dark green. Stems 1.1-1.2 m, dark, with 7-11 fls (from 16-18 cm bulbs).  
Trade designation: FLORENCE.

**‘Eldorado’ I(b-c/-)**

Syn. of ‘Inkagold’.

**‘Electra’ VII(-/d)**

Parentage: (*auratum* × *japonicum*) × (*auratum* var. *platyphyllum* × (*auratum* × *rubellum*))  
R: N.E. Pfeiffer, N: A.D. Rothman (1955)  
Fls white, each tepal with a strong gold ray, and papillae. July to Aug.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *LYB NALS* 10: 121 (1957). May not actually contain *japonicum* and *rubellum*.)

**‘Electra’ IX(b/c)**

See *auratum* ‘Electra’.

**‘Electric’ I(a/b-c)**

Parentage: ‘Prince Charming’ (Div. I) × ‘Ladykiller’  
R: Gebr. N. & B. Laan & Zn (1982), G: Gebr. N. & B. Laan & Zn (1984), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985)  
Inside orange-red, tepal-edges and tips lilac, throat orange-red; outside orange with pink tepal-tips; spots few, dark brown, in the throat and on middle of tepals; nectaries orange; pollen orange-red. Fls 140 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 22 mm, dark green. Stems 1.3 m, green, with c.10 fls, and bulbils. July.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Electric’ IX(b/c)**

See *auratum* ‘Electric’.

**‘Elegance’ VI(-/b)**

Parentage: Aurelian Group  
R: F.J. Holmes, N: F.J. Holmes (1975), REG: F.J. Holmes (1975)  
Inside pale yellow (11D) flushed brilliant yellow (14C), midveins green; outside pink and green. Tepals slightly recurved. Stems 1 m. Aug.  
(Published in *Lilies and other Liliaceae*, 1975: 92.)

***elegans* Thunb. I(a/b)**

Syn. of *L. × maculatum*.  
(Included in Div. I because, although originally published as a species, it is a synonym of *L. × maculatum* which is placed in Div. I.)

***elegans* var. *alutaceum* Baker & Dyer I(a/b)**

Syn. of *L. × maculatum* ‘Alutaceum’.

***elegans* var. *atrosanguinum* Baker I(a/b)**

Syn. of *L. × maculatum* 'Atrosanguineum'.

***elegans* var. *batemanniæ* Baker I(a/b)**

Syn. of *L. × maculatum* 'Batemanniæ'.

***elegans* 'Ogon' I(a/b)**

See *L. × maculatum* 'Ogon'.

***elegans* 'Orange Glow' I(a/b)**

See *L. × maculatum* 'Orange Glow'.

***elegans* var. *pardinum* (T. Moore) Baker IX(a/b)**

Syn. of *wilsonii*.

***elegans* 'Purple Queen' I(a/b)**

See *L. × maculatum* 'Purple Queen'.

***elegans* 'Quilp' I(a/b)**

See *L. × maculatum* 'Quilp'.

***elegans* 'Red Star' I(a/b)**

See *L. × maculatum* 'Red Star'.

***elegans* var. *venustum* (Kunth) Elwes I(a/b)**

Syn. of *L. × maculatum* 'Venustum'.

**'Elegant Choice' I(b/-)**

Parentage unknown

R: R.A. Prochaska (1982), G: R.A. Prochaska (1984), N: Hartle-Gilman Gardens (1991), I: Hartle-Gilman Gardens (1992), REG: Hartle-Gilman Gardens (1992)  
Inside pale yellow-green (4D), tepal-tips paler, throat light greenish yellow (4B); spots absent; outside light greenish yellow (4B) and green; pollen yellow/orange. Tepals 95 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 10 mm, dark green. Stems 0.95 m, dark green, with 12-14 fls. Midseason. (Published in *Hartle-Gilman Gardens Cat.*, 1992.)

**'Elegant Crown' VIII(a/c)**

Parentage: 'Sorbonne' × 'Goldina'

R: De Jong Lelies Holland B.V. (1996), G: De Jong Lelies Holland B.V. (1998), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2003)  
Inside deep purplish pink (70C), tepal-margins and tips brilliant greenish yellow (6C), along midveins strong purplish red (60D), throat pale yellow-green (4D); outside deep purplish pink (70C), each tepal yellowish white (155D) at base, margin brilliant yellow (13C), midribs brilliant yellow-green (142B) at top; spots strong purplish red (60D); papillae brilliant greenish yellow (6C); nectaries strong yellow-green (141D); pollen strong reddish orange (169A); stigma light purplish pink (63D). Fls 195 mm wide; tepals 115 × 58 mm, margins smooth, tips recurved. Lvs scattered, 107 × 21 mm. Stems 0.9-1.2 m, green with dark markings, and with c.5 fls. June. (An Oriental/Asiatic (OA) hybrid.)

**'Elegant Lady' VIII(b-c/a)**

Parentage: *formosanum* var. *pricei* 'Snow Queen' × (tetraploid *longiflorum* 'Gelria' × *rubellum*)

R: CPRO (1994), G: CPRO (1996), N: Coöp. Kwekersvereniging "The Originals" U.A. (2000), I: Coöp. Kwekersvereniging "The Originals" U.A. (2002), REG: Coöp. Kwekersvereniging "The Originals" U.A. (2002)  
Inside light purplish pink/very pale purple (73C/D), base of midveins green changing to pink, throat pink; outside very pale purple (73D); spots and papillae absent; nectaries green; pollen brown; stigma green. Fls 140 mm wide; tepals 150 × 60 mm, margins slightly ruffled, tips very slightly recurved. Lvs scattered, 150 × 20 mm. Stems 0.8 m, green, with 4-10 fls. Early to midseason. (A *longiflorum*/Oriental (LO) hybrid.)

**'Eleganza' I(a/b)**

Parentage unknown

R: Gebr. Vletter & Den Haan, G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan, I: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1999)  
Inside vivid orange-yellow (23A) in basal part, changing to vivid yellow (14A) towards tepal-tips, throat light greenish yellow (1C); outside brilliant yellow (13C), changing to vivid yellow (14A) towards tepal-margins, midribs strong yellow-green (144C), tipped with strong yellow-green (144A); spots dark red (187A) in throat; papillae vivid orange-yellow (23A); nectaries strong yellow-green (143A) and light greenish yellow (1C); pollen dark reddish orange (175C); stigma moderate reddish brown (175A). Fls 175 mm wide; tepals 95 × 30-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 135 × 18 mm, dark green. Stems 1.3 m, green with pale red-brown spots, and with c.7 fls.

Syn.: 'Messina'.

(Originally registered as 'Eleganza' in 1999 but this epithet was never published in *ILR* because it was rejected for a grant of PBR in The Netherlands, and was renamed 'Messina' in the same year (registered and published in *ILR Nineteenth Supplement*). However, the epithet 'Eleganza' was granted Dutch PBR (LEL 1597) in 2003 and so this latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Elegija' VI(b/a)**

Parentage: ('Tetra White Henry' × white-flowered, tetraploid seedling) × 'Ekzotika'

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)  
Inside pale yellow-green (4D), with a vivid yellow (14B) centre and greenish midveins, throat dark green; outside greenish yellow; spots absent, but with strong reddish orange (31B) stripes; nectaries light green; pollen bright orange. Fls 160 mm wide, slightly scented; tepals 120 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.2 m, dark green, with c.5 fls. Late July. (Disease-resistant.)

**'Elektra' VI(-/-)**

Parentage: ('Heidelberg' × 'Lednice') × 'Heidelberg'  
 R: V. Strasser (1988), G: V. Strasser (1992), N: V. Strasser (1996), REG: V. Strasser (1997)

Inside white, throat yellow; outside green/yellow; nectaries green; pollen brown. Tepals 110 × 36 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 20 mm, dark green. Stems 1.8 m, rather dark green, with c.30 fls. Late July.

**'Elektron' I(a-b/b-d)**

Parentage: ('Etienne' × 'Monte Rosa') × (('Parfait' × 'Wattle Bird') × ('Parfait' × 'Twilight'))  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside dull deep rosy crimson; outside pale crimson. midribs green-brown; spots moderately numerous, small, red-brown, on two-fifths of each tepal; nectaries semi-open, crimson-granulated; pollen blackish brown; stigma pale apricot. Fls 80 mm wide; tepals 80 × 36 mm, thick, margins smooth, tips strongly recurved; pedicels 75 mm long, green. Lvs scattered, 120 × 14 mm, dull dark green. Stems 1.15 m, thick, dark green, with a moderate length infl. Mid June.

**'Elena' I(b/-)**

Parentage: selection from Vasaras Prieks Group  
 S: V.P. ŀrehovs (1964), N: V.P. ŀrehovs  
 Fls red.

Syn.: 'Helēna'.

(Published in *LYB* 33: 78 (1970).)

**'Elena Egorova' VI(-/a)**

Parentage: Aurelian Group × Golden Splendor Group  
 R: V.P. Eremin (c. 1965), N: V.P. Eremin

Fls pale yellow. Stems up to 1.8 m with 10-12 fls. July to Aug.

(Published in *LYB* 33: 77 (1970).)

**'Elena Zalivskaia' VI(-/-)**

Unaccepted spelling of 'Jeļena Zaļivskaja'.

**'Elena Zalivskaya' VI(-/-)**

Unaccepted spelling of 'Jeļena Zaļivskaja'.

**'Elenore Edna' I(a/b)**

Parentage unknown

R: R. Simonet & F. Fellner (1974), N: F. Fellner (1977), I: J. Wadkamper & Piedmont Gardens (1978), REG: J. Wadkamper & Piedmont Gardens (1978)

Inside deep wine-red; outside dark; spots inconspicuous; nectaries red; pollen dark brown. Buds turning brilliant red several days before opening. Tepals broad. Lvs dark green. Stems green, c.1 m. Midseason.

(Published in *Lilies and other Liliaceae*, 1978/9: 108.)

**'Elf' I(c/d)**

Parentage unknown, but includes *cernuum*

R: Columbia-Platte Lilies, N: Columbia-Platte Lilies, I: Columbia-Platte Lilies (1996), REG: ICRA (1998)

Inside lavender pink. Fls slightly scented; tepals rather

narrow, margins smooth, tips strongly recurved. Stems 1-1.2 m with c.9 fls. Mid June.

(Published in *The Lily Garden Cat.*, 1996/97: 2, with colour illustration.)

**'Elfengold' I(b/c)**

Parentage: ('Destiny' × 'Sonnenkranz') × yellow-brown-flowered, brushmarked seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside brilliant orange-yellow (23B), tepal-tips and throat light orange-yellow (22D); outside brilliant orange-yellow (23B); spots numerous, medium sized, deep red (53A) on three-quarters of each tepal; nectaries yellowish white (156D); pollen strong reddish orange (169A); stigma moderate reddish orange (173B). Fls 110 mm wide; tepals 60 × 33 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 15 mm. Stems 1.1 m, green, with c.14 fls on long pedicels. Late June.

(Nomenclatural standard: colour print provided by registrant (WSY 0028892).)

**'Elfenkönigin' I(a/c)**

Parentage unknown

R: J. Klein (pre 1987), N: J. Klein, REG: J. Klein (1988)

Fls pinkish white; spots absent. Fls 120 mm wide. Stems 1.2 m, with more than 20 fls (including secondaries).

(Published in German Lily Group sales list, 1987.)

**'Elfenreigen' I(c/-)**

Parentage: *davidii* var. *wilmottiae* × *pumilum*

R: J. Petruske, G: J. Petruske (1969), N: J. Petruske (1980), I: J. Petruske (1982), REG: J. Petruske (1984)

Inside pale yellow (18C), tepal-margins pale orange-yellow (24D), throat pale yellow (18D); outside pale yellow (18C), midribs with a purple overlay; spots few, small, greyed purple, on two-thirds of each tepal; nectaries white; pollen strong brown (172A). Fls 60 mm wide; tepals 52 × 20 mm, margins smooth, tips strongly recurved. Lvs scattered, 74 × 3 mm, dark green. Stems 0.8 m, purple, with c.10 fls. June.

**'Elfenspiegel' I(a/-)**

Parentage: ((*lancifolium* × *L. × maculatum*) × *wilsonii* var. *flavum*) F<sub>2</sub>

R: L. Denkwitz (pre 1980), N: L. Denkwitz, REG: L. Denkwitz (1988)

Fls light yellow (11B), basal part of tepals brown and with a few spots. Stems 1-1.2 m, with up to 25 fls. July to Aug. (Published in German Lily Group sales list, 1980.)

**'Elf' I(a/b)**

Parentage: 'Libuše' × 'Rosita'

R: K. Braun, N: K. Braun, I: K. Braun (1996), REG: K. Braun (1997)

Inside pastel violet, centre of fl. yellow; outside with greenish midribs; spots scattered, small, dark brown on a third of each tepal; pollen cinnamon; stigma dark violet. Fls 140 mm wide; tepals 70 × 33 mm, not recurved; pedicels 50 mm long, brownish. Lvs scattered, 102 × 11

mm, dull light green. Stems 0.7 m, slightly hairy. Bulbs white. Early July.

**‘Elfros Enticer’ I(c/d)**

Parentage unknown

R: J. Barber (pre 1978), G: J. Barber, N: A.E. Delahey & H.E. Sunley (1999), I: Riverside Gardens (2000), REG: A.E. Delahey (2000)

Inside dark pink (182D) at tepal-tips, midveins dark red (187B), throat strong red (46A); outside moderate purplish red (185C); spots few, dark red (187B), in the throat; nectaries green; pollen dark reddish orange (178B); stigma moderate reddish orange (178C). Fls 100 mm wide; tepals 75 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 100 × 18 mm, mid green. Stems 0.8-1 m, mid green, with c.9-10 fls. Late July.

(Included incorrectly in *ILR* (1982) as ‘Barber’s Pink’, which was never intended to be a cv. epithet. Nomenclatural standard: colour slide provided by registrant (WSY 0022564).)

**‘Elgersburg’ I(a/c)**

Parentage: ‘Red King’ (Div. I) × unnamed Asiatic hybrid  
R: G. Steinbrück (1990), G: G. Steinbrück (1993), N: G. Steinbrück (2003), I: G. Steinbrück (2004), REG: G. Steinbrück (2004)

Inside strong orange (169C) tinged with red, tepal-tips and throat light purplish pink (63D); outside yellow-orange, midribs green-yellow; spots large, oval, deep purplish red (71A), on three-quarters of each tepal; nectaries yellow-orange; pollen moderate red (181A); style soft orange; stigma dark reddish orange (175C). Fls 125 mm wide; tepals 62 × 36 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 10 mm. Stems 0.75 m, violet, with c. 12 fls. Early July.

(Nomenclatural standard: colour print supplied by registrant (WSY 0096355).)

**‘Elgrado’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside deep purplish red (59B), midveins dark red (59A), throat strong purplish red (59D); outside of outer tepals dark red (59A) with dark red (187B) midveins; outside of inner tepals edged red-purple on a dark red (187B) ground; spots dark red (187A), on a quarter of each tepal; papillae absent; nectaries pale purplish pink (65C); pollen strong orange (169B); stigma moderate yellow (161A). Fls 160 mm wide; tepals 100 × 30-50 mm, margins smooth, tips recurved. Lvs scattered, 100 × 15 mm. Stems 0.45-0.65 m, green with darker markings, and with c.4 fls. June.

**‘El Greco’ VI(b/b)**

Parentage: *L. × kewense* ‘White Henry’ × ‘Gold Eagle’  
R: C.K. Kroell (1973), G: W.T. Craig (1977), N: W.T. Craig (1986), I: B & D Lilies, REG: W.T. Craig (1986)

Fls strong orange-yellow (24B); with dense, elongated spots and dark red papillae on two-thirds of each tepal; nectaries moderate yellow-green (146B); pollen moderate orange (167B). Tepals 125-130 × 28-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 27 mm, mid to dark green. Stems 1.7 m, green, with 10 or more fls. Mid to late July.

**‘Elinor’ IV(b/a)**

Parentage: (‘Shuksan’ × *parryi*) × (‘Shuksan’ × *parryi*)

R: C.L. Shride (c. 1937), N: C.L. Shride

Very similar to *parryi*.

(Published in *Lilylore* no. 3 (May 1955).)

**‘Elisa’ VI(c/a)**

Parentage: unnamed seedling × ‘Starlite’

R: J.G. Smith (1981), N: J.G. Smith (1984), I: J.G.

Smith (1984), REG: J.G. Smith (1984)

Inside white, throat deep orange; outside greenish white with a brown overlay; spots absent; nectaries green; pollen brown. Tepals 110 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 160 × 20 mm, mid green. Stems 1.1 m, green, with c.4 fls.

**‘Elise’ I(a/c)**

Parentage unknown

R: A. Weinreich (pre 1985), N: A. Weinreich

Inside cream-white with small red spots and dashes;

pollen brown. Pedicels long. Stems 1.2 m. Mid July.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Elisa’. Published in German Lily Group sales list, 1985.)

**‘Eliška’ I(a/b-c)**

Parentage: Peters seedling 66-24-1 × ‘Connecticut King’

R: Šlechtitelaká Stanice Heřmanův Městec, N:

Šlechtitelaká Stanice Heřmanův Městec, REG:

Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside rich yellow, tepal-centres apricot; spots dark purple, in the throat. Stamens conspicuously exerted. Fls 105-130 mm wide, flat bowl-shaped; tepals recurved. Lvs 60-80 × 10-13 mm, dark green. Stems 0.75 m, thick, green, with c.14 fls. Mid June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1992.)

**‘Elista’ I(a-b/b-c)**

Parentage: ‘Helá’ × ((‘Diblík’ × ‘Connecticut King’) × ‘Wattle Bird’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1996),

REG: B. Mičulka (1996)

Inside pale peach and apricot, tepal-tips and throat paler; outside more whitish, midribs slightly greenish; spots numerous, medium sized, dark brown-crimson, on two-fifths of each tepal; nectaries pale olive-green, finely white-granulated; anthers greenish; pollen yellow (poorly developed); stigma dark crimson. Fls 145 mm wide; tepals 85 × 42 mm, slightly recurved (outer more so); pedicels 65 mm long, brown-dotted, with secondary branches. Lvs scattered, 85 × 16 mm, slightly glossy mid green. Stems 0.9 m, brownish at base. Early July.

**'Elite' I(b/-)**

Parentage unknown

R: Gebr. N. &amp; B. Laan &amp; Zn (pre 1974), N: Gebr. N. &amp; B. Laan &amp; Zn

Inside vivid orange-yellow (21A), tepal-tips brilliant orange-yellow (21B), throat strong orange (24A); outside strong orange-yellow (24A); heavily spotted dark red (187B) on half of each tepal; nectaries strong orange (24A); pollen strong brown (172A). Fls 145 mm wide; tepals 85 × 30 mm, margins ruffled, tips slightly recurved. Lvs scattered, 65 × 6 mm. Stems 1.2 m, dark green, with c.10 fls. June.

(Published in *Albrecht Hoch Kat.*, 1974/75.)**'Elite' I(a/b)**

Syn. of 'Gibraltar'.

R: L. Meece (1985), G: L. Meece (1988), N: L. Meece (1993), REG: L. Meece (1993)

Inside dark red (187B), throat frosted yellowish white (156D); outside dark purplish pink (186C), midribs green; fls overall with a silver sheen; lightly spotted throughout with dark red (187A); nectaries yellowish white (156D); pollen dark reddish orange (173A). Tepals 60 × 35 mm, margins smooth, tips slightly recurved; pedicels 105 mm long. Lvs scattered, 90 × 6 mm, dark green. Stems 1.2 m, brown and green, with c.25 fls. Mid July to mid Aug.

**'Elizabeth Linton' I(b/-)**

Parentage: 'Lord Melbourne' × unknown

R: G. Errey (c. 1946), N: G. Errey

Fls orange.

(Published in *Ball Cat.*, 1949.)**'Elizabeth Messel' VII(-/b)**

Parentage unknown

R: J.E.H. Stooke, N: J.E.H. Stooke

Fls deep cream on orange ground.

(Published in *Constable Cat.*, Spring 1954.)**'Elizabeth's Favorite' VIII(A/-)**Parentage: (*bulbiferum* var. *croceum* × *L. × testaceum*) × 'Melody'

R: P.M. Byam (pre 1958), N: P.M. Byam

Fls vivid yellow (13A) to brilliant yellow (13B), tepal-tips

brownish pink.

(Shown as 'Afterglow' by Byam in London in 1958.)

**'Eliza Blake' VII(-/b)**Parentage: ((*auratum* 'Wittei' × 'Cymbeline') × *rubellum*) × *rubellum*

R: G.G. &amp; F.S. Blake (1980), G: G.G. &amp; F.S. Blake (1984), N: F.S. Blake (1987), I: F.S. Blake (1987), REG: F.S. Blake (1987)

Inside white flushed with pale purplish pink (62D), each tepal with a light yellow (10B) ray, shading to brilliant yellow (10A) - depending on the season, tips pale purplish pink (62D), throat white; outside white, midribs shading from brilliant yellow-green (150C) to dark purplish pink (186C); very lightly spotted strong purplish red (63A); nectaries brilliant yellow-green (150C); pollen moderate orange (167B). Fls 130 mm wide; tepals 95 × 50 mm, margins ruffled, tips strongly recurved. Lvs 200 × 60 mm, mid green. Stems 1.8 m, greyish yellow-green (148C), with c.24 fls. Feb. (Australia).

**'E.L. Joerg' I(a/-)**Syn. of *L. × maculatum* 'Leonard Joerg'.**'Elko' I(a/b)**

Parentage: 'Juliana' × unknown

R: K. Braun, N: K. Braun, I: K. Braun (1992), REG: K. Braun (1993)

Inside bronze, throat violet-bronze; outside bronze; medium-sized bronze dashes on half of each tepal; nectaries bronze; pollen yellow-brown. Fls 150 mm wide; tepals 67 × 23 mm, recurved; pedicels 100 mm long, green, with secondary buds. Lvs scattered, 120 × 14 mm, dull mid green. Stems 1.2 m, brown and green. Mid July.

**'Elkton' IX(b-c/d)**See *speciosum* 'Elkton'.**'Ellabee' IX(b-c/d)**See *speciosum* 'Ellabee'.**'Elle' I(a-b/-)**

Parentage: unnamed seedling × unnamed seedling

R: Hoffgaarde B.V. (1994), G: Hoffgaarde B.V. (1996), N: Hoffgaarde B.V. (1996), I: Hoffgaarde B.V. (2000), REG: Hoffgaarde B.V. (2001)

Inside light purplish pink (65B), midveins at base pale yellowish pink (36D); outside light purplish pink (65B); spots and papillae present; nectaries green; pollen orange-brown; stigma purple. Fls 180 mm wide, sometimes with up to 9 tepals; tepals 100 × 40 mm, margins ruffled, tips recurved. Lvs scattered, 110 × 15 mm. Stems 1.2 m, green with darker stripes and spots, and with 3-5 fls (from 12-14 cm bulbs). Early.

**'Ellenai' VI(-/c)**Parentage: *regale* × mixed pollen of *henryi*, *davidii* & *candidum*

R: Research Institute of Pomology &amp; Floriculture (1964), G: S. Dąbrowska (1966), N: S. Dąbrowska (1983), I: Research Institute of Pomology &amp; Floriculture (1983),

REG: Res. Center Var. Agric. Crops (1983)  
Tepal-tips and throat brilliant yellow (12B), midribs tinged green; spots absent; nectaries yellow; pollen pale bronze. Fls 180 mm wide; tepals 120 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 15 mm, mid green. Stems 0.9 m, grey-green, with 8-13 fls. Mid July.  
(Published in *Owoce, Warzywa, Kwiaty* 23 (13): 18-19 (1983).)

R: A.D. Harrison (c. 1963), N: A.D. Harrison

Fls clear lemon-yellow, with small spots. Fls 125 mm wide.

**'Elmir' I(b/-)**

Parentage: complex hybrid

R: P.M. Byam (c. 1960), N: RBG, Canada, I: RBG, Canada

Fls clear vivid yellow (12A), throat white; spots minute, red. Stems 1 m.

(Published in *ILR* (1969).)

**'Elmont' I(b/-)**

Parentage: 'Connecticut Lass' × 'Connecticut Morn'

R: H.O. Beracha, N: H.O. Beracha

Fls yellow, with white throat; spotted.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

**'El Moro' I(a-b/b-c)**

Parentage: Matthé seedling LV15 × 'Luxor'

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)

Inside vivid yellow (14A), midveins strong, cream, tepal-tips pale yellow-green (155A), throat vivid yellow (14A); outside white and yellow-white; spots numerous, small, rounded, strong red (46A), on basal half of each tepal; nectaries light yellow-green (150D); filaments light orange-yellow (19A); pollen strong red (46A); style

moderate yellow (161B); stigma light yellowish pink (159A). Lvs scattered, 90 × 15 mm. Stems 1.1 m, dark green with darker markings, and with c.16 fls. Late June. (El Moro is a fortification in Havana, Cuba and refers to the tower-like nature of the plant. Nomenclatural standard: colour print provided by registrant (WSY 0032247).)

**ELOCUTION I(a/b)**

Trade designation of 'Dailruna'.

**'Elodie' I(a/b)**

Parentage unknown

R: Testcentrum voor Siergewassen B.V. (1998), G: (2002), N: Marklily (2001), I: Marklily (2003), REG: Marklily (2003)

Inside pale purplish pink (65D) with some moderate purplish pink (65A) stripes, throat yellowish white (155D); outside moderate purplish pink (65A), midribs light purplish pink (65B) flushed with moderate yellow green (147D) at top; spots dark red (59A), large; papillae absent; nectaries moderate yellow green (143D); pollen absent; stigma strong purplish red (61B). Fls double, 175 mm wide; tepals 90 × 46 mm, margins slightly ruffled, tips recurved, narrow, elongated. Lvs 140 × 16 mm. Stems 1-1.4 m, dark, with c.7 fls. June.

**'Eloise' I(a/b)**

Parentage: 'Connecticut King' × unnamed seedling  
R: Gebr. Mak B.V. (1977), G: Gebr. Mak B.V. (1979), N: Gebr. Mak B.V. (1984), I: Gebr. Mak B.V. (1984), REG: Gebr. Mak B.V. (1985)

Inside vivid orange (28A), tepal-edges persimmon-orange, throat shaded burnt orange; outside marigold-orange; spots few, tiny, dark brown, in the throat; nectaries burnt orange; pollen dark brown. Tepal-margins smooth, tips not recurved. Lvs scattered, 160 × 10 mm, dark green. Stems 1.75 m, dark, with 10-14 fls (from 16-18 cm bulbs). July.

(Published in *Bloembollencultuur*, 1984.)

**'Elora' I(b/-)**

Parentage: complex hybrid from many generations of Byam crosses

R: P.M. Byam, N: RBG, Canada (1971), I: RBG, Canada (1971), REG: (1971)

Inside vivid reddish orange (34A); outside with slight brownish flush, midribs greenish; slightly spotted. Tepals slightly reflexed. Stems 1.2-1.5 m.

(Published in *Lilies and other Liliaceae*, 1973: 112.)

**'El Paso' I(a/-)**

Parentage: 'Connecticut Yankee' × 'Firebird'

R: F. Ewald (pre 1981), N: F. Ewald, REG: F. Ewald (1988)

Fls vivid orange; spots absent. Stems 1.3 m, with up to 15 fls. Early to mid July.

(Published in German Lily Group sales list, 1983. It is not known which 'Firebird' is the pollen parent.)

**'Elsa' VI(-/a)**

See *L. × aurelianense* 'Elsa'.

**'Elsa II' VI(-/a)**

See *L. × aurelianense* 'Elsa II'.

**'Elsie' I(a-b/-)**

Parentage: ('Duet' × 'Unique') × 'Unique'

R: G.R. Meyer (1993), G: G.R. Meyer (1995), N: G.R. Meyer (1995), REG: G.R. Meyer (2001)

Inside pale yellow (158B), throat light purplish pink (63D); outside strong purplish red (63A); spots many, light purplish pink (63D); nectaries grey/white; pollen red (179). Tepals 70 × 30-35 mm, margins smooth. Lvs scattered, 100 × 15 mm. Stems 1.05 m, dark green, with c.20 fls. Early to mid July.

(It is not known whether the seed parent is 'Duet' of Bischoff Tulleken or of Columbia-Platte.)

**'El Toro' VII(-/d)**

Parentage unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1961), N: R.L. Strahm (1969), I: H.J. & R.L. Strahm (1969), REG: Strahm's Lilies, Inc. (1981)

Inside moderate red (47A), tepal-tips white, throat green; outside reddish; spots moderate red (47A) around centre and outer edges of tepals; nectaries green; pollen strong brown (172A). Fls c.170 mm wide, scented; tepals c.90 × 45 mm, margins ruffled, tips strongly reflexed. Lvs scattered, c.170 × 45 mm, mid green. Stems 1.5 m, dark red, with 15 or more fls. Aug.

(Published in Strahm's sales sheet, 1969.)

**'Elvie Coltman' VII(b/c)**

See *L. × parkmanii* 'Elvie Coltman'.

**'Elvin's Son' Div. ?**

Given as a parent of 'Thyra'. No further details.

**'Elvira' I(b/-)**

Parentage: selection from Jautrie Bèrni Group

S: V.P. Örehovs, N: V.P. Örehovs

Fls orange.

(Published in *LYB* 33: 79 (1970).)

**'Elvis' I(a/-)**

Parentage: 'Redstart' × 'Connecticut King'

R: W. Peryt (1985), G: W. Peryt (1987), N: W. Peryt (1990), I: W. Peryt (1990), REG: W. Peryt (1990)

Inside deep red (53A), throat dark red (59A); outside vivid red (45B); spots absent; nectaries dark yellowish green (189A); pollen light brown. Fls 140 mm wide; tepals 80 × 40 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 1.2 m, green with dark red-brown veins, and with 8-12 fls. July.

**'Elysée' VII(a-b/b-c)**

Parentage unknown

R: Trior Lelie B.V. (pre 1991)

Inside moderate purplish pink (62B), throat yellowish

white (155B), midveins flushed with pale greenish yellow (2D) on basal part; outside with a moderate/light purplish pink (62B/C) flush on a yellowish white (155B) ground, midribs light greenish yellow (5D); nectaries strong yellow-green (144B); spots deep purplish red (59B); pollen strong orange (169C); stigma pale yellow-green (196C) with deep reddish purple (77A) spots. Fls 320 mm wide; tepals 170 × 65 mm, margins smooth, tips slightly recurved. Lvs scattered, 210 × 47 mm. Stems 1.2 m, green, with c.5 fls.

('Elysée' was granted Dutch PBR (LEL 739) in 1991, but has not been registered.)

**'Elysian' II(b/c)**

Parentage: F<sub>2</sub> of 'Glacier' × (white-flowered seedling × unnamed hybrid)

R: J.C. Ericksen, G: J.C. Ericksen (1989), N: J.C. Ericksen, REG: J.C. Ericksen (1991)

Outside frosty white, throat tinged with pink; outside tinged with pink; spots small, sparse, carmine-pink; nectaries pinkish white; pollen yellow. Fls 55 mm wide; tepal-margins smooth, tips slightly recurved. Lvs whorled, 150 × 75 mm, pale green. Stems c.1 m, pale green. Mid July.

**'E-mail' VII(a-b/b)**

Parentage: ('Star Gazer' × unnamed seedling) × 'Kissproof'

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside deep red (60A), tepal-margins, tips and throat yellowish white (155D), above nectaries and along midveins dark red (59A); outside the outer tepal strong purplish red (59D) with whitish spots, midribs strong yellow-green (145A) at base, strong yellow-green (144A) at top, inner tepals moderate purplish pink (66D) with whitish spots; spots and papillae dark red (59A); nectaries strong yellow-green (143C); pollen strong reddish orange (169A); stigma light greenish grey (188C). Fls 215 mm wide, slightly fragrant; tepals 120 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 40 mm, green. Stems 1.1 m, light green, with 7 fls. July.

**'Embarrassment' I(b-c/c)**

Parentage: *L. × scottiae* × unnamed hybrid

R: R. Simonet, N: A.J. Porter (1974), I: A.J. Porter (1975), REG: A.J. Porter (1975)

Inside strong purplish red (54A); outside deep purplish pink (54B); spots dark red-purple; nectaries light yellow (10C); pollen moderate reddish orange (178C). Lvs yellow-green. Stems 1.2 m, with up to 50 fls. July. (Published in *Lilies and other Liliaceae*, 1975: 92.)

**'Emberglow' VII(-/b)**

Parentage unknown

R: J.S. Yeates ?, N: B.G. Hayler, I: B.G. Hayler (1963)

Inside vivid red (52A), deeper above nectaries, extending over tepal to narrow white border; spots darker; nectaries

green, edged with yellow. Fls 230 mm wide, *auratum* type. Lvs *auratum* type. Stems 1-1.9 m.

**‘Embers’ I(a/-)**

Parentage: *lancifolium* type lily × *L. × maculatum*

R: E.J. Kelley (c. 1966), N: E.J. Kelley

Inside pale orange, tepal-tips reddish; outside burnt orange; spots black. Stems 0.4 m, with c.12 fls, and with bulbils.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 6 (1978).)

**‘Emblema’ I(a/-)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1994)

Fls deep carmine, creamy white towards base; spots purple-brown. Fls 130-140 mm wide. Stems 0.8-1 m, with 15-28 fls. July.

(Published in M.F. Kireeva, *Lilii*, 61 (2000).)

**Emerald Group VI(-/a)**

Parentage: ‘Green Dragon’ × ‘Goliath’

R: J. de Graaff (c. 1957), N: J. de Graaff

Inside white with green-yellow shading; outside pod-green (HCC 061/1). Stems 1.2 m. July.

(Published in *Oregon Bulb Farms Cat., Supplement*, 1958.

Included in *ILR* (1982) as Emerald grex.)

**‘Emerald Beauty’ VI(b-c/a)**

Parentage: *leucanthum* var. *centifolium* × Green Magic Group

R: K. Paszyńska (1984), G: K. Paszyńska (1988), N: K. Paszyńska (1992), I: K. Paszyńska (1992), REG: K. Paszyńska (1992)

Inside white, throat green; outside greenish, suffused with pink; spots absent; nectaries green; pollen light brown. Fls 140 mm wide, wide open, strongly scented; tepals 120 × 40 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 120 × 10 mm, mid green. Stems 1.2 m, green, with 6-8 fls in a crown-like head. Early July.

**‘Emerald Isle’ VI(a/b)**

Parentage: Aurelian Group × *leucanthum*

R: J. de Graaff (pre 1957), N: J. de Graaff, I: C.A. Best (1958)

Fls emerald-green. Tepal-tips recurved.

(Published in *Greenock Farms Cat.*, 1958. Offered as both a clone and a Group by Oregon Bulb Farms in 1964/65.)

**Emerald Isle Group Div. ?**

Given as a parent of ‘Maidenhair’ and ‘Sea Siren’, both raised by D.F. McPherson. No further details.

**‘Emerald Lake’ I(a-b/-)**

Parentage unknown

R: M.D. Holloway (1993), G: M.D. Holloway (1995), N: M.D. Holloway (1995), I: M.D. Holloway (1996), REG: M.D. Holloway (1996)

Inside lime-green with a slight golden tinge at the widest part of each tepal and a fine gold line around outer tepals, throat dark green; outside green suffused brown at base;

spots absent; nectaries dark green; pollen absent. Fls 135 mm wide, slightly scented; tepals 67 × 31 mm, margins smooth, tips becoming strongly recurved; pedicels with secondary and tertiary buds. Lvs scattered, 132 × 22 mm, mid green. Stems 1.35 m, brownish, with c.25 fls. Early July to mid Aug.

**‘Emilie’ I(a/c)**

Parentage: ‘Rangoon’ self-pollinated

G: H. Larsen (1979), N: H. Larsen (1986), I: H. Larsen,

REG: H. Larsen (1987)

Fls brilliant yellow (20A); spots many, heavy, greyish brown (166A), on half of each tepal; nectaries brilliant yellow (20A); pollen orange. Tepals 100 × 38 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 70 × 10 mm, dark green. Stems 0.6 m, dark, with c.5 fls. Early Aug.

(Seed from the RHS Lily Group; introduced under no. ST26.)

**‘Emilia’ I(a/-)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1994)

Fls golden yellow, almost unspotted. Fls 120-130 mm wide. Lvs dark green. Stems 0.8-0.9 m. July.

(Published in M.F. Kireeva, *Lilii*, 57 (2000).)

**‘Emily Harrison’ II(-/d)**

See *L. × dalhansonii* ‘Emily Harrison’.

**‘Emily Louise’ VII(-/b-c)**

Parentage: (*L. × parkmanni* × unknown) × unknown

R: R.F. Nelson (pre 1960), G: R.F. Nelson (1969), N: R.F. Nelson, I: R.F. Nelson (c. 1973), REG: R.F. Nelson (1973)

Fls vivid purplish red (57C), fading to white at tepal-edges; spots moderate purplish red (58A); pollen light brown; stigma purple. Lvs white-veined. (Published in *Lilies and other Liliaceae*, 1973/1974: 109.)

**‘Eminence’ I(a/b)**

Parentage: (Tesca seedling 6 × ‘Sunrise’) × ‘Willow Wood’

R: J. Wadkamper (1978), N: J. Wadkamper (1984), I: Borbeleta Gardens (1984), REG: Borbeleta Gardens (1984)

Fls brilliant yellow (13B); spots and brushmarks prominent, brown; nectaries frosty yellow; pollen light brown. Tepals 90 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 15 mm, dark green. Stems 0.8 m, dark green, with c.12 fls. July.

**‘Emír’ VIII(b-c/d)**

Parentage: ‘Longida’ × (‘Gran Paradiso’ × ‘Puchanta’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005), REG: B. Mičulka (2005)

Inside orange, tepal-tips and throat paler; outside pale orange; spots brown, oblong, moderately numerous, on half of each tepal; nectaries white-granulated; pollen orange-brown; stigma brown. Fls 140 mm wide; tepals 95 × 43 mm, very recurved, margins slightly wavy; pedicels

60 mm long, very thick, brown-dotted, with tertiary buds. Lvs scattered, 145 × 17 mm, mid green. Stems 1.05 m, thick, dark green with brown dots. Early July. Tetraploid.

**‘Emma’ I(a/-)**

Parentage unknown

R: J. Boon (pre 1982), N: J. Boon, REG: J. Boon (1983)  
Inside brilliant orange (29A), throat strong orange (30D); outside light orange (28D), with slight orange tepal-edges; spots small, brown, in the throat; pollen dark reddish brown.

**‘Emotions’ I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
R: Hoffgaarde B.V. (1992), G: Hoffgaarde B.V. (1994), N: Hoffgaarde B.V. (1998), I: Hoffgaarde B.V. (2000), REG: Hoffgaarde B.V. (2001)

Inside and outside vivid red (45A) changing to vivid reddish orange (34A) towards tepal-tips; spots and papillae present; nectaries purple; stigma and pollen red-brown. Fls 160 mm wide; tepals 90 × 20 mm, margins ruffled, tips recurved. Lvs scattered, 70 × 10 mm. Stems 1.2 m, green, with 3-5 fls (from 12-14 cm bulbs). Midseason.

**‘Empire Group’ I(a/-)**

Parentage: yellow-flowered *lancifolium* seedling × unknown

R: J.C. Ericksen (c. 1964), N: J.C. Ericksen, REG: J.C. Ericksen (1975)

Fls light yellow to near cream, some with a few spots. Fls large, with wide tepals. Stems to over 1.5 m. July. (Published in *Lilies and other Liliaceae*, 1975: 92.)

**‘Empire Builder’ VI(-/b)**

Parentage: Silver Sunburst Group × unknown

R: unknown (1988), G: S.R. Kaul (1991), N: S.R. Kaul (1997), I: S.R. Kaul (1997), REG: S.R. Kaul (1997)

Inside white shading to brilliant yellow in the centre, throat brilliant deep yellow; outside white, tinged with yellow, midribs tinged with lavender; nectaries deep yellow fading outwards to white; pollen golden orange; stigma tan. Fls c.185 mm wide; tepals 170 × 37-65 mm, margins slightly ruffled, outer tepal-tips strongly recurved, inner tepals slightly recurved as well as being curled and twisted laterally. Lvs scattered, 175 × 17.5 mm, mid green. Stems 1 m, mid green, with 6-10 fls. Midseason.

**‘Empress of China’ VI(-/b)**

See *L. × parkmanii* ‘Empress of Japan’.

**‘Empress of Mars’ VII(-/-)**

Parentage: selection from Atomic Group

S: L. Woodriff (c. 1958), N: L. Woodriff  
Fls blood-red, with white tepal-tips. Stems 1.2 m. Aug.

**‘Emsweller’s Special Select’ IX(b-c/d)**

See *speciosum* ‘Emsweller’s Special Select’.

**‘Enchanted Evening’ VI(-/a)**

Parentage: pink-flowered *leucanthum* var. *centifolium* hybrid seedling × pink-flowered *leucanthum* var. *centifolium* hybrid seedling

R: G.M. Chandler (1951), G: G.M. Chandler (1954), N: G.M. Chandler, I: G.M. Chandler (1960), REG: G.M. Chandler (1961)

Inside white, flushed pink from edge to half tepal, centre yellow. Fls 160 mm wide. Lvs *regale* type. Stems 1.2 m.

**‘Enchantment’ I(a/b)**

Parentage: selection from Mid-century Group

S: J. de Graaff (1941), N: J. de Graaff (1949), I: J. de Graaff (1949)

Fls vivid reddish orange (30A), finely spotted deepest red-black. Tepals 90 × 25-32 mm, margins ruffled, tips recurved. Stems 0.9-1 m, with 10-17 fls. June to July. (Published in *LYB NALS* 1: 106 (1947/48).)

**‘Enchantress’ IX(b/c)**

See *auratum* ‘Enchantress’.

**‘Encore’ I(a/b-c)**

Parentage: ‘Kopua’ × ‘Chinook’

R: W.H. McLaren (1975), G: W.H. McLaren (1977), N: W.H. McLaren (1980), REG: W.H. McLaren (1980)

Inside vivid yellowish orange (39C); outside the outer tepals with a green knob at tip; spots small, dark purple (79B), at centre extending to sparse dashes near basal tepal-margins; nectaries grey-cream; pollen moderate reddish brown (175A). Fls 120-130 mm wide; tepals 90 × 32 mm, tips slightly recurved. Lvs scattered, 95 × 14 mm, dark green. Stems 1 m, greyish reddish brown (200B) with slight green mottling, and with 4-5 fls. Late.

**‘Encounter’ I(a/b)**

Parentage: (‘Sterling Star’ × ‘Connecticut King’) × ‘Gran Paradiso’

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside strong reddish brown (169A) and vivid reddish orange (32A), throat orange; outside of inner tepals coloured as inside; spots absent; nectaries orange; pollen red-brown; stigma purplish red. Fls 180 mm wide; tepals 90 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, glossy green. Stems 0.9 m, with dark stripes and spots, and with c.8 fls. Early to midseason.

**‘Endeavor’ I(a/-)**

Parentage: ‘Connecticut King’ × (*leichtlinii* var. *maximowiczii* ‘Unicolor’ × ‘Golden Wonder’) F<sub>2</sub>

R: E.A. McRae (1970), G: Oregon Bulb Farms, Inc. (1973), N: Oregon Bulb Farms, Inc. (1983), I: Oregon

Bulb Farms, Inc. (1983), REG: Oregon Bulb Farms, Inc. (1984)

Inside tepal-tips soft orange, throat medium orange; outside medium orange; spots usually absent; brushmarks bright red, sometimes with associated spots; nectaries green; pollen soft golden orange. Tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm, pale green. Stems 1.2 m, green, with 6-30 fls. Mid to late June.  
(Misspelling: 'Endeavour'.)

**'Endeavour'** I(a/-)  
Misspelling of 'Endeavor'.

**'Endios'** VII(a/b)

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals deep/strong purplish pink (68A/B), margins strong reddish purple (70B), pale greenish yellow (2D) along midvein in basal two-thirds of each tepal, strong purplish red (63B) towards top, outer tepals strong purplish red (63B), margins (64C), pale greenish yellow (2D) along midvein for up to basal two-thirds of each tepal, throat yellowish white (155B); outside with inner tepals deep/strong purplish pink (68A/B), basal third of each tepal yellowish white (155D), margins moderate purplish red (64A), midribs strong purplish red (64B) on moderate yellow (162A) ground, strong yellow-green (144C) at top; outer tepals moderate/strong purplish red (63A/B), margins strong purplish red (64B), area next to midribs in basal sixth yellowish white (155D), midribs strong yellow-green (144B) at base changing into moderate purplish red (63A) on moderate yellow (162A) ground, strong yellow-green (144A) at top; spots absent; papillae brilliant greenish yellow (5A), strong purplish red (63B) and pale greenish yellow (2D); nectaries strong yellow-green (144A); pollen strong brown (172A); stigma moderate yellow-green (138B). Fls 240 mm wide; tepals 130 × 60-80 mm, margins ruffled, tips recurved. Lvs scattered, 160-210 × 40-65 mm, dark green. Stems 1.1-1.2 m, green with darker markings, and with c.4 fls.  
(Fl. colour becomes paler with age.)

**'Energia'** VI(-/a)  
Misspelling of 'Energija'.

**'Energija'** VI(-/a)

Parentage: *henryi* × *Aurelians*

R: V.P. Orehovs (1966), N: V.P. Orehovs

Fls white, flushed with cream-pink, and with an orange throat; pollen orange-red. Fls c.150 mm wide. Lvs scattered. Stems up to 2 m. Aug.

(Included in *ILR Fourth Supplement* as 'Energia' which is a misspelling.)

**'Eng'** I(b/-)

Parentage unknown

R: E.H. Doerr?, N: E.H. Doerr, I: Hartle-Gilman

Gardens (1994), REG: Hartle-Gilman Gardens (1994)  
Inside deep pink (185D), tepal-tips strong pink (54C), throat with a yellow flush; outside green over pink; spots small, dark maroon, in centre half of each tepal; nectaries white, with raised papillae; pollen dark maroon. Tepals 90 × 25-36 mm, margins smooth, tips slightly recurved; pedicels held at 45 degrees, with occasional secondaries on lower pedicels. Lvs scattered, 102 × 10 mm, dark green. Stems 1.8 m, greyed green, with 12-15 fls. Midseason.  
(Published in *Hartle-Gilman Gardens Cat.*, 1994. The epithet is a contraction of *everything*.)

**'Enortic'** I(b/-)

Parentage: 'Aureola' × ('Connecticut Lass' × Panamint Group)

R: A. Rech (pre 1982), N: A. Rech, REG: A. Rech (1988)  
Fls greenish yellow. Stems 0.9 m, the fls occupying about half the total height. Mid July.  
(Published in German Lily Group sales list, 1982.)

**'Enrosadira'** VII(a-b/-)

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside strong purplish pink (68B), midveins white at base; outside strong purplish pink (68B); spots and papillae present; nectaries light green; pollen red-brown; stigma purple. Tepal-margins strongly ruffled, tips recurved. Stems of medium height, with reddish markings. Very early to early.

**'Ensor'** VII(a/b-c)

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals dark/moderate purplish pink (186C/D), midveins deep purplish pink (68A), outer tepals very light purple (75C), dark purplish pink (186C) towards margins, light purple (75A) along midveins, throat yellowish white (155D); outside with inner tepals dark/moderate purplish pink (186C/D), very pale purple (69A) towards margins, yellowish white (155D) at base, midribs light yellow-green (144D) at base, changing upwards to moderate purplish red (186B), outer tepals dark/moderate purplish pink (186C/D), with a moderate purplish red (186B) stripe along midribs, base of midribs strong yellow-green (144B) changing into yellowish white (155D), dark greenish yellow (152D) at top; spots absent; papillae pale purplish pink (65D); nectaries strong yellow-green (144C); pollen brownish orange (171B); stigma yellowish white (196D). Fls 250 mm wide, fragrant; tepals 155 × 60-85 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 190 × 57 mm. Stems 1.1-1.25 m, green with darker markings, with c.3 fls.

**'Enterprise'** VII(-/d)  
See *L. × parkmanii* 'Enterprise'.

**'Enticing'** I(a/-)

Parentage: 'Connecticut Queen' × ('Connecticut King' × 'Royal Sovereign')

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc. (1985)

Fls soft ivory-yellow throughout; spots absent; nectaries green; pollen soft yellow/gold. Fls musk-scented; tepals 50 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 60-80 × 10 mm, dark green. Stems 0.9 m, light green, with 10-40 fls. Early to mid June.

(Published in *Oregon Bulb Farms Retail Cat.*, 1985.)

#### 'Envy' VI(-/b)

Parentage: 'Lime On' × greenish-flowered seedling from *L. × kewense* 'White Henry'

R: D.K. Kölli (1985), G: D.K. Kölli (1988), N: D.K. Kölli (1989), REG: D.K. Kölli (1994)

Inside ivory-white, blending to white at tepal-tips, throat suffused with chartreuse-green, the green external midribs show through on inner tepals and suffuse light green onto outer tepals, outer tepals also with yellowish margins; outside ivory-white, green along midribs, with ruddy streaking; spots absent; nectaries deep green; pollen rust-orange. Fls to 202 mm wide, with a *Syringa* (lilac) scent; tepals 136 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 112 × 15 mm, mid green. Stems c. 1 m, mid green flecked with black, with ruddy black lf-axils, and with up to at least 5-7 fls. Fruit-capsules to 95 mm long, ribs keeled and ruffled. Late July.

#### 'Eos' VII(-/l)

Parentage: *auratum* (dwarf form) × *rubellum*

R: van Egmond B.V. (1979), G: van Egmond B.V. (1982), N: van Egmond B.V. (1987), REG: van Egmond B.V. (1988)

Inside greenish white (155C), midveins light greenish yellow (8B/C); outside greenish white (155C), outer tepals flushed with pale yellow-green (4D); spots dark red (187B), on the whole of each tepal; pollen strong orange (169D). Fls 170 mm wide; tepals 85 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 35 mm, mid green. Stems with c.3 fls.

#### 'Epifanija' I(b-c/d)

Parentage: 'Nata' × mixed pollen from Tango Group  
R: D.-V. Škimele (1991), G: D.-V. Škimele (1994), N: D.-V. Škimele (1997), REG: D.-V. Škimele (2004)

Inside dark purplish pink with dark brownish marbling on half of each tepal; outside purplish pink, midribs green; nectaries green; pollen brown; stigma dark red-brown. Fls 100 mm wide; tepals 80 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 50 × 8 mm. Stems 0.85 m, dark green, with c.14 fls. Mid July. (Published in *Lilium Balticum Lily Register*, 1998.)

#### 'Equinox' I(a/b-c)

Parentage: seedling AM 96-01 × seedling RS 93-18  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2001), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside strong purplish red (63A), throat strong yellow-green (144B); outside strong purplish red (63A), tepal-

margins moderate purplish red (58A), midribs strong yellow-green (143C) at base and top, outer tepals paler; spots and papillae absent; nectaries moderate yellow-green (137C); pollen deep orange-yellow (163A); stigma yellowish white (155D), strong purplish red (60B) at edge. Fls 180 mm wide; tepals 105 × 40-50 mm, margins slightly ruffled, tips very slightly recurved. Lvs scattered, 135 × 23 mm. Stems 1.05-1.5 m, green with darker markings, and with c.6 fls.

#### 'Erabu' V(-/a)

See *longiflorum* var. *nobile* 'Erabu'.

#### 'Erabu-no-hikari' V(-/a)

See *longiflorum* 'Erabu no Hikari'.

#### 'Erasmus' VII(-/b)

Parentage: seedling 529 × seedling 99

R: Vletter & Den Haan, N: Vletter & Den Haan, REG: Vletter & Den Haan (1994)

Inside yellowish white (155D) with a pale suffusion of moderate purplish red (58A), the apical quarter of each tepal edged with moderate purplish red (58A), midveins deep red (53A,60A) for 23 mm of their length; outside yellowish white (155D) with a very pale suffusion of moderate purplish red (58A), tepal-tips yellowish white (155D), the outer tepals stronger coloured and with less white at tips, midribs dark at the base and close to brilliant greenish yellow (151D) at the top; spots and papillae deep red (60A), on basal part of (mainly) inner tepals; pollen strong orange (25A); stigma dark red (187A). Fls 220 mm wide; tepals 115 × 45 mm. Lvs scattered, 140 × 25 mm, mid green. Stems 0.8 m, pale green, with c.6 fls.

#### 'Erato' IX(b-c/d)

See *speciosum* 'Erato'.

#### 'Ercolano' VIII(a/b)

Parentage: seedling N 66 × seedling G 90-05

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside yellowish white (155D), midveins strong yellow-green (142A) from above nectaries for a third of each tepal, throat light yellow-green (145C); outside greenish white (155C), midribs deep red (185A) for up to a quarter of outer tepals; spots few, in the throat; papillae absent; nectaries white-hairy; pollen brownish orange (165B); stigma moderate red (179B). Fls 200 mm wide; tepals 125 × 60 mm, margins smooth or wavy, tips recurved. Lvs scattered, 195 × 15 mm. Stems 1.15 m, green with dark markings below, and with 4-7 fls. (*A longiflorum*/Asiatic (LA) hybrid.)

#### 'Erebus' VII(-/b)

See *L. × parkmanii* 'Erebus'.

**‘Erect’ I(a/-)**

Included in *ILR* (1982) - error for *L. × hollandicum* ‘Erectum’.

**‘Erectum’ I(a/b)**

See *L. × hollandicum* ‘Erectum’.

**‘Erectum’ IX(a/d)**

See *speciosum* ‘Erectum’.

**‘Erfordia’ VIII(-/-)**

Parentage: *sargentiae* × ‘Black Beauty’

R: Saatzucht Zierpflanzen Erfurt (1986), G: Saatzucht Zierpflanzen Erfurt (1989), N: W. Reiser (1994), REG: Institut für Gemüse- und Zierpflanzenbau Grossbeeren Erfurt (1994)

Inside moderate purplish red (59C), tepal-margins and tips white, throat brilliant to vivid yellow-green (154B/A); outside white suffused with strong purplish red (63B); papillae dark red; nectaries strong yellow-green (144A); pollen red-brown. Fls 105 mm wide, scented; tepals 100-105 × 25-35 mm, margins ruffled, tips slightly recurved. Lvs scattered, 120-160 × 20-24 mm, mid green. Stems 1.2 m, dark green, with c.15 fls. July.

**‘Eric’ I(a/-)**

Parentage: dark red-flowered Fellner seedling × ‘Black Bear’

R: H.R. & R. Cocker (1980), G: H.R. & R. Cocker (1996), N: H.R. & R. Cocker (1996), REG: H.R. & R. Cocker (1996)

Inside dark red (187A), to dark red (187C) at tepal-tips; outside similarly coloured; spots scattered, small, darker, on basal half of each tepal; pollen dark red (183B). Fls 150 mm wide; tepals 74 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 25 mm, dark and very glossy green. Stems 1 m, dark green. July.

**‘Eric Mayell’ IV(-/-)**

Parentage: complex hybrid

R: E. Mayell, N: E. Mayell  
AM 1967

Fls light yellowish pink (26D) flushed with strong orange (24A), overlaid from mid tepal to tip with a colour between strong red (39A) and deep yellowish pink (47C); spots of near deep red (53A), on basal half of tepals.

**‘Eridanus’ I(a/-)**

Parentage: yellow-flowered seedling × ‘Cabaret’

R: V. Matthé (1984), G: V. Matthé (1986), N: V. Matthé (1990), REG: V. Matthé (1990)

Fls vivid yellow (9A), throat brilliant yellow-green (154B); each tepal with a heavy, sharply defined, more-or-less triangular, dark red (187A) brushmark, below which are numerous, dark red (187A) spots; nectaries frosted yellow-green; pollen dark brown. Fls 130 mm wide; tepals 60 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 10 mm, mid green. Stems 0.75 m, mid green, with c.6 fls. July.

**‘Erika’ VII(b-c/b)**

Misspelling of ‘Ērika’.

**‘Ērika’ VII(b-c/b)**

Parentage unknown

R: Ē. Ievina (1991), G: Ē. Ievina (1995), N: R. Krūmiņš (2001), REG: Liliūm Balticum Association (2004)

Inside white; outside white with brown midribs; papillae white, on half of each tepal; pollen light brown; stigma violet. Fls to 240 mm wide, scented; tepals 145 × 65 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, to 200 × 70 mm. Stems 1.3-1.4 m, green, with 12-14 fls. July to Aug.

(Included in *ILR Twenty-third Supplement* as ‘Erika’ which is a misspelling.)

**‘Erin’ I(a/c)**

Parentage: ‘Melody’ × (‘Melody’ × ‘Symphony’)

R: P.M. Byam (c. 1958), N: P.M. Byam

Fls brilliant greenish yellow (6C). Tepal-tips recurved. (Published in *JRHS* 83: 67 (1958).)

**‘Erin Lee’ VII(-/b)**

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler, N: B.G. Hayler (1983), I: B.G. Hayler (1983), REG: B.G. Hayler (1983)

Inside strong purplish pink (55B), tepal-tips pale purplish pink (55C), throat white; outside pale pink. Tepal-margins ruffled, tips slightly recurved. Lvs scattered, 170 × 40 mm, mid green. Stems 1.7 m, with c.12 fls. Jan. (Australia).

**‘Erlangen’ I(b/b)**

Parentage unknown

R: F. Köhlein (pre 1979), N: F. Köhlein, REG: F. Köhlein (1988)

Fls chrome-yellow, spotted. Stems 1 m, with up to 40 fls. Early July. (Published in German Lily Group sales list, 1983.)

**‘Erlina’ I(a/c)**

Parentage: ‘Bulgaria’ × brushmarked seedling

R: D.-V. Škimele (1991), G: D.-V. Škimele (1993), N: D.-V. Škimele (1996), REG: D.-V. Škimele (2001)

Inside dark red, with darker, narrow rays, throat dark red; outside dark red, midribs brown; spots black, on two-thirds of each tepal; nectaries white; pollen brownish red; stigma black. Fls 160 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 10 mm. Stems 1.4 m, reddish brown, with c.11 fls. Early July.

(Published in *Lilium Balticum Lily Register*, 1998.)

**‘Erlkönig’ I(a/b)**

Parentage: ‘Rubinstern’ × Asiatic seedling

R: G. Steinbrück (1990), G: G. Steinbrück (1993), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside bright deep red (53B); outside bright deep red (53A), midribs greenish yellow; spots few, medium sized, black-brown, in centre of fl.; nectaries violet, white-

hoary; filaments long; pollen moderate red (184B); stigma strong orange (169B) on a similarly coloured style. Fls large (for an Asiatic), 170 mm wide; tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, numerous, 110 × 17 mm. Stems 1.05 m, pale green, with c.14 fls. Early July.  
(Nomenclatural standard: colour print provided by registrant (WSY 0028903).)

#### 'Erna' VII(-/-)

Parentage unknown

R: R. Krūmiņš (1997), G: R. Krūmiņš (2000), N: R. Krūmiņš (2003), REG: Liliūm Balticum Association (2004)

Inside light violet-pink, midveins dark violet-pink, each tepal with white tip and margin; outside brownish pink, midribs brown to green; spots cherry-red, on half of each tepal; pollen reddish brown; stigma grey-green. Fls 240 mm wide; tepals 145 × 60 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, up to 220 × 75 mm. Stems 1 m, with 7-9 fls. Early Aug.  
(Published in *Lilium Balticum Lily Register*, 2003.)

#### 'Ernie Gibson' I(a/d)

Parentage: *L. × maculatum* 'Wallacei' × *lancifolium*

R: G. Errey, N: G. Errey

Fls cadmium-yellow; spots absent. Fls *lancifolium* type. Stems 1.2 m.

(Published in *LYB* 11: 81 (1947).)

#### 'Eroica' I(a/b-c)

Parentage: yellow-white-flowered Asiatic seedling × 'Berliner Morgan'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Inside yellowish white (155D); outside white, midribs strong orange-red; spots and brushmark lines many, medium sized, strong reddish orange (34C), on half of each tepal; anthers large, held well clear of fl. on long filaments; pollen deep purplish red (61A); stigma light yellow-green (145B). Fls 150 mm wide; tepals 75 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 17 mm. Stems 1 m, dark green, with up to 26 fls on long pedicels in a pyramidal infl. Mid July.

#### 'Eros' I(c/d)

Parentage: (*lankongense* × *davidii*) × complex hybrid involving 'Redbird', 'Citronella', 'Destiny' & *lancifolium* var. *flaviflorum*

R: C. North (pre 1976), N: C. North, I: Lingarden Ltd & Grampian Growers Ltd, REG: C. North (1977)

Fls bright pink, scented; spots dark; pollen absent. Stems 1 m, with c.25 fls. Early July. Sterile triploid.

(Published in *Lilies and other Liliaceae*, 1977: 77.)

#### 'Erotika' I(a/-)

Parentage unknown

R: J. Klein (pre 1986), N: J. Klein, REG: J. Klein (1988)  
Fls bright red. Stems 1 m. Early July.

(Published in German Lily Group sales list, 1986.)

#### 'Erroll Garner' VII(-/b)

Parentage: 'Perugia' × unnamed seedling

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)

Inside strong purplish pink (68B/73B), midveins light greenish yellow (8B) on basal part of each tepal, throat strong yellow-green (144B); outside light purplish pink (65B), midribs brilliant yellow-green (150B); spots dark red (59B), on basal half of each tepal; pollen dark reddish orange to brownish orange (172B/C). Fls 215 mm wide; tepals 105 × 53 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 180 × 25 mm, mid green. Stems 1.4 m, green, with c.12 fls. May (under glass).

#### 'Erskine' I(a/-)

Parentage: 'Apricot Pie' × 'Candace'

R: M.D. Holloway (1992), G: M.D. Holloway (1993), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)

Inside red-orange at centre of fl., shading to bright orange at tepal-tips and with a golden orange line on the second quarter of outer tepals, throat a lighter shade of gold; outside with outer tepals golden and an orange-red margin, inner tepals orange-red, with golden midribs; spots raised, self-coloured, on basal part of each tepal; nectaries light gold; pollen bright orange. Fls 115 mm wide; tepals 60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 145 × 10 mm, mid green. Stems 1.32 m, light and dark green, with c.53 fls in a pyramidal infl. (most basal pedicels with tertiary buds). Mid July to late Aug.

#### 'Eruption' VI(-/c)

Parentage: 'Bright Star' × *L. × aurelianense* Golden Sunburst Group

R: J.-M. Kaiser (pre 1979), N: J.-M. Kaiser

Fls green at base, shading into orange and white. Stems 2 m. Late July to Aug.

#### 'Erythro' I(a/-)

Parentage unknown

R: M. Rohrmeier (pre 1981), N: M. Rohrmeier  
Fls dark red. Late.

(Unacceptable name: ICNCP, 2004: Art. 19.13 - after 1959 a name may be in any language other than Latin. *Erythro* is originally Greek but has been Latinised in many scientific plant names. Published in German Lily Group sales list, 1982.)

#### 'Escapade' I(a/-)

Parentage: 'Connecticut King' × unnamed seedling  
R: Gebr. Mak B.V. (1977), G: Gebr. Mak B.V. (1979), N: Gebr. Mak B.V. (1984), I: Gebr. Mak B.V. (1984), REG: Gebr. Mak B.V. (1985)

Inside light orange (28C), tepal-edges nasturtium-red; outside the tepals flamed brown-yellow, edged Saturn red; nectaries violet-red; pollen dark reddish brown. Tepal-margins smooth, tips not recurved. Lvs scattered, 110 × 15 mm, dark green. Stems 1.5 m, green, with c.8 fls. Early July.

(Published in *Bloembollencultuur*, 1984.)

**'Escape' VII(a/b-c)**

Parentage unknown

R: Gebr. Vletter &amp; Den Haan, N: Gebr. Vletter &amp; Den Haan (2001), REG: Vletter &amp; Den Haan Beheer B.V. (2004)

Inside with inner tepals dark/moderate purplish pink (186C/D), brilliant yellow (10A) for up to two-thirds along midveins, bordered with pale yellowish green/greenish white (155A/C); outer tepals dark/moderate purplish pink (186C/D), brilliant/light yellow (10A/B) for up to two-thirds along midveins, pale yellowish green/greenish white (155A/C) at top, throat pale yellow-green (157C); outside with inner tepals very pale purple/moderate purplish pink (69A/186D), margins somewhat darker, base strong yellow-green (144B) and pale yellowish green (155A), outer tepals dark/moderate purplish pink (186C/D), margins greenish white/pale yellow-green (157D/155A), base with some strong yellow-green (144B), midribs pale yellowish green (155A), at top strong yellow-green (144B) with some strong yellow-green (144A); spots absent; papillae brilliant yellow (10A); nectaries strong yellow-green (144B); pollen moderate reddish brown (175A); stigma reddish grey (201C). Fls 210 mm wide; tepals 122-125 × 50-65 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 170 × 32 mm, green with lighter-coloured veins. Stems 1.1-1.2 m, green with darker margins, and with c.9 fls.

(The fl. colour is not always solid.)

**'Escort' VII(-/-)**

Parentage unknown

R: Sun Valley Bulb Farms, Inc. (1972), N: Sun Valley Bulb Farms, Inc. (1980), I: Sun Valley Bulb Farms, Inc. (1980), REG: Sun Valley Bulb Farms, Inc. (1980)

Inside moderate purplish pink (70D), midveins deep red (60A); outside moderate purplish pink (186D); heavily spotted deep red (60A); nectaries lime-green; pollen rust-coloured. Tepals 200 mm long, margins slightly ruffled. Lvs elliptic, moderate olive-green (137A). Stems 0.3-0.6 m.

**'Eskimo' VI(-/a)**Parentage: *leucanthum* var. *centifolium* × *sargentiae*

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls white.

**'Esme' I(a/-)**Parentage: (*davidii* × *dauricum* × unknown) × ('Joseph Fletcher' × *wilsonii* var. *flavum*)

R: A.D. Harrison (c. 1963), N: A.D. Harrison

Fls bright clear red with dark spots. Fls 125 mm wide; tepals broad.

**'Esmeralda' VI(b/a)**

Parentage unknown

Fls pale pink, 120-180 × 90-150 mm. Stems 0.9 m. July. (Published in *Cvetovodstvo* 1981 (2): 21. Raised and named in the Baltic Republics.)**'España' Div. ?**

Given as a parent of 'Eva Foerster'. No further details.

**'Español' I(a/-)**

Parentage: 'Pirate' × 'Connecticut King'

R: A. Winkler (1975), G: A. Winkler (1977), N: A. Winkler (1977), REG: A. Winkler (1997)

Bicolour: inside with throat vivid reddish orange (34B), the midsection of tepals brilliant orange-yellow (21B), tips vivid reddish orange (34B) narrowly edged brilliant orange-yellow (21B); outside vivid reddish orange (34B); spots few, greyish red (178A); pollen strong reddish orange (169A). Fls 115 mm wide; tepals 80-85 × 33-35 mm, margins smooth or very slightly waved, tips slightly recurved. Lvs scattered, 70 × 11 mm, dark green. Stems 0.75 m, almost black, with c.10 fls. Late June.

**'Esperanza' IX(b/c)**See *auratum* 'Esperanza'.**'Esperanza Gold' IX(b/c)**See *auratum* 'Esperanza Gold'.**'Espresso' VII(a-b/b)**Parentage: (*L. × parkmanii* 'Salmon Jewels' × 'Crimson Bute') × ((*L. × parkmanii* 'Allegra' × 'Star Gazer') × 'Furore')

R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1996), REG: Bischoff Tulleken Lelies B.V. (1997)

Inside strong purplish red (60B/C), basal part of tepals edged yellowish white (155B), throat yellowish white (155B); outside strong purplish red (60C/D), tepals narrowly edged yellowish white (155B) and with a little strong yellow-green (144C) at the base, strong yellow-green (143B) at tip, midribs light yellow-green (150D) with strong yellow-green (144C) at top; spots dark red (187A), on two-thirds of each tepal; papillae yellowish white (155B) in the throat; nectaries strong yellow-green (144C); pollen strong orange (25A); stigma greyish yellow-green (148C). Fls 220 mm wide; tepals 120 × 40-55 mm, tepal-margins ruffled, tips slightly recurved. Lvs scattered, 130 × 55 mm, mid green. Stems 0.84 m, green, with c.5 fls. July.

**'Esra' I(a/-)**

Parentage: 'Gran Paradiso' × seedling 1306-WI

R: De Jong Beheer B.V. (1987), G: De Jong Beheer B.V. (1989), N: De Jong Beheer B.V., I: De Jong Lelies Holland B.V. (1995), REG: De Jong Lelies Holland B.V. (1995)

Inside brilliant greenish yellow (5B) on a pale yellow-green (155A) ground, colour strongest around midveins, fading towards brilliant greenish yellow (5A) tepal-tips, throat pale yellow-green (155A); outside light yellow-green/pale greenish yellow (2C/D), base of midribs moderate red (183D), brilliant greenish yellow (1B) near top, extreme top with some moderate reddish brown; spots and papillae absent; nectaries greenish yellow; pollen dark reddish orange (175C); stigma moderate

reddish brown (175A). Fls 190 mm wide; tepals 95 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 15 mm, mid green. Stems 1 m, green with darker markings, and with 3-4 fls (from 11-13 cm bulbs). Midseason.

**'Essex' IX(b-c/d)**

See *speciosum* 'Essex'.

**'Estafeta' I(a/b)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1994)  
Fls deep lemon-yellow; spots brown. Fls 140-150 mm wide; tepal-margins slightly ruffled, tips recurved. Stems 0.9-1 m, with 9-15 fls. July.

(Published in M.F. Kireeva, *Lilii*, 42 (2000).)

**'Estate' V(-/a)**

See *longiflorum* 'Estate'.

**'Esther' I(a/b)**

Parentage unknown

R: J. Boon, G: J. Boon (1980), N: J. Boon (1980), I: J. Boon (1980), REG: J. Boon (1981)

Fls strong reddish orange (31A) with nasturtium-red flush; dark brown dots in orange throat; pollen reddish brown. Stems 0.9 m, with 8-12 fls (from 16-18 cm bulbs).

**'Estland' VII(a/b)**

Parentage: seedling 92-44 × seedling 93-2

R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Fls yellowish white (155D); spots and papillae present; nectaries light yellow-green (142C); pollen strong orange (169C); stigma pale yellow-green (157C). Fls 240 mm wide; tepals 140 × 72 mm, margins ruffled, tips recurved. Lvs scattered, 180 × 45 mm. Stems 1.3 m, light green, with c.3 fls.

**'Estonia' VI(-/a)**

Unaccepted spelling of 'Estoniia'.

**'Estoniia' VI(-/a)**

See *L. × imperiale* 'Estoniia'.

**'Etch-a-sketch' I(a/-)**

Parentage: yellow-flowered, brushmarked seedling × 'Cabaret'

R: V.E. Bowen (1980), G: V.E. Bowen (1982), N: V.E. Bowen (1988), REG: V.E. Bowen (1988)

Fls vivid yellow (14A) with a slight green flush at the base outside, midribs green; spots few, red, on both sides of midveins of inner tepals (only 2-3 on outer tepals), all tepals with 4-5, distinctly marked, red brushlines; nectaries frosted green; pollen orange/gold. Fls 140 mm wide; tepals 70-75 × 40-45 mm, margins smooth, tips not recurved; pedicels 110-140 mm long, lacking secondary buds. Lvs scattered, 110 × 20 mm, mid green, slightly downy. Stems 1.4 m, dark green, with 12-14 fls. Mid June.

**'Etched Orange' VI(-/d)**

Parentage: 'El Greco' × 'Yangtze'

R: W.T. Craig, G: W.T. Craig, N: W.T. Craig (1989), I: Ozark Mountain Lilies, REG: C. Helsley (1989)

Inside vivid orange-yellow (23A), tepal-tips paler brilliant orange-yellow (23B), throat deep yellow-orange; outside brilliant orange-yellow (23B); papillae numerous, dark reddish orange (178B), on apical half of each tepal; nectaries dark green; pollen golden brown. Fls 160 mm wide; tepals 140 × 30-35 mm, margins smooth, tips strongly recurved; lower pedicels with secondary buds. Lvs scattered, 150 × 25 mm, dark green. Stems 1 m, green very slightly brushed with purple, with 8-12 fls. Early June.

**'Eternal Flame' VIII(-/l)**

Parentage: (*longiflorum* × 'Mont Blanc') × orange-flowered seedling

R: A. Bakker & Zn (1988), G: A. Bakker & Zn, N: A. Bakker & Zn (1991), I: A. Bakker & Zn (1991), REG: A. Bakker & Zn (1991)

Inside strong orange (25B), the basal part of each tepal dark red (59A) blending into a light orange-yellow (24C) throat; outside strong orange (25A), the 'tube' suffused with moderate purplish red (58A); spots dark red (59A), on all but the tip of each tepal; pollen dark reddish orange (175B). Fls 170 mm wide; tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 0.5 m, with darker markings, and with c.4 fls. June (under glass).

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Eternity' VII(a/b)**

Parentage: unnamed seedling × 'Royal Class'

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (1999), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside light purplish pink (68D/73C), midveins yellowish white (155D), throat yellowish white (155D); outside very pale purple (73D), yellowish white (155D) at base, moderate yellow-green (139D) along midribs changing into light purplish pink (73C); spots and papillae yellowish white (155D); nectaries strong yellow-green (143C); pollen vivid yellowish pink (28A); stigma light greenish blue (122B). Fls 200 mm wide; tepals 133 × 39 mm, margins slightly ruffled, tips recurved. Lvs scattered, 210 × 57 mm, green. Stems 1.1 m, green with darker markings, and with 5 fls. July.

**'Ethel Kew' I(a/-)**

Parentage: *dauidii* × 'Edna Kean'

R: G.W. Darby (c. 1965), N: G.W. Darby

Fls darkest black-crimson.

(Published in *LYB* 28: 111 (1965).)

**'Ethel Marguerite' I(a/-)**

Parentage: red-flowered seedling × red-flowered seedling

R: E.E. Fox (1987), G: E.E. Fox (1989), N: E.E. Fox (1991), I: Fox Lily Ranch (1994), REG: E.E. Fox (1994)

Inside vivid reddish orange (42A), each tepal with a 3-5

mm long, vivid orange (28A) flare around the top of the nectary-furrow; outside vivid reddish orange (42A); spots very few, tiny, black, in the throat; nectaries vivid reddish orange (42A), frosted; pollen vivid orange (28A). Fls 160 mm wide; tepals 75 × 40 mm, margins smooth, 3 tepal-tips slightly recurved, 3 not recurved. Lvs scattered, 120 × 18 mm, mid green. Stems 1 m, green mottled with plum, with 16-18 fls in a racemose infl. Late July.

**'Ethel May Glasson'** VII(b/b)

See *L. × parkmanii* 'Ethel May Glasson'.

**'Ethelwaite'** I(c/-)

Parentage: ((*davidii* var. *unicolor* × 'Lillian Cummings')) × (*davidii* var. *unicolor* × 'Edith Cecilia') × 'Skylark' (Div. I)

R: W.D. Evans (1968), N: W.D. Evans (1975), REG: W.D. Evans (1976)

Fls light orange-yellow (24C), heavily spotted. Tepal-margins smooth. Lvs scattered, dark green. Stems 1-1.2 m. July.

(Named for the raiser's wife. Published in *Ontario Regional Lily Soc. Newsletter*, Sept. 1974.)

**'Etienne'** I(a/b-c)

Parentage unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1991), REG: B. Mičulka (1991)

Inside deep purple-pink, tepal-tips and outside paler, midribs greenish and brownish red; spots small, sparse, blackish, on two-fifths of each tepal; nectaries olive-green, white-frosted; pollen orange-brown; stigma purple. Fls 130 mm wide; tepals 72 × 30 mm, recurved; pedicels long, spotted dark brown. Lvs scattered, 95 × 8 mm, glossy dark green. Stems 0.85 m, spotted dark brown. Late June.

**'Etna'** I(-/-)

Parentage: 'Edna Kean' × ('Edna Kean' × *wilsonii*)

R: G.W. Darby (c. 1954), N: G.W. Darby

Fls deep red. Colchicine-induced tetraploid.

**'Etude'** VII(b/b)

Parentage: seedling L 256 × seedling L 447

R: Vletter & Den Haan (1981), G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside moderate purplish pink (66D), midveins vivid red (45C), tepal-tips yellowish white (155B), throat strong yellow-green (143C) edged brilliant greenish yellow (6C); outside with outer tepals moderate purplish pink (66D), inner tepals light purplish pink (63D); spots dark red (187A), on basal half of each tepal; pollen moderate reddish orange/brownish orange (171A/B). Fls 220 mm wide; tepals 120 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 210 × 38 mm, mid green. Stems 1.1 m, green, with c.6 fls. May.

**'Eugene Emsweller's Special Select'** IX(b-c/d)

See *speciosum* 'Emsweller's Special Select'.

**'Eugenia Miroshniczenko'** VI(-/a)

Parentage: Aurelian Group × mixture of pollen from *regale* hybrids

R: N.A. Miroshniczenko (c. 1979), N: N.A.

Miroshniczenko

Fls white with a cream centre. Stems 2 m. July.

**'Eunice'** VII(-/c)

Parentage unknown

R: L. Woodriff (c. 1961), G: R.M. Withers (1966), N:

K.L. Watkins (1983), I: K.L. Watkins (1983), REG: K.L. Watkins (1983)

Inside pale purplish pink (56C), merging to yellowish white (155D) along centre groove, tepal-tips pale purplish pink (56C), throat yellowish white (155D); outside with strong pink (54C) midribs on outer tepals, fading to white margin, inner tepals flushed with pale purplish pink (56C); evenly spotted strong red (53B) on basal half; nectaries light yellow-green (145C); pollen dark reddish orange (172B). Fls 180 mm wide; tepals 110 × 35-50 mm, margins ruffled, tips recurved. Lvs scattered, 190 × 55 mm, dark green. Stems 1.8 m, dark green, with c.20 fls. Mid to late Jan. (Australia).

**EUPHORIA** I(a/b)

Trade designation of 'Eiforija'.

**'Eureka'** VIII(b/d)

Parentage: *henryi* × Asiatic hybrid

R: C. North (1975), G: C. North (1976), N: C. North, I: C. North, REG: D.B. Fox (1992)

Inside strong orange (24A/25B), paling to brilliant orange/light orange-yellow (25C/24C) towards tepal-tips, the tips darker; outside similarly coloured but with a green midrib on outer tepals; spotting variable but confined to papillae in basal half of each tepal and almost absent at base; nectaries green; pollen mid brown; style pale green; stigma brown-maroon. Tepals 77-78 × 21-25 mm, margins ruffled, tips recurved. Lvs scattered, up to 215 × 19 mm. Stems c.1.6 m, with 16 or more fls and sometimes with a few bulbils in upper lf-axils. Mid to late July.

(Published in *Lilies and other Liliaceae* 1978/1979: 21. P.M. Syngé, *Lilies*, 87 (1980) suggests that the pollen parent might have been 'Wiltig': this cv. has not been traced.)

**'Euroblanca'** VII(a-b/b)

Parentage: tall, white-flowered seedling × white-flowered seedling

R: Mak Lelieveredeling B.V. (1984), G: Mak Lelieveredeling B.V. (1987), N: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside pure white, the first day after opening with a very soft yellow stripe along the middle of each tepal, throat pure white with soft green surrounding the nectaries; outside white and green, midribs soft green; spots few, pure white; nectaries strong yellow-green (142A); pollen strong reddish orange (169A); stigma deep purple/moderate purple (79C/D). Fls 300 mm wide; tepals 160 × 50-75 mm, margins slightly ruffled, tips

recurved. Lvs scattered, 220 × 80 mm, moderate olive-green (137A), rather leathery. Stems 1-1.3 m, moderate yellow-green (138B), with 4-10 fls. Mid Aug. (Highly resistant to *Botrytis* and viruses.)

### 'Eurogold' I(a/b)

Parentage: yellow-flowered seedling × yellow-flowered seedling

R: Mak Lelieveredeling B.V. (1987), G: Mak-Leek Inc. (1990), N: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside vivid yellow (12A); outside close to brilliant yellow (13C) with greenish tepal-tips, midribs close to moderate yellow-green (139D); spots absent; nectaries soft green; pollen strong orange (24A); stigma strong purplish red (60D). Fls 190 mm wide; tepals 95 × 35-55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 15 mm, moderate olive-green (137A). Stems 1-1.5 m, light green with brown markings, and with 5-15 fls. Mid to late June.

### 'Europa' III(c/d)

Parentage: *pyrenaicum* × *pomponium*

R: C. North (pre 1978), N: C. North

Resembles a tall, vigorous *pomponium*, with scarlet fls and narrow leaves.

(Published in *Lilies and other Liliaceae* 1978/1979: 21 (1979). Distributed under code number 232/1.)

### 'Europa' I(a/-)

Parentage: 'Enchantment' × 'Connecticut King'

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls bright orange; spots absent. Tepals broad. Stems up to 1 m, with bulbils.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

### 'Eurostar' VIII(a/b)

Parentage: ('Loblanca' × 'Roma') × ('Loblanca' × 'Avignon')

R: Sande B.V., G: Sande B.V., N: Sande B.V. (1997), I: Sande B.V., REG: Sande B.V. (2001)

Inside moderate red (47A/180B), base red; outside deep pink (180D); spots very limited and inconspicuous; papillae present but inconspicuous; nectaries green; pollen red-brown; stigma purple. Tepal-margins smooth, tips recurved. Stems 0.9-1.1 m, green, with 4-9 fls. Early to midseason.

(*A longiflorum*/Asiatic (LA) hybrid. *Fusarium*-resistant. Nomenclatural standard: colour illustration supplied by registrant (WSY 0029121).)

### 'Eurovision' I(a/b)

Parentage: red-flowered seedling × 'Pirate'

R: Gebr. Vletter & J.A. Den Haan (1977), G: Gebr. Vletter & J.A. Den Haan (1979), N: Gebr. Vletter & J.A. Den Haan (1984), I: Gebr. Vletter & J.A. Den Haan (1984), REG: Gebr. Vletter & J.A. Den Haan (1985)

Inside vivid reddish orange (32A), throat vivid yellowish orange (30C); outside strong reddish orange (42B) with the inner tepals strong reddish orange (31A); dark brown

spots on half of each tepal; nectaries violet-red; pollen red-brown. Tepal-margins smooth, tips strongly recurved. Lvs scattered, 110 × 10 mm, pale green. Stems 1.1-1.25 m, dark, with 10-12 fls (from 16-18 cm bulbs). July. (Published in *Bloembollencultuur*, 1984.)

### 'Eurydike' I(c/d)

Parentage: 'Karmen' (of Jošt) × 'Ariadne'

R: V. Jošt (1976), G: V. Jošt (1979), N: V. Jošt (1984), I: V. Jošt (1985), REG: V. Jošt (1984)

Inside strong purplish red (60B), tepal-tips strong purplish red (60C), throat light yellowish pink (29C) overlaid with purple; outside deep purplish pink (58D); spots small, dark red (187A/C), on two-thirds of each tepal; nectaries frosty white-purple; pollen moderate reddish orange (171A). Fls 75-80 mm wide, scented; tepals 67 × 32 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 12 mm, dark green. Stems 1.15 m, mid green with some purple coloration, with c.25 fls. Late June. Triploid.

### 'Euterpe' IX(b-c/d)

See *speciosum* 'Euterpe'.

### 'Eva' IX(b-c/d)

See *speciosum* 'Eva'.

### 'Eva Foerster' I(a/-)

Parentage: 'Jetfire' × 'España'

R: H. Georgi (1983), G: H. Georgi (1985), N: H. Georgi (1986), I: H. Georgi (1990), REG: H. Georgi (1989)

Red and yellow bicolor: tepal-tips bright strong red, throat rose-red with a green star, outside of inner tepals red with a yellow-green midrib, outside of inner tepals yellow; broad, yellow blotches, 20-30 mm long, on each tepal; pollen brown. Fls 130-140 mm wide; tepals 70-80 × 40-50 mm (inner and outer more-or-less equally broad), margins smooth, tips not reflexed. Lvs scattered, 100-110 × 10-15 mm. Stems 0.65-0.75 m, mid green, with 7-12 fls. Mid June to early July.

(On the registration form, the pollen parent was given as 'España'. This epithet has not been traced and it would seem likely that the pollen parent is 'Español'.)

### 'Evelina' VII(b/b)

Parentage unknown

R: Trior Lelie B.V., N: Trior Lelie B.V. (1994), REG: Lily Company B.V. (2004)

Inside with inner tepals yellowish white (155D) in basal half, towards margins and tips strong purplish pink (68B), brilliant greenish yellow (3B) along midveins towards top, outer tepals similar but with yellowish white (155D) margins and more purplish pink, throat yellowish white (155D); outside with inner tepals pale yellow-green (155A) in basal half, towards margins and tips dark purplish pink (186C), midribs strong yellow-green (144C) at base, dark purplish pink (186C) towards top, inner tepals dark purplish pink (186C), towards margins yellowish white (155D), midribs strong yellow-green (144C) at base with some dark purplish pink (186C), pale yellow-green (155A) towards top with a small strong

yellow-green (144C) patch; spots absent; papillae brilliant greenish yellow (3B); nectaries strong yellow-green (143C) with narrow brilliant greenish yellow (3B) edge; pollen strong orange (170A); stigma dark purple (79A). Fls 150-240 mm wide, fragrant; tepals 140 × 42-65 mm, margins ruffled, tips recurved. Lvs scattered 160 × 28 mm. Stems 0.6-1 m, green, with c.9 fls. (Younger fls are a little more purplish pink.)

**‘Evelyn’ I(a/b)**

Parentage: ‘White Tiger’ × ‘Heidi’

R: G. Thürmer (1986), G: G. Thürmer (1988), N: G. Thürmer (1999), I: G. Thürmer (1999), REG: G. Thürmer (2001)

Inside brilliant greenish yellow (6A), tepal-tips light greenish yellow (8C), throat brilliant greenish yellow (6A); outside brilliant greenish yellow (6A), pale greenish yellow (9D) near midribs, midribs reddish; spots unequally sized, deep red (185A), on basal third of each tepal; nectaries greenish; pollen strong brown (172A).

Tepals 70 × 32 mm, tips of outer tepals strongly recurved, tips of inner tepals only slightly recurved. Lvs scattered, 90 × 13 mm. Stems 0.8 m, rather dark green, hairy, with 7-10 fls. Early to mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0030947).)

**‘Evening’ VII(-/d)**

See *L. × parkmanii* ‘Evening’.

**‘Evening Star’ I(-/c)**

Parentage: ‘Coronation’ × unknown

R: E. Robinson, N: E. Robinson (1959)

Fls orange, centre dull green, heavily spotted. Stems 1.2 m.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Evening Star’ I(a/-)**

Parentage: *concolor* × *callosum*

R: F.L. Skinner (c. 1954), N: F.L. Skinner

Fls scarlet.

(Published in *Skinner’s Nursery Cat.*, 1954.)

**‘Evening Star’ VIII(-/-)**

Parentage: *longiflorum* × unknown

Fls creamy yellow to buff, very large. Stems 1-1.2 m. Midseason.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. A *longiflorum*/Asiatic (LA) hybrid. Released by Columbia-Platte in 1991. Published in *NALS Bull.* 46: 2 (1992).)

**‘Evensong’ I(b-c/-)**

Parentage: ‘Nutmegger’ × *leichtlinii* seedling with red reverse

R: W. Windus (1971), N: W. Windus, REG: W. Windus (1975)

Inside brilliant yellow (13B), outside the outer tepals moderate red (179A), inner tepals greyish red (176A); heavily spotted moderate reddish brown (177A); pollen

dark reddish orange (178B). Lvs short, mid green. Stems 1.2 m. July.

(Published in *NALS Bull.*, Sept. 1973.)

**‘Evertide’ VI(-/c)**

Parentage: *henryi* × (*L. × aurelianense* × unknown)

R: C. Yerex (c. 1952), N: C. Yerex

Fls cream overlaid with saffron, blending to orange at centre. Stems 1.5 m. Aug.

(Published in *Kline Cat.*, 1954.)

**‘Everest’ Div. ?**

Given as a parent of ‘Triptique’. No further details.

Perhaps an error for *L. × parkmanii* Everest Group.

**Everest Group VII(-/d)**

See *L. × parkmanii* Everest Group.

**‘Evergold’ I(b/-)**

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler (1977), N: B.G. Hayler

(1983), I: B.G. Hayler (1983), REG: B.G. Hayler (1983)

Fls vivid yellow (12A); spots fine, purple-black; nectaries green. Tepals 80 × 20 mm, margins ruffled, tips strongly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1.5 m, green, with c.20 fls. Dec. (Australia).

**‘Everita’ I(a/c)**

Parentage unknown

R: A. Krūmiņš (pre 1999), N: A. Krūmiņš

Inside yellow; brushmarks red, breaking up into many small spots at edges and top; pollen red-brown; stigma red. Tepal-margins smooth, tips not or scarcely recurved.

**‘Evert van Benthem’ VIII(-/a)**

Parentage: unnamed seedling × *longiflorum* ‘White American’

R: IVT (1980), G: IVT (1982), N: C.H. Adrichem & IVT, REG: C.H. Adrichem (1988)

Inside gleaming white, with green midveins in the throat, outer tepals yellowish white (155B); outside with yellowish white (158D) midribs, inner tepals white on outside, both with pale yellow-green (149D) bases; pollen vivid yellow (15A). Fls 170 mm wide; tepals 150 × 45 mm, slightly recurved. Lvs scattered, 210 × 25 mm. Stems 0.6 m, dark green, with c.4 fls.

Syn.: *longiflorum* ‘Evert van Benthem’.

**‘Everything’ VII(b/c)**

Parentage: (*L. × parkmanii* Little Rascal Group × ‘Star Gazer’) × *L. × parkmanii* Little Rascal Group

R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1993)

Inside with a suffusion of moderate purplish red (58A) on a third of each tepal on a yellowish white (155D) ground, stronger coloured towards the tip, outer tepals narrowly edged yellowish white (155D); outside yellowish white (155D) suffused moderate purplish red (58A) at tepal-tips and along edges, midribs brilliant greenish yellow

(151D); spots brilliant yellow (12B) and brownish orange (164A) on the inner tepals only; pollen strong orange (168A/B); stigma dark red (59A). Fls 155 mm wide; tepals 80 × 55 mm, tips slightly recurved. Lvs scattered, 85 × 54 mm, dark green. Stems 0.22 m, dark, with 4 fls. Trade designation: RASCAL EVERYTHING.

**‘Evgeniia’ VI(-/a)**

Parentage: (*henryi* × Olympic Group) × trumpet hybrids  
R: N.G. Korshikova (1990)  
Fls white, flushed with pink. Stems 1-1.1 m. July.  
(Published in M.F. Kireeva, *Lilii*, 88 (2000).)

**‘Evina’ I(b-c/-)**

Parentage: ‘Sun Ray’ × ‘Pink Tiger’  
R: K. Braun (1982), N: K. Braun  
Fls tangerine-orange, tepal-tips nasturtium-orange; outside tinged with purple; spots purple; nectaries white; pollen red-brown. Fls 125 mm wide; tepal-tips slightly recurved. Lvs dark green. Stems dark green, 0.7-0.9 m. Early July.  
(It is not known whether ‘Pink Tiger’ (pollen parent) was raised by Woodriff or Laan.)

**‘Evita’ I(b/c)**

Parentage: (((*davidii* var. *unicolor* × ‘Lillian Cummings’) × ‘Edith Cecilia’) × ‘Meadowlark’) × ‘Josiveve’  
R: W.D. Evans (1977), G: W.D. Evans (1982), N: W.D. Evans (1990), I: W.D. Evans (1991), REG: W.D. Evans (1991)  
Inside light yellowish pink (27A), overlaid with vivid purplish pink (65B), midveins deep purplish pink (70C), tepal-tips vivid purplish pink (65B), throat light yellowish pink (27A); outside similarly coloured; spots numerous, medium sized, dark red (183A), on basal half of each tepal; nectaries light green; pollen moderate reddish brown (171A). Fls 100 mm wide; tepals 60 × 28 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 6 mm, mid green. Stems 0.9 m, mid green, speckled brown, with c.8 fls. Midseason.

**‘Evrika’ I(b/c)**

Parentage unknown  
R: N.G. Korshikova (c. 1985), N: N.G. Korshikova  
Fls yellow with red spots and markings. Stems 1 m.

**‘Ewa’ I(a/b-c)**

Parentage: ((‘Atilla’ × ‘Red King’ (Div. I)) × ‘Atilla’ × ‘Connecticut Morn’) × (‘Connecticut Queen’ × ‘Ethelwaite’)  
R: J. Bodalski (1989), G: J. Bodalski (1991), N: J. Bodalski (1994), I: J. Bodalski (1994), REG: J. Bodalski (1994)  
Inside yellow, tepal-tips and throat light greenish yellow (8B); outside light greenish yellow (8C); spots absent; nectaries green; pollen deep orange-yellow (163A). Tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 12 mm, mid green. Stems 0.9 m, green, with c.9 fls. July.

**‘Ewart’ I(a/c)**

Parentage: ‘Unique’ × ‘Dancing Colleen’  
R: R.A. Prochaska (1994), G: T.R. Martin & G. Brundrett (1997), N: T.R. Martin & G. Brundrett (1999), I: T.R. Martin & G. Brundrett (1999), REG: G. Brundrett (1999)  
Inside deep purplish pink (70C), throat pale purplish pink (62D); outside much darker in bud with green tips; spots few, small, vivid purple (80A), in the throat; nectaries deep pink; stigma very light orange; pollen orange-brown. Fls 125 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 122 × 18 mm. Stems 1.45 m, strong yellow (143C), with up to 38 fls (including many well-formed secondaries) in a broadly pyramidal infl. July.  
(Named for the growers’ assistant. Nomenclatural standard: colour print provided by registrant (WSY 0015431).)

**‘Ewunia’ VI(c/d)**

Parentage: ‘Henrietta’ × ‘Brighton’  
R: R. Widerski, N: R. Widerski, I: R. Widerski (2004), REG: R. Widerski (2004)  
Inside pale orange; outside with pale green midribs; dense brown dashes on half of each tepal; nectaries green; pollen brown; stigma green. Fls 85 mm wide; tepals 100 × 40 mm, strongly recurved, slightly twisted; pedicels 10 mm long, brown and green, with tertiary buds. Lvs scattered, 210 × 40 mm, glossy mid green. Stems 1.3 m, thick, brown-dotted, with a long infl. Mid July.

**‘Excel’ I(b/c)**

Parentage unknown  
R: G. Brown (1991), G: G. Brown, N: G. Brown, I: G. Brown (1994), REG: F. Brown (1999)  
Inside with the basal half brilliant yellow (13B), apical half deep pink (48B), throat with some strong red (47B); spots very few, on a third of each tepal; pollen moderate brown (165A); stigma dark greenish yellow (152D). Fls 140 mm wide; tepals 70 × 33 mm, margins smooth, tips slightly recurved; pedicels long. Lvs scattered, 80 × 10 mm. Stems 1 m, moderate yellow-green (148A), with up to 20 fls (including secondaries) in a well-spaced infl. Mid July.

**‘Excellence’ VII(-/d)**

Parentage: ‘Casa Blanca’ × seedling L 483  
R: Vletter & Den Haan (1981), G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside pale purplish pink (62D), tepal-margins and tips yellowish white (155B), throat strong yellow-green (143C); outside tinged with pale purplish pink (62D) to yellowish white (155B), midribs light yellow-green (145B); spots and papillae strong purplish red (64B), on basal half of each tepal; pollen strong reddish orange (169A). Fls 260 mm wide; tepals 120 × 75 mm, margins ruffled, tips strongly reflexed. Lvs scattered, 240 × 33 mm, mid green. Stems 1.25 m, green, with c.5 fls. June.

**'Excelsior' VII(b/b)**

See *L. × parkmanii* 'Excelsior'.

**'Exception' I(b/-)**

Parentage: (*cernuum* × unknown) × (*cernuum* hybrid × *dauidii*)

R: Gebr. N. & B. Laan & Zn (pre 1978), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1978)

Tepals strong pink (54C), with ivory-white blotch and moderate red (185B) spots; filaments flattened, tepal-like; pollen absent. Fls semi-double.

Syn.: 'Bakker's Pride'.

(Published in *Lilies and other Liliaceae*, 1978/9: 108.)

**var. *eximium* V(b/a)**

See *longiflorum* var. *eximium*.

***eximium* 'Giganteum' V(-/a)**

Syn. of *longiflorum* var. *takeshima*.

**'Exotic' IX(b/c)**

See *auratum* 'Exotic'.

**Exotic Group VII(-/a)**

Parentage: Atomic Group backcrossed to *L. × parkmanii*

R: L. Woodriff (1955), G: L. Woodriff (1958), N: Fairyland Begonia & Lily Garden (1960), I: Fairyland Begonia & Lily Garden (1960)

Fls in pinks, reds and whites; nectaries green; pollen brown. Tepals 100-125 × 40-50 mm, margins ruffled or not, tips slightly recurved or not. Lvs scattered, 100 × 25-30 mm, mid green. Stems 0.3-1.5 m, green, with 5-20 fls. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Exotica' I(b/-)**

See 'Seraph'.

**'Exotic Sister' I(a/-)**

Parentage: 'Blizzard' × 'Cha Cha'

R: H. Georgi (1989), G: H. Georgi (1991), N: H. Georgi (1992), REG: H. Georgi (1992)

Inside cream, more orange-yellow towards base, throat paler; outside cream/green; copiously and minutely spotted with violet-red, especially on basal half of each tepal, spotting extending up margins and into throat; nectaries green/white; pollen orange-red. Fls 125 mm wide; tepals 75 × 32 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 15 mm, mid green. Stems 0.85 m, dark green, with c.8 fls. Mid June to early July.

**'Exotic Star' I(a/-)**

Parentage: 'Blizzard' × 'Cha Cha'

R: H. Georgi (1989), G: H. Georgi (1991), N: H. Georgi (1991), REG: H. Georgi (1992)

Inside cream from the middle of tepals to tips, margins and remainder of each tepal increasingly densely spotted with purplish red, the spots more-or-less coalescing below, base of throat cream-white; outside cream, marked purple; nectaries green-cream; pollen orange. Fls 130-140

mm wide; tepals 150 × 25 mm, margins smooth, tips slightly reflexed. Lvs scattered, mid green. Stems 0.65 m, dark green, with 5-8 fls, lacking bulbils. Late June to mid July.

**'Explosion' I(a/b)**

Parentage: Asiatic seedling LV15 × 'Kleine Freude'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside light greenish yellow (5D) on a yellowish white (158D) ground, throat yellowish white (158D); outside yellowish white (158D), midribs yellow-green; spots numerous, large, greyish red (178A), on basal half of each tepal; nectaries large, white (155D), becoming fan-shaped; filaments long, soft cream; pollen vivid reddish orange (34A) in large, thick anthers; stigma large, light olive (152B) on a long, similarly coloured style. Fls 150 mm wide; tepals 80 × 43 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 23 mm. Stems 1.05 m, dark green, with red-violet towards base, and with c.20 fls. Late June.

(Nomenclatural standard: colour print provided by registrant (WSY 0028908).)

**'Expression' VII(-/-)**

Parentage: unnamed seedling × unnamed seedling

R: W. Paauw & Zn B.V. (1990), G: W. Paauw & Zn B.V. (1991), N: W. Paauw & Zn B.V. (1992), I: Peacock B.V. & Imanse Lelieveredeling B.V., REG: W. Paauw & Zn B.V. (1996)

Inside yellowish white (155B), tepal-edges suffused with moderate purplish pink (70D), throat yellowish white (155B); outside yellowish white (155B), tepal-edges suffused with moderate purplish pink (70D), midribs yellowish white/light greenish yellow (155B and 8B/C), strong yellow-green (143A) at top; spots varying from none to many; papillae yellowish white (155B) on two-thirds of each tepal; nectaries strong yellow-green (144C); pollen strong reddish orange (169A); stigma dark purple (79A). Fls 240 mm wide; tepals 120 × 45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 160 × 55 mm, dark green. Stems 1 m, green with darker markings, and with c.4 fls. Midseason.

**'Exquisite' I(a/-)**

Parentage: 'Enchantment' × unknown

R: L.B. Tuffery, N: L.B. Tuffery

Fls pinkish apricot.

**'Expandable' II(b/-)**

Parentage: 'Filibuster' × Proveyors Group

R: J.C. Ericksen, G: J.C. Ericksen, N: J.C. Ericksen, REG: J.C. Ericksen (2000)

Inside orange-yellow, throat lighter; outside darker; nectaries brown-yellow; pollen dark gold. Tepals 65 × 40 mm, margins smooth, tips not recurved. Lvs whorled, dark green. Stems 0.8 m, dark green, with 3 or more fls. July.

**'Extaz' Div. ?**

Given as a parent of 'Vypushnoi Bal'. No further details.

**'Extra Red' I(a/b)**

See *L. × maculatum* 'Extra Red'.

**'Exultation' VI(b/b)**

Parentage: Pink Perfection Group × seedling with yellow, bowl-shaped fls

R: C. Helsley (1982), G: C. Helsley (1987), N: C. Helsley (1988), I: Ozark Mountain Lilies, REG: Ozark Mountain Lilies (1989)

Inside vivid yellow (9B), tepal-edges blushed red, throat yellow; outside yellow heavily brushed with red; spots absent; nectaries strong yellow-green (143C); pollen golden yellow. Fls 130 mm wide; tepals 120 × 30-55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 1.5-2 m, dark green lightly brushed with purple, with c.10 fls (including secondaries on lowest pedicels). Mid June.

**'Eyecatcher' VII(-/c)**

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × *L. × parkmanii* Little Rascal Group

R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1993)

Inside yellowish white (155D), the midvein from above the nectary brilliant yellow (8A), becoming suffused with moderate purplish red (58A) at the top on inner tepals, midvein on outer tepals light greenish yellow (8B), tipped moderate purplish red (58A); outside yellowish white (155D), midribs pale yellow-green (155A), outer tepals tipped strong yellow-green (144A) and suffused with moderate purplish red (59C) along the midrib; spots greyish brown (166A), on two-thirds of each tepal; pollen moderate reddish orange (171A); stigma dark red/deep purplish red (187C/D). Fls 160 mm wide; tepals 95 × 52 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 54 mm, dark green. Stems 0.3 m, brown, with c.6 fls.

**'Eyellow' VIII(a-b/b)**

Parentage unknown

R: World Breeding B.V., REG: Liliande B.V. (2003)  
Inside vivid yellow (12A) in basal half, changing towards top to light yellow (12C); outside light yellow (12C), midribs pale greenish yellow (10D); spots dark reddish orange (173A); papillae absent; nectaries strong yellow green (145A); pollen strong orange (169C); stigma light grey (191C), moderate red (183C) at edge. Fls 195 mm wide; tepals 120 × 60 mm, margins smooth, tips recurved. Lvs 150 × 30 mm, dark green. Stems 0.7 m, dark green with some darker markings, with 1-6 fls. (Said to be an Orienpet (OT) lily.)

**'Ezonishiki' I(a/b)**

See *L. × maculatum* 'Ezonishiki'.

**Fabergé Group I(c/-)**

Parentage: 'Fialkovaia' × pink-, white- and cream-flowered Asiatics with up-facing fls

R: J.F. McRae (1976), G: J.F. McRae (1979), N: Columbia-Platte Lilies (1985), I: Columbia-Platte Lilies (1986), REG: Columbia-Platte Lilies (1988)

Most fls strong purplish red (58B/C), fading to a lighter tone in hot weather, a few are softer pink blending with an underlying yellow to give a bronze effect, throat cream, white or soft yellow; spots large, deep magenta, on basal third of each tepal; nectaries soft yellow or pink; pollen moderate red (180A) to black. Tepals thick, 60-90 × 30-40 mm, margins smooth, tips strongly to moderately reflexed. Lvs scattered, 100-150 × 20-30 mm, dark green, ciliate. Stems 1-1.75 m, deep green with a plum overlay, and with 5-20 fls. Late May to early June.

(Produced by embryo culture. All clones so far examined are triploids: 2n = 36. Published in *ILR Seventh Supplement* as Fabergé grex.)

**'Fabriano' I(a/-)**

Parentage unknown

R: Vletter & Den Haan (1987), G: Vletter & Den Haan (1989), N: Vletter & Den Haan (1994), I: Vletter & Den Haan (1995), REG: Oriëntal Andijk B.V. (1995)

Inside vivid orange (28B), tepal-edges paler, tips vivid orange (28A), throat vivid to light orange (28B/D); outside suffused with green, with a strong yellow-green (144B) stripe, strong yellow-green (143A) at tepal-tips with some dark red (187A); spots and papillae absent; nectaries vivid orange; pollen dark reddish orange (175B); stigma dark red (187A). Tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 25-35 mm, mid green. Stems 1.25 cm, green, with dark spots, and with 1-13 fls. Midseason to late.

**'Fair' I(a/-)**

Parentage: Asiatic seedling × 'Connecticut King'

R: Bischoff Tulleken Leliecultuur B.V. (1976), G: Bischoff Tulleken Leliecultuur B.V. (1979), N: Bischoff Tulleken Leliecultuur B.V. (1985), I: Bischoff Tulleken Leliecultuur B.V. (1986), REG: Bischoff Tulleken Leliecultuur B.V. (1985)

Inside vivid yellowish orange (30C); outside strong orange (25A), tepal-edges Saturn red, flamed buff-yellow; a few, tiny spots in the throat; nectaries majolica-yellow; pollen dark reddish brown. Tepals 90 × 50 mm. Lvs scattered, 130 × 20 mm, mid green. Stems 0.9-1 m, mid green, with 10-12 fls (from 16-18 cm bulbs). June. Syn.: 'Flair'.

(Originally named, introduced and registered as 'Flair'. This epithet was published in *ILR Fourth Supplement*. However, Dutch PBR were granted in 1986 under the epithet 'Fair', so this latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Fair Elaine' VI(-/c)**

Parentage unknown

R: J. Aldred (pre 1971), N: J. Aldred, REG: J. Aldred (1971)  
Fls near to light yellow (12C); pollen brown. (Published in *Lilies and other Liliaceae*, 1973: 112.)

**'Fairest' I(b-c/d)**

Parentage unknown

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)

Inside pastel pink; outside darker. Tepal-margins smooth, tips distinctly recurved. Stems 1-1.2 m, with an elongated infl. Mid June.

(Published in *The Lily Garden Cat.*, 1996/97: 3.)

**'Fairing' I(a/-)**

Parentage: 'Old Hollandicum' × 'Tabasco'

R: unknown, G: W. Peryt (1983), N: W. Peryt (1990), I: W. Peryt (1991), REG: W. Peryt (1991)

Inside strong reddish orange (31A), veined vivid reddish orange (33B), throat strong reddish orange (31A); outside vivid yellowish orange (30C), midribs brilliant yellow-green (150C); spots absent; nectaries moderate yellowish green (137D); anthers dark purple (79A), lacking pollen. Fls 125 mm wide; tepals 80 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, 78 × 12 mm, mid green. Stems 1.15 m, dark green, with 7-10 fls and some small bulbils. July.

**'Fair Lady' VII(b/-)**

Parentage: complex (*auratum* × *japonicum*) × *speciosum* hybrid

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls large, soft crimson, each tepal with a deeper ray. Stems 1.5 m. July to Aug.

**'Fair Lady' I(a/b)**

Parentage: 'Lady Fair' × unknown

R: H.E. Hoepner (1982), G: H.E. Hoepner (1984), N: H.E. Hoepner (1991)

Inside yellow, centre of each tepal white, tip pale yellow, throat white; outside yellow blending with light yellow and white; spots numerous, large, dark, on basal half of each tepal; nectaries soft yellow; pollen absent. Tepal-margins smooth, tips not recurved. Lvs scattered, 100-105 × 12 mm, mid green. Stems 1.4 m, mid green, with 12-20 fls. Midseason.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Similar to 'Lady Fair' but with a larger fl. with more white, and a differently shaped infl.)

**'Fair Lady' VI(b/a)**

See *L. × imperiale* 'Fair Lady'.

**'Fair Maid of Perth' IV(-/-)**

See *L. × burbankii* 'Fair Maid of Perth'.

**'Fairy' VII(-/d)**

Parentage: derived from *rubellum* and others

R: J.S. Yeates, N: J.S. Yeates

Fls pink.

**'Fairy' VII(-/b)**

See *L. × parkmanii* 'Fairy'.

**'Fairy Atom' VII(b/a-b)**

Parentage: Atomic Group × pink-flowered form of Little Fairies Group

R: J.P. Green (1960s), G: D.B. Fox (c. 1972), N: D.B. Fox, I: D.B. Fox, REG: D.B. Fox (1986)

Inside and outside in shades of strong purplish pink (73B) to very pale purple (73D); spots reddish, on short papillae, on the basal two-thirds of each tepal; nectaries pale green; pollen bright orange; stigma greenish white. Fls 120 mm wide; tepal-margins slightly ruffled, tips strongly recurved. Lvs scattered, 140 × 42 mm, mid green. Stems 0.95 m, with c.5 fls. From mid July. (Photograph in D.B. Fox, *Growing Lilies*, pl.17 (1985).)

**'Fairy Bride' I(a/-)**

Parentage: 'Avalon' × (*pumilum* × bicoloured clone from Coronado Group)

R: Columbia-Platte Lilies (1979), G: Columbia-Platte Lilies (1981), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Pale yellow (11D) (in cool weather and/or low light) to pure white, throat pure white; outside soft cream-white, midribs with a slight plum overlay; spots few, tiny, inconspicuous, magenta, just parallel to nectary on each tepal; nectaries soft green; pollen greyish red (178A) to moderate reddish brown (177A). Fls slightly fragrant; tepals 40-50 × 10-12 mm, margins smooth, tips not recurved, one often with a slight notch. Lvs scattered, 100-150 × 20 mm, dark green. Stems 0.6-0.8 m, dark green, with 6-15 fls in a well-spaced candelabrum infl. Early to mid June.

**'Fairy Isle' V(-/a)**

See *longiflorum* 'Fairy Isle'.

**Fairy Jewel Group II(-/-)**

See *L. × dalhansonii* Fairy Jewel Group.

**Fairy Jewels Group VII(-/d)**

Parentage: hybrids involving *rubellum* & *L. × parkmanii* 'Manawatu'

R: L. Woodriff (pre 1966), S: L. Woodriff & J.M. Shaver  
Inside appleblossom-pink to rose-red, tepal-tips with a narrow white border. Stems 0.9-1.8 m. Aug. to Sept. (Published in *Rex Bulb Farms Cat.*, 1966/67: 43.)

**'Fairy Pink' I(b/d)**

Parentage: ? *cernuum* hybrid

R: C.F. Patterson (pre 1966), N: C.F. Patterson

Fls light pink, spotted. Lvs mid green. Stems up to 0.6 m. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cultivar Group. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

**Fairy Pink Group VII(-/b)**

Parentage unknown

R: L. Woodriff (pre 1966), N: L. Woodriff, I: (1966)

Fls pink or rose-pink; spots dark pink or dark rose. Fls 125-175 mm wide. Stems 0.8-1.5 m. June to July. (Published in *Rex Bulb Farms Cat.*, 1966/67: 34.)

**'Fairy Princess' IX(b-c/d)**

See *speciosum* 'Fairy Princess'.

**'Fairy Tale' VII(a/b-c)**

Parentage unknown

R: Testcentrum voor Siergewassen B.V. (1998), G: (2000), N: Marklily (2000), I: Marklily (2002), REG: Marklily (2003)

Inside strong reddish purple (70B), throat greenish white (155C), with moderate purplish red (58A) along midveins, tepal-margins and tips greenish white (155C); outside light reddish purple (74C), midribs pale yellow (11D); spots dark red (59A); papillae present; nectaries (145A), pale greenish yellow (10D) along edges; pollen strong brown (172A); stigma light greenish grey (188B), flushed with light reddish purple (74C). Fls 240 mm wide; tepals 125 × 37 mm, margins ruffled, tips strongly recurved. Lvs 195 × 50 mm. Stems 1.1 m, light green, with c.4 fs.

**'Faithful Return' VI(b/a)**

Parentage unknown

R: C. Helsley (1966), G: C. Helsley (c. 1969), N: C. Helsley (1996), I: C. Helsley (1996), REG: C. Helsley (2003)

Inside white, throat light greenish yellow (3C); outside pale green brushed with moderate to light reddish brown (177A/B); spots and papillae absent; nectaries olive-green; pollen orange-brown; stigma dark grey-green. Fls 160 mm wide; tepals 140 × 25-45 mm, twisted, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 4 mm. Stems 1 m, green brushed with darker grey-green, with c.10 fs. Late June.

**'Fakír' VI(b/a)**

Parentage: (('Damsón' × unknown) × Golden Splendor Group) × 'Toni'

R: B. Mičulka (pre 1988), N: B. Mičulka, REG: B. Mičulka (1988)

Inside golden yellow, throat deeper yellow, tepal-edges with mahogany red veins; outside with mahogany-red veins, midribs dark mahogany-red; nectaries greenish yellow; pollen dark ochre. Fls 95 × 150 mm; tepals 135 × 57 mm, strongly recurved; pedicels 90 mm long, strongly spotted dark violet. Lvs scattered, 100 × 12 mm, dull green. Stems 1.15 m, silvery at base, dark violet at top. Mid July.

**'Falcon' IV(c/d)**

Parentage: complex *kelloogii* × *pardalinum* hybrid

R: J. de Graaff (c. 1955), N: J. de Graaff

Fls pale orange, with pink star.

**'Falkonera' I(c/-)**

Parentage unknown

R: V. Strasser (pre 1981), N: V. Strasser, REG: ICRA (1996)

Fls red, tepal-edges golden. Lvs dark green. Stems c.0.9 m, with 10-15 fs. Mid July.

**'Falmouth' I(c/-)**

Parentage: ( *davidii* var.  *willmottiae* × unknown) × unknown

R: Rosewarne EHS (1967), N: Rosewarne EHS (1974), I: Rosewarne EHS (1978), REG: Rosewarne EHS (between 1978 and 1981)

Inside vivid reddish orange (30B), tepal-tips vivid reddish orange (30A), throat vivid yellowish orange (30C); outside light orange-yellow (24C) on vivid reddish orange (30A); spots present; nectaries strong orange (30D); pollen strong reddish orange (169A). Tepals 66 mm long. Lvs moderate yellow-green (146B), narrowly lanceolate, tinged with dark red (187A) at curled tips. Stems c.0.8 m. Late June.

(Published in *Rosewarne Annual Report*, 1978. Said to be a selection from Riviera Group. *Lilies and other Liliaceae*, 1976: 90 cites an earlier 'Falmouth' (Div. I(b)) from the same raiser, but no record of this exists and it is probably an error.)

**'Famosa' VI(b-c/a-b)**

Parentage: (Golden Clarion Group × 'Bright Star') × ('Golden Spur' × 'Honeydew')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997), REG: B. Mičulka (1997)

Inside creamy white, with a star-shaped, beige throat; outside creamy, with apricot showing through at base, midribs pale yellowish green; nectaries green; filaments pale green; pollen apricot; stigma green. Fls 150 mm wide; tepals 125 × 43 mm, moderately recurved; pedicels 65 mm long, brown-dotted. Lvs scattered, 115 × 15 mm, dull dark green. Stems 1.5 m, rigid, densely spotted brown-black, with a short infl. Early July.

**'Fanal' I(a/-)**

Parentage unknown

R: G. Steinbrück (1989), N: G. Steinbrück

Inside pale yellow, each tepal with a dark brown brushmark; nectaries light green; pollen deep orange.

**'Fancy' I(a-b/b)**

Parentage: ('Connecticut King' × Sundrop Group) × (('Tabasco' × 'Enchantment') × ('Sterling Star' × 'Connecticut King'))

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (2000), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside vivid yellow (12A), throat brilliant greenish yellow (3A) with close to light greenish yellow (5D) towards edges; outside light yellow (10B) becoming vivid yellow (12A) towards tepal-edges, midribs pale greenish yellow (10D), suffused with strong yellow-green (144C), outer tepals tipped strong yellow-green (143A); spots absent; papillae few, in the throat; nectaries brilliant greenish yellow (3A); pollen greyish brown (166A); stigma dark red (187A). Fls 190 mm wide; tepals 100-105 × 40-55 mm, margins slightly wavy, tips recurved. Lvs scattered, 140 × 20 mm. Stems 0.5 m, green with a little darker marking, and with 5-6 fs. June.

**'Fancy Crown' VIII(a/c)**

Parentage: 'Trance' × mixed pollen of diploid Asiatic hybrids

R: De Jong Lelies Holland B.V. (1991), G: De Jong Lelies Holland B.V. (1997), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2003)

Inside deep red (53A), throat yellow-green, each tepal strong reddish orange (31A) above nectaries and brilliant greenish yellow (3A) at margins and tip; outside dark reddish orange (178B) with vivid yellow (13A) tepal-margins, midribs strong yellow-green (143A) at top; spots dark red (59A), numerous; papillae brilliant greenish yellow (3A); nectaries strong yellow-green (144C); pollen moderate reddish brown (175A); stigma greyish reddish orange (174D). Fls 165 mm wide; tepals 85 × 30 mm, margins slightly ruffled, tips strongly recurved. Lvs 115 × 22 mm. Stems 1.3 m, green with darker markings, with c.14 fls.

**'Fancy Free' VII(-/-)**

Parentage unknown

R: Sun Valley Bulb Farms, Inc. (1971), N: Sun Valley Bulb Farms, Inc. (1980), I: Sun Valley Bulb Farms, Inc. (1980), REG: Sun Valley Bulb Farms, Inc. (1980)

Inside yellowish white (155D), midveins deep red (60A); outside yellowish white (155D); spots present; nectaries lime-green; pollen rust-coloured. Tepals 200 mm long, margins ruffled. Lvs lanceolate, moderate olive-green (137A). Stems 1.2 m.

**'Fancy Lady' VII(-/b)**

See *L. × parkmanii* 'Fancy Lady'.

**'Fanfare' VII(-/c)**

Parentage unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1961), N: R.L. Strahm (1971), I: H.J. & R.L. Strahm (1971), REG: Strahm's Lilies, Inc. (1981)

Inside strong red (53C), tepal-tips white, throat green; outside strong pink (54C); spots deep purplish red (61A); nectaries green; pollen strong orange (169B). Fls 200-250 mm wide; tepals 115 × 55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 175 × 40 mm, pale green. Stems 1.9 m, green, streaked red, with 13 or more fls. Aug.

(Published in Strahm's sale list, 1971. E. Fisher, *Named Lily Hybrids and their Origins*, 49 (1978) gives the parentage as *speciosum* × *auratum* (which would make it a cv. of *L. × parkmanii*), but this parentage was not mentioned on the registration form.)

**'Fanfaron' VI(c/b)**

Parentage: ('Henrietina' × unknown) × ('Crème de la Crème' × unknown)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside rich apricot, centre with sparse, deep rosy veins; outside paler with pale green midribs; minute brown speckles on a third of each tepal; nectaries deep green; pollen brown; stigma green. Fls 135 mm wide; tepals 105

× 48 mm, thick, margins wrinkled, tips slightly recurved (outer tepals more so); pedicels 85 mm long, slender, spotted with dark brown. Lvs scattered, 110 × 11 mm, dull dark green. Stems 1.25 m, moderately thick, with very dark red-brown dots, with a short infl. Early July.

**'Fangio' VIII(a/b)**

Parentage: seedling J 57 × 'Nerone'

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside deep red and strong purplish red (60A & B); outside strong purplish red (60C), tepal-edges dark red (187B), with a little strong yellow-green (143A) at the base; spots few, dark red (187A), in the throat; papillae absent; nectaries strong yellow-green (143A) with a little moderate purplish red (58A); pollen greyish reddish brown (200B); stigma moderate purplish red (186B). Fls 200 mm wide; tepals 110 × 40-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 20 mm, dark green. Stems 1.2-1.5 m, mid green, with 5-7 fls. June to July.

(*A longiflorum*/Asiatic (LA) hybrid.)

**'Fantagiro' I(a-b/b)**

Parentage: ('Plavovláška' × ('Bělásek' × 'Mánes')) × ('Plavovláška' × 'Dekora')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside bright orange, centre more reddish, tepal-tips paler; outside with pale brown-rosy midribs; spots not numerous, tiny, brown, on a quarter of each tepal; nectaries white-granulated; pollen red-brown; stigma dark brown-purple. Fls 120 mm wide, very slightly out-facing; tepals 90 × 38 mm, margins smooth, tips slightly recurved; pedicels 50 mm long, densely dotted with pale brown. Lvs scattered, 85 × 11 mm, dark green. Stems 0.65 m, moderately thick, densely dotted with pale brown, with a moderate length infl. Mid June.

**'Fan Tan' VI(b/b)**

Parentage: 'Orange Sweety' × copper-flowered Aurelian seedling

R: E. Hickling, N: E. Hickling (1974), I: J. Wadkamper (1979), REG: J. Wadkamper (1977)

Inside tan, throat and tepal-tips cream, tepal-margins paler; outside tan with dark brown stripes; spots absent; nectaries light cream; pollen brown. Lvs dark green. Stems 1.2 m, with 5-6 fls.

(Published in *Lilies and other Liliaceae*, 1977: 77, where the male parent is given erroneously as 'Copper'.)

**'Fantango' VII(b/b-c)**

Parentage unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1963), N: R.L. Strahm (1969), I: H.J. & R.L. Strahm (1973), REG: Strahm's Lilies, Inc. (1981)

Inside strong pink (54C), tepal-tips white, throat strong greenish yellow (151A); outside pink; spots strong purplish red (54A), on basal half of tepals (but not at centre); nectaries vivid yellow (15A); pollen strong orange

(24A). Fls 200-250 mm wide, scented; tepals 100 × 45 mm, margins ruffled, tips becoming slightly recurved. Lvs scattered, c. 125 × 25 mm, mid green. Stems 1.2-1.5 m, green, with 7-12 fls. Aug.  
(Published in Strahm's sales list, 1973.)

**'Fantasia' I(a/-)**

Parentage: 'Fantasy' × unknown  
R: G.M. Chandler, N: G.M. Chandler  
Fls pale yellow with large spots.

**'Fantasia' I(a/c)**

Unaccepted spelling of 'Fantaziia'.

**'Fantasie' I(a/-)**

Parentage unknown  
R: VEG Zierpflanzen (pre 1985), N: VEG Zierpflanzen  
Inside orange-red; spots brown, on half of each tepal. Fls 115 mm wide; tepals 75 × 38 mm. Stems 0.6 m. Mid June.  
(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Fantasy'. Published in B. Mičulka, *Odrůdy lilii pěstované u nás*, (1995), p. 49.)

**'Fantastic' I(b/-)**

Parentage: 'Connecticut Lemonglow' × 'Enchantment'  
R: D.H. Brown (1979), G: D.H. Brown (1982), N: D.H. Brown (1984)  
Inside strong orange (25A), throat vivid orange (28A/B) (20 × 20 mm above nectaries); outside orange; spots absent; nectaries white; pollen strong to moderate orange (168B/C). Tepals 70 × 30-45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100-150 × 10-20 mm, very shiny mid green. Stems 0.9 m, mid green overlaid with light purple, with 12 or more fls, and with bulbils. July.

**'Fantasy' I(a/-)**

Parentage: *dauricum* × *L. × maculatum*  
R: G.M. Chandler (c. 1936), N: G.M. Chandler  
Fls light orange, tepal-tips flushed with red; spots large, brown. Stems up to 0.6 m. Early.  
(Published in *LYB* 10: 60 (1946).)

**'Fantaziia' I(a/c)**

Parentage: complex hybrid including 'Redstart', 'Rubinovaia', 'Destiny', *L. × maculatum* & *cernuum*  
R: M.F. Kireeva (1978), N: M.F. Kireeva  
Fls pinkish lilac to dark old rose; spots large, brown. Fls 100-110 mm wide; tepals 100 × 28-38 mm, down-turned, twisted. Lvs 100 × 10 mm, dark green. Stems 0.8-1.3 m, brown, white-downy, with bulbils. July.  
(Published in M.V. Baranova, *Lilii*, 323 (1990). Included in *ILR Third Supplement* as 'Fantasia' which is an unaccepted spelling.)

**'Fantom' I(a-b/b-c)**

Parentage: 'Korál' × ('Pyrit' × brushmarked seedling)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1996), REG: B. Mičulka (1996)  
Inside deep yellow, centre of tepals brownish red over

nectaries, throat brownish olive-green; outside pale brown; spots numerous, large, dark brown-pink, on two-thirds of each tepal; pollen brown; stigma old rose. Fls 120 mm wide; tepals 75 × 35 mm, slightly recurved (outer tepals more so); pedicels 55 mm long, slightly dotted. Lvs scattered, 70 × 11 mm, dull mid green. Stems 0.85 m, slightly dotted, dark brown at base. Mid July.

**'Faradaya' I(a/-)**

Parentage: 'Chaco' × Mercury Group  
R: W. Gackstatter (1977), G: V. Strasser (1980), N: V. Strasser (1983), I: V. Strasser (1985), REG: V. Strasser (1991)  
Inside red-orange, throat red; outside orange; purple spots on three-quarters of each tepal; pollen red. Tepal-margins smooth, tips not recurved. Lvs scattered, 160 × 10 mm, dark green. Stems 1.5 m, dark green, with c.42 fls. Mid July.

**'Farewell' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1984), G: J. Vasarietis (1988), N: J. Vasarietis (1991), I: J. Vasarietis (1991), REG: J. Vasarietis (1992)  
Inside light purplish pink (65B); outside pale purplish pink (65C); brown spots on half of each tepal; nectaries lilac-white; pollen brown. Fls 120 mm wide; tepals 70 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 14 mm, dark green. Stems 0.7 m, brownish, with c.12 fls. Mid July.

**'Farfalla' I(a/b)**

Parentage unknown  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside light orange (29B), with a brilliant orange (29A) mark on each midvein above the ovary, throat light yellowish pink (29C); outside light yellowish pink (29C), tepal-edges light orange/light yellowish pink (29B/C), midribs strongly suffused with yellow-green (144B); spots and papillae absent; nectaries pale yellowish pink (29D) hairy; pollen strong reddish orange (169A); stigma vivid orange (28A). Fls 170 mm wide; tepals 95 × 35-45 mm, margins smooth, tips recurved. Lvs scattered, 205 × 20 mm. Stems 1.2-1.3 m, green with some darker marking, and with 7 fls.

***fargesii* Franch. IX(c/d)**

Fls greenish white; spots purple or purple-brown, dense; nectaries frosted; anthers orange. Lvs scattered. 100-140 × 2-5 mm. Stems 0.2-0.7 m, with 1 to several fls. SW China.

**'Farolito' VII(b/-)**

Parentage: unnamed seedling × unnamed seedling  
R: Imanse Lelieveredeling B.V. (1991), N: Peacock B.V. (1996), I: Peacock B.V. (1996), REG: Peacock B.V. (2002)  
Inside strong purplish pink (73B), midveins yellowish white (155D) at base, throat rose-pink; outside strong

purplish pink (73B); spots and papillae present; nectaries green; pollen orange-brown; stigma grey. Fls 180 mm wide; tepals 80 × 30 mm, margins ruffled, tips recurved. Lvs scattered, 100 × 20 mm. Stems 0.7 m, green, with 2-6 fls. Very early.

#### 'Faros' VIII(b/b)

Parentage: seedling PH 94-68 × 'Aubade'

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals pale greenish yellow (10D) each with a large brilliant yellow (10A) spot, midveins brilliant yellow (10A) in basal half, apical half light yellow (10B), outer tepals pale greenish yellow (10D) with a light yellow (10B) flame, margins light yellow (10C), throat pale greenish yellow/yellowish white (10D/155D); outside with inner tepals pale yellow (11D), margins pale yellow (11C), midribs light yellow (11B), light green at base, flushed with moderate purplish red (184C) at top, outer tepals yellowish white/pale yellow (155D/11D), along midribs with a moderate purplish red (184C) streak, margins and midribs pale yellow (11C), base of midribs light yellow-green (145B), top strong yellow-green (144B); spots absent; papillae vivid yellow (13A); nectaries strong yellow-green (144A) with brilliant yellow (10A) margins; pollen greyish brown (166A); stigma dark purple (79A). Fls 250 mm wide; tepals 155-163 × 45-70 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 205 × 35 mm. Stems 0.8-1.25 m, light green with dark green stripes, and with c.4 fls. (An Orienpet (OT) lily.)

#### *farveri* Turrill IX(c/d)

Syn. of *duchartrei*.

#### 'Fascination' I(a/c)

Parentage: (*L. × scottiae* × unknown) × unknown

R: G.M. Chandler (1949), G: G.M. Chandler (1952), I: G.M. Chandler (1960)

Inside vivid reddish orange (40A), tepal-edges flushed with vivid orange (28B); spots chocolate-brown. Fls 140 mm wide. Stems 0.8 m.

#### 'Fascination' VII(-/-)

Syn. of 'Dominique'.

#### Fascination Group VI(-/a)

Parentage: selections from Marble Temple Group

S: J.M. Shaver (pre 1966), N: J.M. Shaver, I: J.M. Shaver (1966)

Fls in pastel colours. Stems 1.5-2.1 m. July to Aug. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv.)

#### 'Fashion' I(a-b/b-c)

Parentage: 'Connecticut King' × yellow-flowered seedling

R: Bischoff Tulleken Leliecultuur B.V. (1978), G: Bischoff Tulleken Leliecultuur B.V. (1981), N: Bischoff Tulleken Leliecultuur B.V. (1986), I: Bischoff Tulleken Leliecultuur B.V. (1986), REG: Bischoff Tulleken

Leliecultuur B.V. (1988)

Inside vivid yellow (9B), each tepal with a broad, vivid orange-yellow (21A) flame; outside light yellow-green (154D), midribs light yellow-green (145B), base of tepals green-yellow; spots small, brown, in a ring; pollen moderate orange (168C). Fls 170 mm wide; tepals 80 × 35 mm. Lvs scattered, 140 × 20 mm, mid green. Stems 1 m, green, with 8-12 fls (from 16-18 cm bulbs). July.

#### FASHION-MONGER I(a/b)

Trade designation of 'Modes Dâma'.

#### 'Fatal' I(a/b)

Parentage: (*dauricum* × unnamed seedling) × ('Cinnabar' (Div. I) × unnamed seedling)

R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2002)

Inside vivid reddish orange (42A), throat dark red (187B); outside vivid reddish orange (34B); with age the fl. becomes strong red (46A); spots and papillae present; nectaries dark red (187B); pollen strong brown (172A); stigma deep purplish red (59B). Fls 155 mm wide; tepals 95 × 43 mm, margins smooth or slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 12 mm. Stems 0.9-1.12 m, green, with c.6 fls. June.

#### 'Fatal Attraction' VII(a/b)

Parentage: unnamed seedling × ('Merci' × 'Freedom')

R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside yellowish white (155D), very light purple (75C) towards tepal-margins and tips, midveins brilliant yellow (11A); outside with outer tepals light purple (75B), up to half the tepal-margin yellowish white (155D), midribs yellowish white (158D), inner tepals yellowish white (155D), very pale purple (75D) towards margins and tips, midribs light purple (75B); spots brilliant yellow (11A); papillae yellowish white (155D); nectaries strong yellow-green (144C); pollen vivid yellowish pink (28A); stigma moderate purplish red (59C). Fls 240 mm wide, slightly fragrant; tepals 140 × 68 mm, margins slightly ruffled, tips recurved. Lvs scattered, 190 × 53 mm, green. Stems 1.3 m, green with darker markings, and with 5 fls. July.

#### 'Fata Morgana' I(a/b)

Parentage unknown

R: Gebr. N. & B. Laan & Zn (1988), G: Gebr. N. & B. Laan & Zn (1990), N: Gebr. N. & B. Laan & Zn (1993), I: Gebr. N. & B. Laan & Zn (1993), REG: Gebr. N. & B. Laan & Zn (1994)

AGM 2002

Inside brilliant greenish yellow (6C), tinged with a paler colour along nectaries, midveins suffused with vivid yellow from nectaries up to two-thirds of each tepal; outside light greenish yellow (6D) shading to brilliant greenish yellow/light greenish yellow (6C/D) at tepal-

edges, outer tepals tipped strong yellow-green (143A); spots and papillae dark red (187A), on basal third of each tepal; pollen absent; stigma moderate reddish brown (166B). Fls double, with 12 tepals, 165 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 35 mm, dark green. Stems 0.75-0.95 m, mid green, with c.8 fls. July.  
(Not good for cutting because the fls do not last.)

**'Fatima' VI(b/a)**

Parentage: 'Redgoldina' × unknown  
R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)  
Inside glowing apricot, fading at tepal-tips; outside paler, red-veined, midribs mahogany-red; nectaries green; pollen apricot. Fls 125 mm wide; tepals 140 × 45 mm, somewhat recurved; pedicels spotted dark violet. Lvs 80 × 5 mm, glossy dark green. Stems 1.1 m. Mid July.

**'Faust' I(a/b)**

Parentage: 'Cadans' × 'Ventoux'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside rich yellow, throat and centre brown-red, tepal-tips pale; outside brownish crimson; spots absent; nectaries yellow-green, granulated; pollen brown; stigma dark violet-brown. Fls 135 mm wide; tepals 85 × 40 mm, rather rigid, margins wavy, tips slightly recurved; pedicels 85 mm long, slender, dark brown. Lvs 95 × 11 mm, dull pale green. Stems 0.95 m, dark brown, thick, stiff. Late June.

**'Faustino' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
R: Lybelmex Hillegom B.V. (1990), G: Lybelmex Hillegom B.V. (1992), N: Lybelmex Hillegom B.V. (1996), I: Lybelmex Hillegom B.V. (1996), REG: Lybelmex Hillegom B.V. (1996)  
Inside strong orange-yellow (17A), throat vivid orange-yellow (21A); outside vivid yellow (12A) shaded vivid orange-yellow (21A) at tepal-edges; spots and papillae absent; nectaries strong yellow-green (143B); pollen brilliant yellow (7A); stigma strong orange (26A). Fls 170 mm wide; tepals 90 × 40-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 0.9 m, green, with few fls. June to July.

**'Favola' I(a/b)**

Parentage: ('Koral' × unknown) × 'Blizzard'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002), REG: B. Mičulka (2002)  
Inside white, centre and throat tinged with beige; outside pale pink, midribs brownish; spots very few; nectaries brownish green, white-granulated; pollen orange; stigma brownish pink. Fls 125 mm wide; tepals 75 × 35 mm, margins smooth, tips hardly recurved; pedicels 60 mm long, shiny brown. Lvs scattered, 95 × 11 mm, dull pale green. Stems 0.75 m, with numerous spots, and a moderately long infl. Early July.

**'Favorite' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Favorite'.

**'Favoritka' VI(b/a)**

Parentage: pink-flowered trumpet hybrid × 'Bright Star'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)  
Inside cream, tepal-edges with fine pink veins, throat lemon-yellow; outside cream with pink veins and midribs; nectaries green; pollen apricot. Fls 85 × 145 mm; tepals 140 × 56 mm, tips strongly recurved; pedicels slightly spotted dark violet. Lvs scattered, 95 × 8 mm, slightly glossy deep green. Stems 1.2 m, shaded silver at base. Mid July.

**'Fedorov' I(c/d)**

Parentage unknown, but close to *dauidii*  
G: A.M. Fedorov (1980), N: A.M. Fedorov (1985), REG: A.M. Fedorov (2002)  
Fls orange-red with some black spots; nectaries dark; pollen light red and orange; stigma wine-red/dark red. Fls 65 mm wide; tepals 80 × 15 mm, margins smooth, tips strongly recurved; lowest pedicels to 150 mm long. Lvs scattered, 100 × 4 mm. Stems 0.8 m, green, with up to 20 fls. Mid June to mid July.

**'Feedback' I(a-b/b)**

Parentage: ('Connecticut Yankee' × ('Enchantment' × 'Tabasco')) × 'Gran Paradiso'  
R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside orange, vivid orange (28A) at base, tepal-tips and margins vivid reddish orange (32A); outside vivid reddish orange (30B); some spots and papillae present; nectaries orange; pollen red-brown; stigma purple. Tepal-margins smooth, tips slightly recurved, Lvs scattered, green. Stems 1.5 m, green with no darker markings, and with 7-10 fls. Midseason.

**'Feelings' VII(c/c-d)**

Parentage: (*speciosum* × 'Star Gazer') × (*L. × parkmanii* 'Allegra' × 'Star Gazer')  
R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside deep to moderate purplish pink (70C/D), tepal-edges greenish to yellowish white (157D/155D), midveins light greenish yellow (8C) changing to pale orange-yellow (24D) at top, throat light yellow-green (145B); outside of outer tepals pale yellow-green (4D) edged light purplish pink (65B), outside of inner tepals light purplish pink (65B) edged yellowish white (155B); papillae strong red (47B) on basal part of tepals, light greenish yellow (8C) in the throat; nectaries light grey (191C); pollen strong orange (169B). Fls 155 mm wide; tepals 73 × 40 mm, the inner with margins very slightly ruffled, tips slightly recurved. Lvs scattered, 130 × 47 mm, mid green. Stems 0.65 m, dull green, with c.9 fls. July (under glass).

**'Fekinata' I(a/b)**

See *L. × maculatum* 'Fekinata'.

**'Feldmaier's Überraschung' I(b/-)**

Parentage: hybrid including 'Pink Champagne' in its ancestry

R: W. Reich (pre 1987), N: W. Reich, REG: W. Reich (1988)

Fls ochre-yellow with many spots. Stems 1.2 m, with bulbils. Late July.

(Published in German Lily Group sales list, 1987.)

**'Felice' VII(-/b)**

Parentage: ((*auratum* 'Wittei' × 'Cymbeline') × *rubellum*) × *rubellum*

R: G.G. & F.S. Blake (1981), G: G.G. & F.S. Blake (1985), N: F.S. Blake (1987), I: F.S. Blake (1987), REG: F.S. Blake (1987)

Inside and outside moderate purplish pink (66D), tepal-tips deep purplish pink (66C), throat brilliant orange (25C); spots moderate purplish red (59C); papillae conspicuous; nectaries strong yellow-green (144C); pollen dark reddish orange (178B). Fls 180 mm wide; tepals 130 × 65 mm, margins ruffled, tips slightly recurved. Lvs scattered, 160 × 35 mm, mid green. Stems 1.8 m, moderate yellow-green (147C), with c.18 fls. Feb. (Australia).

**'Felicity' I(b/-)**

Parentage: *amabile* var. *luteum* × 'Valencia'

R: J. de Graaff (c. 1949), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (c. 1954)

Fls yellow, spotted. Stems 1 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1954.)

**'Felix' I(a-b/b)**

Parentage: 'Tabasco' × unknown

R: F. Peryt (1979), G: W. Peryt (1981), N: W. Peryt (1983), I: W. Peryt (1989), REG: W. Peryt (1990)

Inside dark red (59A), tepal-tips deep red (60A), throat brownish orange (171B); outside deep red (60A); black spots on two-thirds of each tepal; nectaries white-frosted and with papillae; pollen vivid orange (28A). Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 10 mm, dark green. Stems 0.35 m, dark red (183A), with c.8 fls. Mid June.

**'Fellowship' VII(-/l)**

Parentage unknown

R: Sun Valley Bulb Farms, Inc. (1975), N: Sun Valley Bulb Farms, Inc. (1980), I: Sun Valley Bulb Farms, Inc. (1980), REG: Sun Valley Bulb Farms, Inc. (1980)

Inside pale purplish pink (56D), midveins strong red (50A) and strong purplish red (64B), tepal-tips pale purplish pink (56A); outside pale purplish pink (56D); lightly spotted; nectaries lime-green; pollen rust-coloured. Tepals 165 mm long, margins slightly ruffled. Lvs ovate, moderate olive-green (146A). Stems 1 m.

**'Fenice' VII(a-b/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside very light purple (75C), each tepal with a light greenish yellow (6D) spot at the base and light purple (75B) at the tip, throat yellowish white (155D); outside with outer tepals light purple (75A), inner tepals very pale purple (76C), basal half of midribs yellowish white (155D); spots few, deep purplish red (59B), on basal part of tepals; papillae greenish yellow (6D); nectaries (151C); pollen pale yellow-green (196B); stigma greyish yellow-green (195B). Fls 230 mm wide, slightly fragrant; tepals 142 × 80 mm, margins slightly ruffled, tips slightly recurved. Lvs 210 × 56 mm, dark green. Stems 1 m, green with darker markings, with c.3 fls.

**'Fenomenale' VII(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1991), N: Bischoff Tulleken Lelies B.V. (1997), I: Bischoff Tulleken Lelies B.V. (1998), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside vivid purplish red (57C/D) on a paler ground, midveins strong red (53B), throat yellowish white (155B); outside vivid purplish red (57C) on a paler ground, tepal-tips strong yellow-green (144A), a little stronger coloured beside the midribs which are strong yellow-green (143B/144B); spots on up to a third of each tepal; papillae yellowish white (155B) and dark red (59A) in the throat; nectaries strong yellow-green (143B) with a yellow rim; pollen strong brown (172A); stigma greyish yellow-green (195B). Fls 240 mm wide; tepals 120 × 40-55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 30 mm. Stems 0.8 m, light green with darker markings, and with c.3 fls. July.

**'Ferienfreude' I(a/-)**

Parentage unknown

R: VEG Zierpflanzen (pre 1983), N: VEG Zierpflanzen Fls yellow. Stems to 0.95 m. Late June.

(Published in German Lily Group sales list, 1993.)

**'Fermata' I(a/b)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1993) Fls pale gold; spots deep purple on basal third to half of each tepal. Fls 120-130 mm wide; tepal-margins slightly ruffled, tips recurved. Stems 0.8-0.8 m, with 27-40 fls. July.

(Published in M.F. Kireeva, *Lilii*, 56 (2000).)

**'Ferrara' I(a-b/-)**

Parentage unknown

R: Vletter & Den Haan (1991), G: Vletter & Den Haan (1993), N: Vletter & Den Haan (1997), REG: Vletter & Den Haan (1998)

Inside strong purplish red (54A), paling with age; outside strong purplish red (54A); spots few, small; papillae present; nectaries green, changing to red; pollen brown; stigma red. Stems medium to tall, green with darker stripes and spots. Early to midseason.

**'Ferrari' I(a/-)**

Parentage unknown

R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1989)  
 Inside vivid to brilliant orange-yellow (23A/B) with a strong orange (24A) blush; outside brilliant orange-yellow (23B); spots small, dark reddish orange (172B), on the blush; pollen strong reddish orange (169C). Fls 150 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 10 mm, mid green. Stems 0.65 m, green with darker markings, and with c.8 fls. June.

**'Festia' I(c/-)**

Parentage: yellow-flowered seedling × 'Sonnentiger'

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1981), I: V. Strasser (1984), REG: V. Strasser (1986)  
 Fls yellow throughout, apart from purple spots on two-thirds of each tepal. Tepals 80 mm long, margins smooth, tips slightly recurved. Lvs scattered, 150 × 15 mm, dark green. Stems 1.2 m, almost black, with up to 52 fls. Mid July.

**'Festival' I(a/b)**

Parentage unknown

R: Fa P. Hoff & Zn, G: Fa P. Hoff & Zn, N: Fa P. Hoff & Zn (1980), REG: Fa P. Hoff & Zn (1980)  
 Inside vivid yellow (14B) with a central currant-red star, tepal-edges current-red, tips flamed brick-red; outside red-brown to violet-red; spots dark brown; anthers burnt orange. Stems 1 m, with c.12 fls.  
 Trade designation: HOLEB.  
 (Published in *Bloembollencultuur*, June 1980.)

**'Festivalflamme' I(a/-)**Parentage: *L. × scottiae* 'Festival of Britain' × dark red-flowered Mid-century Group

R: J. Petruske (pre 1965), N: J. Petruske (1972), REG: J. Petruske (pre 1985)  
 Inside vivid orange (28B); outside light orange (28C), tepal-margins vivid orange (28B); spots numerous, tiny, dark red (187A), on a third of each tepal; nectaries white-frosted; pollen (strong orange 169B). Fls 125 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 83 × 8 mm, dark green. Stems 0.8 m, mid green. June to July.

**'Festival of Britain' I(b/-)**See *L. × scottiae* 'Festival of Britain'.**'Festkleid' I(a/-)**

Parentage: 'Zlata' × 'Fantasie'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)  
 Fls strong orange-yellow (22A); spots many, conspicuous, red-purple, on basal two-thirds of each tepal; nectaries greenish white (155C), hairy, conspicuous; pollen strong red (46A). Fls 140 mm wide; tepals 70 × 35 mm, margins smooth, tips not reflexed. Lvs scattered, 70 × 12 mm, dark green. Stems 0.8 m, rather dark green, with c.15 fls. Mid to late June.

**'Festone' I(a/b)**

Parentage: seedling R 90-10 × seedling G 91-04

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
 Inside vivid yellow (9A), throat brilliant yellow-green (150B); outside with inner tepals light greenish yellow (4B), edged light greenish yellow (4B), midribs brilliant greenish yellow (2B), outer tepals brilliant greenish yellow (1B), edged vivid yellow; spots few, dark red (187B), in the throat; papillae present; nectaries white-hairy; pollen dark reddish orange (175C); stigma vivid yellow (12A). Fls 150 mm wide; tepals 110 × 55 mm, margins smooth, tips recurved. Lvs scattered, 210 × 20 mm. Stems 0.9-1.25 m, green, with 6-8 fls (from 14-16 cm bulbs); buds hairy.

**'Fetis' VI(b-c/b)**Parentage: *L. × aurelianense* Golden Sunburst Group × unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002), REG: B. Mičulka (2002)  
 Inside white, centre and throat deep apricot, tepal-edges slightly pink-veined; outside with apricot glowing through, midribs slightly pinkish; spots absent; nectaries green; pollen apricot-brown; stigma crimson-red. Fls 160 mm wide; tepals 110 × 33 mm, margins smooth, tips very strongly recurved; pedicels 60 mm long, green. Lvs scattered, 115 × 20 mm, dull mid green. Stems 0.95 m, slightly marked with violet-brown and with a short infl. Mid July.

**'Feu Brilliant' I(a/b)**See *L. × hollandicum* 'Feu Brilliant'.**'Feuerball' I(b/-)**Parentage: (*lancifolium* × unknown) × 'Red Tiger'

R: A. Winkler (pre 1981), N: A. Winkler  
 Inside brick-red with dark spots. Stems to 1.3 m, dark, with up to 15 fls and many bulbils. Late July.  
 (Published in Gesellschaft der Staudenfreunde, bulb list, 1981.)

**'Feuerchor' I(a/b-c)**

Parentage: 'El Paso' × 'Neptunsilber'

R: G. Steinbrück (1992), G: G. Steinbrück (1994), N: G. Steinbrück (1998), I: G. Steinbrück (1998), REG: G. Steinbrück (1998)  
 Inside strong red (53B), with a few very inconspicuous spots in centre of fl.; nectaries strong purple (83C), white-frosted; pollen strong red (53B); stigma strong red (53B). Fls 140 mm wide; tepals 70 × 25 mm, margins smooth, tips hardly recurved. Lvs scattered, 85 × 12 mm, mid green. Stems 0.7 m, rather dark green, with up to 8 fls. Mid July.

**'Feuerschein' I(b/c)**

Parentage: 'Amurgold' × 'Jetfire'

R: G. Steinbrück (1988), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (2000), REG: G.

Steinbrück (2003)

Inside strong yellowish pink (34D) with a large, soft pale yellow (20C) blotch at base of each tepal; outside strong yellowish pink (34D); spots tiny, red-violet, scattered, at base of each tepal; nectaries soft green, edged with soft pink; filaments pink; pollen dark reddish orange (175C); style soft pink; stigma deep purplish red (59B). Fls 140 mm wide; tepals 60 × 35 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 80 × 13 mm. Stems 0.7 m, mid green, with 8-10 fls. Late June to early July. (Published in ELG sales list, 2000. Nomenclatural standard: colour print provided by registrant (WSY 0038764).)

**'Feuertanz'** I(-/-)

Parentage unknown

R: VEG(S), Erfurt (1979), N: VEG(S), Erfurt

Fls red. Stems 0.6 m. June.

**'Feuer und Rauch'** I(b/-)

Parentage unknown

G: C. Feldmaier (1966), N: C. Feldmaier (1972), I: C. Feldmaier (1980), REG: G. & F. Ewald (1988)

Inside moderate red (179A); outside moderate red (179B); slight, dark brown spotting on basal half of each tepal; nectaries vivid orange (28A); pollen dark reddish orange (173A). Fls 140 mm wide; tepals 130 × 80 mm, margins smooth, slightly recurved. Lvs scattered, 120 × 25 mm, dark green. Stems 0.9 m, dark green, with c.10 fls in an almost umbellate infl. Late July. (Published in Gesellschaft der Staudenfreunde bulb list, 1983. A chance hybrid that appeared in 1963.)

**'Feuervogel'** I(a/b)

Parentage: 'Saxonia' × 'Niederheide-star'

R: G. Thürmer (1988), G: G. Thürmer (1990), N: G. Thürmer (2001), I: G. Thürmer (2001), REG: G. Thürmer (2001)

Inside vivid yellow (9A); outside vivid yellow (9B); with a conspicuous dark red (187A) brushmark on basal half of each tepal breaking up into some streaks and spots towards base; nectaries greenish; pollen vivid orange (28A). Fls 140 mm wide; tepals 70 × 35 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 70 × 12 mm. Stems 0.7 m, pale green, with 5-10 fls from greenish yellow buds. Early to mid July. (Nomenclatural standard: colour print provided by registrant (WSY 0030339).)

**'Feuerwalze'** I(b/-)

Parentage: Citronella Group × 'Prince Charming' (Div. I)

R: N. Martschinke (1972), G: N. Martschinke (1974), N: N. Martschinke (1976), REG: N. Martschinke (1988)

Inside brighter than vivid reddish orange (30A), throat vivid reddish orange (30B); outside strong to moderate orange (170A/C); scattered, small dark spots on basal half of each tepal; nectaries vivid reddish orange (30A). Tepals 60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 7 mm, dark green. Stems 1.4 m, almost black, with c.18 fls, including many secondary buds.

Early July to early Aug.

(Published in German Lily Group sales list, 1985.)

**'Feuerwerksmusik'** I(a/b)

Parentage: yellow-flowered Asiatic seedling × brushmarked seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Inside and outside strong yellowish pink (31C); brushmarks large, vivid red (45A); nectaries soft grey-green; pollen strong red (46A). Fls 130 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 65 × 15 mm, mid green. Stems 0.7 m, rather dark green, with c.12 fls. Mid July.

**'Feuerzauber'** I(a-b/b)

Parentage: *L. × hollandicum* 'Erectum' × *lancifolium*

R: Gebr. N. & B. Laan & Zn (c. 1970), N: Gebr. N. & B. Laan & Zn

Fls strong reddish orange (31A), with dark spots on basal half of each tepal. Stems 0.4-1 m. July.

**'Feuerzunge'** I(a/c)

Parentage unknown

R: H. Gerke (pre 1988), N: H. Gerke, REG: H. Gerke (1990)

Tepals with an orange ray. Stems 1.1 m, with c.17 fls, including secondary buds.

(Published in German Lily Group sales list, 1990.)

**'Feurio'** I(b/-)

Parentage: 'Connecticut King' × sienna-brown-flowered Tiger Group

R: C. Feldmaier (1973), G: C. Feldmaier (1978), N: C. Feldmaier (1984), I: C. Feldmaier (1985), REG: G. & F. Ewald (1988)

Inside vivid orange-yellow (23A), tepal-tips vivid orange-yellow (23A), throat vivid reddish orange (33A); outside brilliant orange-yellow (23B) overlaid reddish; spots few, dark brown, in the throat; nectaries vivid reddish orange (33A); pollen orange; stigma chocolate-brown. Fls 110 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved; pedicels 60-80 mm long, horizontal. Lvs scattered, 70 × 30 mm, mid green. Stems 1.1 m, black, with c.10 fls in a racemose infl. July to Aug. (Published in Gesellschaft der Staudenfreunde, bulb list, 1985.)

**'Fez'** I(b-c/c-d)

Parentage: Sutter's Gold Group × 'Sun Ray'

R: B. Mičulka (c. 1982), N: B. Mičulka, REG: B. Mičulka (1984)

Inside pale yellow, each tepal flushed with ochre at centre, throat pale yellow; outside with pale green midribs; nectaries white-frosted; pollen pale brown. Fls 100 mm wide; tepals 85 × 40 mm, margins slightly curled, tips strongly recurved; pedicels slightly brown-spotted. Lvs 90 × 10 mm, glossy dark green. Stems 1.1 m, dark violet-brown at base. Mid July.

**‘Fialkovaia’ I(b/d)**

Parentage: *monadelphum* × *L.* × *maculatum*

R: I.V. Michurin (1914), N: I.V. Michurin

Fls carmine-lilac, centre yellow; spots dark brown; nectaries green; anthers black; pollen brown-lilac. Fls 60-90 mm wide, with a delicate scent. Lvs 50-60 × 8 mm. Stems 1-1.3 m, green, downy, with 11-20 fls in a pyramidal infl. May to July.

Syn.: *L.* × *fialkovaja*.

(Unaccepted spelling: ‘Fialkovaja’; ‘Fialkovaya’. Published in *LYB* 33: 74 (1970) as ‘Fialkovaya’. McRae in *Lilies* p. 299 (1998) gave the parentage as *monadelphum* (syn. *szovitsianum*) × *bulbiferum*.)

**× *fialkovaja* I(b/d)**

Syn. of ‘Fialkovaia’

(This name, although it has appeared in the literature, has never been published with a Latin description and is therefore invalid.)

**‘Fialkovaja’ I(b/d)**

Unaccepted spelling of ‘Fialkovaia’.

**‘Fialkovaya’ I(b/d)**

Unaccepted spelling of ‘Fialkovaia’.

**‘Fiandra’ VIII(a/b)**

Parentage: seedling BG 94-10 × seedling G 92-10

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside vivid yellow (12A), midveins and tepal-edges vivid yellow (17B), throat brilliant greenish yellow (1B); outside light greenish yellow (5D), becoming vivid yellow (12A) toward the vivid yellow (17B) tepal-edges; spots and papillae absent; nectaries light greenish yellow (1C), hairy; pollen moderate orange (167A); stigma vivid yellow (12A). Fls 200 mm wide; tepals 120 × 50 mm, margins smooth, tips recurved. Lvs scattered, 215 × 25 mm. Stems 1.5 m, green with darker markings, and with c.4 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Fiasko’ I(a/-)**

Parentage unknown

R: M.F. Kireeva (1985)

Fls lilac-pink, tepal-centres golden apricot; spots present. Fls 110-120 mm wide. Stems 1.1-1.2 m, with 7-18 fls. July.

(Published in M.F. Kireeva, *Lilii*, 61 (2000).)

**FIDANZA VII(a/b)**

Trade designation of ‘Zantrifid’.

**‘Fidelio’ I(a/-)**

Parentage: ‘Connecticut King’ × (*L.* × *hollandicum* × unknown)

R: Fa J. Dignum & Zn, G: Fa J. Dignum & Zn, N: Gebr. Van Zanten B.V. (1980), REG: Gebr. Van Zanten B.V. (1980)

Fls vivid orange-yellow (21A), throat slightly spotted; anthers brown.

(Published in *Bloembollencultuur*, June 1980.)

**‘Fidelity’ I(a-b/-)**

Parentage unknown

R: J.W.A. van der Wereld (pre 1993), G: J.W.A. van der Wereld, N: J.W.A. van der Wereld (1993), I: J.W.A. van der Wereld (2002), REG: J.W.A. van der Wereld (2002) Inside and outside vivid yellowish orange (30C); spots and papillae present; nectaries orange; pollen orange-brown; stigma dark purple. Tepal-margins ruffled, tips recurved. Stems green with dark stripes and spots. Midseason to late.

**‘Fiery Belles’ VIII(a-b/b)**

Parentage: (*L.* × *aurelianense* × ‘Redland’) × Asiatic seedling 75-38-1

R: L.M. Collicutt & W.G. Ronald (1982), G: L.M. Collicutt (1984), N: Morden Research Center (1996), I: Morden Research Center (1996), REG: Morden Research Center (1997)

Inside strong orange (168B); spots absent; nectaries dark brown, 20 × 2 mm; stamens and style strong orange (168B); pollen moderate reddish brown (166B); stigma moderate purplish red (186B). Fls 130 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 22 mm, mid green. Stems 0.85 m, mid green, with c.8-10 fls. Mid July.

(An Asiatic/Aurelian derivative. Published in *The Lily Nook Cat.*, 1997: 18. Included in *ILR Sixteenth Supplement* under the incorrect spelling ‘Firey Belles’.)

**‘Fiery Chariot’ I(b/c)**

Parentage: ‘Red Knight’ × unnamed seedling

R: C. Robinson (1974), G: C. Robinson (1977), N: C. Robinson (1983), I: C. Robinson (1984), REG: C. Robinson (1983)

Inside vivid red (45A); outside vivid red (44A); spots few, medium, dark brown, at base of tepals; nectaries yellowish red; pollen brown. Tepals 78 × 24 mm, margins smooth, tips strongly recurved. Lvs scattered, 106 × 10 mm, mid green. Stems c.1.1 m, dark green, reddish green near base, with c.18 fls. July.

**‘Fiery Eyes’ I(a/-)**

Parentage unknown

R: J. Wadepammer, N: J. Wadepammer, I: Borbeleta Gardens (1994), REG: ICRA (1998)

Tricolour: centre deep raspberry-red, the middle half of each tepal yellow peppered with purple spots, apical parts red. Stems 0.6 m. Midseason.

**‘Fiery Sunset’ I(c/d)**

Parentage: ‘Scarlet Robe’ × unnamed seedling

R: C. Robinson (1966), N: C. Robinson (1976), REG: C. Robinson (1977)

Fls orange-red throughout; spots absent; nectaries darker red; pollen red. Tepal-margins smooth. Lvs dark green, 125 × 7 mm. Stems 1.2 m, with up to 34 fls. Early. (Published in *Lilies and other Liliaceae*, 1977: 77.)

**Fiesta Group I(c/d)**

Parentage: contains *amabile*, *dauricum* & *davidii*

R: J. de Graaff, N: J. de Graaff, I: J. de Graaff (1946)

Fls pale straw-yellow to vivid red, lightly maroon-spotted.

Stems 1.2 m. June to July.

(Published in *Oregon Bulb Farms Cat.*, 1948.)

**'Fiesta Gitana' I(a/-)**

Parentage: 'Connecticut King' × 'Pirate'

R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff

Tulleken Lelies B.V. (1981), N: Bischoff Tulleken Lelies

B.V. (1985), I: Bischoff Tulleken Lelies B.V. (1987),

REG: Bischoff Tulleken Lelies B.V. (1988)

Inside strong reddish orange (32B), throat strong reddish

orange (42B); outside moderate orange (171C/D),

midribs rust-brown; spots dark brown on a narrow flame

of strong orange (24A). Fls 160 mm wide; tepals 80 × 40

mm, margins smooth, tips not recurved. Lvs scattered,

160 × 10 mm, mid green. Stems 0.7 m, green with dark

spots, and with 6-8 fls. June.

**'Figaro' I(a/b)**

Parentage: 'Tabasco' × 'Connecticut King' ×

'Firecracker'

R: Bischoff Tulleken Leliecultuur B.V. (1978), G:

Bischoff Tulleken Leliecultuur B.V. (1981), N: Bischoff

Tulleken Leliecultuur B.V. (1986), I: Bischoff Tulleken

Leliecultuur B.V. (1986), REG: Bischoff Tulleken

Leliecultuur B.V. (1988)

Inside strong reddish orange (34C), throat strong red

(39A); outside strong yellowish pink (32C), each tepal

with a brownish red edge and greenish basal markings;

spots dark brown, in the throat; pollen greyish red

(178A). Fls 140 mm wide; tepals 90 × 40 mm. Lvs

scattered, 100 × 15 mm. Stems 0.9-1 m, with 8-12 fls

(from 16-18 cm bulbs). July.

**Fighter Group I(-/b)**

Parentage: seedling selections from Stenographer Group

S: I. Preston (1940s), N: I. Preston

Shorter than in Stenographer Group, with fls more bowl-shaped, often up-facing.

**'Figi' I(a/c)**

Parentage unknown

R: H.E. Hoepner (pre 1985), G: S.R. Kaul (1986), N:

S.R. Kaul (1991), REG: H.E. Hoepner & S.R. Kaul

(1991)

Inside light orange, darker at tepal-edges and tips; outside

greenish orange; spots few, maroon-red, from nectaries to

the midpoint of each tepal; nectaries light orange; pollen

absent (male sterile). Tepals 75-80 × 30 mm, margins

smooth, tips not recurved; pedicels curving upwards. Lvs

scattered, 125 × 15 mm, mid green. Stems 1 m, dark

reddish brown, with 10-15 fls. Midseason.

**'Filaret' I(a/-)**

Parentage: 'Arktika' × 'Symfonieta'

R: A.V. Otroshko (1991), N: A.V. Otroshko, REG: A.V.

Otroshko (1994)

Inside white, suffused with moderate rose-pink in the

centre; spots few, small, black, in the throat; nectaries white-frosted; pollen red. Fls 140 mm wide; tepals 72 × 47 mm, margins slightly ruffled, tips slightly recurved. Stems 1.1 m, green. Early July.

**'Filibuster' II(-/)**

Parentage: complex *martagon* hybrid × probably

'Tsingense'

R: J.C. Ericksen (1979), G: J.C. Ericksen (1989), N: J.C.

Ericksen (1991), REG: J.C. Ericksen (1991)

Fls dark golden yellow throughout, slightly darker in the

throat; spots absent; nectaries green-gold; pollen golden

yellow. Tepals 40 mm long, not recurved. Lvs whorled,

125 × 20-50 mm, pale to mid green. Stems 1 m, dark

green, with c.10 fls. July.

**'Finale' I(b/-)**

Syn. of 'Herbstsonne'.

**'Fine Art' VII(b/b)**

Parentage: *auratum* × 'Freedom'

R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff

Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies

B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1988),

REG: Bischoff Tulleken Lelies B.V. (1994)

Inside yellowish white (155D), midveins pale yellow-

green (4D) from nectaries along two-thirds of each

tepal; outside yellowish white (155D), midribs slightly

suffused with dark red (183A) towards base and tinged

with strong yellow-green (144B/C) at the base; spots and

papillae yellowish white (155A & B) on three-quarters

of each tepal; pollen strong orange (169C); stigma dark

red (187A). Fls 290 mm wide; tepals 155 × 75 mm,

margins ruffled, tips slightly recurved. Lvs scattered, 165

× 45 mm, mid green. Stems 0.8 m, pale green with a few

darker markings, and c.6 fls.

**'Finesse' I(a/-)**

Parentage: 'Connecticut King' × Hallmark Group

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc.

(1977), N: Oregon Bulb Farms, Inc. (1986), I: Oregon

Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc.

(1986)

Inside and outside clear pink, tepal-tips deep pink, throat

clear pink; spots few, tiny, near nectaries; nectaries lime-

green; pollen soft gold. Tepals 90 × 30 mm, margins

smooth, tips slightly recurved. Lvs scattered, 120 × 10

mm, mid green. Stems 1.2 m, light green, with 8-25 fls.

Late June.

(Published in *Oregon Bulb Farms Retail Cat.*, 1986/87.)

**'Finest White' IX(b/c)**

See *auratum* 'Finest White'.

**'Fiona' VI(-/a)**

Parentage unknown

Fls 145 mm wide; tepals 130 × 50 mm. Stems 1.2 m.

(Listed in *K.L. Watkins Cat.*, 1983.)

**'Fiorentina' VIII(a/b)**

Parentage: seedling LBG 93-3 × seedling G 92-01

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside vivid yellow (12A), throat brilliant yellow-green (149A); outside of inner tepals brilliant greenish yellow (1B) on a vivid yellow (12A) ground, outer tepals brilliant yellow (12B) with a vivid yellow (12A) edge, all midribs brilliant yellow-green; spots and papillae absent; nectaries pale greenish yellow (2D) hairy; pollen greyish brown (165/166A); stigma greyish red (178A). Fls 150 mm wide; tepals 125 × 50 mm, margins smooth, tips recurved. Lvs scattered, 120 × 50 mm. Stems 0.8 m, green with darker markings, and with c.3 fls; buds hairy. (A *longiflorum*/Asiatic (LA) hybrid. Published in *ILR Nineteenth Supplement* erroneously as 'Fiorentino').

#### 'Fiorentino' VIII(a/b)

Error for 'Fiorentina'.

#### 'Fire' I(a/-)

Parentage unknown

R: P. Hoff, G: Hoffgaarde B.V. (1993), N: Hoffgaarde B.V. (1993), I: Hoffgaarde B.V. (1996), REG: Hoffgaarde B.V. (1996)

Inside vivid reddish orange (34A/B), tinged with vivid orange (28A) above nectaries, throat moderate red (180A), the colour blending into main tepal colour; outside strong reddish orange (42B) in basal part, shading upwards to strong reddish orange (169A), paler towards tepal-tips; spots absent; papillae in the throat; nectaries white-hairy; pollen moderate reddish brown (175A); stigma dark red (183B). Fls 165 mm wide; tepals 100 × 35-45 mm, margins slightly ruffled, tips hardly recurved. Lvs scattered, 100 × 25 mm, mid green. Stems 1.35 m, pale green with darker markings, and with c.5-6 fls. Trade designation: HOFFRICA® FIRE.

#### 'Fire Alarm' I(a/-)

Parentage: (*leichtlinii* var. *maximowiczii* 'Unicolor' × 'Connecticut King') × ('Enchantment' × (*pumilum* × bicoloured Coronado Group))

R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Inside vivid reddish orange (30A/B) to vivid orange (28A), tepal-tips vivid reddish orange (30A/B), throat vivid reddish orange (30A/B); outside vivid orange (28A); spots medium sized, magenta, parallel to nectaries; nectaries soft orange; pollen greyish red (178A). Tepals 70-80 × 20-30 mm, margins very lightly ruffled as fl. ages, tips slightly recurved. Lvs scattered, 100-150 × 10-20 mm, mid green. Stems 1-1.2m, dark green, with 5-10 fls, and bulbils. Late June to early July.

#### 'Fireaway' I(a/b)

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler (1980), N: B.G. Hayler (1985), I: B.G. Hayler, REG: B.G. Hayler (1986)  
Fls strong red (46A); spots black, in centre third of each

tepal; nectaries green-white; pollen light brown. Tepals 100 × 35 mm, margins ruffled, tips slightly recurved. Lvs scattered, 100 × 12 mm, dark green. Stems 1.5 m, deep green with c.20 fls. Dec. (Australia).

Syn.: 'Marquita'

(Introduced as 'Marquita' in 1985.)

#### 'Fireball' I(b/d)

Parentage: selection from Mid-century Group

S: J. de Graaff (c. 1952), N: J. de Graaff

Fls fire-red. Stems 1-1.5 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1957.)

#### 'Firebird' I(c/-)

Parentage: diploid *lancifolium* × 'Grace Marshall'

R: J.C. Taylor (1940), G: J.C. Taylor (1943), N: J.C.

Taylor (1951), I: Ontario Agricultural College, Dept. of Horticulture (1951), REG: University of Guelph (1983)

Fls strong yellowish pink (40D) throughout, heavily spotted. Tepal-margins smooth, tips strongly recurved.

Lvs scattered, 160 × 12 mm, dark green. Stems 1.2-1.5 m, moderate reddish brown (177A), with c.23 fls, and bulbils in upper part of stem. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978). There are three cvs with this epithet.

Although the one found by Horsford was the earliest to be published, very little is known about it and it is unlikely to be extant. Taylor's 'Firebird' was registered in 1983 and is the one selected by the ICRA as accepted (ICNCP, 2004: Art. 26.3).)

#### 'Firebird' I(b/c)

Parentage unknown

Fls apricot.

(Unacceptable name: see note under 'Firebird' (of Taylor).

Published in *Sandyloam Cat.*, 1950. Found by W.C.

Horsford in a Vermont (USA) garden.)

#### 'Firebird' I(a/b)

Parentage: 'Jonithe' × red-flowered seedling

R: Mak Lelieveredeling B.V. (1989), G: Mak-Leek Inc.

(1991), N: Mak-Leek Inc. (1997)

Inside vivid red, each tepal with an orange flame from the base, with small red stripes in the flame; outside dark red with vivid red midribs, tepal-tips greenish; spots tiny, dark, mainly towards base of each tepal; nectaries dark brown; pollen red-orange; stigma dark red. Fls 155 mm wide; tepals 90 × 30-45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 20 mm. Stems 0.6-0.95 m, grey-brown and green, with 5-12 fls. June to early July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for other lilies.)

#### 'Firebrand' I(a/b)

Parentage: 'Harmony' × 'Byam's Ruby'

R: E.A. McRae (c. 1966), I: Oregon Bulb Farms, Inc.

(1976), REG: Oregon Bulb Farms, Inc. (1977)

Fls deepest shiny red; spots small, at base of each tepal; filaments cream; pollen dark reddish brown; stigma deep purple. Fls 125 mm wide; pedicels c.50 mm

long, upright. Lvs 75-100 mm long, glossy deep green with a reddish cast. Stems 0.6-1 m, dark, with tiny inconspicuous spots, and with 6-12 fls. June.  
(In *ILR* (1982) the parentage was given as Mid-century Group × ('Brenda Watts' × unknown). However, the first-found publication of the epithet in *Lilies and other Liliaceae*, 1977: 78 gives the parentage as 'Harmony' × 'Byam's Ruby', and this parentage appears in the application submitted by E.A. McRae for the USPP that was granted in 1978. It is thus assumed that the latter parentage is correct and the parentage given in *ILR* (1982) is erroneous.)

**'Firebright' I(b/b)**

Parentage: 'Flame' × *L.* × *hollandicum* 'Christmas Red'  
R: A.J. Porter (c. 1963), N: A.J. Porter  
Fls vivid currant-red, more or less unspotted. Fls open funnel-shaped, scented. Stems up to 0.8 m, with a pyramidal infl., and with bulbils. July.  
Syn.: 'Wildfire'.  
(Published in *ILR* (1969). Formerly known as 'Wildfire'. Fl. colour does not fade.)

**'Fire Chief' VII(b/b)**

See *L.* × *parkmanii* 'Fire Chief'.

**'Firecloud' VI(-/a-d)**

Parentage: selection from Aurelian Group  
S: C. Yerex (c. 1964), N: C. Yerex  
Fls vivid orange (28B), apical half of tepals pale greenish yellow (9D). Fls semi-trumpet-shaped, very wide-flaring; tepals strongly recurved. July.

**'Firecracker' I(a/b)**

Parentage: 'Harmony' × 'Byam's Ruby'  
R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1975)  
Fls deepest cherry-red, non-fading. Stems 1-1.2 m, with 8-30 fls. June to July.  
Syn.: 'Seventeen Hundred and Seventy-six'.  
(Originally registered and published (in *Lilies and other Liliaceae*, 1975: 96) as 'Seventeen Hundred and Seventy-six', but in 1978 a USPP was granted under the epithet 'Firecracker' so this later epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Firecrown' I(a/-)**

Parentage: *concolor* × Mid-century Group  
R: J. de Graaff (c. 1954), N: J. de Graaff  
Fls vivid reddish orange (33B), slightly spotted at base inside. Stems 1 m. July.  
(Published in *Oregon Bulb Farms Cat.*, 1954.)

**'Fire Dance' I(a/-)**

Parentage: Mercury Group × salmon-pink-flowered seedling  
R: J. Wadepammer (1975), N: J. Wadepammer (1977), REG: J. Wadepammer (1978)  
Inside fiery red, throat brilliant red; outside deeper; lightly spotted; nectaries reddish; pollen brown. Tepal-

margins smooth. Lvs dark green. Stems 1.1 m.  
(Published in *Lilies and other Liliaceae*, 1978/9: 108.)

**'Fire Dance Group VII(b/b)**

Error for Fire Dancer Group.

**'Fire Dancer Group VII(b/b)**

Parentage: derived from *speciosum*, *auratum* & *rubellum*  
R: H.J. Strahm, N: H.J. Strahm (c. 1973), I: H.J. Strahm  
Inside crimson or red, tepals with white margin; spots darker red; pollen orange. Fls 150-225 mm wide; tepal-margins smooth, tips slightly recurved. Stems 1-1.9 m. July to Sept.  
(Published in *ILR* (1982) erroneously as Fire Dance grex.)

**'Fire Engine' IX(c/a)**

See *canadense* var. *ediorum* 'Fire Engine'.

**'Fireflame' I(b/-)**

Parentage: selection from Mid-century Group  
S: J. de Graaff (1941), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1949)  
Fls vivid reddish orange (40A) and deep yellowish pink (41D), with slight spotting at base inside. Stems 0.6-0.8 m. June to July.  
(Published in *Oregon Bulb Farms Cat.*, 1949.)

**'Firefly' I(a/b)**

Parentage unknown  
R: G.M. Chandler, G: G.M. Chandler (1952), N: G.M. Chandler, REG: G.M. Chandler (1961)  
Inside vivid yellow (13A), basal half of each tepal deeper yellow above nectaries, changing to light yellowish pink (38D) on apical half and down edges; spots red-black. Fls 125 mm wide; tepals curved outwards. Stems 0.6 m.

**'Fireglow' I(b/-)**

Parentage: *bulbiferum* × *pumilum* open-pollinated  
R: I. Preston (c. 1936), N: I. Preston, I: Central Experimental Farm  
Fls orange, with darker reddish brown tepal-edges; spots tiny, dark brown, numerous. Tepal-tips slightly reflexed.  
(Included in *ILR* (1969).)

**'Fire King' I(b/d)**

Parentage: (*L.* × *hollandicum* × *L.* × *maculatum*) ? × ('Crovicii' × *davidii* var. *willmottiae*)  
R: J.E.H. Stooke (c. 1933), N: J.E.H. Stooke  
AM 1934, AMH 1947, FCCH 1948  
Fls deep reddish orange; spots purple. Tepal-tips strongly reflexed. Stems 1.1-1.2 m., with up to 25 fls. July.  
(Published in *Gard. Chron.*, ser. 3, 96: 31 (1934).)

**'Fire King' IX(b/c)**

See *auratum* 'Fire King'.

**'Firemount Number 1' I(b/-)**

Syn. of 'Noris Fire'.

**'Fire Nest' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (c. 1988), G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)

Inside and outside vivid reddish orange (33A); spots absent; nectaries white; pollen orange-brown. Fls 130 mm wide; tepal-tips slightly recurved. Lvs scattered, 90 × 39 mm, pale green. Stem 0.9 m, brownish, with 7-11 fls. Late June.

(Published in *Latvian Lily Register*, 1993.)

**'Fire Opal' IX(b/c)**

See *auratum* 'Fire Opal'.

**'Fire Pixie' I(a/-)**

Parentage: Pastel Group × 'Red Carpet'

R: E.A. McRae (1976), G: Oregon Bulb Farms, Inc. (1980), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)  
Inside vivid orange (28B) at centre of each tepal, suffusing out to vivid reddish orange (30A), tepal-tips vivid reddish orange (30A), throat strong red to deep yellowish pink (39A/B); outside light orange (28C/D), flushed with green along midribs; 10-20 tiny spots parallel to nectaries; nectaries green; pollen strong reddish orange (169A) to moderate reddish orange (171A). Fls 120-150 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 12 mm, dark green. Stems 0.35 m, green, with 6-30 fls. Early June.

**'Fire Red' I(-/-)**

Parentage: *amabile* × *lancifolium*

No further details.

**'Fire Star' VII(c/d)**

Parentage: red-flowered Oriental seedling × 'Star Gazer'

R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside moderate purplish red (58A), midveins deep purplish red (59B), tepal-edges narrow, yellowish white (155D), the basal half of each tepal suffused with strong red (53B), throat strong yellow-green (144C) edged light greenish yellow (8B); outside strong purplish red (59D), the 'tube' spotted yellowish white (155D), midribs pale yellow-green (155A) suffused with yellowish white (158D); papillae dark red (187A), on basal part of each tepal; nectaries light yellow-green (154D); pollen strong orange (169C). Fls 180 mm wide; tepals 90 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 120 × 50 mm, mid green. Stems 0.4 m, pale green, with c.7 fls. July (under glass).

**'Fire Wings' I(b/b)**

Parentage: 'Avignon' × unnamed seedling

R: Testcentrum voor Siergewassen B.V. (1996), G: Testcentrum voor Siergewassen B.V., N: Marklily C.V. (2000), I: Marklily C.V. (2000), REG: Marklily C.V. (2000)

Inside vivid reddish orange (34A/B), throat moderate yellowish pink/strong reddish orange (33D/34C); outside

strong reddish orange (34C) shading to vivid reddish orange (34B) at tepal-edges; spots and papillae absent; nectaries moderate olive-brown (199A) changing into light greenish yellow (1C); pollen moderate reddish brown (175A); stigma strong reddish orange (31A). Fls 135 mm wide; tepals 77.5 × 30-45 mm, margins smooth, tips recurved. Lvs scattered, 150 × 20 mm. Stems 1.4 m, dark, with c.11 fls.

**'Fireworks' I(c/d)**

Parentage: 'Matchless' × (*concolor* × *pumilum*)

R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987), REG: Columbia-Platte Lilies (1988)

Inside vivid reddish orange (33A/32A); outside vivid to strong reddish orange (33A to 32A/B); spots absent; nectaries green; pollen vivid reddish orange (30A). Fls slightly scented; tepals 40-50 × 20-30 mm, margins smooth, tips strongly recurved. Lvs scattered, 100-150 × 10-20 mm. Stems 1-1.2 m, dark green, with 7-20 or more fls in an elongated infl.; buds slightly hairy. Mid June.

**'Firey Belles' VIII(a-b/b)**

Error for 'Fiery Belles'.

**'Firnengold' I(a/b-c)**

Parentage: Asiatic seedling × mixed pollen of

'Brushstroke' & a brushmarked seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Fls strong orange-yellow (17A) except for light orange-yellow (23A) tepal-tips; spots and lines few, small, strong red (46A), on basal third of each tepal, some of the markings continuing as 2 discontinuous lines from the tip of the yellowish white (156D) nectaries; pollen deep red (185A); stigma moderate reddish brown (175A). Fls 120 mm wide; tepals 55 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 70 × 15 mm. Stems 0.7 m, dark green, with c.8 fls. Early to mid July.

**'First Arrival' VII(a-b/b)**

Parentage: seedling 89-50-10 × seedling 90-058-4

R: World Breeding B.V., N: World Breeding B.V. (2001), REG: World Breeding B.V. (2004)

Inside and outside greenish white (155C); spots absent; papillae greenish white (155C); nectaries green; pollen yellow-brown; stigma purple. Fls 220 mm wide; tepals 145-152 × 50-58 mm, margins ruffled, tips recurved. Lvs scattered, 79-205 × 32-42 mm, dark green. Stems 0.8-1.25 m, green, with 3-11 fls. Midseason.  
(Nomenclatural standard: colour print supplied by registrant (WSY 0096396).)

**'First Blush' I(b/-)**

Parentage: *cernuum* × 'Mimosa'

R: L.B. Tuffery (c. 1967), N: L.B. Tuffery

Fls pure white, tepals with dawn-pink ray, tips very lightly tinged with pink.

**'First Crown' VIII(a-b/b)**

Parentage: pink-flowered Oriental seedling × 'Goldina'  
 R: De Jong Lelies Holland B.V. (1996), G: De Jong Lelies Holland B.V. (1998), N: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2001)  
 Inside moderate red (181A), tepal-edges brilliant yellow (21C), throat brilliant orange/light orange-yellow (25C/D); outside greyish red (182B), tepal-edges light yellow (21D), with a little brilliant yellow-green (154C) at midrib; spots dark red (187A); papillae brilliant orange to light orange-yellow (25C/D); pollen vivid yellow/greyish brown (13A/166A); stigma moderate red (184B) speckled with dark red (187B). Fls 165 mm wide; tepals 105 × 45-55 mm, margins slightly ruffled, tips recurved. Lvs scattered, 120 × 25 mm. Stems 0.8-1.1 m, light green, with 4-7 fls. June to July.  
 (An Oriental/Asiatic (OA) hybrid.)

**First Impression Group I(a/-)**

Parentage: old clone of *L. × hollandicum* × (*pumilum* × bicolor Coronado Group) several siblings  
 R: L.D. Marshall (1977), G: J.F. McRae (1979), N: Columbia-Platte Lilies (1982), I: Columbia-Platte Lilies (1982), REG: Columbia-Platte Lilies (1984)  
 Inside cream, yellow, golden, golden orange or orange, tepal-tips and throat burnt orange or red; outside cream through gold to orange; spots absent or very few in centre; nectaries green. Tepals 60-80 × 25-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 140-180 × 20-40 mm, mid to dark green. Stems 0.6-0.8 m, dark green, some overlaid with red, with 3-6 fls. May to June.  
 (Published in *Rex Lilies Cat.*, 1982. Included in *ILR Third Supplement* as First Impression grex.)

**'First Lady' I(-/-)**

Parentage unknown  
 R: N. Groot, N: N. Groot, REG: N. Groot (1989)  
 Inside yellowish to greenish white (155B/C); outside greenish white (155C), midribs light greenish yellow (8C); papillae yellowish white (155B) to pale yellow (8D); pollen strong brown (172A). Fls 240 mm wide; tepals 120 × 75 mm, margins ruffled, tips slightly recurved. Lvs scattered, 125 × 30 mm, mid green. Stems 0.6 m, green, with c.7 fls.

**'First Light' I(a-b/-)**

Parentage: 'Unique' × 'Connecticut Beauty'  
 R: M.D. Holloway (1993), G: M.D. Holloway (1994), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)  
 Inside two-toned, yellow and pink: apical half of tepals pink, with a golden yellow ray above the deep wine-pink throat, as fl. ages, pink tips change to a soft yellow; outside rose-pink, outer tepals slightly darker; spots absent; nectaries pink-frosted; pollen light brown. Fls 190 mm wide, scented; tepals 97 × 51 mm, margins smooth, tips slightly recurved. Lvs scattered, 164 × 33 mm, mid green. Stems 1.16 m, brown, with c.18 fls (with secondary and some tertiary buds). Late July to Aug.

**'First Love' VII(a/-)**

Parentage unknown  
 R: Koninklijke Van Zanten B.V., G: Koninklijke Van Zanten B.V., N: Koninklijke Van Zanten B.V., I: Koninklijke Van Zanten B.V.  
 Inside strong purplish red (59D), midveins white flushed with pink, throat yellowish white (155D); outside yellowish white (155D) at base of each tepal, changing to strong purplish red (59D) towards tip; papillae present; nectaries green; pollen orange; stigma yellow-green. Tepal-margins ruffled, tips recurved. Stems tall to very tall, green.  
 (Published in *ILR Twenty-second Supplement* as an unacceptable name, ICNCP, 2004: Art. 27.1 - name already used for a cultivar Group. However, it has been found that this cv. was granted Dutch PBR (LEL 1143) in 1995 and therefore under ICNCP, 2004: Art. 24.4. the epithet must be accepted, although it cannot be registered.)

**First Love Group VI(b/b)**

Parentage: complex Aurelian hybrids  
 R: J. de Graaff (c. 1964), N: J. de Graaff  
 Fls a combination of pink and yellow, throats green. Sunburst form. Stems 1.5 m. July.  
 (Published in *ILR* (1982) as First Love grex.)

**First Thanksgiving Group I(a/-)**

Parentage unknown  
 R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens  
 Fls in apricot shades, some with gold rays. Stems 1.2-1.5 m. Aug. to Oct.

**FIRST-YEAR GIRL I(a/c)**

Trade designation of 'Pirmklasniece'.

**'Fisheyes' I(-/-)**

Parentage: 'Edith Cecilia' × 'Fireflame'  
 R: R.P.H. Clas (pre 1976), N: R.P.H. Clas  
 Fls have black spots with yellow halos.

**'Fiška' I(a-b-b-c)**

Parentage: ('Nakts Tango' × 'Provincial') × seedling BM9 (yellow-flowered with brushmarks)  
 R: D. Hercbergs (1995), G: D. Hercbergs (1997), N: D. Hercbergs (1998), I: D. Hercbergs (2000), REG: D. Hercbergs (2004)  
 Inside moderate orange (170D); spots cherry-red, on a third of each tepal; pollen brown. Fls 140 mm wide; tepals 75 × 30-35 mm; pedicels to 220 mm long. Lvs scattered. Stems 1.1 m, green, with c.12 fls. July.

**'Fiu-kwama' I(a/b)**

See *L. × maculatum* 'Fiu-kwama'.

**'Flagship' I(a/-)**

Parentage: ('Connecticut Lemonglow' × 'Enchantment') × ('Red Carpet' × (*pumilum* × bicoloured selection from Coronado Group))  
 R: Columbia-Platte Lilies (1981), G: Columbia-Platte

Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Inside vivid reddish orange (34A/33A), tepal-tips vivid reddish orange (34A), throat vivid reddish orange (34A/B to 33A); outside vivid reddish orange (34A/B); spots absent; nectaries green, with orange-red margins; pollen greyish red (178A). Tepals 60-90 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 100-150 × 20 mm, dark green. Stems 0.6-0.8 m, dark green, with 5-10 fls. Late June.

**'Flair' I(a/-)**

Syn. of 'Fair'.

**'Flambeau' VIII(b/b)**

See *L. × phildauricum* 'Flambeau'.

**Flamboyant Group I(a/b)**

Parentage: 'Connecticut Lass' × 'Keystone' and others  
R: D.M. Stone & F.H. Payne (c. 1967), N: D.M. Stone & F.H. Payne (1968), I: D.M. Stone & F.H. Payne (1968), REG: (1978)

Inside vivid yellow (14A), throat vivid orange-yellow (23A); outside brilliant yellow (13B); spots large, brown; nectaries brilliant yellow-green (154B); pollen brown. Tepal-margins slightly ruffled. Lvs broad. Stems 1 m. July. (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 41 (1978) as Flamboyant strain; in *Lilies and other Liliaceae*, 1978/9: 108 and included in *ILR* (1982) as Flamboyant grex.)

**'Flame' I(a/a-b)**

Parentage: ('Skyrocket' × 'Sultan') ×  *davidii*  
R: P.H. Wright & A.J. Porter (c. 1969), N: P.H. Wright & A.J. Porter

Fls vivid nasturtium-red. Fls funnel-shaped. (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 6 (1978).)

**'Flamenco' I(b-c/-)**

Parentage unknown  
N: S. Pierce, I: S. Pierce, REG: S.J.A. Pierce (1992)  
Inside and outside rich mid orange, outside suffused with crimson on the midribs especially on the outer tepals in bud; spots numerous, very dark crimson, on basal half of each tepal, mostly in the throat; nectaries rich mid orange; pollen watered rust-coloured. Fls 90 mm wide; tepals 70 × 28 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 1 m, dark brown at base, shading to green at apex, with 8-13 fls. Late June to early July. (Bought originally from Wallace & Barr in 1988 as *amabile*, but clearly incorrectly labelled.)

**'Flame Satin' I(a/-)**

Parentage: 'Pirate' × red/gold-flowered bicolor Asiatic seedling  
R: V.E. Bowen (1976), G: V.E. Bowen (1978), N: V.E. Bowen (1988), REG: V.E. Bowen (1988)  
Inside tepal-tips with a lacquered sheen, vivid reddish

orange (34A) shading to vivid reddish orange (33A/B), throat vivid reddish orange (33B); outside vivid reddish orange (34A); lightly spotted; nectaries white-frosted; pollen dark brown; stigma white. Fls 150 mm wide; tepals 65-75 × 35-40 mm, margins not or very slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 15 mm, dark green. Stems 1.25 m, dark green, with 10-12 fls. Early June.

**'Flaming Giant' I(a/b)**

Parentage: 'Redbird' × 'Flame'  
R: A.J. Porter (1969), N: A.J. Porter (1974), I: A.J. Porter (1975), REG: A.J. Porter (1975)

Inside vivid reddish orange (34A), throat strong orange (25B); outside strong red (46A); spots dark, on basal half of each tepal; nectaries strong orange (25B); pollen moderate orange (167A). Lvs moderate olive-green (146A), glossy. Stems 1.2-1.5 m. July.

Trade designation: MOULIN ROUGE.

(Published in *Lilies and other Liliaceae*, 1975: 92.

Published in *Lilies and other Liliaceae*, 1978/9: 111 and included in *ILR* (1982) as the cv. 'Moulin Rouge' before it was known that this epithet had been given by Vletter & Den Haan to 'Flaming Giant' for sale in Europe.)

**'Flaming Mandarin' I(a/-)**

Parentage: selection from Coronado Group  
(Raised in the USA.)

**'Flamingo' I(a/-)**

Parentage: selection from Coronado Group  
S: J. de Graaff, N: J. de Graaff (c. 1947), I: J. de Graaff (c. 1947)

Fls pinkish orange, spotted.

(Published in *LYB NALS* 1: 106 (1947/48).)

**'Flamingo' I(a/-)**

Syn. of 'Lachsstern'.

**'Flamingo' VII(-/)**

Parentage: *speciosum* × unknown

An unpublished, unregistered lily raised by L. Woodriff, used as a parent of Bridal Group, Bridal Blush Group and Bridal Showers Group.

**'Flamingo Star' VII(a-b/b-c)**

Syn. of 'Pink Paradise'.

**'Flaming Star' I(a/b)**

Parentage: 'Connecticut King' × red-flowered seedling  
R: Gebr. Vletter & J.A. Den Haan (1977), G: Gebr. Vletter & J.A. Den Haan (1979), N: Gebr. Vletter & J.A. Den Haan (1984), I: Gebr. Vletter & J.A. Den Haan (1984), REG: Gebr. Vletter & J.A. Den Haan (1985)  
Inside strong reddish orange (169A) to moderate red (179A), tepal-edges darker; outside brown-red, midribs greenish; nectaries grey-green; pollen dark brown. Lvs scattered, dark green. Stems 0.9-1.1 m, mid green, with 10 or more fls (from 16-18 cm bulbs). July.

**‘Flaming Youth’ I(a/-)**

Parentage: *L. × maculatum* ‘Helen Carroll’ × ‘Brenda Watts’

R: W.C. Horsford, N: W.C. Horsford, I: G.E. Holland (1958)

Fls brilliant flame. Stems 1 m. July.  
(Published in *Lilyhaven Cat.*, 1958.)

**‘Flammenspiel’ I(a/-)**

Parentage: *bulbiferum* var. *croceum* × ‘Parade’

R: C. Feldmaier, N: C. Feldmaier, I: C. Feldmaier (1974)

Fls vivid orange (28A), with stripes of strong orange (24A); heavily spotted chocolate-brown; pollen dark orange. Lvs 80 × 10 mm. Stems 0.8 m, with 10-12 fls. Mid June to early July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 6 (1978).)

**‘Flammenzeichen’ I(a/b-c)**

Parentage: ‘Ancona’ × seedling ‘Col 1’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1993), I: G. Steinbrück (2003), REG: G. Steinbrück (2003)

Inside and outside moderate reddish orange (178D); spots absent; pollen moderate red (180A); style moderate red (182A) with a similarly coloured stigma. Fls 150 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 12 mm. Stems 0.8 m, dark green, with c.15 fls. Early to mid July.

**‘Flashdance’ I(a/b)**

Parentage unknown

R: J. Wadepammer (1982), G: J. Wadepammer (1984), N: J. Wadepammer (1987), I: Borbeleta Gardens (1987), REG: Borbeleta Gardens (1988)

Inside brilliant red; outside slightly darker; spots brown on basal half of each tepal; nectaries red-black; pollen orange. Tepals 90 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 20 mm, dark green. Stems 0.5 m, dark red-green, with c.10 fls. Early to mid July.  
(Published in *Borbeleta Gardens Cat.*, 1988.)

**‘Flash Light’ I(a/-)**

Parentage: ‘Oranje Zon’ × ‘Red Carpet’

R: Bischoff Tulleken Lelies B.V. (1977), G: Bischoff Tulleken Lelies B.V. (1980), N: Bischoff Tulleken Lelies B.V. (1986), I: Bischoff Tulleken Lelies B.V. (1987), REG: Bischoff Tulleken Lelies B.V. (1986)

Inside vivid orange (28B), tepal-edges vivid yellowish orange (30C); outside orange, midribs lemon-yellow; spots reddish brown, on half of each tepal; nectaries red-brown; pollen dark reddish brown. Fls 190 mm wide; tepals 90 × 35 mm, rather strongly recurved. Lvs scattered, 100 × 10 mm. Stems 0.75 m, green, with 7-9 fls. June.

**‘Flavella’ II(-/-)**

Parentage: (*martagon* × unknown) × *tsingtauense*

R: O. Beutnagel (pre 1987), N: O. Beutnagel, REG: O. Beutnagel (1987)

Fls yellow with a few spots; pollen absent. Stems 0.6 m.

Late June.

(Published in German Lily Group sales list, 1987.)

See *philadelphicum* ‘Flawless’.

**‘Fleita’ I(a/-)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1991)

Fls pale apricot, finely spotted. Fls 130-150 mm wide. Stems 1-1.1 m, with 11-17 fls. July.

(Published in M.F. Kireeva, *Lilii*, 56 (2000).)

**‘Fleuralia’ VII(-/a)**

Syn. of ‘La Fleurie’.

**‘Flevo’ V(-/a)**

See *longiflorum* ‘Flevo’.

**‘Flevo Gold’ I(a-b/b-c)**

Parentage unknown

REG: De Vries Veredeling B.V. (2005)

Inside vivid yellow (9A), midveins yellow-green at base; outside vivid yellow (9A/B); spots absent; papillae few; nectaries green; pollen orange; stigma purple-red. Tepals short, margins slightly ruffled, tips slightly recurved. Stems 0.4 m, green with darker markings, with 2-7 fls. Early.

**‘Flight Fire’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (1998), G: J. Vasarietis, N: J. Vasarietis (1989), I: J. Vasarietis (1989), REG: J. Vasarietis (1993)

Inside and outside vivid reddish orange (34A) throughout, inside with a small, narrow mark in the centre of each tepal; spots absent; nectaries reddish white; pollen brown. Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 0.9 m, greenish brown, with c.7 fls. Late June to early July

**‘Flirt’ I(a/b)**

Parentage: ‘Sterling Star’ × (‘Connecticut King’ ×

(*dauricum* × *leichtlinii* var. *maximowiczii* ‘Unicolor’) brushmarked selection)

R: J.F. McRae (1976), G: J.F. McRae (1978), N: Columbia-Platte Lilies (1986), I: Columbia-Platte Lilies (1986), REG: Columbia-Platte Lilies (1988)

Fls light greenish yellow (6D); each tepal with a dark red pencil stripe brushmark and associated spots above nectary in an area 20 × 10 mm; nectaries green/soft yellow; pollen moderate red (180A). Tepals 60-90 × 20-30 mm, margins narrowly ruffled, tips slightly recurved. Lvs scattered, 100-150 × 15-25 mm, dark green. Stems 0.75-1.2 m, mid to dark green, with 5-15 fls. Late June to July.

(Brushmarks constant, even under low light conditions.)

#### ‘Flora’ I(b/d)

Parentage: ‘Connecticut King’ × ‘Hawaiian Punch’  
R: K. Braun (1980), N: K. Braun, REG: K. Braun (1985)

Fls raspberry-red; spots numerous, medium sized, brown-red, on two-thirds of each tepal; papillae present in throat; nectaries orange; pollen brown; stigma pale orange. Fls 120 mm wide; tepals 80 × 30 mm; pedicels brown-green. Lvs 100 × 18 mm, slightly glossy dark green. Stems 1 m, brown, hairy, with bulbils; buds hairy. Early July.

#### ‘Flora Darby’ VI(-/a)

Parentage: ‘Air Drop’ × (‘T.A. Havemeyer’ × *L.* × *aureliana*)

R: G.W. Darby (c. 1958), N: G.W. Darby  
Fls rich orange.

#### ‘Floraster’ I(c/-)

Parentage: selection from Fiesta Group

R: unknown

Fls reddish orange.

(Grown in New Zealand.)

#### ‘Florence’ VI(-/a)

Parentage: selection from Pink Perfection Group

S: J. de Graaff, N: J. de Graaff

Fls pale.

#### FLORENCE I(a/b)

Trade designation of ‘Eldorado’.

#### ‘Florence Mayell’ IV(c/c)

Parentage: selection from Monterey Group

S: E. Mayell, N: D.M. Simmons (1968), I: D.M.

Simmons (1968)

PC 1986

Fls orange-red, lighter in centre, quite heavily spotted.

(Published in *LYB* 32: 85, pl.11 (1969).)

#### ‘Florentino’ VIII(a/b)

Parentage: seedling LBG 93-3 × seedling G 92-01

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside vivid yellow (12A), throat brilliant yellow-green

(149A); outside of inner tepals brilliant greenish yellow (1B) on a vivid yellow (12A) ground, outer tepals brilliant yellow (12B) with a vivid yellow (12A) edge, all midribs brilliant yellow-green (150B); spots and papillae absent; nectaries pale greenish yellow (2D), hairy; pollen brown; stigma greyish red (178A). Fls 150 mm wide; tepal-margins smooth, tips recurved. Lvs scattered, 120 × 50 mm. Stems 0.8 m, green with darker markings, and with c.3 fls; buds hairy.

(A *longiflorum*/Asiatic (LA) hybrid. Included in *ILLR Nineteenth Supplement* erroneously as ‘Fiorentino’.)

R: Lybelmex Hillegom B.V. (1982), G: Lybelmex

Hillegom B.V. (1984), N: Lybelmex Hillegom B.V.

(1990), I: Lybelmex Hillegom B.V., REG: De Lijster

Hillegom B.V./Lybelmex Hillegom B.V. (1990)

Inside strong purplish red (64B) changing to light or pale purplish pink (65B/C), throat slightly suffused with

pale yellow (11C); outside moderate purplish red to strong reddish purple (70A/B) changing to deep purplish pink (70C) to light purple (75A); spots very small, dark red (187A), in the throat; nectaries deep purplish red (187D); pollen moderate reddish brown (175A). Fls 150 mm wide; tepals 70 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 75 × 15 mm, mid green. Stems 0.4 m, green, with c.5 fls. July to Aug.

#### ‘Florian’ VII(a/b)

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside dark/moderate purplish pink (186C/D), with some yellowish white (155D) along and above nectaries and along tepal-margins; outside with inner tepals very pale purple (69A), margins narrow, yellowish white (155D), midribs light yellow-green (144D) at base and top, in between brilliant yellow-green (150C), yellowish white (155D) along midribs in basal half, outer tepals moderate purplish pink (186D), margins narrow, yellowish white (155D), midribs strong yellow-green (144B) at base and top, in between light yellow-green (145B); spots absent; papillae yellowish white (155D) and strong purplish pink (58C); nectaries strong yellow-green (144C); pollen vivid yellowish pink (28A); stigma pale green (189C). Fls 250 mm wide, slightly fragrant; tepals 130 × 50-71 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 179 × 44 mm. Stems 1.1-1.3 m, green with darker markings at base, with c.3 fls.

**'Florida' I(a/-)**

Parentage: 'Hilde' × 'Ikaria'

R: A. Bakker & Zn (1987), G: A. Bakker & Zn, N: A. Bakker & Zn (1991), I: A. Bakker & Zn (1991), REG: A. Bakker & Zn (1991)

Inside strong purplish pink (63C) flushed with yellowish white (155D), throat strong purplish pink (63C); outside strong purplish red (63B) with small, moderate purplish red (64A) tepal-tips; spots absent; nectaries strong pink (50C); pollen greyish reddish orange (174C). Fls 160 mm wide; tepals 75 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 75 × 10 mm, mid green. Stems 0.7 m, with darker markings, and with c.9 fls. July (under glass).

**'Floridii' V(-/a)**

See *longiflorum* var. *eximium* 'Creole'.

**'Florina' I(b-c/d)**

Parentage: 'Padua' × 'Connecticut King'

R: V. Strasser (1979), G: V. Strasser (1981), N: V. Strasser (1984), I: V. Strasser (1989), REG: V. Strasser (1990)

Inside vivid orange-yellow (23A), throat green-yellow; outside red-brown; spots purple on half of each tepal; nectaries green; pollen orange. Fls 130 mm wide; tepals 75 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 15 mm, dark green. Stems 1.3 m, almost black, with c.25 fls and some bulbils. Mid July.

**Florosanum Group V(-/a)**

Parentage: (*formosanum* × *longiflorum*) × *longiflorum*

R: L.B. Tuffery (c. 1952), N: L.B. Tuffery  
Fls white.

(Published in *Dunhampton Lily Fields Cat.*, 1954.

Included in *ILR* (1982) as *Florosanum* grex.)

**'Flossie' VII(-/l)**

Parentage unknown

R: F. Jury (pre 1998), I: M Jury (1998)

Fls pink, large.

(Published in *M. Jury Cat.*, 1998: 16.)

**'Flowersong' I(a/b)**

Parentage: Yellow Blaze Group × 'Connecticut King'

R: Bischoff Tulleken Leliecultuur B.V. (1975), G: Bischoff Tulleken Leliecultuur B.V. (1978), N: Bischoff Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken Leliecultuur B.V. (1984), REG: Bischoff Tulleken Leliecultuur B.V. (1988)

Inside vivid yellow (12A/14B), each tepal flamed vivid orange-yellow (23A), throat light greenish yellow (5C); outside vivid yellow (9A); spots dark red (187A); pollen moderate reddish orange to moderate orange (173B/C). Fls 190 mm wide; tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 0.75-1 m, green with darker markings, and with 5-7 fls. July to Aug.

**'Flush' IX(b-c/d)**

See *speciosum* 'Flush'.

**'Flushing Meadow' I(a-b/b)**

Parentage: 'San Nunzia' × unnamed seedling

R: Sande B.V. (1989), G: Sande B.V. (1991), N: Sande B.V. (1995), I: Sande B.V. (1996), REG: Sande B.V. (1996)

Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen pale brown; stigma purple. Tepal-margins slightly ruffled, tips slightly recurved. Lvs scattered, mid green. Stems 1.1-1.25 m, green with darker markings, and with 8-10 fls (from 14/16 cm bulbs).

**'Flying Circus' VII(a/b)**

Parentage unknown

R: Columbia-Platte Lilies, N: Columbia-Platte Lilies, I: Columbia-Platte Lilies (1996), REG: ICRA (1998)

Fls fully double, with 50 or more tepals which start mint-green and change to pure white as fl. expands over a long period. Tepal-margins slightly ruffled, tips not recurved.

Stems 1-1.2 m. July to Aug.

(Published in *The Lily Garden Cat.*, 1996/97: 25, with colour illustration.)

**Flying Cloud Group VII(-/l)**

See *L. × parkmanii* Flying Cloud Group.

**'Flying Wing' I(b/b)**

Parentage unknown

R: Laan Lelie B.V., N: Lily Company B.V. (2000), REG: Lily Company B.V. (2004)

Inside strong reddish orange (169A), each tepal edged moderate red (180A) in basal part; outside vivid reddish orange (34B), strong orange (169B) towards tepal-tip; spots dark red (187A) on basal quarter of tepals; papillae moderate red (180A); nectaries moderate red (180A); pollen strong brown/strong reddish orange (172A/169A); stigma strong orange (169A). Fls 155 mm wide; tepals 90-95 × 30-48 mm, margins smooth, tips recurved. Lvs 95 × 10 mm, light green. Stems 1 m, with darker markings, with c.8 fls.

**'Fobos' I(a/-)**

Parentage: selection from 'Volkhova'

S: A.V. Otroshko (1986), N: A.V. Otroshko, REG: A.V. Otroshko (1991)

Buds tan, opening to rose-pink fls with ivory centres; spots absent; pollen brown. Stems 1.2 m, with bulbils, vigorous. July.

**'Fogarty Fegan' IX(b/c)**

See *auratum* 'Fogarty Fegan'.

**'Foggy Morning' IV(c/d)**

Parentage: 'Lake Tulare' × 'Oliver Wyatt'

R: N. Martschinke (1986), G: N. Martschinke (1992), N: N. Martschinke (1999), REG: N. Martschinke (2000)  
Inside light yellow (12C) with brilliant orange-yellow (23B) along the middle of each tepal, throat strong yellow-green (144B); outside brilliant yellow (12B) to light yellowish pink (29C); fine, moderate purplish red (59C) spots in centre of fl.; nectaries strong yellow-green

(144B); pollen dark reddish orange (175B); stigma moderate purplish red (59C) mixed with strong yellow-green (144C). Fls 80 mm wide; tepals 75 × 20 mm, margins smooth, tips strongly reflexed. Lvs whorled, 140 × 18 mm, mid green. Stems 1.6 m, green, with c.9 fls. Late June.

(Epithet derives from the fls looking like 'Oliver Wyatt' seen through a fog. Nomenclatural standard: colour print provided by registrant (WSY 0022858).)

**'Foliis Albo Marginatis'** V(-/a)

See *longiflorum* 'Foliis Albo Marginatis'.

**'Foliis Variegatis'** IX(c/d)

See *lancifolium* 'Foliis Variegatis'.

**'Foliis Variegatis'** V(-/a)

See *longiflorum* 'Foliis Variegatis'.

**'Folk'** I(a/b-c)

Parentage: 'Polednice' × ('Chinook' × 'Wattle Bird')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1994),  
REG: B. Mičulka (1994)

Inside pastel apricot, tepal-tips slightly paler; outside with pinkish midribs; spots absent; nectaries white-hairy; pollen orange-brown; stigma apricot. Fls 125 mm wide; tepals 75 × 42 mm, margins slightly wavy, tips slightly recurved; pedicels 70 mm long, strongly dotted red-brown. Lvs scattered, 110 × 14 mm, dull deep green. Stems 0.95 cm, black. June.

**'Folklorá'** I(a/-)

Parentage: red-flowered seedling × 'Connecticut King'  
R: A. Buķēvics, G: A. Buķēvics, N: A. Buķēvics (1985), I:  
A. Buķēvics, REG: A. Buķēvics (1987)

Inside yellow, flushed with reddish brown; outside pale yellow; spots brown, very sparse; nectaries creamy; pollen brown. Fls 120 mm wide; tepals 70 × 25 mm, not recurved. Lvs scattered, mid green. Stems 0.9 m, with c.8 fls. Mid July.

**'Fonopoli'** VII(a-b/b-c)

Parentage: 'Pisaro' × 'Muscadet'  
R: Sande B.V., G: Sande B.V., N: Sande B.V. (1997), I:  
Sande B.V., REG: Sande B.V. (2001)

Inside strong purplish red (63B), tepal-edges and base yellowish white (155D), midveins deeper purplish red; outside strong/light purplish pink (63C/D); dark spots on basal half of each tepal; papillae pale and dark, towards the base; nectaries light green; pollen red-brown; stigma purplish. Tepal-margins ruffled, tips recurved. Stems 1.1-1.2 m, green with darker stripes and spots, and with 3-9 fls. Early to midseason.

**'Forelle'** VII(-/-)

Parentage: seedling from Atomic Group × seedling from Little Fairies Group

R: W. Daunicht (1968), G: W. Daunicht (1971), N:  
W. Daunicht (1981), I: W. Daunicht (1981), REG: W.  
Daunicht (1983)

Fls rose-pink, with darker tepal-margins. Fls 120 mm

wide, fragrant; tepals slightly recurved. Lvs scattered, dark green. Stems 0.8-1 m, green, with 3-5 fls. June to July. (Published in Gesellschaft der Staudenfreunde, bulb list, 1982.)

**'Forerunner'** I(a/-)

Parentage: 'Sunstar' × 'Connecticut King'  
R: E.A. McRae (1975), G: Oregon Bulb Farms, Inc. (1978), N: Oregon Bulb Farms, Inc. (1984), I: Oregon Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc. (1985)

Strong orange (24A) to strong orange-yellow (24B), tepal-tips brilliant orange-yellow (23B), throat strong orange (25A/B); outside light orange-yellow (24C); Spots absent; nectaries white-downy; pollen strong orange (170A). Fls 160-190 mm wide; tepals 100 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 80 × 18 mm, mid green. Stems 1 m, light green, with 6-20 fls. Mid June.

**'Forever in Love'** VI(b/a)

Parentage unknown

N: C. Helsley, REG: C. Helsley (2003)

Inside moderate purplish pink (74D) blending to vivid to light reddish purple (74B/C) at tepal-edges, throat brilliant greenish yellow (5B); outside vivid to light reddish purple (74B/C); spots absent; nectaries yellow-green; pollen golden brown; stigma purplish. Fls 140 mm wide, strongly scented; tepals 150 mm long, outer 40 mm wide, inner 60 mm wide, margins slightly ruffled, tips strongly recurved. Lvs scattered, 150 × 15 mm, light green. Stems 1.5 m, grey-green heavily brushed and dotted with dark red, with c.9 fls. Late June.

**'Formát'** I(a-b/b)

Parentage: white-flowered tetraploid × ('Milano' × 'Puchantá')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002),  
REG: B. Mičulka (2002)

Inside pink, tepal-tips salmon-pink, centre apricot with pink veins; outside pastel pink, midribs pale brown; spots moderately numerous, small, on two-fifths of each tepal; papillae in the throat; nectaries white-granulated; pollen red-brown; stigma beige. Fls 150 mm wide; tepals 100 × 48 mm, margins smooth, tips not recurved; pedicels 60 mm long, very thick, strongly spotted dark brown, hairy. Lvs scattered, 130 × 19 mm, dull dark green. Stems 0.9 m, very thick, with pronounced dark brown speckling, and a short infl. Mid June. Tetraploid.

**'Formflos'** V(-/a)

Parentage: derived from *formosanum* × *longiflorum*  
(Grown in New Zealand. No further details.)

**'Formobel'** V(b/a)

Parentage: *longiflorum* 'Tetrabel' (tetraploid) × *formosanum* (diploid)

R: John Innes Horticultural Institute (c. 1956), N: John Innes Horticultural Institute  
AM 1957, FCC 1963

Fls white, shaded green at throat. Fls very large,

horizontal. Triploid.  
(Published in *JRHS* 82: 23 (1957).)

**Formolense Group VIII(-/a)**

Parentage: *formosanum* × *nepalense*  
R: L.B. Tuffery (pre 1953), N: L.B. Tuffery  
Similar to *nepalense*, but fls with shorter tube and tinged yellowish when first open.  
(Published in *Dunhampton Lily Fields Cat.*, 1953.  
Included in *ILR* (1982) as Formolense grex.)

× **formolongi hort. V(-/a)**

Syn. of Formolongi Group.  
(Included in Div. V because, although originally published as a hybrid between two species, it is a synonym of Formolongi Group which is placed in Div. V.)

**Formolongi Group V(-/a)**

Parentage: *longiflorum* × *formosanum* 'Wilson's Giant White'  
R: K. Wada (pre 1939), N: K. Wada  
Fls pure white.  
Syn.: *L.* × *formolongi* hort.  
(Published in *LYB NALS* 4: 73 (1951). Included in *ILR* (1982) as Formolongi grex.)

**formosanum Wallace IX(b/a)**

Inside white; outside white usually flushed with reddish purple; spots absent; nectaries green, bordered with hairs and papillae; anthers yellow to purplish; pollen brown or yellow. Fls fragrant; tepals 120-200 mm long, outer 25-30 mm wide, inner up to 50 mm wide, margins smooth. Lvs scattered, 75-200 × 5-10 mm, margins recurved. Stems 0.3-1.5 m, purplish brown, especially towards base, with 1-2(-10) fls. Taiwan.

**formosanum 'Burnham Special White' V(b/a)**

Parentage: selection from *formosanum*  
S: W.A. Constable Ltd, N: W.A. Constable Ltd  
Pure white; larger than typical *formosanum* but with fewer fls.  
(Published in *Constable Cat.*, 1938/39.)

**formosanum 'Giant White' V(b/a)**

Parentage: selection from *formosanum* 'Wilson's Pure White'  
Produces larger, pure white fls when grown from seed; this cultivar is therefore not a clone.  
(Published in *LYB NALS* 4: 74 (1951). Raised in the USA c.1950.)

**formosanum 'Intermediate Pure White' V(b/a)**

Parentage: selection from *formosanum*  
Taller than *formosanum* var. *pricei*.  
(Published in *Constable Cat.*, 1935/36 as Intermediate Variety. Comes true from seed, therefore this cv. is not a single clone.)

**formosanum 'Kenya' V(b/a)**

Parentage: selection from *formosanum*  
R: unknown

Outside marked with rose-pink. Stems tall.  
(Published in *Constable Cat.*, 1949. Comes true from seed, therefore this cv. is not a single clone.)

**formosanum 'Moomba' V(b/a)**

Parentage: selection from *formosanum*  
Late flowering.  
(Raised in Australia.)

**formosanum 'New Year White' V(b/a)**

Parentage: selection from *formosanum*  
S: B.S. Doak (pre 1958), N: B.S. Doak

**formosanum var. pricei Stoker IX(b/a)**

AM 1929  
Outside more deeply flushed with reddish purple than in *formosanum* itself. Stems usually less than 0.6 m, with 1 fl.  
(Seed collected in 1912 by W.R. Price in Formosa (Taiwan) on Mt Morrison. Hardier than the species.)

**formosanum var. pricei 'Snow Queen' V(b/a)**

Parentage: selection from *formosanum* var. *pricei*  
Fls white. Stems 1.4 m, with 4-7 fls (from 16-18 cm bulbs).  
(Published in *LYB* 20: 79 (1957). Raised in Australia.)

**formosanum 'Saint Louis' V(b/a)**

Parentage: seedling selections from *formosanum*  
S: J. de Graaff (c. 1946), N: J. de Graaff  
Very tall and sturdy. Late flowering.  
(Misspelling: 'St Louis'. Published in *LYB NALS*: 9 (1946). This cv. is a group of similar clones.)

**formosanum 'Snow Queen' V(b/a)**

See *formosanum* var. *pricei* 'Snow Queen'.

**formosanum Special Group V(b-c/a)**

Parentage: white-flowered seedling of *formosanum* × *formosanum*  
R: J. Wall (1994), G: J. Wall (1995), N: J. Wall (1997), REG: J. Wall (1998)  
Inside pure white; outside cream fading to white; spots absent; nectaries pale green; pollen bright yellow; stigma pale green. Fls 90 mm wide; tepals wider than normal, 180 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 185 × 5 mm, mid green. Stems 1.5 m, green, with 1-3 fls. Main flowering is in July, but mature plants flower intermittently all year unless there is a frost. (The plant (which has since died) so-labelled in *NALS Bull.* 51(2), June 1997 was a parent in the breeding of what is now recognized as the Special Group. The epithet should apply only to this Group.)

**formosanum 'St. Louis' V(-/a)**

Misspelling of *formosanum* 'Saint Louis'.

**formosanum 'Wallace' V(b/a)**

Parentage: selection from *formosanum*  
Fls pure white. Stems 0.75-1.2 m. July to Aug. (i.e. intermediate type).

(Origin unknown. Comes true from seed so this cv. consists of more than one clone.)

***formosanum* ‘Welwyn Tetraform’ V(b/a)**

Parentage: originated from a cross between two colchicine-induced tetraploids of *formosanum*

R: G.W. Darby (c. 1955), N: G.W. Darby

Very large, robust form of *formosanum*.

(Comes true from seed and therefore this cv. is not a single clone.)

***formosanum* ‘Wilson’s Giant White’ V(-/-)**

Given as a parent of Formolongi Group. No further details.

***formosanum* ‘Wilson’s Pure White’ V(b/a)**

Parentage: selection from *formosanum*

(Imported from Nanto, Japan, by E.H. Wilson in 1918.

Comes true from seed and therefore this cv. is not a single clone.)

***formosanum* ‘Wonder’ V(b/a)**

(Unacceptable name: ICNCP, 2004: Art 27.1 - name already used for another lily. Listed in *Strawberry Hill Cat.*, 1963, without description.)

**‘Formose’ VIII(a/b)**

Parentage: seedling LAG 93-9 × seedling G 91-18

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid yellow (9A/B), a little darker at the tepal-margins, throat light yellow-green (154D); outside light greenish yellow (5C), tepal-edges with vivid yellow (9A/B), midribs with a little strong yellow-green (144B) at base, outer tepals tipped with strong yellow-green (143A); spots and papillae absent; nectaries light yellow-green (154D); pollen more or less deep orange-yellow (163A); stigma brilliant greenish yellow (3A). Fls 195 mm wide; tepals 125-130 × 45-50 mm, margins smooth, tips recurved. Lvs scattered, 250 × 25 mm. Stems 1.3 m, green, with 3-8 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Forsythia’ VI(-/a)**

Parentage: seedling from Golden Clarion Group

R: J. de Graaff, N: W. Marx (1952)

Fls bright yellow. Stems 1.5 m. July.

(Published in *LYB* 21: 62 (1958).)

**‘Fortiuna’ I(c/-)**

Parentage: ‘Fire King’ (Div. I) × *davidii* var. *willmottiae*

R: V.A. Volkov (c. 1975), N: V.A. Volkov

Inside orange-red with brown spots. Stems 1.8 m. Late.

**‘Fortune’ I(b/-)**

Parentage: *L. × scottiae* × unknown

R: L.B. Tuffery, N: L.B. Tuffery

(Published in *Dunhampton Lily Fields Cat.*, 1950/51.)

**var. *fortunei* IX(c/d)**

See *lancifolium* var. *fortunei*.

**‘Forty Winks’ I(a/-)**

Parentage unknown

R: R.A. Prochaska, G: R.A. Prochaska, N: R.A. Prochaska (1994), I: Hartle-Gilman Gardens (1996), REG: Hartle-Gilman Gardens (1996)

Inside light yellowish pink (29C) with at least the apical half of each tepal pale yellowish pink (29D), throat tinged with green; outside pale yellowish pink (29D); spots very tiny, brown, on basal quarter of each tepal; nectaries slightly frosted; pollen absent. Fls 116 mm wide; tepals 62 × 34 mm, margins smooth but somewhat recurved on some tepals, outer tepal-tips slightly recurved, each tepal with a strong central pleat. Lvs scattered, 86 × 10 mm, strong yellow-green (143A). Stems 1.21 m, dark greenish black.

**‘Forward Wisconsin’ I(c/-)**

Parentage unknown

R: H.E. Hoepner (pre 1990), G: S.R. Kaul (1992), N: S.R. Kaul (1997), I: S.R. Kaul (1997), REG: Kaul’s Wind Song Lilies (1997)

Inside red, deeper under the large black spots on the basal half of each tepal, throat a lighter shade of red; outside reddish tan on opening; nectaries pale orange-red; pollen rusty red; stigma deep red. Fls 120 mm wide; tepals 80 × 35 mm, margins very slightly ruffled, tips slightly recurved; pedicels ascending. Lvs scattered, 180 × 28 mm, dark green, borne down to soil-level. Stems 1-1.2 m or more, brown-black, downy, with bulbils and 30 or more fls (consistently producing secondary and tertiary buds). Late July to Aug.

**‘Four Seasons’ I(a/b)**

Parentage: (‘Sterling Star’ × ‘Connecticut King’) × (Yellow Blaze Group × ‘Connecticut King’)

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside vivid yellow (9A), throat brilliant yellow (9C); outside vivid/brilliant yellow (9B/C); spots dark red (187A), in the throat, together with a few papillae; nectaries white-hairy; pollen dark reddish orange (175B); stigma dark red (187A). Fls 220 mm wide; tepals 115 × 40-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 30 mm, mid green. Stems 1.25 m, green with a little darker marking, and with c.6 fls. July.

**‘Foxden Hybrid’ I(a/b)**

See *L. × hollandicum* ‘Foxden Hybrid’.

**‘Foxtrot’ I(a/b)**

Parentage: ‘Connecticut King’ × ‘Croesus’

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1978), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986) Inside strong to brilliant orange (25B/C), shading into vivid orange (28A/B) along tepal-edges, tips vivid orange

(28B), throat brilliant orange (25C); outside brilliant orange to light orange-yellow (25C/D) overlaid with green prior to opening; spots absent; nectaries green; pollen vivid reddish orange (34B). Fls 160-190 mm wide; tepals 90 mm long, margins smooth, tips slightly recurved. Lvs scattered, 100 mm long, pale green. Stems 1 m, light green, with 8-30 fls. Mid June.

**'Fraboja' I(a/b)**

Parentage: 'Milk and Honey' × 'Feuer und Rauch'  
R: J. Dudek, N: J. Dudek, I: J. Dudek (2001), REG: J. Dudek (2001)

Inside lemon-yellow, throat yellow; outside yellow, midribs green-yellow; spots very few; nectaries green; pollen orange-brown; stigma red-brown. Fls 180 mm wide; tepals 96 × 45 mm, tips slightly recurved; pedicels 40 mm long, brown-dotted. Lvs scattered, 140 × 70 mm, glossy green. Stems 1.2 m, rigid, brown. Mid July.

**var. *fragrans* IX(c/d)**

See *pardalinum* var. *fragrans*.

**'France' VII(a/b)**

Parentage: unknown × seedling 92-48  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside strong purplish red (60B) on a paler ground, throat yellowish white (155B); outside moderate purplish red (64A) on a paler ground, with a little yellowish white (155B) at the base, midribs light yellow-green (154D) to strong yellow-green (143C), tipped strong yellow-green (143A); spots dark red (187A), on basal part of each tepal; papillae yellowish white (155B), in the throat (a few with dark red (187C) tips); nectaries strong yellow-green (144A); pollen strong orange (169B); stigma light yellow-green (145D). Fls 220 mm wide; tepals 115 × 40-65 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 190 × 35 mm, dark green. Stems 1.4 m, dark green, with c.4 fls.

**'Frances' I(b/-)**

Parentage unknown  
R: H. Peters (1974), N: Borbeleta Gardens (1980), I: Borbeleta Gardens (1981), REG: Borbeleta Gardens (1981)

Inside light yellow (19B), throat ivory; outside tan and green; spots purple, on two-thirds of each tepal; nectaries tan-green; pollen brown. Tepals 65 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 120 × 5 mm, mid green. Stems 0.9 m, tan-green, with c.20 fls. July. (Published in *Borbeleta Gardens Cat.*, 1981.)

**'Frances Ann' I(b/c)**

Parentage: 'Dori Jo' × 'Edith'  
R: B. Strohmman (1988), G: B. Strohmman (1990), N: B. Strohmman (1993), I: B. Strohmman (1995), REG: B. Strohmman (1994)

Inside with the apical part of each tepal and basal edges deep purplish pink (67C), central part of each tepal

yellowish white, throat vivid purplish red (67B); outside deep purplish pink (67C); spots absent; nectaries strong to vivid purplish red (67A/B); pollen dark reddish orange (175C); stigma grey-pink. Fls 150 mm wide; tepals 80 × 50 mm, margins smooth, tips slightly reflexed. Lvs scattered, 140 × 15 mm, mid green. Stems 1.2 m, dark green, with 11-13 fls. Early July to early Aug.

**'Frances Fell' IV(-/d)**

See *L. × burbankii* 'Frances Fell'.

**'Frances Larrabee' IV(b-c/d)**

Parentage: selection from Bellingham Group  
R: D. Griffiths (c. 1924), N: D. Griffiths  
Fls deep cadmium-yellow; spots small, burnt sienna; anthers dull yellow; pollen yellow-brown. Upper lvs whorled, lower lvs scattered, all slightly wavy. Stems 1.9-2.2 m, brown-mottled, with 20-30 fls. (Published in *USDA Circular* no. 299: 7 (1933). The parents are thought to be *parryi* and *humboldtii* var. *ocellatum*.)

**'Frances Searle' VII(-/c)**

Parentage: 'Pink Jewel' × 'Black Beauty'  
R: R. Pappo, N: R. Pappo, I: R. Pappo (1972), REG: R. Pappo (1972)

Fls white, flecked crimson; nectaries green continuing in a yellow band which ends as a pink ray at tepal-tip; tepal-margins ruffled. Fls large, *auratum* type; scented. Lvs deep green, *auratum* type. (Published in *Lilies and other Liliaceae*, 1973: 114 erroneously as 'Franses Searle'.)

**'Francina' VII(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Trior Lelie B.V., G: Trior Lelie B.V., N: Trior Lelie B.V. (1995), I: Trior Lelie B.V. (1996), REG: Trior Lelie B.V. (1997)

Inside moderate purplish pink (62B) becoming strong purplish pink (62A) towards tepal-tips, all on a paler ground, throat yellowish white (155D); outside moderate purplish pink (62B) on a paler ground, tepal-edges strong purplish red (64C), yellowish white (155D) at the base; spots moderate purplish red (59C), on basal part of each tepal; papillae pale greenish yellow (10D) and moderate purplish red (59C) in the throat; nectaries strong yellow-green (143C) with a brilliant yellow (10A) rim; pollen moderate reddish brown (175A); stigma moderate purplish red (70A). Fls 230 mm wide; tepals 120 × 40-55 mm, margins ruffled, especially on outer tepals, tips slightly recurved. Lvs scattered, 160 × 35 mm, mid green. Stems 1.05 m, green, with 5-7 fls.

**'Francina' VII(-/b)**

See *L. × parkmanii* 'Francina'.

**'Frankavilla' I(a/-)**

Parentage: 'Aurachtiger' × Laan seedling  
R: V. Strasser (1977), G: V. Strasser (1980), N: V. Strasser (1981), I: V. Strasser (1986), REG: V. Strasser (1997)  
Fls orange throughout. Tepal-margins smooth, tips

slightly recurved. Lvs dark green. Stems 1.3 m, rather dark green, with up to 30 fls. Mid July.

**'Frankenjungfer' I(b/c)**

Parentage unknown

R: A. Winkler (pre 1980), N: A. Winkler, REG: A. Winkler (1988)

Fls vivid yellow (15A) with small spots. Lvs dark. Stems 1 m, with a long infl. Late July.

(Published in German Lily Group sales list, 1980.)

**'Frankenkönig' I(a/-)**

Parentage: 'Pirate' × 'Connecticut King'

R: A. Winkler (1976), G: A. Winkler (1978), N: A. Winkler (1979), REG: A. Winkler (1997)

Inside vivid yellow (12A); outside vivid yellow (9A); spots absent; nectaries white-green; Tepals 80 × 37 mm, margins smooth, tips slightly recurved. Lvs scattered, 118 × 15 mm, dark green. Stems 1 m, rather dark green, with c.6 fls. June to July.

**'Frankenleuchte' I(a/-)**

Parentage: (*lancifolium* × unknown) × 'Connecticut King'

R: A. Winkler (1978), G: A. Winkler (1980), N: A. Winkler (1982), REG: A. Winkler (1985)

Inside strong reddish orange (32B), tepal-tips orange, throat yellow-orange; outside greenish orange; some dark brown spots in centre; pollen brown. Tepals 65 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 15 mm, dark green. Stems 1.2 m, dark brown, with c.15 fls. Early July.

Syn.: 'Orangenleuchte'.

(Published in *Der Staudengarten* 4 (1981) as 'Orangenleuchte'.)

**'Frank Jones' III(c/d)**

See *L. × testaceum* 'Frank Jones'.

**'Frank Miles' II(-/-)**

Parentage: presumed to be a seedling of *L. × dalhansonii* 'Marhan'

R: C.G. van Tubergen (c. 1893), N: C.G. van Tubergen

Similar to 'G.F. Wilson'.

(Published in *JRHS* 16: lxxix (1894).)

**'Frankonia' I(a/-)**

Parentage: ('Destiny' × 'Amber Gold') × 'Connecticut King'

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1983), I: V. Strasser (1984), REG: V. Strasser (1985)

Fls vivid yellow (14A) with purple spots; nectaries green; pollen brown. Tepals 80 mm long, margins smooth, tips not recurved. Lvs scattered, dark green, reflexed. Stems 1.4 m, red-brown, with c.15 fls. Mid July.

**'Franky' I(a/-)**

Parentage: 'Connecticut Red' × unnamed seedling

R: Gebr. Mak B.V. (1982), G: Gebr. Mak B.V. (1984), N: S. Schoon (1989), I: S. Schoon (1989), REG: Gebr. Mak B.V. (1989)

Inside dark red (187B), throat spotted pale yellow (158A); outside dark red (187B), tepal-edges dark red (187A); spots few, small, dark red (187A); pollen strong reddish orange (169A). Tepals 90 × 42 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 0.9 m, with c.8 fls. July.

**'Franses Searle' VII(-/c)**

Error for 'Frances Searle'.

**'Frans Hals' VIII(a/b)**

Parentage: seedling BG 96-59 × seedling AG 96-5

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside light greenish yellow (3D), midveins and tepal-margins brilliant greenish yellow (5B), throat pale yellow-green (4D); outside pale yellow-green (4D), each tepal strong yellow-green (144C) at base, brilliant yellow (9C) on margins and tip; spots and papillae absent; nectaries strong yellow-green (143B); pollen strong orange (170A); stigma brilliant greenish yellow (5A). Fls 190 mm wide; tepals 140 × 65 mm, margins smooth, tips slightly recurved. Lvs 190 × 18 mm. Stems 1.3-1.65 m, green, with c.4 fls.

(*A longiflorum*/Asiatic (LA) hybrid.)

**'Fraternita' I(a-b/b)**

Parentage: unnamed seedling × unnamed seedling

R: D.-V. Škimele (1992), G: D.-V. Škimele (1995), N: D.-V. Škimele (1997), REG: D.-V. Škimele (2001)

Inside cranberry-red, flushed with lilac, tepal-margins darker, a small yellow ray over a third of each tepal, throat red; outside similarly coloured but with yellow-green midribs; spots small, black, on a third of each tepal; nectaries greenish; pollen bronze; stigma dark red. Fls 160 mm wide; tepals 80 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 20 mm. Stems 0.6 m, green, with c.11 fls. Mid to late July.

**'Frechdachs' I(b/c)**

Parentage: 'Amurgold' × Yellow Blaze Group

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Inside strong orange-yellow (22A), tepal-tips light orange-yellow (19A); outside moderate yellow (161A); spots numerous, medium sized, dark red (183A), on basal half of each tepal; nectaries pale yellow-green (193A); pollen moderate reddish brown (174A); stigma dark purple (83A). Fls 150 mm wide; tepals 75 × 38 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 95 × 18 mm. Stems 1.25 m, dark green, with 8-10 fls. Early to mid July. (The cv. epithet derives from the bold *frech* appearance of the fl. Nomenclatural standard: colour print provided by registrant (WSY 0024704).)

**'Freckle Face' I(a/d)**

Parentage: tall, white-flowered seedling × 'White Princess'

R: W.D. Evans (1988), G: W.D. Evans (1991), N: W.D.

Evans (1999), I: Hartle-Gilman Gardens (1999), REG: W.D. Evans (1999)

Inside and outside yellowish white (155B); spots numerous, dark reddish orange (175C), on two-thirds of each tepal; nectaries white; pollen dark reddish orange (175C). Fls 60 mm wide; tepals 50 × 30 mm, margins not or slightly wavy, tips strongly recurved. Lvs scattered, 60 × 20 mm, mid green. Stems 1.3 m, green, with c.9 fls. Midseason.

(Nomenclatural Standard: colour photograph supplied by registrant (WSY 0016003).)

#### 'Freckles' IX(b/c)

See *auratum* 'Freckles'.

#### 'Frederick Stern' I(c/-)

Parentage: 'Progenitor' × (*lancifolium* var. *flaviflorum* × 'Marlyn Ross')

R: G.W. Darby (c. 1965), N: G.W. Darby

Fls yellow with dark spots. Tepals semi-recurved. Stems 1 m. Late July.

#### 'Fredijs' I(a-b/b-c)

Parentage: ('Nakts Tango' × 'Provincial') × seedling BM9 (yellow-flowered with brushmarks)

R: D. Hercborgs (1995), G: D. Hercborgs (1997), N: D. Hercborgs (1998), I: D. Hercborgs (2000), REG: D. Hercborgs (2004)

Inside and outside strong orange (25A); spots brown, on a third of each tepal. Fls 140 mm wide; tepals 75 × 30-35 mm, margins smooth, tips slightly recurved; pedicels to 200 mm long. Lvs scattered. Stems 1.1 m, green, with c.12 fls. July.

#### 'Fred Tarlton' II(b/-)

Parentage: *L.* × *dalbansonii* 'Sutton Court' × unknown

R: R. Erskine (pre 1975), G: R. Erskine, N: R. Erskine (1996), I: R. Erskine (1996), REG: R. Erskine (1996)

Inside deep yellow, throat pale yellow; outside pale yellow; spots brown, mostly on central third of each tepal; nectaries green; pollen orange. Fls 50 mm wide; tepals 25 × 15 mm, margins smooth, tips slightly recurved. Lvs whorled, 130 × 35 mm, mid green. Stems 1.2 m, green, with 20 or more fls.

#### 'Free Choice' VII(a/b-b-c)

Parentage: (*L.* × *parkmanii* Little Rascal Group × unknown) × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2002)

Inside and outside yellowish white (155D), with a pale greenish yellow (1D) stripe along midribs, and some tepals flushed with strong purplish red (59D); spots and papillae present; nectaries strong yellow-green (144B); pollen moderate red (181A); stigma dark purple (79A). Fls 180 mm wide, slightly scented; tepals 115 × 40 mm, margins slightly ruffled, outer more so, tips recurved. Lvs scattered, 110 × 48 mm. Stems 0.5 m, green, with c.5 fls. July.

#### 'Freedom' VII(b/b)

Parentage unknown

R: T.T. Kirsch (1974), G: T.T. Kirsch (1977), N: Sun Valley Bulb Farms, Inc. (1982), I: Sun Valley Bulb Farms, Inc. (1982), REG: Sun Valley Bulb Farms, Inc. (1982) Fls yellowish white (155D); spots very few, red-purple, ageing to white; nectaries light green; pollen strong orange (169B). Tepals 140-155 × 50 mm, margins ruffled, tips strongly recurved; pedicels dark maroon above, blue-green. Lvs scattered, 150 mm long. Stems 0.75-1.1 m, with 1-10 fls. July.

#### 'Freischütz' I(a/-)

Parentage unknown

R: H. Böhm, N: H. Böhm, I: H. Böhm (pre 1980), REG: H. Böhm (1985)

Inside vivid reddish orange (30B), throat vivid yellowish orange (30C); outside vivid yellowish orange (30C); spots minute, dark greyish purple (202A), in the throat; nectaries orange-frosted; pollen strong orange (169B). Fls 140 mm wide; tepals 90 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 116 × 13 mm, mid green. Stems 1.2-1.4 m, green overlaid with purple, with c.15 fls. July.

(Published in *Liliářská ročenka*, 1983.)

#### 'Freising' VI(-/-)

Parentage unknown

R: P. Geiser (1975), G: V. Strasser (1978), N: V. Strasser (1983), I: V. Strasser (1985), REG: V. Strasser (1986) Inside yellow, throat green; outside yellow, midribs green. Tepals 125 mm long, margins smooth, tips not recurved. Lvs scattered, 180 × 15 mm, dark green. Stems 1.5 m, dark green, with c.18 fls. Mid July.

#### 'French Lace' I(a/-)

Parentage: ((*concolor* × *dauidii*) F<sub>2</sub> selection × 'Sunkissed') × ((*concolor* × *dauidii*) F<sub>2</sub> selection × 'Juliana')

R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Inside pale orange-yellow (23D) slightly flushed with light orange-yellow (23C) midveins in the throat; outside soft buff with the lightest plum overlay at base; spots many, very small, magenta; nectaries soft buff, white-downy; pollen strong brown (172A). Tepals 50-60 × 25-30 mm, margins ruffled, tips slightly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 0.8-1 m, dark green, with 10-22 fls in a pyramidal inf. Mid June.

#### 'Fresco' VII(-/-)

Parentage unknown

R: T.T. Kirsch (1973), G: T.T. Kirsch (1977), N: T.T. Kirsch (1982), REG: Sun Valley Bulb Farms, Inc. (1982) Inside pale purplish pink (62D/65D), paler at base, darker at tepal-tips, throat yellow-orange; outside pale purplish pink (65D) overall, outer tepals a more intense pink with narrow white edge; spots deep red (53A), on basal two-thirds of each tepal; nectaries strong yellow-

green (144C); pollen strong orange (169B). Fls 150-175 mm wide; tepals 155 × 65 mm, margins ruffled, tips strongly recurved. Lvs scattered, 75-100 × 25-50 mm, dark green. Stems 0.75-1 m, dark red-purple with numerous green spots, and with 1-10 fls. Late July.

**'fresense' (Eastwood) Eastwood IX(c/d)**

Syn. of *kelleyanum*.

**'Freudenträne' I(c/-)**

Parentage unknown

R: Wiedmann (pre 1995), N: Wiedmann, REG:

Wiedmann (1997)

Fls salmon with small spots. Stems 1 m, with bulbils.

Mid July.

(Published in European Lily Society sales list, 1996.)

**'Freya' VIII(a/b)**

Parentage: seedling BG 95-07 × seedling AG 98-21

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2001), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside brilliant yellow (7A), tepal-margins vivid yellow (9A), throat strong yellow-green (144B) with light yellow-green (150D) margin, becoming yellowish white (155D) with age; outside light yellow-green (2C), brilliant greenish yellow (4A) towards tepal-margins, margins brilliant yellow (7A), base with light yellow-green (144D) flush (older fls are yellowish white (155D) inside, with brilliant yellow (7A) tepal-margins and along midveins flushed with pale greenish yellow (2D)); outside yellowish white (155D), with brilliant yellow (7A) tepal-margins, and flushed with pale yellow-green (4D) along midribs); spots and papillae absent; nectaries pale greenish yellow (1D) (in older fls yellowish white (155D) with strong yellow-green (144B) edge); pollen moderate orange (167A/B); stigma deep greenish yellow (153A). Fls 220 mm wide; tepals 119 × 20 mm, margins smooth, tips recurved. Lvs scattered, 172 × 40 mm, dark green. Stems 1-1.25 m, dark green with darker markings, and with 3-6 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Frieda' I(a-b/-)**

Parentage: 'Apeldoorn' × 'Monaco'

R: De Jong Lelies Holland B.V. (1988), G: De Jong Lelies Holland B.V. (1990), N: De Jong Lelies Holland B.V. (1993), I: De Jong Lelies Holland B.V. (1994), REG: De Jong Lelies Holland B.V. (2001)

Inside and outside vivid yellow (12A); spots and papillae present; nectaries yellow-green; pollen light brown; stigma yellow. Fls 150 mm wide; tepal-margins ruffled, tips recurved. Stems 0.8 m, green with dark spots and stripes. Early to midseason.

**'Friendship' VII(-/-)**

Parentage unknown

R: Sun Valley Bulb Farms, Inc. (1975), N: Sun Valley Bulb Farms, Inc. (1980), I: Sun Valley Bulb Farms, Inc. (1980), REG: Sun Valley Bulb Farms, Inc. (1980 or 1981)

Inside strong purplish red (60C), throat yellowish white (155D); outside deep purplish pink (70C); spots present; nectaries strong yellow-green (145A); pollen reddish orange (31A). Tepals 175-200 mm long, margins slightly ruffled. Lvs lanceolate, moderate olive-green (137A). Stems 1-1.5 m.

**'Friendship' I(a/-)**

Syn. of 'Country Dawn'.

**'Frietschii' VI(-/-)**

See *L. × aurelianense* Frietschii Group.

**'Frietschii Group' VI(-/-)**

See *L. × aurelianense* Frietschii Group.

**'Fripita' I(-/c)**

Parentage unknown

R: F. Piasek (pre 1986), N: F. Piasek

Inside pale yellow with a red centre. July.

**'Frisia' VII(b/-)**

Parentage: unnamed seedling × unnamed seedling  
R: Trior Lelie B.V., G: Trior Lelie B.V., N: Trior Lelie B.V. (1996), I: Trior Lelie B.V. (1997), REG: Trior Lelie B.V. (1997)

Inside moderate purplish pink (62B), becoming strong purplish pink (62A) at tepal-tips, all on a paler ground, throat yellowish white (155D); outside moderate purplish pink (62B) on a paler ground, tepal-edges strong purplish red (64C), base yellowish white (155D); spots moderate purplish red (59C), on basal part of each tepal; papillae pale greenish yellow (10D) and moderate purplish red (59C), in the throat; nectaries strong yellow-green (143C) with a pale greenish yellow (10D) rim; pollen dark reddish orange (175C); stigma vivid purple (80A). Fls 230 mm wide; tepals 120 × 40-55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 160 × 35 mm, mid green. Stems 1.05 m, green, with 6-7 fls.

**'Frontier' II(b/-)**

Parentage: complex hybrid seedling × 'Tsing'

R: J.C. Ericksen, G: J.C. Ericksen (1989), N: J.C. Ericksen (1991), REG: J.C. Ericksen (1991)

Inside creamy gold, throat gold; outside creamy gold tinged with green; spots absent; nectaries gold; pollen red-gold-orange. Fls c.75 mm wide; tepals 30-40 × 25-30 mm, margins smooth, tips hardly recurved. Lvs whorled, 175 × 40-50 mm, mid to dark green, mottled. Stems to 1 m, dark green. July.

**'Frost' IX(b/c)**

See *auratum* 'Frost'.

**'Frosted Apricot' I(c/c)**

Parentage: (( *davidii* var.  *unicolor* × 'Lillian Cummings') × 'Skylark' (Div. I)) × unnamed seedling

R: W.D. Evans (1971), G: W.D. Evans (1974), N: W.D. Evans (1986), I: W.D. Evans (1986), REG: W.D. Evans (1986)

Inside pale orange-yellow (159B), tepal-tips light orange

(18C), throat light orange (28C); outside pale orange-yellow (159B), midribs yellow-orange; spots few, small, in the throat; nectaries light orange (28C); pollen reddish brown. Fls 110 mm wide; tepals 65 × 33 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 5 mm, mid green. Stems 0.9 m, green, with c.16 fls. Mid to late.

**'Frosty Morn'** VII(b/b)

See *L. × parkmanii* 'Frosty Morn'.

**'Frosty Sky'** VII(a/b)

Parentage: (*L. × parkmanii* 'Allegra' × 'Star Gazer') × 'Casa Blanca'

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside and outside yellowish white (155D), midveins pale yellow-green (155A), tinged with strong/light yellow-green (144C/D) at base and top; spots moderate purplish red (58A), on some but not all fls; papillae on two-thirds of each tepal; nectaries strong yellow-green (144C); pollen moderate reddish orange (171A); stigma with moderate purplish red (59C) papillae on a moderate yellowish pink (173D) ground. Fls 270 mm wide; tepals 150 × 45-70 mm, margins ruffled, tips recurved. Lvs scattered, 165 × 60 mm, mid green. Stems 1.1 m, pale green, with 4-5 fls. July.

**'Frühes Gelb'** I(b/-)

Parentage unknown

R: J. Klein (pre 1984), N: J. Klein, REG: J. Klein (1988) Fls yellow with light spots; nectaries green. Stems 0.9 m, with secondary buds. Late June.  
(Published in German Lily Group sales list, 1984.)

**'Frühlingserwachen'** I(a-b/c)

Parentage: 'Dawn Star' × red-violet-flowered Asiatic seedling NNC7.47

R: G. Steinbrück (1988), G: G. Steinbrück (1990), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2001)

Inside strong purplish red (64C), strong purplish pink (62A) towards tepal-tips, with a yellow-white spot at the extreme tip, throat yellowish white (158C); outside strong purplish red (64C); spots numerous, small, moderate reddish orange, on three-quarters of each tepal; nectaries conspicuous, yellowish grey (156B); filaments pale; pollen moderate red (179A) in large anthers; stigma strong purplish red (60B). Fls 135 mm wide; tepals 75 × 32 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 10 mm. Stems 0.65 m, green, with 6-8 fls. Late June.

(Published in Steinbrück's sales list, 2000. Nomenclatural standard: colour print provided by registrant (WSY 0028891).)

**'Frynee'** I(a-b/b)

Parentage: 'Dukát' × 'Connecticut Red'

R: I. Wiesner, N: I. Wiesner, REG: I. Wiesner (1989) Inside vivid yellow (17B), tepal-tips vivid orange-yellow

(21A); outside ochre with a brownish flush; spots small, on a quarter of each tepal; pollen cinnamon-brown; stigma pale brown. Fls 145 mm wide; tepals 84 × 32 mm, tips slightly recurved. Lvs deep green. Stems 0.6-0.7 m, with 6-8 fls in a crowded infl. Late July.

**'Fuchsia Lady'** I(c/d)

Parentage: complex hybrid

R: C.F. Patterson (c. 1948), I: Dept. of Horticulture, University of Saskatchewan (1958)

Fls fuchsia-pink, with a few spots. Stems 1.4 m. July.

**'Fuchsia Queen'** I(b/-)

Parentage:  *davidii* 'Lady Byng' × ( *davidii* var.  *willmottiae* ×  *cernuum*)

R: C.F. Patterson (c. 1946), I: Dept. of Horticulture, University of Saskatchewan (1957)

Fls spinel-pink, slightly spotted. Stems 1.4 m. July.  
(Published in *ILR* (1960).)

**'Fuchsia Splendor'** I(a/-)

Parentage: complex hybrid

R: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1974)

Fls between deep and moderate purplish pink (66C & D), shoulders darkening to deep red (60A); spots dark red (187A), on basal two-thirds of each tepal; nectaries yellowish white (155B). Tepals slightly reflexed. Stems 0.4-0.6 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 6 (1978).)

**'Fuchsia Swirl'** I(b/-)

Parentage: 'Edith Cecilia' × unknown

R: E. Robinson (1965), G: E. Robinson (1970), N: E. Robinson (1978), REG: E. Robinson (1980)

Inside fuchsia-pink; outside paler; large, dark spots in centre. Tepals slightly recurved, twisted. Lvs scattered, mid green. Stems 1.2 m, with c.15 fls.

**'Fuchsinebelle'** VI(-/a)

Parentage: selection from *L. × imperiale* Pink Trumpet Group

N: D. Foxwell (1960)

Fls fuchsia-purple (HCC 28/3).

**'Fudge Sundae'** I(a/-)

Parentage: brushmarked seedling × 'White Prince'

R: J. Wadekamper (1978), G: J. Wadekamper (1980), N: J. Wadekamper (1989), I: Borbeleta Gardens (1991), REG: J. Wadekamper (1993)

Fls pale greenish yellow (10D), throat almost white; spots few, purple, below the deep purple brushmarks; nectaries lime-green; pollen dark brown. Tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 20 mm, mid green. Stems 0.7 m, dark green, with c.6 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1989.)

**'Fuego'** I(a/b)

Parentage: ('Tabasco' × 'Connecticut Yankee') ×

**'Firecracker'**

R: Bischoff Tulleken Leliecultuur B.V. (1978), G: Bischoff Tulleken Leliecultuur B.V. (1981), N: Bischoff Tulleken Leliecultuur B.V. (1986), I: Bischoff Tulleken Leliecultuur B.V. (1986), REG: Bischoff Tulleken Leliecultuur B.V. (1988)

Inside brilliant greenish yellow (3B), tepals with a broad, strong orange (24A) flame; outside light greenish yellow (3C/D), midribs pale green; some spots in the throat; pollen orange-brown. Fls 170 mm wide; tepals 90 × 45 mm. Lvs scattered, 160 × 25 mm. Stems 1-1.2 m, green with some brownish markings, and with 7-12 fls (from 16-18 cm bulbs). July.

**'Fuego Crown' VIII(a/b)**

Parentage: 'Miami' × 'Gloria'

R: De Jong Lelies Holland B.V. (1996), G: De Jong Lelies Holland B.V. (1998), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2003)

Inside strong yellowish pink (34D), each tepal brilliant greenish yellow (6B) above nectaries, margins and apical part of midveins brilliant greenish yellow (5B), throat pale greenish yellow (1D); outside moderate red (179A), base moderate purplish red (58A), midribs dark yellowish green (139C), tepal-margins and tip brilliant yellow (11A); spots dark red (59A); papillae brilliant greenish yellow (6B); nectaries strong yellow-green (143C); pollen moderate red (179B); stigma dark red (59A). Fls 115 mm wide, slightly fragrant; tepals 85 × 36 mm, margins smooth, tips slightly recurved. Lvs 170 × 26 mm. Stems 1.2 m, green, with c.8 fls.

**'Fuga' I(c/d)**

Parentage: *cernuum* × *davidii*

R: J. de Graaff (c. 1962), N: J. de Graaff  
Fls bright orange; spots black. Stems 1.2-1.9 m, dark. Late June to July.

Syn.: 'Bittersweet'.

(Published in *LYB* 28: 133 (1965). E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978) says that the parentage (of 'Bittersweet') is 'Edith Cecilia' × 'Lighthouse'.)

**'Fuji Hirado' IX(c/d)**

See *leichtlinii* 'Fuji Hirado'.

**'Fuji Hirato' IX(c/d)**

See *leichtlinii* 'Fuji Hirato'.

**'Fulbright' I(a/-)**

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler (1977), N: B.G. Hayler (1983), I: B.G. Hayler (1983), REG: B.G. Hayler (1983)  
Inside brilliant yellow (12B), throat vivid yellow (12A); outside yellow; lightly spotted purple-black. Tepals 100 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems with c.10 fls. Dec. (Australia).

**'Fulgens' I(a/b)**

See *L. × maculatum* 'Fulgens'.

***fulgens* var. *staminosum* Lemaine I(a/b)**

Syn. of *L. × maculatum* 'Staminosum'.

(Included in Div. I because, although *fulgens* was originally published as a species, this variety is a synonym of *L. × maculatum* which is placed in Div. I.)

**'Full House' I(a/b)**

Parentage: seedling G 90-05 × seedling OR 91-15

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside strong orange (25A), throat strong orange (24A); outside light yellowish pink (29C), tepal-edges strong orange (25A), midribs light yellow (18A); spotted and papillae absent; nectaries moderate reddish orange (35B), hairy; pollen strong orange (168A); stigma dark red (187A). Fls 170 mm wide; tepals 95 × 45 mm, margins smooth, tips recurved. Lvs scattered, 175 × 15 mm. Stems 1.5 m, dark, with c.7 fls.

**'Full Speed' I(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside vivid reddish orange (34B) on a vivid yellow (12A) ground, with a small vivid yellow (12A) mark above each nectary, throat strong reddish orange (42B); outside light orange-yellow (22C), tepals edged strong orange (26A), fading towards tips and with a little strong yellow-green (144C) towards base; spots dark purple (79A), on up to a quarter of each tepal; papillae vivid yellow (12A), in the throat; nectaries light greenish yellow (5D); pollen strong orange (26A); stigma strong orange (25A). Fls 140 mm wide; tepals 80 × 30 mm, margins ruffled towards tip, tips slightly recurved. Lvs scattered, 90 × 20 mm. Stems 0.55 m, green, with c.6 fls. June.

**'Full Time' VIII(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1997), I: Bischoff Tulleken Lelies B.V. (1998), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside pale orange-yellow (23D), tepals striped strong orange (24A,25B) at margins, midveins brilliant orange-yellow (23B) at base and strong orange (25A) at top, throat strong yellow-green (143B) alongside nectaries; outside pale yellow (20D), tepal-edges strong orange (26A), midribs strong yellow-green (144B/C), tipped strong yellow-green (143A); spots absent; papillae few, light yellowish pink (26D) alongside nectaries; nectaries light yellowish pink (26D); pollen strong brown (172A); stigma moderate orange-yellow (164C). Fls 220 mm wide; tepals 110 × 45-65 mm, margins smooth, tips slightly recurved. Lvs scattered, 200 × 20 mm. Stems 0.85

m, dark green, with c.4 fls. June.  
(*A longiflorum*/Asiatic (LA) hybrid.)

**‘Funkturn’ I(a/-)**

Parentage unknown

R: J. Klein (pre 1987), N: J. Klein, REG: J. Klein (1988)  
Fls blood-red. Stems 1.3 m. Mid July.  
(Published in German Lily Group sales list, 1987.)

**‘Für Elise’ I(a/-)**

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N:  
Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG:  
Hoffgaarde B.V. (1994)

Inside pale yellow (8D) below, shading in stripes to deep  
purplish pink (58D) at tepal-tips; outside deep red (60A)  
fading towards tepal-tips and with slight pale yellow-  
green (155A) edged, tinged with strong yellow-green  
(143C) at base, midribs dark greenish yellow (152D),  
tipped light olive (152B); spots moderate purplish red  
(58A), in the throat; pollen strong orange (26A); stigma  
dark red (187A). Fls 200 mm wide; tepals 100 × 50 mm.  
Lvs scattered, 120 × 15 mm, mid green. Stems 0.6 m,  
pale green, with c.4 fls.

**‘Furore’ VII(b/c)**

Parentage unknown

R: Sun Valley Bulb Farms, Inc. (1975), G: Sun Valley  
Bulb Farms, Inc. (1978), N: Trior Lelie B.V. (1982), I:  
Trior Lelie B.V. (1984), REG: Trior Lelie B.V. (1985)  
Inside and outside white, midribs pale primrose-yellow;  
spots white, over the whole fl.; nectaries Dauphin’s violet;  
pollen red-brown. Fls 200 mm wide; tepals 95 × 50 mm.  
Lvs scattered, 150 × 50 mm, dark green. Stems 1.25 m,  
pale green, with 7-14 fls (from 16-18 cm bulbs). Aug.  
(Published in *Bloembollencultuur*, 1984.)

**‘Fury’ I(-/-)**

Parentage: (*L. × scottiae* × unknown) × unknown

R: G.M. Chandler, N: G.M. Chandler (1954), I: G.M.  
Chandler (1961)

Inside deep red (53A), deepening around tepal-edges and  
towards centre; spots black, on basal half of each tepal. Fls  
125 mm wide. Stems 0.4 m, with 8-12 fls.

**‘Fury’ I(c/d)**

Parentage: selection from Fiesta Group type

S: J. de Graaff (c. 1966), N: J. de Graaff

Fls red. Stems 1-1.2 m. Late June.

(Unacceptable name: ICNCP, 2004: Art.27.1 - name  
already used for another lily. Published in *ILR* (1969)  
Addenda.)

**‘Fusenosato’ VII(-/c)**

Parentage unknown

REG: G. Bottema (1988)

Inside of tepals flamed strong purplish red (58B) on a  
strong purplish pink (63C) ground, tips and edges white;  
outside deep to strong purplish pink (68A/B); spots red,  
on basal half of each tepal; pollen reddish brown. Fls 190  
mm wide; tepals 100 × 45 mm. Lvs scattered, 150 × 40

mm. Stems 0.75 m, pale green, with c.3 fls. Late Sept.  
(Raised and named in Japan.)

**‘Futura’ VIII(b/b)**

Parentage: seedling E-890-19 × seedling OR 90-058-8  
R: World Breeding B.V., G: World Breeding B.V., N:  
World Breeding B.V. (2000), I: World Breeding B.V.  
(2000)

Inside brilliant yellow (7B), tepal-edges brownish orange  
(171B) in basal half, tips brilliant yellow (7B), throat  
light yellow (10C); outside brilliant yellow (9C), midribs  
light yellow-green (145C) with pale greenish yellow (9D)  
alongside, the base with a deep purplish red (59B) spot;  
spots very few, on outer tepals only; papillae absent;  
nectaries strong yellow-green (144B); pollen strong  
orange (26A); stigma greyish purplish blue (103A). Fls  
200 mm wide; tepals 140 × 65 mm, margins smooth, tips  
strongly recurved. Lvs scattered, 250 × 25 mm. Stems  
1.25 m, with c.7 fls.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name  
already used for a cultivar Group. However, this cv. has  
been granted PBR in Europe and Israel, and USPP in the  
USA, so the epithet must be accepted. An Orienpet (OT)  
hybrid.)

**Futura Group I(-/-)**

Parentage: complex hybrids, including *dauidii*

R: Blackthorne Gardens (pre 1982), N: Blackthorne  
Gardens, I: Blackthorne Gardens

Fls of varied colours.

**‘Future’ I(b/-)**

Parentage: selection from Vasaras Prieks Group

No further information. Possibly a synonym of another lily.

**‘Gabra’ I(b-c/c)**

Parentage: ‘Plavovláška’ × (‘Bělásek’ × ‘Mánes’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2001),  
REG: B. Mičulka (2001)

Inside pastel yellow, with a brown-apricot tinge above  
nectaries; outside deeper yellow, midribs brownish at  
base; a moderate number of large, dark brown-crimson  
spots on two-fifths of each tepal; nectaries yellow-  
papillate; pollen brown; stigma brownish red. Fls 145  
mm wide; tepals 97 × 33 mm, slightly recurved; pedicels  
45 mm long, thick, brown-dotted. Lvs scattered, 95 × 18  
mm, shiny dark green. Stems 0.86 m. Mid June.

**‘Gabrielle’ I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: P. Hoff Jr (1982), G: Hoffgaarde B.V. (1984), N:  
P. Hoff Jr (1987), I: Hoffgaarde B.V. (1986), REG:  
Hoffgaarde B.V. (1988)

Inside light orange-yellow (16B), centre brick-red with  
grey veins, tepal-tips deep pink (51C), margins darker;  
outside orange-yellow, with brick red basal markings,  
tepal-edges brick-red; spots chocolate-brown, on two-  
thirds of each tepal; pollen dark reddish brown. Fls 130  
mm wide; tepals 75 × 40 mm. Lvs scattered, 75 × 40  
mm, mid green. Stems 1 m, green with some darker  
pigmentation, and with c.9 fls.

**'Gaida' VII(b/b)**

Parentage unknown

R: Ē. Ieviņa, G: Ē. Ieviņa, N: Ē. Ieviņa (pre 1997), REG: Liliūm Balticum Association (2004)

Inside and outside white, midribs light greenish yellow; papillae white; nectaries light green; pollen brown; stigma violet. Fls 220 mm wide; tepals 135 × 68 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, up to 175 × 75 mm. Stems up to 1.1 m, green, with 6-7 fls. Early autumn.

**'Gaiety' I(c/d)**

Parentage unknown

R: F.J. Holmes, N: F.J. Holmes (1973)

Fls vivid orange-yellow (23B), lightly spotted brown; pollen brown. Lvs dark green to bronze, very narrow. Stems 1-1.6 m, with 20-30 fls in a pyramidal infl. Aug. (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 21 (1978).)

**'Gaišā Nākotne' I(b/-)**

Parentage: selection from Vasaras Prieks Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls apricot-orange, spotted brown. Fls 80-100 mm wide, scentless. Stems up to 1.2 m, with 15-20 fls. June to July. Syn.: 'Bright Future'.

(Published in *LYB* 33: 78 (1970) as 'Gaishas Nakotne' which is a misspelling.)

**'Gaishas Nakotne' I(b/-)**

Misspelling of 'Gaišā Nākotne'.

**'Gaishas Stars' I(b/-)**

Misspelling of 'Gaismas Stars'.

**'Gaismas Stars' I(b/-)**

Parentage: selection from Vasaras Prieks Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls rosy apricot, spotted brown. First fls double, all scentless. Stems up to 1.5 m, with 20-25 fls. June to July. Syn.: 'Bright Path'.

(Published in *LYB* 33: 78 (1970) as 'Gaishas Stars'; it was included in *ILR* (1982) under this misspelling.)

**'Gajaneh' I(a/-)**Parentage: (*lancifolium* × unknown) × mixed pollen

R: G. Hennig, N: G. Hennig (1979), I: G. Hennig (1979), REG: G. Hennig (1985)

Inside with tepal-tips vivid reddish orange (34A), throat and tepal-margins vivid reddish orange (42A); outside strong reddish orange (42C); spots sparse, dark greyish to greyish reddish brown (200A/B) on two-thirds of each tepal; nectaries orange, frosted; pollen strong reddish orange (169AS). Fls 145 mm wide; tepals 92 × 35 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, dark green. Stems 0.8-1.1 m, with c.9 fls. July. (Published in *Liliārskā ročenka*, 1983)

**'Gala' VII(a-b/b)**

Parentage unknown

R: Gebr. Vletter &amp; Den Haan (1984), G: Gebr. Vletter &amp;

Den Haan (1987), N: Gebr. Vletter &amp; Den Haan (1994), I: Gebr. Vletter &amp; Den Haan (1994), REG: Gebr. Vletter &amp; Den Haan (1995)

Inside of inner tepals pale purplish pink (65C), of outer tepals light purplish pink (65B), both shading paler towards base, margins and tips, throat pink; outside yellowish white (155D) suffused with pink; spots dark rose-pink; papillae present; nectaries green; pollen reddish brown; stigma dark purple. Tepal-margins ruffled, tips slightly recurved. Lvs scattered, mid green. Stems 1 m, spotted and striped darker, and with 3-6 fls (from 16-18 cm bulbs). Early to midseason.

**'Galahad' VI(-/a)**Parentage: contains *L. × imperiale, sulphureum* & *L. × sulphurgale*

R: E.F. Palmer (c. 1939), N: E.F. Palmer, I: B.L. Palmer (1948)

Buds greenish, flushed with rose-pink. Fls clear cream inside; anthers chocolate-brown. Lvs 130-150 × 12 mm, grey-green. Stems 1.5-1.9 m, greenish brown, with 9-12 fls. July to Aug.

(Published in *Cobblehill Cat.*, 1948.)

**'Galateia' I(a/-)**

Parentage: derived from Connecticut Group

R: A.V. Otroshko (1987), N: A.V. Otroshko, REG: A.V. Otroshko (1991)

Fls very broad, chartreuse-yellow with a few spots near centre. Stems 1 m. July.

(Unaccepted spelling: 'Galateja'.)

**'Galateia' VI(-/-)**Parentage: (*henryi* × Olympic Group) × trumpet hybrids

R: N.G. Korshikova (1991)

Fls golden yellow, flushed with brownish outside. Stems 1 m, with 5-9 fls. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in M.F. Kireeva, *Lilii*, 88 (2000).)

**'Galateja' I(a/-)**

Unaccepted spelling of 'Galateia' (Div. I).

**'Galatina' VI(-/-)**

Parentage: seedling 28/83 × 'Glockenturm'

R: V. Strasser (1983), G: V. Strasser (1986), N: V. Strasser (1995), REG: V. Strasser (1996)

Inside white, throat citron-yellow; outside whitish; nectaries green; pollen orange. Tepals 125 × 37 mm, margins smooth, tips slightly recurved. Lvs 130 × 12 mm, dark green. Stems 1.2 m, green, with c.20 fls. July.

**'Galaxie' IV(-/d)**Parentage: selection from complex *parryi* × *humboldtii* hybrid

S: J. de Graaff (c. 1963), N: J. de Graaff

Fls with centre yellow, tepal-tips bronze.

**'Galilei' VII(a-b/c)**

Parentage: unnamed seedling × unnamed seedling

R: Gebr. Vletter & Den Haan, G: Gebr. Vletter & Den Haan (1985), N: Gebr. Vletter & Den Haan (1992), I: Gebr. Vletter & Den Haan (1993), REG: Gebr. Vletter & Den Haan (1993)

Inside strong purplish pink (63C) on a yellowish white (155D) ground, midveins brilliant yellow (12B) fading towards top; outside suffused with strong purplish pink (63C) on a yellowish white (155D) ground, midribs light yellow-green (150D), tepal-tips strong yellow-green (143B); spots dark red and deep purplish red (187C,D), on half of each tepal; papillae yellow; pollen strong orange (170A); stigma dark red (59A). Fls 230 mm wide; tepals 115 × 53 mm, margins of outer tepals ruffled, tips slightly reflexed. Lvs scattered, 165 × 27 mm, dark green. Stems 0.92 m, pale green, with c.5-9 fls.

**‘Galina’ VI(-/-)**

Unaccepted spelling of ‘Gaļina’.

**‘Gaļina’ VI(-/-)**

See *L. × aurelianense* ‘Gaļina’.

**‘Galloway’ V(b/a)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside and outside yellowish white (155D), midribs tinged with light yellow-green (145D); spots and papillae absent; nectaries strong yellow-green (144C); pollen vivid yellow (12A); stigma pale greenish yellow (2D). Fls 175 mm wide, fragrant; tepals 190 × 65 mm, margins smooth, tips recurved. Lvs 180 × 37 mm, Stems 1.5-2 m, green with c.5 fls. Late June to July.

**‘Gamma’ IX(c/d)**

See *leichtlinii* var. *maximowiczii* ‘Gamma’.

**‘Garde’ I(a-b/b)**

Parentage: ‘Blizzard’ × (‘Rusalka’ (of Mičulka) × unknown)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2001), REG: B. Mičulka (2001)

Inside pale but brilliant yellow, tepal-tips tinged pinkish, throat pale greenish yellow; outside paler with brownish midribs; spots absent; nectaries white-granulated; pollen brown; stigma pale greyed pink. Fls 138 mm wide; tepals 80 × 40 mm, slightly recurved; pedicels 65 mm long, slightly brown-dotted. Lvs scattered, 65 × 13 mm, slightly glossy mid green. Stems 0.75 m, thick, green. Late June.

**‘Garden Beauty’ I(a/b)**

See *L. × maculatum* ‘Garden Beauty’.

**‘Garden Bouquet’ I(a/-)**

Parentage: pink-flowered Asiatic × pink-flowered Asiatic R: J.C. Ericksen (1973), G: J.C. Ericksen (1978), N: J.C. Ericksen (1990), REG: J.C. Ericksen (1991)

Inside rose-pink, throat somewhat darker; outside greenish pink; spots inconspicuous; nectaries greenish; pollen light orange-red. Tepals c.20 mm wide, slightly

recurved. Lvs scattered, c.175 mm long, pale to mid green, fine-pointed, thick. Stems 1.1-1.5 m, mid green, with 15 or more fls in a pyramidal infl. Early to mid July.

**‘Garden Bouquet’ I(a/b)**

Parentage: seedling 37-80 × seedling 6-78

R: Cebeco Lilies, Inc. (pre 1998), N: Cebeco Lilies, Inc.

Fls coral-pink, with a yellow centre; spots numerous, reddish, on basal half of yellow area. Tepal-margins smooth, tips not recurved. Stems 1 m. Early to midseason. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Garden Glory’ I(a/-)**

Parentage: Sundrop Group × ‘Red Carpet’

R: J. Wadekamper (1978), G: J. Wadekamper (1980), N: J. Wadekamper (1984), I: Borbeleta Gardens (1985), REG: J. Wadekamper (1985)

Inside red-orange, throat light orange; outside orange; spots few, brown. Fls with waxy texture; tepal-margins smooth, tips not recurved. Lvs scattered, mid green. Stems 0.6 m, dark brown. Mid June.

(Published in *Borbeleta Gardens Cat.*, 1985.)

**‘Gardenja’ I(b/-)**

Parentage: (‘Appleblossom’ × ‘Connecticut King’) × unnamed seedling

R: Gebr. Mak B.V. (1983), G: Gebr. Mak B.V. (1985), N: Gebr. Mak B.V. (1990), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1991)

Inside brilliant orange-yellow (21B) changing to vivid or brilliant orange-yellow (23A/B), tepal-tips vivid to strong reddish orange (34B/C) changing to vivid reddish orange (34A), throat light yellow-green (150D); outside vivid yellow (15B), tepal-edges strong reddish orange (42B); spots few, small, vivid reddish orange (34A), in the throat; nectaries dark red (187A); pollen dark reddish orange (175C). Fls 150 mm wide; tepals 73 × 38 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 13 mm, mid green. Stems 1.2 m, green, with c.14 fls. Apr.

**‘Garden of Eden’ I(-/c)**

See *L. × scottiae* ‘Garden of Eden’.

**‘Garden Party’ VII(b/b)**

Parentage unknown

N: Pater Bloemenbollen B.V. (1995), I: Pater Bloemenbollen B.V. (1995), REG: Pater Bloemenbollen B.V. (1996)

AGM 2002

Inside yellowish white (155D), midveins yellow; outside yellowish white (155D); spots and papillae present; nectaries green; pollen orange-brown; stigma violet. Fls 100 mm wide; tepals 80 × 20 mm, margins ruffled, tips recurved. Lvs scattered, 50 × 15 mm, mid green. Stems c.0.35 m, green with darker markings, and c.4-7 fls. (Obtained from USA as a seedling.)

**‘Garden Queen’ VII(c/c-d)**

Parentage: (*speciosum* var. *album* × *rubellum*) × unnamed seedling

R: Mak Lelieveredeling B.V. (1987), G: Mak-Leek Inc. (1990), N: Mak-Leek Inc. (1995), I: Mak-Leek Inc., REG: Mak-Leek Inc. (1997)

Inside very pale purple (69C), sometimes with a moderate purplish pink (66D) ray extending from nectary-furrows, throat very pale purple (69C) over moderate purplish pink (66D); outside greenish pink; lightly spotted with moderate purplish pink (66D) on basal half of tepals; nectaries soft greenish white; pollen moderate reddish orange (178C) to moderate red (181A). Fls 140 mm wide; tepals 75 × 45 mm, tips slightly recurved. Lvs scattered, 140 × 60 mm, mid green. Stems 0.5 m, green with darker markings, and with 8-15 fls. Early July.

#### 'Gardony' VI(-/d)

Parentage: 'Heidelberg' × 'Lednice'

R: V. Strasser (1982), G: V. Strasser (1985), N: V. Strasser (1990), I: V. Strasser (1990), REG: V. Strasser (1991)

Inside white, with an orange throat and *henryi*-like markings; outside white; nectaries green; pollen brown. Fls 170 mm wide; tepals 105 × 37 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 20 mm, mid green. Stems 1.4 m, dark green with c.20 fls, including secondary and tertiary buds. Late July to late Aug.

#### 'Garfield' V(b/b-c)

Parentage unknown

R: G. Brown (pre 1992), G: G. Brown (1992), N: G. Brown (1992), I: G. Brown (1995), REG: F. Brown (1999)

Inside vivid orange (28B), throat reddish orange (34B); outside vivid orange (28B), midribs light green; vivid reddish orange (34B) spots and vivid reddish orange (44C) pencil marks on the conspicuous papillae; nectaries green; pollen moderate reddish brown (177A); stigma strong yellow-green (145A). Fls 120 mm wide; tepals 85 × 25 mm, tips slightly recurved. Lvs scattered, 80 × 25 mm. Stems 1.25 m, moderate yellow-green (137C), with up to 25-30 fls (including secondaries) in a pyramidal inf. July.

(Named for Garfield, the striped orange cat in the comic-strip of the same name.)

#### 'Garibaldi' VIII(a-b/-)

Parentage: seedling AH 627-35 × seedling AH 3150

R: J.W.A. van der Wereld (1996), G: J.W.A. van der Wereld, N: J.W.A. van der Wereld (1998), I: J.W.A. van der Wereld (2002), REG: J.W.A. van der Wereld (2002)

Inside vivid yellowish orange (30C); outside vivid reddish orange (30B/C); spots absent; papillae present; nectaries orange; pollen brown-red; stigma red-orange. Tepal-margins ruffled, tips recurved. Stems 1.15 m, green with dark stripes and spots. Midseason.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Garmisch' VI(-/-)

Parentage: *henryi* × 'Hoangho'

R: V. Strasser (1975), G: V. Strasser (1978), N: V. Strasser (1981), I: V. Strasser (1984), REG: V. Strasser (1986)

Fls white, throat orange; some *henryi*-type papillae present; nectaries green. Fls 170 mm wide; tepals 100

mm long, margins smooth, tips slightly recurved. Lvs scattered, 120 × 20 mm, dark green. Stems 1.3 m, dark green marked with red-brown, with c.20 fls. Late July.

#### 'Garnet' I(b/-)

Parentage: (*lancifolium* × unknown) × Burgundy Group

R: J. de Graaff (pre 1954), N: J. de Graaff

Fls blood-red; spots maroon. Stems 1.2-1.5 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1954.)

#### 'Garnet Crystals' II(-/-)

Parentage: 'Hantsing' × unknown

R: E. Robinson (1975), G: E. Robinson (1980), N: E. Robinson (1985), I: E. Robinson (1984), REG: ICRA (1998)

Inside dark red with slight yellow centre; outside lighter red; spots few, dark; pollen orange. Tepal-margins smooth, tips slightly recurved. Lvs whorled, mid green. Stems 1.2 m, dark green, with 10 fls. Early July.

#### 'Garnet Fire' IX(b-c/d)

See *speciosum* 'Garnet Fire'.

#### 'Garnet Gem' I(c/-)

Parentage: ('Maxwill' × unknown) × unknown

R: E. Robinson (c. 1956), N: E. Robinson

Fls mid blood-red, with heavy black spotting. Tepals slightly reflexed. Stems 1.1 m. July.

#### 'Garnet Gem' I(a-b/-)

Syn. of 'January Jewel'.

#### 'Garnet Light' I(b/-)

Parentage: *davidii* var. *wilmottiae* × unknown

R: E. Robinson (pre 1969), N: E. Robinson

Fls blood-red; spots absent. Lvs dark green. Stems 1-1.2 m. July.

(Published in *ILR* (1969) Addenda.)

#### 'Garonne' I(a-b/-)

Parentage: 'Monaco' × seedling G 85-12

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer

B.V. (1995), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1997)

Inside brilliant greenish yellow (6C), with a yellow-green base; outside light greenish yellow (6D); a few small spots and some papillae present; nectaries green; pollen brown; stigma dark purple. Tepal-margins ruffled, tips slightly recurved. Stems 1.3-1.35 m, green, with 6-8 fls. Mid to late season.

(Stock was destroyed by registrant in 1998.)

#### 'Gartenglück' I(a/b)

Parentage: 'Impala' × 'Impact'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N:

G. Steinbrück (1997), I: G. Steinbrück (1997), REG: G. Steinbrück (1998)

Inside strong orange-yellow (17A), tepal-tips light greenish yellow (7D); outside light greenish yellow (7D); each tepal with a slight, deep red (60A) brushmark and a

few associated spots and streaks; nectaries light yellowish green (134D), frosted white; pollen light yellowish pink (26D); stigma light orange (26C). Fls 140 mm wide; tepals 65 × 27 mm, margins smooth, tips slightly reflexed. Lvs scattered, 80 × 10 mm, mid green. Stems 0.8 m, rather dark green, with up to 13 fls. Late June to early July.

**‘Gartenschau’ I(a/b-c)**

Parentage: ‘Impala’ × ‘Impact’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1997), REG: G. Steinbrück (1998)

Inside strong orange-yellow (17A), tepal-tips light greenish yellow (7D); outside strong orange-yellow (17A), midribs green; spots absent; nectaries strong yellow-green (145A); pollen dark red (59A); stigma pale yellow-green (157B). Fls 150 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 12 mm, mid green. Stems 1.1 m, rather dark green, with up to 15 fls. Early July.

**‘Gasparone’ VII(a-b/b)**

Parentage unknown

REG: Hoogland B.V. (2005)

Inside greenish white (155C), basal part of each tepal along midvein brilliant yellow/light greenish yellow (8A/B); outside greenish white (155C), spots and papillae yellow; nectaries yellow-green; pollen orange-brown; stigma purple. Tepals medium to long, margins ruffled, tips strongly recurved. Lvs scattered. Stems 1.25 m, green, with 3-9 fls. Midseason to late.

**‘Gatis’ VI(-/a)**

Parentage: *L. × aurelianense* × unknown

R: T. Gertsons, G: T. Gertsons, N: T. Gertsons (1983), I: T. Gertsons, REG: T. Gertsons (1987)

Inside bright yellow, throat dark green; outside of inner tepals with brown midribs, outer tepals brown with a yellow margin. Fls 160 mm wide, scented; tepals 145 × 60 mm, margins smooth. Lvs scattered, 110 × 18 mm, mid green. Stems 1 m, purple. Early Aug.

**‘Gaudi’ VII(a-b/b)**

Parentage: ((*L. × parkmanii* ‘Allegra’ × *japonicum*) × ‘Camaro’) × pink-flowered seedling

R: Lybelmex Hillegom B.V. (1989), G: Lybelmex Hillegom B.V. (1992), N: Lybelmex Hillegom B.V. (1996), REG: Lybelmex Hillegom B.V. (1997)

Inside yellowish white (155D), midveins light yellow (10B/C); outside yellowish white (155D), midribs strong yellow-green (144C), which are 144B at top; spots vivid yellow (12A) and some yellowish white (155D), on two-thirds of each tepal; papillae yellowish white (155D) and brilliant/light yellow (12B/C) in the throat; nectaries strong yellow-green (144C); pollen strong orange (169B); stigma near dark red (187B). Fls 250 mm wide; tepals 155-165 × 55-75 mm, margins of outer tepals ruffled, tips recurved. Lvs scattered, 210 × 60 mm, mid green. Stems 1.05 m, light green, with 3-5 fls. July to Aug.

**‘Gauquin’ VIII(a-b/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside strong to moderate purplish red (54A/184D), midveins green at base; outside strong purplish red (54A); spots present; papillae very few; nectaries green; pollen brown; stigma purple. Tepal-margins slightly ruffled, tips slightly recurved. Stems medium to tall, with reddish markings. Early.

(*A. longiflorum*/Asiatic (LA) hybrid.)

**‘Gaviles’ VI(-/-)**

Parentage: selection from Gaviles Group

S: V.P. Orehovs (post 1969), N: V.P. Orehovs  
No further details.

**Gaviles Group VI(-/-)**

Parentage: *L. × aurelianense* ‘Alaska’ × *henryi*

R: V.P. Orehovs (1969), N: V.P. Orehovs

No further details.

**‘Gavota’ I(b-c/c-d)**

Parentage: ‘Willtigrinum’ × ‘Red Success’

R: Šlechtitelaká Stanice Heřmanův Městec, N:

Šlechtitelaká Stanice Heřmanův Městec, REG:

Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside dark scarlet-red, each tepal with a small, orange flame over nectary; spots moderately numerous, medium sized, black, on half of each tepal. Fls 90-130 mm wide, semi-Turk’s cap in form, with overlapping tepals; pedicels 60-100 mm long. Lvs 85-105 × 11-14 mm, glossy mid green. Stems 1.35 m, red-brown. Mid June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1992.)

**‘Gavrosh’ I(b/-)**

Parentage: ‘Svetlana’ open-pollinated

R: V.A. Volkov (c. 1982), N: V.A. Volkov

Fls orange, shaded pink; spots dark violet. Stems 0.5 m. July.

(The seed parent is probably ‘Svetlana’ of Kireeva.)

**‘Gaybird Gem’ I(a/c)**

Parentage: two Preston seedlings

R: E. Robinson (c. 1959), N: E. Robinson

Fls pinkish mauve, spotted black.

**‘Gay Dawn’ I(a/b)**

Parentage: (‘Tansy’ × unknown) × (‘Kallista’ × ‘Fantasy’)

R: G.M. Chandler (c. 1948), G: G.M. Chandler (1951),

N: G.M. Chandler, I: G.M. Chandler (1961)

Inside light orange at tepal-tips, changing to yellow at centre; lightly spotted with black. Fls 115 mm wide. Stems 0.6-1.0 m, with 6-8 fls. Early.

**‘Gay Fellows’ I(c/-)**

Syn. of ‘Jautrie Běrní’.

**Gay Fellows Group I(c/-)**

Syn. of Jautrie Běrní Group.

**'Gay Gold' I(a/b-c)**

Parentage: (*L. × scottiae* × unknown) × unknown  
 R: G.M. Chandler, G: G.M. Chandler (1954), I: G.M. Chandler (1961)  
 Inside strong orange (25A), deeper towards nectaries; spots black, on basal half. Fls 140 mm wide. Stems 0.3-0.4 m, with 5-8 fls.

**'Gay Knight' I(a/-)**

Parentage: seedling of Preston Group × *L. × scottiae*  
 R: G.M. Chandler, N: G.M. Chandler, I: G.M. Chandler (1958)  
 Fls strong red (45D), spotted. Fls 100 mm wide. Stems 0.8 m.

**'Gaylene' VII(-/-)**

Parentage: *speciosum* × unknown  
 R: Fox, N: Fox  
 (Raised in New Zealand. No further details)

**'Gayle's Favorite' I(a/d)**

Parentage unknown  
 R: A.J. Porter  
 Fls coppery bronze. Tepals recurved. Stems dark, up to 1.2 m. July.

**'Gay Lights' II(-/-)**

Parentage: *martagon* var. *album* × *hansonii* hybrids  
 R: J. de Graaff (c. 1954), N: J. de Graaff  
 Fls yellow-brown spotted maroon. Fls large with broad tepals. Stems 1.2-1.5 m. June.

**'Gaylord Nelson' I(c/-)**

Parentage: 'My Joe Ann' × 'Bonny'  
 R: S.R. Kaul (1988), G: S.R. Kaul (1990), N: R. Kaul (1990), REG: S.R. Kaul (1993)  
 Fls a tangerine-orange blend, with a reddish suffusion on outside of buds and open fls; spots absent. Fls 150 mm wide; tepals 95 × 25 mm, overlapping, margins slightly ruffled, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 1 m or more, reddish brown at base.

**'Gay Passion' I(a/-)**

See *L. × scottiae* 'Gay Passion'.

**'Gazel' I(a-b/b-c)**

Parentage unknown  
 Fls lilac-pink, with tiny darker spots. Tepal-margins smooth, tips not recurved. Stigma dark.  
 (Published in M.F. Kireeva, *Lilii*, 51 (2000).)

**'G.C. Creelman' VI(a/-)**

Syn. of 'George C. Creelman'.

**'Gear Ptica' VI(-/a)**

Parentage: 'African Queen' × Golden Clarion Group  
 R: V.P. Eremin (c. 1960), N: V.P. Eremin  
 Fls apricot-gold, up to 250 long and 200 mm wide, strongly scented. Stems 1.5 m, with 5-7 fls. Aug.  
 (Published in *LYB* 33: 76 (1970).)

**'Geisha' VII(-/-)**

Parentage unknown  
 R: L. Woodriff, G: L. Woodriff, N: Trior Lelie B.V. (1985), I: Trior Lelie B.V. (1989), REG: Gebr. De Vries B.V. (1989)  
 Inside pale purplish pink (56C), midveins flushed with pale yellow (11C), throat strong yellow-green (144B); outside pale purplish pink (56D), tinged with moderate purplish pink (66D) along the light yellow (162C) midribs; spots deep red (60A), on entire surface of tepals; pollen strong reddish orange (169A). Fls 240 mm wide; tepals 110 × 70 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 25 mm, mid green. Stems 0.45 m, green with darker markings, and with c.2 fls. July.

**'Geisha Girl' I(b-c/c-d)**

Parentage: 'Lemon Queen' (Div. I) × 'Lemon Lady'  
 R: A.J. Porter (1965), N: A.J. Porter (1974), I: A.J. Porter (1975), REG: A.J. Porter (1975)  
 Inside vivid yellow (12A); outside vivid yellow (9B); spots present; nectaries vivid yellow (12A); pollen moderate orange (167A). Lvs moderate olive-green (146A). Stems 0.8 m. July.  
 (Published in *Lilies and other Liliaceae*, 1975: 92.)

**'Gelba' I(a/-)**

Parentage unknown  
 R: A. Rech (pre 1982), N: A. Rech, REG: A. Rech (1988)  
 Fls yellow, throat greenish; spots present. Stems 0.9 m. Mid July.  
 (Published in German Lily Group sales list, 1983.)

**'Gelbe Dolde' I(a-b/d)**

Syn. of 'Sommertag'.

**'Gelber Goliath' I(c/-)**

Parentage: unknown × Sutter's Gold Group  
 R: A. Winkler (pre 1981), N: A. Winkler  
 Inside golden yellow, strongly spotted. Stems 0.7 m. Late July.

**'Gelber Herold' Div. ?**

Given as a parent of 'Abraxas'. No further details.

**'Gelber Mandarin' I(a/-)**

Parentage unknown  
 R: C. Feldmaier (pre 1987), N: C. Feldmaier  
 Fls 145 mm wide; tepals 85 × 38 mm. Stems 0.95 m.

**'Gelber Schnabel' VI(-/-)**

Parentage unknown  
 R: H. Böhm, N: H. Böhm, REG: H. Böhm (1997)  
 Fls strong yellow, wide open. Stems 1 m. Mid July.  
 (Published in European Lily Society sales list, 1996.)

**'Gelber Stern' I(a/-)**

Parentage: hybrid involving *wilsonii* & *lancifolium*  
 R: G. Köpke (pre 1979), N: G. Köpke  
 Inside yellow. Stems 0.6 m, black, with up to 12 fls. July to Aug.  
 (Published in German Lily Group sales list, 1980.)

**'Gelber Traum' I(c/c-d)**

Parentage: *L. × scottiae* 'Schuetzenlis' × Yellow Blaze Group

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Inside moderate yellow (162A), tepal-tips light yellow (162C), throat rather paler; outside similarly coloured; spots numerous, small, strong brown (172A), on basal half of each tepal; nectaries pale yellow-green (157B); pollen moderate reddish orange (171A); stigma deep red (60A). Fls 120 mm wide; tepals 60 × 45 mm, inner tepals noticeably broader, margins smooth, tips slightly recurved. Lvs scattered, 120 × 18 mm. Stems 1.2 m, dark green, with 8-10 fls. Mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0024702).)

**'Gelber Turm' I(a/-)**

Parentage: 'Abendsonne' × 'Connecticut King'

R: A. Weinreich, N: A. Weinreich, REG: ICRA (1992)

Fls yellow, with few spots. Stems 1.5 m, dark, with secondary buds. Late July.

(Published in German Lily Group sales list, 1991. Sister seedling to 'Alkestios' and 'Sommersonne'.)

**'Gelbona' VIII(-/a)**

Parentage: 'Leuchstern' × 'Thunderbolt'

R: Saatzucht Zierpflanzen Erfurt (1982), G: Saatzucht Zierpflanzen Erfurt (1985), N: Saatzucht Zierpflanzen Erfurt, REG: Institut für Gemüse- und Zierpflanzenbau Grossbeeren Erfurt (1994)

Inside brilliant yellow (21C), tepal-margins suffused with pale greenish yellow (10D), tips brilliant yellow (21C), throat brilliant orange (25C); outside light yellow (18B), midribs moderate reddish orange (35B) on outer tepals; spots absent; nectaries strong yellow-green (144A); pollen golden yellow. Fls 175 mm wide; tepals 100-109 × 18-38 mm, margins smooth, tips strongly recurved. Lvs scattered, 120-125 × 12-15 mm, mid green. Stems 1.5 m, dark green, with c.15 fls. Mid July.

**'Gelbriese' I(a/-)**

Parentage unknown

R: J. Klein (pre 1989), N: J. Klein, REG: J. Klein (1990)

Fls light yellow, without spots. Stems 0.8 m, with large fls. Mid July.

(Published in German Lily Group sales list, 1989.)

**'Gelria' V(a-b/a)**

See *longiflorum* 'Gelria'.

**'Gem' I(a/-)**

Parentage: *lancifolium* × *L. × hollandicum*

R: J. de Graaff (c. 1954), N: J. de Graaff

Fls rich, deep red, with a few almost black spots near centre.

**'Gemini Glamour' VI(-/a)**

Parentage: dwarf yellow- and white-flowered seedling × pink-flowered trumpet seedling

R: D.F. McPherson (1970), G: D.F. McPherson (1972), N: D.F. McPherson, I: D.F. McPherson (1976), REG: D.F. McPherson (1976)

Fls 80 mm long, throat vivid yellow (12B), tepal-margins deep purplish pink (70C), streaked white. Stems with 1-2 fls.

(Published in *Lilies and other Liliaceae*, 1976: 90.)

**'Gemini Gleam' VI(-/a)**

Parentage unknown

R: D.F. McPherson, N: D.F. McPherson, I: D.F. McPherson (1976), REG: D.F. McPherson (1976)

Fls white, 80 mm long, throat brilliant orange-yellow (23B). Stems with 1-2 fls.

(Published in *Lilies and other Liliaceae*, 1976: 91.)

**'Gemini Glow' VI(-/a)**

Parentage: dwarf yellow- and white-flowered trumpet seedling × yellow-flowered trumpet seedling

R: D.F. McPherson (1970), G: D.F. McPherson (1972), N: D.F. McPherson, I: D.F. McPherson (1976), REG: D.F. McPherson (1976)

Fls 80 mm long, pale yellow (12D), deepening to brilliant orange-yellow (23B) in throat. Stems with 1-2 fls.

(Published in *Lilies and other Liliaceae*, 1976: 91.)

**'Geneve' I(a/b)**

Parentage: 'Sterling Star' × 'Mont Blanc'

R: Vletter & Den Haan (1980), G: Vletter & Den Haan (1982), N: Vletter & Den Haan (1986), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)

Inside yellowish white (155B) with a deep pink (185D) blush; outside yellowish white (155B) suffused with deep pink (185D) on outer tepals; spots few, dark red (187A), on basal half of each tepal; pollen moderate orange (167A). Fls 160 mm wide; tepals 80 × 50 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 0.55-0.9 m, green with darker markings, and with 10-12 fls (from 16-18 cm bulbs). July.

**'Genie' I(b/-)**

Parentage: (pink-flowered selection from Harlequin Group × 'Connecticut King') × (pink-flowered selection from Harlequin Group × 'Connecticut King')

R: Columbia-Platte Lilies (1980), G: Columbia-Platte Lilies (1982), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987)

Inside with tepal-tips and throat strong to light purplish pink (63C/D), midveins strong purplish red (64C); outside softer pink with a green overlay along midribs; a ring of tiny magenta spots parallel to nectaries; nectaries soft green/pink; pollen dark reddish orange/brownish orange (172B/C). Tepals 60-90 × 20-30 mm, margins smooth, tips slightly recurved; pedicels dark, often with secondary buds. Lvs scattered, 100-115 × 12 mm, dark green. Stems 1-1.4 m, dark green with a plum overlay, and with 5-15 fls. Late June.

(Unacceptable name: ICNCP, 1980: Recommendation 13. Ah - the pronunciation can be confused with that of the earlier cv. 'Jeanie'.)

**'Genova' VII(a/b)**

Parentage: 'Capitol' × seedling 88-75

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1996), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside strong purplish pink (68B), midveins yellow changing to pink; outside strong to moderate purplish pink (68B/C); spots and papillae present; nectaries green; pollen reddish brown; stigma grey. Tepal-margins ruffled, tips slightly recurved. Stems 1.2 m, green with c.10 fls. Early to midseason.

Trade designation: VLETGEN.

**'Genoveva' I(b-c/b)**

Parentage: unnamed seedling × 'Ringla'

R: D.-V. Škimele (1992), G: D.-V. Škimele (1995), N: D.-V. Škimele (1998), REG: D.-V. Škimele (2001)

Inside light yellow, throat yellow; outside yellow, with pale creamy midribs and brownish shading; spots dark red, in the throat; brushmarks slight, vivid dark red; nectaries creamy; pollen dark brown; stigma dark reddish brown. Fls 140 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered. Stems 0.6 m, dark green, with c.5 fls. Late June to early July.

(Published in *Lilium Balticum Lily Register*, 1998.)

**'Genteel Lady' VII(-/b)**

Parentage unknown

R: unknown (pre 1982)

Inside white; outside lavender pink; spots lavender. Fls 200 mm wide; tepal-tips recurved. Stems 1.2 m. Aug. (Listed in *Rex Bulb Farms Cat.*, 1982/83.)

**'Gentile' VII(a/b)**

Parentage: 'Vedea' × seedling 88-75

R: Gebr. Vletter & Den Haan (1993), G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1996), I: Gebr. Vletter & Den Haan (1996), REG: Gebr. Vletter & Den Haan (1996)

Inside suffused deep purplish pink (54B) on a yellowish white (155D) ground, throat yellowish white (155D); outside slightly suffused with deep purplish pink (54B) on a yellowish white (155D) ground, midribs with some moderate purplish red (184D) at base and strong yellow-green (144C) at top; spots absent; papillae few; nectaries yellowish white (155D); pollen strong orange (24A) and strong reddish orange (169A); stigma moderate yellow-green (147D). Fls 230 mm wide; tepals 150 × 50-75 mm, margins ruffled, tips recurved. Lvs scattered, 155 × 35 mm, mid green. Stems 1.2 m, pale green with darker markings, and with c.3-8 fls.

**'Genua' I(a/-)**

Parentage: 'Tabasco' × 'Cinnabar' (Div. I)

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1980), I: V. Strasser (1985), REG: V. Strasser (1997)

Fls blood-red. Tepal-margins smooth. Lvs scattered, dark green. Stems 0.86 m, rather dark green, with up to 21 fls. Late June.

**'Geoffrey Blake' VII(-/b)**

Parentage: ((*auratum* 'Wittei' × 'Cymbeline') × *rubellum*) × *rubellum*

R: G.G. & F.S. Blake (1980), G: G.G. & F.S. Blake (1984), N: F.S. Blake, I: F.S. Blake, REG: F.S. Blake (1987)

Inside pale purplish pink (56D) shading to white at tepal-edges and tips, each tepal with a pale orange-yellow (16D) ray, throat strong yellow-green (144C); outside pale purplish pink (56C), midribs strong yellow-green (144C); lightly spotted deep yellowish pink (47C); nectaries strong yellow-green (144C); pollen moderate reddish orange (178C). Fls 200 mm wide; tepals 120 × 65 mm, margins ruffled, tips slightly recurved. Lvs scattered, 230 × 65 mm, mid green. Stems 2.1 m, greyish yellow-green (148C), with c.27 fls. Jan. to Feb. (Australia).

**'George' IX(b/c)**

See *auratum* 'George'.

**George Group VII(-/c)**

Parentage unknown

R: J. Kirsch, N: J. Kirsch

Fls pink. Stems 1.2 m. Early Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 49 (1978) as George strain. Included in *ILR* (1982) as George grex, and as being raised and named by J. Kirsch. However, Ted Kirsch (*in litt.* 1983) said that this Group was not known at Sun Valley Bulb Farms.)

**'George C. Creelman' VI(-/a)**

See *L. × imperiale* 'George C. Creelman'.

**'George Jackson' I(a/b)**

Parentage: 'Edna Kean' × *wilsonii*

R: G.W. Darby (pre 1958), N: G.W. Darby PC 1958, AM 1961

Fls deep mahogany-red, c.120 mm wide. (Published in *LYB* 22: 132 (1959).)

**'George Marshall' VII(b/b-c)**

Parentage: (*L. × parkmanii* 'Allura' × 'Star Gazer') × (pink-/white-flowered seedling × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1991), N: Bischoff Tulleken Lelies B.V. (1997), I: Bischoff Tulleken Lelies B.V. (1997), REG: Bischoff Tulleken Lelies B.V. (1997)

Inside yellowish white (155D) lightly suffused with strong purplish red (59D) on the apical three-quarters of each tepal, tip edged yellowish white (155D), midveins light greenish yellow (8B/C) on basal part of each tepal, throat yellowish white (155D); outside yellowish white (155D), suffused with strong purplish red (59D) on the apical three-quarters of each tepal, tip edged yellowish white (155D), midribs lighter than light yellow-green (150D), tepals tipped strong yellow-green (143A), with outside paler than inside; spots strong purplish red (59D) and yellowish white (155D), on two-thirds of each tepal; papillae yellowish white (155D), in the throat; nectaries strong yellow-green (144B); pollen strong orange (15A);

stigma greyish yellow-green (148C). Fls 230 mm wide; tepals 125-130 × 50-60 mm, margins ruffled, tips recurved. Lvs scattered, 140 × 40 mm, mid green. Stems 0.7 m, light green, with c.3 fls. July.

**‘George Slate’ I(c/d)**

Parentage unknown

R: G.L. Slate, G: G.L. Slate, N: E.A. McRae (c. 1986), I: Cebeco Lilies, Inc. (1998), REG: Cebeco Lilies, Inc. (1998)

Inside light greenish yellow (8C); outside light greenish yellow to pale yellow (8C/D), paler along midribs; spots dark red (187A), on basal two-thirds of each tepal; nectaries pale yellow (8D); filaments pale yellow; pollen strong brown (172A); style pale yellow; stigma light yellow (20B); Fls 105 mm wide, from pale yellow buds; tepals 72 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 120 × 6 mm. Stems 1.2-1.5 m, yellow-green with maroon blotches. Late June to July.

**‘George Soper’ I(b/d)**

Parentage: (‘Maxwill’ × ‘Edna Kean’) F<sub>3</sub> × ‘Dark Princess’

R: G.W. Darby (c. 1958), N: G.W. Darby

AM 1961, AM 1967

Fls vivid reddish orange (33B) spotted black.

**‘Georgette’ VIII(a-b/b)**

Parentage unknown

R: Van der Salm Bulb Farm, Inc. (pre 1999), REG: J.A. Van der Salm (2003)

Inside and outside brilliant yellow (14C), light to pale yellow (11B/C) towards tepal-tips; spots yellow; papillae present; nectaries green; pollen light brown; stigma purple. Tepal-margins slightly ruffled, tips recurved. Early to midseason.

(An Oriental/Asiatic (OA) hybrid.)

**‘George Woodriff’ VII(-/c)**

See *L. × parkmanii* ‘George Woodriff’.

**‘Georgia’ V(a-b/-)**

See *longiflorum* ‘Georgia’.

**‘Georgia Belle’ V(b/a)**

See *longiflorum* ‘Georgia Belle’.

**‘Georgiana’ VII(-/c)**

Parentage: *auratum* × seedling of *L. × parkmanii* type

R: G.M. Chandler (1951), G: G.M. Chandler (1954), N:

G.M. Chandler, REG: G.M. Chandler (1961)

Inside deep red, tepal-edges white; nectaries golden.

Fls *auratum* type, 215 mm wide. Lvs *auratum* var.

*platyphyllum* type. Stems up to 1.5 m.

***georgicum* Manden. IX(c/d)**

Syn. of *pyrenaicum* subsp. *ponticum* var. *ponticum*.

**‘Gepard’ I(a/-)**

Parentage unknown

R: A. Rech (c. 1970), N: A. Rech, I: H. Hörster (pre

1975), REG: H. Hörster (1985)

Inside strong orange (25B), tepal-margins strong orange (25A), tips strong orange (24A); outside vivid orange (28B); spots copious, large, dark red (187A/B), on four-fifths of each tepal; nectaries white; pollen vivid orange (28A). Fls 125 mm wide; tepals 95 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, dark green. Stems 0.65 m, with 5 fls. July.

(Published in *Liljařska ročenka*, 1983.)

**‘Geranium’ IX(b/c)**

See *auratum* ‘Geranium’.

**‘Gerez’ VII(a/b)**

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside moderate purplish red/strong reddish purple (70A/B), basal half of each tepal with a large greenish white (155C) spot, throat greenish white (155C); outside with inner tepals light purple (75B), strong reddish purple (70B) towards margins, greenish white (155C) at base, midribs pale yellow-green (4D), with purple flush towards top, outer tepals strong reddish purple (70B), moderate purplish red (70A) towards margins, greenish white (155C) at base, midribs pale yellow-green (4D), at base light yellow-green (145C) and at top light yellow-green (145B); spots absent; papillae at base few, greenish white (155C), others deep purplish red (71A); nectaries strong yellow-green (144A); pollen strong brown (172A); stigma dark purple/light purple (79B/77D). Fls 210 mm wide; tepals 150-160 × 57-77 mm, margins smooth to slightly ruffled, tips slightly recurved. Lvs scattered, 152 × 37 mm, dark green. Stems 0.9-1.2 m, light green, with c.4 fls.

**‘Gerojam Shipki’ I(b/-)**

Parentage: ‘Connecticut King’ × ‘Nochka’

R: G.N. Ovechkin (1984), G: G.N. Ovechkin (1987), N:

G.N. Ovechkin (1992), I: G.N. Ovechkin (1993), REG:

G.N. Ovechkin (1995)

Inside red suffused with brown, throat blood-red; outside dark red; spots tiny, dividing throat colour from the rest of each tepal; nectaries red; pollen brown. Fls 185 mm wide; tepals 100 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 15 mm, mid green. Stems 1.1 m, mid green, with c.7 fls, and with bulbils. Mid July.

**‘Geroyam Severomortsam’ I(b/-)**

Parentage: ‘Redstart’ × unknown

R: V.A. Volkov (c. 1977), N: V.A. Volkov

Fls velvety red, shaded black; spots present. Stems 1.7 m, with bulbils. July.

**‘Geroyam Stalingrada’ VI(-/a)**

Parentage: ‘Sunlight’ × Pink Perfection Group

R: E.V. Parmanin & Z.S. Sapozhnikova (c. 1972), N:

E.V. E.V. Parmanin & Z.S. Sapozhnikova

Inside white, throat yellow; outside tan-pink. Stems 1.8 m. July.

**‘Gerrit Zalm’ VIII(a/c)**

Parentage: seedling BW 95-07 × seedling AG 94-09  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside pale greenish yellow (2D), tepal-margins and tips light yellow-green (2C), throat pale greenish yellow (2D); outside pale greenish yellow (2D), tepal-margins and tips light yellow-green (2C), midribs strong yellow-green (144D); spots and papillae absent; nectaries strong yellow-green (143A); pollen moderate brown (165A); stigma deep yellowish pink (39B). Fls 215 mm wide; tepals 125 × 65 mm, margins smooth, tips recurved. Lvs 135 × 23 mm. Stems 1.3 m, green, darker at base, with c.7 fls; buds hairy.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Gertraudenbrücke’ I(a/c-d)**

Parentage: Asiatic seedling × mixed pollen of ‘Brushstroke’ & brushmarked seedlings  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Inside and outside greenish white (155C); spots many, deep red (53A), medium sized and associated brushmark lines on three-quarters of each tepal; nectaries soft greenish white; pollen dark red (59A); stigma light greyish olive (195A) on a long prominent style. Fls 150 mm wide; tepals 75 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 12 mm. Stems 0.8 m, dark green, with c.10 fls. Early July.

**‘Get-um-tige’ I(b/-)**

Parentage: *L. × hollandicum* × *lancifolium*  
R: H.E. Barry, N: H.E. Barry, I: A. MacNeil (1950)  
Fls vermilion.  
(Published in *Sandyloam Cat.*, 1950.)

**‘G.F. Berthoud’ V(b/a)**

See *longiflorum* ‘G.F. Berthoud’.

**‘G.F. Wilson’ II(c/d)**

Parentage: presumed to be a seedling of *L. × dalhansonii* ‘Marhan’  
R: C.G. van Tubergen (c. 1893), N: C.G. van Tubergen  
Fls pale citron-yellow, tinged with carmine at tepal-tips; spots purple.  
(Sent to the RHS Floral Committee on 20 June 1893 by van Tubergen under the name *L. Marhan* ‘G.F. Wilson’.)

**‘Giacondo’ VII(b/b-c)**

Parentage: seedling 93-14 × seedling RW 97-05  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2003), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals yellowish white (155D), with deep purplish pink (58D) streaks towards margins and tips, outer tepals similar but streaks stronger-coloured; outside with inner tepals yellowish white (155D), with deep purplish pink (58D) streaks, strong purplish red (59D) along midribs (less so with age), base and top of

midribs strong yellow-green (144C) with light yellow-green (150D) in middle part, outer tepals similar but streaks more prominent, spots absent; papillae yellowish white (155D) and deep purplish pink (58D); nectaries moderate yellow-green (143D); filaments pale green; pollen strong brown (172A); stigma very pale green (192C). Fls 250 mm wide, fragrant; tepals 140 × 55-70 mm, margins gently ruffled, tips recurved. Lvs scattered, 160 × 38 mm, dark green. Stems 1.1-1.2 m, brownish with green, with 5-8 fls.

**‘Giallisa’ VII(a-b/b-c)**

Parentage: (yellow-flowered *L. × parkmanii* Little Rascal Group × ‘Star Gazer’) × (*auratum* × unknown)

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside greenish white (155C), midveins light yellow (10B), throat pale yellow-green (155A); outside pale yellow-green (155A), flushed with pale yellow-green (4D); spots vivid yellow (13A); papillae present; nectaries strong yellow-green (144C); pollen moderate reddish orange (171A); stigma dark red (187A). Fls 260 mm wide; tepals 125 × 40 (outer) or 60 (inner) mm, margins smooth, tips recurved. Lvs scattered, 160 × 35 mm, green. Stems 1.1 m, light green with darker markings, with c.7 fls. July.

**‘Giant Flat Yellow’ VI(-/c)**

Syn. of ‘Gold Eagle’.

**Giant Harlequin Group I(c/d)**

Parentage unknown  
R: unknown (pre 1970)  
Fls varying from pink, pale lilac, old rose, red, violet, purple, ivory, white, yellow, salmon and tangerine to amber-pink. Stems 1.5 m, with up to 30 fls. June to July. (Listed in *Rex Bulb Farms Cat.*, 1970/71.)

**‘Giant Star’ VII(a-b/b)**

Parentage: unknown × ‘Mero Star’  
R: S. Reus (1998), G: De Streng B.V. (2000), N: S. Reus (2001), I: De Streng B.V. (2001), REG: De Streng B.V. (2001)

Inside darker than strong purplish red (60D) changing to vivid purplish red (57D) on a paler ground towards tepal-edges, edges whiter than greenish white (155C), throat more white than 155C; outside vivid purplish red (57D) on a paler ground, tepal-edges greenish white (155C), tepal-tips strong yellow-green (144A), midribs greenish white (155C); spots deep purplish red (59B); papillae greenish white (155C) and vivid purplish red (57D); nectaries strong yellow-green (144C); pollen strong reddish orange (169A); stigma greyish yellow-green (148D), speckled deep reddish purple (77A). Fls 230 mm wide; tepals 125-130 × 40-60 mm, margins smooth, tips recurved. Lvs scattered, 195 × 52 mm. Stems 1.05 m, light green, with c.4 fls.

**'Giant White'** V(b/a)  
See *formosanum* 'Giant White'.

**'Gibraltar'** I(a/b)  
Parentage: seedling OR 844 × seedling OR 843  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside vivid yellowish orange (30C), tepal-tips strong reddish orange (42B); outside strong orange (30D), midribs light orange-yellow (23C), tepal-margins vivid reddish orange (30B); spots few, small, dark red (187A), in the throat; pollen moderate reddish orange (171A); stigma darker reddish orange. Fls 170 mm wide; tepals 80 × 35 mm, margins smooth, outer tepals strongly recurved. Lvs scattered, 180 × 13 mm, mid green. Stems 1.1-1.6 m, green with darker markings, with 8-12 fls. May (under glass).  
Syn.: 'Elite'.  
(Published in *ILR Ninth Supplement* with an incorrect division (VII(b)). 'Gibraltar' is an up-facing Asiatic lily I(a/b). The correction was made in *ILR Thirteenth Supplement*.)

**'Gibson'** V(-/a)  
See *longiflorum* 'Gibson'.

**'Gienah'** I(a/-)  
Parentage: 'Connecticut Lemonglow' × 'Red Carpet'  
R: F. Fellner (1982), G: F. Tarlton (1985), N: F. Tarlton (1990), I: D. Dale (1991), REG: F. Tarlton (1991)  
Fls strong orange (25A), not-fading; spots few, small, dark, on basal third of each tepal; nectaries light orange-yellow (23C). Fls 135 mm wide; tepals 70 × 33 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 7 mm, mid green. Stems 0.75 m, mid green, with 10-12 fls. Late July.  
(Published in *Lilydale Lilies Cat.*, 1991.)

See *pardalinum* var. *giganteum*.

**'Gigi'** VII(-/)-  
Parentage: 'Star Gazer' × dwarf Oriental seedling  
R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1987), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1989)  
Inside light purplish pink (62C), each tepal edged with deep purplish pink (68A) and with a long, strong red (53C) flame, throat strong yellow-green (144C) edged pale yellow (8D); outside strong reddish purple (70B), tepal-edges ivory-white; papillae dark red; pollen strong orange (169B). Fls 200 mm wide; tepals 95 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 25 mm, mid green. Stems 0.35 m, green, with 8 fls. July.

**'Gigolo'** I(a-b/b-c)  
Parentage: ('Polednice' × ('Wattle Bird' × 'Heloma')) × ('Mirage' (Div. I) × 'Windahloo')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2001), REG: B. Mičulka (2001)  
Inside rich yellow, throat paler; outside paler yellow, midribs greenish and brownish; spots absent; each tepal with a small mahogany brushmark; nectaries green; pollen and stigma brown. Fls 115 mm wide; tepals 75 × 37 mm, slightly recurved; pedicels 45 mm long, deep brown. Lvs scattered, 105 × 13 mm, dull pale green. Stems 0.65 m, thick, green, with light spotting. Late June.

**'Gilbert William Russell'** VI(b/a)  
Parentage unknown  
R: D. Home (or Horne), N: D. Home (or Horne) (1972), REG: (1973)  
Fls deep cream; spots absent. Fls 100-125 mm long. Stems 0.3 m.  
(Published in *Lilies and other Liliaceae*, 1973/1974: 110 where the raiser is given as D. Horne. In *ILR* (1982) the raiser is given as D. Home. The registration form cannot be traced.)

**'Gillian Benson'** VI(-/a)  
Parentage: *L. aurelianense* × *leucanthum* var. *centifolium*  
Inside apricot-buff; outside dull rose-pink; anthers chocolate-brown. Buds 150 mm long. Tepal-tips reflexed. Lvs 175 × 12 mm, dark green. Stems 2.2 m, dark green.  
(Published in *Constable Cat.*, 1950.)

**'Gillian Grace'** VI(-/a)  
Parentage unknown  
G: (1999), N: A. & T. Buitenhuis (2000), REG: A. & T. Buitenhuis (2003)  
Inside and outside yellowish white (155D), throat brilliant yellow (7A); spots absent; nectaries strong greenish yellow (151A); pollen moderate reddish brown (175A). Fls 167 mm wide; tepals 135 × 57 mm, margins smooth, tips slightly recurved. Lvs scattered, 134 × 13 mm, mid green. Stems 1.25 m, light green mottled with mid brown. Dec. to Jan. (S hemisphere).  
(Named after the registrants' daughter.)

**'Gilrey'** IX(b-c/d)  
See *speciosum* 'Gilrey'.

**'Ginger'** I(c/-)  
Parentage: (*lancifolium* × unknown) × 'Connecticut Morn'  
R: D.M. Stone & F.H. Payne (c. 1965), N: D.M. Stone & F.H. Payne  
Fls saffron-yellow; spots absent; nectaries cadmium-orange. Stems 1 m. July.

**'Gingerbread'** I(a/b)  
Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1983), G: J. Vasarietis (1986), N: J. Vasarietis (1989), I: J. Vasarietis (1989), REG: J. Vasarietis (1992)  
Inside and outside strong orange (25A), with scarcely

distinguishable red and yellow midveins, tepal-edges narrow, yellow; spots absent; nectaries white; pollen orange. Fls 150 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 1-1.25 m, green, with 8-12 fls. Early July.

#### **'Gingersnap' I(a/-)**

Parentage: *lanceifolium* × *L. × hollandicum*

R: J. de Graaff (c. 1954), N: J. de Graaff

Fls bright orange-red. Tepals broad. Stems 1.5-1.9 m. Aug. to Sept.

#### **'Ginny' VI(-/a)**

Parentage: Aurelian Group × Golden Splendor Group

R: V.P. Eremin (c. 1965), N: V.P. Eremin

Fls golden yellow throughout. Stems up to 2 m, with up to 12 fls. Stems, lvs and bulbs like *regale*. July to Aug (Published in *LYB* 33: 77 (1970).)

#### **'Ginny' I(a-b/b-c)**

Syn. of 'Ginny of Millis'.

#### **'Ginny of Millis' I(a-b/b-c)**

Parentage: red-flowered form of *L. × hollandicum* × 'Paprika'

R: B. Vajgent, N: B. Vajgent, I: B. Vajgent (1968), REG: B. Vajgent (1986)

Inside dark pepper-red, tepal-tips paler; outside paler, midribs pale yellow-green; sporadic, tiny black dashes on half of each tepal; nectaries olive-green; pollen ochre-brown. Fls 185 mm wide; tepals 90 × 37 mm, tips recurved. Lvs 100 × 11 mm, slightly glossy. Stems with c.8 fls. Bulbs white. Late June.  
Syn.: 'Ginny' (Div. I).

#### **'Gioia' VII(-/-)**

Parentage: unnamed seedling × 'Joy'

R: Lybelmex Hillegom B.V. (1984), G: Lybelmex Hillegom B.V. (1987), N: Lybelmex Hillegom B.V. (1992), I: Lybelmex Hillegom B.V. (1992), REG: Lybelmex Hillegom B.V. (1993)

Inside strong purplish red (60D), midveins strong red (53B), becoming deep to moderate purplish pink (70C/D) towards top, throat greenish white (155C) and light yellow (10B); outside deep to moderate purplish pink (70C/D) shading to strong reddish purple (70B) at tepal-edges and with the yellowish white (155D) midvein shading to green at top; spots dark red (187A), on half of each tepal; nectaries greyish yellow-green (148D); pollen dark reddish orange (175C). Fls 200 mm wide; tepals 100 × 45 mm. Lvs scattered, 160 × 30 mm, dark green. Stems 0.7 m, pale green with darker markings, and with c.6 fls.

#### **'Giove' I(a/-)**

Parentage: seedling RS840 × seedling RS 814

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside yellowish white (155D), each tepal with a small

purplish red (184D) flame; outside greenish/yellowish white (155C/D), outer tepals tinged with moderate purplish red (184D), midribs pale yellow (11C); spots dark red (187A); pollen brownish orange (166C). Fls 190 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 1.2 m, green, with c.7 fls. May.

#### **'Gipsy Eyes' VII(-/-)**

Parentage: unnamed seedling × *L. × parkmanii* Imperial Silver Group

R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1983), N: Gebr. Mak B.V. (1984), I: Oriental Express (1987), REG: Oriental Express (1989)

Inside seep purplish pink (70C), midveins vivid red (45A); tepal-tips white; outside yellowish white (155B) flushed with very pale purple (75D); spots deep red (185A); nectaries strong yellow-green (145A); pollen moderate reddish orange (171A). Fls 260 mm wide; tepals 135 × 60 mm, margins smooth, tips strongly recurved. Lvs scattered, 150 × 30 mm, mid green. Stems 0.8 m, light green, with c.5 fls.

#### **'Gipsy Queen' Div. ?**

Given as a parent of 'Caressa'. No further details.

#### **'Giraffe' I(a/b-c)**

Parentage unknown

R: P. Hoff (1993), G: Hoffgaarde B.V. (1995), N: Hoffgaarde B.V. (1996), I: Hoffgaarde B.V. (1997), REG: Hoffgaarde B.V. (1997)

Inside vivid yellow (12A/13A), tepal suffused with strong orange (170A) in the apical third, throat vivid yellow (12A/13A) with a moderate reddish orange (171A) suffusion; outside strong orange-yellow (22A) with a moderate reddish orange (171A) suffusion, greyish red (178A) along the midvein in basal part of each tepal, at the base a little strong yellow-green/light yellow-green (144C/D); spots dark red (187A), on a third of each tepal; papillae few, in the throat; nectaries moderate reddish orange (171A); pollen strong brown (172A); stigma dark red (187B). Fls 170 mm wide; tepals 95 × 30-40 mm, margins smooth, tips recurved. Lvs scattered, 110 × 15 mm, mid green. Stems 1.45-1.6 m, green with darker markings, and with 3-10 fls.

#### **'Girls Only' I(b/-)**

Parentage: (*cernuum* × unknown) × unknown

R: J. Barber, N: A.J. Porter (1975), REG: A.J. Porter (1975)

Inside strong purplish red (63A) fading to pale purplish pink (65D), tepal-tips strong purplish pink (63C), throat yellowish white (155B); outside deep purplish red (59B); very slightly spotted; nectaries yellowish white (155B); pollen strong orange (168A). Lvs moderate olive-green (146A). Stems 0.3-0.4 m. July.  
(Published in *Lilies and other Liliaceae*, 1975: 92.)

#### **'Gironde' I(a/b)**

Parentage: seedling G 85-13 × seedling G 86-2

R: Vletter & Den Haan (1987), G: Vletter & Den Haan

(1989), N: Vletter & Den Haan (1994), I: Vletter & Den Haan (1994), REG: Vletter & Den Haan (1995)

Inside and outside vivid yellow (12A); spots and papillae absent; nectaries green; stigma purplish red; pollen pale brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, green. Stems 1.1-1.2 m, with dark stripes and spots and 5-9 fls (from 14-16 cm bulbs). Midseason to late.

#### 'Girosa' VII(a-b/c)

Parentage: (*L.* × *parkmanii* Little Rascal Group × 'Star Gazer') × unnamed seedling × (*L.* × *parkmanii* 'Allegra' × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: H.J.A. Rooyackers B.V. (1994)

Inside yellowish white (155B) suffused with pale yellow-green (4D) towards base, suffused with light purple (80D) towards tepal-edges, slightly suffused with deep purplish pink (72D) in apical part, midveins light yellow (10B/C) from the nectaries up to two-thirds of each tepal, throat edged yellowish white (155B); outside slightly suffused with deep purplish pink (72D) on a yellowish white (155B) ground, apical part stronger-coloured, tepal-edges slight yellowish white (155B), midribs pale yellow-green (155A) becoming light greenish yellow (8B) towards top and tipped strong yellow-green (143B); spots (and dashes) red, on two-thirds of each tepal; papillae present; pollen strong orange (25A); stigma greyish yellow-green (195B). Fls 240 mm wide; tepals 120 × 60 mm, margins ruffled, tips recurved. Lvs scattered, 180 × 40 mm, dark green. Stems 1 m, green with a lot of darker markings, and with c.6 fls. Midseason.

#### 'Gisborn' VII(a-b/b)

Parentage: seedling 89-14 × seedling RW 94-16  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2001), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside yellowish white (155D); outside with inner tepals yellowish white (155D), midribs strong yellow-green (144C) at base, changing towards top from light yellow-green (150D/154D), outer tepals yellowish white (155D), with midribs strong yellow-green (144C) at base changing towards top to light yellow-green/brilliant yellow-green (150D/149A), strong yellow-green (143B) at top, up to a fifth along midribs moderate red (185B); spots absent; papillae many, yellowish white (155D); nectaries strong yellow-green (144A); pollen strong brown (172A); stigma dark red (59A). Fls 260 mm wide; tepals 155 × 50-80 mm, margins ruffled, tips recurved. Lvs scattered, 160-210 × 40-60 mm, dark green. Stems 0.7-1.1 m, light green, with 2-5 fls.

#### 'Gisela' I(c/c-d)

Parentage: 'Pink Champagne' × 'Connecticut King'  
R: A. Weinreich (pre 1989), N: A. Weinreich  
Inside dusky pink with a yellowish white centre; dark spots rather large, on three-quarters of each tepal; pale

papillae on basal third. Stems 1.5 m, with some bulbils. Early July.

#### 'Giselle' VII(-/b)

Parentage: *L.* × *parkmanii* Imperial Silver Group × *nobilissimum*

R: E.A. McRae (1969), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)

Inside pure white; outside pure white with soft green midribs; spots absent; nectaries apple-green; pollen strong orange (170A) fading to moderate orange (167A). Fls 250-300 mm wide; tepals 110 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 70 mm. Stems 1.3 m, light green above, dark below, with 4-20 fls. Early Sept.

#### 'Gizeh' I(a/-)

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1994)

Inside a little stronger than vivid yellow (14B), each tepal with a dark red (187A) margin in basal third; outside more-or-less vivid yellow (12A), tepal-edges vivid yellow (14B), outer tepals tipped dark red (187A); spots dark red (187A), on a third of each tepal; pollen dark reddish orange (175C); stigma dark red (187A/B). Fls 200 mm wide; tepals 105 × 50 mm. Lvs scattered, 120 × 30 mm, mid green. Stems 0.9 m, pale green, with c.6 fls.

#### 'Glacial' VI(-/a)

Parentage: Aurelian Group × unknown

R: C. Yerex

(Published in *LYB NALS* 15: 93 (1962). No further details.)

#### 'Glacier' II(c/d)

Parentage: *hansonii* × (*martagon* × unknown)

R: F.L. Skinner (pre 1948), N: F.L. Skinner

Fls white, spotted pink. Buds suffused with pink. Stems 1 m. Late June.

(Published in *LYB* 13: 162 (1949).)

#### 'Glacier Peak' VI(-/b)

Parentage unknown

R: C. Yerex, I: (1968), REG: (1985)

Fls white with a slight greenish tinge. Stems 1.5 m, with a pyramidal infl. July.

(Published in *Rex Bulb Farms Cat.*, 1968/69.)

#### 'Gladiator' I(a/-)

Parentage: "Connecticut" hybrid × 'Tabasco'

R: Bischoff Tulleken Lelies B.V., G: Bischoff Tulleken

Lelies B.V., N: Bischoff Tulleken Lelies B.V. (1980),

REG: Bischoff Tulleken Lelies B.V. (1980)

Fls strong orange (30D), with small, reddish midveins; heavily spotted rust-brown; anthers chocolate-brown. Lvs dark green. Stems 0.7 m.

(Published in *Bloembollencultuur*, September 1980.)

**‘Glance’ I(a/-)**

Parentage unknown

R: Lybelmex Hillegom B.V. (1986), G: Lybelmex Hillegom B.V. (1988), N: Lybelmex Hillegom B.V. (1993), I: Lybelmex Hillegom B.V. (1993), REG: Lybelmex Hillegom B.V. (1994)  
 Inside vivid orange (28A), slightly stronger-coloured above the nectaries, throat vivid orange (18B); outside vivid orange (28B); spots dark red (187A), in the throat; pollen dark reddish orange (172B); stigma strong orange (169B). Fls 170 mm wide; tepals 85 × 50 mm. Lvs scattered, 75 × 15 mm, pale green. Stems 1.05 m, pale green with dark markings, and with c.6 fls.

**‘Glasgow’ VII(a/b-c)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)  
 Inside vivid purplish red (57C), throat yellowish white (155D); outside a third of each tepal yellowish white (155D) and two-thirds vivid purplish red (57C), midribs yellowish white (155D); spots vivid purplish red (57B); papillae present; nectaries strong greenish yellow (151A) shading to light greenish yellow (8B) along margin; pollen strong orange (168B); stigma moderate purplish pink (66D). Fls 240 mm wide, slightly scented; tepals 130 × 62 mm, margins ruffled, tips recurved. Lvs scattered, 155 × 35 mm. Stems 0.81 m, dark, with few fls.

**‘Glasnost’ I(a/-)**

Parentage unknown

R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1989)  
 Inside vivid orange (30C); outside strong reddish orange (31A), slightly flushed with strong orange (26B); spots dark red (187A), on basal half of each tepal; pollen strong orange (168A). Fls 180 mm wide; tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 20 mm, mid green. Stems 1.3 m, green with darker markings, and with 8-13 fls. June.

**‘Gleam’ IX(c/d)**Parentage: *martagon* var. *album* × ? *martagon*

R: W.G. Knox Finlay (c. 1959), N: W.G. Knox Finlay  
 Fls erythrite-red (HCC 0027/3); spots black; buds pale pink.  
 Syn.: *martagon* ‘Gleam’.  
 (Published in *LYB* 23: 138 t.7 (1960).)

**‘Glee’ I(a/-)**Parentage: ‘Sunspot’ × *dauricum*

I: Oregon Bulb Farms, Inc. (1975)  
 Fls warm orange. Stems up to 1 m. June to July.  
 Syn.: ‘Liberty’.  
 (Published in *Lilies and other Liliaceae*, 1975: 93.  
 Originally registered and published as ‘Liberty’, but the epithet was changed to ‘Glee’.)

**Glengarry Group VI(-/a)**Parentage: derived from *L. × imperiale*, *sargentiae*

‘Greenbush’, Golden Trumpet Group & *L. × imperiale* Shelburne Group  
 R: G.E. Holland (c. 1958), N: G.E. Holland  
 Fls mainly white, some pink, throats yellow, brownish purple markings outside.  
 (Published in *Lilyhaven Cat.*, 1958.)

**‘Glisten’ IX(c/d)**Parentage: *martagon* var. *album* × ? *martagon*

R: W.G. Knox Finlay (c. 1959), N: W.G. Knox Finlay  
 Fls Indian lake (HCC 826/1).  
 Syn.: *martagon* ‘Glisten’.  
 (Published in *LYB* 23: 138 t.7 (1960).)

**‘Glistening Star’ I(c/d)**

Parentage unknown

R: A.J. Porter  
 Fls orange, spotted. Tepals strongly recurved. Early.

**‘Gloaming’ VII(-/-)**See *L. × parkmanii* ‘Gloaming’.**‘Globetrotter’ I(b/-)**

Parentage unknown

R: Gebr. N. & B. Laan & Zn (pre 1982), N: Gebr. N. & B. Laan & Zn  
 Inside brilliant orange (29A); outside light orange (29B); spots dark red (187B) on a quarter of each tepal; nectaries orange; pollen strong orange-yellow (17A). Tepals 90 × 50 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 97 × 15 mm, mid green. Stems 0.8-0.9 m. June to July.

**‘Glockenklang’ I(b/b-d)**

Parentage: ‘Dawn Star’ × ‘Summer Night’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)  
 Inside brilliant orange-yellow (23B); outside brilliant orange-yellow (23B), reddish at the base, midribs strong greyish green; numerous, round or streaked spots of strong red (46A), on basal half of each tepal; nectaries light olive (152B); pollen and stigma strong red (46A). Fls 130 mm wide; tepals 75 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 14 mm. Stems 0.85 m, dark green, with 6-10 fls. Late June.  
 (Nomenclatural standard: colour print provided by registrant (WSY 0032249).)

**‘Glockenspiel’ I(c/d)**

Parentage unknown

R: V. Matthé (pre 1980), N: V. Matthé, REG: V. Matthé (1990)  
 Fls vivid reddish orange (33A), centre vivid reddish orange (30B); fine spots of vivid reddish orange (34A) on two-thirds of each tepal; nectaries red-frosted. Tepals 55 × 25 mm. Stems 0.6-0.9 m.

**‘Glockenturm’ VI(-/c)**

Parentage: rose-pink-flowered Aurelian Group (from a *L.* × *imperiale* Pink Trumpet Group × *henryi*) × Olympic Group

R: V. Strasser (1970), G: V. Strasser (1973), N: V. Strasser (1976), I: V. Strasser (1980), REG: V. Strasser (1986)  
Inside white and pink, tepal-tips pink, throat yellow; outside rose-pink; nectaries green; pollen orange-yellow. Tepals 150 mm long, margins smooth, tips slightly recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 2.1 m, brownish green, with 18-21 fls. July.

**‘Gloria’ I(a/-)**

Parentage: ‘Jolanda’ × red-flowered seedling

R: De Jong Beheer B.V. (1986), N: De Jong Beheer B.V. (1990), I: De Jong Beheer B.V. (1990), REG: De Jong Beheer B.V. (1992)

Inside vivid reddish orange (30B); outside vivid reddish orange (30B) suffused with dark reddish orange (178B); spots absent; nectaries vivid red (46C); pollen moderate reddish orange (171A). Fls 165 mm wide; tepals 80 × 40 mm, margins somewhat ruffled, tips slightly recurved. Lvs scattered, 185 × 25 mm, mid green. Stems 1.35 m, dark below, green above, with c.7 fls.

**‘Gloriette’ I(a/b-c)**

Parentage: ‘Padua’ × ‘Connecticut King’

R: V. Strasser (1979), G: V. Strasser (1982), N: V. Strasser (1986), I: V. Strasser (1986), REG: V. Strasser (1990)

Inside vivid orange-yellow (23A), throat yellow; outside copper-coloured; spots purple, on basal half of each tepal; nectaries yellow; pollen orange. Tepals 85 mm long, margins smooth, tips slightly recurved. Lvs scattered, 130 × 14 mm, dark green. Stems 1.5 m, almost black, with c.26 fls and some bulbils. Mid July.

(Incorrectly spelt ‘Gloritte’ in *ILR Seventeenth Supplement* (1999).)

**var. *gloriosoides* IX(b-c/d)**

See *speciosum* var. *gloriosoides*.

**‘Gloriosum’ IV(-/d)**

Parentage: ‘Amos Perry’ × *humboldtii*

R: A. Perry (c. 1922), N: A. Perry  
AM 1922

Fls pale orange with numerous crimson spots.

(Published in *Gard. Chron.*, ser. 3, 72: 41, fig. 20 (1922).)

**‘Gloriosum’ IX(b/a)**

See *regale* ‘Gloriosum’.

**‘Glorious’ IX(b-c/d)**

See *speciosum* ‘Glorious’.

**‘Gloritte’ I(a/-)**

Error for ‘Gloriette’.

**‘Glory of Alkemade’ IV(-/l)**

See *L.* × *burbankii* ‘Glory of Alkemade’.

**‘Glory of Gresham’ VI(-/a)**

Parentage: *leucanthum* var. *centifolium* × *sargentiae*

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls white.

**‘Glossy Wings’ VIII(a-b/b)**

Parentage: seedling S-6-85 × seedling 91.20.149-3

R: World Breeding B.V. (1993), G: World Breeding B.V. (1995), N: World Breeding B.V. (2000), I: World Breeding B.V. (2001), REG: World Breeding B.V. (2002)

Inside strong purplish red (60B) on a strong purplish red (59D) ground, throat strong purplish red (63B); outside moderate purplish red (59C) on a strong purplish red (59D) ground, midribs suffused with strong greenish yellow (151A); spots very few; papillae absent; nectaries strong yellow-green (143C); pollen moderate reddish brown (155B); stigma moderate purplish red (58A). Fls 240 mm wide; tepals 130 × 50 mm, margins smooth, tips recurved. Lvs scattered, 170 × 20 mm. Stems 0.95 m, green with darker markings, and with c.7 fls. (*A longiflorum*/Asiatic (LA) hybrid.)

**‘Glove’ I(a/-)**

Parentage: seedling RS 840 × seedling RS 814

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside yellowish white (155D), each tepal with a small, moderate purplish red (184D) flame; outside greenish to yellowish white (155C/D), outer tepals tinged with moderate purplish red (84D), midribs pale yellow (11C); spots dark red (187A), in the throat; pollen brownish orange (166C). Fls 190 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 1-2 m, green, with c.7 fls. May.

**‘Glow’ IX(b/c)**

See *auratum* ‘Glow’.

**‘Glow’ VIII(a/-)**

See *L.* × *phildauricum* ‘Glow’.

**‘Glow Bug’ VI(a-b/a)**

Parentage: gold-flowered Aurelian seedling × apricot- and green-flowered Aurelian

R: M.E. Rollinson (1988), G: M.E. Rollinson (1990), N: M.E. Rollinson (2002), I: M.E. Rollinson (2002), REG: M.E. Rollinson (2002)

Inside creamy white (159D), throat conspicuous brilliant orange-yellow (21B) with a flash of strong yellow-green (143C); outside creamy white (159D) suffused with dark purplish pink (186C) along midribs; spots absent; nectaries strong yellow-green (145A); pollen deep orange-yellow; stigma greyish yellow-green (191B). Fls 125 mm wide, strongly scented; tepals 120 × 28-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 6 mm. Stems 0.9-1 m, moderate yellow-green (139C), flecked dark red (187A), with 15-20 fls. Dec. to Jan. (New Zealand).

(Nomenclatural standard: colour print provided by registrant (WSY 0032035).)

**‘Glowing Crater’ I(a/b)**

Parentage: selection from Egmont Group  
 N: R.E. Harrison, I: R.E. Harrison (pre 1970)  
 Fls coppery orange shading into ember red; spots dark, on lower half of each tepal; nectaries white. Stems c.1 m.

**‘Glowing Crater’ I(a/-)**

Parentage: selection or seedling from Mid-century Group  
 N: Springfields, I: Springfields  
 Fls red, tepal-margins whitish; spots sparse, black. Stems 1 m, with 10-15 fls. Dec. to Jan. (New Zealand).

**‘Glowing Embers’ I(a/b-c)**

Parentage: ‘Trenwell’ × mixed brushmarked pollen  
 R: R.R. MacGregor (1986), G: R.R. MacGregor (1989), N: R.R. MacGregor (1992), REG: R.R. MacGregor (1994)  
 Inside strong orange (25A) at tepal-margins and tips, the centre of each tepal vivid orange-yellow (23A), throat strong orange (25A); outside green and orange in bud, opening orange; spots absent; brushmarks triangular, strong red (46A); nectaries with a green-white furrow; pollen vivid reddish orange (30A). Fls 138 mm wide; tepals 75 × 44 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 13 mm, mid green. Stems 1.12 m, green, with c.15 fls. Mid Dec. (Australia).

**‘Glowing Star’ VI(b-c/c)**

Syn. of ‘White Henryi’.

**‘Glowing Torch’ I(a/-)**

Parentage: seedling of Mid-century Group × ‘Connecticut Yankee’  
 R: R.C. Haring, N: R.C. Haring (1975), I: J. Wadekamper (1976), REG: R.C. Haring (1976)  
 Fls red-orange, paler outside and deeper in centre; spots absent; nectaries yellow; pollen brown. Stems 1.2 m. July. (Published in *Lilies and other Liliaceae*, 1976: 91.)

**‘Glutregen’ I(c/d)**

Parentage unknown  
 R: C. Wittneben (pre 1970), N: C. Wittneben  
 Fls dark red.

**‘Glynis’ II(c/d)**

Parentage: unnamed hybrid × unnamed hybrid  
 R: F. Tarlton (1987), G: M. Joslin (1996), N: F. Tarlton & M. Joslin (1999), I: M. Joslin & W. Kuyt (1999), REG: Parkland Perennials (1999)  
 Inside moderate purplish red (185C) darkening to brilliant yellow-green (149C) in throat; outside moderate red (183C), with a dark stripe down the middle of each tepal; spots numerous, small, moderate red (183C); nectaries brilliant yellow-green (149C); pollen light reddish brown (177B); stigma moderate red (185B). Fls 45 mm wide, slightly scented; tepals 30 × 15 mm, margins smooth, tips strongly recurved. Lvs whorled, 140 × 40 mm. Stems 1.6 m, dark greyish reddish brown (200A), with 30-40 fls in a long, cylindric infl. Early July. (Named for Marvin Joslin’s granddaughter.  
 Nomenclatural standard: colour print supplied by F. Tarlton (WSY 0015385).)

**‘Glynis Evans’ I(a/-)**

Parentage: ‘Jolly Miller’ × ‘Connecticut King’  
 R: W.D. Evans (1984), G: W.D. Evans (1987), N: W.D. Evans (1996), I: W.D. Evans (1996), REG: W.D. Evans (1996)  
 Inside brilliant yellow (12B), tepal-tips light yellow (12C); outside pale yellow, midribs greenish; spots absent; nectaries yellow; pollen orange. Tepals 130 × 24 mm, margins smooth or very slightly ruffled, tips not recurved. Lvs scattered, 125 × 25 mm, dark green, upper lvs ovate. Stems 1 m, very robust, moderate olive-green (137B), with c.14 fls. Early July. (Named after the raiser’s daughter.)

**‘Goblin’ I(a/-)**

Parentage: ‘Mont Blanc’ × seedling W 235  
 R: Vletter & Den Haan, G: Vletter & Den Haan (1983), N: Vletter & Den Haan (1993), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)  
 Inside yellowish white (155B), tepal-edges, throat and midveins light purplish pink (62C); outside variegated yellowish white (155B) and purplish pink (62), colour somewhat stronger on outer tepals, the basal parts tinged with strong purplish red (59D), tepal-tips and base strong yellow-green (143C), apical parts with a golden flush; pollen moderate orange (167A); stigma light yellow (15D). Fls 170 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 13 mm, dark green. Stems 0.85 m, mid green with darker markings, and with c.9 fls.

**‘Goedejohan’ I(a-b/b-c)**

Parentage: unnamed seedling ex Weinreich × ‘Ivory Supreme’  
 R: N. Martschinke (1981), G: N. Martschinke (1985), N: N. Martschinke (1991), REG: N. Martschinke (1991)  
 Inside moderate red (179A), throat vivid reddish orange (34A); outside vivid yellowish orange (30C) with white hairs; faintly spotted deep red on basal half of tepals; papillae whitish, in the throat; nectaries vivid reddish orange (34A), hairy; pollen dark reddish orange (172B). Tepals 75 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 8 mm, mid green. Stems 1.2 m, pale green, with c.18 fls in a pyramidal infl. July.

**‘Gold Band’ IX(b/c)**

Syn. of *auratum* var. *platyphyllum*.

**Gold Banded Primrose Glory Group I(-/-)**

Parentage: selections from Futura Group  
 S: Blackthorne Gardens, N: Blackthorne Gardens, I: Blackthorne Gardens (1982)  
 Fls primrose-yellow, banded gold.

**‘Gold Brocade’ I(a/-)**

Parentage unknown  
 R: R.W. Bemis (pre 1978), N: R.W. Bemis, I: R.W. Bemis, REG: R.W. Bemis (1984)  
 Fls golden yellow, spotted. Stems 1 m. June. (Published in ‘*Deep-Freeze’ Lilies Cat.*, 1978/79: 1.)

**‘Gold Coast’ I(b/-)**

Syn. of ‘Connecticut Lemonglow’.

**Gold Coast Group VI(-/d)**

Parentage: Aurelian Group

R: W.M. Spry (c. 1965), N: W.M. Spry

Fls creamy yellow to lemon-yellow.

(Published in *ILR* (1982) as Gold Coast grex.)

**‘Goldcrest’ VIII(-/d)**

Parentage: (*philadelphicum* × unknown) × ? ‘Golden Gleam’

R: J.C. Taylor, N: J.C. Taylor, I: Ontario Agricultural College, Dept. of Horticulture (1947)

Fls strong orange (25A); spots absent. Stems 0.6-1.2 m. June.

Syn.: ‘Goldfinch’.

(Published in *LYB NALS* 1: 104 (1947/48). Originally called ‘Goldfinch’.)

**‘Goldcrest’ VI(-/a)**

Parentage unknown

R: L. Woodriff (pre 1982), N: L. Woodriff

Inside apricot; spots absent, the 3 inner tepals with a median crest. Fls 125 mm wide. Stems 1.1 m, with 10-12 fls. Late July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Gold Cup’ IX(b/a)**

See *regale* ‘Gold Cup’.

**Gold Cup Group I(a/-)**

Parentage: seedlings of *L. × maculatum* ‘Alice Wilson’ & *dauricum* var. *luteum*

Fls from bright orange to apricot and chrome-yellow.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv. Published in *R.B. Ware Cat.*, 1949. Included in *ILR* (1982) as Gold Cup grex.)

**‘Golddigger’ I(a/-)**

Parentage: ‘Joan Evans’ × ‘Connecticut King’

R: E.A. McRae (1968), G: Oregon Bulb Farms, Inc. (1971), N: Oregon Bulb Farms, Inc. (1979), I: Oregon Bulb Farms, Inc. (1979), REG: Oregon Bulb Farms, Inc. (1983)

Inside vivid yellow (9A) with a 20-30 mm-wide, vivid yellow (14A) flush, throat vivid yellow (14A); outside brilliant yellow; papillae small, purple-brown, only in centre of fl.; nectaries green; pollen golden brown. Fls 150-170 mm wide; tepals 90 × 30-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 50-60 × 10 mm, dark green. Stems 0.8 m, dark green, with 7-20 fls. Late June.

**‘Gold Dust’ VI(c/a)**

See *L. × aurelianense* ‘Gold Dust’.

**‘Gold Dwarf’ I(a/b)**

Parentage: ‘Charisma’ × ‘Sun Ray’

R: H. Mantel (1983), G: H. Mantel (1986), N: Mt Hood

Lilies Inc. (1994), I: Mt Hood Lilies Inc. (1994), REG: Mt Hood Lilies Inc. (1996)

Inside vivid/brilliant yellow (15B/C) to vivid yellow (16A); outside light orange-yellow (23C); lightly spotted with small magenta spots on basal half of each tepal; pollen strong brown; stigma soft grey. Fls 150-170 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, 80-120 × 15-25 mm, mid to dark green. Stems 0.2-0.45 m, mid to dark green, with 3-8 fls (from 14/16 cm bulbs).

**‘Gold Eagle’ VI(b-c/c)**

Parentage: unknown member of Aurelian Group × unknown member of Aurelian Group

R: L. Woodriff (c. 1957), G: H.J. & R.L. Strahm (1962), N: R.L. Strahm (1968), I: H.J. & R.L. Strahm (1972), REG: Strahm’s Lilies, Inc. (1981)

Inside vivid yellow (17C), throat moderate yellowish green (139B); outside yellow with greyish reddish orange (177C) on midribs; spots few, very small, brownish orange (166C), along tepal-edges near centre; nectaries green to yellow; pollen moderate reddish brown (166B). Fls c. 170 mm wide, strongly scented; tepals c. 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 25 mm, mid green. Stems 1.5-2.2 m, green mottled red, with 6 or more fls. July to Aug.

Syn.: ‘Giant Flat Yellow’.

(Published in Strahm’s sales sheet, 1972.)

**‘Gold Elf’ VII(-/b)**

Parentage: Little Gold Rascal Group × Little Gold Rascal Group

R: Fairdale Nursery, N: Fairdale Nursery (1991), REG: Van der Salm Bulb Farm, Inc. (1992)

Inside white, with a gold ray on each tepal and a golden throat; outside white suffused with green. Stems short.

**‘Goldelse’ VIII(a/b)**

Parentage: ‘Maria’ × (‘Yukatan’ × Longistar Group)

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside and outside strong orange-yellow (17A), tepal-tips pale yellow (19C), throat vivid reddish orange (30A); spots very few, small, vivid red (46B), on basal quarter of each tepal; nectaries pale yellow-green (157A); filaments brilliant orange-yellow (23B); pollen greyish red (176A); style brilliant orange-yellow (23B); stigma moderate red (181A). Fls 130 mm wide; tepals 70 × 31 mm, margins slightly and very narrowly ruffled, tips slightly recurved. Lvs scattered, 100 × 15 mm. Stems 1.05 m, dark green, with 7-10 fls. Early July.

(Nomenclatural standard: colour print provided by registrant (WSY 0028914).)

**‘Gold Emperor’ IX(b/c)**

See *auratum* ‘Gold Emperor’.

**‘Golden Age’ I(a/b)**

Parentage: (‘Primrose Lady’ × ‘Connecticut King’) F<sub>3</sub>  
R: A.J. Porter, G: A.J. Porter, N: Honeywood Lilies

(1984), I: Honeywood Lilies (1984), REG: (1984) Inside vivid yellow (14B), blending in the throat and in mid tepal to vivid yellow (17B); outside vivid yellow (14A), midribs strong greenish yellow (151A); spots very few, greyish red (178A), flanking nectaries; nectaries strong yellow-green (145A/143B); pollen moderate orange (167A). Fls 150 mm wide; tepals 85 × 35 mm, margins smooth, tips not recurved. Lvs 140 × 20 mm, mid green. Stems 0.75-0.9 m, dark bronze-green, with 15-25 fls, and bulbils. July to Aug. (Published in *Honeywood Lilies Cat.*, 1984/85.)

**'Golden Amulett' I(b/-)**

Parentage unknown

R: J. Petruske, N: J. Petruske, REG: J. Petruske (1997) Fls shining salmon-orange. Stems 1.2 m. Early July. (Published in European Lily Society sales list, 1995.)

**'Golden Beard' VI(b-c/b)**

Parentage: selection from seedlings of *L. × kewense* 'White Henry'

S: L. Woodriff (pre 1990), G: L. Woodriff, N: L. Woodriff (1990), I: Ozark Mountain Lilies, REG: C. Helsley (2003)

Inside brilliant yellow (12B); outside similar but brushed with light green on midribs; papillae very dense, forming a 'beard' above nectaries on well-grown plants; nectaries mid green; pollen golden brown; stigma green. Fls 170 mm wide, strongly scented; tepals 130 mm long, inner 52 mm wide, outer 32 mm wide, margins smooth, tips slightly recurved. Lvs scattered, 124 × 22 mm. Stems 1 m, green heavily marked with dark red, with c.8 fls. July.

**'Golden Beauty' VIII(c/b)**

Parentage: 'Tall Boy' × 'Tetra White Henry'

R: J. Hoell (1988), G: J. Hoell (1992), N: J. Hoell (1994), I: J. Hoell (1995), REG: J. Hoell (1994)

Inside vivid orange-yellow (23A) throughout; outside vivid orange (28B) on inner tepals, suffused with strong reddish orange (32B) on outer tepals; spots absent; papillae self-coloured; nectaries vivid yellowish green (140A); pollen vivid reddish orange (30A); style and stigma dark-coloured, stigma 3-lobed with a distinct central depression. Fls 170 mm wide; tepals 105 × 48 mm, margins smooth, tips becoming strongly recurved; pedicels heavily spotted vivid violet (89B). Lvs scattered, 245 × 42 mm, dark green. Stems 1.65 m, heavily spotted vivid violet (89B), with up to 30 or more fls of very heavy texture. Mid to late Dec. (Australia).

**'Golden Bell' VI(c/a)**

Parentage: Aurelian

R: C. Yerex (pre 1980), N: C. Yerex, REG: C. Yerex (1983)

Fls citron-green throughout, but outside suffused with brown; spots absent. Tepal-margins smooth, tips not recurved. Stems 1.8 m, with 10-12 fls. July to Aug.

**'Golden Candlestick' I(a/-)**

Parentage: F<sub>2</sub> seedling of *davidii* var. *willmottiae* hybrid R: F.L. Skinner, N: F.L. Skinner, I: F.L. Skinner (1948)

Fls clear yellow; spots absent. Lvs very glossy dark green. Stems 0.6 m.

(Published in *LYB NALS* 2: 113 (1949).)

**'Golden Chalice' IX(b/c)**

See *auratum* 'Golden Chalice'.

**Golden Chalice Group I(a/-)**

Parentage: derived from *dauricum*, *L. × maculatum* & *L. × hollandicum*

R: J. de Graaff (c. 1947), N: J. de Graaff

Fls in various shades of yellow and golden orange, some with black spots. Tepals broad. Stems 1-1.9 m. May to June.

(Published in *ILR* (1960).)

**'Golden Chariot' I(a/-)**

Parentage: 'Sovereign' × 'Palomino'

R: J.C. Ericksen (c. 1963), N: J.C. Ericksen

Fls golden yellow. Stems 1.9 m.

**'Golden Charmer' I(b/-)**

Parentage: 'Pirate' × unknown seedling

R: L. Schmit, N: L. Schmit (1977), I: Borbeleta Gardens (1980), REG: Borbeleta Gardens (1981)

Inside deep yellow with paler throat; outside yellow; spots absent; nectaries, filaments and stigma white; pollen light brown. Tepals 120 × 70 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 60 mm, mid green. Stems 0.6 m, mid green, with 8-10 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1980.)

**'Golden Clarion' Div. ?**

Given as a parent of 'Dawn's Glow', 'Goldie Ann', 'Marcia', 'Megan's Delight', and 'Rae Chel' which were raised by R.C. Crawford. No further details. Perhaps an error for Golden Clarion Group.

**Golden Clarion Group VI(b/a)**

Parentage: selections from Aurelian Group

S: J. de Graaff, N: J. de Graaff

AM 1949

Inside brilliant yellow (12B) to almost golden brown; outside shaded with moderate red (183D). Stems up to 2.2 m, with up to 15 fls. Late July.

(Published in *Oregon Bull Farms Cat.*, 1948. Included in *ILR* (1982) as Golden Clarion grex.)

**Golden Corona Group VI(b/b)**

Parentage: selections from Aurelian Group

S: C. Yerex, N: C. Yerex

Fls gold. Tepals partly reflexed.

(Published in *Greenock Farms Cat.*, 1958. Included in *ILR* (1982) as Golden Corona grex.)

**'Golden Coronet' I(a/-)**

Parentage: 'Hunter's Moon' × 'Connecticut Yankee'

R: G.S. Jacobs (1969), N: G.S. Jacobs (1972), I: G.S. Jacobs (1974), REG: G.S. Jacobs (1972)

Fls clear yellow with a few spots in throat; nectaries green; pollen light brown. Lvs dark green. Stems 1.1 m. July.

(Published in *Lilies and other Liliaceae*, 1973/1974: 110.)

**‘Golden Crown’ I(a/-)**

Syn. of ‘Zelta Vainags’.

**Golden Crown Group I(a/b)**

Syn. of Zelta Vainags Group.

**‘Golden Cup’ I(a/-)**

Parentage: selection from Zelta Vainags Group

No further details.

**‘Golden Dancer’ IX(b/c)**

See *auratum* ‘Golden Dancer’.

**Golden Dawn Group VI(b/b)**

Parentage: selection from Aurelian Group

S: J. de Graaff, N: J. de Graaff

Fls chartreuse-green and apple yellow-green. Tepals pointed.

Syn.: Limelight Group.

(Published in *Oregon Bulb Farms Cat.*, 1959. Originally

named Limelight Group. Included in *ILR* (1982) as

Golden Dawn grex.)

**‘Golden Days’ VI(c/b)**

Parentage: ‘Air Drop’ × ((*henryi* × ‘T.A. Havemeyer’) × orange-flowered trumpet seedling)

R: G.W. Darby (c. 1960), N: G.W. Darby, I: G.W. Darby (1964), REG: G.W. Darby (1964)

Fls golden yellow throughout.

(Published in *LYB* 28: 133 (1965).)

**‘Golden Delight’ IV(-/-)**

Parentage: *L.* × *burbankii* × *L.* × *pardaboldtii*

R: A.J. van der Zwet & Sons (c. 1944), N: A.J. van der Zwet & Sons

AMH 1944

Fls golden yellow, changing to orange; spots purple

**‘Golden Delight’ I(a/-)**

Syn. of ‘Golden Dream’.

**‘Golden Dew’ I(a/b)**

Parentage: ‘Chinook’ × ‘Red King’ (Div. I)

R: J. Bodalski (1981), G: J. Bodalski (1983), N: J.

Bodalski (1985), I: J. Bodalski (1987), REG: J. Bodalski (1987)

Inside pale rose-pink, tepal-tips strong yellowish pink (37A), throat moderate reddish orange (35B); outside strong yellowish pink (37A); spots numerous, small, dark, on a ground of vivid yellow (17B), on basal half of each tepal; pollen strong orange (169B). Tepals 70 × 30–40 mm, margins smooth, tips not recurved. Lvs scattered, 95 × 13 mm, mid green. Stems 1 m, mid green, with c.8 fls. July.

**‘Golden Dragon’ I(a/-)**

Parentage: (*bulbiferum* var. *croceum* × unknown) × ‘Connecticut Yankee’

R: E. Hickling, N: E. Hickling (1976), I: J. Wadepammer (1978), REG: J. Wadepammer (1978)

Fls yellow-orange; spots absent; nectaries light yellow;

pollen light brown. Tepal-margins smooth. Lvs scattered, dark green. Stems 1 m, with up to 34 fls. Early.

(Published in *Lilies and other Liliaceae*, 1978/9: 108.)

**‘Golden Dream’ I(a/-)**

Parentage: (‘Nutmegger’ × unknown) × orange-flowered brushmarked seedling

R: R. Chiabotta, G: R. Chiabotta, N: R. Chiabotta

(1981), I: Borbeleta Gardens (1982), REG: Borbeleta Gardens (1983)

Inside soft lemon-yellow, throat with a greenish flush; outside darker yellow; fine spots on centre third of tepals; nectaries yellow-green; pollen brown. Tepals 100 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 20 mm, mid green. Stems 0.9 m, dark green, with c.12 fls. Mid July.

Syn.: ‘Golden Delight’.

(Published in *Borbeleta Gardens Cat.*, 1982, as ‘Golden Delight’ and in 1983 as ‘Golden Dream’.)

**‘Golden Eagle’ IV(-/-)**

Syn. of ‘Cock Robin’.

**‘Golden Eclipse’ VI(-/a)**

Parentage unknown

R: J.S. Yeates, I: Dunhampton Lily Fields (1988), REG: Dunhampton Lily Fields (1989)

Inside golden yellow, throat green; outside yellow, outer tepals with red midribs; nectaries green; pollen brown. Fls 130 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 12 mm, dark green. Stems dark green, with c.6 fls. Late (late Feb. in New Zealand).

**Golden Elegance Group VII(-/-)**

Parentage: *L.* × *parkmanii* Imperial Gold Group × unnamed seedling

R: Fairdale Nursery, N: Fairdale Nursery (1992), REG: Van der Salm Bulb Farm, Inc. (1992)

Fls white, with a gold suffusion, each tepal with a gold ray; pattern of spots variable.

**‘Golden Empress’ I(a/-)**

Syn. of ‘Bellona’.

**‘Goldener Kandelaber’ I(a/-)**

Parentage: *bulbiferum* var. *croceum* × ‘Parade’

R: C. Feldmaier, N: C. Feldmaier, I: C. Feldmaier (1974)

Fls strong orange-yellow (24B), heavily spotted brown.

Lvs 120 × 15 mm, dark green. Stems 1.3 m, with 12–15 fls. Mid June to early July.

**‘Goldener Pavillon’ I(a/c-d)**

Parentage: ‘Yukatan’ × ‘Jette’

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N:

G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Inside and outside vivid yellow (13A); spots many, small; each tepal with a large deep red (60A) brushmark; nectaries pale green; large anthers on long filaments; pollen moderate reddish brown (175A); stigma greyed

orange (174B). Fls 120 mm wide; tepals 75 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm. Stems 0.8 m, dark green, with c.12 fls. Early to mid July.

**‘Goldener Reiter’ I(b/-)**

Parentage unknown

R: H. Böhm (pre 1986), N: H. Böhm, REG: H. Böhm (1994)

Fls yellow with a few spots. Lvs dark green. Stems 0.8 m. (Published in German Lily Group sales list, 1993.)

**‘Goldener Turban’ I(b/d)**

Parentage: ‘Medora’ × ‘Goldmarie’

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Inside moderate yellow (160A), throat with a light green tinge; outside with dark green midribs; spots numerous, large, dark red (187A), on half of each tepal; nectaries strong yellow-green (143B); pollen dark red (183A); stigma dark red (187B). Fls 100 mm wide; tepals 60 × 35 mm. Lvs scattered, 70 × 12 mm. Stems 0.9 m, dark green, with c.11 fls. Early to mid July.

**‘Golden Flame’ I(a/b)**

Parentage: yellow-flowered seedling × (*dauricum* × yellow-flowered seedling)

R: A.J. van der Zwet (1989), G: A.J. van der Zwet (1992), N: B. Konijn, I: B. Konijn (1999), REG: A.J. van der Zwet (1999)

Inside strong orange (25A) towards the base, shading to vivid orange-yellow (21A) towards tepal-tips; outside vivid yellow (15B), changing into vivid orange-yellow (21A) towards tepal-edges; spots dark red (187A), on over a third of each tepal; papillae vivid orange-yellow (21A), in the throat; nectaries strong yellow-green (143A) with a little vivid yellow (14A); stigma vivid yellow (12A); pollen strong orange (169D). Fls 180 mm wide; tepals 90 × 30-50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 80 × 15 mm, dark green. Stems 1 m, green, with c.4 fls. June.

**‘Golden Flash’ I(a/-)**

Parentage unknown

R: Hartle-Gilman Gardens (1983), G: Hartle-Gilman Gardens (1986), N: Hartle-Gilman Gardens (1991), I: Hartle-Gilman Gardens (1992), REG: Hartle-Gilman Gardens (1992)

Inside vivid orange-yellow (23A), tepal-tips and throat strong orange; outside light brown and vivid orange yellow (23A); some spots in central third of each tepal; nectaries frosted; pollen brown. Tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 18 mm, mid green. Stems 1.12 m, dark brown, with c.9 fls. Late.

(Published in *Hartle-Gilman Gardens Cat.*, 1992.)

**‘Golden Fleece’ I(a/b)**

See *L. × hollandicum* ‘Golden Fleece’.

**‘Golden Galleon’ VI(b/a-b)**

Parentage: F<sub>2</sub> selection from Vineland Golden Aurelians Group × up-facing selection from Golden Splendor Group

R: T.R. Martin (1988), G: T.R. Martin (1991), N: T.R. Martin (1995), I: T.R. Martin (1995), REG: T.R. Martin (1995)

Inside medium golden yellow; outside golden yellow tinged with green and with very slight red shading; spots absent; nectaries light green; pollen orange-yellow. Tepals 85 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 180 × 30 mm, dark green. Stems 1.3-1.8 m, mid green, with 20-28 fls in a pyramidal infl. (including secondaries). Mid to late July.

**‘Golden Gleam’ I(c/d)**

Parentage: *pumilum* × ? *martagon* var. *album*

R: E. Huftelen (early 1890s), N: E. Huftelen AM 1911, AMH 1936

Fls apricot-yellow. Stems 0.6 m. June.

Syn.: *pumilum* ‘Golden Gleam’.

(Published in *Gard. Chron.*, ser.3, 49: 338, fig.155

(1911). Plants now grown under this epithet show no trace of *martagon*. P.M. Syngé, *Lilies*, 118 (1980) suggests that it may be *chrysanthum* Nakai & Maekawa which is native to N Korea and first described in 1935.)

**‘Golden Glimmer’ VI(b/a)**

Parentage unknown

R: W.T. Craig (c. 1985), G: W.T. Craig (c. 1988), N: C. Helsley (2002), REG: C. Helsley (2003)

Inside brilliant yellow (15C); outside similar but heavily brushed with greyish reddish orange (174C); spots absent; nectaries mid green; pollen yellow-orange; stigma green. Fls 150 mm wide, strongly scented; tepals 150 mm long, inner 60 mm wide, outer 30 mm wide, margins smooth, tips slightly recurved. Lvs scattered, 140 × 15 mm. Stems 2 m, grey-green with faint red-green dots, with 8-12 fls. Late June.

(Published in Ozark Mountain Lilies Seedlist, 2003.)

**‘Golden Globe’ I(a/-)**

Parentage: seedling G 92-1 × seedling G 91-4

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside vivid yellow (14B), throat brilliant greenish yellow (151D); outside with brilliant greenish yellow (6C) midribs shading to vivid yellow (14B) at tepal-edges; spots and papillae absent; nectaries a little paler than brilliant greenish yellow (151D); pollen greyish brown (166A); stigma vivid yellow (12A). Fls 160 mm wide; tepals 90 × 32-42 mm, margins smooth, tips hardly recurved. Lvs scattered, 145 × 15 mm, mid green. Stems 1.3 m, green, with c.4 fls.

**‘Golden Glory’ I(c/-)**

Parentage: ‘Ann Constable’ × ‘Violet M. Constable’

R: S.V. Gilkison, N: S.V. Gilkison

(Bulb sent to F.C. Stern in 1958. No further details.)

**'Golden Glow' IX(c/d)**

See *pardalinum* 'Golden Glow'.

**'Golden Goblet' I(a/-)**

Parentage unknown

R: G.M. Chandler (pre 1962), N: G.M. Chandler

Fls pale golden yellow.

(Listed in *Hayter Cat.*, 1962.)

**Golden Goblet Group I(-/-)**

Parentage unknown

R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens

Fls in bright yellow shades. Stems 0.8 m. Early.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv.)

**'Golden Green' II(b/-)**

See *L. × dalhansonii* 'Golden Green'.

**'Golden Harvest' VII(-/-)**

Parentage unknown

R: F. Jury, N: F. Jury, I: M. Jury (1998)

Fls very large, white, each tepal with a gold ray.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cultivar Group.)

**'Golden Harvest' II(-/d)**

Syn. of 'Autumn Harvest'.

**Golden Harvest Group VI(b/b)**

Parentage: 'T.A. Havemeyer' × *L. × aurelianense*

R: E.L. Kline, N: E.L. Kline

Fls white, lemon-yellow or cadmium-orange, with green throat. Stems 1.5-2.1 m. July to Aug.

(Published in *Kline Cat.*, 1954.)

**'Golden Heart' VI(-/c)**

See *L. × kewense* 'Golden Heart'.

**'Golden Horn' I(a/b)**

Parentage: 'Madras' × 'Reno'

R: Gebr. Vletter & Den Haan (1993), G: Gebr. Vletter

& Den Haan, N: Gebr. Vletter & Den Haan (1996), I:

Gebr. Vletter & Den Haan (1996), REG: Gebr. Vletter & Den Haan (1996)

Inside vivid yellow (12A/14A) with a paler throat; outside brilliant yellow (12B), vivid yellow (12A/14A) towards tepal-edges and a little strong yellow-green (144C)

towards tips; spots absent; papillae few, in the throat;

nectaries coloured as tepals; pollen greyish brown (166A);

stigma dark red (187B). Fls 200 mm wide; tepals 105 ×

40-60 mm, margins smooth, tips of outer tepals recurved.

Lvs scattered, 135 × 20 mm, mid green. Stems 1.3 m, green, with c.7-9 fls.

**'Golden Hummingbird' IV(-/-)**

Parentage: *humboldtii* × Bellingham Group

R: H. Eckstein (c. 1944), N: H. Eckstein

No further details.

**'Golden Joy' I(a/-)**

Parentage unknown

REG: Fa G.A. Verdegaaal & Zn Export B.V. (2005)

Inside vivid yellow (12A/13A), at base strong orange

(25A/B); outside light orange-yellow (25D), vivid yellow

(9A) towards tepal-margins; spots few; papillae present;

nectaries yellow-green; pollen brown; stigma dark

purple. Tepals short, margins slightly ruffled, tips slightly

recurved. Stems short. Early to midseason.

**'Golden Jubilee' I(a/-)**

Parentage: from seed labelled "Preston Hybrids F<sub>2</sub>"

R: A.J. Porter, N: A.J. Porter

Fls rich golden yellow. Lvs rich green. Stems 1-1.2 m.

June.

(Published in *Honeywood Lilies Cat.*, 1956.)

**'Golden King' I(c/d)**

Parentage: 'Crowdii' × 'Cromottiae'

R: J.E.H. Stooke, N: J.E.H. Stooke

AM 1933

Fls bright yellow, freely spotted deep crimson. Lvs

scattered. Stems with. c.8 fls.

(Published in *Gard. Chron.*, ser. 3, 94: 52 (1933).)

**'Golden Kiss' I(a/-)**

Parentage: 'Exception' × 'Bellona'

R: Gebr. N. & B. Laan & Zn (1979), G: Gebr. N. &

B. Laan & Zn (1981), N: Gebr. N. & B. Laan & Zn

(1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr.

N. & B. Laan & Zn (1985)

Fls light yellow; spots dark brown, in the throat; nectaries

green-yellow; pollen absent. Fls 90 mm wide, the stamens

tepaloid so that fls have 12 tepals; tepals 55 × 28 mm,

margins ruffled, tips not recurved. Lvs scattered, 80 × 20

mm, dark green. Stems 0.6 m, green, with c.10 fls. July.

(Published in *Bloembollencultuur*, July 1986.)

**Golden Kiwi Group VI(-/a)**

Parentage unknown

R: N. Copey, N: N. Copey

Fls golden yellow, the outside varying from self-coloured

to soft lemon-green and lightest brown. Stems 1.5-2.2 m,

with up to 20-30 fls.

(A strain developed and re-selected in New Zealand.)

**GOLDEN MELODY I(a/b-c)**

Trade designation of 'Gold Lode'.

**'Golden Mountain' I(a/-)**

Parentage: 'Connecticut King' × 'Chinook'

R: M.A. van den Berg & Zn (1977), G: M.A. van den

Berg & Zn (1980), N: M.A. van den Berg & Zn (1987),

REG: M.A. van den Berg & Zn (1988)

Inside brilliant yellow (14C), flamed vivid orange-yellow

(23A), throat moderate yellowish pink (173D); outside

light to brilliant yellow (10C/21C), each tepal with a

vivid orange-yellow (21A) edge; pollen brownish orange

(171B). Fls 140 mm wide; tepals 80 × 40 mm, margins

smooth, tips not recurved. Lvs scattered, 100 × 10 mm,

mid green. Stems 0.7 m, green, with 13-14 fls.

**'Golden Nugget' VI(-c)**

Parentage: selection from Golden Harvest Group  
Fls lemon-yellow, with lime throat. Stems 1.5-2.1 m.  
Aug.  
(Published in *Kline Cat.*, 1957.)

**'Golden Orb' II(-l)**

See *L. × dalhansonii* 'Golden Orb'.

**'Golden Pard' IV(-l)**

Parentage: *pardalinum* × *parvum*  
R: G.S.F. Napier (pre 1939), N: G.S.F. Napier  
Fls yellow.  
(Published in G.L. Slate, *Lilies for American Gardens*, 189 (1939).)

**Golden Pearl Group VI(-l)**

Parentage: *sargentiae* × yellow-flowered selections from Temple Group  
R: J.M. Shaver (pre 1969), N: J.M. Shaver  
Fls pastel gold. Stems 1.2-2 m. Late July.  
(Published in *Rex Bulb Farms Cat.*, 1971/72: 23.)

**'Golden Phoenix' VI(-c)**

Parentage unknown  
R: E. Hickling, G: E. Hickling, N: E. Hickling, I: Ozark Mountain Lilies, REG: C. Helsley (1989)  
Fls vivid yellow (12A) throughout; spots absent; nectaries strong greenish yellow (151A); pollen brown. Fls 160 mm wide; tepals 150 × 25-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 10 mm, mid green. Stems 1-1.25 m, green, with c.20 fls (including secondaries on lower pedicels). Late June.

**'Golden Pictum' IX(b/c)**

See *auratum* 'Golden Pictum'.

**'Golden Pike' I(a/b)**

Parentage: 'Joan Evans' × 'Connecticut King'  
R: E.A. McRae (1968), G: Oregon Bulb Farms, Inc. (1970), N: Oregon Bulb Farms, Inc. (1978), I: Oregon Bulb Farms, Inc. (1980), REG: E.A. McRae (1982)  
Inside and outside vivid yellow (12A), inside flushed with vivid orange-yellow (21A) above nectaries, throat vivid orange-yellow (21A); papillae very few, dark, near centre-base of each tepal; nectaries green; pollen gold. Fls 140-170 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved; pedicels 50-120 mm. Lvs scattered, 60-80 × 15 mm, dark green. Stems 0.8 m, green, with 8-30 fls. Late June.  
Syn.: 'Goldrush'.  
(Was sold to The Netherlands before being introduced in the USA.)

**'Golden Pixie' I(a/b)**

Parentage: 'Sun Ray' × *dauricum*  
R: E.A. McRae (1976), G: Oregon Bulb Farms, Inc. (1981), N: Oregon Bulb Farms, Inc. (1983), I: Oregon Bulb Farms, Inc. (1983), REG: Oregon Bulb Farms, Inc. (1985)  
Inside vivid yellow (12A), with a vivid orange-yellow

(21A) flush along midveins, throat soft gold; outside vivid yellow; a few spots in centre of fl.; nectaries green; pollen soft golden brown. Tepals 70 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 60-80 × 20 mm, dark green. Stems 0.3 m, light green, with 6-18 fls. Late May.  
(Published in *Oregon Bulb Farms Cat.*, 1985.)

**GOLDEN PIXIE® I(a/b)**

Trade designation of 'Ceb Golden'.

**'Golden Plover' I(b/-)**

Parentage: Taylor seedling 46341 × Taylor seedling 1010-2  
R: J.C. Taylor (c. 1976), N: University of Guelph (1977), I: University of Guelph (1977), REG: University of Guelph (1977)  
Fls brilliant yellow (7A), throat yellow; spots many, dark red (59A). Lvs scattered, dark green. Stems 2.2 m. Midseason.  
(Published in *Lilies and other Liliaceae*, 1977: 78.)

**'Golden Princess' I(c/d)**

Parentage: complex hybrid  
R: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1974)  
Fls vivid orange-yellow (21A); spots irregular, dark red (187A), on basal two-thirds of each tepal; nectaries strong yellow-green (143B); pollen orange. Stems 1-1.1 m. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 21 (1978).)

**'Golden Purity' I(c/-)**

Parentage unknown, but probably an *amabile* hybrid  
R: F.L. Skinner (pre 1940), N: F.L. Skinner  
(Published in *LYB* 9: 90 (1940). No further details.)

**'Golden Pyramid' I(b/-)**

Parentage: raised from various yellow-flowered Asiatics  
R: N.A. Lamb (c. 1960), N: N.A. Lamb, REG: N.A. Lamb (1984)  
Fls clear yellow, spotted. Lvs scattered, dark green. Stems 1-1.2 m. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

**'Golden Queen' (de Graaff) VI(-l)**

Parentage: Aurelian origin  
R: J. de Graaff (c. 1954), N: J. de Graaff  
Fls golden yellow with light green stripes.  
(See note under 'Golden Queen' (Mak-Leek).)

**'Golden Queen' (Mak-Leek) VI(a/c-d)**

Parentage: yellow-flowered seedling × yellow-flowered seedling  
R: Mak Lelieveredeling B.V. (1987), G: Mak Lelieveredeling B.V. (1989), N: Mak-Leek Inc. (1991)  
Inside vivid yellow (12A); outside brilliant yellow/brilliant greenish yellow (7A/5B), midribs brilliant greenish yellow (2B); spots few, dark, at base of tepals; nectaries vivid yellow (13A); pollen strong orange (25A); stigma light

greenish yellow (7D). Fls 190 mm wide; tepals 95 × 30-45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 105 × 15 mm, moderate yellow-green (137C). Stems 0.75-1 m, strong yellowish green to strong yellow-green (141C/D), with 5-13 fls. Late. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. However, although not accepted for registration, the name must be accepted because it was granted Dutch PBR (LEL 965) in 1993 (ICNCP, 2004: Art. 24.4). To distinguish between the two 'Golden Queen's, the name of the raiser is appended to each and should be thus cited when the names are used (ICNCP, 2004: Art. 27.5).)

#### **Golden Regale Group VI(-/a)**

Parentage: (*regale* × Crow's Group) × *regale* 'Lesterina'  
R: LeV. Freimann (c. 1945), N: LeV. Freimann  
Fls in shades of yellow.  
(Published in *LYB NALS* 7: 43 (1954). Included in *ILR* (1982) as Golden Regale grex.)

#### **'Golden Rosaly' I(a/-)**

Syn. of 'Golden Rosy'.

#### **'Golden Rosy' I(a/-)**

Parentage unknown  
R: Gebr. Mak B.V. (1982), G: Gebr. Mak B.V. (1985), N: Gebr. Mak B.V. (1989), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1989)  
Inside vivid yellow (14B), throat brilliant yellow-green (150B); outside vivid yellow (12A), midribs brilliant yellow-green (150B); spots few, dark red (187A), on basal half of each tepal; pollen vivid to brilliant orange-yellow (23A/B). Fls 185 mm wide; tepals 90 × 47 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 75 × 13 mm, mid green. Stems 0.6 m, pale green, with c.12 fls. July.  
Syn.: 'Golden Rosaly'.  
(Registered and included in *ILR Ninth Supplement* as 'Golden Rosaly'. However, Dutch PBR (LEL 676) were granted under the epithet 'Golden Rosy', so this latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

#### **Golden Royal Coronas Group VI(-/d)**

Parentage: Aurelians  
R: R.W. Bemis, N: R.W. Bemis, REG: R.W. Bemis (1984)  
Fls in shades of yellow from chartreuse to gold; spots absent; nectaries yellow; pollen orange-red. Fls to 130 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered. Stems 1.2-2 m, with many fls. July to Aug. (Published in *'Deep-Freeze' Lilies Cat.*, 1978/79: 4. Included in *ILR* (1982) as Golden Royal Coronas grex.)

#### **Golden Royal Trumpets Group VI(-/a)**

Parentage: Aurelians  
R: R.W. Bemis, N: R.W. Bemis, REG: R.W. Bemis (1984)  
Fls lemon-yellow to burnished gold; spots absent. Tepal-margins smooth, tips strongly recurved. Lvs scattered. Stems 1.3-1.6 m. July.

(Published in *'Deep-Freeze' Lilies Cat.*, 1978/79: 4. Included in *ILR* (1982) as Golden Royal Trumpets grex.)

#### **'Golden Ruffle' IX(b/c)**

See *auratum* 'Golden Ruffle'.

#### **'Golden Rule' IX(c/a)**

See *canadense* 'Golden Rule'.

#### **'Golden Sceptre' VI(b-c/a)**

Parentage unknown  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Inside golden yellow; outside of outer tepals with a broad bronze band and narrow yellow margin, of inner tepals with bronze midribs. Tepal-margins smooth, tips recurved. Stems 1.2 m. July.  
(Published in *The Lily Garden Cat.*, 1996/97: 15.)

#### **'Golden Show' I(a/b-c)**

Parentage: seedling G 844 × seedling G 907  
R: Vletter & Den Haan (1988), G: Vletter & Den Haan, N: Vletter & Den Haan (1993), I: Vletter & Den Haan (1997), REG: Vletter & Den Haan (1997)  
Inside and outside vivid yellow (9A); a few spots and some papillae present; nectaries yellowish green; pollen dark brown; stigma violet. Tepal-margins smooth or ruffled, tips slightly recurved. Stems 1 m, green with dark markings, and with c.10 fls.

#### **Golden Showers Group VI(c/a)**

Parentage: Aurelian origin  
R: J. de Graaff (c. 1960), N: J. de Graaff, I: J. de Graaff (1961)  
Inside golden yellow; outside brown. Tepal-tips recurved. Stems 1.2-1.5 m. July.  
(Published in *ILR* (1982) as Golden Showers grex.)

#### **'Golden Souvenir' I(b/-)**

Parentage: *lancifolium* × (*lancifolium* × *L. × hollandicum*)  
R: Gebr. N. & B. Laan & Zn (c. 1968), N: Gebr. N. & B. Laan & Zn  
Fls brilliant yellow (7A); spots purple. Stems 1 m. July to Aug.

#### **'Golden Spire' VI(-/a)**

Parentage: selection from Golden Splendor Group  
S: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1976)  
Inside deep yellow; outside wine-coloured. Stems 1.9 m.

#### **Golden Splendor Group VI(b-c/a)**

Parentage: selections from Golden Clarion Group  
S: J. de Graaff, N: R.B. Ware (1957)  
AGM 2002, AGM 2002  
Fls in shades of yellow and gold, with wine-red stripe on outside of each tepal. Stems 1.2 m. July.  
(Published in *R.B. Ware Cat.*, 1957. Included in *ILR* (1982) as Golden Splendor grex.)

#### **'Golden Spur' VI(-/a)**

Parentage: selection from Golden Clarion Group

S: J. de Graaff (c. 1960), N: J. de Graaff  
Inside golden yellow; outside brown. Stems 1.2-1.9 m.  
July.

**‘Golden Standard’ VI(b/b)**

Syn. of ‘Gold Standard’.

**‘Golden Star’ VII(a/c)**

Parentage: (*L. × parkmanii* Little Rascal Group × ‘Star Gazer’) × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2002)  
Inside yellowish white (155D), each tepal with a flame of light greenish yellow (5C) along midvein, throat yellowish white (155D); outside yellowish white (155D), midribs with pale yellow-green flame; spots brilliant greenish yellow (5B); papillae present; nectaries strong yellow-green (144B); pollen brownish orange (171B); stigma dark purple (79B). Fls 230 mm wide, slightly scented; tepals 135 × 65 mm, margins ruffled, tips recurved. Lvs scattered, 140 × 40 mm. Stems 0.9 m, green flushed darker, with c.6 fls. July.

**‘Golden Stargazer’ VII(a-b/b)**

Parentage unknown  
R: Van der Salm Bulb Farm, Inc. (c. 1997), REG: Van der Salm Holland B.V. (2002)  
Inside vivid yellow/light orange-yellow (16A/B); outside pale orange-yellow (16D); spots and papillae present; nectaries green; stigma purple; pollen light brown. Tepal-margins smooth, tips recurved. Stems 0.9 m, with c.5 fls. Late to very late.  
(An Orienpet (OT) lily.)

**‘Golden Summer’ I(a/-)**

Parentage: ‘Sunkissed’ × ‘Carol Jean’  
R: F. Fellner (1978), G: F. Fellner (1981), N: F. Fellner (1987), I: Riverside Gardens (1987), REG: F. Fellner (1987)  
Fls golden yellow; spots absent. Fls 150 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered. Stems 0.75 m, green, with 10-14 fls. Mid July.

**Golden Sunburst Group VI(a-b/c-d)**

See *L. × aurelianense* Golden Sunburst Group.

**‘Golden Sunrise’ I(a/-)**

Parentage: (‘Kallista’ × unknown) × unknown  
R: G.M. Chandler, N: G.M. Chandler, I: G.M. Chandler (1958)  
Fls capsicum-red (HCC 715/3) to nasturtium-red (HCC 610) at centre; spots chocolate-brown. Fls 140 mm wide. Stems 0.8 m, with 6-8 fls.

**‘Golden Surprise’ VIII(b/b)**

Parentage: unnamed trumpet seedling × ‘Lucky Strike’  
R: R.H. Bazett (1990), G: R.H. Bazett (1993), N: R.H. Bazett (1998), I: R.H. Bazett (1999), REG: R.H. Bazett (1998)

Inside vivid yellow (9A), throat strong greenish yellow (151B); outside vivid yellow (9A), midribs pale green; spots absent; nectaries strong yellow-green (144A); pollen moderate orange (167A); stigma colourless. Fls 160 mm wide, lightly scented; tepals 100 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 13 mm, dark green. Stems 1.10 m, mid green, with 9-13 fls in a semi-umbellate infl. July.  
(An Asiatic/trumpet hybrid.)

**‘Golden Tan’ VI(-/a)**

Parentage: *L. × sulianense* ‘Sulphur Queen’ × Golden Clarion Group  
R: A.C. McKillop (c. 1957), N: A.C. McKillop  
Fls deep yellow.

**‘Golden Tapestry’ I(b/c-d)**

Parentage: sibling of ‘Ethelwaite’ × ‘Connecticut Dream’  
R: W.D. Evans (1975), G: W.D. Evans (1979), N: W.D. Evans (1986), I: W.D. Evans (1986), REG: W.D. Evans (1986)  
Inside vivid orange-yellow (21A); outside of outer tepals various shades of brown, of inner tepals vivid orange-yellow (21A) with brown midribs; spots deep purplish red (61A), in the throat; nectaries greenish; pollen brown. Fls 155 mm wide; tepals 90 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 22 mm, mid green. Stems 1 m, dark brown. with c.10 fls. Late.

**‘Golden Tears’ I(a/-)**

Parentage: ((‘Tabasco’ × ‘Nutmegger’) × (Yellow Blaze Group × ‘Connecticut King’)) × (‘Sahara’ × ‘Crescendo’)  
R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1993), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside darker than vivid yellow (12A), throat brilliant yellow (12B); outside brilliant/light yellow (10A/B), shading to almost brilliant yellow (13B) at tepal-edges; spots absent; papillae few, self-coloured, near nectaries; nectaries hairy, strong yellow-green (144B); pollen vivid orange-yellow (23A); stigma dark red (187A). Fls 170 mm wide; tepals 95 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 12.5 mm, mid green. Stems 0.85 m, mid green, with c.10 fls.

**Golden Temple Group VI(b/a)**

Parentage: *leucanthum* var. *centifolium* × Aurelian Group  
N: J.M. Shaver, I: J.M. Shaver (c. 1966), REG: J.M. Shaver (1984)  
Inside golden yellow; outside with bands of pink, purple, red-brown or olive; spots absent. Tepal-margins smooth. Lvs scattered. Stems 1.3-2.3 m. July.  
(Published in *Rex Bulb Farms Cat.*, May 1966: 19.)

**Golden Temple Bells Group VI(c/-)**

Parentage: selections from Temple Group  
S: J.M. Shaver (pre 1970), N: J.M. Shaver, I: J.M. Shaver (1970), REG: J.M. Shaver (1984)  
Fls golden yellow; spots absent. Tepal-margins smooth, tips not recurved. Lvs scattered. Stems 1.2-2.2 m. July.

(Published in *Rex Bulb Farms Cat.* 1971: 31. Included in *ILR* (1982) as Golden Temple Bells grex, and classified erroneously in Div. VI(a).)

**'Golden Tiara' VII(-/)**

Parentage: *L. × parkmanii* Imperial Gold Group × unnamed seedling  
R: Fairdale Nursery, N: Fairdale Nursery (1991), REG: Van der Salm Bulb Farm, Inc. (1992)  
Fls white, each tepal tinged pink at tip and with a gold ray; copiously spotted.

**'Golden Tiger' I(c/-)**

Parentage: *lancifolium* × unknown  
R: J. de Graaff (c. 1962), N: J. de Graaff  
Fls deep buttercup-yellow; spots dark over whole tepal-surface. Stems 1.2 m. Aug.

**'Golden Times' I(a/-)**

Parentage: 'Connecticut King' × 'Golden Coronet'  
R: Bischoff Tulleken Lelies B.V. (1977), G: Bischoff Tulleken Lelies B.V. (1980), N: Bischoff Tulleken Lelies B.V. (1985), I: Bischoff Tulleken Lelies B.V. (1986), REG: Bischoff Tulleken Lelies B.V. (1986)  
Inside strong orange-yellow (17A), tepal-edges brilliant yellow (15C), throat yellow; outside brilliant yellow, midribs tinged with green; brown spots around base of tepals; nectaries reddish brown; pollen light red-brown. Fls 180 mm wide; tepals 70 × 25 mm. Lvs scattered, 100 × 15 mm, mid green. Stems 1 m, green, with 11-12 fls. June.

**'Golden Torch' VIII(a-b/b)**

Parentage: (yellow-flowered seedling × 'Sahara') × (*longiflorum* × 'Snowstar')  
R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (1999)  
Inside brilliant greenish yellow (5A); outside light greenish yellow (3D), tepals edged brilliant greenish yellow (5A) and tipped strong yellow-green (143A); spots few, dark red (187A), along the nectaries, together with a few light yellow-green (2C) papillae; nectaries strong yellow-green (143A), with a little light yellow-green (150D); pollen strong brown (172A); stigma light greenish yellow (4C). Fls 200 mm wide; tepals 105 × 40-50 mm, margins smooth, tips recurved. Lvs scattered, 150 × 40-50 mm, dark green. Stems 1.1 m, green, with c.5 fls. July.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**Golden Trumpet Group VI(-/a)**

Parentage: Aurelians  
R: C. Yerex (1940s), N: C. Yerex  
Fls in deep yellows. Stems 1.5-2 m. July to Aug.  
(Published in *LYB NALS* 4: 59-62 (1951).)

**'Golden Tycoon' VIII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Testcentrum voor Siergewassen B.V., G: Marklily B.V.

(1998), N: Marklily B.V. (2000), I: Marklily B.V. (2001), REG: Marklily B.V. (2002)

Inside and outside vivid yellow (13A/14A), base of midveins yellow-green shading to yellow; nectaries green; pollen light brown; stigma yellow. Fls 150 mm wide; tepals 100 × 50 mm, margins smooth to very slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 30 mm. Stems 1 m, green, with 2-6 fls. Early to midseason.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Golden Wedding' I(c/-)**

Parentage: selection from Citronella Group  
S: J. de Graaff, N: J. de Graaff  
Fls soft yellow, spotted. Stems 1-1.5 m. July.  
(Published in *NALS Bull.* 13 (2), (1959).)

**'Golden Wonder' I(a/-)**

Parentage: selection from Golden Chalice Group  
S: J. de Graaff (c. 1958), N: J. de Graaff  
Fls soft golden yellow; spots few, faint, maroon. Stems 1-1.2 m. June.  
(Published in *Oregon Bulb Farms Cat. Suppl.*, 1958.)

**Golden Wreath Group I(a/b)**

Syn. of Zelta Vainags Group.

**Golden Zephyrs Group VII(-/b)**

Parentage unknown  
R: Strahm Bulb Farm (pre 1979), N: Strahm Bulb Farm  
Inside white, each tepal with a gold ray and crimson spots. Stems 1-1.9 m. July to Aug.

**'Goldeye' I(a/-)**

Parentage: (*dauricum* × unknown) × yellow-flowered *philadelphicum* var. *andinum*  
R: A.R. Brown, N: P.H. Wright (1951)  
Fls rich golden yellow, base of tepals darker.  
(Published in *ILR* (1960).)

**'Gold Fewer' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1983), G: J. Vasarietis (1987), N: J. Vasarietis (1990), I: J. Vasarietis (1990), REG: J. Vasarietis (1992)  
Inside strong orange (25A); outside vivid orange-yellow (23A); spots absent; nectaries greenish white; pollen orange. Fls 170 mm wide; tepals 100 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 25 mm, dark green. Stems 1-1.2 m, dark green, with 13 fls. Early July.

**'Goldfinch' I(c/d)**

Parentage: *pumilum* × unknown  
Fls canary-yellow.  
Syn.: *pumilum* 'Goldfinch'; *tenuifolium* 'Goldfinch'.  
(Published in *J.E. Clark Cat.*, 1942. Introduced as *tenuifolium* 'Goldfinch'.)

**'Goldfinch' I(b/-)**

Syn. of 'Gold Rush'.

**'Goldfinch' VIII(-/d)**

Syn. of 'Goldcrest'.

**'Goldfind' I(c/d)**

Parentage: yellow-flowered seedling of 'Coronation' × ('Coronation' × unknown)

R: E. Robinson (c. 1956), N: E. Robinson

Fls golden yellow, centre purplish; spots large, heavy.

Stems 1.2 m. July.

**'Goldfinger' I(a/-)**

Parentage: 'Aristo' × ('Connecticut King' × 'Chinook')

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff

Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies

B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1989),

REG: Bischoff Tulleken Lelies B.V. (1993)

Inside vivid orange-yellow (23A); outside brilliant orange-yellow (23B), edged vivid orange-yellow (23A), the midvein strong greenish yellow (151B), tinged strong yellow-green (144A) and dark red (187A) on the outer tepals; spots dark red (187A), on half of each tepal; pollen moderate reddish brown (175A); stigma dark red (187B). Fls 160 mm wide; tepals 84 × 45 mm, tips not recurved. Lvs scattered, 105 × 14 mm, dark green. Stems 0.71 m, mid green with darker markings, and with c.8 fls.

**'Gold Flake' I(a-b/-)**

Parentage: 'Lyla McCann' × *L. × maculatum* 'Alice Wilson'

R: E.L. Kline, N: E.L. Kline

Fls golden yellow; spots mahogany. Late June.

(Published in *R.B. Ware Cat.*, 1954.)

**'Gold Idol' I(a/b)**

Parentage unknown

N: K.L. Watkins (1985), I: K.L. Watkins (1985), REG:

K.L. Watkins (1986)

Fls vivid yellow (12A); each tepal spotted dark red (183A) on basal half; nectaries frosted brilliant yellow-green (154C); pollen moderate orange (167B). Fls 130 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm, dark green. Stems 1 m, dark green, with 10-15 fls. Late Dec. (Australia).

**'Goldie' IX(b/c)**

See *auratum* var. *platyphyllum* 'Goldie'.

**'Goldie Ann' VI(-/a)**

Parentage: Aurelian Group seedling × 'Golden Clarion'

R: R.C. Crawford, G: Montana State University (1958),

N: D.C. Merkely (1979), I: Borbeleta Gardens (1980),

REG: Borbeleta Gardens (1981)

Inside brilliant yellow (9C), throat greenish; outside reddish; spots absent; nectaries greenish; pollen light brown. Fls scented; tepals 130 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 180 × 13 mm, mid green. Stems 1.2 m, green, with c.15 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1980.)

**'Goldilocks' I(-/-)**

Parentage: 'Lord Melbourne' × (*L. × hollandicum* × unknown)

R: G. Errey, N: G. Errry

**'Goldina' I(a/-)**

Parentage: *dauricum* × 'Connecticut King'

R: De Jong Beheer B.V. (pre 1983), G: De Jong Beheer

B.V. (1983), N: De Jong Beheer B.V. (1983), I: De Jong

Beheer B.V., REG: De Jong Lelies Holland B.V. (1994)

Inside vivid yellow (14A), tepals paler in apical part, midveins strong orange (24A) above the nectaries, the colour shading into the tepals, tepal-tips strong orange (24A); outside light yellow (2B), tepals inconspicuously edged vivid yellow (14B); spots dark red (187B), in the throat; pollen dark reddish orange (175B); stigma deep red (185A). Fls 180 mm wide; tepals 90 × 40 mm. Lvs scattered, 80 × 10 mm, mid green. Stems 0.47 m, pale green with some darker markings, and with c.11 fls.

**'Gold Key' I(a/-)**

Parentage: Golden Chalice Group × 'Keystone'

R: H.O. Beracha (pre 1978), N: H.O. Beracha

Fls golden yellow. Early.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 41 (1978).)

**'Goldkleid' I(a-b/c)**

Parentage: 'Yukatan' × Feldmaier seedling Fe4

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N:

G. Steinbrück (1998), I: G. Steinbrück (2002), REG: G.

Steinbrück (2002)

Inside and outside light yellow (21D) throughout; spots absent; nectaries moderate yellowish green (138A); pollen dark reddish orange (172B); stigma brownish orange (164A). Fls 160 mm wide; tepals 80 × 30 mm, margins smooth, tips becoming distinctly recurved. Lvs scattered, 90 × 17 mm. Stems 1.2 m, mid green, with c.11 fls. Mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0032250).)

**'Goldkranz' VI(-/-)**

Parentage unknown

R: H. Böhm (pre 1981), N: H. Böhm, REG: H. Böhm (1990)

Fls orange-yellow; pollen orange-yellow. Fls 100 mm wide. Stems 1.6 m, with c.12 fls held at the same level (infl. not pyramidal). Mid July.

(Published in German Lily Group sales list, 1988.)

**'Gold Lady' VII(-/b)**

See *L. × parkmanii* 'Gold Lady'.

**'Gold Lode' I(a/b-c)**

Parentage: ('Gold Urn' × unknown) × 'Connecticut King'

R: W. Windus, N: W. Windus (1973), REG: W. Windus (1973)

Inside vivid yellow (15B) with vivid orange-yellow (23A) along midveins, throat somewhat green; outside vivid

yellow (14A); spots red-brown, few, deep in throat; nectaries green; pollen dark brown. Tepal-margins smooth. Stems 1-1.2 m, with 11-15 fls. Midseason.

Trade designation: GOLDEN MELODY.

(Published in *Lilies and other Liliaceae*, 1973/1974: 110. 'Golden Melody' is the epithet under which this cv. was released about 1976 by Vletter & J.A. Den Haan. It appeared in *Lilies and other Liliaceae*, 1976: 91 erroneously as a new registration of 'Golden Melody' and with a different parentage.)

#### 'Goldmarie' I(b/-)

Parentage unknown

R: G. Steinbrück (pre 1992)

Fls golden yellow with large dark brown spots.

#### 'Gold Medal' I(a/b)

Parentage: (('Uncle Sam' × ('Mega' × 'Lemon Queen' (Div. I)) × 'Edith Cecilia') × 'Connecticut King')

R: E.A. McRae (1971), G: Oregon Bulb Farms, Inc. (1973), N: Oregon Bulb Farms, Inc. (1978), I: Oregon Bulb Farms, Inc., REG: E.A. McRae (1981)

Inside vivid yellow (12A) flushed with vivid orange-yellow (21A) at base of tepals; outside brilliant/light yellow (12B/C) overlaying soft green; papillae very few, tiny, pigmented, in centre; nectaries light yellow (12C) shading into green; pollen moderate orange/moderate reddish orange (167A/171A). Tepals 70-90 × 25-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 60-100 × 15-20 mm, pale to mid green. Stems 0.8-1 m, light green, with 6-8 fls. June to July.

#### Goldmine Group VI(-/a)

Parentage: Aurelian Group

R: W.M. Spry, N: W.M. Spry

Fls golden yellow.

(Published in *ILR* (1982) as Goldmine grex.)

#### 'Gold Missy' VI(b-c/a)

Parentage: 'Starlite' × Golden Splendor Group

R: J.G. Smith (1981), G: J.G. Smith (1984), N: J.G. Smith (1984), I: J.G. Smith (1984), REG: J.G. Smith (1984)

Inside yellow; outside reddish brown; spots absent; nectaries green; pollen brown. Tepals 117 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 200 × 20 mm, dark green. Stems 1.7 m, green, with c.18 fls.

#### 'Goldmöve' I(a/-)

Parentage: derived from *lancifolium* var. *flaviflorum*, *wilsonii* var. *flavum* & *L. × maculatum*

R: L. Denkewitz (pre 1980), N: L. Denkewitz

Inside cadmium-orange. Stems 1.1 m. Mid July.

#### 'Gold Nugget' I(a/-)

Parentage unknown

R: Sun Valley Bulb Farms, Inc., N: Sun Valley Bulb Farms, Inc. (1977), I: Sun Valley Bulb Farms, Inc. (1977)

Fls brilliant yellow (7B), very lightly spotted; nectaries brilliant greenish yellow (1B); pollen vivid yellow (17B).

Tepals 75 mm long. Lvs moderate olive-green (137A), elliptic. Stems 0.6 m.

#### 'Goldperle' I(a/b)

Parentage unknown

R: VEG Zierpflanzen (1979), N: VEG Zierpflanzen

Fls golden yellow, tinged with red-orange in centre; spots dark brown, on half of each tepal. Fls 120 mm wide; tepal-tips slightly recurved. Stems 0.75-1 m. Late May to June.

#### 'Gold Plate' VI(b/a)

Parentage: (((Copper King Group × 'Anaconda') ×

'Penelope') × 'Poor Knights') × greenish yellow-flowered seedling

R: P.L. Greenfield (1984), G: P.L. Greenfield (1987), N: P.L. Greenfield (1988), REG: P.L. Greenfield (1989)

Inside clear butter-yellow inside; outside yellow with a slight green cast; spots absent; nectaries light green; pollen light brown. Fls 130 mm wide; tepals 128 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 133 × 10 mm, mid green. Stems 1.2 m, greyish green with some purple markings, and with c.8 fls (second year of flowering). Dec. (New Zealand).

#### 'Goldprinzessin' I(a/-)

Parentage: 'Impala' × 'Impact'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Inside and outside vivid yellow (13A), tepal-tips suffused with pale yellow (12D); basal third of each tepal with sparse, purplish spots and a very weak brushmark (mostly consisting of 3-4 streaks); nectaries large, conspicuous, very pale green (128D); pollen dark reddish orange (172B); stigma pale red. Fls 140 mm wide; tepals 75 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 50 × 15 mm, mid green. Stems 0.8 m, rather dark green, with 10-15 fls. Late June to early July.

#### Goldpyramide Group VI(-/a)

Parentage unknown

R: V. Strasser (pre 1982), N: V. Strasser, REG: ICRA (1996)

Fls gold to orange. Stems 1.4 m.

(This epithet has been used for a cultivar Group and also a particular, selected clone of that Group ('Goldpyramide').)

#### 'Goldquelle' I(b/-)

Parentage: Asiatic seedling × 'Rusalka'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Inside and outside strong orange-yellow (17A), tepal-tips and throat orange-white (159D); spots absent; pollen strong red (46A). Fls 120 mm wide; tepals 65 × 30 mm, margins smooth, tips slightly reflexed. Lvs scattered, 70 × 15 mm, dark green. Stems 1.2 m, almost black, with c.15 fls. Mid July.

(It is not known whether the pollen parent is the 'Rusalka' of Mičulka or Weinreich.)

**'Gold Ray' IX(b/c)**

See *auratum* 'Gold Ray'.

**'Gold Rush' I(a-b/b)**

Parentage: selection from Mid-century Group

S: J. de Graaff (1941), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1949)

Fls golden yellow, slightly spotted; nectaries green; pollen brown. Stems 0.7 m. Late June.

Syn.: 'Goldfinch'.

(Published in *Oregon Bulb Farms Cat.*, 1951 as 'Gold Rush'; introduced as 'Goldfinch' in *Oregon Bulb Farms Cat.*, 1949.)

**'Goldrush' I(a/-)**

Syn. of 'Golden Pike'.

**'Goldsaum' I(b/-)**

Parentage unknown

R: C. Wittneben (c. 1968), N: C. Wittneben

Fls strong orange-yellow (22A), tepal-tips and throat overlaid with strong red (46A); spots few, dark red (187A/B) on half of each tepal; nectaries pale orange-yellow (159B), white-frosted; pollen dark reddish orange (175C). Fls 135 mm wide; tepals 84 × 35 mm, margins smooth, tips slightly recurved. Lvs 100 × 12 mm, dark green. Stems 0.5 m. July.

**'Goldschopf' I(a/-)**

Parentage unknown

R: C. Wittneben, N: C. Wittneben

Fls soft gold.

**'Goldshell' I(a/-)**

Parentage: *lancifolium* × *L. × hollandicum*

R: J. de Graaff (c. 1954), N: J. de Graaff

Fls yellow with a few maroon spots.

(Published in *ILR* (1969).)

**'Goldspire' VI(c/-)**

Parentage: unknown × 'Charles T. Russell'

R: C. Yerex (c. 1964), N: C. Yerex

HC 1967

Fls brilliant yellow (12B); outside with bands of brilliant yellow (21C); light papillae near centre. Tepal-margins wavy, tips curled. Stems 1.9-2.2 m. July.

(Published in *Kline Cat.*, 1966.)

**'Goldsprite' VI(-/c)**

Parentage: Aurelian Group

R: C. Yerex (c. 1951), I: C. Yerex (1967)

Inside light yellow (17D), each tepal with a vivid yellow (15B) ray and tepal-margins; outside deep red (53A).

Stems 1.5 m. July.

**'Gold Standard' VI(b/b)**

Parentage: selection from Golden Clarion Group

S: J. de Graaff (c. 1960), N: J. de Graaff

Fls deep golden yellow throughout; inner tepals ruffled.

Stems 1.2-1.9 m. Late July.

Syn.: 'Golden Standard'.

(Originally named 'Golden Standard'.)

**'Gold Star' I(a/b)**

Parentage: an unnamed Tiger (i.e. *lancifolium*?) × *L. × maculatum*

R: E.J. Kelley (c. 1966), N: E.J. Kelley

Fls golden yellow with some spotting. Lvs dark green.

Stems 1.2-1.5 m, with c.10 fls, and with bulbils. July.

(F.M. Abbey in *Gardenside Gossip* 24: 1,5 (1959) said that this cv. was raised by L.G. Lafrancis and that it first flowered and was named in 1957.)

**'Goldstar' II(c/d)**

Syn. of 'Schönholzer Heide'.

**'Goldstaub' I(-/-)**

Parentage unknown

R: C. Wittneben (pre 1972), N: C. Wittneben

Inside gold, glittering as if dusted with gold.

**'Goldstaub' I(a/b)**

Syn. of 'Schneider's Goldstaub'.

**'Goldstern' I(b/d)**

Parentage unknown

R: S. Ziepke (pre 1970), N: S. Ziepke, I: S. Ziepke

Inside and outside vivid yellow (12A), throat vivid orange-yellow (21A); heavily spotted dark red (187A/B) on two-thirds of each tepal; nectaries white-green; pollen strong orange (168A). Fls 100 mm wide; tepals 80 × 30 mm, margins strongly ruffled, tips strongly reflexed. Lvs scattered, 100 × 13 mm, dark green. Stems 0.85 m, green overlaid with purple, and with c.10 fls. July to Aug.

**'Goldsucher' I(b/c-d)**

Parentage: 'Cynthia' × seedling CP 151

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N:

G. Steinbrück (1996), I: G. Steinbrück (1997), REG: G. Steinbrück (1999)

Inside light orange-yellow (19A), throat pale yellow (19C); outside pale yellow (19C); spots absent; nectaries very pale green (128D), frosted; pollen dark red (187B); stigma moderate yellowish pink (173D). Fls 110 mm wide; tepals 65 × 30 mm, margins smooth, tips recurved. Lvs scattered, 70 × 15 mm. Stems 0.7 m, dark green, with c.10 fls. Early July.

(Published in ELG sales list, 1997.)

**'Goldtaler' I(a/-)**

Parentage: (*lancifolium* × *L. × maculatum*) × *wilsonii* var. *flavum*

R: L. Denkewitz (pre 1980), N: L. Denkewitz, REG: L. Denkewitz (1988)

Fls lemon-yellow with many spots. Stems 0.8 m, with up to 15 fls. Mid July.

(Published in German Lily Group sales list, 1980.)

**'Gold Tiger'** I(b/-)  
Syn. of 'Sunny Twinkle'.

**'Goldturn'** VI(-/a)  
Parentage: gold-flowered Aurelian Group × gold-flowered Aurelian Group  
R: V. Strasser (pre 1979), N: V. Strasser, REG: ICRA (1996)  
Fls golden yellow. Lvs dark green. Stems 1.6 m, dark green. July.

**'Gold Urn'** I(b/-)  
Parentage: *L. × maculatum* 'Helen Carroll' × ('Grace Marshall' × unknown)  
R: R. Warner (c. 1951), N: R. Warner, I: R. Warner (c. 1955), REG: (between 1969 and 1981)  
Inside and outside light orange (28C), throat light orange-yellow (23C); spots absent; nectaries light orange-yellow (23C). Lvs *lanceifolium* type. Stems 0.4 m. (Published in *LYB* 30: 48 (1967) without description; E. Fisher, *Named Lily Hybrids and their Origins*, 6 (1978).)

**'Golem'** I(a/b)  
Parentage: (('Zephyr' × 'Twilight') × white-flowered tetraploid) × 'Nove Cento'  
R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside orange-red, tepal-tips tinged with brownish, centre and throat bright yellow; outside orange-red, midribs brown; spots absent; nectaries white-granulated; filaments pale yellow; pollen dark orange-brown; style brownish; stigma pale orange. Fls 145 mm wide; tepals 100 × 47 mm, scarcely recurved (outer slightly more so); pedicels 50 mm long, very thick, densely dotted with dark brown. Lvs scattered, 125 × 20 mm, dull pale green. Stems 0.85 m, very thick, dark brown, with medium-sized infl. Late June.

**'Golf'** I(a/b)  
Parentage: unnamed seedling × *dauricum*  
R: A.J. van der Zwet & Zn (1988), G: A.J. van der Zwet & Zn (1991), N: A.J. van der Zwet & Zn (1992), I: A.J. van der Zwet & Zn (1992), REG: A.J. van der Zwet & Zn (1997)  
Inside strong orange (25A) shading to strong orange (25B) towards the tepal-tips, tinged with vivid orange (28A) above nectaries; outside strong orange-yellow (22A) shading to strong orange (25A) towards tepal-tips and tipped strong yellow-green (143A); spots dark red (187A), on a third of each tepal; papillae vivid orange (28A), in the throat; nectaries light orange (29B); pollen moderate reddish brown (175A); stigma deep red (60A). Fls 190 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 20 mm, mid green. Stems 0.8-1.05 m, mid green, with 6-8 fls. June.

**'Goliath'** VI(b/b)  
Parentage: selection from Aurelian Group  
S: J. de Graaff (c. 1958), N: J. de Graaff  
Fls white. Stems 1-1.5 m. July.  
(Published in *Greenock Farms Cat.*, 1958/59.)

**'Good Friday'** IX(b/c)  
See *auratum* 'Good Friday'.

**'Good Hope'** VI(b/c)  
Parentage: selection from Sunburst Group  
S: J. de Graaff (c. 1954), N: J. de Graaff  
Fls soft golden yellow; spots reddish, tiny, many are dashes rather than spots; papillae yellow. Tepal-tips recurved. Stems 1.2-1.9 m. July to Aug.

**'Good Night'** I(a/b)  
Parentage: (('Sunrise' × 'Appleblossom') × 'Connecticut King') × 'Connecticut Red'  
R: Mak-Leek Inc. (pre 1997), N: Mak-Leek Inc., REG: ICRA (1998)  
Fls strong dark red inside, each tepal with a yellowish centre. Tepal-tips recurved. Lvs very dark green. Stems 1-1.2 m, very dark green. Midseason. Triploid.

**GOOD NIGHT** I(a/b)  
Trade designation of 'Soirée'.

**'Gorsebelle'** VI(-/a)  
Parentage: selection from Golden Trumpet Group  
N: D. Foxwell (1960)  
C 1966  
Fls gorse-yellow, outside with red-brown midribs.

**'Goshoguruma'** I(a/-)  
Parentage: 'Enchantment' × *L. × maculatum*  
R: S. Fujishima (c. 1966), N: S. Fujishima  
Fls orange. Buds brown. Stems 0.5 m.

**'Gossamer'** VII(-/b)  
Parentage: (*auratum* 'Wittei' × 'Cymbeline') × *rubellum*  
R: G.G. & F.S. Blake (1980), G: G.G. & F.S. Blake (1983), N: G.G. & F.S. Blake (1986), I: G.G. & F.S. Blake (1986), REG: G.G. & F.S. Blake (1986)  
Inside pale purplish pink (65C) shading to light purplish pink (65B), tepal-tips light purplish pink (65B), throat light yellow (15D); outside with midribs pale purplish pink (65D); spots strong red. Fls 200 mm wide; tepals 130 × 68 mm, margins ruffled, tips slightly recurved. Lvs scattered, 210 × 52 mm, mid green. Stems 2 m, moderate yellow-green (147D), with c.15 fls. Jan. to Feb. (Australia).

**'Governor Winslow'** I(a/-)  
Parentage unknown  
R: R.W. Bemis (early 1960s), G: Blackthorne Gardens, N: Blackthorne Gardens, I: Blackthorne Gardens (1982)  
Inside bright yellow; spots absent. Stems 1 m. July to Sept.

**'Goya'** I(a/-)  
Parentage: seedling RS 887 × seedling RS 707  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside light purplish pink (55C); outside light purplish pink (63D), outer tepals with strong purplish pink (63B)

margins, midribs pale yellow (158B); spots deep purplish red (61A), on basal half of each tepal; pollen strong orange (25A). Fls 185 mm wide; tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 19 mm, mid green. Stems 0.9 m, pale green, with 5-8 fls. May.

**'Grace'** I(b/-)

Syn. of 'Grace Marshall'.

**'Graceland'** I(a/-)

Parentage unknown

G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoff Quality First (1993)  
Inside yellowish white (155B), throat with some light greenish yellow (1C), midveins pale yellow-green (155A); outside yellowish white (155B), with a little strong purplish red (59D) towards base, and moderate reddish brown (176B) at tepal-tips, midribs strong/light yellow-green (145A/B); spots few, dark red (187A) in throat; pollen moderate orange (167A); stigma dark reddish orange (175C). Fls 170 mm wide; tepals 90 × 45 mm. Lvs scattered, 95 × 13 mm, mid green. Stems 0.8-0.9 m, dark with a little pale green.

(The details of 'Graceland' published in *ILR Twelfth Supplement* were wrong. The registrant supplied the description of an orange lily, whereas 'Graceland' is yellowish white: the description is as given here.)

**'Grace Marshall'** I(b/-)

Parentage: Stenographer Group selection from Preston Group

S: I. Preston, N: I. Preston (1934)

AM 1935

Fls deep orange scarlet; spots chocolate-brown. Tepals recurved. Stems 1-1.5 m. July.

Syn.: 'Grace'.

(Published in *Gard. Chron.*, ser. 3, 98: 17 (1935) as 'Grace'. Renamed 'Grace Marshall'.)

**'Grace Mary'** I(a/b)

Parentage: (*L.* × *maculatum* × unknown) × unknown

R: G.M. Chandler (pre 1954), G: G.M. Chandler, N: G.M. Chandler (1954), I: G.M. Chandler (1961)

Inside vivid reddish orange (40A) at tepal-tips, shading to brilliant orange-yellow (23B) towards base; lightly spotted in basal half of tepals. Fls 140 mm wide. Stems 0.3 m.

**'Grace Mills'** Div. ?

Given as a parent of 'Grace Note'. No further details.

**'Grace Note'** I(b/-)

Parentage: ('Grace Mills' × unknown) × unknown

R: J. Aldred (c. 1966), N: J. Aldred, REG: J. Aldred (1971)

Fls strong yellowish pink (32C), overlaid with strong orange (30D) in throat; nectary-furrows densely papillate. (Published in *Lilies and other Liliaceae*, 1973: 112.)

**'Grace Rees'** VII(-/c)

See *L.* × *parkmanii* 'Grace Rees'.

**'Gracious One Group'** I(a/-)

Parentage: unknown × 'Rosita'

R: G.C. Keast (1988), G: G.C. Keast (1990), N: G.C. Keast (1992), I: G.C. Keast (1992), REG: G.C. Keast (1992)

Inside and outside deep purplish pink (64D), throat slightly frosted; outside with green midribs; spots small, maroon, on basal half of each tepal; nectaries green; pollen brown. Tepals 65 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 0.6 m, black, with c.4 fls. Mid Dec. to mid Jan. (New Zealand).

**'Gradient'** VI(b-c/b)

Parentage: (Palmer seedling 56221 × 'Crème de la Crème') × ((Palmer seedling 582812 × 'Gold Eagle') × 'Mimosa Star')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)

Inside white, centre and throat with deep yellow rays; outside with creamy midribs that are greenish at base; spots small, numerous, cinnamon, in lines on half of each tepal; pollen brown-apricot; stigma green. Fls 125 mm wide; tepals 115 × 30 mm, margin slightly waved, tips recurved; pedicels 50 mm long, dotted with red-brown. Lvs 130 × 18 mm, dull pale green. Stems 1.15 m, rigid, freely dotted with red-brown. Mid July.

**'Grado'** I(a/-)

Parentage: ('Edith Cecilia' × unknown) × ('Edith Cecilia' × unknown)

R: V. Strasser (1973), G: V. Strasser (1975), N: V. Strasser (1979), I: V. Strasser (1981), REG: V. Strasser (1985)

Fls pastel pink; a third of each tepal spotted. Tepal-margins smooth, tips slightly recurved. Stems c.1 m, dark green, with c.12 fls. Early July.

(Published in *Der Staudengarten*, 1981.)

**'Graf Almaviva'** I(b/-)

Parentage: 'Johanna' × yellow-brown-flowered Asiatic seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Fls light orange (26C); spots deep reddish purple (77A), on basal three-quarters of each tepal; nectaries pale whitish; pollen dark purple (79B); stigma dark purple (79A). Fls 139 mm wide; tepals 80 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 70 × 15 mm, mid green. Stems 1 m, rather dark green, with c.15 fls. Late June to early July.

**'Grail'** IX(b/c)

See *auratum* 'Grail'.

**'Granada'** I(a/-)

Parentage: Yellow Blaze Group × Asiatic seedling

R: Bischoff Tulleken Leliecultuur B.V. (1974), G: Bischoff Tulleken Leliecultuur B.V. (1977), N: Bischoff Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken Leliecultuur B.V. (1983), REG: Bischoff Tulleken

Leliecultuur B.V. (1983)

Inside brilliant yellow (21C), tepal-tips yellow, throat yellow; outside light yellow (21D), tepal-edges saffron-yellow; spots rust-brown; nectaries reddish brown; pollen reddish brown. Fls 120 mm wide; tepals 100 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 10 mm, mid green. Stems 1 m, green, with c.4 fls. Mid June.

**‘Granát’ I(a/-)**

Parentage unknown

R: J. Marks (pre 1970), N: J. Marks

Fls dark red.

**‘Granatglanz’ I(a/-)**

Parentage: ‘Black Butterfly’ × ‘Kupferturm’

R: H. Gerke (pre 1979), N: H. Gerke, REG: ICRA (1997)

Fls dark lake-red. Stems 1 m. Early July.

**‘Granatovaia’ I(a/-)**

Parentage: ‘Aelita’ × mixed pollen of ‘Svetlana’ & ‘Zabava’

R: V.A. Volkov (c. 1982), N: V.A. Volkov

Fls cherry-red with small spots. Stems 0.5 m, with bulbils. June.

(Included in *ILR Third Supplement* as ‘Granatovaya’ which is an unaccepted spelling. The ‘Svetlana’ of the seed parent is probably ‘Svetlana’ of Kireeva.)

**‘Granatovaya’ I(a/-)**

Unaccepted spelling of ‘Granatovaia’.

**‘Gran Cru’ I(a/-)**

Syn. of ‘Grand Cru’.

**Grand Canyon Group VI(-/-)**

Parentage: (‘Tetra White Henry’ × tetraploid trumpet hybrids) × (‘Tetra White Henry’ × tetraploid trumpet hybrids)

R: R.J. Griesbach (1962 until 1991), G: R.J. Griesbach, N: E.A. McRae (1994), I: Van der Salm Bulb Farm, Inc. (1995), REG: Van der Salm Bulb Farm, Inc. (1994)

Inside pure white to cream, throat orange to soft yellow; outside pure white to cream, with some purplish suffusion; spots absent; nectaries lime-green; pollen soft yellow to rust-coloured. Fls large; tepal-margins smooth, tips slightly recurved. Lvs scattered. Stems 1-1.5 m, dark green. Aug. Tetraploid.

**‘Grand Champion’ Div. ?**

Parentage unknown

Trumpet. No further details.

(Grown in Australia.)

**‘Grand Commander’ I(a/-)**

Parentage unknown

R: unknown (pre 1998)

Inside intense apricot, slightly spotted. Fls 150 mm wide. Stems 0.9 m. Late June.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in German Lily Group sales list, 1998.)

**‘Grand Commander’ IX(b-c/d)**

See *speciosum* ‘Grand Commander’.

**‘Grand Cru’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Vletter & Den Haan (1981), G: Vletter & Den Haan (1983), N: Vletter & Den Haan (1988), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)

AGM 2002

Inside vivid to brilliant yellow (12A/B), with a moderate red (179A) blush on basal third of each tepal; outside vivid yellow (12A) suffused with greyish red (182B); spots few, dark red (187A), at base of inner tepals; pollen moderate reddish brown (166B). Fls 150 mm wide; tepals 85 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 180 × 13 mm, mid green. Stems 1-1.2 m, green with darker markings, and with 7-11 fls. May (under glass).

Syn.: ‘Gran Cru’.

(Originally published in *ILR Tenth Supplement* as ‘Gran Cru’. However, it received Dutch PBR (LEL 379) in 1988 under the epithet ‘Grand Cru’ and this latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Grandessa’ I(a/-)**

Parentage: ‘Uncle Sam’ × ‘Enchantment’

R: Bischoff Tulleken Lelies B.V., G: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (1980), REG: Bischoff Tulleken Lelies B.V. (1980)

Fls strong reddish orange/strong yellowish orange (30B/C), heavily spotted rust-brown; anthers reddish brown. Stems 0.8 m, green with brownish markings. (Published in *Bloembollencultuur*, September 1980.)

**‘Grandeur’ I(a/-)**

Parentage: ‘Connecticut King’ × unnamed seedling

R: Bischoff Tulleken Leliecultuur B.V. (1978), G: Bischoff Tulleken Leliecultuur B.V. (1981), N: Bischoff Tulleken Leliecultuur B.V. (1985), I: Bischoff Tulleken Leliecultuur B.V. (1987), REG: Bischoff Tulleken Leliecultuur B.V. (1988)

Inside vivid yellow (12A), throat strong orange-yellow (17A); outside vivid yellow (14B) with a slight, light yellow-green (145B) midveins; spots few, dark red (187A/B); pollen deep orange-yellow (163A). Fls 180 mm wide; tepals 105 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 1 m, with 6-7 fls. July.

**‘Grand Gala’ VII(-/d)**

Parentage: white-flowered seedling × ‘Star Gazer’

R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside yellowish white (155B), each tepal with a large, moderate purplish pink (66D) flame, midveins on the basal half of each tepal suffused with strong purplish red (60B), throat light yellow-green (145B); outside moderate purplish red to dark purplish pink (186B/C), tepal-edges and tips ivory-white; spots dark red, on basal part of

tepals; nectaries dark purple (79A); pollen strong orange (169B). Fls 250 mm wide; tepals 125 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 160 × 40 mm, mid green. Stems 0.95 m, green, with c.6 fls. May to June (under glass).

**'Grandiflorum' I(a/b)**

See *L. × hollandicum* 'Grandiflorum'.

**'Grandiflorum' IX(c/d)**

See *leichtlinii* 'Grandiflorum'.

**'Grandiflorum' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Grandiflorum'.

**'Grand Prix' I(a/-)**

Parentage: "Connecticut" hybrid × 'Tabasco'  
R: Bischoff Tulleken Lelies B.V., G: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (1980), REG: Bischoff Tulleken Lelies B.V. (1980)  
Fls vivid yellowish orange (30C), with small pale brown veins; spots dark brown, in throat; anthers vivid reddish orange (34B). Stems 0.8 m.  
(Published in *Bloembollencultuur*, September 1980.)

**'Grand Slam' I(a/-)**

Parentage: sport from 'Tabasco'  
S: J. de Graaff (c. 1962), N: J. de Graaff, I: Oregon Bulb Farms, Inc.  
Fls chestnut-red; spots present. Stems 1-1.2 m. July.  
(Published in *LYB* 28: 133 (1965).)

**'Grand Stand' I(a/-)**

Misspelling of 'Grandstand'.

**'Grandstand' I(a/-)**

Parentage: 'Coronation' × unknown  
R: E. Robinson, N: E. Robinson (1957)  
Fls dark orange; heavily spotted. Stems 1 m. Mid July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 41 (1978) as 'Grand Stand' which is a misspelling.)

**Grand Teton Group VI(b/c)**

Parentage: ('Tetra White Henry' × tetraploid trumpet hybrids) × ('Tetra White Henry' × tetraploid trumpet hybrids)  
R: R.J. Griesbach (1962 to 1991), G: R.J. Griesbach, N: E.A. McRae (1994), I: Van der Salm Bulb Farm, Inc. (1995), REG: Van der Salm Bulb Farm, Inc. (1994)  
Inside pure white to cream, throat lime-green to soft yellow; outside pure white to cream, with some purple suffusion; spots absent; nectaries lime-green to mottled brown; pollen soft yellow. Fls large; tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1-1.5 m, dark green, very strong. Aug. All tetraploid.

**'Grand Witt' VII(-/b)**

Parentage: *auratum* 'Wittei' × 'Tranquil Dawn'  
R: G.G. & F.S. Blake (1980), G: G.G. & F.S. Blake

(1984), N: G.G. & F.S. Blake (1986), I: G.G. & F.S. Blake (1986), REG: G.G. & F.S. Blake (1986)  
Inside white, each tepal with a light orange-yellow (16C) ray, tepal-tips white, throat light orange-yellow (16B); outside white with vivid purplish red (57D) stripes along basal part of midribs; spots absent; nectaries light yellow-green (144D); pollen dark reddish orange (178B). Fls 230 mm wide; tepals 150 × 80 mm, margins ruffled, tips slightly recurved. Lvs scattered, 250 × 80 mm, mid-green. Stems 1.5 m, moderate yellow-green (147C), with c.18 fls. Jan. to Feb. (Australia).

**'Granny' I(a/c)**

Parentage: (('Dame Blanche' × 'Bianca') × ('Connecticut Red' × unnamed seedling)) × 'Appleblossom'  
R: Mak-Leek Inc. (pre 1996), N: Mak-Leek Inc., REG: ICRA (1998)  
Inside yellow in centre, with dark red edges to each tepal. Tepal-tips recurved. Stems 1 m. Mid July. Tetraploid.  
(Published in *Parkland Perennials Cat.*, 1996.)

**'Granny Mac' VI(-/a)**

Parentage: gold-flowered trumpet seedling × pink-flowered trumpet seedling  
R: D.F. McPherson (1971), G: D.F. McPherson (1973), N: D.F. McPherson, I: D.F. McPherson (1976), REG: D.F. McPherson (1976)  
Fls vivid yellow (17B) to vivid reddish orange (33B), scented.  
(Published in *Lilies and other Liliaceae*, 1976: 91.)

**'Gran Paradiso' I(a/b)**

Parentage: 'Vesuvius' × unnamed seedling  
R: Gebr. Vletter & J.A. Den Haan (1980), G: Gebr. Vletter & J.A. Den Haan (1982), N: Gebr. Vletter & J.A. Den Haan (1983), I: Gebr. Vletter & J.A. Den Haan (1983), REG: Gebr. Vletter & J.A. Den Haan (1984)  
Inside vivid reddish orange (32A), tepal-tips and throat strong reddish orange (34A); outside flushed with strong reddish orange (34A), the inner tepals Chinese coral; spots absent; pollen light red-brown. Fls 130 mm wide; tepals 80 × 50 mm, margins smooth, tips recurved. Lvs scattered, 200 × 15 mm, dark green. Stems 1.1-2 m, dark, with 7-9 fls.

**'Gran Sasso' I(a/b)**

Parentage: *wilsonii* × 'Avento'  
R: Bischoff Tulleken Leliecultuur B.V., G: Bischoff Tulleken Leliecultuur B.V. (1982), N: Bischoff Tulleken Leliecultuur B.V. (1986), I: Bischoff Tulleken Leliecultuur B.V. (1988), REG: Bischoff Tulleken Leliecultuur B.V. (1988)  
Inside vivid reddish orange to vivid yellowish orange (30B/C); outside strong reddish orange (31B), tepal-margins vivid yellowish orange; spots chocolate-brown, on whole of each tepal; pollen strong reddish orange (169A). Fls 140 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered, 130 × 30 mm, mid green. Stems 1-1.1 m, pale green with darker spots, and with 7-9 fls. July.

**'Grasa' VII(a/b-c)**

Parentage: seedling 93-80 × seedling RM 97-11  
 R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside strong reddish purple (72B), midveins flushed with vivid reddish orange (32A) in basal half, top yellowish white (155D), throat yellowish white (155D); outside with inner tepals light purple (75A), midribs light yellow-green (145D) at base, changing into yellowish white (155D), outer tepals strong reddish purple (72B), at tips yellowish white (155D) at edge, midribs light yellow-green (144D) at base, changing into pale yellow-green (155A), light yellow-green (145D) at top; spots absent; papillae deep red (60A); nectaries strong yellow-green (144B) with light greenish yellow (1C) edge; pollen strong orange (168B); stigma yellowish grey (194C). Fls 200 mm wide, slightly fragrant; tepals 114 × 45-65 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered 130 × 30 mm. Stems 0.85-1.1 m, brownish with a little green, and with c.4 fls. (Young fls are more reddish purple.)

**'Gratulant' VI(c/b,d)**

Parentage: 'Favoritka' × unknown  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)

Inside creamy, centre and throat with golden yellow rays; outside with yellow shining through and with pale yellow midribs; spots dusty, very numerous, cinnamon, on half of each tepal; pollen apricot-brown; stigma green. Fls 135 mm wide, bowl- and Turk's cap-shaped; tepals 110 × 33 mm, very recurved, margins roughly waved, pedicels 105 mm long, thick, slightly dotted with red-brown. Lvs 145 × 19 mm, dull dark green. Stems 1.2 m, moderately thick, brown-dotted. Mid July.

***grayi* S. Watson IX(c/a)**

Inside pale red, throat yellow or reddish yellow; outside deep red, somewhat darker at base; spots maroon-purple; nectaries green; anthers orange-brown; stigma green. Tepals up to 63 × 5 mm, tips not recurved. Lvs whorled, up to 75 × 20 mm. Stems up to 1.5 m, with 1-8 or more fls. E USA.

***grayi* 'Gulliver's Thimble' IX(b-c/a)**

Parentage: wild-collected selection from *grayi*  
 N: R.M. Adams (1981), I: B & D Lilies (1984), REG: R.M. Adams (1985)  
 Fls vivid reddish orange (42A). Tepals 50 × 10-12 mm, margins smooth, tips not recurved. Lvs whorled, mid green. Stems with c.6 fls. (Collected in the wild (Boone, North Carolina) by R.M. Adams in 1981.)

**'Grayswood' I(a/-)**

Parentage: assumed to be *L. × hollandicum × bulbiferum* var. *croceum*, but may also contain *dauricum*  
 N: Lord Swaythling  
 AM 1938  
 Fls rich orange-yellow, with a few carmine spots on inner

tepals. Tepals broad, recurved. Stems up to 1 m. (Published in *Gard. Chron.*, ser. 3, 104: 33 (1938). Found in a garden at Grayswood, Surrey, England.)

**'Grayswood' VII(-/d)**

Parentage: unnamed seedling × 'Star Gazer'  
 R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1989)  
 Inside suffused deep purplish pink (72D) on a greenish white (155C) ground, tepal-edges greenish white (155C), the midveins suffused with strong red (53D) in the basal part, throat greenish white (155C); outside suffused with strong reddish purple (70B) on a greenish white (155C) ground, tepal-edges slightly greenish white (155C), tips moderate olive-green (146A), midveins suffused with strong purplish red (63A) and tinged moderate yellow-green (146C) at base; spots dark red (187B), on two-thirds of each tepal; papillae (coloured as tepals) in the throat; pollen strong orange (169C); stigma dark greyish yellow (199D), stronger coloured on edge. Fls 240 mm wide; tepals 135 × 60 mm, the outer with ruffled margins, tips strongly recurved. Lvs scattered, 110 × 43 mm, mid green. Stems 0.45 m, pale green with many darker markings, and with c.3 fls. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Graz' I(a/-)**

Parentage: 'Grado' × 'Sunrise'  
 R: V. Strasser (1976), G: V. Strasser (1978), N: V. Strasser (1984), I: V. Strasser (1985), REG: V. Strasser (1986)  
 Inside white, tepal-tips pink, throat green; outside white; spots purple, on a third of each tepal; nectaries green. Tepals 70 × 25 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 15 mm, dark green. Stems 0.8 m, brownish green, with 7-10 fls. July.

**'Grazia' I(a/-)**

Parentage: 'Sonnewende' × 'Robin Hood'  
 R: V. Strasser (1975), G: V. Strasser (1977), N: V. Strasser (1983), I: V. Strasser (1983), REG: V. Strasser (1986)  
 Fls tomato-red; spots purple, on half of each tepal; nectaries white; pollen red-brown. Tepal-margins ruffled, tips slightly reflexed. Lvs scattered, 100 × 12 mm, dark green. Stems 1 m, almost black, with c.20 fls. June to July.

**'Graziella' I(a/-)**

Parentage: 'Pirate' × 'Sporades'  
 R: V. Strasser (1977), G: V. Strasser (1979), N: V. Strasser (1983), I: V. Strasser (1986), REG: V. Strasser (1986)  
 Fls red, apart from red-orange throat. Fls 110 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, 90 × 9 mm wide, dark green. Stems 0.9 m, brownish green, with c.18 fls. June to July.

**'Grease' I(a-b/-)**

Parentage unknown  
 R: Hoffgaarde B.V., N: Hoffgaarde B.V. (1993), REG: Hoffgaarde B.V. (2002)

Inside pale purplish pink (62D), almost white at base, midveins moderate purplish red (184C) changing to very light pink; outside light purplish pink (62C); spots and papillae present; nectaries green; pollen orange-brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems green with dark stripes and spots. Midseason to late.

#### 'Great Day' VI(-/c)

Parentage: 'Madame Edouard Debras' × seedling 50-8  
R: C. Yerex (c. 1956), N: C. Yerex  
Centre vivid yellow (9A), blending to light greenish yellow (6D) at tips; light brown papillae at centre. Tepals broad, recurved.

#### 'Great Dick' I(c/d)

Parentage: (*lancifolium* × unknown) × 'Tetra Nutmegger'  
R: D. Thomas (1985), G: J. Bodalski (1987), N: J. Bodalski (1994), I: J. Bodalski (1994), REG: J. Bodalski (1994)  
Inside vivid reddish orange (30B); outside strong orange (30D); spots large, dark brown, on basal two-thirds of each tepal; nectaries orange; pollen greyish reddish brown (200B). Tepals 100 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 180 × 25 mm, mid green. Stems 2.25 m, brown-green, infl. 70 cm long with c.64 fls; bulbils present. Late July.

#### 'Greathart' VI(b/b)

Parentage: *henryi* × ('Galahad' × (*L.* × *aurelianense* × unknown))  
R: B.L. Palmer, N: B.L. Palmer, I: B.L. Palmer (1959)  
Tepals with flame-orange centre, shading to deep cream tips; nectaries green; stamens orange-brown. Tepal-tips recurved. Stems 1.9 m, with up to 30 fls.  
(Published in *B.L. Palmer Lily Cat.*, 1959.)

#### Great Smoky Group VI(c/-)

Parentage: *leucanthum* var. *centifolium* (tetraploid) × (*regale* (tetraploid) × pink-flowered Perfection Group (tetraploid))  
R: R.J. Griesbach (1962 to 1991), G: R.J. Griesbach, N: E.A. McRae (1994), I: Van der Salm Bulb Farm, Inc. (1995), REG: Van der Salm Bulb Farm, Inc. (1995)  
Inside white to cream; tepal-tips and margins suffused with pink to coral, throat lime-green; outside pink to soft purple; spots absent; nectaries lime-green; pollen soft yellow. Fls very large; tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1-1.5 m, dark green. July. Tetraploids.

#### 'Grecian Sunset' I(a/-)

Parentage: brushmarked seedling × brushmarked seedling  
R: R.M. Withers (1980), G: R.M. Withers (1982), N: R.M. Withers (1987), I: R.M. Withers (1986), REG: R.M. Withers (1987)  
Inside vivid orange-yellow (23A), throat light orange-yellow (23C); each tepal with a dark red (59A) brushmark in centre of basal part; spots few, purple, either side of the brushmark towards centre of fl.; nectaries greenish; pollen light brown. Fls c.160 mm wide; tepals 80 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 10

mm, mid green. Stems 1 m, light green, with c.6 fls. Dec. (Australia).

#### Green Bush Group I(-/)

Parentage: 'Brenda Watts' × *L.* × *maculatum* 'Helen Carroll'  
R: W.C. Horsford, N: W.C. Horsford  
Fls in oranges, yellows and golds. Stems 1 m. July.  
(Published in *Horsford Cat.*, 1942.)

#### 'Greenbush' IX(b-c/a)

See *sargentiae* 'Greenbush'.

#### 'Green Comet' I(a/-)

Parentage unknown  
R: unknown, G: Hartle-Gilman Gardens (1989), N: Hartle-Gilman Gardens (1995), I: Hartle-Gilman Gardens (1995), REG: Hartle-Gilman Gardens (1995)  
Inside light yellow-green (150D), throat darker; outside green and yellow; spots small, on centre half of fl.; nectaries frosted; filaments and style 48 mm long; pollen vivid orange-yellow (21A). Fls 177 mm wide; tepals 90 × 40 mm, slightly overlapping, margins smooth, tips slightly recurved. Lvs scattered, 160 × 18 mm, dark green. Stems 1.1 m, dark green, with c.14 fls. Late.

#### Green Corona Group VI(-/c)

Parentage unknown  
R: C. Yerex, G: C. Yerex, REG: (1985)  
Fls in shades of light apple-green and greenish white. Tepals recurved. Stems 1.5-1.8 m. July to Aug.  
(Published in *Rex Bulb Farms Cat.*, 1966/67.)

#### 'Green Dawn' VI(b/a)

Parentage: selection from Green Magic Group  
S: Gebr. N. & B. Laan & Zn (c. 1975), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1977)  
Fls ivory-white, centre yellow, fading into yellow veins.  
(Published in *Lilies and other Liliaceae*, 1977: 78.)

#### Green Dolphin Group VI(-/a)

Parentage unknown  
Inside almost pure white, throat green or whole of inside flushed with green (fading to white); outside with green midribs.  
(Raised in New Zealand. Published in *ILR* (1982) as Green Dolphin grex.)

#### 'Green Dragon' VI(-/a)

Parentage: selection from Olympic Group  
S: J. de Graaff (c. 1949 to 1955), N: J. de Graaff  
Inside white; outside chartreuse. Pollen deep orange-red. Stems 1.5-2.2 m. July.  
(Published in *Oregon Bulb Farms Cat.*, 1949. Withdrawn and reintroduced 1955.)

#### Green Dragon Group VI(-/a)

Parentage: 'Green Dragon' × yellow-flowered trumpet lily  
R: F.M. Abbey, N: F.M. Abbey, I: F.M. Abbey, REG: (1985)  
Fls white to yellow. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv. Published in *Gardenside Gossip* 26: 3 (1961) as Green Dragon Seedlings and included in *ILR Fourth Supplement* as such.)

**Green Dragon Seedlings VI(-/a)**

See Green Dragon Group.

**'Green Eggs and Ham' I(a/-)**

Parentage: 'Honeybunch' × unknown

R: R. Erskine (c. 1980), G: R. Erskine (pre 1985), N: R. Erskine (1990), I: R. Erskine (1992), REG: R. Erskine (1998)

Inside red-pink, throat purple; outside pink; spots few, dark; nectaries greenish yellow; pollen orange-brown. Fls 100 mm wide; tepals 55 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 8 mm, mid green. Stems 0.9 m, green, with 25-30 fls.

**'Green Elf' I(b/-)**

Parentage: 'Intrepid' × (gold-flowered lily with a 'green heart' × unknown)

R: P.M. Johnson (1975), G: P.M. Johnson (1977), N: P.M. Johnson (1982), I: Borbeleta Gardens (1983), REG: J. Wadekamper (1983)

Inside brilliant greenish yellow (6A), throat green; outside tan-green; spots absent; nectaries frosty green-white; pollen dark brown. Tepals 80 × 35 mm, margins smooth or slightly ruffled, tips not recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 0.9 m, green, with 17-19 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1983.)

**'Green Emerald' VI(b/a)**

Parentage: probably Aurelian Group × *leucanthum*

R: J. de Graaff (c. 1959), N: J. de Graaff

Fls white and green. Stems 1.2 m. July.

(Published in *Greenock Farms Cat.*, 1958.)

**'Green Emerald' VII(-/b)**

See *L. × parkmanii* 'Green Emerald'.

**'Green Eye' VI(-/a)**

See *L. × aurelianense* 'Green Eye'.

**'Greenfinch' VI(b/a)**

Parentage: (*regale* 'Royal Gold' × unknown) × Golden Splendor Group

R: B. Mičulka (pre 1988), N: B. Mičulka, REG: B. Mičulka (1988)

Inside pale apricot-yellow, throat deeper, tepal-tips fading; outside pale apricot, midribs green; spots (dashes) brown; nectaries green; pollen ochre; stigma green. Fls 110 × 115 mm; tepals 135 × 42 mm, tips slightly recurved; pedicels brown-spotted. Lvs scattered, 170 × 7 mm, dull dark green. Stems 1.05 m, spotted pale brown. Mid July.

**'Green Flush' VI(-/a)**

Parentage: *L. × imperiale* 'George C. Creelman' × Crow's Group

R: W.A. Constable Ltd, N: W.A. Constable Ltd, I: W.A.

Constable Ltd (1951)

Fls flushed with green.

(Published in *LYB NALS* 4: 37 (1951).)

**'Green Giant' VI(-/a)**

Parentage: *leucanthum* origin

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls white flushed with green.

**'Green Glow' I(b/-)**

Parentage: 'Edith Cecilia' × unknown

R: E. Robinson (1965), G: E. Robinson (1968), N: E. Robinson (1978), REG: E. Robinson (1980)

Inside pale green, tepal-tips pink; outside greenish; dark spots in centre; pollen brown. Tepal-margins ruffled, tips slightly recurved. Lvs scattered, mid green. Stems 0.6-1 m, green, with c.10 fls.

**'Green Goddess' VI(b/b)**

Parentage: seedling 49-18 × Aurelian seedling

R: C. Yerex (c. 1954), N: C. Yerex

Fls white with citron-green tones. Stems 1.4 m. July.

Syn.: 'Citrolirion'.

(Published in *Kline Cat.*, 1954. Originally known as 'Citrolirion'.)

**'Green Goddess' I(c/d)**

Parentage unknown, but involving *lankongense*

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies

Inside chartreuse-yellow; fine flecks and spots on most of each tepal; anthers dark; stigma green. Fls scented as in *lankongense*; tepal-margins smooth, tips distinctly recurved. Stems 1-1.2m. Mid to late June.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *The Lily Garden Cat.*, 1996/97: 10.)

**'Green Gold' VI(-/a)**

Parentage: selection from Sulphur Group

S: E.F. Palmer, N: E.F. Palmer

Fls greenish yellow. Stems 1.2-1.5 m.

(Published in *R.B. Ware Cat.*, 1953.)

**Green-gold Trumpets Group VI(-/a)**

Parentage: selections from Aurelian Group

S: C. Yerex, N: C. Yerex, I: C.A. Best

Fls in greenish yellow tones. July.

(Published in *Greenock Farms Cat.*, 1959. No further details. Included in *ILR* (1982) as Green-Gold Trumpets grex.)

**'Green Highlight' I(a/-)**

Parentage: 'White Prince' × 'Dreamaway'

R: G.C. Keast (1986), G: G.C. Keast (1988), N: G.C. Keast (1990), I: G.C. Keast, REG: G.C. Keast (1991)

Inside strong purplish pink (55B) with a brilliant yellow-green (149C) centre; outside strong purplish pink; spots maroon, on the yellow-green areas only. Fls 150 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved, slightly hairy outside. Lvs scattered, 100 × 20

mm, dark green. Stems 1 m, black, slightly hairy, with c.6 fls. Mid Dec. to mid Jan. (New Zealand).

**‘Green Hope’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1986), G: J. Vasarietis (1989), N:  
J. Vasarietis (1992), I: J. Vasarietis (1992), REG: J.  
Vasarietis (1992)

Inside and outside brilliant greenish yellow (6A), throat  
vivid yellow-green (154A); spots 5-10 tiny, purple, in the  
throat; nectaries greenish white; pollen orange. Fls 130  
mm wide; tepals 75 × 43 mm, margins smooth, tips not  
recurved. Lvs scattered, 110 × 13 mm, mid green. Stems  
0.9 m, green, with up to 15 fls. Mid June.

**‘Green Ice’ Div. ?**

Parentage unknown  
(Grown in New Zealand. No further details.)

**Green Knight Flares Group VI(-/a,b)**

Parentage: parentage very mixed  
R: C. Yerex, N: C. Yerex  
Fls greenish yellow.  
(Published in *Klime Cat.*, 1958. Included in *ILR* (1982) as  
Green Knight Flares grex.)

**‘Greenland’ VI(-/a)**

Parentage: *leucanthum* var. *centifolium* × (*henryi* ×  
unknown)  
R: F.L. Skinner (c. 1964), N: F.L. Skinner  
Fls pure white with green lines in throat. Lvs *henryi* type.  
Stems up to 1 m. July.  
(Published in *LYB* 28: 133 (1965).)

**‘Greenlight’ I(a/-)**

Parentage unknown  
R: unknown  
Fls lemon-yellow, tepals flushed with a deeper yellow near  
base; spots brown, on basal third of each tepal; pollen  
brown. Tepal-margins smooth, tips recurved. Stems 0.6-  
0.8 m. June to July.  
(Listed by De Jager (UK) in 1987.)

**‘Greenlight’ VI(-/a)**

Parentage unknown  
R: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan &  
Zn  
(An Aurelian lily. Production ceased before 1988.)

**‘Green Lili Alp’ V(-/-)**

Parentage: sport from Formolongi Group  
S: Y. Miyahara (1983), N: Y. Miyahara  
Fls strong yellow-green (144A), tepal-margins ageing to  
yellow-green; stamens and pistil united and malformed;  
filaments very short; style almost absent. Fls 60-70 mm  
wide, sometimes leafy, not scented. Stems 0.8 m. Late.

**Green Magic Group VI(-/a)**

Parentage: *leucanthum* origin  
R: J. de Graaff (c. 1956), N: J. de Graaff, I: J. de Graaff  
(1962)

Fls white, centre green; spots absent; pollen dark red. Fls  
170 mm wide. Stems 1-1.9 m. July.  
Syn.: Bakker’s Green Favourite Group.  
(Published in *ILR* (1969) as Green Magic grex.)

**Green Mountain Group VI(-/a)**

Parentage: contains *L. × imperiale* ‘George C. Creelman’,  
*L. × imperiale* Shelburne Group, Crow’s Group &  
*leucanthum* var. *centifolium*  
R: J. de Graaff, N: J. de Graaff, I: A. MacNeil  
Inside white or cream, with green, yellow or orange  
throat; outside mostly green-bronze; anthers yellow or  
brown. Stems 1.1-1.9 m. July.  
(Published in *Sandyloam Cat.*, 1942/43. *Sandyloam Cat.*,  
1946 says the raiser was Dr L.H. Abel.)

**Greenock Glory Group VI(-/a)**

Parentage: (‘T.A. Havemeyer’ × *regale*) × Aurelian Group  
R: P.M. Byam, N: P.M. Byam, I: C.A. Best  
Fls pale cream to golden yellow.  
(Published in *Greenock Farms Cat.*, 1958/59. Included in  
*ILR* (1982) as Greenock Glory grex.)

**‘Greenpeace’ I(a/-)**

Parentage: Asiatic seedling × (‘Connecticut King’ ×  
unknown)  
R: Bischoff Tulleken Leliecultuur B.V. (1974), G:  
Bischoff Tulleken Leliecultuur B.V. (1977), N: Bischoff  
Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken  
Leliecultuur B.V. (1983), REG: Bischoff Tulleken  
Leliecultuur B.V. (1983)  
Inside brilliant greenish yellow (6B), tepal-tips yellow-  
green, throat greenish; outside sulphur-yellow; fine brown  
spots in the throat; nectaries yellow-green; pollen brown-  
orange. Fls 125 mm wide; tepals 75 × 25 mm, margins  
smooth, tips slightly recurved. Lvs scattered, 80 × 10  
mm, dark green. Stems 0.8 m, red-brown, with c.4 fls.  
Late June.

**‘Green Reflections’ I(b-c/c)**

Parentage: (Panamint Group × unspotted ‘Connecticut’  
seedling) × ‘Lime Ice’  
R: V.E. Bowen (1979), G: V.E. Bowen (1981), N: V.E.  
Bowen (1985), I: V.E. Bowen (1985), REG: V.E. Bowen  
(1985)  
Inside light yellow (10C), tepal-margins suffused with  
light orange-yellow (22C), tips light yellow (10C), throat  
green; outside bronze at base, otherwise strong green  
which influences the colour inside; spots absent; nectaries  
frosted green; pollen medium brown. Tepals 85 × 32 mm,  
margins smooth, tips slightly recurved. Lvs scattered, 150  
× 17 mm, dark green. Stems 1.25 m, dark green, with 10-  
12 fls, and bulbils late in the season. Mid to late June.

**Green Royal Group VI(-/a)**

Syn. of Green Royal Trumpets Group.

**Green Royal Coronas Group VI(-/c)**

Parentage: Aurelian hybrids  
R: R.W. Bemis, N: R.W. Bemis, I: R.W. Bemis, REG:  
ICRA (1985)

Fls in delicate shades of pure lime to icy green-white. Stems 1.4-1.8 m. (Published in *'Deep-Freeze' Lilies Cat.*, 1966/67: 4; *Blackthorne Gardens Cat.*, 1966/67. Included in *ILR* (1982) as Green Royal Coronas grex and mentioned as registered in the *Fourth Supplement*.)

### **Green Royal Trumpets Group VI(-/a)**

Parentage: Aurelian hybrids  
R: R.W. Bemis, N: R.W. Bemis, REG: ICRA (1984)  
Fls icy green to green-gold; spots absent. Tepal-margins smooth, tips strongly recurved. Lvs scattered. Stems 1.2-1.6 m. July.

Syn.: Green Royal Group.  
(Published in *'Deep-Freeze' Lilies Cat.*, 1978/79: 4. Included in *ILR* (1982) as Green Royal grex, and mentioned as registered in the *Third Supplement* as Green Royal Trumpets grex.)

### **'Greensleeves' VI(-/c)**

Parentage: (Barryi Group × unknown) × ? *L. × aurelianense* 'Alaska'  
R: F.M. Abbey (pre 1966), N: F.M. Abbey, I: F.M. Abbey, REG: ICRA (1984)  
Inside lemon-yellow, throat and tepal-tips yellow; outside yellow with prominent green midribs; spots few, gold; nectaries dark green. Tepals broad, margins ruffled. Lvs scattered. Stems 1.5-1.9 m. Aug.  
(Published in *Gardenside Gossip* 31(2): 2 (1966).)

### **'Greensprite' VI(c/-)**

Parentage unknown  
R: C. Yerex (c. 1952), N: C. Yerex  
Inside pure white, centre light green; outside sap-green. Stems 1.5 m. July.  
(Published in *Kline Cat.*, 1962.)

### **'Green Strike' VI(c/a)**

Parentage: ('Tundra' × 'Tundra') × 'Poor Knights'  
R: P.L. Greenfield (1985), G: P.L. Greenfield (1987), N: P.L. Greenfield (1987), REG: P.L. Greenfield (1989)  
Inside lime-green with solid streaks of green in the tepals, which hold their colour well, tepal-tips lemon/lime green, throat deep green; outside lime-green; spots absent; nectaries green; pollen mid brown. Fls 180 mm wide; tepals 130 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 18 mm, mid green. Stems 1.2 m, mid green with purple markings, and 3 fls (second year of flowering). Dec. (New Zealand).

### **'Green Treasure' IX(b/c)**

See *auratum* 'Green Treasure'.

### **'Green Wax' I(-/)**

Parentage unknown  
R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens  
Inside yellow-green with a few crimson spots; pollen absent. Stems and buds glossy.

### **'Green Year' I(a/b)**

Parentage: 'Gold Medal' × 'Brushmarks'  
R: E.A. McRae (1985), G: J. Bodalski (1987), N: J. Bodalski (1994), I: J. Bodalski (1994), REG: J. Bodalski (1994)

Inside vivid orange (28A); outside strong orange (25A); spots dark brown, on basal two-thirds of each tepal; nectaries orange; pollen vivid orange (28A). Tepals 80 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 1 m, green-brown, with c.16 fls. Early July.

### **'Grenadier' I(a-b/-)**

Parentage: *L. × scottiae* × unknown  
R: G.M. Chandler (c. 1945), N: G.M. Chandler  
Fls deep orange-red. Stems up to 0.6 m.  
(Published in *LYB* 10: 60 (1946).)

### **'Grenadier' I(b/-)**

Parentage: *leichtlinii* var. *maximowiczii* × *wilsonii*  
R: E.L. Kline (c. 1945), N: E.L. Kline  
Fls Chinese coral, dotted garnet-brown. Fls 200 mm wide. Stems 1-1.2 m. July.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *LYB NALS* 1: 105 (1947/48).)

### **Grenadier Group I(b/-)**

Parentage: *leichtlinii* var. *maximowiczii* × *wilsonii*  
Included in *ILR* (1982) as Grenadier Hybrids. This entry was based on a listing (without description) in *R.B. Ware Cat.* 1950. In *Greenock Farms Cat.* 1956, Grenadier Hybrids were listed and described, but the description was identical to that of the cv. 'Grenadier' raised by Kline. It is likely that the Group name is erroneous, and in any case is unacceptable (ICNCP, 2004: Art. 27.1), having already been used for a cv. raised by Chandler.

### **'Grenadine' VIII(b-c/b-c)**

Parentage: (Atomic Group × unknown) × (*auratum* × *henryi*)  
R: R.H. Bazett (1990), G: R.H. Bazett (1993), N: R.H. Bazett (2001), I: B & D Lilies, REG: R.H. Bazett (2001)  
Inside strong red to deep pink (51A/B), darker towards midveins, throat strong red (46A); outside strong purplish pink (55B) shading lighter toward outer tepal-margins, midribs suffused with mid green; papillae numerous, small, dark red, on basal three-quarters of each tepal; nectaries prominent, dark green, narrowly edged yellow; pollen vivid reddish orange (34B); stigma pale green. Fls 200 mm wide, slightly scented; tepals 110 × 50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 190 × 55 mm. Stems 1.83 m, grey-green, with c.16 fls in a racemose infl., including secondaries on lower pedicels. Late July.  
(An Orienpet (OT) lily. Nomenclatural standard: colour print provided by registrant (WSY 0030920).)

### **'Grenoble' VII(a/b)**

Parentage: seedling 92-55 × seedling 93-47  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den

Haan Beheer B.V. (2001), REG: Vletter & Den Haan  
Beheer B.V. (2003)

Inside moderate purplish pink (65A), each tepal light purple (75B) towards margin and with a small yellowish white (155D) spot at tip, throat yellowish white (155D); outside moderate purplish pink (66D), midribs brilliant yellow-green (142B) at base changing into yellowish white (155D); spots strong purplish pink (60B); papillae yellowish white (155D); nectaries light yellow-green (144D); pollen strong orange (168A); stigma deep purple (79C). Fls 240 mm wide, slightly fragrant; tepals 143 × 72 mm, margins smooth, tips slightly recurved. Lvs 180 × 47 mm, dark green. Stems 1.2 m, green with darker markings, with c.5 fls.

**‘Greta Garbo’ I(c/-)**

Parentage: ‘Redstart’ × ‘Enchantment’

R: I.D. Parsons (c. 1966), N: I.D. Parsons, REG: I.D. Parsons (1971)

Fls orange-yellow, spotted black. Stems tall.

(Published in *Lilies and other Liliaceae*, 1973: 112.)

**‘Gretine’ VII(a/b)**

Parentage: unnamed seedling × Imperial Pink Group

R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1983), N: Gebr. Mak B.V. (1984), I: Oriental Express (1987), REG: Oriental Express (1989)

Inside moderate purplish pink (70D), midveins flushed with deep to strong red (53A/B); outside greenish white (155C) and very pale purple (69C); spots dark red (187C); pollen dark reddish orange (172B). Fls 270 mm wide; tepals 140 × 60 mm, margins ruffled, tips strongly recurved. Lvs 110 × 40 mm, mid green. Stems 0.6 m, green with darker markings, and with c.4-6 fls.

**‘Grietinja’ I(a-b/-)**

Parentage unknown

R: V.P. Orehovs (pre 1981), N: V.P. Orehovs

Fls bronze-yellow, very large.

(Included in *ILR Third Supplement* as ‘Grietinja’ which is a misspelling.)

**‘Grietinja’ I(a-b/-)**

Misspelling of ‘Grietinja’.

**‘Griffith’ VI(-/a)**

Parentage: derived from Butterfield Group

R: F.C. Stern (pre 1960), N: F.C. Stern, REG: ICRA (1997)

Fls *regale*-like white trumpets, outside flushed with soft green and yellow. Stems up to 2 m, with 7-8 fls, larger than in *regale*.

**‘Grouse’ IV(c/d)**

Parentage: complex *kelloggii* × *pardalinum* hybrid

R: J. de Graaff (c. 1965), N: J. de Graaff

Fls deep red, with orange-yellow centre.

**‘Grün 80’ I(a/-)**

Parentage unknown

R: J. Klein (pre 1980), N: J. Klein, REG: J. Klein (1988)

Fls light yellow; spots brown; pollen brown. Pedicels long, horizontal. Lvs dark green. Stems 1 m, dark green, with up to 20 fls. Late June.

(Published in German Lily Group sales list, 1982.)

**‘Grüngelber Riese’ VI(b/b)**

Parentage: (‘Heidelberg’ × ‘Lednice’) × white-flowered seedling of Sunburst Group

R: V. & S. Strasser (1988), G: V. & S. Strasser (1992), N: V. & S. Strasser (1995), REG: V. & S. Strasser (1998)

Inside greenish yellow, tepal-tips white, throat green; outside greenish white, midribs green; spots absent; nectaries green; pollen pale brown. Tepals 135 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 18 mm, mid green. Stems 1.8 m, rather dark green, with up to 50 fls. Late July.

**‘Grüngelber Turm’ Div. ?**

Given as a parent of ‘Innsbruck’. No further details.

**Grüngelber Turm Group VI(-/-)**

Parentage unknown

R: V. Strasser (pre 1982), N: V. Strasser, REG: ICRA (1996)

Fls white, with greenish rose-pink ridges. Stems 1.5 m.

**‘Grüngelb Tiger’ I(c/-)**

Parentage unknown

R: J. Klein (pre 1986), N: J. Klein, REG: J. Klein (1988)

Fls bright greenish yellow, with a light green centre and fine brown spots; nectaries light green; pollen dark brown. Stems 1 m, dark, slightly hairy. Late July. (Published in German Lily Group sales list, 1986.)

**‘Grun-weiss’ I(a/c)**

Parentage unknown

R: Gebr. N. & B. Laan & Zn (pre 1992)

Inside white with a slight pale lilac flush in centre; spots dark purple; pollen brown. Stems 0.9 m. Late July. (Published in German Lily Group sales list, 1992.)

**‘Guardsman’ I(a/-)**

Parentage: ‘Pirate’ × ‘Connecticut King’

R: W.S. Summers, N: W.S. Summers (1980), I: Borbeleta Gardens (1981), REG: Borbeleta Gardens (1981)

Inside vivid reddish orange (44B) to strong red (46A), throat slightly paler than strong red (46A); outside strong red (46A) with lighter overlay; spots small, raised, purple, on basal third of each tepal; nectaries frosty white; pollen orange brown. Tepals 85 × 22 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 7 mm, mid green. Stems 0.9 m, tan-green, with c.18 fls. July. (Published in *Borbeleta Gardens Cat.*, 1981.)

**‘Gubbio’ I(a/-)**

Parentage: ‘Blizzard’ × seedling RS 819

R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside strong to light purplish pink (63C/D), throat strong purplish red (63B); outside light purplish pink

(63D), tepal-margins strong to light purplish pink (63B/D), outer tepals tinged with pale greenish yellow (1D); spots absent; pollen strong orange (26A/B). Fls 155 mm wide; tepals 80 × 40 mm, margins ruffled, tips not recurved. Lvs scattered, 140 × 14 mm, mid green. Stems 0.9 m, green, with c.7 fls. May.

**'Guernsey Gold' VI(-/c)**

Parentage: contains 'T.A. Havemeyer' & *L. × aurelianense*  
R: LeV. Freimann, N: LeV. Freimann  
Fls clear yellow. Tepals semi-reflexed. July.  
(Published in *LYB NALS* 6: 85 (1953).)

**'Gugerna' I(b/b-c)**

Syn. of 'King Pete'.

**'Guinea Gold' II(-/c)**

See *L. × dalhansonii* 'Guinea Gold'.

**'Guldene Flamme' I(a-b/b)**

Parentage: 'Amurgold' × 'Jetfire'  
R: G. Steinbrück (1990), G: G. Steinbrück (1993), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)  
Inside strong red (46A), paling with age, each tepal with a large, vivid orange-yellow (21A) flare at base, throat and outside strong red (46A); spots absent; nectaries strong pink (49A), white-frosted; pollen deep red (185A); stigma dark red (187A). Fls 135 mm wide; tepals 70 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 20 mm. Stems 1 m, dark green to black, with 8-10 fls. Late June.

**'Gulden Vlies' I(a/-)**

Syn. of *L. × hollandicum* 'Golden Fleece'.

**'Gulliver's Thimble' IX(b-c/a)**

See *grayi* 'Gulliver's Thimble'.

**Gum Drop Group I(c/d)**

Parentage: 'Edith Cecilia' × various Asiatic hybrids  
R: L. Lutz (c. 1963), N: L. Lutz (1967)  
Fls lilacs to reds through yellows and creams, also bicolors of these shades; spots present. June.  
(Included in *ILR* (1969) as Gum Drop Hybrids grex.)

**'Gundega' VI(-/a)**

Parentage: *L. × aurelianense* × unknown  
R: T. Gertsons, G: T. Gertsons, N: T. Gertsons (1985), I: T. Gertsons, REG: T. Gertsons (1987)  
Inside cream, tinted with lilac, throat yellow; outside cream, midribs lilac; pollen dark yellow. Tepals 160 × 60 mm, margins smooth. Lvs scattered, 100 × 17 mm, mid green. Stems 1 m. Early Aug.

**'Gunta' VI(-/a)**

Parentage unknown  
R: V.P. Orehovs (1962)  
Inside cream, throat pale yellow; outside lilac; pollen orange; stigma green. Fls 120 mm wide, fragrant. Stems 1 m. July.  
(Published in M.V. Baranova, *Lilii*, 356 (1990).)

**'Gurmán' VI(b-c/b,d)**

Parentage: ('Andrea' × 'Sommertraum') × ('Henrietina' × 'Mimosa Star')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)  
Inside pale orange-apricot, tepal-tips paler; outside pale beige, midribs green; spots absent; nectaries olive-green; pollen pale brown; stigma violet-grey. Fls 135 mm wide, bowl- and Turk's cap-shaped; tepals 105 × 42 mm, moderately recurved, rigid; pedicels 75 mm long, dark brown-dotted. Lvs 110 × 9 mm, dull dark green. Stems 1.1 m, rigid, slightly black-dotted. Late July.

**Gurnet Light Group I(b/-)**

Parentage unknown  
R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens  
Inside golden yellow; pollen rusty red. Stems 0.8 m. May to July.

**'Guvernante' I(-/b)**

Parentage unknown  
R: J. Vasarietis (pre 1999), N: J. Vasarietis  
Inside pink-purple; spots dark, conspicuous, on basal half of each tepal; nectaries whitish; pollen orange; stigma cream. Tepal-margins slightly ruffled with a tendency to curve upwards, tips not or scarcely recurved.

**'Guyenne' VII(a/b)**

Parentage: seedling 93-50 × seedling 92-35  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside pale purplish pink (65D), midveins moderate purplish pink (65A) at top, throat yellowish white (155D); outside very pale purple (69A), midribs light yellow-green (142D) changing towards top to strong purplish pink (63B) with greenish tinge; spots and papillae yellowish white (155D); nectaries strong yellow-green (144B); pollen brownish orange (171B); stigma light grey (188D). Fls 220 mm wide; tepals 123 × 66 mm, margins smooth, tips recurved. Lvs 152 × 48 mm, dark green. Stems 1 m, with c.5 fls.

**'G.V. Shaw' VI(-/c)**

Parentage: 'T.A. Havemeyer' × unknown  
R: Barry (c. 1941), N: Barry  
Fls Egyptian buff, shading to old ivory.

**'Gwendolyn Anley' VI(b/b)**

Parentage: Aurelian seedling × Aurelian seedling  
R: G.W. Darby (c. 1960), N: G.W. Darby  
AM 1961, PC 1961  
Fls pearly green, centre pale orange. Tepal-tips slightly reflexed. Lvs scattered.  
(Published in *LYB* 25: 137, 153, fig 15 (1962).)

**'Gwen Mills' I(c/-)**

Parentage: 'Talisman' × *lancifolium* var. *flaviflorum*  
R: J. Aldred (pre 1962), N: J. Aldred, REG: J. Aldred (1971)

Fls strong orange (25A); tepals slightly spotted in basal third. Bulbils occasionally present.  
(Published in *Lilies and other Liliaceae*, 1973: 112.)

**'Gwyneth Evans' I(c/d)**

Parentage: yellow-flowered, up-facing, speckled lily × unknown  
R: I.R. Evans (1991), G: I.R. Evans (1993), N: I.R. Evans (2004), REG: I.R. Evans (2004)  
Inside and outside light orange-yellow (19A); spots mid brown, moderately heavy, uniformly distributed; nectaries yellow-orange; pollen bright orange; stigma pale yellow. Fls 120-140 mm wide; tepals 60-70 × 30-40 mm, margins smooth, tips strongly recurved. Leaves scattered, 120-140 × 20-30 mm, dark green. Stems 1-2 m, dark green, with 10-50 fls.  
(Nomenclatural standard: colour transparency provided by registrant (WSY 0096420).)

**'Gypsy' I(b/-)**

Parentage: ('Lemon Queen' (Div. I) × 'Mega') × ('Lemon Queen' (Div. I) × 'Mega') × 'Edith Cecilia' F<sub>2</sub>  
R: J. de Graaff (pre 1969), N: J. de Graaff, REG: Oregon Bulb Farms, Inc. (1969)  
Fls moderate purplish pink (65A) and pale yellow-green (155A); spots pinkish red on basal half of each tepal; pollen reddish. June.  
(Published in *LYB* 33: 255 (1970).)

**'Habas' VIII(a/-)**

Parentage: unknown × seedling AL-3-88  
R: World Flower B.V. (1990), G: World Flower B.V. (1992), N: World Flower B.V. (2000), I: World Flower B.V. (2000), REG: World Flower B.V. (2000)  
Inside deep/moderate red (185A/B); outside deep red (185A); spots absent; papillae present; nectaries red-purple; pollen reddish brown; stigma orange. Fls 260 mm wide; tepals 140 × 65 mm, margins ruffled, tips recurved. Lvs scattered, 220 × 25 mm. Stems 1.1 m, green, with c.5 fls. Very early to early.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Habbekrats' I(a/b)**

Parentage: 'Umbria' × seedling W 91-12  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)  
Inside yellowish white (155B), with some strong yellow green (145A) along nectaries in the throat; outside yellowish white (155B) with strong yellow-green (144C) at base, midribs strong yellow-green (145A) tipped strong yellow-green (143A); spots few, dark red (187A); papillae few, yellowish white (155B), by nectaries; nectaries strong yellow-green (144A) and yellowish white (155B); pollen moderate orange (167A); stigma pale yellow-green (155A) with a little moderate reddish brown (166B). Fls 165 mm wide; tepals 85 × 30-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 15 mm, dark green. Stems 0.8 m, green, with c.2 fls.  
Syn.: 'Macon'.

(Registered and included in *ILR Nineteenth Supplement* as 'Macon', but in 2000 Dutch PBR (LEL 1610) were granted under the epithet 'Habbekrats', so this latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Hadeco-matador' I(a/-)**

Parentage: selection from *L. × hollandicum* hybrids × unknown  
R: Hadeco (Pty) Ltd (1970), G: Hadeco (Pty) Ltd (1972), N: Hadeco (Pty) Ltd (1975), I: Hadeco (Pty) Ltd (1980), REG: Hadeco (Pty) Ltd (1983)  
Strong reddish orange (42B), tepal-tips vivid reddish orange (44C), throat strong reddish orange (42B); outside strong reddish orange (40C); spots small, purple, from tip down three-quarters of tepal; nectaries moderate reddish orange (41C); pollen vivid red (45B). Fls 140 mm wide; tepals 95 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 25 mm, dark green. Stems 1.5-1.7 m, mid green, with 7-10 fls. Early summer.

**'Hadeco-safari' I(a/-)**

Parentage: selection from *L. × hollandicum* hybrids × unknown  
R: Hadeco (Pty) Ltd (1970), G: Hadeco (Pty) Ltd (1972), N: Hadeco (Pty) Ltd (1975), I: Hadeco (Pty) Ltd & Sande B.V. (1980)  
Inside vivid orange (28B), throat vivid orange (28A); outside strong orange (25A); spots purple from throat to middle of tepals; nectaries vivid orange (28A); pollen strong reddish orange (169A). Fls 140 mm wide; tepals 85 × 25 mm. Lvs scattered, 150 × 15 mm, dark green. Stems 0.9-1.1 m, mid green, with 10-16 fls. June.  
Trade designation: SAFARI (in Europe).

**'Hadrián' I(b/c-d)**

Parentage unknown  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)  
Inside golden yellow, tepal-tips yellow, throat pale yellow-green; outside yellow with pale yellow in middle, midribs pale green-yellow; brushmarks mahogany-brown, spots large, mahogany-brown, on a third of each tepal; nectaries green, white-granulated; pollen ochre-brown; stigma brown. Fls 123 mm wide, out-facing to slightly pendent; tepals 85 × 35 mm, margins smooth, tips somewhat recurved; pedicels c.50 mm, brown-dotted. Lvs scattered, dull pale green, 100 × 12 mm. Stems 0.95 m, green, hairy above, with a mid-sized infl. Late June.

**'Hafennacht' I(a)**

Parentage: Bronzino Group × *davidii* 'Rex'  
R: L. Denkwitz (pre 1980), N: L. Denkwitz, REG: L. Denkwitz (1988)  
Fls dark red, glossy. Stems 0.9 m, with c.10 fls. Late June to early July.  
(Published in German Lily Group sales list, 1980.)

**'Hagoromo' I(b-c/-)**

Parentage: *L. × maculatum* 'Wallacei' × *leichtlinii* var. *maximowiczii* 'Grandiflorum'  
R: M. Ito (c. 1961), N: M. Ito

Inside vivid reddish orange (34A), throat strong reddish orange (34C); outside vivid reddish orange (34B); spots black; nectaries white; pollen strong reddish orange (169A). Buds white-woolly. Tepals 74 × 36 mm, tips slightly recurved. Lvs 112 × 16 mm, dark green. Stems 1.2 m, with c.20 fls, unusually hairy. (Published in *LYB* 30: 59 (1967). Introduced from Japan to Holland by van Til-Hartman B.V.)

#### 'Haiti' IV(-/-)

Parentage: Bellingham Group × *kelloggii*

R: F. Ewald (pre 1981), N: F. Ewald, REG: ICRA (1998)  
Fls large with an orange-yellow centre, and suffused with pink. Stems to 2 m. Mid to late June.

#### 'Hakuhou' VII(a-b/-)

Parentage: *nobilissimum* × *auratum*

Inside white; outside white suffused with green at base; pollen reddish brown. Tepal-margins slightly ruffled, tips slightly recurved. Lvs scattered, broadly lanceolate, dark green. Stems with c.4 fls.

(Published in *Miyoshi & Co. Cat.* 1989: 106, with colour illustration. Raised and named in Japan before 1989.)

#### Hakushika Group VI(-/-)

Parentage: Aurelian Group

No further details.

(Raised in Japan. Published in *ILR* (1982) as Hakushika grex.)

#### 'Half Moon' I(a/-)

Parentage: yellow-flowered seedling × ('Keystone' × miniature seedling of Sundrop Group type)

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside light greenish yellow (3D) on basal part with light greenish yellow (5D) veins, tepal-tips pale yellow-green (4D), midvein above nectary vivid yellow (14B) shading into tepal, throat a little paler than strong yellow-green (144C); outside pale yellow-green (4D) with brilliant greenish yellow (4C) veins, midribs strong yellow-green (144C); spots few, dark red (187A), in the throat; papillae few, in the throat; nectaries light yellow-green (145D); pollen strong brown (172A); stigma dark red (187B). Fls 140 mm wide; tepals 85 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 0.6 m, green with dark markings, and with 9-10 fls. June.

#### 'Halifax' VII(a/b)

Parentage: seedling 92-80 × seedling RM 96-2

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside dark red (59A); throat yellowish white (155D), changing to vivid purplish red (57C); outside deep purplish red (59B), midribs light yellow-green (144D) at base, changing to yellowish white (155D) above; spots and papillae vivid purplish red (57C); nectaries strong

yellow-green (145A); pollen moderate reddish orange (171A); stigma light olive-grey (197B). Fls 230 mm wide, slightly fragrant; tepals 130 × 67 mm, margins slightly ruffled, tips recurved. Lvs 190 × 55 mm, dark green. Stems 1.2 m, light green, with c.3 fls.

#### 'Halka' I(a/b)

Parentage: Heartspell Group × Asiatic seedling

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Inside and outside light orange (26C), tepal-tips inside lighter (27B); spots strong dark red (59A), in numerous lines, on basal three-quarters of each tepal; pollen deep red (185A). Fls 160 mm wide; tepals 60 mm long, margins smooth, tips slightly recurved. Lvs scattered, 65 × 15 mm, mid green. Stems 0.9 m, almost black, with c.14 fls. Early July.

#### 'Halla' VI(-/a)

Parentage: (*regale* × *henryi*) × (*regale* × *lancifolium*)

R: G.A. Allan, N: G.A. Allan (1970), I: G.A. Allan (1970), REG: G.A. Allan (1971)

Fls white, throat brilliant greenish yellow (1B); outside the base and midribs red-purple; spots absent; nectaries green; anthers vivid orange-yellow (23A). Lvs *regale* type, tending to *henryi*. Stems 1.2 m.

(Published in *Lilies and other Liliaceae*, 1973: 112.)

#### 'Hallein' I(b/-)

Parentage: ('Destiny' × 'Amber Gold') × 'Connecticut King'

R: V. Strasser (1976), G: V. Strasser (1978), N: V. Strasser (1984), I: V. Strasser (1985), REG: V. Strasser (1986)

Fls yellow, throat green; spots purple, on a third of each tepal; nectaries green; pollen light brown. Fls 150 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered, 120 × 14 mm, dark green. Stems 1.2 m, brownish green, with c.23 fls. July.

#### HALLEY VIII(a/b)

Trade designation of 'Zanlahalley'.

#### 'Hallista' I(a/-)

Misspelling of 'Kallista'.

#### Hallmark Group I(c/d)

Parentage: (*cernuum* × *lancifolium*) F<sub>2</sub>

R: J. de Graaff (c. 1965), N: J. de Graaff

Fls white; spots dark. Stems 1.2 m. July.

(Published in *ILR* (1969) as Hallmark grex.)

#### 'Halloween' I(a/-)

Parentage: 'Enchantment' × 'Connecticut King'

R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc. (c. 1978)

Fls rich vivid orange; spots absent. Stems 1-1.2 m. Early July.

#### 'Hamburger Goldrausch' I(a)

Parentage: (*lancifolium* var. *flaviflorum* × *L.* × *maculatum*)

× ('Enchantment' × *wilsonii* var. *flavum*)  
R: L. Denkewitz (pre 1980), N: L. Denkewitz, REG:  
ICRA (1997)  
Tepals cobalt-yellow, with a narrow saffron-yellow ray.  
Stems 1.1 m. Mid July.

**'Hamburger Leuchfeuer' I(b/-)**

Parentage: 'Tabasco' × *lancifolium* var. *flaviflorum*  
R: L. Denkewitz (pre 1981), N: L. Denkewitz, REG:  
ICRA (1997)  
Fls bright red with medium-strong spots. Fls 130 mm  
wide. Stems 1.4 m, with up to 30 fls. Mid July.

**'Hammamet' I(a/c)**

Parentage: 'Ancona' × unknown  
R: G. Steinbrück (1989), G: G. Steinbrück (1991), N:  
G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G.  
Steinbrück (2002)  
Inside strong orange (170A) mixed with pale yellow,  
throat somewhat paler; outside similarly coloured; spots  
numerous, medium sized, round and elongated, dark  
purple (79A), on all but the tip of each tepal; nectaries  
yellowish white (155D); pollen strong reddish orange  
(169A) in large anthers; style pale green; stigma strong  
reddish orange (169A). Fls 160 mm wide; tepals 80 × 30  
mm, margins smooth, tips not or very slightly recurved.  
Lvs scattered, 72 × 17 mm. Stems 0.9 m, dark green, with  
c.7-10 fls. Late July to mid Aug. (i.e. late for an Asiatic).  
(Hammamet is a town in Tunisia. Nomenclatural  
standard: colour print provided by registrant (WSY  
0032251).)

**'Hanka' I(a/b)**

Parentage: 'Connecticut King' × seedling C-15  
R: Šlechtitelaká Stanice Heřmanův Městec, N:  
Šlechtitelaká Stanice Heřmanův Městec, REG:  
Šlechtitelaká Stanice Heřmanův Městec (1994)  
Inside scarlet, tinted brown-orange; spots inconspicuous,  
on a quarter of each tepal. Fls 120-140 mm wide, with  
overlapping tepals; pedicels 45-60 mm long. Lvs dark  
green. Stems 0.75-0.95 m, green, mottled red-brown at  
base, with 15-23 fls. Late June.  
(Published in *Listina povolených odrůd okrasných rostlin*,  
MZ Praha, 1989.)

**'Hannah Dustin' I(a/b)**

See *L. × hollandicum* 'Hannah Dustin'.

**'Hannah North' I(c/-)**

Parentage: (*lankongense* × 'Maxwill') × 'Enchantment'  
R: C. North (1973), G: SHRI (1975), N: C. North  
(1985), I: RHS Lily Group (1985), REG: RHS Lily  
Group (1986)  
Fls very pale yellow or cream, fading to white; spots very  
few, darker greenish; nectaries cream; pollen dark brown.  
Fls slightly scented; tepals 74 × 29 mm, margins smooth,  
tips strongly recurved. Lvs scattered, 164 × 10 mm, mid  
green. Stems 0.4-0.7 m, with 8 or more fls. Midseason.  
Allotriploid

***hansonii* Leichtlin ex D.T. Moore IX(b-c/d)**

Fls deep orange-yellow; spots purplish brown, towards  
base of each tepal; anthers purplish; pollen yellow. Fls  
fragrant; tepals thick, 30-40 × c.15 mm, recurved from  
about the middle.; pedicels up to 80 mm long. Lvs in  
whorls of 12-20, up to 180 × 40 mm, dark green. Stems  
1-1.5 m, stout, green, with 3-12 fls. Eastern former  
USSR, Korea, Japan.

**'Hantsing' II(-/d)**

Parentage: *L. × dalhansonii* × *tsingtauense*  
R: E. Robinson (c. 1964), N: E. Robinson  
Inside bright, light red, centre pale yellow; outside pale;  
spots absent. Stems 1.2-1.5 m, with c.20 fls. July.  
(Unacceptable name: 'Hantsing' (being formed from  
*dalhansonii* and *tsingtauense*) is not acceptable under  
ICNCP, 2004: Art. 19.13 - after 1959 a name must be in  
any language other than Latin.)

**'Haparanda' I(a-b/-)**

Parentage: unknown seedling × unknown seedling  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den  
Haan Beheer B.V., N: Vletter & Den Haan Beheer  
B.V. (1995), I: Vletter & Den Haan Beheer B.V., REG:  
Vletter & Den Haan Beheer B.V. (2001)  
Inside of inner tepals yellowish white (155D) with  
light purple veins along tepal-edges, inside of outer  
tepals yellowish white (155D) with light purple veins  
at the base, midveins at the base cream-white suffused  
with purple; outside yellowish white (155D); spots and  
papillae present; nectaries yellow-green; pollen light  
brown; stigma purple. Stems 1.3 m, green-white with  
darker stripes and spots. Midseason to late.

**'Happiness' Div. ?**

Given as a parent of 'Kingston'. No further details.

**'Happy Birthday' VII(a/b)**

Parentage: unnamed seedling × ('Star Gazer' × *auratum*  
type)  
R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff  
Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies  
B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2002),  
REG: Bischoff Tulleken Lelies B.V. (2002)  
Inside yellowish white (155D), midveins with a brilliant  
yellow (13C) stripe from above nectaries, throat yellowish  
white (155D); outside yellowish white (155D), midribs  
pale yellow-green (155A), the centre pale yellow-green  
(157A), becoming strong yellow-green (144A) at top;  
spots brilliant yellow (13B); papillae absent; nectaries  
strong yellow-green (144B); pollen dark reddish orange  
(173A); stigma dark red (187A). Fls 190 mm wide;  
tepals 130 × 46 mm, margins ruffled, tips recurved. Lvs  
scattered, 135 × 40 mm. Stems 0.93 m, green, the lower  
third with darker markings, and with c.4 fls. July.

**'Happy Day' VI(-/-)**

Parentage: selection from Sunburst Group  
S: J. de Graaff (c. 1954), N: J. de Graaff  
Fls clear golden yellow. Stems 1-1.5 m. July.

**'Happy Hour' VII(-/b)**

Parentage: 'Freedom' × (*L. × parkmanii* Everest Group × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1994)

Inside yellowish white (155D), midveins yellowish white (155A) at nectaries, shading to yellowish white (155D) at top; outside yellowish white (155D), midribs yellowish white (155A), with a very slight suffusion of moderate purplish red (59C), this colouring extending onto tepals on outer tepals only; spots and papillae yellowish white (155D) on three-quarters of each tepal; stigma greyish yellow-green (148D) edged dark red (187B); pollen strong orange (169B). Fls 230 mm wide; tepals 120 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 145 × 35 mm, mid green. Stems 0.65 m, pale green, with some darker markings, and with c.4 fls.

**'Happy Thoughts' I(a/b-c)**

Parentage unknown

R: A.J. Porter (1980), G: A.J. Porter (1981), N: A.J. Porter (c. 1985), I: Honeywood Lilies (c. 1983), REG: Canadian Prairie Lily Society (2001)

Inside yellowish white (158C) with a pale yellow (158A) stripe running down centre of each tepal, throat and tepal-tips yellowish white (158C), centre of fl. soft green; outside yellowish white (158C/D), midribs on inner tepals light yellow-green (154D), on outer tepals brilliant yellow-green (154C); spots few, dark red (183A), just above nectaries; papillae prominent; nectaries pale yellow (158A); pollen strong orange (169B). Fls 120 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 8 mm, mid green. Stems 0.75-0.9 m, mid green, with up to 30 fls. Mid July. Syn.: 'White Dove'.

(Published in *Honeywood Lilies Cat.*, 1988.

Nomenclatural standard: colour print provided by registrant (WSY 0030812).)

**'Happy Times' VII(-/d)**

Parentage: ('Star Gazer' × white-flowered Oriental seedling) × 'Furore'

R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside yellowish white (155D), midveins brilliant yellow (9C) on basal part of each tepal, pale yellow-green (4D) above, throat strong yellow-green (145A); outside yellowish white (155D), tepal-tips strong yellow-green (144C), midribs suffused with pale yellow-green (4D); papillae brilliant yellow (9C) and yellowish white (155D), on basal half of each tepal; nectaries greyish yellow-green (197D) striped light greyish olive (197C); pollen moderate reddish orange (171A). Fls 250 mm wide; tepals 130 × 60 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 180 × 35 mm, mid green. Stems 0.65 m, pale green, with c.4 fls. July (under glass).

**'Harald Andel' VI(b/a)**

Parentage: (unnamed seedling × *regale*) × *brownii*  
R: H. Georgi (1988), G: H. Georgi (1991), N: H. Georgi (1992), REG: H. Georgi (1992)

Inside cream with pale yellow and pinkish tepal-edges, throat creamy yellow; outside cream strongly tinged with pink (especially on midribs and at base) and green; nectaries green; pollen red. Fls 60-70 mm wide; tepals 130 × 45-50 mm, margins smooth, tips slightly reflexed. Lvs scattered, 120 × 10 mm, mid green. Stems 1.2 m, dark green, with 4-5 fls. Mid June to early July.

**'Harbor' V(-/a)**

See *longiflorum* 'Harbor'.

**'Harbor Star' VII(-/b)**

Parentage unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1962), N: H.J. Strahm (1971), I: H.J. & R.L. Strahm (1973), REG: Strahm's Lilies, Inc. (1981)

Fls light yellowish pink (36C), midveins orange above nectaries, becoming coral-pink near tip; spots few, strong purplish red (63B), around centre; nectaries yellow; pollen dark reddish orange (173A). Fls 200-250 mm wide; tepals 100 × 45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 25 mm, mid green. Stems 1.2 m, dark, rusty red on exposure, with 7-12 fls. July. (Published in Strahm's sales list, 1971.)

**'Hari Withers' I(a/-)**

Parentage: Asiatic seedling × Asiatic seedling

R: R.M. Withers (1976), G: R.M. Withers (1978), N: R.M. Withers (1982), I: R.M. Withers (1984), REG: R.M. Withers (1985)

Strong orange (25A), tepal-tips vivid reddish orange (30B), throat strong orange (25A); outside strong orange (25B); spots sparse, dark red (183A), on basal third of tepals; nectaries strong orange (25A); pollen dark reddish orange (175B). Fls 170 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 13 mm, dark green. Stems 1 m, strong yellow-green (144A), with c.10 fls. Nov. to Dec. (Australia). (Named for the wife of Dr R.M. Withers.)

**Harlequin Group I(c/d)**

Parentage: selections from Mid-century Group

S: J. de Graaff, N: J. de Graaff

Fls cream, salmon-buff, yellow and pale red; spots dark, on basal half of each tepal. Fls 100 mm wide; tepals strongly recurved, with smooth margins. Stems 1-1.5 m, with 15-20 fls. July.

(Published in *Oregon Bulb Farms Cat.*, 1950. J. de Graaff & E. Hornback (*LYB* 30: 27 (1967)) say that the 'Harlequin' that was selected from the Mid-century Group was a clone, not a "strain" (Group). They also say "The modern Harlequin Hybrids are a strain (Group) of *cernuum* × *davidii* hybrids and are not related to the Mid-Centuries". No information has yet been found about this other Harlequin Group.)

**Harlequin Jewels Group I(c/d)**

Parentage: ('Edith Cecilia' × unknown) × 'Connecticut King'

R: J.F. McRae & L.D. Marshall (1978), G: J.F. McRae (1980), N: J.M. Shaver (1982), I: Columbia-Platte Lilies (1982), REG: Columbia-Platte Lilies (1984)

Complete range of shades of yellow, soft orange, peach, cream and pink (no deep orange or red), tepal-tips often deeper; outside as general colour or lighter; unspotted or with a small ring of spots or spotted in the centre half of each tepal; nectaries green; pollen colour variable. Tepals 40-80 × 20-30 mm, margins smooth, tips strongly to slightly recurved. Lvs scattered, 100-180 × 20-30 mm, mid green. Stems 0.6-1.2 m, green, with 6-8 fls. June.

(Published in *Rex Lilies Cat.*, 1982. Included in *ILR Third Supplement* as Harlequin Jewels grex.)

**'Harmony' I(a-b/b)**

Parentage: selection from Mid-century Group

S: J. de Graaff (1941), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1950)

AM 1955

Fls strong orange (25A) with small maroon spots. Tepals broad, tips reflexed. Stems 0.6-1 m, green tinged with bronze, with 9-12(-20) fls. July.

(Published in *Oregon Bulb Farms Cat.*, 1950.)

**Harpsong Group VI(-a)**

Parentage: Aurelian trumpets bred by Bert Harp × hybrids of *leucanthum* var. *centifolium* bred by F.L. Skinner

R: J.C. Ericksen (post 1960), N: J.C. Ericksen, REG: J.C. Ericksen (1983)

Inside white to pinkish white, throat sometimes yellow; outside darker; spots absent; pollen yellow or brown. Stems 1-1.4 m, green, with 5-7 fls. July.

***harrisianum* Beane & Vollmer IX(c/d)**

Syn. of *pardalinum*.

**'Harrisii' V(b-c/a)**

See *longiflorum* var. *eximium* 'Harrisii'.

**'Harry Gunner' I(b/-)**

Parentage: *L.* × *maculatum* 'Wallacei' × *lancifolium*

R: G. Errey, N: G. Errey

Fls cadmium-yellow; spots absent. Stems 0.6 m, with c.6 fls.

(Published in *LYB* 11: 81 (1947).)

**'Harry Wharton' I(a/b)**

Parentage: 'Merryspring' × 'Sutherland Peach Melody'

R: D.J. Hay (1996), G: D.J. Hay (1999), N: D.J. Hay (2004), REG: D.J. Hay (2005)

Inside cream in basal part of tepals, pink in apical part, throat pink; outside pink, spots absent; nectaries pink; filaments reddish; pollen rust-orange; stigma dark pink. Fls 120 mm wide; tepals 74 × 38 mm, margins scarcely ruffled, tips very slightly recurved. Lvs scattered, 63 × 12 mm. Stems 0.5 m, brown, with c.5 fls. Mid July.

(Named after the raiser's great uncle. Nomenclatural standard: colour print supplied by registrant (WSY 0096411).)

**'Harson' Va(b-1a)**

See *longiflorum* 'Harson'.

**'Hartford' I(a/-)**

Parentage: 'Rosabelle' × seedling of "Connecticut" hybrids

R: Piedmont Gardens (1972), N: Piedmont Gardens, I: Piedmont Gardens, REG: Piedmont Gardens (1978) Inside strong orange (25A), throat brilliant orange (25C); outside light orange-yellow (25D); spots brown; nectaries light orange-yellow (25D); pollen absent. Tepal-margins smooth. Lvs medium wide. Stems 1.4 m, black. July. (Published in *Lilies and other Liliaceae*, 1978/9: 109.)

**'Harvard' VIII(a/b)**

Parentage: seedling BG 96-49 × seedling AG 95-14

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside brilliant yellow (13B), midveins, tepal-margins and tips vivid yellow (13A), throat pale greenish yellow (2D); outside brilliant yellow (12B), tepals light yellow-green (142C) at base changing into pale greenish yellow (2D), margins vivid yellow (13A); spots few, deep purplish red (59B); papillae absent; nectaries light yellow-green (142C); pollen moderate brown (165A); stigma pale yellow (12D) with strong purplish red (59D). Fls 200 mm wide, slightly fragrant; tepals 135 × 65 mm, margins smooth, tips recurved. Lvs 133 × 20 mm. Stems 1.1 m, green with darker markings, with 3-5 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Harvest' I(a/-)**

Parentage: 'Harmony' × 'Red Carpet'

R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc. (c. 1978)

Fls deep orange, very large; spots present. Stems 0.4-0.6 m. Early to mid July.

Syn.: 'Heroic'.

**'Harvest Gem' II(-/d)**

Parentage: *L.* × *dalhansonii* 'Juanita' × *L.* × *dalhansonii* 'Brocade'

R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)

Fls opening white, fading to pale yellow; outside with pink midribs; spots lilac. Stems 1-1.5 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 26 (1978).)

**'Harvest Moon' I(a/c)**

Parentage: 'Palomino' × unknown

R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)

Fls cream, with darker tones; pollen absent. Tepals rounded. Stems 1 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 7 (1978).)

**'Harvest Queen' VI(-/c)**

Parentage: Aurelian Group (with no. 49-16)

R: C. Yerex (c. 1954), N: C. Yerex

Fls brilliant orange-yellow (23B), blending to pale orange-yellow (23D) at recurved tepal-tips.

**'Harzmärchen' IX(c/d)**

See *martagon* var. *albiflorum* 'Harzmärchen'.

**'Haseltiger' I(a/-)**

Parentage unknown

R: A.R. Winkler (pre 1982), N: A.R. Winkler, REG: A.R. Winkler (1988)

Fls ochre-brown. Stems 1.1 m. Mid July.

(Published in German Lily Group sales list, 1982.)

**'Hauptmann von Köpenick' VIII(a/c)**

Parentage: 'Yukatan' × Longistar Group

R: G. Steinbrück (1988), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1997), REG: G. Steinbrück (2003)

Inside pale orange-yellow (24D), tepal-edges paler; outside similarly coloured, becoming pale pink towards base; spots large, purplish red, mostly below the large, strong reddish purple (72B) brushmark on basal half of each tepal (brushmark itself marked with black-violet); nectaries grey-white-hoary; filaments long, pale pink; pollen reddish brown (166B); style long, pale pink; stigma beige. Fls 150 mm wide; tepals 70 × 30 mm, margins smooth, tips not or slightly recurved; pedicels long. Lvs scattered, 80 × 13 mm. Stems 1.2 m, dark green lightly mottled reddish, with up to 10 fls. Mid to late July.

(Published in ELG sales list, 1999. Nomenclatural standard: colour print provided by registrant (WSY 0038762).)

**'Havana' I(a/b)**

Parentage: 'Sonnentiger' × 'Orion'

R: K. Braun (1982), N: K. Braun, REG: K. Braun (1985)

Inside tepals orange-red in centre, tips paler, throat yellow; outside orange-red; spots numerous, medium sized, orange-red, on two-thirds of each tepal; papillae paler, in throat; nectaries orange-red; pollen brown. Fls 160 mm wide; tepals 80 × 33 mm, slightly recurved; pedicels brown-tinged, somewhat hairy. Lvs 123 × 17 mm, glossy pale green. Stems 0.8 m. Early July.

**'Havelchic' I(a-c/d)**

Parentage: 'Dawn Star' × Feldmaier seedling Fe4

R: G. Steinbrück (1989), G: G. Steinbrück (1991), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside yellowish white (158D), throat pale yellow (158A); outside yellowish white (158D), midribs citron-yellow; spots very few, tiny, orange, on basal quarter of each tepal; nectaries greenish white-hairy; anthers on long yellow-green filaments; pollen vivid reddish orange (34A); stigma vivid reddish orange (34A) on a long, yellow-green style. Fls 110 mm wide; tepals 65 × 30 mm, margins smooth, tips slightly reflexed. Lvs scattered, 90 × 16 mm. Stems 1

m, green, with c.8 fls. Late June.

(Nomenclatural standard: colour print provided by registrant (WSY 0028895).)

**'Havelglanz' I(a/c)**

Parentage: 'Renoir' (of Weinreich) × 'Connecticut Melon'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Inside moderate reddish orange (171A), tepal-tips rather paler, moderate orange (171D), throat moderate reddish orange (171A); outside moderate reddish orange (171A); spots few, medium sized, deep purplish red (59B) on basal half of each tepal; nectaries greyish white; pollen deep red (60A) in thick anthers; stigma strong brown (172A). Fls 100 mm wide; tepals thick and broad, 55 × 35 mm, margins smooth, tips not recurved. Lvs scattered, deep green, 80 × 20 mm. Stems 0.65 m, dark green to black, with c.9 fls; stems and buds slightly hairy. Early to mid July.

**'Havelidol' VI(c/d)**

Parentage: 'Henrietta' × *L. × kewense* 'White Henry'

R: G. Steinbrück (1990), G: G. Steinbrück (1994), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)

Inside moderate orange (167A) shading to pale orange-yellow (165D) at tepal-tips, throat moderate orange (167A); outside pale orange-yellow (165D); spots numerous, medium sized, pale red, on three-quarters of each tepal; papillae large, on basal part of each tepal, coloured as the tepal; nectaries deep yellowish green (141A); filaments long, pale yellow-green (157C); pollen dark reddish orange (175B); stigma moderate reddish brown (176B) on a long style. Fls 95 mm wide; tepals 70 × 24 mm, margins smooth, tips strongly recurved; pedicels long, often 2-flowered. Lvs scattered, unusually long, 250 × 30 mm. Stems 2 m, dark green with dark markings, and with c.25 fls in a 50-60 cm-long infl. Mid to late July.

(Nomenclatural standard: colour print provided by registrant (WSY 0032254).)

**'Havelmond' I(b/-)**

Parentage unknown

R: J. Giffei (pre 2000), N: J. Giffei

Inside lemon-yellow, ageing to white at tepal-tips; spots on basal half of each tepal. Stems 0.6 m. Early July.

(Published in ELG sales list, 2000.)

**'Havelschau' I(b/b-d)**

Parentage: 'Schwefelblüte' × 'Sinai'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)

Inside vivid orange-yellow (23A), throat with slight orange suffusion; outside vivid orange-yellow (23A), midribs moderate yellow-green; spots and papillae absent; nectaries light greyish olive (185A); pollen brownish orange (166C); stigma light orange (28C). Fls 150 mm

wide; tepals 90 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 15 mm. Stems 0.6 m, mid green, with 7-10 fls. Mid June.  
(Nomenclatural standard: colour print provided by registrant (WSY 0032255).)

**‘Havel-traum’ I(b/b)**

Parentage: ‘Dawn Star’ × wine-red-flowered Asiatic seedling  
R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)  
Inside pale yellowish pink (159D) with a moderate reddish orange (35B) suffusion in the centre; outside yellowish white (158D), midribs much darker; spots numerous, small, greyish reddish brown to moderate brown (200B/C), on basal half of each tepal; pollen vivid reddish orange (34A). Fls 120 mm wide; tepals 70 × 27 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 27 mm, dark green. Stems 0.8 m, rather dark green, with c.12 fls. Late June to early July.

**‘Havemeyer’ VI(c/-)**

Syn. of ‘T.A. Havemeyer’.

**‘Hawaii’ I(a/-)**

Parentage unknown  
R: C. Kouwenhoven (1976), G: C. Kouwenhoven, N: S.H. Steltenpool (1989), REG: S.H. Steltenpool (1990)  
Inside vivid to strong reddish orange (42A/B), each tepal with a large, strong orange (25A) flame, throat strong red (53B); outside strong reddish orange (42B), midribs of inner tepals and all of outer tepals flushed with strong red (53B); spots few, small, dark red (187A) on the flame in the throat; pollen dark reddish orange to brownish orange (172B/C). Fls 220 mm wide; tepals 110 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 15 mm, mid green. Stems 0.65 m, green, with darker markings, and with c.6 fls. July.

**‘Hawaiian Moon’ VI(b/b)**

Parentage: selection from Aurelian Group  
S: C. Yerex (c. 1950), N: C. Yerex  
Fls pale yellow. Tepals very broad, partially recurved.

**‘Hawaiian Punch’ I(b/-)**

Parentage: (‘Rose Sunshine’ × ‘Rosabelle’) × (‘Edith Cecilia’ × ‘Lemon Lady’)  
R: L. Koehler (1968), N: M.C. Eisel (1970), I: J. Wadkamper (1973), REG: J. Wadkamper (1973)  
Fls lavender-red with a few dark spots; pollen dark brown. Stems 0.6 m.  
(Published in *North Star Lily Society Newsl.*, 1970.)

**‘Hawk’ I(b/-)**

Parentage: *dauricum* × unknown  
R: V.P. Orehovs, N: V.P. Orehovs  
Fls dark red, up to 125 mm wide. Stems up to 1.2 m.  
(Published in *LYB NALS* 15: 101 (1962).)

**‘Hawkins’ IX(b-c/d)**

See *speciosum* ‘W.R. Hawkins’.

**‘Hayai’ V(-/a)**

See *longiflorum* ‘Hayai’.

**‘Haydee’ I(a/b)**

Syn. of ‘Hilde’.

**‘Hayley’ I(a/b)**

Parentage: ‘Wattlebird’ × ‘Condamine’  
R: R.E. Allen (1987), G: R.E. Allan (1989), N: R.E. Allan (1991), I: R.E. Allan (1991), REG: R.E. Allan (1991)  
Inside vivid reddish orange (32A); outside dark reddish orange (178B); spots absent; nectaries vivid reddish orange (44B); pollen vivid reddish orange (33A). Fls 150 mm wide; tepals 95 × 46 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 16 mm, dark green. Stems 1.2 m, moderate yellow-green (137C), with c.12 fls. Late Dec. (Australia).

**‘Hayride’ I(b/c)**

Parentage: ‘Indian Brave’ × salmon-flowered brushmarked seedling  
R: V. Mathé (1984), G: Hartle-Gilman Gardens (1986), N: Hartle-Gilman Gardens (1997), I: Hartle-Gilman Gardens (1997), REG: Hartle-Gilman Gardens (1997)  
Inside light greenish yellow (6D), throat moderate orange (172D); outside a blend of strong brown to moderate orange (172A/D); dark spots on basal third of each tepal (spots elongated along tepal-folds); nectaries light green-frosted; pollen rust-coloured; stigma creamy white. Fls 150 mm wide; tepals 80 × 31 mm, margins smooth, tips slightly recurved. Lvs scattered, 88 × 10 mm, darker than moderate olive-green (137A). Stems 0.9 m, moderate olive-green (137A), with 8-16 fls.  
(Similar to ‘Indian Brave’ except in fl. orientation and, on average, being a taller plant.)

**‘Haywardii’ VII(-/b)**

See *L. × parkmanii* ‘Haywardii’.

**Hazienda Group I(c/-)**

Parentage unknown  
R: K. Kiel (pre 1983), N: K. Kiel, REG: K. Kiel (1988)  
Fls yellow. Stems 1.2-1.4 m, with bulbils. Late July.  
(Published in German Lily Group sales list, 1983.)

**‘Headlight’ I(a/-)**

Parentage: Mid-century Group × (‘Mega’ × ‘Tabasco’)  
I: Oregon Bulb Farms, Inc. (c. 1976), REG: Oregon Bulb Farms, Inc. (1977)  
Fls golden orange, spotted. Stems 0.8-1.9 m, dark, with 8-30 fls.  
(Published in *Lilies and other Liliaceae*, 1977: 78.)

**‘Headliner’ I(c/-)**

Parentage: ((‘Harmony’ × *leichtlinii* var. *maximowiczii*) × *lancifolium* var. *flaviflorum*) F<sub>2</sub>  
R: J. de Graaff (c. 1960), N: J. de Graaff

Fls sulphur-yellow, heavily spotted with maroon-black. Stems 1-1.2 m. July.

### 'Heads Up' VI(a/a)

Parentage: unknown seedling × Pink Perfection Group  
R: R. Elders (1979), G: R. Elders (1982), N: R. Elders (1991), I: R. Elders (1991), REG: R. Elders (1995)  
Inside very pale purple (69B), tepal-edges flushed with deep purplish pink (70C), tips strongly reddish purple (70B), throat yellow; outside strong purplish red (60D); spots absent; nectaries yellow; pollen brown. Tepals 80 × 42 mm, margins smooth, tips strongly recurved; pedicels 130 mm long, evenly placed along infl. Lvs scattered, 85 × 20 mm, mid green. Stems 1.7 m, mid green, with 9-14 fls. July.

### 'Healesville' IX(b-c/d)

See *speciosum* 'Healesville'.

### 'Heartbeat' VII(b/d)

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × 'Star Gazer'  
R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1993), REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside very pale purple (73D), tepal-edges pale yellow-green (155A), throat strong yellow-green (144C); outside yellowish white (155D) suffused with light purplish pink/very pale purple (73C/D), midribs pale yellow-green (4D); spots ivory-white, in the throat; papillae moderate red (59C) papillae on the basal half of each tepal; nectaries greyish yellow-green (197D); pollen strong orange (169D). Fls 140 mm wide; tepals 65-80 × 45-55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 80-90 × 45-60 mm, mid green. Stems 0.25 m, green, with 5-7 fls. July (under glass).  
Trade designation: RASCAL HEARTBEAT.

### 'Heartbeat' I(b/-)

Parentage: 'Brauner Bär' × Jacobi seedling 1070  
R: J. Wadepammer (1979), G: J. Wadepammer (1981), N: J. Wadepammer (1993), I: Borbeleta Gardens (1993)  
Inside vivid reddish orange (43A); outside red/tan; spots inconspicuous; nectaries orange; pollen brown. Tepals 85 × 20 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 15 mm, dark green. Stems 1.3 m, dark brown, with c.10 fls and some bulbils. Very late. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Borbeleta Gardens Cat.*, 1993.)

### 'Heartbreaker' VIII(b/b-c)

Parentage: seedling PG 95-57 × seedling RH 97-07  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)  
Inside with inner tepals light greenish yellow (6D), light greenish yellow (8C) towards margins, brilliant greenish yellow (6B) along midveins, outer tepals with a streak of (53B) along midveins, this streak sometimes present on

inner tepals. throat pale yellow (8D); outside with inner tepals pale yellow-green (4D) with a narrow light greenish yellow (8C) margin, midribs light yellow-green (144D) at base, outer tepals pale yellow-green (4D), midribs light yellow-green (144D) at base, light yellow-green (150D) with light yellow-green (143B) at top, with a strong red (53B) streak along midribs (stronger in older fls); spots absent; papillae brilliant yellow (8A); nectaries light yellow-green (144C); pollen dark reddish orange (175B); stigma deep reddish purple (77A). Fls 275 mm wide, slightly fragrant; tepals 150 × 55-86 mm, margins smooth to slightly ruffled, tips strongly recurved. Lvs scattered, 165 × 40 mm. Stems 0.9-1.1 m, green with darker markings, and with c.3 fls.  
(An Orienpet (OT) lily.)

### 'Heartfire' I(a-b/-)

Parentage: rose-pink-flowered seedling × seedling A-165-80  
R: Cebeco Lilies, Inc. (pre 1998), N: Cebeco Lilies, Inc., REG: ICRA (1998)  
Inside rose-red. Tepals broad. Stems 1 m. Midseason. (Published in *The Lily Nook Cat.*, 1998.)

### 'Hearthglow' VI(-/a)

Parentage: contains *sargentiae*, *leucanthum* var. *centifolium* & *regale*  
R: LeV. Freimann (c. 1958), N: LeV. Freimann, I: Northwest Gardens (1958)  
Fls bright lemon-yellow, overlaid with rose-pink at tepal-edges.

### Heart of Gold Group I(a/-)

Parentage: derived from Milk and Honey Group  
R: H.O. Beracha, N: H.O. Beracha, I: H.O. Beracha (1975), REG: H.O. Beracha (1985)  
Fls in shades of light yellow, throat glowing orange-gold; spots few or absent. Stems 1 m. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 41 (1978) and included in *ILR* (1982) as 'Heart o' Gold' grex.)

### Heart o' Gold Group I(a/-)

See Heart of Gold Group.

### 'Hearts' Delight' I(a/-)

Parentage: (*wilsonii* × unknown) × (*L. × hollandicum* × unknown)  
R: Gebr. N. & B. Laan & Zn, G: Gebr. N. & B. Laan & Zn (1979), N: Gebr. N. & B. Laan & Zn (1979), REG: Gebr. N. & B. Laan & Zn (1981)  
Fls light yellow (18B) with a flush of pale orange-yellow (24D), centre blotched light orange (28D); spots brown; anthers reddish brown. Stems 0.9 m.  
(Published in *Bloembollencultuur*, July 1979.)

### 'Heart's Desire' Div. ?

Given as a parent of 'Irene's Grace' and 'Victory of Dreams', both raised by K Paszuńska. No further details. Perhaps an error for Heart's Desire Group.

**Heart's Desire Group VI(b/b)**

Parentage: selections from Aurelian Group

S: J. de Graaff, N: J. de Graaff

Fls white, cream or yellow, throats gold or orange. Stems 1.2-1.9 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1950. Included in *ILR* (1982) as Heart's Desire grex.)

**Heartspell Group I(a/-)**

Parentage: 'Juliana' × 'Firecracker'

R: Columbia-Platte Lilies (1980), G: Columbia-Platte Lilies (1982), N: Columbia-Platte Lilies (1986), I: Columbia-Platte Lilies (1986), REG: Columbia-Platte Lilies (1988)

Inside deep purplish pink to strong pink (54B/C) to strong pink (48C), tepal-tips deep purplish pink to strong pink (54B/48C), throat deep purplish pink to strong pink (54B/C) at base with a light to pale yellow area (20 × 20 mm) above nectaries; outside strong pink to moderate purplish pink (54C/D), midribs with a light green overlay; spots small to medium sized, magenta, on basal third of each tepal; nectaries soft yellow; pollen moderate red (180A). Tepals 60-90 × 20-30 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 1-1.4 m, mid to dark green, with 5-20 fls. Late June.

(Published in *Rex Lilies Cat.*, 1986. Consists of 3 clones, all selections with peach-coloured fls from a single cross. Included in *ILR Seventh Supplement* as Heartspell grex.)

**'Heatherbelle' VI(-/a)**

Parentage: selection from *L. × imperiale* Pink Trumpet Group

N: D. Foxwell (1960)

Fls cyclamen-purple (HCC 30/2) throughout; buds 125 mm long.

**'Heather Llenos' I(b/-)**

Parentage: 'Pink Tiger' (Woodriff) × unknown

R: N.F. Bieniasz (1980), N: N.F. Bieniasz (1984), I: N.F. Bieniasz (1984), REG: N.F. Bieniasz (1984)

Inside strong orange (30D); outside strong yellowish pink (32C) with darker midribs; spots present; nectaries strong orange (30D), frosted; pollen moderate reddish brown (175A). Tepal-margins smooth, tips recurved. Lvs mid green. Stems 0.6 m.

**'Heavenly' I(a/c)**

Parentage: 'Reinesse' × 'Napoleon'

R: J. Vanheusden (1995), G: J. Vanheusden (1997), N: J. Vanheusden (1998), I: J. Vanheusden (1998), REG: J. Vanheusden (1998)

Inside light creamy salmon, tepals with a 3 mm-wide peach-coloured edge, throat light green; outside very light creamy salmon; spots absent; nectaries creamy white; pollen dark orange; stigma dark orange. Fls 140 mm wide; tepals 70 × 25 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 20 mm, dark green. Stems 0.3 m, green, with 6-7 fls. Late June.

**'Heavenly Rose' I(a/b)**

Parentage: seedling 10-78 × seedling 23-82

R: Cebeco Lilies, Inc. (pre 1998), N: Cebeco Lilies, Inc.

Inside solid, deep raspberry-red. Buds red. Tepals slightly recurved. Stems 0.8 m. Midseason.

(Published in *The Lily Nook Cat.*, 1998. Included in *ILR Nineteenth Supplement* as an unacceptable name: ICNCP, 1995: Art.17.13 - "rose" is the vernacular name of another genus. However, in 2004 this ICNCP Article was amended and this name is now accepted.)

**'Heavensong' I(a)**

Parentage unknown

I: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)

Wine-pink and cream/gold bicolor: tepal-tips wine-pink, centre of tepals cream/gold, throat rich wine-pink; outside wine-pink; traces of large spots in centre of fl. only; nectaries maroon-red; pollen brown. Tepals 100 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 1.1 m, mottled purple, with 5-25 fls. Mid June.

(Published in *Oregon Bulb Farms Cat.*, 1986/87. Raised in Japan.)

**'Hedi' I(c/-)**

Parentage unknown

R: H. Dierssen (pre 1977), N: H. Dierssen

Inside orange. Stems 1.5 m. Mid July.

(Published in ELG sales list, 1997. The epithet is a diminutive of Hedwig.)

**'Heidegold' I(a/-)**

Parentage unknown

R: J. Petruske (pre 2001), N: J. Petruske

Inside bright yellow, with a green centre; spots brown; pollen light brown. Stems 1 m. Early July.

(Published in ELG sales list, 2001.)

**'Heidelberg' VI(-/-)**

Parentage: orange-flowered seedling (from Emerald Group × *henryi*) × *henryi*

R: V. Strasser (1975), G: V. Strasser (1978), N: V. Strasser (1981), I: V. Strasser (1984), REG: V. Strasser (1986)

Fls pale yellow (8D), throat brilliant yellow (15C); spots and papillae vivid orange-yellow. Fls 120 mm wide; tepals 100 × 25 mm. Lvs scattered, 150 × 30 mm, dark green. Stems 1.2-1.5 m, dark brown, with c.18 fls. Aug.

(Misspelled 'Heidelberg' in the *ILR Fifth Supplement*.)

**'Heidelberg' VI(-/-)**

Misspelling of 'Heidelberg'.

**'Heidesand' I(a/-)**

Parentage unknown

R: H. Hinke (pre 1979), N: H. Hinke, REG: H. Hinke (1988)

Fls yellow, tepals lemon-yellow at tips, shading to orange-yellow at centre of fl.; spots chocolate-brown; pollen dark brown. Fls 140 mm wide. Stems 0.9 m. July to Aug. (Published in German Lily Group sales list, 1980.)

**'Heidi' I(a/b)**

Parentage: 'Altgold' × 'Feuer und Rauch'

R: H. Georgi (1976), G: H. Georgi (1978), N: H. Georgi (1980), I: H. Georgi (1985), REG: H. Georgi (1985)

Inside vivid reddish orange (30A) (similar to 'Enchantment'), tepal-margins darker; outside somewhat darker, midribs brownish; brown spots on basal half of tepals; pollen orange-brown. Fls 100-140 mm wide; tepals 80-100 × 15-20 mm, margins smooth, tips somewhat recurved. Lvs scattered, 100-130 × 8-10 mm, mid green. Stems 1.15-1.3 m, very dark, with 10-15 fls and numerous bulbils. June to July.

**'Heidi III' I(a/b)**

Parentage unknown

R: H. Georgi (pre 1992), N: H. Georgi

Fls orange-red.

**'Heinz Florian' I(a/b-d)**

Parentage: 'Beucherts Rote Sternschale' × dark red-flowered Asiatic seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1997), REG: G. Steinbrück (1998)

Inside strong purplish red (60B), each tepal with a slight light orange-yellow (24C) midvein; outside similarly coloured; papillae few, inconspicuous, small, self-coloured, on three-quarters of each tepal; nectaries silvery pale orange; pollen violet; stigma greyish red (178A). Fls 120 mm wide; tepals 55 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 12 mm, mid green. Stems 0.8 m, rather dark green, with up to 8 fls. Late June to early July.

**'Hektor' I(b-c/d)**

Parentage: 'Pinegos Ares' × 'Tetra Tabasco'

R: B. Mičulka, N: B. Mičulka, I: B. Mičuka (2002), REG: B. Mičulka (2002)

Inside deep blood-red, throat paler; outside orange-red in centre of tepals, midribs brownish; spots numerous, large, brown-red, on two-thirds of each tepal; nectaries pinkish-granulated, fairly papillate; pollen and stigma red-chocolate. Fls 125 mm wide; tepals 75 × 40 mm, strongly recurved; pedicels 85 mm long, with pronounced brown markings, thick, hairy. Lvs scattered, 110 × 11 mm, dark green. Stems 1 m, thick, spotted very dark brown, with a moderately long infl. Late June. Tetraploid.

**'Hel' I(-/d)**

Parentage unknown

R: C. Wittneben (pre 1972), N: C. Wittneben

Fls dark black-red.

**'Hela' I(a/b)**

Parentage: 'Korál' × 'Heloma'

R: B. Mičulka (1989), N: B. Mičulka, REG: B. Mičulka (1989)

Inside pale salmon-apricot, tepal-edges darker salmon, throat paler; outside paler, midribs pale greenish brown; spots numerous, large, oval, dark red-violet, on two-thirds of each tepal; a hint of a brushmark on

each nectary; frosted papillae present; nectaries white-granulated; pollen brown; stigma red. Fls 180 mm wide; tepals 100 × 50 mm, not recurved; pedicels 100 mm long, fairly spotted. Lvs scattered, 100 × 31 mm, glossy dark green. Stems 0.9 m, dark green with violet spots. Early July.

**'heldreichii' Freyn IX(b-c/d)**

Syn. of *chalconicum*.

**'Helena' I(b/d)**

Parentage: *lancifolium* var. *flaviflorum* × unknown

R: D.B. Fox (pre 1969), N: D.B. Fox, REG: D.B. Fox (1969)

Fls vivid orange (28A), ageing to vivid reddish orange (30B); spots small. Lvs mid green. Stems 1.4 m, green with dark staining.

(Published in *LYB* 33: 255 (1970).)

**'Helēna' I(b/-)**

Syn. of 'Elena'.

**'Helen Carroll' I(a/-)**

See *L. × maculatum* 'Helen Carroll'.

**'Helenilla' VII(-/b)**

See *L. × parkmanii* 'Helenilla'.

**'Helenka' I(c/-)**

Parentage: Citronella Group × 'Connecticut Yankee'

R: K. Braun (1981), N: K. Braun, REG: K. Braun (1984)

Fls buttercup-yellow; spots purple, on half of each tepal; nectaries white-frosted; pollen brown. Fls 150 mm wide. Stems 1 m, with up to 10 fls. Early July.

**'Helen North' I(b-c/-)**

Parentage: (*lankongense* × 'Maxwill') × ('Edith Cecilia' × (*lancifolium* var. *flaviflorum* × 'Destiny') × 'Citronella')

R: C. North (1973), G: SHRI (1975), N: C. North (1985), I: RHS Lily Group (1985), REG: RHS Lily Group (1986)

Fls reddish mauve throughout; nectaries reddish mauve; pollen dark red. Fls 70 mm wide, slightly scented; tepals 70 × 28 mm, margins smooth, tips strongly recurved. Lvs scattered, 160 × 7 mm. Stems 0.9-1 m. Allotriploid. (This cv. was produced by embryo culture.)

**'Helen Pike' V(b/a)**

See *longiflorum* 'Helen Pike'.

**'Helen's Smile' I(a-b/-)**

Parentage: Wadেকamper very late red-flowered seedling × 'White Prince'

R: J. Wadেকamper (1980), G: J. Wadেকamper (1982), N: J. Wadেকamper (1992), I: Borbeleta Gardens (1993), REG: J. Wadেকamper (1993)

Fls vivid yellow (13A) and pale greenish yellow (13D), throat white; spots brown, on basal half of each tepal; nectaries green; pollen brown. Tepals 70 × 12 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 10 mm, mid green. Stems 1.2 m, mid green, with 12-14 fls.

Mid to late Aug. (i.e. very late for an Asiatic).  
(Published in *Borbeleta Gardens Cat.*, 1993.)

### 'Helga' I(a/-)

Parentage unknown

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (1980), I: De Jong Lelies Beheer B.V., REG: De Jong Lelies Beheer B.V. (1981)

Fls brilliant yellow (12B), with many, dark brown dots all over tepals; pollen reddish brown.

### 'Helios' VI(-/a)

Parentage: selection from Golden Clarion Group

S: J. de Graaff (c. 1960), N: J. de Graaff

Inside golden yellow; outside green. Stems 1.5 m. July.

### 'Hellados' VI(-/d)

Parentage: 'Heidelberg' × 'Lednice'

R: V. Strasser (1982), G: V. Strasser (1986), N: V. Strasser (1996), REG: V. Strasser (1997)

Inside white, throat orange; outside reddish orange; papillae like those of *henryi*; nectaries green; pollen brown. Fl-shape like *henryi*; tepals 105 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.5 m, rather dark green, with c.20 fls. Early Aug.

### 'Helle Panke' I(a/d)

Parentage: 'Peaceful' × 'Elite'

R: G. Steinbrück (1990), G: G. Steinbrück (1993), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Inside and outside pale orange-white (159D), midveins deep orange-white (159A), midribs prominent; spots numerous, medium sized, dark red (183A), on basal half of each tepal; nectaries moderate green-white (157A); pollen dark red (187A); stigma grey-green. Fls 110 mm wide; tepals 60 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 75 × 12 mm. Stems 0.8 m, dark green, with 8-10 fls. Mid July.

### 'Hello Dolly' VIII(a/b)

Parentage: (unnamed Asiatic × *longiflorum* 'Slocum's Ace') × mixed pollen of pastel-flowered Asiatics

R: E.A. McRae (1988), G: Van der Salm Bulb Farm, Inc. (1990), N: E.A. McRae (1994), I: Van der Salm Bulb Farm, Inc. (1994), REG: Van der Salm Bulb Farm, Inc. (1994)

Inside and outside maroon-red, throat softer maroon-red; traces of spotting around nectary-furrows only; nectaries soft brown; pollen dark chocolate-brown. Fls fragrant; tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 0.5 m, with a stocky habit, light green. Late June to July.

(A *longiflorum*/Asiatic (LA) hybrid. Published in *Wayside Cat.*, Autumn 1994.)

### Hell's Blazes Group I(a/-)

Parentage unknown

R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens

Fls in shades of apricot. Stems 0.8 m. July to Aug.

### 'Heloma' I(b/-)

Parentage: 'Golden Souvenir' × Hallmark Group

R: Gebr. N. & B. Laan & Zn (c. 1975), N: Gebr. N. &

B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1977)

Fls light orange-yellow (25D), spotted. Stems 1.5 m. Mid July.

(Published incorrectly as 'Helona' in *Lilies and other Liliaceae*, 1977: 78 and in *ILR* (1982).)

### 'Helona' I(b/-)

Error for 'Heloma'.

### 'Helsinki' II(-/-)

Parentage: *martagon* × unknown

R: N. Martschinke (pre 1992), N: N. Martschinke, REG: N. Martschinke (1994)

Fls white suffused with green; spots absent. Stems 1.2 m. Late June.

(Published in German Lily Group sales list, 1992.)

### 'Helvetia' VII(a/b-c)

Parentage: unnamed seedling × unnamed seedling

R: Trior Lelie B.V. (1993), G: Trior Lelie B.V., N: Trior Lelie B.V. (1995), I: Trior Lelie B.V. (1997), REG: Trior Lelie B.V. (1997)

Inside yellowish white (155D), midveins pale yellow-green (155A); outside yellowish white (155D), midribs pale yellow-green (155A), base and apex with some strong yellow-green (144C); spots pale yellow-green (155A) and yellowish white (155D), on more than half of each tepal; papillae yellowish white (155D) in the throat; nectaries strong yellow-green (144B/C); pollen strong orange (169B); stigma moderate red (185B). Fls 225 mm wide; tepals 110-120 × 35-50 mm, margins ruffled, tips strongly recurved. Lvs scattered, 145 × 45 mm, mid green. Stems 0.85 m, light green, with c.6 fls.

### 'Henena' VI(b-c/a)

Parentage: 'Svētēdianas Rīts' × unknown

R: I. Zilgalvis (1996), G: I. Zilgalvis (1998), N: I.

Zilgalvis (1999), REG: I. Zilgalvis (2004)

Inside white, throat green; outside white-green; spots absent; nectaries green; pollen dark red-brown; stigma green. Fls 150 mm wide; tepals 150 × 45 mm, margins smooth, tips slightly recurved. Lvs 100 × 9 mm. Stems 1.4 m, dark green, with 7-8 fls. Late July.

(Henena is a Latvian female name. Nomenclatural standard: colour print supplied by registrant (WSY 0096373).)

### 'Henrelian' VI(-/-)

A very early Aurelian.

(Published in *LYB NALS* 20: 65 (1967).)

### *henrici* Franch. IX(b-c/a-c)

Inside whitish, dark purple-red at base and with many longitudinal veins; outside flushed with pinkish purple especially at base; nectaries green; anthers orange-yellow.

Fls opening flattish. Tepals c.55 × 18-20 mm. Lvs scattered. Stems up to 1 m, green, somewhat flushed with

brown, with 1-7 fls. W China (Yunnan).  
(At one time included in the genus *Nomocharis*.)

**henrici var. maculatum Evans IX(b-c/a-c)**  
Fls with a few crimson-purple spots at base of tepals.

**‘Henrieta’ VI(c/d)**  
Parentage: *henryi* × ‘Gold Eagle’  
R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B. Mičulka (1984)  
Inside apricot, tepal-tips paler, throat dark ochre; outside with green midribs; spots crimson on two-thirds of each tepal; nectaries green; pollen brown. Fls 100 mm wide; tepals 85 × 32 mm, strongly recurved. Lvs 95 × 20 mm, glossy. Stems 1.5 m, spotted brown, dark violet at base. Late July.

**‘Henriette’ VI(c/-)**  
Parentage: (*henryi* × unknown) × Pink Perfection Group  
R: V. Strasser (1973), G: V. Strasser (1976), N: V. Strasser (1981), REG: V. Strasser (1992)  
Inside pale yellow (11C), tepal-tips white, throat strong orange (24A); outside with greenish pink midribs; papillae slender; nectaries dark green; pollen strong orange (26A). Tepals 105 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, dark green. Stems 1.5 m, with up to 26 fls. Mid July to mid Aug.

**‘Henry Bolander’ IV(c/d)**  
Parentage: *pardalinum* × *bolanderi*  
R: E. Mayell (pre 1960), N: E. Mayell, I: A.D. Rothman PC 1960  
Fls magenta, with a few spots in centre. Tepals recurved. Stems 1.2 m. July.  
(Published in *LYB* 24: 149 (1960).)

**Henry Bolander Group IV(-/-)**  
Parentage: ‘Henry Bolander’ × (*kelloggii* × *parryi*)  
R: E. Mayell (c. 1962)  
Fls in various colours.

**henryi Baker IX(c/d)**  
AGM 1993  
Fls orange; spots dark, towards base of each tepal; papillae on basal half of each tepal; nectaries green; anthers orange. Tepals 60-80 × 10-20 mm, each narrowed at base into a short claw. Lvs scattered, 80-150 × 20-30 mm, glossy dark green. Stems (1-)1.5-2(-3) m, green marked with red-purple, with 4-20(-70) fls, sometimes with bulbils. C China.

**henryi ‘Adamovo’ IX(-/d)**  
Misspelling of *henryi* ‘Adams’.

**henryi ‘Adams’ IX(-/d)**  
Parentage: selection from *henryi* Latgales Group  
S: V.P. Orehovs (post 1966), N: V.P. Orehovs  
No further details.  
(Included in *ILR Second Supplement* as ‘Adamovo’ which is a misspelling.)

**henryi ‘Baltā Pilsēta’ IX(-/d)**  
Parentage: selection from *henryi* Latgales Group  
S: V.P. Orehovs (c. 1966), N: V.P. Orehovs  
Fls pure white with reddish brown marking; pollen dark brown. Fls up to 100 mm wide, scented. Stems up to 2 m. July to Aug.  
(Published in *LYB* 33: 77 (1970) and included in *ILR* (1982) as ‘Palta Pilsita’ which is a misspelling.)

**henryi var. citrinum hort. Wallace ex Gard. Chron. IX(c/d)**  
AM 1936  
Fls lemon-yellow with a few chocolate-brown spots.

**henryi var. citrinum ‘John T. Scheepers’ IX(c/d)**  
Parentage: selection from *henryi* var. *citrinum*  
No further details.  
(Published in *Scheepers’ Cat.*, 1937.)

**henryi ‘Citronu Henrijs’ IX(-/d)**  
Parentage: selection from *henryi* Latgales Group  
S: V.P. Orehovs (post 1966), N: V.P. Orehovs  
No further details.  
(Misspelling: *henryi* ‘Tsitronu Henry’. Included in *ILR Second Supplement* as *henryi* ‘Zitronu Henry’ which is also a misspelling.)

**henryi ‘Dzeltena Henry’ IX(-/d)**  
Misspelling of *henryi* ‘Dzeltenais Henrijs’.

**henryi ‘Dzeltenais Henrijs’ IX(-/d)**  
Parentage: selection from *henryi* Latgales Group  
S: V.P. Orehovs (post 1966), N: V.P. Orehovs  
No further details.  
(Included in *ILR* (1982) as ‘Dzeltena Henry’ which is a misspelling.)

**henryi ‘Ideala’ IX(-/d)**  
Misspelling of *henryi* ‘Ideālā’.

**henryi ‘Ideālā’ IX(-/d)**  
Parentage: selection from *henryi* Latgales Group  
S: V.P. Orehovs (post 1966), N: V.P. Orehovs  
No further details.  
(Included in *ILR Second Supplement* as ‘Ideala’ which is a misspelling.)

**henryi ‘Improved’ IX(c/d)**  
Parentage: selection from *henryi*  
S: Messrs Horsford, N: Messrs Horsford  
Stem stiffer and more erect than in *henryi* itself.

**henryi ‘John T. Scheepers’ IX(c/d)**  
See *henryi* var. *citrinum* ‘John T. Scheepers’.

**henryi ‘Kupava’ IX(-/c)**  
Parentage: (*henryi* × *henryi* var. *citrinum*) × *henryi* Latgales Group  
R: E.V. Parmanin & Z.S. Sapozhnikove (1972), N: E.V. Parmanin & Z.S. Sapozhnikova  
Fls white, pale yellow at base of tepals. Stems 1.7 m. July.

**henryi Latgales Group IX(b-c/d)**

Parentage: *henryi* × *henryi*; treated with a mutagen giving a group of 'hybrid' seedlings in F<sub>4</sub> generation differing from the type

R: V.P. Orehovs (1966), N: V.P. Orehovs

Fls pure white to dark orange with large, reddish brown spots; pollen dark brown. Stems up to 2 m, with up to 15 fls. July to Aug.

(Published in *LYB* 33: 77 (1970) and included in *ILR* (1982) as *Latgalia Hybrids* - a misspelling. It has been suggested that the *Latgales Group* is in fact derived from *henryi* crossed with unnamed Aurelian type hybrids. Until this is definitely confirmed, the selections from this group are listed under *henryi*, as in *ILR* (1982).)

**henryi Latgalia Group IX(b-c/d)**

Misspelling of *henryi Latgales Group*.

**henryi 'Lielziedu Henrijs' IX(-/d)**

Parentage: selection from *henryi Latgales Group*

S: V.P. Orehovs (post 1966), N: V.P. Orehovs

No further details.

(Included in *ILR Third Supplement* as *henryi 'Lielziedu Henry'* which is a misspelling.)

**henryi 'Lielziedu Henry' IX(-/d)**

Misspelling of *henryi 'Lielziedu Henrijs'*.

**henryi 'Melkeri' IX(-/d)**

Misspelling of *henryi 'Melķeri'*.

**henryi 'Melķeri' IX(-/d)**

Parentage: selection from *henryi Latgales Group*

S: V.P. Orehovs (post 1966), N: V.P. Orehovs

No further details.

(Included in *ILR Second Supplement* as *henryi 'Melkeri'* which is a misspelling.)

**henryi 'Mirdza' IX(-/d)**

Parentage: selection from *henryi Latgales Group*

S: V.P. Orehovs (c. 1966), N: V.P. Orehovs

Fls white, centre orange; spots black; pollen brown. Fls up to 150 mm wide. Stems up to 1.5 m, with up to 10 fls. July to Aug.

(Published in *LYB* 33: 77 (1970).)

**henryi 'Nitaure' IX(-/d)**

Misspelling of *henryi 'Nitaure'*.

**henryi 'Nitaure' IX(-/d)**

Parentage: selection from *henryi Latgales Group*

S: V.P. Orehovs (post 1966), N: V.P. Orehovs

No further details.

(Included in *ILR Second Supplement* as *henryi 'Nitaure'* which is a misspelling.)

**henryi 'Palta Pilsita' IX(-/d)**

See *henryi 'Baltā Pilsēta'*.

**henryi 'Raiba' IX(-/d)**

Misspelling of *henryi 'Raibā'*.

**henryi 'Raibā' IX(-/d)**

Parentage: selection from *henryi Latgales Group*

S: V.P. Orehovs (post 1966), N: V.P. Orehovs

No further details.

(Included in *ILR Second Supplement* as *henryi 'Raiba'* which is a misspelling.)

**henryi 'Razna' IX(-/d)**

Misspelling of *henryi 'Rāzna'*.

**henryi 'Rāzna' IX(-/d)**

Parentage: selection from *henryi Latgales Group*

S: V.P. Orehovs (post 1966), N: V.P. Orehovs

No further details.

(Included in *ILR Second Supplement* as *henryi 'Razna'* which is a misspelling.)

**henryi 'Solistka Baleta' IX(b/c)**

Parentage: (*henryi* × *henryi* var. *citrinum*) × *henryi Latgales Group*

R: Ē.V. Parmanin & Z.S. Sapozhnikova (c. 1972), N:

Ē.V. Parmanin & Z.S. Sapozhnikova

Fls ivory-white, with lemon-yellow at base of tepals; spots reddish. Stems 1.7 m. Aug.

**henryi 'Tsitronu Henry' IX(-/d)**

Misspelling of *henryi 'Citronu Henrijs'*.

**henryi 'Vilany' IX(-/d)**

See *henryi 'Viļāny'*.

**henryi 'Viļāny' IX(-/d)**

Parentage: selection from *henryi Latgales Group*

S: V.P. Orehovs (post 1966), N: V.P. Orehovs

No further details.

(Included in *ILR Second Supplement* as *henryi 'Vilany'* which is a misspelling.)

**henryi 'Zitronu Henry' IX(-/d)**

Misspelling of *henryi 'Citronu Henrijs'*.

**henryi 'Zolushka' IX(-/c-d)**

Parentage: (*henryi* × *henryi* var. *citrinum*) × *henryi Latgales Group*

R: Ē.V. Parmanin & Z.S. Sapozhnikova (c. 1972), N:

Ē.V. Parmanin & Z.S. Sapozhnikova

Tepals white, bright orange at base; spots reddish. Stems 1.7 m. July to Aug.

**henryi 'Zvaigzne' IX(-/d)**

Parentage: selection from *henryi Latgales Group*

S: V.P. Orehovs (post 1966), N: V.P. Orehovs

No further details.

**'Henryjka' VI(c/d)**

Parentage: 'Henrietina' × *henryi*

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1998),

REG: B. Mičulka (1998)

Inside beige-orange, tepal-tips paler; outside pastel orange, midribs greenish; spots numerous, small, dash-like, dark brown-carmine, on two-thirds of each tepal;

papillae medium large; nectaries green; pollen chocolate-brown; stigma green. Fls 85 mm wide; tepals 80 × 35 mm, strongly recurved; pedicels 120 mm long, brown-dotted. Lvs scattered, 115 × 28 mm, dull dark green. Stems 1.3 m, rigid, slightly dotted red-brown, with a medium length infl. Mid July.

**‘Henry P’ I(c/-)**

Parentage unknown

R: F.H. Payne (pre 1988), N: J. Wadkamper (1988)

Fls very light fawn/salmon-tan; spots few, brown, on basal half of each tepal; nectaries green; pollen light brown. Tepals 100 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 15 mm, mid green. Stems 0.9 m, dark green, with 10-12 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1988. Named after the raiser.)

**‘Henry’s Darling’ VI(c/a)**

Parentage: ‘Thunderbolt’ × *L.* × *kewense* ‘White Henry’

R: G. Brown (1981), G: G. Brown (1983), N: G. Brown (1983), I: G. Brown, REG: G. Brown (1987)

Inside orange in the throat, shading to lemon at tepal-tips; outside light orange, midribs green; spots absent; nectaries orange; pollen dark brown. Fls 150 mm wide; tepals 100 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 30 mm, mid green. Stems up to 1.55 m or more, mid green, with c.12 fls. Late July.

**‘Henry’s Honey’ VI(c/a)**

Parentage: ‘Thunderbolt’ × *L.* × *kewense* ‘White Henry’

R: G. Brown (1981), G: G. Brown (1983), N: G. Brown (1983), I: G. Brown, REG: G. Brown (1987)

Inside deep orange in the throat shading upwards to a honey colour and then to almond, which fades to white with age at tips; outside light orange, midribs green; spots absent; nectaries orange; pollen starts orange and becomes dark brown. Fls 180 mm wide; tepals 60 × 25 mm, margins not or very slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 25 mm, mid green. Stems 1.65 m, mid green, with up to 17 or more fls. Mid to late July.

**‘Hephaestus’ III(c/d)**

See *L.* × *testaceum* ‘Hephaestus’.

**‘Hera’ I(a/b)**

Parentage unknown

R: S. en S. V.o.f. (pre 1984), N: S. en S. V.o.f., REG: J.J. Schouten (2002)

Inside light/moderate pink (50D/51D) on a white ground, tepal-tips strong pink (54C) ageing to light/pale purplish pink (55C/D), throat pale yellow-green (155A); outside of outer tepals deep purplish pink (54B), deep/moderate pink (51C/D) along midribs, greenish on midribs, outside of inner tepals strong pink (54C), towards tip deep purplish pink (54B), midribs greenish; spots and papillae present; pollen orange-brown; stigma red-purple. Tepal-margins ruffled, tips recurved. Stems mid green with brownish purple spots.

**‘Herakles’ VI(-/-)**

Parentage: ‘Heidelberg’ × ‘Lednice’

R: V. Strasser (1988), G: V. Strasser (1991), N: V. Strasser (1996), REG: V. Strasser (1997)

Inside white, throat greenish yellow; nectaries green; pollen light brown. Tepals 120 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 200 × 23 mm, dark green. Stems 2 m, rather dark green, with c.58 fls. Mid July.

**‘Heraklion’ I(a/b)**

Parentage: seedling OR 90-10 × seedling G 91-4

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1994), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid orange (28B), throat light orange (28D); outside strong orange (25B), midribs light yellow-green (144D) with pale orange-yellow (24D) along midribs and vivid orange-pink (28A) towards tepal margins; spots absent; papillae vivid orange (28B); nectaries vivid yellowish orange (30C); pollen dark red (183B); stigma deep red (60A). Fls 145 mm wide; tepals 100 × 55 mm, margins smooth, tips slightly recurved. Lvs 180 × 16 mm. Stems 1.2 m, green, with c.7 fls.

**‘Herald’ IV(-/d)**

Parentage: complex *parryi* × *humboldtii* hybrid

R: J. de Graaff (c. 1965), N: J. de Graaff  
Fls yellow.

**‘Herald’ I(a/-)**

Syn. of ‘Inferno’.

**Herald Angel Group VI(a/a)**

Parentage unknown

R: Cebeco Lilies, Inc. (pre 1997), N: Cebeco Lilies, Inc., REG: ICRA (1998)

Fls white with yellow throat, slightly scented; pollen orange. Stems 1.2 m. Late.

**‘Herbstsonne’ I(b/-)**

Parentage unknown

R: C. Feldmaier (pre 1976), N: C. Feldmaier

Fls orange; spots small, brown. Stems 0.9 m. Aug.  
Syn.: ‘Finale’; ‘Schlusslicht’.

**‘Herbstsonne’ I(a/-)**

Parentage unknown

R: H. Böhm (pre 1995), N: H. Böhm

Fls light yellow with a reddish centre; spots brown. Stems 1.3 m. Aug.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in German Lily Group sales list, 1995.)

**‘Herc Henry’ IX(c/d)**

See *superbum* ‘Herc Henry’.

**‘Hercules’ (Bischoff-Tulleken) I(a/-)**

Parentage: selection from Yellow Blaze Group

S: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken

Lelies B.V. (1980)

Fls brilliant greenish yellow (6B), heavily spotted; anthers pale brown. Stems 0.9 m.

(Unacceptable name: ICNCP, 2004: Art. 27.1

- name already used for another lily. Published in *Bloembollencultuur*, September 1980. See note under 'Hercules' (Windus).)

### 'Hercules' (Ryder) VI(-/a)

Parentage: *regale* × *longiflorum*

R: Mrs Ryder, G: Mrs Ryder, I: F.M. Abbey (1955),

REG: (1985)

Fls white, throat yellow. Stems 1-1.2 m. July.

(Published in *Gardenside Gossip* 21, fall 1955. See note under 'Hercules' (Windus).)

### 'Hercules' (Windus) I(b/-)

Parentage: *lancifolium* × unknown

R: W. Windus (c. 1970), N: W. Windus, REG: W.

Windus (1978)

Fls vivid reddish orange (34A) to vivid reddish orange (32A), each tepal spotted for two-thirds of length; pollen vivid reddish orange (34A). Stems 1 m, with bulbils.

(Published in *Lilies and other Liliaceae*, 1978/9: 109. Unfortunately, two cvs with the epithet 'Hercules' have been registered, and a third one has been rejected for registration. To distinguish them, the name of the raiser is appended to each one and should be thus cited when the names are used - see ICNCP, 2004: Art. 27.5.)

### 'Herena' VI(-/a)

Parentage: *henryi* × *regale*

R: Saatzucht Zierpflanzen Erfurt (1983), G: Saatzucht Zierpflanzen Erfurt (1986), N: Saatzucht Zierpflanzen Erfurt, REG: Institut für Gemüse- und Zierpflanzenbau Grossbeeren Erfurt (1994)

Inside orange-yellow, tepal-tips vivid orange-yellow (21A), throat brilliant orange (25C); outside light orange-yellow (23C), midribs deep purplish red (61A); spots absent; nectaries strong yellow-green (144A); pollen golden yellow-brown. Fls 175 mm wide, weakly scented; tepals 105-110 × 20-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 17 mm, mid green. Stems 1.5 m, dark green, with 20-23 fls. Mid July.

### HERETIC I(a/b)

Trade designation of 'Kecseris'.

### 'Her Grace' I(a/b)

Parentage: yellow-flowered seedling × 'Golden Coronet'

R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1993)

Inside and outside vivid yellow (12A), midribs brilliant yellow (12B) suffused with strong yellow-green (144A) at base and top; spots absent; pollen strong orange (24A); stigma brilliant yellow (7A). Fls 160 mm wide; tepals 90 × 38 mm. Lvs scattered, 155 × 38 mm, mid green. Stems 0.7 m, mid green, with c.15 fls.

### 'Heritage' I(a/b)

Parentage: 'Harmony' × 'Byam's Ruby'

R: Oregon Bulb Farms, Inc. (1968), N: Oregon Bulb Farms, Inc. (1979), I: Oregon Bulb Farms, Inc. (1980), REG: Oregon Bulb Farms, Inc. (1980)

Fls vivid reddish orange (44C) except for a deep yellowish pink (44D) throat; spots small, strong red (46A); nectaries yellow-green; pollen dark reddish orange (172B). Fls 100 mm wide; tepals 100 × 40 mm, slightly recurved. Lvs scattered, 120-140 × 20 mm, pale green. Stems 0.75 m, light green, with 8-20 fls. June to July.

### 'Hermagor' VI(-/a)

Parentage: seedling 9/83 × 'Glockenturm'

R: V. Strasser (1983), G: V. Strasser (1986), N: V. Strasser (1996), REG: V. Strasser (1997)

Inside cream, throat yellow; outside cream, midribs reddish brown; nectaries green; pollen yellow. Tepals 115 × 32 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 12 mm, dark green. Stems 1.3 m, rather dark green, with c.25 fls. Early July.

### 'Hermes' I(b/b-c)

Parentage unknown

R: W. Windus (c. 1976), G: W. Windus (c. 1978), N: W. Windus (1980), I: Borbeleta Gardens (1981), REG: W. Windus (1985)

Tepals brilliant yellow (7A), each flushed with vivid orange-yellow (23A) for a half to two-thirds (more on outer tepals), throat light yellow-green (145B); spots scattered, mid brown; nectaries light yellow-green (145B); pollen moderate orange (167B). Fls 100 mm wide; tepals 86 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 125-150 × 10 mm, mid to dark green. Stems 1.3-1.45 m, dark, with c.20 fls. Late June to July. Syn.: 'Atlas'.

(First marketed and listed in *Borbeleta Gardens Cat.*, 1981 under the unacceptable epithet 'Atlas'.)

### 'Hermitage' VII(a/b)

Syn. of 'Cassini'.

### 'Heroic' I(a/-)

Syn. of 'Harvest'.

### 'Herold' I(a/-)

Parentage: hybrid involving  *davidii*,  *lancifolium* &  *L. × maculatum*

R: C. Feldmaier (1964), N: C. Feldmaier (1977), I: C. Feldmaier (1978), REG: C. Feldmaier (1978)

Fls vivid orange (28A); heavy brown spotting on almost the whole of each tepal; nectaries vivid orange (28A); pollen red-orange. Tepals 70 mm long, tips rounded. Lvs bright green. Stems 1.2 m, green tinged with brown, with up to 14 fls.

(Published in *Lilies and other Liliaceae*, 1978/9: 109.)

### 'Heros' I(b/b-c)

Parentage: 'Alkestios' × 'Noris Star'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1996), REG: B. Mičulka (1996)

Inside orange-red, centre redder, throat paler; outside with mahogany ribs at base; spots fairly numerous, large, brown-red, on three-fifths of each tepal; nectaries with white and orange hairs; pollen chocolate-brown; stigma pale orange-red. Fls 135 mm wide; tepals 115 × 42 mm, slightly recurved; pedicels 80 mm long, strongly dotted dark brown. Lvs scattered, 160 × 13 mm, dull dark green. Stems 0.9 m, black-dotted, very thick. Late June.

**‘Herta’ I(b-c/-)**

Parentage: ‘Pink Champagne’ × Hallmark Group  
R: A. Weinreich (pre 1989), N: A. Weinreich  
Fls rose-pink. Stems 1 m. Early July.

**‘Herta Rozentäle’ I(a/c)**

Parentage: ‘Polimja’ × (‘Olga’ × ‘Connecticut King’)  
R: D.-V. Škimele (1982), G: D.-V. Škimele (1984), N: D.-V. Škimele (1988), REG: D.-V. Škimele (2001)  
Inside orange-yellow flushed with maroon, tepal-tips orange, throat light red; outside tangerine-orange, midribs brownish yellow; spots dark red, on two-thirds of each tepal; nectaries light yellow, hairy; pollen light brown; stigma dark red. Fls 150 mm wide; tepals 75 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 13 mm. Stems 1 m, green, with c.11 fls. Early to mid July.  
(Published in *Lilium Balticum Lily Register*, 1994.)

**‘Hesara’ VI(-/-)**

See *L. × aurelianense* ‘Hesara’.

**‘Hesperos’ I(c/-)**

See *L. × scottiae* ‘Hesperos’.

**‘Heureka’ I(a/-)**

Parentage: Pastel Group × ‘Connecticut King’  
R: V. Jošt (1971), G: V. Jošt (1975), N: V. Jošt (1984), I: V. Jošt (1984), REG: V. Jošt (1984)  
Inside strong pink (48C/D), throat light orange-yellow (22B) with a pink overlay; outside strong pink (48D) with a green overlay; spots linear, dark red (187A), scattered; nectaries frosty strong yellow-green (145A); pollen moderate orange (170B). Fls 125 mm wide; tepals 76 × 34 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 11 mm, dark green. Stems 0.65-0.75 m, mid green, with c.6 fls. June.

**‘Hexentanz’ I(b/I)**

Parentage: ‘Sun Ray’ × down-facing, orange-flowered, Asiatic seedling  
R: F. Ewald (1979), G: F. Ewald (1983), N: G. & F. Ewald (1985), I: G. & F. Ewald (1988), REG: G. & F. Ewald (1988)  
Strong reddish orange (31B), throat vivid reddish orange (32A); outside strong yellowish pink (32C); spots dark red (187A), on all but tips of tepals; nectaries greenish white; pollen strong orange (169B). Tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 12 mm, mid green. Stems 0.8 m, reddish brown, with c.15 fls in an infl. which measures half the height of the plant. July.

**‘Hexentanzplatz’ I(a/c)**

Parentage: ‘Rubinstern’ × ‘Darja’  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)  
Inside moderate purplish red (184D), tepals narrowly edged with pale yellow (20D); spots very numerous, medium sized, dark purple (79A), on basal three-quarters of each tepal; nectaries greenish white (157D); pollen deep purplish red (187D); stigma deep red (185A). Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 90 × 20 mm. Stems 1 m, dark green. Mid to late July.  
(Hexentanzplatz is a location in the Harz Mountains, Germany. Nomenclatural standard: colour print provided by registrant (WSY 0024689).)

**‘Hiawatha’ I(b/-)**

Parentage: (‘Edith Cecilia’ × ‘Rosabelle’) × red-flowered *lancifolium* seedling ex Lamb  
R: L. Koehler, N: L. Koehler, I: J. Wadekamper (1975), REG: J. Wadekamper (1975)  
Inside brick-red, tepal-tips dark, throat yellow; outside light red; lightly spotted; pollen brown. Lvs dark. Stems 1.2 m. July.  
(Published in *Lilies and other Liliaceae*, 1975: 92.)

**‘Hidden Treasure’ I(a/-)**

Parentage: yellow-flowered seedling × ‘Senhora Alice’  
G: M.D. Holloway, N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)  
Inside tangerine (as fl. fades, the colour becomes more golden), tepal-tips and mid section of tepals darker, throat creamy; spots few, dark brown, on mid section of tepals; nectaries frosted cream; pollen golden. Fls 170 mm wide; tepals 85 × 45 mm, margins smooth, tips slightly reflexed. Lvs scattered, 140 × 9 mm, mid green. Stems 0.73 m, mid green, with c.9 fls. Early July to early Aug.  
(Original seed from the NALS seed exchange, 1992.)

**‘Hidden Valley’ VII(b/b)**

Parentage unknown  
R: Mak-Leek Inc. (1991), G: Mak-Leek Inc. (1994), N: Mak-Leek Inc. (1999), REG: Mak-Leek Inc. (2003)  
Inside yellowish white (155B), midveins pale greenish yellow (2D) fading towards top; outside yellowish white (155B), tepal-tips strong yellow-green (144A); spots moderate reddish brown (166B) on two-thirds of each tepal; papillae yellowish white (155B) and pale greenish yellow (2D) in throat; nectaries strong yellow-green (144B); pollen dark reddish orange (175B); stigma dark red (187A). Fls 210 mm wide; tepals 105 × 40-55 mm. Lvs 180 × 50 mm, dark green. Stems 1.15 m, green, with 9 fls. Late.

**‘Hideko’ I(a/-)**

Parentage unknown  
R: E. Doerr (pre 1998)  
Fls pale orange-yellow (159B/C). Stems 1.25 m with up to 22 fls.

**‘High and Low’ IX(c/d)**

See *martagon* var. *album* ‘High and Low’.

**‘High Class’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Testcentrum voor Siergewassen B.V. (c. 1994), N: Marklily B.V. (2000), I: Marklily B.V. (2000), REG: Marklily B.V. (2000)

Inside moderate reddish orange (35A); outside moderate red (185B), tepals stronger coloured towards edges and tip; spots dark red (187A) on up to a third of each tepal; papillae few, in the throat; nectaries white-hairy; pollen moderate orange (167A); stigma dark red (187B). Fls 185 mm wide; tepals 100–105 × 40–55 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 25 mm. Stems 1–1.25 m, green with darker markings, with c.4–6 fls.

**‘Highdown’ VII(-/b)**

See *L. × parkmanii* ‘Highdown’.

**‘Highdown Sunrise’ VI(c/d)**

Parentage: *henryi* × ‘T.A. Havemeyer’  
R: F.C. Stern (c. 1958), N: F.C. Stern  
C 1966, AM 1967

Fls Marigold Orange (HCC 11/1). Tepals narrow, recurved.

**‘High Flight’ I(a/b)**

Parentage: ‘Rhodos’ × black-red-flowered Fellner Asiatic seedling

R: A.J. Burnett (1989), G: A.J. Burnett (1992), N: A.J. Burnett (1995), I: A.J. Burnett (1995), REG: A.J. Burnett (1995)

Inside black-red (blackier than dark purple (79A)), dark red (187A) or dark greyish reddish brown (200A), tepal-tips deep red (53A); outside of each tepal with deep red (53A) midribs and black-red margin; each tepal with 12–15, slightly raised, black papillae; nectaries frosted; pollen moderate red (179A). Fls 135 mm wide; tepals 70 × 32 mm, margins narrowly ruffled, tips slightly recurved. Lvs scattered, 110 × 12 mm, dark green. Stems just over 1 m, mottled dark red/light olive-grey (187A/197A) and dark green, with 13–15 fls. July.

**‘Highland Fling’ I(c/b)**

Parentage unknown

R: R.A. Prochaska, G: R.A. Prochaska, N: Hartle-Gilman Gardens (1996), I: Hartle-Gilman Gardens (1996), REG: Hartle-Gilman Gardens (1996)

Inside strong reddish orange (42B); outside strong and deep yellowish pink (37B & 39B), inner tepals edged and ribbed yellow, outer tepals tipped yellow; sparsely spotted in throat; nectaries slightly frosted; pollen red like the tepals; style and stigma soft red. Tepals 82 × 38 mm, margins slightly ruffled, tips slightly recurved (outer tepals more so). Lvs scattered, 84 × 19 mm, moderate yellow-green (147B). Stems c.1 m, green and dark brown, with c.16 fls.

**‘High Light’ I(a/-)**

Parentage unknown

R: H. Hörster (pre 1989), N: H. Hörster

Inside orange, midveins paler. Stems c.1 m, dark. Late June to early July.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Highlight’. This cv. was only brought to the attention of the ICRA after the registration of ‘Highlight’.)

**‘Highlight’ I(a/-)**

Parentage: ‘Connecticut King’ × Coronado Group  
R: Bischoff Tulleken Leliecultuur B.V. (1977), G: Bischoff Tulleken Leliecultuur B.V. (1980), N: Bischoff Tulleken Leliecultuur B.V. (1985), I: Bischoff Tulleken Leliecultuur B.V. (1987), REG: Bischoff Tulleken Leliecultuur B.V. (1988)

Inside strong orange (24A), with a ring of vivid orange (28B) blotches, and a few brown spots in the throat; outside strong orange to light orange-yellow (24A/C); pollen strong orange (168B). Fls 160 mm wide; tepals 65 × 40 mm. Lvs scattered, 150 × 20 mm. Stems 0.8 m, green, with c.6 fls. July.

**‘Highlights’ VII(a-b/b)**

Parentage unknown

R: unknown

Inside white, each tepal with a strong orange-yellow ray, fading towards top; pollen orange-red. Tepal-margins slightly ruffled, tips strongly recurved. Stems 1–1.2 m. Aug.

(Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to ‘Highlight’. Published in *The Lily Garden Cat.* 1996/97.)

**‘High Noon’ I(a/-)**

Parentage: selection from Stenographer Group

S: P.M. Byam (c. 1958), N: P.M. Byam

Fls vivid yellow (15B), deepening in centre to brilliant orange-yellow (21B).

(Published in *ILR* (1960).)

**‘High Note’ I(a/c)**

Parentage: (‘Vanguard’ × ‘Attila’) × white-flowered, up-facing Asiatic seedling

R: E.E. Fox (1994), G: E.E. Fox (1996), N: E.E. Fox (1998), I: Fox Lily Ranch (2002), REG: E.E. Fox (2001)

Inside light orange-yellow (22C), throat light orange-yellow (22C); outside light orange-yellow (22D), midribs moderate orange-yellow (165C); brushmarks dark red (187A), just above the nectaries; spots dark red (187A), medium sized, on either side of brushmarks; nectaries white-frosted; pollen vivid orange (28A); stigma strong reddish orange (31B). Fls 150 mm wide; tepals 75 × 22 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 22 mm. Stems 1.25 m, moderate olive-green (147A), with 16–18 fls. Mid July.

(Epithet reflects the brushmark shape that suggests a musical note, and the lily is tall.)

**‘High Style’ I(-/-)**

Parentage: ‘Connecticut King’ × unnamed seedling

R: Bischoff Tulleken Leliecultuur B.V. (1978), G:

Bischoff Tulleken Leliecultuur B.V. (1981), N: Bischoff

Tulleken Lieliecultuur B.V. (1986), I: Bischoff Tulleken Lieliecultuur B.V. (1987), REG: Bischoff Tulleken Lieliecultuur B.V. (1988)

Inside brilliant yellow (13B), each tepal with a long, orange-yellow flame, throat green; outside brilliant greenish yellow (6C), tepals with a broad, vivid yellow (12A) edge; spots tiny, brown, around the throat; pollen strong orange (168B). Fls 150 mm wide; tepals 85 × 40 mm, tips slightly recurved. Lvs scattered, 120 × 10 mm. Stems 1 m, pale yellowish green, with c.5-6 fls. June. Syn.: 'Nova Lux' (of Bischoff Tulleken).

(Submitted for registration as 'Nova Lux' but this epithet was rejected under ICNCP, 2004: Art. 19.13 - after 1959 a name must be in any language other than Latin. It appeared under this epithet in *ILR Twentieth Supplement*. It has now been renamed and registered as 'High Style'.)

#### 'Hikari' I(b/-)

Parentage: *L. × maculatum* 'Orange Queen' × *lancifolium* var. *flaviflorum*

Fls orange-yellow. Lvs glossy.

(Published in *LYB* 30: 59 (1967). Raised in Hokkaido, Japan before 1966.)

#### 'Hilde' I(a/b)

Parentage unknown

R: J. Boon (pre 1982), N: J. Boon, REG: J. Boon (1983)

Inside vivid yellow (12A), throat green; outside vivid yellow (9B) on a primrose-yellow ground; spots few, tiny; nectaries green-brown; pollen tangerine-orange. Fls 145 mm wide; tepals 85 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 11 mm, dark green. Stems 1 m, green and reddish, with 4-13 fls. Late June. Syn.: 'Haydee'.

#### 'Hilde Haber' II(-/-)

Parentage: *martagon* var. *cattaniae* × *tsingtauense*

R: J. Petruske, N: J. Petruske, REG: ICRA (1996)

Fls carmine-red, tepal-tips darker; spotted; pollen apricot. Stems 1 m. Late June.

(Published in German Lily Group sales list, 1994.)

#### 'Hillcrest Cynthia' I(a-b/b)

Parentage unknown

R: D. Putland (1990), G: Hillcrest Harmony Flowers (1992), N: Hillcrest Harmony Flowers (1995), I: Hillcrest Harmony Flowers (2005), REG: D. Putland (2005)

Inside strong orange (25B) changing to pale orange-yellow (24D) in apical half of tepals; outside light orange-yellow (25D), midribs of inner tepals overlaid with green, midribs of outer tepals brilliant orange (29C); spots elongated, dark red (59A) on basal third of each tepal; nectaries green; pollen vivid reddish orange (32A); stigma strong red (51A). Fls 172 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved; pedicels with secondary buds. Lvs scattered, 125-170 × 13-26 mm, glossy. Stems 1.1-1.2 m, green with brown streaks, with some bulbils, and with c.25 fls. July.

(Named after the raiser's daughter. Nomenclatural standard: colour photograph provided by registrant (WSY 0096422).)

#### 'Hille' I(a-b/c)

Parentage unknown

R: D.-V. Škimele (1996), G: D.-V. Škimele (1998), N: D.-V. Škimele (2001), REG: D.-V. Škimele (2004)

Inside soft apricot, each tepal with darker base and paler tip; outside soft apricot, midribs light green; spots absent; nectaries cream; pollen bright orange-red; stigma dark brownish red. Fls 145 mm wide; tepals 75 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 10 mm. Stems 0.7 m, green, with c. 8 fls. Mid July. (Published in *Lilium Balticum Lily Register*, 2002.)

#### 'Hilton Beauty' VI(b/b)

Parentage: pink-flowered trumpet seedling × yellow-flowered trumpet seedling

R: M.E. Rollinson (1996), G: M.E. Rollinson (1999), N: M.E. Rollinson (1999), I: M.E. Rollinson, REG: M.E. Rollinson (2002)

Inside vivid yellow (9A); outside vivid yellow (9A) with tepal-margins and midribs deep purplish red (61A); unmarked; nectaries strong yellow-green (144B); pollen vivid orange-yellow (23A); stigma light purple (75B). Fls 185 mm wide, strongly scented; tepals 123 × 36-55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 112 × 15 mm. Stems 0.95-1 m, strong yellowish green (141C), with 10-15 fls. Jan. (New Zealand).

(The Hilton Highway, Timaru, New Zealand is the location of a property of the registrant, where most of his lily breeding has been done. Nomenclatural standard: colour print provided by registrant (WSY 0032038).)

#### 'Hilton Deluxe' VI(b-c/a)

Parentage unknown

R: M.E. Rollinson, G: M.E. Rollinson (1997), N: M.E. Rollinson (1998), I: M.E. Rollinson (1999), REG: M.E. Rollinson (2002)

Inside dark purplish pink (186C), throat brilliant greenish yellow (2B); outside dark purplish pink (186C); unmarked; nectaries strong yellow-green (144B); pollen strong orange (168A); stigma dark red (187A). Fls 125 mm wide; tepals 138 × 32-48 mm, margins smooth, tips slightly recurved. Lvs scattered, 78 × 8 mm. Stems 0.85-0.9 m, pale green (189C) speckled with dark purplish pink (184C), with 8 or more fls. Jan. (New Zealand). (Epithet: see note under 'Hilton Beauty'. Nomenclatural standard: colour print provided by registrant (WSY 0032033).)

#### 'Hilton Dream' VI(b/b)

Parentage: pink-flowered seedling × Copper King Group R: M.E. Rollinson (1996), G: M.E. Rollinson (1999), N: M.E. Rollinson (1999), I: M.E. Rollinson (1999), REG: M.E. Rollinson (2002)

Inside dark purplish pink (186C), throat brilliant yellow (13B); outside moderate purplish red (186B); unmarked; nectaries brilliant yellow (13B); pollen vivid orange-yellow (23A); stigma moderate purplish red (186A). Fls 174 mm wide, slightly scented; tepals 135 × 32-52 mm, margin smooth, tips slightly recurved. Lvs scattered, 87 × 6 mm. Stems 1.7-1.8 m, pale green (189C) mottled with

dark red (59A), with 12-15 fls. Jan. (New Zealand). (Epithet: see note under 'Hilton Beauty'. Nomenclatural standard: colour print provided by registrant (WSY 0032041).)

**'Hilton Green' VI(b-c/a)**

Parentage: unnamed seedling × *leucanthum* var. *centifolium* 'Black Dragon'  
R: M.E. Rollinson (1994), G: M.E. Rollinson (1997), N: M.E. Rollinson (2001), I: M.E. Rollinson (2002), REG: M.E. Rollinson (2002)

Inside greenish white (155C), throat strong yellow-green (145A); outside greenish white, midribs tinged with moderate purplish red (185C), especially at base; unmarked; nectaries strong yellow-green (145A); pollen moderate orange (168C); stigma strong yellow-green (145A). Fls 155 mm wide, very faintly scented; tepals 115 × 14-42 mm, margin smooth, tips slightly recurved. Lvs scattered, 85 × 13 mm. Stems 1.2 m, dark red (59A) with a grey undertone, with 8-15 fls. Dec. (New Zealand). (Epithet: see note under 'Hilton Beauty'. Nomenclatural standard: colour print provided by registrant (WSY 0032039).)

**'Himalaya' VII(-/d)**

Parentage: 'Star Gazer' × *L. × parkmanii* 'Allegra'  
R: Lybelmex Hillegom B.V. (1981), G: Lybelmex Hillegom B.V. (1984), N: Lybelmex Hillegom B.V. (1987), I: Lybelmex Hillegom B.V. (1987), REG: Lybelmex Hillegom B.V. (1988)

Inside ivory-white, midveins green at base, yellow above, throat greenish; outside of inner tepals ivory-white, of outer tepals ivory-white, with midrib shading from green to rosy; papillae many, especially near centre of fl.; pollen chocolate-brown. Fls 200 mm wide; tepals 130 × 70 mm, margins ruffled, tips strongly recurved. Lvs scattered, 200 × 65 mm. Stems 1.75 m, pale green, with 4-5 fls. July.

**'Hinamoto' V(b/a)**

See *longiflorum* 'Hinamoto'.

**'Hinemoa' VII(-/b)**

Parentage: *auratum* origin  
R: L.B. Tuffery (c. 1966), N: L.B. Tuffery  
Fls carmine. Fls large; tepals very wide. Stems very tall. Midseason. Typically *auratum* in form, foliage and growth.

**'Hinemoa' VII(-/l)**

Parentage: *L. × parkmanii* 'Beecher's Variety' × 'Susie Lambourne'  
R: W.A. Christensen, N: W.A. Christensen  
Fls salmon-pink, changing to old gold in throat. Stems 1.9 m.

**'Hinamoto' V(b/a)**

See *longiflorum* 'Hinamoto'.

**'Hir' Div. ?**

Given as a parent of 'Calabria'. No further details.

**'Hirado' Div. ?**

Given as a parent of 'Akiba-nishiki' and 'Benisugata', both raised by S. Tanabe et al. No further details.

**'Hiraito' I(c/-)**

Parentage: *leichtlinii* var. *maximowiczii* × *pumilum*  
R: H. Myodo (c. 1960), N: H. Myodo  
Fls lacquer-red.

**'Hirakoma' I(c/-)**

Parentage: *amabile* × *leichtlinii* 'Grandiflorum'  
Fls dark red; tepal-tips recurved.  
(Published in *LYB* 30: 59 (1967). Raised in Japan before 1966.)

**var. *hirsutum* IX(c/d)**

See *martagon* var. *hirsutum*.

**Hispanics Group I(a/-)**

Parentage: pink-flowered up-facing Asiatic seedling × 'Quadroon' & other red- or pink-flowered, up-facing Asiatics  
R: J.C. Ericksen (1984), G: J.C. Ericksen (1987), N: J.C. Ericksen (1991), REG: J.C. Ericksen (1991)  
Fls reddish pink to bicoloured rose/red, mixed with yellow; unspotted or with a few, small, red-brown spots on basal half of each tepal; nectaries creamy pink, frosted; pollen mostly dark red-brown. Tepals 65-75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.1 m, mostly dark brownish green, with 6-10 fls. Late July.

**'Hitfever' VIII(a-b/-)**

Parentage unknown  
R: H.P. Imanse B.V. (1997), G: H.P. Imanse B.V. (1998), N: A.J. van der Velde (1999), I: H.P. Imanse B.V. (2001), REG: H.P. Imanse B.V. (2002)  
Inside vivid reddish orange/strong reddish orange (34B/169A); outside strong reddish orange (34C); spots and papillae present; nectaries brownish green; pollen orange-brown; stigma orange. Fls 160 mm wide; tepals 110 × 80 mm, margins slightly ruffled, tips recurved. Lvs scattered, 150 × 30 mm. Stems 1 m, with dark spots and stripes, and with 5-7 fls. Early to midseason.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Hit Parade' VII(-/l)**

Parentage: 'Star Gazer' × pink-flowered seedling  
R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1988), I: J. Rooyackers (1990), REG: Bischoff Tulleken Lelies B.V. (1989)  
Inside strong to light purplish pink (63C/D), with an ivory-white blush and papillae near edges, throat brilliant yellow-green/strong greenish yellow (150C/151C); outside moderate purplish red (58A), inner tepals flushed with light to pale purplish pink (62C/D); pollen strong orange (169C). Fls 240 mm wide; tepals 110 × 55 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 95 × 40 mm, mid green. Stems 0.5 m, green with dark markings, and with c.3 fls. Aug.

**‘H.J. Elwes’ II(c/d)**

Parentage: presumed to be a seedling of *L. × dalhansonii* ‘Marhan’

R: C.G. van Tubergen, N: C.G. van Tubergen

Fls bronze-orange with dark red spots.

**‘Hnědka’ I(a-b/b-c)**

Parentage: (‘Korál’ × (‘Connecticut King’ × ‘Pink Champagne’)) × ‘Dagmar’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2001),

REG: B. Mičulka (2001)

Inside pale apricot, tinted beige, centre suffused and veined brown, tepal-tips and edges whitish, throat with felt-like papillae; outside paler, brownish and pinkish at base; spots relatively few, large, dark brown-crimson, on half of each tepal; nectaries white, felty; pollen orange-brown; stigma dark brown-crimson. Fls 145 mm wide; tepals 85 × 40 mm, tips slightly recurved; pedicels 80 mm long, thick, brown-spotted. Lvs scattered, 75 × 11 mm, dull dark green. Stems 0.75 m, thick, dark green. Mid June.

**‘Hoangho’ I(a/b)**

Parentage unknown

R: Fa Jaap Boon, G: Fa Jaap Boon, N: Fa Jaap Boon,

REG: Fa Jaap Boon (2000)

Inside vivid yellow (9B), outer tepals vivid yellow (9A), throat vivid yellow (9B) with pale yellow-green (4D) and a little strong yellow-green (143C) towards the edges; outside brilliant yellow (9C), with vivid yellow (9B) towards tepal-edges; spots and papillae absent; pollen dark reddish orange (175C); stigma moderate red/deep pink (180C/D). Fls 195 mm wide; tepals 100 × 30-45 mm, margins smooth, tips recurved. Lvs scattered, 175 × 22 mm. Stems 1.1-1.25 m, light green, with 5-10 fls.

**‘Hobbit’ I(a/-)**

Parentage: unnamed yellow-flowered seedling ex Piedmont Gardens × (‘Honey Queen’ × (Pastel Group × ‘Pirate’))

R: P.M. Johnson (1978), G: P.M. Johnson (1982), N:

P.M. Johnson (1986), REG: P.M. Johnson (1992)

Inside strong orange (26B), throat brilliant orange-yellow (23B); outside brilliant orange (25C); spots absent; nectaries small, frosted; pollen absent. Fls 100 mm wide; tepals 57 × 21 mm, margins smooth, tips not recurved. Lvs scattered, 49 × 14 mm, dark green. Stems 1.15 m, dark brown with green mottling, and with c.15 fls (including secondaries). July.

**‘Hobozi’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: P Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1998)

Inside strong purplish red (54A), tepal-bases pale yellow-green (155A); outside strong purplish red (54A) and pale purplish pink (56D); a few dark red (187A) spots and some papillae present; nectaries yellowish green; pollen orange-brown; stigma purple. Fls 140-200 mm wide; tepals 75-100 × 44-50 mm, margins smooth, tips slightly

recurved. Lvs scattered, 50-100 × 15 mm, mid green. Stems 0.28-0.45 m, green with dark stripes and spots, and with c.9 fls. June.

Syn.: ‘Madurodam’.

Trade designation: PETIT® PINK.

(First registered as ‘Madurodam’ by Hoff Quality First, and included in *ILR Seventeenth Supplement*. In 1995 Dutch PBR were granted under the epithet ‘Hobozi’ so this epithet must be accepted as the cv. epithet (ICNCP, 2004: Art. 24.4).)

**‘Hobuze’ I(a/b)**

Syn. of ‘Marlène’.

**‘Hobyza’ I(a/-)**

Parentage unknown

R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N:

Hoffgaarde B.V. (1989), I: Hoffgaarde B.V., REG: Hoff Quality First (1993)

Inside vivid reddish orange (33B) in basal part, moderate purplish red (59C) in apical part, throat dark red (59A); outside vivid to strong reddish orange (42A/B), tepal-edges dark red (59A), tinged with deep purplish red (59B) at base, strong yellow-green (143A) at top, the edge becoming dark red (187A) in basal part; pollen moderate reddish orange (171A); stigma moderate red (183C). Fls 170 mm wide; tepals 95 × 35 mm. Lvs scattered, 130 × 13 mm, mid green. Stems 0.9 m, pale green with darker markings, and with c.9 fls.

Syn.: ‘Simply Red’.

(Registered as ‘Simply Red’ in 1993 and included in *ILR Twelfth Supplement*. However, in 1994 Dutch PBR (LEL 985) were granted under the epithet ‘Hobyza’ and this latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Hochkönig’ VI(b/b)**

Parentage: ‘Henriette’ × ‘Lady Ann’

R: V. Strasser (1977), G: V. Strasser (1981), N: V. Strasser (1992), REG: V. Strasser (1992)

Inside light orange-yellow (22D), throat orange; outside greenish yellow, midribs green; nectaries green; pollen orange. Fls 150 mm wide; tepals 105 × 38 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 17 mm, dark green. Stems 1.9 m, with up to 20 fls. Late July to late Aug.

**‘Hočimin’ I(c/d)**

Parentage: gold-flowered *lancifolium* hybrid × unknown

R: B. Mičulka (1983), N: B. Mičulka

Fls apricot-orange with a brownish tint, tepal-tips and throat paler; spots numerous, dark violet, on half of each tepal; pollen reddish brown. Fls 100 mm wide; tepals 80 × 27 mm, tips recurved. Lvs 115 × 13 mm. Stems 1.3 m, violet-black. Early July.

**‘Hocozu’ I(a/b)**

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N:

Hoffgaarde B.V. (1993), I: Hoffgaarde B.V. (1996), REG: Hoffgaarde B.V. (1996)

Inside strong orange (169B), shading to moderate reddish orange (35A) towards tepal-tips which are vivid reddish orange (34A/B), throat strong orange (169D) with a deep red (53A) suffusion at edge and by nectaries; outside strong reddish orange (31B), tinged with light olive (152B) at base, strong reddish orange (31A) towards tepal-edges; spots dark red (187A) or dark greyish reddish brown (200A), on basal two-thirds of each tepal; papillae the same colour, few, in the throat; pollen strong/moderate reddish orange (169A/171A); stigma strong orange (170A). Fls 180-200 mm wide; tepals 100 × 30-53 mm, margins smooth, tips slightly recurved. Lvs scattered, 95-110 × 20 mm, mid green. Stems 1.3-1.4 m, pale green, with c.6-8 fls.

Syn.: 'Toro'.

Trade designation: **HOFFRICA® TORO**.

('Toro' (registered in 1994) and 'Hocozu' (registered in 1996) are synonymous. Normally the later epithet would be a synonym but because Dutch PBR (LEL 1172) were granted to 'Hocozu', this epithet must be accepted (ICNCP, 2004: Art. 24.4).)

#### 'Hoffnungsstern' I(b/c)

Parentage: 'Johanna' × Asiatic seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1995), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Tepals greyed white (156A) throughout except for greenish white (157A) tips and a few, small, deep purplish red (71A) spots on basal half; nectaries greyish yellow-green (194A); pollen strong brown (172A); stigma dark purple (79A). Fls 120 mm wide; tepals 55 × 25 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 16 mm. Stems 0.95 m, dark green to black, with c.10 fls. Late June.

#### **HOFFRICA®**

For information: **HOFFRICA®** is a registered trademark of Hoffgaard B.V.

#### **HOFFRICA® BLUE EYES I(a/-)**

Trade designation of 'Blue Eyes'.

#### **HOFFRICA® CANCUN I(a/-)**

Trade designation of 'Holecece'.

#### **HOFFRICA® COCO I(a/-)**

Trade designation of 'Coco'.

#### **HOFFRICA® DION I(a-b/c)**

Trade designation of 'Celine'.

#### **HOFFRICA® FIRE I(a/-)**

Trade designation of 'Fire'.

#### **HOFFRICA® LEMON TREE I(a-b/-)**

Trade designation of 'Lemon Tree'.

#### **HOFFRICA® MARRAKECH I(a/-)**

Trade designation of 'Marrakech'.

#### **HOFFRICA® TORO I(a/b)**

Trade designation of 'Hocozu'.

#### **HOFFRICA® VICKY I(a/-)**

Trade designation of 'Vicky'.

#### 'Hoffs Glorie' I(b/-)

Parentage: selection from Citronella Group

S: Fa P. Hoff & Zn (c. 1961), N: Fa P. Hoff & Zn

Fls brilliant orange-yellow (23B) in centre, with purple-brown dots; anthers reddish brown. Tepals slightly reflexed. Stems 1-1.2 m. July.

(Published in *LYB* 28: 134 (1965).)

#### 'Hokkaido' VII(b/b-d)

Parentage: seedling 405 × seedling 480

R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside light to pale purplish pink (62C/D), tepal-edges greenish white (155C), midveins suffused with light yellow (10C), throat strong to light yellow-green (145A/B) flamed light greenish yellow (5C/D); outside pale purplish pink (65C/D), midribs brilliant yellow-green (154C), tepal-tips suffused with strong yellow-green (144C) and basal parts greenish white (157D); spots moderate purplish red (59C), on basal half of each tepal; nectaries very pale green (189D); pollen strong reddish orange (169A). Fls 230 mm wide; tepals 115 × 60 mm, margins smooth, tips strongly recurved. Lvs scattered, 175 × 33 mm, mid green. Stems 1 m, green, with c.8 fls.

#### 'Hold' VI(a-b/c)

Parentage: cream-flowered trumpet lily × yellow-green-flowered trumpet lily

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005), REG: B. Mičulka (2005)

Inside pale yellow, tepal-tips whitish, throat yellow; outside yellow, midribs brownish; spots absent; nectaries dark green; pollen ochre-apricot; stigma green. Fls 135 mm wide, shortly trumpet-shaped; tepals 130 × 55 mm, margins ruffled, tips recurved; pedicels 55 mm long, thick, freely brown-dotted. Lvs scattered, 90 × 14 mm, dark green, slightly shiny. Stems 1.15 m, greyish, slightly brown-dotted. Early July.

#### 'Holea' I(a/-)

Parentage unknown

R: Fa P. Hoff & Zn (1973), N: Fa P. Hoff & Zn, I: Fa P. Hoff & Zn (c. 1977), REG: ICRA (1998)

Outer tepals vivid orange-yellow (21A) in the centre, edged vivid orange-yellow (23A), inner tepals somewhat duller, greenish orange around the nectaries; outside of outer tepals vivid yellow (15B/C), edged vivid to brilliant orange-yellow; nectaries more-or-less greenish yellow-orange. Stems green.

Trade designation: AMIGOS.

#### 'Holean' I(a/b)

Error for 'Holeaw'

**'Holeas' I(-/-)**

Parentage unknown

R: Hoffgaarde B.V. (pre 1993), N: Hoffgaarde B.V. (2002), REG: Hoffgaarde B.V. (2002)

Inside a little stronger coloured than vivid yellow (12A), throat light greenish yellow (5C); outside a little stronger coloured than vivid yellow (12A), midribs brownish orange (166C) at base; spots dark red (187A), on basal part of each tepal; pollen moderate reddish brown (175A); stigma dark red (187B). Fls 170 mm wide; tepals 90 × 40 mm. Lvs scattered, 120 × 20 mm. Stems 1.15 m, pale green with darker markings, and with c.7 fls. Stems 1.5m. Very late.

**'Holeaw' I(a/b)**

Parentage unknown

R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V., REG: Hoff Quality First (1993)

Inside moderate red to moderate purplish red (185B/C), tepal-edges and throat dark red (187B); outside dark red (187A/B), midribs moderate red (184B), fading to the top; spots dark greyish purple (202A) on two-thirds of each tepal; pollen dark reddish orange (175C); stigma moderate brown (165A). Fls 180 mm wide; tepals 90 × 35 mm. Lvs scattered, 150 × 13 mm, mid green. Stems 0.8-1 m, mid green with darker markings, and with 6-11 fls. Late July.

Trade designation: AMERICA.

(Registered in 1993 as 'Holean' and published as such in *ILR Twelfth Supplement*. However, in the same year Dutch PBR (LEL 876) were granted to this lily under the name 'Holeaw', and it is now known that 'Holean' was an error for 'Holeaw'.)

**HOLEB I(a/-)**

Trade designation of 'Festival'.

**'Holebaba' I(a/-)**

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1994)

Inside yellowish white (155D), with a pale yellow-green (155A) throat; outside pale yellow-green (155A), shading to yellowish white (155D) at tepal-edges, tips dark red (187B), midribs pale yellow-green (155A) shading to brilliant greenish yellow (6C) and strong yellow-green (144C) at top, darker at base; spots dark red (59A), above the nectaries; papillae yellowish white in the throat; pollen moderate orange/strong orange (167A/26A); stigma moderate reddish orange (173B). Fls 180 mm wide; tepals 90 × 50 mm. Lvs scattered, 90 × 15 mm, mid green. Stems 0.7 m, pale green with darker markings, and with c.6 fls.

Syn.: 'Inzell'.

(The USPP granted to 'Inzell' on 27 June 1995 is predated by the grant of Dutch PBR (LEL 1107) on 16 May 1995 under the epithet 'Holebaba', so the latter epithet must be accepted and 'Inzell' becomes a synonym (ICNCP, 2004: Art. 24.4).)

**'Holebb' I(a/-)**

Parentage unknown

R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1993), I: Hoffgaarde B.V. (1993), REG: Hoffgaarde B.V. (1998)

Inside orange-yellow (21A), each tepal shading to vivid yellow (17B) at the tip; outside vivid yellow (15B), each tepal shading to vivid yellow (17B) at the edges, outer tepals strong yellow-green (143B) at base and tip and with a dark red (187A) edge at the base; spots few, small; some papillae present; nectaries yellow-green; pollen deep orange-yellow (163A); stigma dark red (187B). Fls 135-190 mm wide; tepals 90-95 × 37-40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 90-112 × 15-18 mm, mid green. Stems 0.56-0.88 m, mid green, with c.7 fls. Midseason.

Syn.: 'Smash'.

Trade designation: LOTUS.

('Smash' (registered in 1994) and 'Holebb' (registered in 1998) are synonymous. Normally the later epithet would be a synonym but because Dutch PBR (LEL 881) were granted to 'Holebb', this epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Holebe' I(a-b/b-c)**

Error for 'Holebebe'.

**'Holebebe' I(a-b/b-c)**

Parentage unknown

R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V. (1994), I: Hoffgaarde B.V. (1995), REG: Hoffgaarde B.V. (1997)

Inside strong orange (25A), tepal-edges vivid orange (28B); outside strong orange (25A); spots few, small; some papillae present; nectaries orange; pollen brown-orange; stigma purple. Fls 200 mm wide; tepals 110 × 50 mm, margins very slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 0.9 m, green with dark markings, and with 4-6 fls. Early.

Trade designation: CHANEL.

(Included in *ILR Seventeenth Supplement* erroneously as 'Holebe'.)

**'Holebibi' I(a/b)**

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1994)

Inside yellowish white (155B), apical part of tepals suffused with deep red (60A); outside of inner tepals yellowish white (155D), with a quarter narrowly speckled moderate purplish red (64A), stronger at edges and with light yellow-green (145B) midribs; outside of outer tepals yellowish white (155D), from base to tip with a strong suffusion (20 mm wide) of light yellow-green (145B), apical parts with a narrow edging of moderate purplish red (64A) speckling; pollen dark reddish orange (175C); stigma light yellow-green (145C) and dark red (187C). Fls 180 mm wide; tepals 95 × 40 mm, margins smooth, tips recurved. Lvs scattered, 110 × 15 mm. Stems 0.5-0.7 m, green with some darker markings and 2-5 fls.

Trade designation: LOLLYPOP.

(Registered as 'Lollypop' in 1994 and included in *ILR Thirteenth Supplement* as such. However, in 1995 Dutch PBR (LEL 1104) were granted under the epithet 'Holebibi' which must be accepted as the cv. epithet (ICNCP, 2004: Art. 24.4). 'Lollypop' is the name under which this cv. is sold and so must be regarded as a trade designation, rather than a synonym.)

**'Holebobo' I(a/b)**

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1994)

Inside dark red (187A/B) in the basal part, strong red (46A) in apical part; outside deep red (185A) at tepal-edges in the basal third, shading to dark red and deep red (187B/185A), the apical two-thirds moderate red (179A/B); spots dark greyish purple (202A) on basal part of each tepal; pollen strong brown (172A); stigma moderate red (179A) and dark red (187A). Fls 180 mm wide; tepals 100 × 40 mm. Lvs scattered, 125 × 30 mm. Stems 0.72 m, green with some darker markings, and with c.6 fls.

Syn.: 'Stones'.

(Registered and included in *ILR Thirteenth Supplement*. However, in 1995 Dutch PBR (LEL1111) were granted to this cv. under the epithet 'Holebobo', and this latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Holebubu' I(a/b)**

Syn. of 'Zsazsa'.

**'Holecaca' I(a/c-d)**

Parentage: unnamed seedling × unnamed seedling

R: P. Hoff (1990), G: Hoffgaarde B.V., N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1997)

Inside vivid reddish orange/vivid red (42A/44A), base vivid yellowish pink (30C); outside vivid reddish orange/vivid red (42A/44A); spots few, small; some papillae present; nectaries light orange; stamens partially tepaloid, pollen orange; stigma dark purple. Fls double, 130 mm wide; tepals 100 × 40 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 1 m, green with darker markings, and with c.4-6 fls.

Trade designation: SPHINX.

**'Holecece' I(a/-)**

Parentage unknown

R: P. Hoff (1992), G: Hoffgaarde B.V., N: Hoffgaarde B.V. (1993), I: Hoffgaarde B.V. (1996), REG: Hoffgaarde B.V. (1996)

Inside vivid yellow (12A) in the basal part, strong orange (169B) in the apical part, tepal-tips a little darker, throat brilliant yellow (12B) and dark red (183B); outside strong reddish orange/strong orange (169A/B) on a moderate yellow (163C) ground (outer tepals yellow and narrowly edged strong orange (169B)); spots few, dark red (187A), in the throat; papillae few, also in the throat; nectaries white-hairy; pollen strong brown (172A); stigma

strong yellow (153D). Fls 180 mm wide; tepals 100 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm, mid green. Stems 1.1 m, green, with 8-10 fls.

Trade designation: HOFFRICA® CANCUN.

**'Holecici' I(a/-)**

Syn. of 'Blue Eyes'.

**'Holeq' I(a/b)**

Syn. of 'Colosseo'.

**Holland Festival Group VI(-/a)**

Parentage: Golden Splendor Group selection B.1 × Moonlight Group selection G.7

R: Gebr. N. & B. Laan & Zn (pre 1974), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1974)

Inside brilliant yellow (9C), midveins greenish; outside strong yellow-green (144B). Tepal-edges yellow.

(Published in *Lilies and other Liliaceae*, 1975: 92 as Holland Festival grex.)

**'Hollandia' VII(a/-)**

Parentage unknown

R: Trior Lelie B.V. (1983), G: Trior Lelie B.V. (1989), N: Trior Lelie B.V. (1992), I: Trior Lelie B.V. (1993), REG: Trior Lelie B.V. (1997)

Inside strong purplish red (64C), tepal-tips, margins and base white, throat purplish red; outside deep purplish pink (64D); spots and papillae present; nectaries greenish at first; pollen orange-yellow; stigma purplish red. Tepal-tips slightly recurved. Stems with c.5 fls. Late to very late.

**× hollandicum Bergmans I(a/b)**

Parentage: *bulbiferum* var. *bulbiferum* or *bulbiferum* var. *croceum* × *L. × maculatum*

AGM 1931

Fls brilliant yellows, oranges and reds. Stems 0.7-1.2 m. June to July.

Syn.: *L. umbellatum* hort., non Pursh

**× hollandicum 'Applegate's Variety' I(a/b)**

Parentage: selection from *L. × hollandicum*

(Published in *LYB NALS* 2: 126 (1949). No further details.)

**× hollandicum 'Apricot' I(a/b)**

Parentage: selection from *L. × hollandicum*

S: K. Zaadnoordijk, N: K. Zaadnoordijk

Fls clear apricot-yellow. Stems 0.4 m.

(Published in *Wallace Cat.*, 1928.)

**× hollandicum 'Cape Eagle' I(a/b)**

Parentage: selection from *L. × hollandicum*

S: H. Deleeuw Co. Ltd (c. 1962), N: H. Deleeuw Co. Ltd, I: D. Barnhoorn (1968)

Inside vivid orange (28B), throat pale yellowish orange; outside light orange (28C); spots present. Stems 0.8 m.

**× hollandicum 'Chief Chinook' I(a/b)**

Parentage: selection from *L. × hollandicum*

S: M. Searles, I: E.L. Kline (1937)  
Tepals apricot, shading to vivid reddish orange (33A) at tips.  
(Published in *LYB NALS* 2: 59 (1949).)

× *hollandicum* 'Christmas Red' I(a/b)  
Parentage: selection from *L. × hollandicum*  
R: R. Warner, N: R. Warner  
(Published in *Horsford Cat.*, 1952. No further details)

Parentage: selection from *L. × hollandicum*  
S: unknown  
AMH 1925  
Fls clear golden yellow, tepals tipped with scarlet and speckled crimson. June.  
Syn.: 'Gulden Vlies'.  
(Published in *Wallace Cat.*, 1924.)

× *hollandicum* 'Grandiflorum' I(a/b)  
Parentage: selection from *L. × hollandicum*  
S: unknown  
Fls orange, shading to red at tepal-tips. June.

× *hollandicum* 'Hannah Dustin' I(a/b)  
Parentage: selection from *L. × hollandicum*  
S: unknown  
Fls light orange-yellow to near red at tepal-tips. June.  
(Published in *Gardenside Cat.*, 1950.)

× *hollandicum* 'Incomparable' I(a/b)  
Parentage: selection from *L. × hollandicum*  
R: J.H. Krelage (1871)  
Fls dark scarlet-red, each tepal with a yellow central streak; spots black. Stems 0.6 m.  
(Published in Elwes, *Monograph of the genus Lilium*, t.20 (1878) as *umbellatum* var. *incomparabile*. Raised by J.H. Krelage in 1871 (see Barr & Sugden Cat, 1871) as *davuricum* 'Incomparable'.)

× *hollandicum* 'Invincible' I(a/b)  
Parentage: selection from *L. × hollandicum*  
S: K. Zaadnoordijk, N: K. Zaadnoordijk  
AMH 1937  
Fls rich, clear orange, tepal-tips red. Tepals broad.  
(Published in *Wallace Cat.*, 1928.)

× *hollandicum* 'Mahogany' I(a/b)  
Given as a parent of 'Red Night' (of Laan). No further details. Perhaps an error for *L. × maculatum* 'Mahogany'.

× *hollandicum* 'Monarch' I(a/b)  
Parentage: selection from *L. × hollandicum*  
S: S.J. Schoon, N: S.J. Schoon  
AMH 1926  
Fls mahogany-red, with gold sheen in centre.  
(Published in *LYB* 7: 147 (1938) without description.)

× *hollandicum* 'Moonlight' I(a/b)  
Syn. of 'Moonlight'.

× *hollandicum* 'Mystic Cherry' I(a/-)  
Parentage: dark-flowered *L. × hollandicum*, self-pollinated  
R: N.A. Lamb (c. 1960), N: N.A. Lamb  
Fls cherry-red. Lvs scattered, dark green. Stems 0.8 m.  
Late June.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)

× *hollandicum* 'Orange Brilliant' I(a/b)  
Parentage: selection from *L. × hollandicum*  
S: K. Zaadnoordijk, N: K. Zaadnoordijk  
Fls brilliant orange, shading to crimson.  
(Published in *Constable Cat.*, 1933/34.)

× *hollandicum* 'Orange King' I(a/b)  
Parentage: selection from *L. × hollandicum*  
S: K. Zaadnoordijk, N: K. Zaadnoordijk  
AMH 1938  
Fls deep orange; spots brown.

× ***hollandicum*** ‘Prince of Wales’ I(a/b)

Parentage: selection from *L. × hollandicum*  
S: K. Zaadnoordijk, N: K. Zaadnoordijk  
Fls orange-yellow, spotted in throat.  
(Published in *Constable Cat.*, 1931/32.)

× ***hollandicum*** ‘Refulgence’ I(a/b)

Parentage: selection from *L. × hollandicum*  
S: unknown  
Fls rich golden orange-crimson.  
(Published in *Constable Cat.*, 1937.)

× ***hollandicum*** ‘Sappho’ I(a/b)

Parentage: selection from *L. × hollandicum*  
S: unknown  
Fls orange, flushed with red at tepal-tips; spots present.  
June.  
(Published in F.W. Burbidge, *Cultivated Plants*, 371 (1877).)

× ***hollandicum*** ‘Satan’ I(a/b)

Syn. of ‘Satan’.

× ***hollandicum*** ‘Splendid’ I(a/b)

Parentage: selection from *L. × hollandicum*  
S: K. Zaadnoordijk, N: K. Zaadnoordijk  
AMH 1923, FCCH 1925  
Fls brilliant vermilion-orange, shading to coppery crimson, nearly unspotted. Tepal-tips reflexed.  
(Published in *Wallace Cat.*, 1923.)

× ***hollandicum*** ‘Thalia’ I(a/b)

Parentage: selection from *L. × hollandicum*  
S: K. Zaadnoordijk, N: K. Zaadnoordijk  
AMH 1937  
Fls copper-orange, spotted with brown.  
(Published in *Constable Cat.*, 1933/34.)

× ***hollandicum*** ‘Variegated’ I(a/b)

Parentage: selection from *L. × hollandicum*  
S: unknown  
(Published in *Strawberry Hill Cat.*, 1953. No further details.)

× ***hollandicum*** ‘Vermilion Brilliant’ I(a/b)

Parentage: selection from *L. × hollandicum*  
S: K. Zaadnoordijk, N: K. Zaadnoordijk  
AM 1926  
Fls crimson-blood-red. Stems 0.4 m.  
(Published in *Wallace Cat.*, 1927.)

× ***hollandicum*** ‘Violet Niles Walker’ I(a/b)

Syn. of *L. × maculatum* ‘Violet Niles Walker’.

× ***hollandicum*** ‘West Burke’ I(a/b)

Parentage: selection from *L. × hollandicum*  
(Discovered in a Vermont (USA) garden by W.C. Horsford. Published in *Horsford Cat.*, 1950/51. No further details.)

× ***hollandicum*** ‘William Craig’ I(a/b)

Parentage: *L. × hollandicum* ‘Apricot’ × *L. × hollandicum* ‘Orange King’  
R: L. Vasseur (c. 1943), N: L. Vasseur  
Fls orange-yellow; spots absent. Stems 0.6-0.8 m, with up to 6 fls.  
Syn.: *L. × hollandicum* ‘W.N. Craig’.  
(Published in *Sandyloam Cat.*, 1944.)

× ***hollandicum*** ‘W.N. Craig’ I(a/b)

Syn. of *L. × hollandicum* ‘William Craig’.

‘Holland’s Glory’ V(-/a)

See *longiflorum* ‘Holland’s Glory’.

‘Höllenfürst’ I(a/-)

Parentage unknown  
R: K. Wittneben, N: K. Wittneben, I: K. Wittneben (pre 1970), REG: K. Wittneben (1985)  
Tepal-tips vivid red (45A), throat vivid reddish orange (40B); outside strong reddish orange (31B); spots small, purple; nectaries moderate purplish pink (54D); pollen strong brown (172A). Fls 130 mm wide; tepals 85 × 45 mm, margins smooth, tips not recurved. Lvs scattered, mid green. Stems 0.55 m, dark green, with c.5 fls. Early June.  
(Published in *Iris & Lilien*, 1972.)

‘Hollfeld’ Div. ?

Given as a parent of ‘Mainau’. No further details.

‘Hollisii’ V(-/a)

Syn. of *longiflorum* ‘Howardii’.

Hollywood Group I(-/-)

Parentage: Preston Group × Mid-century Group  
R: J. de Graaff (c. 1946), N: J. de Graaff  
Wide range of colours and fl. types.  
(Published in *Oregon Bulb Farms Cat.*, 1951. In *LYB* 30: 28 (1966), J. de Graaff & E. Hornback give the parentage as ‘Lilian Cummings’ × ‘Umbtig 8’.)

‘Holubice’ VI(b-c/b-c)

Parentage: (‘Oneida’ × Apricot Trumpets Group) × (‘Henrietina’ × Palmer’s selection no. 56227)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2001), REG: B. Mičulka (2001)  
Inside creamy with a greenish tint, tepal-tips white, throat and centre yellowish; outside with greenish midribs, marbled brown; spots absent; nectaries green; pollen brown; stigma green. Fls 120 mm wide; tepals 95 × 38 mm, moderately recurved (the outer tepals more so); pedicels 100 mm long, slightly brown-dotted, with some secondary buds. Lvs scattered, 140 × 15 mm, dull yellowish green. Stems 1.15 m, green. Late July.

‘Home Again’ I(b/-)

Parentage: ‘Edna Kean’ × unknown  
R: P.H. Wright, N: P.H. Wright  
No further details.

**'Honey Bear' I(a,b/b)**

Parentage: *L. × maculatum* 'Helen Carroll' × unknown  
 R: E.H. Doerr (c. 1966), N: E.H. Doerr  
 Fls honey and amber-orange. Stems 0.3 m. Long flowering period.  
 (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 7 (1978).)

**'Honeyboy' II(-/-)**

See *L. × dalhansonii* 'Honeyboy'.

**'Honeybunch' I(b/c)**

Parentage: (*cernuum* × unknown) × unknown  
 R: J. Barber, N: A.J. Porter (1974), I: A.J. Porter (1975), REG: A.J. Porter (1975)  
 Inside light orange-yellow (22C), tepal-tips light yellowish pink (38C), throat deep purplish pink (58D); outside moderate yellowish pink (38B); spots absent; nectaries light yellowish pink (38C); pollen moderate reddish orange (171A). Lvs narrow, strong yellow-green (144A). Stems 0.4-1 m. July.  
 (Published in *Lilies and other Liliaceae*, 1975: 93.)

**'Honey Creme' I(b/b)**

Parentage unknown  
 R: E. Tesca (1965), N: E. Tesca (1970), REG: R. & H.R. Cocker (1977)  
 Inside light yellow (15D) with dark cream shading, throat light yellow (21D), tepal-tips and outside light yellow (15D); spots dark maroon on basal half of each tepal; nectaries white; pollen dark reddish brown. Lvs long and narrow. Stems 1-1.2 m.  
 (Published in *Lilies and other Liliaceae*, 1977: 78.)

**'Honeydew' VI(-/a)**

Parentage: Aurelian origin  
 R: J. de Graaff (c. 1954), N: J. de Graaff  
 Fls green-gold, each tepal with a green stripe on midrib; spots absent; pollen red-brown. Fls narrowly trumpet-shaped. Stems 1-1.4 m, with up to 15 fls. July.

**'Honeyglow' VII(-/b)**

Parentage: *L. × parkmanii* × unknown  
 R: B.G. Hayler (1955), G: B.G. Hayler (1959), N: B.G. Hayler, I: B.G. Hayler (1963)  
 Inside white, each tepal with a pale yellow ray; lightly spotted with crimson. Fls *auratum* type, 200 mm wide; tepals slightly reflexed. Lvs *auratum* type. Stems 1.4 m.

**'Honey Gold' VIII(a-b/b)**

Parentage: seedling E 854 × seedling OR 2  
 R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)  
 Inside brilliant yellow (9C), lighter towards tepal-tips, midveins yellow at base; outside light yellow (10C), darker towards tepal-margins, midribs green; spots and papillae absent; nectaries yellow-green; pollen brown-red; stigma green. Fls 190 mm wide; tepals medium sized, margins ruffled, tips recurved. Lvs scattered. Stems 1-1.4 m, dark green, with 2-9 fls. Late.

(An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096395).)

**'Honeymoon' VIII(a-b/b)**

Parentage: seedling 164-5 × seedling 90-058-8  
 R: World Breeding B.V., N: World Breeding B.V. (2001), REG: World Breeding B.V. (2004)  
 Inside light/pale yellow (11B/C), lighter towards tepal-margins and tips, brilliant yellow (13C) in basal half of midveins; outside pale yellow (11C); spots absent; papillae present; nectaries green; pollen brown-red; stigma purple. Fls 200 mm wide; tepals 155-162 × 42-67 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 185-205 × 29-40 mm, dark green. Stems 1-1.2 m, green, with 2-12 fls. Late.  
 (An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096407).)

**'Honeymoon' I(b/-)**

Syn. of 'Maple Honey'.

**'Honey Pink' I(b-c/-)**

Parentage: *cernuum* × unknown  
 R: F. Fellner, N: F. Fellner, I: Riverside Gardens (1986)  
 Inside pale pink, each tepal with a central white stripe. Spots absent. Pollen orange. Tepal-margins smooth, tips recurved. Stems 0.6-0.8 m, with 10-15 fls. Midseason.

**'Honey Pot' Div. ?**

Given as a parent of 'Menarda'. No further details.

**'Honey Queen' I(b-c/-)**

Parentage: complex hybrid  
 R: C.F. Patterson (c. 1961), I: Dept. of Horticulture, University of Saskatchewan (1969)  
 Fls majolica-yellow (HCC 09/3), tepal-tips rose-pink, spots self-coloured, fine, on basal third of each tepal. Tepals half reflexed. Stems 1.1 m. July.  
 (Published in *ILR* (1969).)

**'Honeywind' I(b-c/-)**

Parentage unknown  
 R: P. Whipple (1976), G: P. Whipple (1978), N: P. Whipple (1980), I: Borbeleta Gardens (1984), REG: Borbeleta Gardens (1984)  
 Inside deep yellowish pink (41D) and light yellow (20B), tepal-tips deep yellowish pink (41D), throat light yellow (20B); outside strong yellowish pink (31C); spots dark brown, on basal quarter of tepals; nectaries frosty pink; pollen mid brown. Tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 8 mm, mid green. Stems 0.7 m, brown, with 15-17 fls. Late June.  
 (Published in *Borbeleta Gardens Cat.*, 1984.)

**'Honfleur' VII(a/b-c)**

Parentage unknown  
 R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2003), REG: Vletter & Den Haan Beheer B.V. (2004)  
 Inside with inner tepals strong/vivid purplish red (68A/B), light purple (75A) towards margins, midveins

vivid purplish red (57B), outer tepals strong/vivid purplish red (68A/B), basal half very pale purple (73D), midveins vivid purplish red (57B), throat yellowish white (155D); outside with inner tepals strong reddish purple/deep purplish pink (70B/C), yellowish white (155D) at base, midribs strong yellow-green (144A) at base, changing to deep purplish pink (54B), towards top pale greenish yellow (2D) with light yellow-green (144D) at top, outer tepals light purple (75B), margins light purple (75A), midribs strong yellow-green (144A) at base changing into yellowish white (155D), towards top strong yellow-green (144A); spots absent; papillae strong purplish pink (63C) and vivid red (57A); nectaries strong yellow-green (144C); pollen deep orange-yellow (163A); stigma very light purple (85C). Fls 270 mm wide, slightly fragrant; tepals 155 × 61–86 mm, margins ruffled, tips recurved. Lvs scattered, 175 × 58 mm. Stems 1.15–1.2 m, green with darker markings, and with c.3 fls.

**‘Hong Kong’ IX(b-c/a)**  
See *brownii* ‘Hong Kong’.

**‘Hoohkaku’ I(a/b)**  
See *L. × maculatum* ‘Hoohkaku’.

**‘Hope’ I(b/d)**  
Syn. of ‘Ceriba’.

**‘Hopi’ I(a/-)**  
Parentage unknown  
R: W. Windus, G: W. Windus, N: W. Windus, REG: W. Windus (1991)  
Fls brilliant yellow (12B); spots large, dark brown, on a third of each tepal; nectaries yellow; pollen dark brown. Tepals 70 × 35 mm, overlapping below, margins smooth or twisted, tips not recurved. Lvs scattered, mid green. Stems 1.5 m, mid green, with c.13 fls (including secondaries). Early July.

**‘Horizon’ I(a/-)**  
Parentage: (‘Oranje Zon’ × ‘Red Carpet’) × ‘Pineapple’  
R: Bischoff Tulleken Leliecultuur B.V. (1979), G: Bischoff Tulleken Leliecultuur B.V. (1981), N: Bischoff Tulleken Leliecultuur B.V. (1987), I: Bischoff Tulleken Leliecultuur B.V. (1989), REG: Bischoff Tulleken Leliecultuur B.V. (1988)  
Inside vivid orange (28B), tepal-tips moderate red (185B); outside vivid orange (28B); spots small, chocolate-brown, only on inner tepals; pollen strong reddish orange (169A). Fls 175 mm wide; tepals 85 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 10 mm, mid green. Stems 0.35 m, green with darker spots, and with c.7 fls. June.

**‘Hornback’s Gold’ I(c/d)**  
Parentage: (*lancifolium* var. *flaviflorum* × *dauricum*) × ‘Lemon Queen’ (Div. I) × ‘Mega’ F<sub>2</sub>  
R: Oregon Bulb Farms, Inc. (1966), I: Oregon Bulb Farms, Inc. (1972), REG: Oregon Bulb Farms, Inc. (1972)  
Fls soft yellow, lightly spotted with black. Fls large. Stems

1.2 m, with bulbils. July.  
(Published in *Lilies and other Liliaceae*, 1973/1974: 113.)

**‘Hornpipe’ I(a/-)**  
Parentage: ‘Connecticut King’ × ‘Croesus’  
R: E.A. McRae (c. 1974), G: Oregon Bulb Farms, Inc. (1978), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)  
Inside strong orange (25A/B), deepening to vivid orange (28B) along midveins, tepal-tips and throat vivid orange (28B); outside strong to brilliant orange (25B/C), slightly lighter at tepal-tips and base of bud; spots absent; nectaries overlaid with white downy hairs; pollen vivid reddish orange (34B). Fls 160–190 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 15 mm, mid green. Stems 1.2 m, light green, with 7–35 fls. Late June.

**‘Horsford’ IX(b-c/a)**  
See *sargentiae* ‘Horsford’.

**‘Horsfordii’ I(b/d)**  
Parentage: *leichtlinii* var. *maximowiczii* × *L. × maculatum* ‘Batemanniae’  
R: F.H. Horsford (c. 1915), N: F.H. Horsford  
Fls orange, with round, purplish red spots; pollen dark orange; stigma purplish. Tepals 80–90 mm long, recurved. Stems up to 2 m, somewhat hairy, with c.8 fls.  
(Cross remade in 1938 by W.C. Horsford, (grandson of the raiser) after original stock became infected with virus.)

**‘Horsmannii’ I(a/b)**  
See *L. × maculatum* ‘Horsmannii’.

**‘Horta’ I(a/b)**  
Parentage: ‘House of Orange’ × ‘Impact’  
R: K. Vereš, N: K. Vereš, I: K. Vereš (1999), REG: K. Vereš (1999)  
Inside orange, tepal-tips paler, throat green; outside pale orange, midribs green; spots medium sized, numerous, brown-red, on a third of each tepal; brushmarks faint, brown-red; pollen orange; stigma violet-brown. Fls 150 mm wide; tepals 70 × 30 mm, not recurved; pedicels 120 mm long, green. Lvs scattered, 130 × 20 mm, slightly glossy mid green. Stems 0.7 m, dark green, with a short infl. Early July.

**‘Hostese’ VII(b/b)**  
Parentage unknown  
R: Ē. Ieviņa (1992), G: Ē. Ieviņa (1995), N: R. Krūmiņš (2001), REG: Liliium Balticum Association (2004)  
Inside pink, each tepal with a white margin 3–4 mm wide; outside whitish pink, midribs yellowish pink; papillae red; nectaries greenish white; pollen brown; stigma light greyish green. Fls 190 mm wide; tepals 105 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 47 mm. Stems 0.9–1 m, green, with 7–8 fls. July to Aug.

**'Hot Canary' I(a/b)**

Parentage unknown

R: E. Hickling, G: E. Hickling, N: E. Hickling (1980), I: Borbeleta Gardens (1983), REG: J. Wadepammer (1983)  
 Inside brilliant yellow (8A), throat brilliant yellow (7A); outside brilliant yellow (8A) and tan; spots large, brown, on basal half of tepals; nectaries white; pollen red-brown. Tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 12 mm, pale green. Stems 1.2 m, light green, with 15-21 fls. Very late.  
 (Published in *Borbeleta Gardens Cat.*, 1983.)

**'Hot Fudge' I(a/b-c)**

Parentage: unnamed brushmarked seedling ex Wadepammer × 'White Prince'

R: J. Wadepammer (1979), G: J. Wadepammer (1982), N: J. Wadepammer (1989), I: Borbeleta Gardens (1989), REG: J. Wadepammer (1993)  
 Fls white, throat green; brushmarks large, deep purple, with some spotting below them; nectaries green; pollen deep brown. Tepals 90 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 90 × 25 mm, dark green. Stems 0.8 m, dark, with 8-10 fls. Midseason.  
 (Published in *Borbeleta Gardens Cat.*, 1989.)

**'Hot Lips' VII(b/b-d)**Parentage: (*L. × parkmanii* Everest Group × 'Star Gazer') × white-flowered seedling

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1991)  
 Inside yellowish white (155D), each tepal with a small, moderate red (185B) flame changing to strong red (53B), throat strong yellow-green (144B) edged light greenish yellow (6D); outside yellowish white (155B), each tepal with a large, moderate purplish red to dark purplish pink (186B/C) flame, midribs pale greenish yellow (2D); spots and papillae dark red (187A/B), on basal half of each tepal; nectaries dark purple (79A); pollen strong orange (169C). Fls 225 mm wide; tepals 120 × 50 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 150 × 28 mm, mid green. Stems 0.8 m, green, with c.6 fls. May to June (under glass).

**'Hot Tamale' I(a/c)**

Parentage: 'Little Moons' × short-stemmed, red-flowered Asiatic seedling

R: E.E. Fox (1994), G: E.E. Fox (1996), N: E.E. Fox (1999), I: Fox Lily Ranch (2002), REG: E.E. Fox (2001)  
 Inside with circular vivid orange (28A) marks at mid tepal, tips strong red (46A), throat vivid red (46B); outside vivid red (46C); spots very fine, dark red (187A), on basal third of each tepal; nectaries red, frosted white; pollen vivid orange (28A); stigma strong yellowish pink (32C). Fls 100 mm wide; tepals 50 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 12 mm. Stems 0.35 m, mid green, with 9-12 fls. Late July.  
 (The epithet was suggested by the hot colours.)

**'House of Orange' I(a/-)**

Parentage: 'Enchantment' × 'Connecticut King'

R: E.A. McRae (1969), G: E.A. McRae (1971), N: E.A. McRae (1980), I: E.A. McRae (1980), REG: Oregon Bulb Farms, Inc. (1983)  
 Inside vivid reddish orange (33B); outside vivid reddish orange (33A); spots oxblood-red, in a ring in centre of fl.; nectaries green; pollen brown. Fls 100 mm wide; tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm, dark green. Stems 1.5-2 m, purple-brown, with 6-25 fls. Late June.

**'Houston' VII(a/b)**

Parentage: seedling 88-131 × seedling 93-14

R: Vletter & Den Haan Beheer B.V. (1996), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)  
 Inside light purplish pink (63D), throat very pale purple (69D); outside pale purplish pink (65C); spots deep purplish pink (66C); papillae present; nectaries strong yellow-green (141D); pollen moderate reddish orange (171A); stigma dark purple (79A). Fls 250 mm wide; tepals 140 × 87 mm, margins smooth, tips slightly recurved. Lvs scattered, 155 × 38 mm. Stems 0.8 m, green, with c.3 fls.

**'Hovey's Variety' VII(-/b)**See *L. × parkmanii* 'Hovey's Variety'.**'Howard Henry' IX(c/d)**See *superbum* 'Howard Henry'.**'Howardii' V(-/a)**See *longiflorum* 'Howardii'.**'Hughes Apricot' III(c/d)**See *L. × testaceum* 'Hughes Apricot'.**'Hugo' I(a-b/b)**

Parentage unknown

R: S. en S. V.o.f. (pre 1989), N: S. en S. V.o.f. (2002), REG: S. en S. V.o.f. (2002)  
 Inside vivid yellow (12A), darker at the base, throat yellow; markings purple-red, paler along margin; spots and papillae present; pollen orange-brown; stigma purple. Tepal-margins ruffled, tips recurved. Lvs mid green. Stems light green above, base brown and green with darker markings. Very early to early.

**'Huig' VII(b/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)  
 Inside yellowish white (155D), midveins yellow-green at base; outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen orange-brown; stigma grey. Tepal-margins slightly ruffled, tips slightly recurved. Stems short to medium, with reddish markings. Early to midseason.

**‘Humble Bumble’ I(b/-)**

Parentage unknown

R: L. Kramer (pre 1985), G: C. Fuson &amp; S.R. Kaul, N: S.R. Kaul (1993), I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)

Fls white, very slightly tinged yellowish and with a few spots. Stems 0.6 m. June to July.

***humboldtii* Roezl & Leichtlin ex Duchartre IX(c/d)**

Fls yellow to reddish orange; spots maroon or purple, towards base of each tepal; anthers purplish; pollen orange. Tepals up to 100 × 25 mm. Lvs in whorls of 10-20, 90-125 × 15-30 mm. Stems to 1-2.25 m, green often tinged with purple, with 10-15 (-80) fls. USA (C California).

**Humboldtii Group IV(-/d)**Parentage: ‘Star of Oregon’ × *humboldtii* var. *ocellatum*

R: H. Eckstein (c. 1941), N: H. Eckstein

Fls bright orange, tepal-tips flame; spots numerous, maroon. Stems with up to 20 fls. July.

(Published in *Kline Cat.*, 1955.)***humboldtii* var. *bloomerianum* Purdy IX(c/d)**Similar to *humboldtii* itself, but with a poorer colour and a shorter stem.(M.W. Skinner in *Flora of North America* 26: 181(2002) considers that this variety is synonymous with *humboldtii*.)***humboldtii* var. *magnificum* Purdy IX(c/d)**Syn. of *humboldtii* var. *ocellatum*.***humboldtii* var. *ocellatum* (Kellogg) Elwes IX(c/d)**

FCC 1883

Fls golden orange, tepal-tips red; spots many, maroon, each surrounded by a circle of crimson.

Syn.: *humboldtii* var. *magnificum*.(M.W. Skinner in *Flora of North America* 26: 182 (2002) treats var. *ocellatum* as a subspecies of *humboldtii*.)**‘Hummingbird’ IV(c/d)**Parentage: complex *kelloggii* × *pardalinum* hybrid

R: J. de Graaff (c. 1967), N: J. de Graaff

Fls fuchsia-pink and orange, with a few spots.

**‘Humoreska’ I(a/c)**

Parentage unknown

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside salmon-pink, tepal-centres brown-pink, throat pink; outside of tepals with yellow edges and pink centres, midribs brownish; spots crimson-black, moderately numerous, small, on a fifth of each tepal; nectaries white-ciliate; filaments pale pink; pollen red-brown; style beige; stigma dark brown-purple. Fls 135 mm wide; tepals 80 × 38 mm, scarcely recurved, the outer slightly more so; pedicels 65 mm long, strongly dotted dark brown. Lvs scattered, 90 × 9 mm, dull dark green. Stem 0.75 m. Mid June.

**‘Humpty Dumpty’ I(a/b)**

Parentage: ‘Indian Brave’ sibling × ‘White Prince’

R: Hartle-Gilman Gardens (1982), G: Hartle-Gilman Gardens (1984), N: Hartle-Gilman Gardens (1996), I: Hartle-Gilman Gardens (1996), REG: Hartle-Gilman Gardens (1996)

Inside yellowish white (158D), base of tepals and throat brilliant yellow (20A); outside pale yellow (11D), midribs brown; spots absent; nectaries pale yellow (11D), slightly green-frosted; pollen rust-coloured. Tepals 100 × 38 mm, margins smooth and slightly upcurved, tips slightly reflexed. Lvs scattered, 90 × 11 mm, moderate olive-green (146A). Stems 1.23 m, moderate yellow-green (146B), with up to 19 fls. Midseason.

**‘Hunter’s Moon’ I(a/-)**

Parentage unknown

R: R.W. Bemis, N: R.W. Bemis

Fls coppery apricot, centre green. Spots few, deep mahogany, near centre. Pedicels very long. Lvs scattered. Stems 1.2 m.

(Published in *Blackthorne Gardens Cat.*, 1966/67.)**‘Hunting Song’ I(a/-)**

Parentage: ‘Delphi’ × ‘Nutmegger’

R: Gebr. N. &amp; B. Laan &amp; Zn (1982), G: Gebr. N. &amp; B. Laan &amp; Zn (1984), N: Gebr. N. &amp; B. Laan &amp; Zn (1985), I: Gebr. N. &amp; B. Laan &amp; Zn (1985), REG: Gebr. N. &amp; B. Laan &amp; Zn (1985)

Fls yellow; spots few, deep purple; nectaries yellow; pollen dark red. Fls 160 mm wide; tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 20 mm, dark green. Stems 0.8 m, green, with c.6 fls. June.

**‘Hup Holland’ I(a/b)**

Parentage unknown

R: Sande B.V. (1988), G: Sande B.V. (1990), N: Coöp. Kwekersvereniging “The Originals” U.A. (1994), I: Coöp. Kwekersvereniging “The Originals” U.A. (1994), REG: Coöp. Kwekersvereniging “The Originals” U.A. (1996)

Inside vivid orange (28A); outside Saturn red (vivid yellowish pink (30C)); spots orange; papillae present; nectaries orange; pollen dark brown; stigma violet red. Tepal-margins smooth, tips recurved. Lvs scattered, mid green. Stems 1 m, green with darker markings, and with 6-14 fls.

**‘Hurricane’ I(c/?b)**

Parentage: Fighter Group selection from Preston Group

S: I. Preston, N: I. Preston (1941)

Fls moderate reddish orange (35A), funnel-shaped. Stems 1.1 m. July.

(Published in *Amer. LYB*, 1942: 112.)**‘Hurunui Red’ I(-/-)**

Parentage unknown

R: G.M. Ensor, N: G.M. Ensor

Fls red.

**'Hydra' I(c/-)**

Parentage: 'Edith Cecilia' × 'Connecticut King'

R: D.E. Schmitzer (1974), G: V. Strasser (1976), N: V. Strasser (1980), I: V. Strasser (1982), REG: V. Strasser (1986)

Inside yellow, throat green; outside yellow-brownish red; purple spots on a third of each tepal; nectaries green; pollen orange-red. Fls 140 mm wide; tepals 75 × 25 mm, margins smooth, tips slightly recurved. Lvs 100 × 10 mm. Stems 1.2 m, almost black, with up to 50 fls. July to Aug.

**'Hyppolite Zalivski' VI(-/a)**

Unaccepted spelling of 'Ippolite Zalivskii'.

**'Iadviga' VI(-/a)**

Misspelling of 'Jadviga'.

**'Iaguars' I(b/-)**

Misspelling of 'Jaguars'.

**'Ibarra' I(a/b)**

Parentage unknown

R: P. Hoff (1993), G: Hoffgaarde B.V., N: Hoffgaarde B.V. (1996), I: Hoffgaarde B.V. (1997), REG: Hoffgaarde B.V. (1997)

Inside moderate red/moderate purplish red (185B/C), throat moderate red (185B); outside of inner tepals shading towards edges to moderate red/moderate purplish red (185B/C), midribs deep pink (185D), outside of outer tepals deep pink (185D), narrowly edged with moderate red/moderate purplish red (185B/C); spots dark red (187A), on a third of each tepal (stripes on the midveins); papillae few in the throat; nectaries strong yellow-green (144A); pollen light yellowish pink (26D); stigma light greenish yellow (7D). Fls 170 mm wide; tepals 90 × 25-40 mm, margins smooth, tips very slightly recurved. Lvs scattered, 115 × 25 mm, mid green. Stems 1.35-1.5 m, light green with dark markings, and with 2-8 fls. July.

**'Iberflora' I(a/b)**

Parentage: ('Corina' × unnamed seedling) × ('King Pete' × 'Esther')

R: Lybelmex Hillegom B.V. (1984), G: Lybelmex Hillegom B.V. (1986), N: Lybelmex Hillegom B.V. (1990), I: Lybelmex Hillegom B.V., REG: De Lijster Hillegom B.V./Lybelmex Hillegom B.V. (1990)

Inside vivid reddish orange (42A), with a vivid reddish orange (33A) blush; outside vivid reddish orange (34A/B), outer tepals edged moderate red (179A), midribs suffused with strong orange to strong orange-yellow (24A/B); spots dark red (187A), in the throat; nectaries moderate red (181A); pollen strong reddish orange (169A). Fls 140 mm wide; tepals 80 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 15 mm, mid green. Stems 0.7 m, green with darker markings, with 5-10 fls. July.

**'Iberia' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: Lybelmex Hillegom B.V. (1986), G: Lybelmex

Hillegom B.V. (1988), N: Lybelmex Hillegom B.V.

(1992), I: Lybelmex Hillegom B.V. (1992), REG:

Lybelmex Hillegom B.V. (1993)

Inside vivid orange-yellow (23A); outside vivid yellow (17C) shading to vivid orange-yellow at tepal-edges, tinged with strong yellow-green (144C) at base and tipped strong yellow-green (144A); spots absent; nectaries dark red (183A); pollen deep orange-yellow (163A). Fls 190 mm wide; tepals 105 × 53 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 13 mm. Stems 1 m, pale green, with c.6 fls.

**'Ibis' I(c/-)**

Parentage: 'Edith Cecilia' × Byam seedling 1055-3

R: J.C. Taylor (c. 1976), N: University of Guelph (1977),

I: University of Guelph (1977), REG: University of Guelph (1978)

Inside moderate purplish red (59C), throat lighter; outside greyed brown to green; heavily spotted with brown in throat. Lvs scattered, numerous, dark green. Stems 0.7-1.5 m. Early to mid season.

(Published in *Lilies and other Liliaceae*, 1978/9: 109.)

**'Ibiza' VII(a-b/-)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V. (1984), G: Vletter & Den Haan Beheer B.V. (1987), N: Vletter & Den Haan Beheer B.V. (1990), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside moderate to light purplish pink (65A/B), base of midveins white changing to pink; outside pale purplish pink (65D); spots and papillae present; nectaries green; pollen orange-brown; stigma grey. Stems 1.2 m. Early to midseason.

(Fls are usually up-facing, although they *may* be up- to out-facing.)

**'Iceberg' VIII(a/b)**

Parentage: seedling N 60 × seedling W 90-7

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside yellowish white to greenish white (155B/C), each tepal with a dark red (187A) edge on up to a third; outside yellowish white to greenish white (155B/C); spots dark red (187A), on a third of each tepal; papillae few, yellowish white (155B), along nectaries; nectaries strong yellow-green (143A) with a little yellowish white (155B); pollen moderate reddish brown (175A); stigma moderate yellow (162A). Fls 210 mm wide; tepals 110 × 45-60 mm, margins ruffled, tips strongly recurved. Lvs scattered, 125 × 20 mm, dark green. Stems 1.1 m, green, with 2-5 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Ice Berry' I(a/c)**

Parentage: white-flowered seedling × 'Vivaldi'

R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2000), REG: Bischoff Tulleken Lelies B.V. (2004)

Inside light purplish pink (63D), each tepal with a yellowish white (155D) flame and a narrow strong purplish pink (63C) margin; outside pale purplish pink (65C), tepal-margins narrow, strong purplish pink (67D); spots few, dark red (59A); papillae light purplish pink (63D); nectaries strong yellow-green (144B); pollen strong brown (172A); stigma moderate orange (170C). Fls 195 mm wide; tepals 105 × 33-52 mm, margins slightly ruffled, tips recurved. Lvs scattered, 130 × 16 mm. Stems 1.01 m, green with darker markings, and with c.6 fls.

**'Ice Cap' IX(b-c/a)**

See *leucanthum* var. *centifolium* 'Ice Cap'.

**'Ice Cream' I(a/-)**

Parentage unknown

G: F. Fellner (1978), N: F. Fellner (1978), REG: ICRA (1982)

Inside cream; outside greenish; spots purple, from middle of tepal to throat; nectaries white; pollen brown. Fls 70-90 mm wide; tepals 70 × 25-30 mm, tips slightly recurved. Lvs 70 × 10 mm, mid green. Stems 0.5-1.6 m, green, with 8-10 fls. Late July.  
(Raised in the 1970s from seed of unknown origin.)

**'Ice Diamond' VIII(a/b)**

Parentage: (seedling 3217.rs × 'Esra') × seedling LA 93055.5T

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)  
Inside yellowish white (155D), throat light yellow-green (145D); outside yellowish white (155B), midribs with some moderate yellow-green (143D) at base and top; spots and papillae absent; nectaries strong yellow-green (143C); pollen brownish orange (164A); stigma greenish white (157D). Fls 175-190 mm wide; tepals 132 × 45-59 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 15 mm. Stems 1.15 m, green with some darker markings at base, and with 2-10 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Ice Floe' VI(b/b)**

Parentage: 'Tundra' × greenish yellow-flowered seedling  
R: P.L. Greenfield (1984), G: P.L. Greenfield (1987), N: P.L. Greenfield (1987), REG: P.L. Greenfield (1989)

Inside white, throat yellow; outside greenish white; spots absent; nectaries green; pollen light brown. Fls 170 mm wide; tepals 140 × 70 mm, margins smooth, tips slightly recurved; pedicels long. Lvs scattered, 140 × 20 mm, dark green. Stems 1.5 m, green, with c.4 fls (second year of flowering). Dec. (New Zealand).

**'Icepearl' VIII(a-b/b)**

Parentage: 'Monte Rosa' × unknown

R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)

Inside pale yellow-green (4D), becoming whiter with age; outside pale yellow-green (4D), midribs green; spots few; papillae absent; nectaries yellow-green; pollen brown; stigma light yellow-green. Tepals short to medium

sized, margins scarcely ruffled, tips slightly recurved. Lvs scattered, dark green. Stems 1-1.4 m, green with darker markings, and with 2-8 fls. Midseason.

(A *longiflorum*/Asiatic (LA) hybrid. Nomenclatural standard: colour print supplied by registrant (WSY 0096410).)

**'Idaho' I(a/-)**

Parentage: seedling OR 97-10 × 'Nove Cento'

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside vivid orange (28A/B); outside vivid orange (28B); spots absent; some papillae present; nectaries orange, green at base; pollen reddish brown; stigma orange-red. Stems 1.2 m, green with darker spots and stripes. Early.

**'Ida Jane Califf' VI(-/c)**

Parentage: 'T.A. Havemeyer' × unknown

R: E.L. Kline (pre 1956), N: E.L. Kline

Fls majolica-yellow, basal half of each tepal with margins spotted with red. Stems 1-1.2 m. Aug.

(Published in *Greenock Farms Cat.*, 1956.)

**'Ida Lu' I(a/-)**

Parentage: Asiatic hybrid × 'Connecticut Yankee'

R: Piedmont Gardens (pre 1978), N: Piedmont Gardens (1978), I: Piedmont Gardens (1978), REG: Piedmont Gardens (1978)

Inside vivid orange (28A); outside light orange (28C); spots absent; nectaries moderate orange-yellow (164B); pollen dark reddish orange (172B). Tepal-margins slightly ruffled. Lvs wide. Stems 0.8 m.

(Published in *Piedmont Gardens Cat.*, 1978; *Lilies and other Liliaceae*, 1978/9: 109.)

**'Ideala' IX(-/d)**

See *henryi* 'Ideālā'.

**'Ideālā' IX(-/d)**

See *henryi* 'Ideālā'.

**'Ideal Pictum' IX(b/c)**

See *auratum* 'Ideal Pictum'.

**'Idole' VII(-/d)**

Parentage: (*L. × parkmanii* 'Allegra' × 'Star Gazer') × (*speciosum* var. *rubrum* 'Marvellous' × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1992)

Inside yellowish white (155D) suffused with moderate purplish pink (70D), throat light yellow-green (145B); outside greenish white (155C), each tepal suffused with moderate purplish pink (70D) towards tip and suffused with moderate purplish red/strong reddish purple (70A/B) at the base; papillae yellowish white (155D) on basal half of each tepal; nectaries strong reddish purple; pollen brownish orange (171B). Fls 240 mm wide; tepals

110 × 60 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 180 × 65 mm, mid green. Stems 0.9 m, pale green, with c.4 fls.

#### 'Idylle' I(a-b/b-c)

Parentage: seedling AW 94-09 × seedling W 92-01  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside greenish white (155C), throat greenish white (155C) with small strong/light yellow-green (144C/145D) stripes; outside with inner tepals greenish white (155C), along midribs strong yellow-green/moderate red (144C/181A), outer tepals light/strong yellow-green (145C/144B), margins greenish white (155C), striped or flushed with moderate red (181A/B) along midribs; spots and papillae absent; pollen moderate brown (165A); stigma vivid red (45B). Fls 170 mm wide; tepals 90-97 × 40-54 mm, margins smooth to slightly ruffled, tips slightly recurved. Lvs scattered, 129 × 25 mm, dark green. Stems 1.05-1.3 m, dark green with darker markings, and with c.7 fls.

#### 'Ierosme' VI(-/a)

Parentage unknown

R: V.P. Orehovs

Inside greenish white, throat yellow; outside greenish white with lilac midribs; pollen orange; stigma green. Fls 70 mm wide, fragrant. Stems 1 m.  
(Published in M.V. Baranova, *Lilii*, 356 (1990).)

#### 'Ieva' I(a/b)

Parentage: 'Veronika' × 'Baltais Lācis'

R: A. Balode (1996), G: A. Balode (1998), N: A. Balode (2000), REG: A. Balode (2000)

Inside light orange (28D), each tepal with a vivid orange (28B) blotch in the centre, throat pale orange; outside pale orange and greenish; spots few, large, moderate red (183C); nectaries pale orange; pollen brown. Fls 130 mm wide; tepals 70 × 28 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 80 × 10 mm. Stems 1 m, light green, with c.15 fls. Late July.

#### 'Igita' I(b/-)

Parentage: selection from Amālijas Group

S: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)

Fls creamy yellow, the basal half of each tepal densely covered with dark lilac spots. Fls 90 mm wide; tepals 50 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 60 × 3 mm, mid green. Stems 0.6 m, green.  
(Published in *Dārzs un Drava* 7: 21 (1986).)

#### 'Iglo' I(a/-)

Parentage unknown

R: P. Hoff (1993), G: Hoffgaarde B.V., N: Hoffgaarde B.V. (1996), I: Hoffgaarde B.V. (1997), REG: Hoffgaarde B.V. (1997)

Inside white (155A/B); outside white (155A/B) with strong yellow-green (144C) midribs; spots dark red (187A), in the throat on inner tepals only; papillae

absent; nectaries strong yellow-green (144B); pollen dark reddish orange (175C); stigma dark red (187B/C). Fls 150 mm wide; tepals 75 × 30-40 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 0.8 m, light green, with 3-5 fls.

#### 'Igrushka' I(a/-)

Parentage: 'Zabava' × mixed pollen of 'Aelita' & 'Svetlana'  
R: V.A. Volkov (c. 1982), N: V.A. Volkov

Fls rose-pink, spotted. Stems 1.5 m, with bulbils. July.  
(The seed parent is probably 'Svetlana' of Kireeva.)

#### 'Iholdy' I(a/-)

Parentage: seedling 90-81-066-2 × seedling 91-25-344-2  
R: World Flower B.V. (1993), G: World Flower B.V.

(1995), N: World Flower B.V. (2000), I: World Flower B.V. (2000), REG: World Flower B.V. (2000)

Inside light greenish yellow (4C/5C); outside brilliant greenish yellow (6C); spots and papillae absent; nectaries green; pollen orange; stigma yellow. Fls 210 mm wide; tepals 120 × 50 mm, margins ruffled, tips recurved. Lvs scattered, 170 × 25 mm. Stems 0.95 m, green, with c.4 fls. Early.

#### 'Ikaria' I(a/b)

Parentage: 'Pirate' × unknown

R: Van der Salm Bulb Farm, Inc. (1979), G: Van der Salm Bulb Farm, Inc. (1980), N: Van der Salm Bulb Farm, Inc. (1981), I: Van der Salm Bulb Farm, Inc.

(1987), REG: Van der Salm Bulb Farm, Inc. (1988)  
Inside light purplish pink (68D), tepal-edges darker red, throat purplish red; outside dark purplish pink (186C), tepal-edges darker, midribs brownish red, basal markings green; spots absent; nectaries white; pollen red-brown. Fls 150 mm wide; tepals 80 × 30-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 90-130 × 15 mm, mid green. Stems 0.8-1 m, green with some brown markings, and with 8-30 fls. June to July.  
Syn.: 'Malta'; 'Maltese'.

#### 'Ikaria' I(c/-)

Syn. of 'Kispirit'.

#### 'Ikaros' VII(-/l-)

See *L. × parkmanii* 'Ikaros'.

#### 'Ike' I(a/-)

Parentage unknown

R: Gebr. Mak B.V. (1982), G: Gebr. Mak B.V. (1984), N: Gebr. Mak B.V. (1988), I: Gebr. Mak B.V. (1988), REG: Gebr. Mak B.V. (1989)

Inside pale greenish yellow (9D), with a brilliant orange-yellow (21B) blush; outside pale yellow-green (4D), tepal-edges light greenish yellow to pale yellow (8C/D), the outer tepals flushed with moderate reddish orange (179C); spots few, small, deep red (185A), in the throat; pollen vivid orange-yellow (23A). Tepals 88 × 51 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 12 mm, mid green. Stems 0.65 m, green, with c.8 fls. July.

**'Ilja'** I(a/-)

Parentage unknown

R: R.R. Rutkovskaya (1985), G: R.R. Rutkovskaya (1988), N: R.R. Rutkovskaya (1991), I: R.R. Rutkovskaya (1992), REG: R.R. Rutkovskaya (1995)  
 Inside white, with an orange flame in the centre of each tepal; outside white with a greenish tinge; a plum red brushmark (20 × 15 mm) and dark spots on each tepal; pollen yellow. Fls 146 mm wide; tepals 70 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 130 × 15 mm, mid green. Stems 1.1 m, green, with c.13 fls. Mid July.

**'Illiuziia'** I(a/b)

Fls pale apricot-pink

(Published in M.F. Kireeva, *Lilii*, 51 (2000).)**'Illusion'** Div. ?

Parentage unknown

(Published in *Amer. Lily Soc. Bull.* 7(3), (1954). No further details.)**'Ilona'** I(b/-)

Parentage: selection from Jautrie Bèrni Group

S: V.P. Orehovs, N: V.P. Orehovs

Fls pale orange.

(Published in *LYB* 33: 79 (1970).)**'Ilonca'** I(a/b)

Parentage: ('Gran Paradiso' × unknown) × 'Tetra Monaco'

R: De Jong Beheer B.V. (1995), G: De Jong Lelies Beheer B.V. (1997), N: De Jong Beheer B.V. (1998), I: De Jong Lelies Beheer B.V. (1998), REG: De Jong Lelies Beheer B.V. (1999)

Inside variegated vivid reddish orange (42A) on a vivid yellowish orange (30C) ground, throat vivid orange (28A) along nectaries; outside striped vivid reddish orange (34A) on a paler ground, tepals narrowly edged vivid reddish orange (33A), tipped strong yellow-green (143A) and dark red (187A); spots few, dark red (187D), in the throat; papillae few, light orange (28D); nectaries moderate olive-green (137A) with a little light orange (28D); pollen greyish red (178A); stigma dark red (187B). Fls 180 mm wide; tepals 85 × 30-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 12 mm, dark green. Stems 1.1 m, mid green, with c.7-8 fls.

**'Ilsa'** I(b/-)

Syn. of 'Ilze'.

**Iluschkas Group** I(b,c/d)

Misspelling of Iluškas Group.

**Ilushkas Group** I(b,c/d)

Misspelling of Iluškas Group.

**'Iluška'** Div. ?

Given as a parent of 'Ausma'. No further details.

**Iluškas Group** I(b,c/d)Parentage: (*concolor* × unknown) × *pumilum*

R: V.P. Orehovs (1966), N: V.P. Orehovs

Fls bright red; filaments pink; pollen bright orange-red. Fls 70-100 mm wide, scented. Lvs scattered, 30-60 × 3-10 mm. Stems up to 1.2 m, with 5-8 fls. Bulbs white. June to July.

(Misspelling: Ilushkas Group. Published in *LYB* 33: 81 (1970) and included in *ILLR* (1982) as Iluschkas Hybrids (= Group), which is also a misspelling.)

**'Ilute'** VI(-/a)

Parentage unknown

R: V.P. Orehovs

Inside white; outside lilac-white; pollen dark wine-red; stigma green. Fls 110 mm wide, fragrant. Stems 0.6 m. July.

(Published in M.V. Baranova, *Lilii*, 356 (1990).)**'Ilza'** I(b/-)

Misspelling of 'Ilze'.

**'Ilze'** I(b/-)

Parentage: selection from Skumstu Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls dark red.

Syn.: 'Ilsa'.

(Published in *LYB* 33: 79 (1970) and included in *ILLR* (1982) as 'Ilza' which is a misspelling.)**'Imagine'** I(a/-)

Syn. of 'Aquila'.

**'Imago'** I(a/-)

Parentage: 'Aristo' × ('Connecticut King' × 'Chinook')

See *canadense* var. *immaculatum*.

**‘Immaculé’ V(b/a)**

Parentage unknown

R: Fa Jaap Boon (pre 1987), G: Fa Jaap Boon, N: Fa Jaap Boon, REG: Fa Jaap Boon (2000)

Inside greenish white (155C); outside greenish white (155C) with yellowish white (155D) midveins; spots and papillae absent; nectaries strong yellow-green (144B); pollen vivid yellow (13A); stigma pale yellow-green (4D). Fls 160 mm wide; tepals 175 × 40-50 mm, margins slightly ruffled, tips recurved. Lvs scattered, 215 × 27 mm. Stems 1.2 m, light green, with 5-6 fls.

Trade designation: ROMERO.

**‘Imola’ I(a/-)**

Parentage: seedling RS 85-39 × seedling RS 85-7

R: Vletter & Den Haan, N: Vletter & Den Haan, REG: Vletter & Den Haan (1994)

Inside light yellow (21D) shading to paler than pale orange-yellow (23D) at tepal-tips, with a small (25 mm long) flame of deep red (53A) above nectaries, throat pale orange-yellow (19D); outside pale orange-yellow (23D), paler along midveins, the midveins light yellow-green (154D), outer tepals tinged deep red (53A) along

midveins; pollen strong reddish orange (169A); stigma strong orange (26B) edged dark red (187A). Fls 170 mm wide; tepals 90 × 20 mm. Lvs scattered, 75 × 10 mm, mid green. Stems 0.9 m, pale green with darker markings, and with c.8 fls.

**‘Imp’ I(a/b-c)**

Parentage unknown

R: W. Windus (c. 1980), G: W. Windus (1982), N: W. Windus (1986), REG: W. Windus (1986)

Inside vivid reddish orange (32A); outside strong reddish orange (32B); spots few, tiny, mid brown, deep in the throat; pollen moderate reddish orange (173B). Tepals 55-65 × 35-40 mm, broadly overlapping, margins smooth, tips not recurved. Lvs scattered, 70 × 16 mm, mid green. Stems 0.9 m, mid green, with 5-9 fls. Late June.

**‘Impact’ I(a/-)**

Parentage: ‘Connecticut King’ × (*leichtlinii* var.

*maximowiczii* ‘Unicolor’ × *dauricum*) F<sub>2</sub>

R: E.A. McRae (1969), G: Oregon Bulb Farms, Inc. (1973), N: Oregon Bulb Farms, Inc. (1980), I: Oregon Bulb Farms, Inc. (1983), REG: Oregon Bulb Farms, Inc. (1983)

Fls vivid orange (28A) throughout, outside shaded purple, each tepal with deep purple brushmarks (30 × 20 mm) above nectaries, and a few, pigmented papillae; nectaries brown; pollen brown to purple. Fls 140-180 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 25 mm, dark green. Stems 1.2 m, brown, with 7-30 fls. Late June.

Syn.: ‘Tarheel’.

**‘Impala’ I(a/-)**

Parentage: ‘Sterling Silver’ × ‘Connecticut Lemonglow’

R: E.A. McRae (1970), G: Oregon Bulb Farms, Inc. (1976), N: Oregon Bulb Farms, Inc. (1983), I: Oregon Bulb Farms, Inc. (1984), REG: Oregon Bulb Farms, Inc. (1984)

Inside vivid yellow (12A), tepal-tips bright yellow, throat and outside intense yellow; spots few, small, in centre of fl.; nectaries green; pollen soft golden green. Fls large; tepals 100 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 25 mm, mid green. Stems 1.4 m, light green, with 7-25 fls. Mid to late June.

**‘Imperatore’ VIII(a/b)**

Parentage: seedling BG 96-49 × seedling AG 95-14

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside brilliant yellow (7A), each tepal with vivid yellow (9A) margins and tip, midveins vivid yellow (9A), throat yellowish white (155D); outside light greenish yellow (6D), each tepal with brilliant yellow (7A) margins and tip; spots and papillae absent; nectaries light greenish yellow (3D); pollen moderate reddish brown (175A); stigma moderate red (181B). Fls 200 mm wide, slightly fragrant; tepals 140 × 51 mm, margins slightly ruffled,

tips recurved. Lvs 170 × 20 mm. Stems 1.1 m, green, with 3-5 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Imperial Day'** VII(a-b/b)

Parentage: Oriental seedling × (('Allegro' × 'Star Gazer') × (unnamed seedling × 'Star Gazer'))

R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1991), N: Bischoff Tulleken Lelies B.V. (1993), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside yellowish white (155D) with light greenish yellow (8C) along midveins, throat yellow; outside yellowish white (155D); spots present on most of each tepal; papillae present; nectaries green; pollen orange-brown; stigma grey. Margins of outer tepals ruffled, tips slightly recurved. Lvs scattered, green. Stems 1.05 m, green with darker stripes and speckles, and with 5-7 fls. Late.

× **imperiale E. H. Wilson** VI(b/a)

Parentage: *regale* × *sargentiae*

R: Messrs R. & J. Farquhar (c. 1916), N: E.H. Wilson (1920)

Original clone similar to *regale*, but tepals wider and tips more recurved. Anthers orange-brown. Stems to 1.2 m, grey-green, often with bulbils.

(Published in *Gard. Chron.*, ser. 3, 67: 255 (1920). All the clones raised by Messrs Farquhar have disappeared, but were replaced by hybrids derived from the same cross made by Isabella Preston in 1916.)

**'Imperiale'** IX(-/l-)

See *speciosum* 'Imperiale'.

× **imperiale 'Akademik I. Eikhfeld'** VI(-/a)

Parentage: *L. × imperiale* 'Estoniia' × *regale* 'Royal Gold'

R: V.N. Esinovskaya (c. 1967), N: V.N. Esinovskaya

Inside cream with pink stripes; outside pale green shading to brown at base. Stems up to 1.2 m, with up to 5 fls, and with bulbils. July.

(Published in *LYB* 33: 76 (1970) and included in *ILR* (1982) as 'Akademic Zichfeld', which is an error.)

× **imperiale 'Bower'** VI(-/a)

Parentage: selection from *L. × imperiale*

Fls white with a green tinge.

(Raised in Australia.)

× **imperiale 'Bowles' Variety'** VI(-/a)

Parentage: selection from *L. × imperiale*

S: E.A. Bowles, N: E.A. Bowles

Similar to *L. × imperiale* 'George C. Creelman'.

(Published in *Constable Cat.* 1949: 10. Perhaps a syn. of *L. × imperiale* 'Myddelton House'.)

× **imperiale 'Calla'** VI(-/a)

Parentage: selection from *L. × imperiale*

Fls pure white. Stems tall.

(Grown in Australia.)

× **imperiale 'Cherry Glow'** VI(b/a)

Parentage: selection from *L. × imperiale* Shelburne Group

S: F.M. Abbey, N: F.M. Abbey (1957), I: F.M. Abbey (1957)

Fls pink, flushed with red. Stems to 1.5 m. July.

(Published in *LYB NALS* 10: 82 (1957). Fls darker than 'Winter Sunset'.)

× **imperiale 'Cherry Supreme'** VI(-/a)

Parentage: selection from *L. × imperiale* Shelburne Group

S: F.M. Abbey (pre 1968), N: F.M. Abbey

Fls soft pink. Stems 1.2-1.5 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 46 (1978).)

× **imperiale 'Crow's Triumph'** VI(-/a)

Parentage: selection from *L. × imperiale*

S: I. Preston (c. 1919), N: I. Preston

Very similar to 'George C. Creelman', but with less massive fls.

(Named after Prof. John Warren Crow (d.1933) of Simcoe, Ontario.)

× **imperiale 'Dainty Lass'** VI(-/a)

Parentage: selection from *L. × imperiale* Shelburne Group

S: F.M. Abbey (pre 1966), N: F.M. Abbey, REG: F.M. Abbey (1984)

Fls pink; spots absent. Tepal-margins smooth. Lvs scattered. Stems 0.6-1 m. July.

(Published in *Gardenside Gossip* 31(2): 2 (1966).)

× **imperiale 'Estoniia'** VI(-/a)

Parentage: *sargentiae* × *regale* 'Gloriosum'

R: V.N. Esinovskaya (1962)

Inside white with yellowish pink throat; outside greenish white; pollen pale chocolate-brown; stigma brown. Fls 90-140 mm wide, fragrant. Stems 1-1.2 m, with 3-8 fls, and with bulbils. Aug.

(Misspelling: 'Estonia'. Published in M.V. Baranova, *Lilii*, 355 (1990).)

× **imperiale 'Fair Lady'** VI(b/a)

Parentage: selection from *L. × imperiale* Shelburne Group

S: F.M. Abbey (pre 1966), N: F.M. Abbey

Fls white; spots absent. Tepal-margins smooth. Lvs scattered. Stems 1.5 m, with the fls in a flattened infl. July.

(Unacceptable name, ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Gardenside Gossip* 31(2):2 (1966).)

× **imperiale 'George C. Creelman'** VI(-/a)

Parentage: selection from *L. × imperiale*

S: I. Preston (c. 1919), N: I. Preston, I: J.W. Crow  
AM 1934, AMH 1936  
Similar to *regale*, but darker outside. Stems 1.5 m. July.  
Syn.: 'G.C. Creelman'.  
(Published in *Gard. Chron.*, ser. 3, 76: 320 (1924).  
Named for Dr George Christie Creelman (d.1929) who  
was President of Ontario Agricultural College, Guelph  
from 1904 to 1920. The epithet was given to several  
different, although similar, clones, but should refer to the  
plant figured in *LYB* 2: 174, fig. 42 (1933).)

× **imperiale 'Ithaca'** VI(-/a)  
Parentage: selection from *L. × imperiale* Shelburne Group  
S: F.M. Abbey (c. 1960), N: F.M. Abbey  
Fls golden yellow. Stems 1.2-1.5 m. July.  
(Published in E. Fisher, *Named Lily Hybrids and their  
Origins*, 46 (1978).)

× **imperiale 'Lovely Lady'** VI(-/a)  
Parentage: selection from *L. × imperiale* Shelburne Group  
S: F.M. Abbey (pre 1966), N: F.M. Abbey, REG: (1984)  
Fls creamy white; spots absent. Tepal-margins smooth.  
Lvs scattered. Stems 1.2 m. July.  
(Published in *Gardenside Gossip* 31(2): 2 (1966).)

× **imperiale 'Mrs Andrew C. Wilson'** VI(-/a)  
Parentage: selection from *L. × imperiale*  
(Published in *Sheepers' Cat.*, 1937. No further details.)

× **imperiale 'Mrs John W. Davis'** VI(-/a)  
Parentage: selection from *L. × imperiale*  
(Published in *Sheepers' Cat.*, 1937. No further details.)

× **imperiale 'Myddelton House'** VI(-/a)  
Parentage: *regale* × *sargentiae*  
R: E.A. Bowles (c. 1925), N: E.A. Bowles  
Fls with yellow throat; outside pink-purple. Stems 1.4 m,  
with 4-8 fls, and with bulbils that often appear after fls  
are over.  
Syn.: 'Bowles' Variety' ?  
(Named after the house where E.A. Bowles lived.)

× **imperiale 'Picotée'** VI(-/a)  
Parentage: selection from *L. × imperiale*  
AM 1939  
Inside pearl-white, stained yellow at tepal-bases, broadly  
margined light purplish pink (68D); outside suffused  
with bronzy rose-pink.  
(Published in *JRHS* 64: 369 (1939).)

× **imperiale Pink Shelburne Group** VI(-/a)  
Parentage: pink-flowered selections from *L. × imperiale*  
Shelburne Group  
G: F.M. Abbey, N: F.M. Abbey, I: F.M. Abbey, REG:  
F.M. Abbey (1985)  
Fls pink, some bright pink, some faintly pencilled, all  
with a tinge of pink inside.  
(Published in *Garden Gossip* 20: 2 (1954). Included in  
*ILR Fourth Supplement* as Pink Shelburne Seedlings grex.)

× **imperiale Pink Trumpet Group** VI(-/a)  
Parentage: derived from *L. × imperiale* Shelburne Group  
R: F.M. Abbey (post 1943), N: F.M. Abbey, I: F.M.  
Abbey  
Fls pink, ranging from delicate pink to fairly dark; tepals  
edged with pink.  
(Unacceptable name: ICNCP, 1980: Recommendation  
13 Ah - name too similar to Pink Trumpets Group.  
Published in *Gardenside Gossip* 24: 3 (1959).)

× **imperiale Shelburne Group** VI(-/a)  
Parentage: *sargentiae* × *regale*  
R: A. Graham (c. 1930), N: A. Graham  
Inside soft green to pale yellow; outside with green lines.  
Tepals slender, with recurved tips. Late June to early Aug.  
(Published in *Horticulture* 10: 493 (1932).)

× **imperiale Shellman Group** VI(-/a)  
Parentage: *L. × imperiale* Shelburne Group × *L. ×  
imperiale* 'George C. Creelman'  
R: Gardenside Nurseries (c. 1948), N: Gardenside  
Nurseries  
Fls usually similar to, but larger than, *sargentiae*, and  
lacking green on reverse.  
(Published in *Gardenside Gossip* no.10 (1945). Included  
in *ILR* (1982) as Shellman grex.)

× **imperiale 'Strength'** VI(-/a)  
Parentage: selection from *L. × imperiale*  
(Published in *JRHS* 71: lix (1946). Exhibited by W.A.  
Constable. No further details.)

× **imperiale 'Winter Sunset'** VI(-/a)  
Parentage: selection from *L. × imperiale* Shelburne Group  
S: F.M. Abbey (c. 1945), N: F.M. Abbey  
AM 1954  
Fls white flushed with pink. Stems 1 m. July.  
(Published in *Gardenside Cat.*, 1951.)

**Imperial Gold Group** VII(-/c)  
See *L. × parkmanii* Imperial Gold Group.

**'Imperial Jewel'** VII(-/b)  
Parentage unknown  
R: L.G. Farina, G: L.G. Farina (1970), N: L.G. Farina  
(1973), REG: (between 1973 and 1981)  
Fls white, throat red; spots red; nectaries green; pollen  
brown. Fls 250 mm wide. Lvs dark green, very wide.  
Stems 1.5 m.  
(Published in E. Fisher, *Named Lily Hybrids and their  
Origins*, 38 (1978).)

**'Imperial Love'** VIII(a/b)  
Parentage: 'Montreux' × (*longiflorum* × 'Aristo')  
R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff  
Tulleken Lelies B.V. (1991), N: Bischoff Tulleken Lelies  
B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999),  
REG: Bischoff Tulleken Lelies B.V. (2000)  
Inside variegated moderate purplish red (59C) on a paler  
ground generally, but on a light green ground above  
nectaries, throat light yellow-green (145D); outside

variegated moderate purplish red (59C) on a paler ground, midribs with a strong to light yellow-green (144C/D) suffusion; spots dark red (187A), on basal part of each tepal; papillae few, in the throat; nectaries pale purplish pink (65D), hairy; pollen strong brown (172A); stigma strong orange-yellow (22A). Fls 190 mm wide; tepals 105-110 × 40-50 mm, margins smooth, tips hardly recurved. Lvs scattered, 190 × 20 mm. Stems 1.15 m, green, with c.3 fls; buds hairy. June.  
(*A. longiflorum*/Asiatic (LA) hybrid.)

#### **Imperial Pink Group VII(-c)**

Parentage: (*auratum* × *speciosum*) F<sub>2</sub> × (*auratum* × *japonicum*) F<sub>2</sub>

R: J. de Graaff, N: J. de Graaff

Fls pink, large. Stems 1.2-1.5 m. Stems 1.2-1.5 m. July to Aug.

(Published in *ILR* (1982) as Imperial Pink grex.)

#### **Imperial Salmon Group VII(-/c)**

See *L. × parkmanii* Imperial Salmon Group.

#### **Imperial Silver Group VII(b/c)**

See *L. × parkmanii* Imperial Silver Group.

#### **'Imperial Wedding' VII(b/a)**

Parentage: (*L. × parkmanii* 'Allegra' × 'Star Gazer') × ('Furore' × (*speciosum* × 'Star Gazer'))

R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside white (whiter than yellowish white (155D)), midveins pale yellow-green (155A); outside similar to inside but with a little reddish brown at the base and the outer tepals tipped strong yellow-green (144A); spots absent; papillae white on two-thirds of each tepal; nectaries strong yellow-green (144C); pollen strong brown (172A) and moderate reddish orange (171A); stigma dark red (187A) on a light greyish olive (195A) ground. Fls 230 mm wide; tepals 130 × 40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 180 × 55 mm, pale green. Stems 1.3 m, green with reddish brown at lf-nodes, and with c.5-6 fls.

#### **'Impeto' I(a/b)**

Parentage: ('Red King' (Div. I) × 'Juno') × ('Polárka' × unknown)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000), REG: B. Mičulka (2000)

Inside crimson-red, darker above nectaries; outside red-beige, midribs green; spots sparse, medium sized, black, on a quarter of each tepal; nectaries semi-open, white-granulated; pollen apricot-brown; stigma dark crimson. Fls 135 mm wide; tepals 75 × 43 mm, very slightly recurved; pedicels 80 mm long, brown-dotted. Lvs scattered, 80 × 12 mm, dull pale green. Stems 0.75 m, rigid, slightly brown-dotted, with a short infl. Early July.

#### **'Impressive' VII(b/b-c)**

Parentage: (Oriental seedling × *auratum*) × 'Star Gazer'

R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1987), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside yellowish white (155B/D), midveins light yellow (12C), throat strong yellow-green (143C); outside yellowish white (155B), midribs pale yellow-green (4D) suffused greyish red (182B) at the base; papillae sparse, brilliant yellow (13B), on the whole of each tepal; nectaries deep reddish purple (77A); pollen brownish orange (172C). Fls 280 mm wide; tepals 135 × 65 mm, margins of outer tepals slightly ruffled, tips slightly recurved. Lvs scattered, 190 × 43 mm, mid green. Stems 1.1 m, green, with c.4 fls. June (under glass).

#### **'Improved' IX(c/d)**

See *henryi* 'Improved'.

#### **'Imra' IV(a/b)**

See *pardalinum* 'Imra'.

#### **'Ina' I(a/b)**

Parentage: 'Tirreno' × 'Baltais Lācis'

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1998), REG: A. Balode (1999)

Inside strong red (51A), tepals with a narrow white edge, throat dark red; outside pinkish; spots absent; nectaries brown; pollen yellow. Fls 145 mm wide; tepals 75 × 40 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 125 × 15 mm, dark green. Stems 1 m, dark green, with c.3 fls. Early July.  
(Fl. colour does not fade in the sun.)

#### **'Ina Weekes' VIII(-/b)**

Parentage: *regale* × *candidum*

R: C. Weekes (c. 1942), N: C. Weekes

Fls white, throat cream.

(Published in *LYB* 11: 80 (1947).)

#### **'Inca' I(a/-)**

Parentage unknown

R: P. Hoff (1993), G: Hoffgaard B.V., N: Hoffgaard B.V. (1996), I: Hoffgaard B.V. (1997), REG: Hoffgaard B.V. (1997)

Inside vivid yellow (9A); outside brilliant yellow (9C), tepals narrowly edged vivid yellow (9A) and tipped moderate reddish brown (166B); spots few, dark red (187A), in the throat; papillae absent; nectaries strong yellow-green (144B/C); pollen dark reddish orange (175C); stigma dark red (187B). Fls 170 mm wide; tepals 85 × 30-45 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 80 mm, mid green. Stems 0.8 m, green with a little darker marking, and with 6-8 fls.

#### **'Inca Princess' VI(b/b)**

Parentage: Aurelian hybrid

R: C. Yerex (1957), G: C. Yerex (1959), N: C. Yerex, REG: (1983)

Fls apricot; spots absent; nectaries green. Tepal-margins smooth, tips slightly recurved. Stems 1.5 m, green. July to Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 46 (1978). Included as Div. VI(a) in *ILR* (1982).)

**'Incis' I(a/c)**

Parentage unknown

R: V.P. Orehovs (pre 1981), N: V.P. Orehovs  
Fls yellow, very large. Stems with bulbils.

**'Incomparable' I(a/b)**

See *L. × hollandicum* 'Incomparable'.

**'Inčukalns' I(b/-)**

Parentage unknown

R: V.P. Orehovs, G: V.P. Orehovs (1984), N: V.P. Orehovs (1984), I: V.P. Orehovs, REG: V.P. Orehovs (1987)  
Inside yellowish red; outside yellowish red, midribs yellow; spots small, dark brown, in centre of fl. Fls 140 mm wide; tepals 90 × 40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 85 × 15 mm, mid green. Stems 0.6 m, green. Mid July.

**'Independant' I(a/-)**

Parentage: 'Bora' × 'Peach Blossom'

R: Gebr. N. & B. Laan & Zn (1979), G: Gebr. N. & B. Laan & Zn (1981), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)

Fls pink; spots deep purple, in the throat and middle of tepals; nectaries light pink; pollen orange-red. Fls 150 mm wide; tepals 90 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 20 mm, dark green. Stems 1.4 m, green, with 12-14 fls. July.

**'Independence' I(a/-)**

Syn. of 'Showboat'.

**'Independence Hall' I(b/d)**

Parentage: Red Knight Group × Asiatic seedling

R: L. Lutz (pre 1964), G: L. Lutz (1964), N: L. Lutz (1967)

Fls mid red, spotted.

(Published in *ILR* (1969).)

**'Index' IV(-/-)**

Parentage: ('Shuksan' × *parryi*) self-pollinated

R: C.L. Shride, G: C.L. Shride, N: C.L. Shride, I: C.L. Shride (1953), REG: (1985)

Fls light orange; spots small, maroon. Tepals partly reflexed. Stems 1 m or more, with c.20 fls. June to July. (Published in *Greenock Farms Cat.*, 1956.)

**'India' I(b/c)**

Parentage unknown

R: Mak-Leek Inc. (pre 1997), N: Mak-Leek Inc., REG: ICRA (1998)

Fls red. Tepal-tips recurved. Stems 0.2 m. Very early. (Published in *The Lily Nook Cat.*, 1997.)

**'Indian Brave' I(a/b)**

Parentage: unnamed seedling ex J.C. Ericksen × yellow-

flowered Asiatic seedling ex Koehler

R: H.J. Hartle, G: H.J. Hartle, N: H.J. Hartle, I:

Borbeleta Gardens (1979), REG: J. Wadkamper (1981)

Inside brilliant yellow (10A), tepal-tips tan, throat blush pink; outside pinkish tan; spots large, brown, on basal third of each tepal; nectaries white; pollen light brown.

Tepals 90 × 35 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 1.2 m, mid green, with c.15 fls. Late.

(Published in *Borbeleta Gardens Cat.*, 1979.)

**'Indian Chief' II(-/d)**

See *L. × dalhansonii* 'Indian Chief'.

**'Indian Diamond' VIII(a/b)**

Parentage: ('Stella' × 'Mirella') × unnamed LA hybrid 93007-8

R: De Jong Lelies Holland B.V. (1996), G: De Jong Lelies Holland B.V. (1998), N: De Jong Lelies Holland B.V. (2002), I: De Jong Lelies Holland B.V. (c. 2003), REG: De Jong Lelies Holland B.V. (2002)

Inside strong orange (25B), throat light orange-yellow (22D); outside brilliant orange (25C); spots and papillae absent; nectaries moderate orange-yellow (167D); pollen dark reddish orange (173A); stigma strong red (53D).

Fls 175 mm wide; tepals 125 × 57 mm, margins smooth, tips slightly recurved. Lvs scattered, 210 × 20 mm. Stems 1.2-1.4 m, green with dark markings, with c.6-8 fls. June to July.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Indianka' I(b/-)**

Parentage: selection from Tsvetaevoi Group

R: Z.N. Tsvetaeva (c. 1940)

Inside dark violet shaded with purple, centre yellow with some brown stripes; outside violet. Fls scented of *Hesperis*; tepals slightly recurved.

(Published in *Lilies and other Liliaceae*, 1975: 28. Belongs to Tsvetaevoi Group.)

**'Indian Lady' I(b/-)**

Parentage: complex hybrid

R: C.F. Patterson (c. 1961), N: Dept. of Horticulture, University of Saskatchewan (1969)

Fls lemon-yellow (HCC 4/1), overlaid with geranium lake (HCC 20/2), giving a burnished effect; each tepal with basal third profusely spotted with purple madder (HCC 1028). Tepals three-quarters reflexed. Stems 1.1 m. (Published in *ILR* (1969).)

**'Indian Maid' I(a/b)**

Parentage unknown

R: H.J. Hartle (1923), N: J. Wadkamper (1977), I: J. Wadkamper (1970), REG: J. Wadkamper (1978)

Fls yellow, throat yellow-green; spots absent; nectaries greenish yellow; pollen light brown. Tepal-margins smooth. Lvs scattered. Stems up to 1 m. Midseason. (Published in *Lilies and other Liliaceae*, 1978/9: 109.)

**'Indian Princess' I(a/-)**

Parentage: 'Indian Brave' × 'White Prince'

R: Hartle-Gilman Gardens (1982), G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1990), I: Hartle-Gilman Gardens (1990), REG: Hartle-Gilman Gardens (1990)

Inside pale yellow-green (4D) fading to white, throat light greenish yellow (4C); outside white; spots black, on centre quarter of each tepal; nectaries greenish yellow; pollen orange. Tepals 95 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 80 × 10 mm, dark green. Stems 1.1 m, dark green, with 10-12 fls. Midseason.

#### 'Indian Queen' I(a/-)

Parentage: 'Edith Cecilia' × Asiatic seedling

R: H.J. Hartle (1973), N: H.J. Hartle (1977), I: J. Wadkamper (1978), REG: J. Wadkamper (1978)

Inside cream; outside cream-tan; lightly spotted on basal third to half of each tepal; nectaries cream; pollen orange. Stems 1 m. Early to midseason. (Published in *Lilies and other Liliaceae*, 1978/9: 110.)

#### 'Indian Song' VIII(b/c)

Parentage: 'Swing' × 'Napoleon'

R: J. Vanheusden (1995), G: J. Vanheusden (1997), N: J. Vanheusden (1997), I: J. Vanheusden (1997), REG: J. Vanheusden (1997)

Inside very bright orange; outside orange; spots fine, dark orange, on centre of each tepal; nectaries light grey; pollen orange; stigma orange. Fls c.130 mm wide; tepals c.65 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, c.75 × 10 mm, dark green. Stems c.0.6 m, dark, with c.15 fls. Late June.

#### 'Indian Summer' V(-/-)

See *longiflorum* 'Indian Summer'.

#### Indian Summer Group V? (-/-)

Parentage: includes *longiflorum* 'White Queen'

R: J. Boon (pre 1982), N: J. Boon  
Given as a parent of *longiflorum* 'Flevo', *longiflorum* 'Jean Paul' and *longiflorum* 'White Lace'.

#### 'Indian Trails' I(a/-)

Parentage: 'Indian Brave' × brushmarked seedling

R: H.J. Hartle (1978), G: Hartle-Gilman Gardens (1981), N: Hartle-Gilman Gardens (1985), I: Hartle-Gilman Gardens (1990), REG: Hartle-Gilman Gardens (1990)

Fls vivid yellow (12A); spots red/maroon, on centre third of each tepal; nectaries green; pollen gold. Tepals 66 × 30 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 130 × 14 mm, mid green. Stems 0.98 m, moderate olive-green (146A), with c.30 fls. Midseason.

#### 'Indian Warrior' I(b/-)

Parentage: ('Red Tiger' × unknown) × unnamed seedling  
R: H.J. Hartle, G: H.J. Hartle (1978), N: H.J. Hartle (1978), I: Borbeleta Gardens (1980), REG: Borbeleta Gardens (1981)

Inside strong reddish orange (42B) with orange-red on lime in throat; outside red; spots darker red; nectaries

frosty white; pollen light rust. Tepals 100 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 10 mm, mid green. Stems 1 m, tan-green, with c.20 fls, and bulbils. July.

(Published in *Borbeleta Gardens Cat.*, 1980.)

#### 'Indira Gandhi' VI(-/a)

Parentage unknown

R: D.-V. Škimele, G: D.-V. Škimele, N: D.-V. Škimele (1984), I: D.-V. Škimele, REG: D.-V. Škimele (1987)

Inside pure yellow flushed light brown, tepal-tips reddish, throat pure yellow; outside brownish yellow; pollen brown. Tepals 160 × 60 mm, ruffled. Lvs scattered, dark green. Stems 1.55 m, brown. Late July to early Aug. (Published in *Därzs un Drava 7: 24* (1986).)

#### 'Inferno' I(a/b)

Parentage: 'Cinnabar' (Div. I) × 'Red Carpet'

R: E.A. McRae (1968), G: E.A. McRae (1970), N: Oregon Bulb Farms, Inc. (1980), REG: Oregon Bulb Farms, Inc. (1981)

Inside vivid orange (28A) shading to vivid reddish orange (30A) on midveins in throat; outside vivid orange (28A); spots very few, tiny, above nectaries; nectaries light green with vivid orange (28B) overlay; pollen strong orange (26A). Fls 150-180 mm wide; tepals 70-90 × 25-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 70-90 × 10 mm, dark green. Stems 0.6-0.8 m, dark magenta over dark green, with 8-12 fls. June to July. Syn.: 'Herald'.

(Originally introduced in 1979 as 'Herald', but this epithet had already been used so the name was changed to 'Inferno' the following year.)

#### 'Ingenieur van der Slikke' VI(c/-)

Parentage: *henryi* × unknown

R: A.J. van der Zwet & Sons, N: A.J. van der Zwet & Sons AMH 1951

Fls egg-yolk-yellow, midribs green; faintly spotted.

#### var. *ingramii* IX(c/d)

See *columbianum* var. *ingramii*.

#### 'Ingrid' I(a/-)

Parentage unknown

R: H. Böhm (pre 1986), N: H. Böhm, REG: H. Böhm (1994)

Fls cherry-red, tepal-tips paler. Stems up to 0.7 m. (Published in German Lily Group sales list, 1993.)

#### 'Inka' I(a/-)

Parentage: 'Connecticut King' × Golden Chalice Group  
R: V. Jošt (1974), G: V. Jošt (1977), N: V. Jošt (1984), I: Sempra Praha a.s., REG: V. Jošt (1984)

Inside vivid orange-yellow (21A), throat vivid orange-yellow (23A); outside brilliant orange-yellow (23B); spots small, dark red (183A), in throat; nectaries white-orange; pollen strong reddish orange (169A). Fls 160 mm wide; tepals 93 × 52 mm, margins smooth, tips not recurved. Lvs scattered, 125 × 13 mm, dark green. Stems 0.45-0.65 m, mid green, with c.9 fls. June.

**'Inkafürst' Div. ?**

Given as a parent of 'Pharao' and 'Winnetou', both raised by V. Matthé. No further details.

**'Inkagold' I(b-c/d)**

Parentage: 'Sutter's Gold' × 'Connecticut King'  
R: A. Weinreich (1973), G: A. Weinreich (1975), N: A. Weinreich, I: A. Weinreich, REG: A. Weinreich (1993)  
Fls golden yellow with a few spots in the centre. Tepals slightly reflexed. Stems 1.2 m, with up to 20 fls. Early July.

Syn.: 'Eldorado'.

(Previously (1979) sold under the illegitimate epithet 'Eldorado' (or 'El Dorado'), but later re-named.

'Eldorado' is correctly used for an up-facing Asiatic lily from Hoff.)

**'Innes Betty' I(a-b/b)**

Parentage: ('Sunseeker' × 'Rosy Sunrise') × ('Vanguard' × 'Jupiter')

R: A.E. Alexander (1986), G: A.E. Alexander (1988), N: A.E. Alexander (1993), I: A.E. Alexander (1993), REG: A.E. Alexander (1993)

Inside moderate orange (170C), tepal-tips shaded gold; outside shaded strong yellowish pink (31C) to vivid red (45C); a narrow brushmark of vivid red (45C) in centre of each tepal surrounded by scattered, dark purple spots. Fls 110 mm wide; tepals 70 × 22 mm, margins smooth, tips very slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 1 m, mid green, with 8-10 fls. Dec. (New Zealand).

**'Innes Claire' I(a/b)**

Parentage: ('Sunseeker' × 'Rosy Sunrise') × cream-flowered, out-facing Asiatic

R: A.E. Alexander (1986), G: A.E. Alexander (1988), N: A.E. Alexander (1992), I: A.E. Alexander, REG: A.E. Alexander (1992)

Inside pink, tepal-tips darker, throat large, golden; outside pink and gold; spots small, dark red, on basal half of each tepal; pollen orange-red. Fls 100 mm wide; tepals 60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 10 mm, mid green. Stems 1 m, greenish brown, with 12-15 long-stalked fls. Dec. (New Zealand).

**'Innes Harrington' I(b/b)**

Parentage: ('Sunseeker' × 'Rosy Sunrise') × ('Vanguard' × 'Jupiter')

R: A.E. Alexander (1986), G: A.E. Alexander (1988), N: A.E. Alexander (1993), I: A.E. Alexander (1993), REG: A.E. Alexander (1993)

Inside and outside vivid red (46C) shading to vivid reddish orange (44C) at tepal-tips, throat strong reddish orange (31B); spots few, scattered, dark red, on basal third of each tepal; nectaries greyed gold; pollen brown. Fls 140 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 18 mm, dark green. Stems 1.1 m, dark green overlaid with tiny, red-brown spots, and with 10-15 fls. Dec. (New Zealand).

**'Innes Imp' I(b/b)**

Parentage: ('Sunseeker' × 'Rosy Sunrise') × cream-flowered, out-facing Asiatic

R: A.E. Alexander (1986), G: A.E. Alexander (1988), N: A.E. Alexander (1992), I: A.E. Alexander, REG: A.E. Alexander (1992)

Inside cream-buff, suffused gold-orange in throat; spots small, purple, on three-fifths of each tepal; nectaries mid orange; pollen bright orange; stigmas purple. Fls 100 mm wide; tepals 50 × 25-30 mm, margins smooth, tips very slightly recurved. Lvs scattered. Stems 0.7 m, mid green speckled with purple-brown, with up to 20 fls. Dec. (New Zealand).

**'Innes Yvonne' I(a/b)**

Parentage: ('Sunseeker' × 'Rosy Sunrise') × cream-flowered, out-facing Asiatic

R: A.E. Alexander (1986), G: A.E. Alexander (1988), N: A.E. Alexander (1992), I: A.E. Alexander, REG: A.E. Alexander (1992)

Inside muted pinkish orange, darker towards throat; outside orange; spots small, red-purple, on two-thirds of each tepal; pollen almost absent. Fls 110 mm wide; tepals 65 × 30 mm, margins smooth, tips very slightly recurved. Lvs scattered, 110 × 8 mm, mid green. Stems 0.8 m, pale green, with c.10 fls. Dec. (New Zealand).

**'Innocence' VII(-/b)**

Parentage: bred from *auratum* var. *platyphyllum*

R: L.B. Tuffery (c. 1966), N: L.B. Tuffery

Fls pure white; nectaries very small, green. Fls very large. Stems tall. Typical var. *platyphyllum* in growth.

**'Innocence' I(b/c-d)**

Parentage unknown

R: L. Koehler (pre 1980), N: L. Koehler

Inside pink, tepal-tips red, shading to orange in throat; outside red; spots on two-thirds of each tepal; anthers absent. Tepals 55 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 5 mm, mid green. Stems green, with 12-15 fls. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - already used for another lily. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978) as 'Innocense' which is a misspelling.)

**'Innocense' I(b/c-d)**

Misspelling of 'Innocence' (Div. I).

**'Innocent Molly' I(b/-)**

Parentage: 'Red Fox' × white-flowered seedling

R: W. Peryt (1986), G: W. Peryt (1988), N: W. Peryt (1990), I: W. Peryt (1991), REG: W. Peryt (1991)

Inside light yellowish pink (27B) blushed moderate pink (49B), throat light yellowish pink (27A); outside moderate pink (51D); spots tiny, deep red (185A), near base of each tepal; nectaries moderate pink (49B); pollen vivid reddish orange (34B). Fls 135 mm wide; tepals 70 × 28 mm, margins smooth, tips slightly recurved. Lvs scattered, 86 × 5 mm, dark green. Stems 0.8-1 m, mid green, with 16-20 fls on short pedicels. July.

**'Innova' VII(a/-)**

Parentage: unnamed seedling × unnamed seedling  
 R: Trior Lelie B.V., G: Trior Lelie B.V., N: Trior Lelie B.V. (1996), I: Trior Lelie B.V. (1998), REG: Trior Lelie B.V. (1997)

Inside yellowish white (155D), midveins a little darker; outside yellowish white (155D), tepal-tips strong yellow-green (143B), midribs light yellow-green (150D); spots absent; papillae yellowish white (155D) on half of each tepal; nectaries strong yellow-green (144B); pollen strong orange (25A/B); stigma light brownish grey (201A) with a purple flush. Fls 210 mm wide; tepals 120 × 55-70 mm, margins ruffled, tips recurved. Lvs scattered, 165 × 35 mm, mid green. Stems 0.9 m, light green, with 4-6 fls.

**'Innsbruck' VI(-/-)**

Parentage: 'Grüngelber Turm' × 'Glockenturm'  
 R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1981), I: V. Strasser (1984), REG: V. Strasser (1986)

Inside white, tepal-tips pink, throat yellow-orange; outside red-brown-green. Tepals 130 mm long, margins smooth, tips slightly recurved. Lvs scattered, 110 × 12 mm, dark green. Stems 1.7 m, grey-green, with c.12 fls. Mid July.

**'Inshriach Ivory' II(-/d)**

Parentage: *martagon* × unknown  
 G: Messrs Jack Drake (1968), N: Messrs Jack Drake (1976), I: Messrs Jack Drake (1976), REG: Messrs Jack Drake (1983)

Fls creamy white with a pale green centre. Lvs whorled. Stems 1.5 m. June.

(Published in *Jack Drake Cat.*, 1977. Appeared in *ILR Second Supplement* as a cv. of *L. martagon*.)

**'Inshriach Rose' II(-/d)**

Parentage: *martagon* var. *cattaniae* × unknown  
 G: Messrs Jack Drake (1960), N: Messrs Jack Drake (1970), I: Messrs Jack Drake (1973), REG: Messrs Jack Drake (1983)

Fls rose-red. Lvs whorled. Stems 1.5 m, with 25 fls. June. (Published in *Jack Drake Cat.*, 1973/74. Appeared in *ILR Second Supplement* as a cv. of *L. martagon*.)

**Inspiration Group VI(-/a)**

Parentage: selections from Aurelian Group  
 S: J. de Graaff (c. 1959), N: J. de Graaff

Fls pink and white. Stems 1.5 m. July. (Published in *ILR* (1982) as Inspiration grex.)

**Instigators Group I(a/-)**

Parentage: 'Coronation' × large-flowered, up-facing Asiatic seedlings

R: J.C. Ericksen (early 1970s), G: J.C. Ericksen (1980), N: J.C. Ericksen (1991), REG: J.C. Ericksen (1991)

Fls bicoloured, inside in shades of soft coral, throat paler (yellow or white); outside soft coral and green; spots few, inconspicuous; nectaries greenish; pollen light orange. Fls large; tepals 75 × 30 mm or more, margins smooth, tips slightly recurved. Lvs c.150 mm long, mid green. Stems 1.2 m or more, very thick, green, with up to 15 fls. Early to late July.

**var. *insulare* IX(b/a)**

See *longiflorum* var. *insulare*.

**'Inta' VII(a-b/b)**

Parentage unknown  
 R: R. Krūmiņš (1997), G: R. Krūmiņš (2001), N: R. Krūmiņš (2003), REG: Liliūm Balticum Association (2004)

Inside light violet-pink, midveins darker, tip and margin of each tepal white, throat yellowish green; outside greyish pink, midribs brownish green; spots cherry-red; pollen light brown; stigma greyish yellow. Fls 230 mm wide; tepals 155 × 70 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 240 × 60 mm. Stems 1 m, greyish green, with 5-6 fls. Late July.

**'Intercept' VII(-/c)**

Parentage: *L. × parkmanii* Imperial Silver Group × 'Red Jamboree'

R: M. van Egmond (1979), G: M. van Egmond (1982), N: M. van Egmond (1984), REG: van Egmond B.V. (1988)

Inside greenish white (155C), flamed moderate red (185B), outside greenish white marked with moderate purplish red (186B); papillae moderate red on basal half of each tepal; pollen moderate reddish orange (173B). Fls 270 mm wide; tepals 125 × 65 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 25 mm, mid green. Stems 0.6 m, green, with c.3 fls.

**'Interlude' I(c/-)**

Parentage: (*cernuum* × *lancifolium*) F<sub>2</sub>  
 R: J. de Graaff (c. 1960), N: J. de Graaff  
 Fls soft orange-pink. Stems 1.2 m.

**'Intermediate Pure White' V(b/a)**

See *formosanum* 'Intermediate Pure White'.

**× *intermedium* H.F. Comber I(c/d)**

Parentage: *concolor* var. *pulchellum* × *pumilum*  
 R: H.F. Comber (pre 1940), G: H.F. Comber (1940)  
 Fls bright red; spots towards base of fl.; papillae purple-tipped, at base of each tepal. Fls c. 50 mm wide, strongly scented, hairy outside. Lvs scattered, up to 90 × 7 mm. Stems c.0.75 m.

Syn.: 'Intermedium'.

(Publ. in *Gard. Chron.* 107: 319 (1940). The plant died during World War II.)

**'Intermedium' I(c/d)**

Syn. of *L. × intermedium*

**× *intermedium* 'Red Star' I(b/c-d)**

Syn. of 'Red Star'.

**× *intermedium* Tenuicon Group I(c/-)**

Parentage: *concolor* var. *pulchellum* × *pumilum*

R: C.C. Bangs (c. 1931), N: C.C. Bangs

Tepals orange-red to dark red, longer and narrower than *pumilum*, not reflexed.

(Published in *LYB NALS* 1: 106 (1947/48). Included

in *ILR* (1982) as *Tenuicon* grex. Epithet formed from *tenuifolium* (= *pumilum*) and *concolor*.

**‘Inti Illimani’ I(a/b)**

Parentage: ‘Chinook’ × ‘Connecticut King’  
R: D.E. Schmitzer (1975), G: D.E. Schmitzer (1978), N: D.E. Schmitzer (1983), REG: D.E. Schmitzer (1983)  
Fls vivid orange (28B) throughout; spots absent; nectaries fading to green; pollen more-or-less strong reddish orange (169A). Fls 125 mm wide; tepals 75 × 36 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 14 mm, pale green. Stems 1 m, green slightly overlaid with brown, with up to 25 fls. Mid July.  
(Named in honour of the Chilean folk-music group that went into exile during the Pinochet era.)

**‘Intrepid’ I(b/-)**

Parentage: complex *lancifolium* hybrid  
R: E.J. Kelley (c. 1966), N: E.J. Kelley  
Fls light lemon-yellow, dusted with tiny spots. Tepals slightly reflexed and gracefully twisted. Lvs pale green. Stems 1.2 m. Midseason.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 13 (1978).)

**INTRO VIII(a-b/b)**

Trade designation of ‘Zanlaitro’.

**‘Invercargill’ IX(b/c)**

Name given erroneously to *auratum* in *LYB* 21, fig.26 (1958).

**‘Invergowrie’ I(c/-)**

Parentage: *lankongense* × Asiatic hybrid  
R: C. North, G: C. North, N: D.M. Simmons (1983), I: D.M. Simmons (1983), REG: D.M. Simmons (1983)  
PC 1981  
Inside tepal-tips strong purplish pink (63C), throat pale yellow (158A); outside strong purplish pink (63C) fading to pale yellow (158A) along tepal-margins; spots copious, strong purplish red (63A) in throat and along tepal-margins; nectaries strong yellow-green (144C); pollen vivid reddish orange (33A). Fls 55-65 mm wide; tepals 50-65 × 16-25 mm, margins smooth, tips strongly recurved. Lvs scattered, the upper 100 × 10 mm, dark green. Stems c.1.6 m, green flecked greenish brown, with up to 27 fls. July.

**‘Invinceable’ VII(-/c)**

Syn. of *L. × parkmanii* ‘Adventure’.

**‘Invincible’ I(a/b)**

See *L. × hollandicum* ‘Invincible’.

***inyoense* Eastwood IX(c/d)**

Syn. of *kelleyanum*.

**‘Inzell’ I(a/-)**

Syn. of ‘Holebaba’.

**‘Ioaninna’ I(-/-)**

Parentage unknown  
R: Vletter & Den Haan (pre 1992)  
Inside yellowish white (155D); outside yellowish white (155D), midribs flushed with light yellow-green (145B); spots and papillae absent; nectaries light yellow-green (145B); pollen deep orange-yellow (163A); stigma dark red (187C). Fls 150 mm wide; tepals 85 × 45 mm, margins slightly ruffled. Lvs scattered, 170 × 20 mm. Stems 0.7 m, green with some darker markings, and with c.8 fls.  
(Granted Dutch PBR (LEL 1058) in 1994, but not registered - the stock was destroyed by the raiser.)

**‘Iolanta’ I(a-b/b)**

Parentage: (‘Rubinovaia’ × ‘Prince Charming’ (Div. I)) × ‘Liudmila’ (of Kireeva)  
R: M.F. Kireeva (1976), N: M.F. Kireeva  
Fls light pink, each tepal with a white centre; spots small, dark red, on white part of each tepal. Fls 140-160 mm wide; tepal-margins smooth, tips slightly recurved. Stems 0.9-1.15 m, with 9-15 fls and with a few bulbils.  
(Unaccepted spelling: ‘Jolanta’, ‘Yolanta’. Published in M.F. Kireeva, *Lilii*, 46 (2000).)

**‘Iolanta’ I(a-b/c)**

Parentage: (‘Rubinovaia’ × ‘Prince Charming’ (Div. I)) × (((‘Stroinaia’ × *dauidii* var. *willmottiae*) × ‘Enchantment’) × ‘Malinovka’)  
R: Michurinsk Institute (1980), N: Michurinsk Institute, REG: ICRA (1994)  
Fls white, tepal-tips rose-pink, throat rose-pink; spots few, small, brown; pollen light brown. July.  
(Possibly the same as ‘Iolanta’ of Kireeva.)

**‘Iona’ I(c/-)**

Parentage: *lankongense* × Asiatic hybrid  
R: C. North, G: C. North, N: D.M. Simmons (1982), I: D.M. Simmons (1982), REG: D.M. Simmons (1983)  
Inside with tepal-tips pale orange-yellow (23D), throat pale orange-yellow (23D) to light orange-yellow (25D), tepal-margins strong orange (24A); outside pale orange-yellow (23D) flushed more-or-less moderate reddish brown (166B) at base; spots copious, deep red (53A), on basal two-thirds of each tepal; papillae strong orange (24A); nectaries strong yellow-green (144B); pollen vivid reddish orange (34A). Fls 60-70 mm wide; tepals 70 × 19-27 mm, margins smooth, tips strongly recurved. Lvs scattered, the upper 110 × 12 mm, dark green. Stems c.1.6 m, green flecked greenish brown, with 8-48 fls. July.  
Syn.: ‘Iona North’.

**‘Iona North’ I(c/-)**

Syn. of ‘Iona’.

**‘Iowa Gold’ VI(b-c/a)**

Parentage: unnamed seedling × unnamed seedling  
R: D.B. Schaefer (1993), G: Cebecco Lilies, Inc. (1996), N: J. Venard (2002), I: J. Venard (2002), REG: J. Venard (2002)  
Inside and outside vivid yellow (9A); unmarked; nectaries

deep yellowish green (141B); pollen light reddish brown (177B); stigma strong yellow-green (143C). Fls 180 mm wide, strongly scented; tepals 170 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 200 × 15 mm. Stems 1.5 m, moderate olive-green (137B), with 8-10 fls in a racemose infl. July. Tetraploid.  
(The epithet refers to the State of origin and the fl. colour. Nomenclatural standard: colour print provided by registrant (WSY 0035292).)

#### **'Iowa Orangeglow' VI(b-c/a)**

Parentage: unnamed seedling × unnamed seedling  
R: D.B. Schaefer (1993), G: Cebeco Lilies, Inc. (1996), N: J. Venard (2002), I: J. Venard (2002), REG: J. Venard (2002)

Inside yellowish white (155B) at tepal-tips, shading to brilliant orange-yellow (21B) in throat; outside yellowish white (155B) with stripes of green and light orange; spots absent; nectaries strong yellowish green (135C); pollen moderate reddish brown (177A); stigma light greyish olive (197C). Fls 170 mm wide, strongly scented; tepals 130 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 185 × 15 mm. Stems 1.7 m, moderate yellowish green (139B) with 9-14 fls in a racemose infl. July. Tetraploid.

(The epithet refers to the State of origin and the fl. colour. Nomenclatural standard: colour print provided by registrant (WSY 0035288).)

#### **'Iowa Pink Blush' VI(b-c/a)**

Parentage: unnamed seedling × unnamed seedling  
R: D.B. Schaefer (1994), G: Cebeco Lilies, Inc. (1997), N: J. Venard (2002), I: J. Venard (2002), REG: J. Venard (2002)

Inside yellowish white (155D), tepals edged with a moderate purplish pink (186D) blush, throat brilliant greenish yellow (6A); outside yellowish white (155D), with stripes of moderate purplish pink (186D) and moderate yellow-green (139D); spots absent; nectaries strong yellow-green (143C); pollen moderate reddish brown (166B); stigma light olive-grey (197B). Fls 190 mm wide; tepals 140 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 200 × 15 mm. Stems 1 m, moderate yellow-green (138B), with 8-10 fls in a racemose infl. July. Tetraploid.

(The epithet refers to the State of origin and the fl. colour. Nomenclatural standard: colour print provided by registrant (WSY 0035290).)

#### **'Iowa Rose' I(b/-)**

Parentage: Hallmark Group × 'Rosebelle'  
R: R.A. Prochaska (1980), G: R.A. Prochaska (1982), N: R.A. Prochaska (1984), I: Hartle-Gilman Gardens (1988), REG: Hartle-Gilman Gardens (1988)

Inside strong pink (54C), throat pale orange-yellow (19D); outside strong pink (54C) with a black edge along the central third of each tepal; spots small, dark, on central third of each tepal; nectaries light pink; pollen brown. Tepals 76 × 31 mm, margins smooth, tips slightly recurved. Lvs scattered, 89 × 14 mm, dark green. Stems 1.32 m, dark green, with 16-20 fls. Midseason.

#### **'Iowa Snowflakes' VI(b-c/a)**

Parentage: unnamed seedling × unnamed seedling  
R: D.B. Schaefer (1993), G: Cebeco Lilies, Inc., N: J. Venard (2001), I: J. Venard (2001), REG: J. Venard (2001)

Inside creamy yellowish white (155B), throat brilliant yellow (12A), the colour extending as far as the base of reflexed part of tepals; outside creamy yellowish white (155B), with alternating bands of green and rose-pink; spots absent; nectaries dark green; pollen moderate brown (200D); stigma brown. Fls 190 mm wide, strongly scented; tepals 160 × 50 mm, margins smooth, tips recurved; margins of inner tepals unevenly reflexed near apex. Lvs scattered, 200 × 20 mm. Stems 1.3 m, dark green, with 7-9 fls (from long buds) in a racemose infl. Tetraploid.

(Iowa is the state where this lily originated.)

Nomenclatural standard: colour print provided by registrant (WSY 0029869).)

#### **'Iowa Sunbeam' VI(b-c/a)**

Parentage: unnamed seedling × unnamed seedling  
R: D.B. Schaefer (1993), G: Cebeco Lilies, Inc. (1996), N: J. Venard (2002), I: J. Venard (2002), REG: J. Venard (2002)

Inside brilliant yellow (11A); outside brilliant yellow (10A), with green and white stripes; unmarked; nectaries strong yellow-green (141D); pollen moderate brown (200D); stigma strong yellow-green (143C). Fls 200 mm wide, strongly scented; tepals 170 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 230 × 15 mm. Stems 1.9 m, moderate yellowish green (137D), with 9-12 fls. July. Tetraploid.

(The epithet refers to the State of origin and the fl. colour. Nomenclatural standard: colour print provided by registrant (WSY 0035291).)

#### **'Iowa Sunset' VI(b-c/a)**

Parentage: unnamed seedling × unnamed seedling  
R: D.B. Schaefer (1993), G: Cebeco Lilies, Inc. (1996), N: J. Venard (2002), I: J. Venard (2002), REG: J. Venard (2002)

Inside light greenish yellow (4C) shading through dark yellow then to brilliant yellow (21C) in the throat; outside light greenish yellow (4C), with stripes of light orange and yellow; unmarked; nectaries strong yellowish green (141C); pollen brownish orange (165B); stigma moderate yellow-green (138C). Fls 170 mm wide, strongly scented; tepals 155 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 17 mm. Stems 1.9 m, moderate yellowish green (139B), with 8-12 fls. July. Tetraploid.

(The epithet refers to the colour of an Iowa sunset. Nomenclatural standard: colour print provided by registrant (WSY 0035289).)

#### **'Iphigenia' VI(b/a)**

Parentage: (*L. × sulphurgale* × *leucanthum* var. *centifolium*) × *henryi* 'Vilány'  
R: I. Wiesner (1988), N: I. Wiesner, I. I. Wiesner (1989), REG: I. Wiesner (1989)

Inside vivid reddish orange (30A), throat darker (33B); outside greenish, midribs brownish red; nectaries green; pollen pale orange; stigma dark brown-purple. Fls 150 mm wide; tepals very slightly recurved; pedicels 65-85 mm long. Lvs scattered, glossy deep green. Stems 1-1.2 m, brownish at base, with 6-8 fls in a very short infl. Bulbs purple. Mid July.

**'Ippolit Zalivskii'** VI(-/a)

Parentage: 'Severnaia Palmira' × *L. × sulphurgale*  
R: V.P. Eremin (c. 1959), N: V.P. Eremin  
Fls phosphorus-white, centre creamy white; buds stained brown; pollen dark brown. Fls up to 200 × 250 mm, with a *regale*-like scent. Stems 2 m, with 5-8 fls. Young shoots light chocolate-brown, with wavy lvs. Late Aug. (Unaccepted spelling: 'Hyppolite Zalivski'. Published in *LYB* 33: 76 (1970).)

**'Ira'** I(b/-)

Parentage: selection from Skumstu Group  
S: V.P. Orehovs (post 1956), N: V.P. Orehovs  
Fls orange-yellow.  
(Published in *LYB* 33: 79 (1970).)

**'Irasmol'** I(b-c/d)

Parentage: *dauidii* × 'Feuer und Rauch'  
R: J. Dudek, N: J. Dudek, I: J. Dudek (2001), REG: J. Dudek (2001)  
Inside red, centre of fl. blackish red, with a red blotch, throat red; outside dark red with red midribs; spots small, moderately numerous, on half of each tepal; pollen orange; stigma red. Fls 80 mm wide; tepals 65 × 25 mm, strongly recurved; pedicels 120 mm long, brown-spotted. Lvs scattered, 120 × 8 mm. Stems 1.4 m, brown, with a long infl. Mid July.

**'Irena'** I(a/b)

Parentage: 'Karmen' × 'Symfonieta'  
R: Šlechtitelaká Stanice Heřmanův Městec (pre 1993), N: Šlechtitelaká Stanice Heřmanův Městec, REG: Šlechtitelaká Stanice Helvmanův Městec (1993)  
Inside red, with an orange flare at base of each tepal; spots small, sparse, on a third of each tepal. Fls 105-135 mm wide, with pointed, overlapping tepals; pedicels 45-56 mm long. Lvs 53-90 × 12-14 mm, glossy green. Stems 0.7-0.95 m, slightly shaded with red-brown, with c.15 fls. Mid June. (Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1993. Unsuitable for forcing. The seed parent is probably 'Karmen' of V. Jošt.)

**'Irene'** I(a-b/b)

Parentage unknown  
R: Peacock B.V., N: Peacock B.V. (1990), REG: Peacock B.V. (2002)  
Inside vivid yellowish orange (30C), throat vivid reddish orange (30B), markings dark purple; outside of outer tepals vivid reddish orange (30A), of inner tepals vivid yellowish orange (30C); spots and papillae present; nectaries orange; pollen red-brown; stigma purple-red. Tepal-margins ruffled, tips recurved. Stems dark green with brown spots and some darker markings. Midseason.

**'Irene's Grace'** VI(b/a)

Parentage: *leucanthum* var. *centifolium* × 'Heart's Desire'  
R: K. Paszyńska (1984), G: K. Paszyńska (1988), N: K. Paszyńska (1992), I: K. Paszyńska (1992), REG: K. Paszyńska (1992)

Inside cream, throat intense golden yellow; outside tinged with green especially along midribs; spots absent; nectaries golden yellow; pollen light brown. Fls 170 mm wide, scented; tepals 120 × 50 mm, margins slightly ruffled, tips recurved. Lvs scattered, 120 × 20 mm, mid green. Stems 1/2, green, with 6-10 fls (including some secondaries) in a crown-like head. Early July.

**'iridollae M.G. Henry'** IX(c/d)

Fls buff-yellow to golden yellow; spots maroon or brown, on basal half of each tepal or sometimes almost to tip; nectaries green; anthers red-brown; pollen red-brown or brown-yellow. Fls slightly scented; tepals up to 100 × 15-25 mm. Lvs whorled, sometimes scattered towards stem-base, up to 90 × 25 mm. Stems 1-1.75 m, usually with solitary fls but sometimes with up to 8. Aug. to Sept. SE USA (Alabama, Florida).

**'Irina'** VI(b/a)

Parentage: 'Quicksilver' × Pink Perfection Group  
R: E.V. Parmanin & Z.S. Sapozhnikova (1968), N: E.V. Parmanin & Z.S. Sapozhnikova  
Inside white, throat shaded pink; outside brownish rose-pink. Fls 150-170 mm wide. Stems 1.6-1.8 m, with 3-9 fls. July.  
(Published in *ILR Third Supplement*: 23 (1989).)

**'Irina'** VI(-/a)

Parentage unknown  
R: V.P. Orehovs (1962)  
Inside greenish yellow; outside pale lilac; pollen chocolate-brown; style and stigma green. Fls 110 mm wide, fragrant. Stems 1 m. July.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in M.V. Baranova, *Lilii*, 356 (1990).)

**'Irish Cream'** II(c/d)

Parentage unknown  
R: unknown, G: E.E. Fox (1989), N: E.E. Fox (1990), I: Fox Lily Ranch (1993), REG: E.E. Fox (1992)  
Inside white with a cream tinge towards the centre, changing to lime-green in the nectaries, throat light green; outside cream/white, midribs mid green, and plum-coloured edges at the junction with the pedicel; spots very small, maroon, sprinkled on two-thirds of each tepal and on the reverse; pollen cinnamon. Fls 50 mm wide; tepals 35 × 17 mm, margins smooth, tips slightly recurved. Lvs whorled, 150 × 32-35 mm, dark green, with pronounced vein grooves. Stems 1.4 m, green, with c.22 fls. Late June to early July.

**'Irish Pixie'** I(a/-)

Parentage: 'Charisma' × 'Sun Ray'  
R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1985), I: Oregon

Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)

Inside vivid orange (28A) fading to vivid reddish orange (30A), with a slight gold blotch on each tepal; outside vivid yellowish pink suffused with purple; spots few, in the centre; nectaries green; pollen soft golden yellow. Tepals 100 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 35 mm, dark green. Stems 0.4 m, mottled, with 6-20 fls. June.

Syn.: 'Ceb Irish'.

(The USPP granted to 'Irish Pixie' in 1989 predates the 1995 grant of Dutch PBR (LEL 1113) under the epithet 'Ceb Irish', so the latter epithet is regarded as a synonym.)

#### 'Irish Tune' VI(b/b)

Parentage: *L. × kewense* 'White Henry' × yellow-green-flowered trumpet

R: C. Helsley (1979), G: C. Helsley (1984), N: C. Helsley (1989), I: Ozark Mountain Lilies (1991), REG: C. Helsley (1989)

Inside pale greenish yellow (9D), throat blending to a brilliant yellow (8A) centre; outside brilliant yellow-green (154C); a few, very small, brown papillae in centre of fl.; nectaries strong greenish yellow (151B); pollen vivid orange-yellow (23A). Fls 170 mm wide; tepals 130 × 30-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 12 mm, mid green. Stems 1.5 m, green with violet-brown spots, and c.12 fls. Late June.

#### 'Ironia' I(a/-b)

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1992)  
Fls bronze-red; spots dark brown on basal half of each tepal; pollen sterile. Fls 110-130 mm wide; tepal-margins smooth. Stems 0.8-1 m, with 8-13 fls. July.  
(Published in M.F. Kireeva, *Lilii*, 34 (2000).)

#### 'Irresistible' VII(b/d)

Parentage unknown

R: L. Woodriff (1958), G: R.L. & H.R. Strahm (1962), N: R.L. Strahm (1964), I: R.L. & H.R. Strahm (1971), REG: R.L. & H.R. Strahm (1984)

Inside claret-rose, tepal-tips paler, throat green; outside deep pink; spots dark red; nectaries green; pollen orange. Fls 200 mm wide; tepals 100 × 40 mm, margins ruffled, tips strongly recurved. Lvs scattered. Stems 1.2 m. July to August.

(Published in *Rex Bulb Farms Cat.*, 1971. Listed in *ILR* (1982) without classification and in *ILR Third Supplement* without description.)

#### 'Irresistible' I(a/-)

Syn. of 'Sweetheart'.

#### 'Irrlicht' I(a/-)

Parentage: 'Rubinstern' × 'Darja'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Inside and outside strong purplish red (64B), throat light orange-yellow (19A); spots small, well-spaced, strong

red (46A), on basal half of each tepal; nectaries creamy white; pollen vivid red (46C). Fls 160 mm wide; tepals 85 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm, mid green. Stems 1 m, rather dark green, with c.20 fls. Early to mid July.

#### 'Iru' VI(-/a)

Parentage: *L. × imperiale* × *L. × sulphurgale*

R: V.N. Esinovskaya (1965), N: V.N. Esinovskaya

Fls pale pink, very fragrant. Stems 1.2 m, with bulbils.

#### 'Isaac Watts' I(b/b)

Parentage: 'Albipayne' × 'Bingo'

R: L.D. Marshall (1978), G: Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987), REG: Columbia-Platte Lilies (1988)  
Inside vivid to strong reddish orange (42A/B), tepal-tips vivid reddish orange (42A), throat vivid to strong reddish orange (42A/B); outside strong reddish orange (42B/C); spots absent; nectaries green/cream; pollen moderate reddish brown (176B) when present, but anthers often remain closed or open only at tips. Tepals 60-90 × 30 mm, margins slightly ruffled, tips slightly recurved; pedicels very dark, horizontal. Lvs scattered, 100-150 × 20 mm, dark green. Stems 1.5-2 m, dark (almost black) with 8-30 very glossy fls in a long infl. Late June.

#### 'Isabell' I(b/-)

Parentage unknown

R: J. Klein (pre 1982), N: J. Klein

Fls salmon-pink. Stems 0.8 m. Early July.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Isabelle'. Published in German Lily Group sales list, 1986.)

#### 'Isabella Preston' I(b/-)

Parentage: *L. × hollandicum* × unknown

R: R. Warner, N: R. Warner

Fls orange.

(Published in *Sandyloam Cat.*, 1945.)

#### 'Isabelle' III(c/d)

See *L. × testaceum* 'Isabelle'.

#### 'Isadora' VII(-/b)

Parentage: Pink Glory Group (Div. VII) × *nobilissimum*

R: E.A. McRae (1967), G: Oregon Bulb Farms, Inc. (1970), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)  
Inside deep to moderate purplish pink (66C/D), suffusing outwards from midveins to deep to strong purplish pink (68A/B), tepal-margins white, 20-30 mm wide; outside white flushed with soft pink, midribs soft green; spots 5-20, mid pink, on inner tepals; nectaries apple-green; pollen moderate red (179A). Fls 180-230 mm wide; tepals 110 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 70 mm, dark green. Stems 1 m, light green, with 6-20 fls. Late Aug.

**'Isis' I(a/b-c)**

Parentage unknown

R: A.J. Porter (c. 1986)

Fls ivory-yellow, throat tinged with green and flushed with yellow-orange in centre; spots present. Stems 0.9-1 m, dark, with c.20 fls. July.

Syn.: 'Cover Girl' (Div. I).

(Published in *Honeywood Lilies Cat.*, 1988.)**'Iskra' I(c/d)**Parentage: *dauidii* × mixed Asiatic pollen

R: M.F. Kireeva (1979), N: M.F. Kireeva

Fls bright orange-red, *dauidii* type; filaments pale orange; anthers rudimentary, sometimes with a small amount of orange-red pollen. Fls 80 mm wide. Stems 1.3-1.5 m, with c.25 fls. June to July.(Published in M.F. Kireeva, *Lilii*, 51 (1984).)**'Isobel Lindsay' VII(-c)**See *L. × parkmanii* 'Isobel Lindsay'.**'Isola' VII(a/b)**

Parentage unknown

R: Vletter &amp; Den Haan Beheer B.V. (1993), G: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V. (1996), I: Vletter &amp; Den Haan Beheer B.V., REG: Vletter &amp; Den Haan Beheer B.V. (1999)

Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen orange-brown; stigma green. Tepal-margins ruffled, tips slightly recurved. Stems 1.3 m, green. Midseason to late.

**'Isphahan' I(a/c)**

Parentage unknown

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Inside and outside vivid reddish orange (34B); each tepal with tiny, moderate orange (173C) spots on basal half, and a conspicuous pale yellow flash towards base; nectaries pale green (189C); pollen moderate reddish brown; stigma deep purple-red. Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm. Stems 1.3 m, dark green, with 8-10 fls. Mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0024694).)

**'It' VII(-d)**See *L. × parkmanii* 'It'.**'Italia' I(a/b)**

Parentage unknown

R: Hoffgaarde B.V. (1980), G: Hoffgaarde B.V. (1982), N: Hoffgaarde B.V. (1988), I: Hoffgaarde B.V. (1988), REG: Hoffgaarde B.V. (1989)

Inside deep pink (47D), tepal-tips edged strong reddish orange (34C), throat light greenish yellow (5D); outside light yellowish pink (38D), tepal-margins strong yellowish pink; spots dark red (187A); pollen brownish orange (172C). Fls 170 mm wide; tepals 90 × 45 mm,

margins smooth, tips not recurved. Lvs scattered, 100 × 15 mm, pale green. Stems 0.9-1.5 m, green with darker markings, and with 5-12 fls.

**'Ithaca' VI(-a)**See *L. × imperiale* 'Ithaca'.**'Jubileinaia' VI(-/a)**Parentage: *L. × imperiale* × Olympic Group

R: V.N. Esinovskaya (1966), N: V.N. Esinovskaya

Fls pink and white. Stems 1.3 m, with bulbils.

(Unaccepted spelling: 'Jubileinaia', 'Jubileinaja'.)

**'Junaia' VI(-/-)**

Parentage: 'Gloriosum' × 'Zalivskii'

R: V.A. Grot (c. 1960), N: V.A. Grot

(Unaccepted spelling: 'Junaja'. The 'Gloriosum' parent is of Russian origin. No further details.)

**'Junost' VI(-/c)**

Parentage: selection from Aurelian seedlings

S: N.A. Miroshniczenko (c. 1979), N: N.A.

Miroshniczenko

Fls pure white with a large, reddish nectary-star in centre. Stems 1.5 m. July.

(Included in *ILR Third Supplement* as 'Yunost', which is an unaccepted spelling.)**'Juras Zvaigne' I(a/-)**

Misspelling of 'Jūras Zvaigzne'.

**Juras Zvaigne Group I(a/b)**

Misspelling of Jūras Zvaigzne Group.

**'Iurii Gagarin' VI(-/c)**

Unaccepted spelling of 'Yuri Gagarin'.

**'Iuzhanka' I(b/-)**

Parentage: 'Russian Scope' × 'Connecticut King'

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls bright apricot; spots absent. Stems 1.3 m.

(Included in *ILR Second Supplement* as 'Youzhanka' which is an unaccepted spelling.)**'Ivan' I(a/b)**

Syn. of 'Ivanka'.

**'Ivana' I(a/b)**

Syn. of 'Ivanka'.

**'Ivanka' I(a/b)**

Parentage unknown

R: K. Vereš (1984), N: K. Vereš, REG: K. Vereš (1986)

Inside glowing red, tepal-tips orange-red; outside reddish; spots very few, tiny; pollen pepper-red. Fls 140 mm wide; tepals 64 × 17 mm, margins slightly curled; pedicels brown-dotted, with secondary buds. Lvs 100 × 9 mm. Stems 1.45 m, brownish, with 10-15 fls and a few bulbils. Early July.

Syn.: 'Ivan'; 'Ivana'.

**'Iverna' I(a-b/b)**

Parentage unknown

R: De Jong Beheer B.V. (1988), G: De Jong Beheer B.V., N: De Jong Beheer B.V. (1993), I: De Jong Beheer B.V. (1994), REG: De Jong Beheer B.V. (1995)

Inside vivid yellow (between 12A & 14B), tepal-tips yellow, throat green changing to yellow; outside vivid yellow (12A); dark spots and some papillae present on basal third of each tepal; nectaries green; pollen orange-yellow; stigma purplish red. Tepals 167 × 55 mm, margins smooth, tips not or very slightly recurved. Lvs scattered, 150 × 39 mm, mid green. Stems 0.75-1 m, green, with 7-9 fls (from 16-18 cm bulbs). Early to midseason.

**'Ivija' VII(b/c)**

Parentage unknown

R: Ē. Ieviņa, G: Ē. Ieviņa, N: Ē. Ieviņa (pre 1996), REG: Liliūm Balticum Association (2004)

Inside white; outside white, midribs pale greyish brown to pale yellow; papillae white; nectaries light green; pollen reddish brown; stigma violet-grey. Fls 200 mm wide; tepals 130 × 45-50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 180 × 45 mm. Stems 1 m, green, with 6-7 fls. Early Aug.

**'Ivolga' I(a/b)**

Parentage unknown

R: Fls lemon-yellow. Fls 140 -160 mm wide. Stems 0.8-0.9 m, with 8-11 fls. July.

(Published in M.F. Kireeva, *Lilii*, 41 (2000).)**'Ivona' I(a/-)**

Parentage: Pastel Group × 'Connecticut King'

R: J. Jošt (1971), G: J. Jošt (1974), N: J. Jošt (1984), I: Semptra Praha a.s. (1984), REG: J. Jošt (1984)

Inside light greenish yellow (8B), throat vivid yellow (9B); outside light greenish yellow (8B); spots few, dark red (187A), on a third of each tepal; nectaries white; pollen vivid orange-yellow (23A). Fls 125 mm wide; tepals 86 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, 128 × 9 mm, dark green. Stems 1.05 m, mid green, with c.12 fls. June to July. (Published in *Zabradnictvo*, 1984.)

**'Ivonka's Choice' I(a/-)**

Parentage unknown

R: J. Montgomery (1989), G: J. Montgomery (1991), N: J. Montgomery (1996), I: Ambrosia Gardens (1998), REG: J. Montgomery (1997)

Inside strong red (50A) fading slowly to brilliant orange (29A), with a narrow yellow stripe down the centre of each tepal; outside similarly coloured; tiny carmine dots on about half of each tepal; pollen bright orange. Fls 115 mm wide; tepals 60 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 8 mm, dark green. Stems 0.75 m, green, with 9-12 fls. Midseason to late.

**'Ivorine' II(-/-)**Parentage: *hansonii* × unknown

R: F.L. Skinner, N: F.L. Skinner

Fls ivory-white. Stems 1-1.2 m.

(Published in *LYB NALS* 2: 114 (1949).)**'Ivorine' VI(-/c)**

Parentage: selection from Aurelian Group

S: J. de Graaff (c. 1956), N: J. de Graaff

Fls ivory-white with broad tepals. Stems 1-1.2 m.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Walter Marx Gardens Cat.*, 1956/57.)

**'Ivory' VI(-/a)**Parentage: *L. × sulphurgale* × mixture of pollen from *sargentiae*, *henryi* & 'Severnaia Palmira'

R: I.L. Zalivski (mid 1950s), N: I.L. Zalivski

Inside ivory, throat yellow-green; outside greenish brown; pollen orange-brown. Fls 150 × 150 mm. Lvs scattered, 125 × 13 mm, pale green. Stems up to 1.5 m, dark green. June.

**'Ivory Belles' VIII(b/b)**Parentage: *L. × aurelianense* × Asiatic seedling ex Charles Robinson

R: L.M. Collicutt (1988), G: L.M. Collicutt (1989), N: Morden Research Center (1996), I: Morden Research Center (1996), REG: Morden Research Center (1997)

Inside brilliant yellow (7B) on basal third of each tepal, apical half pale yellow-green (4D), throat yellow; outside moderate purplish red (186B), paling towards tepal-tips and edges; spots few, purple, pepper-like, towards base of each tepal; nectaries yellow; anthers do not dehisce; stigma moderate purplish pink (186D). Fls 166 mm wide; tepals 100 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 8 mm, dark green. Stem 0.76 m, mid green, with 6-8 fls. July to Aug. (Published erroneously in *ILR Sixteenth Supplement* as 'Ivory Bells'.)

**'Ivory Bells' VIII(b/b)**

Error for 'Ivory Belles'.

**'Ivory Corona' VI(-/c)**

Parentage: selection from Corona Group

S: C. Yerex, N: C. Yerex, I: C.A. Best

Fls ivory. Stems 1-1.9 m. July to Aug.

(Published in *Greenock Farms Cat.*, 1958.)**'Ivory Delight' I(a/-)**

Parentage unknown

N: D. Dale (1994), I: Parkland Perennials, REG: D. Dale (1994)

Inside ivory-white, throat with light green stripes; outside shaded pink on inner tepals, outer tepals with pink midribs; spots small, burgundy, on basal half of each tepal; nectaries ivory, with green tips; pollen absent. Fls 90 mm wide; tepals 40 × 30 mm, tips slightly recurved. Lvs scattered, 135 × 10 mm. Stems 1 m, brown, overlaid with green, with c.10 fls. Early July. (Purchased as a seedling from E.H. Doerr, 1987.)

**'Ivory Gem' II(c/d)**

See *L. × dalhansonii* 'Ivory Gem'.

**'Ivory Jewel' II(-/-)**

Parentage: *L. × dalhansonii* 'Juanita' × (pale-flowered *L. × dalhansonii* 'Juanita' × unknown)

R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)  
Inside ivory-white; outside pink; spots few, large; buds pink.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 26 (1978).)

**'Ivory Pixie' I(a/b)**

Parentage: unnamed clone no. OH-6 × ('Lemon Glow' × 'Red Carpet')

R: Rien Veenstra (1978), G: Oregon Bulb Farms, Inc. (1980), N: Rien Veenstra (1989), I: Oregon Bulb Farms, Inc. (1989), REG: Oregon Bulb Farms, Inc. (1989)  
Inside of outer tepals light greenish yellow (5D/6D) in centre of tepal, pale yellow-green (4D) at base, inner tepals pale greenish yellow (2D) in centre, pale yellow-green (4D) at base, tips light greenish yellow (5D), throat pale yellow-green (4D); outside of outer tepals brilliant yellow-green (150B) on midrib shading to light greenish yellow (8B/5C) at edges, inner tepals pale yellow-green (4D); spots tiny, oblong, greyish red (184A), beginning at centre of nectaries and extending for a quarter of tepal length; nectaries strong yellow-green (143B); pollen vivid orange-yellow (23A); stigma purple. Fls 130 mm wide; tepals 80-82 × 25-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 10 mm, dark green. Stems 0.35-0.4 m, moderate olive-green (146A), mottled greyish red (176A), with c.4 fls. Early to midseason.

**'Ivory Queen' VI(-/a)**

Parentage: *leucanthum* × Olympic Group

R: Gebr. N. & B. Laan & Zn (1960), G: Gebr. N. & B. Laan & Zn (1966), N: Gebr. N. & B. Laan & Zn (1980), I: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1981)

Fls ivory, with greyish brown spots in throat; pollen orange.

(In *ILR* (1982) the classification was given incorrectly as I(c).)

**'Ivory Sands' I(c/d)**

Parentage: Preston Group × 'Edith Cecilia'

R: E. Robinson, N: E. Robinson, I: E. Robinson (1970)  
Fls fawn, throat darker, ribs green; spots violet. Stems 1-1.2 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 22 (1978).)

**'Ivory Snow' I(b/c)**

Parentage: 'Edith Cecilia' × Preston Group

R: E. Robinson (c. 1962), N: E. Robinson (1965), I: E. Robinson

Fls palest primrose-yellow changing to ivory-white. Fls large. Stems 1 m. July.

(Published in *ILR* (1969).)

**'Ivory Supreme' I(b/c)**

Parentage: 'Edith Cecilia' × Preston Group

R: E. Robinson (c. 1962), N: E. Robinson (1966), I: E. Robinson

Fls ivory, with straw-yellow centre; lightly spotted. Fls large.

(Published in *ILR* (1969).)

**'Ivory Tower' VI(-/d)**

Parentage: selection from Sunburst Group

S: J. de Graaff (c. 1954), N: J. de Graaff

Fls pure silver. Fls *martagon* type. July.

**'Ivy Calder' I(a/-)**

Parentage: 'Unique' × pink-flowered seedling

R: M.D. Holloway (1992), G: M.D. Holloway (1993), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)

Inside deep pink, with slight apricot blush on centre of each tepal and deeper pink margins, throat deep pink; outside deep pink, with deeper tepal-margins, midribs green; spots very few, tiny, around the throat; nectaries pink-frosted; pollen orange, but very little produced; filaments and style coloured. Fls 165 mm wide, scented; tepals 85 × 50 mm with a strong midrib furrow, margins slightly ruffled, tips not recurved. Lvs scattered, 130 × 33 mm, dark green. Stems 1.15 m, green, marked with brown and with c.8 fls. Mid July to mid Aug.

**'Ivy Helen' I(b-c/c-d)**

Parentage: 'Radiant Glow' × 'Edith Cecilia'

R: E. Robinson (pre 1969), N: E. Robinson  
Fls pale lavender, centre straw-yellow; heavily spotted; pollen orange. Lvs narrow. Stems 1 m. July.

(Published in *ILR* (1969) Addenda.)

**'Ivymaud' IX(b-c/d)**

See *speciosum* 'Ivymaud'.

**'Izaura' I(a/-)**

Parentage unknown

Fls lilac-pink.

(Published in M.F. Kireeva, *Lilii*, 51 (2000).)

**'Iziashchnaia' I(b/-)**

Parentage: *concolor* × 'Fialkovaia'

R: V.A. Grot (c. 1957), N: V.A. Grot

(Unaccepted spelling: 'Iziashchnaja'. Included in *ILR Second Supplement* as 'Iziastchnaja', which is also an unaccepted spelling.)

**'Iziashchnaja' I(b/-)**

Unaccepted spelling of 'Iziashchnaia'.

**'Iziastchnaja' I(b/-)**

Unaccepted spelling of 'Iziashchnaia'.

**'Izumrudnaia' VI(-/-)**

Parentage: 'Gloriosum' × *sargentiae*

R: V.A. Grot (c. 1960), N: V.A. Grot

(Published in *ILR Second Supplement* as 'Izumrudnaja')

which is an unaccepted spelling. The parent 'Gloriosum' is of Russian origin. No further details.)

**'Izumrudnaja' VI(-/-)**

Unaccepted spelling of 'Izumrudnaia'.

**'Jaap Aap' I(a-b/b-c)**

Parentage: seedling AG 94-01 × seedling AG 95-12  
R: Gebr. Vletter & Den Haan, REG: Vletter & Den Haan Beheer B.V. (2004)

Inside vivid yellow (14A), lighter towards base; outside vivid yellow (14A); spots absent; papillae few, small; nectaries green; pollen reddish brown; stigma yellow with small red spots. Tepals short, tips slightly recurved. Lvs scattered. Stems 1.2 m, green. Early to midseason.

**'Jack Flieger' I(a/-)**

Parentage: 'Tetra Mountaineer' × polyploid 'Enchantment'

R: W.S. Summers (1983), G: W.S. Summers (1985), N: W.S. Summers (1993), REG: W.S. Summers (1993)

Inside vivid reddish orange (33B); outside strong yellowish pink (33C); spots medium sized, oval, moderate reddish brown (177A), on half of each tepal; nectaries strong yellowish pink (32D); pollen dark reddish orange (175B). Fls 160 mm wide; tepals 85 × 42 mm, margins slightly ruffled, tips slightly recurved; pedicels 70 mm long. Lvs scattered, 135 × 18 mm, dark green. Stems 1.1 m, mid green, with 7-15 fls. Late June. Tetraploid.

**'Jack Frost' I(c/-)**

Parentage: 'Edith Cecilia' × 'Snow Bunting'  
R: W. Windus (1968), N: W. Windus (1973), REG: W. Windus (1973)

Inside yellowish white (158C); outside pink; small spots in throat; pollen red-brown. Tepals broad, 95 mm long. Lvs long and narrow. Stems 0.6 m. June.

(Published in *Lilies and other Liliaceae*, 1973/1974: 110.)

**'Jack Hall' I(c/-)**

The plant with this name that was described in *The Garden* 104(1): 31 (1979) is now thought to be de Graaff's 'Palomino'.

**'Jackie' VI(c/d)**

Parentage: 'T.A. Havemeyer' × unknown  
(Published in *Constable Cat.*, Autumn 1952.)

**'Jackpot' I(c/-)**

Parentage: *lancifolium* × (*leichtlinii* var. *maximowiczii* × unknown)

R: J. de Graaff (c. 1959), N: J. de Graaff  
Fls orange. Stems 1.5 m. July to Aug.

**'Jacobi' VII(b/b)**

Parentage: seedling 93-13 × seedling RM 97-22  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside strong purplish pink (63B), tepal-margins moderate purplish red (70A), brilliant yellow/light

greenish yellow (8A/B) around basal third of nectary, strong purplish pink (63A) along midveins, throat yellowish white (155D); outside with inner tepals deep purplish pink (70C), margins strong reddish purple (70B), yellowish white (155D) along midribs in basal third, midribs strong yellow-green (144A) at base, changing into brilliant yellow-green (150C), brilliant yellow-green (150A) at top, outer tepals strong purplish pink (63B/C), margins strong purplish red (63A), base yellowish white (155D), light purplish pink (63D) along midribs in basal half, midribs strong yellow-green (144A) at base, changing into brilliant yellow-green (150C), brilliant yellow-green (150A) at top; spots and papillae strong purplish pink (60B); nectaries strong yellow-green (144A); pollen strong brown (172C); stigma dark red (187A). Fls 190 mm wide; tepals 160 × 70-100 mm, margins ruffled, tips recurved. Lvs scattered, 140-180 × 35-45 mm, dark green. Stems 1.1-1.2 m, green with darker markings, and with c.3 fls.

**'Jacques S. Dijt' II(c/d)**

See *L. × dalhansonii* 'Jacques S. Dijt'.

**'Jade Emperor Group' VI(-/a)**

Parentage unknown

R: J.M. Shaver, N: J.M. Shaver, I: Rex Bulb Farms (1970), REG: Rex Bulb Farms (1985)

Inside green and greenish white; outside overlaid with brownish purple; pollen yellow to cinnamon. Stems 1.2-2.1 m. July to Aug.

**'Jade Temple Group' VI(-/a)**

Parentage: selections from Temple Group

S: J.M. Shaver, N: J.M. Shaver, I: C.A. Best

Inside in shades of green and lime-white with greenish yellow or white throats; outside green or brown. Stems 1-1.9 m. Aug.

(Published in *Greenock Farms Cat.*, 1956. Included in *ILR* (1982) as Jade Temple grex.)

**'Jadran' I(a-b/b)**

Parentage: ('Diblík' × 'Red King' (Div. I)) × ('Korál' × ('Pyrit' × unknown))

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside rich golden yellow, tepal-centres and throat brownish; outside tinged with pink; spots dark brown, not numerous, medium sized, on a quarter of each tepal; nectaries green, white-granulated; pollen orange-brown; stigma dark brown. Fls 120 mm wide; tepals 85 × 38 mm, tips slightly recurved (the outer more so); pedicels 55 mm long, spotted with rich brown. Lvs 115 × 15 mm, dull pale green. Stems 0.85 m, thick, stiff, heavily brown-dotted. Late June.

**'Jadviaga' VI(-/a)**

Parentage: *L. × centigale* × *sargentiae*

R: V.P. Orehovs (1957), N: V.P. Orehovs

Inside greenish white flushed with lilac, throat yellow-green; outside violet-rose-brown; pollen dark brown; stigma violet. Fls up to 170 × 250 mm, fragrant. Stems

up to 1.5(-2) m, with bulbils in upper part. July to Aug. (Misspelling: 'Iadwiga'. Published in *LYB* 33: 75 (1970) and included in *ILR* (1982) as 'Jadwiga' which is also a misspelling.)

**'Jadwiga'** VI(-/a)  
Misspelling of 'Jadwiga'.

**'Ja-ethal'** I(a/b)  
See *L. × maculatum* 'Ja-ethal'.

**'Jaguar'** I(a/-)  
Syn. of 'Sandokan'.

**'Jaguars'** I(b/-)  
Misspelling of 'Jaguārs'.

**'Jaguārs'** I(b/-)  
Parentage: selection from Skumstu Group  
S: V.P. Orehovs (1959), N: V.P. Orehovs  
Fls orange-red.  
(Misspelling: 'Jaguars'. Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as 'Jaguars' which is also a misspelling.)

**'Jakabpiete'** I(c/-)  
Misspelling of 'Jekabpiiete'.

**'Jakarta'** VII(a/b)  
Parentage: seedling 92-83 × seedling RM 95-84  
R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)  
Inside light purplish pink (65B), each tepal with a brilliant greenish yellow (6C) flame, throat yellowish white (155D); outside light purplish pink (65B), each tepal with a yellowish white (155D) flame; spots brilliant greenish yellow (6C); papillae present; nectaries strong yellow-green (144C); pollen vivid reddish orange (32A); stigma moderate purplish red (59C). Fls 220 mm wide, slightly scented; tepals 135 × 65 mm, margins ruffled, tips recurved. Lvs scattered, 200 × 37 mm. Stems 1.25 m, light green, with c.4 fls.

**'Jakobín'** VI(c/b-d)  
Parentage: (Silver Sunburst Group × 'Gold Eagle') × (((henryi × unknown) × 'Gold Eagle') × unknown)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)  
Inside white, centre and throat yellow-green; outside with yellow midribs, green and brownish at base; small cinnamon spots on two-thirds of each tepal; nectaries yellow-green; pollen apricot-brown; stigma green. Fls 145 mm wide, bowl- and Turk's cap-shaped; tepals 110 × 40 mm, margins slightly wavy, tips recurved. Lvs 100 × 13 mm, yellowish green, sparse. Stems 1.15 m, brown-dotted. Mid July.

**'Jalapeno Fire'** I(a/b)  
Parentage: seedling A-18-84 × seedling A-143-83  
R: Oregon Bulb Farms, Inc., REG: Cebece Lilies, Inc. (1998)

Inside vivid reddish orange (33B) at tepal-tips, vivid reddish orange (34B) at base, with a strong orange (30D) claw; outside vivid reddish orange (33B/34B); spots c.20, dark red (187A), alongside the nectaries towards tepal-edge; nectaries vivid reddish orange (33B); filaments red-orange; pollen greyish red (178A); style red-orange; stigma dark red (187A); buds dark orange. Fls 150 mm wide; tepals 85 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 82 × 15 mm. Stems 1.06 m, dark red (187A), with c.5 fls. Midseason.

**'Jalna'** I(b/-)  
Parentage: (((*davidii* var. *unicolor* × 'Lillian Cummings') × 'Edith Cecilia') × 'Skylark' (Div. I)) × (*davidii* var. *unicolor* × 'Lillian Cummings')  
R: W.D. Evans (1971), N: University of Guelph (1979), I: University of Guelph (1979), REG: University of Guelph (between 1979 and 1981)  
Inside brilliant orange (25C), tepal-tips and throat light orange-yellow (25D); outside similar to inside but with green midribs and reddish base; spots numerous, large, dark purple (79B). Lvs scattered. Stems 1.4 m.

**'Jamaica'** VII(-/c)  
Parentage: unnamed seedling × unnamed seedling  
R: W. Paauw & Zn B.V. (1991), G: W. Paauw & Zn B.V. (1992), N: W. Paauw & Zn B.V. (1996), I: Peacock B.V. & Imanse Lelieveredeling B.V., REG: W. Paauw & Zn B.V. (1996)  
Inside yellowish white (155B), midveins brilliant yellow (9C); tepal-margins light purplish pink (62C), fading towards top, tips near light purplish pink (62C), throat yellowish white (155B); outside yellowish white (155B), midribs brilliant yellow (11A) in apical part, with moderate purplish pink (62B) along midrib below, tipped strong yellow-green (144B); spots varying from none to many; papillae brilliant yellow (7A) on basal part of each tepal; nectaries strong yellow green (144B); pollen moderate reddish orange (171A); stigma deep purple (79C). Fls 210 mm wide; tepals 120 × 40 mm, margins ruffled towards tepal-tip, tips slightly recurved. Lvs scattered, 190 × 43 mm, mid green. Stems 1 m, pale green with darker markings, and with c.6 fls. Midseason.

**'Jamboree'** VII(b/c-d)  
See *L. × parkmanii* 'Jamboree'.

**Jamboree Group** VII(b/c-d)  
See *L. × parkmanii* Jamboree Group.

**'Jamesii'** V(-/a)  
See *longiflorum* 'Jamesii'.

**'James Ross'** I(a/b/-)  
Parentage unknown  
REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside light orange (28C); outside light orange (29B), midribs lighter; spots absent; papillae present; nectaries orange-green; pollen orange-red; stigma purple-red. Tepal-margins smooth, tips slightly recurved. Stems of medium height, with reddish markings. Midseason.

**'Jamie' I(a-b/-)**

Parentage: ((yellow-flowered Asiatic seedling × 'Connecticut King') × 'Sunrise') × 'White Pastel'  
 R: J. Wadkamper (1978), G: J. Wadkamper (1980), N: J. Wadkamper (1983), I: Borbeleta Gardens (1984), REG: Borbeleta Gardens (1984)  
 Fls light yellowish pink (27A) throughout, except for light pink (26D) towards throat; spots few, very small, on basal quarter of each tepal; nectaries pink; pollen dark brown. Tepals 70 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 0.6 m, dark green, with 17-19 fls. Early July.  
 (Published in *Borbeleta Gardens Cat.*, 1984.)

**'Jan de Graaff' VII(a/b)**

Parentage: (*speciosum* var. *rubrum* × 'Star Gazer') × (*L. × parkmanii* 'Allegra' × 'Star Gazer')  
 R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1995)  
 Inside yellowish white (155B), midveins pale yellow-green (155A); outside pale yellow-green (155A), suffused with golden yellow towards tepal-tips which are moderate brown (165A), base with some reddish brown; spots absent; papillae pale yellow-green (155A); nectaries strong yellow-green (144C); pollen strong reddish orange/brownish orange (169A/171B); stigma deep purplish red (71A). Fls 190 mm wide; tepals 100 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 45 mm, mid green. Stems 0.5 m, mid green, with a little darker marking, and with c.4 fls.

**'Jan de Mooy' VIII(a-b/-)**

Parentage unknown  
 REG: Vletter & Den Haan Beheer B.V. (2003)  
 Inside brilliant greenish yellow (2D), at first more intense, midveins green at base; outside pale yellow-green (4D); spots and papillae absent; nectaries green; pollen dark brown; stigma yellow with red spots. Tepal-margins smooth or very slightly ruffled, tips slightly recurved. Stems of medium height, with some reddish markings. Early.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Jan des Bouvrie' VII(a/b)**

Parentage: (*L. × parkmanii* 'Allegra' × 'Star Gazer') × (*L. × parkmanii* Everest Group × 'Star Gazer' × white-flowered seedling)  
 R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (1998), I: Kwekersvereniging "Het Vrije Westen" (1999), REG: Bischoff Tulleken Lelies B.V. (1999)  
 Inside and outside yellowish white (155B), midveins strong yellow-green (144A) at top, tepals tipped strong yellow-green (143A); spots yellowish white (155B), on up to two-thirds of each tepal; papillae yellowish white (155B) in the throat; nectaries strong yellow-green (144B); pollen a little stronger coloured than strong brown (172A); stigma dark red (187A). Fls 220 mm wide; tepals 110 × 40-60 mm, margins ruffled, tips

slightly recurved. Lvs scattered, 170 × 40 mm, dark green. Stems 1 m, green, with c.5 fls. July.

**'Jane' I(b/c)**

Parentage unknown  
 R: D.M. Stone & F.H. Payne, N: S. Johnson (1972), I: E. Robinson (1975), REG: E. Robinson (1977)  
 Fls sulphur-yellow, throat pale orange; slightly spotted. Lvs *lanceifolium* type. Stems 0.8-1.2 m. July.  
 (Published in *Gaybird Nursery Cat.*, 1975.)

**'Janek' I(b-c/d)**

Parentage: 'Firebird' × 'Connecticut Yankee'  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1984), REG: B. Mičulka (1984)  
 Fls orange-red, throat paler, tepal-tips fading; spots small, more-or-less numerous, dark violet, on a third of each tepal; nectaries white-frosted; pollen brown. Fls 95 mm wide; tepals 95 × 34 mm, margins slightly curled, tips strongly recurved; pedicels dark violet. Lvs 100 × 11 mm, glossy dark green. Stems 0.8 m, dark violet, with a few, late developing bulbils. Mid July.  
 (It is not known which 'Firebird' is the seed parent.)

**'Jane Pepper' I(a/-)**

Parentage: unnamed seedling ex Windus × Haring seedling ATW-2  
 R: K.S. Andersen (1979), G: K.S. Andersen (1981), N: K.S. Andersen (1988), I: K.S. Andersen (1988), REG: K.S. Andersen (1989)  
 Inside and outside pale yellow, throat green; each tepal with a consistent, large, maroon brushmark (c.25 mm long); nectaries yellow-green; pollen tan. Fls 120 mm wide; tepals 90 × 43 mm, margins smooth, tips strongly recurved. Lvs scattered, 105 × 15 mm, mid green. Stems 0.5-0.7 m, green, with 7-12 fls in a rather flat, but not overcrowded, inf. Late June.  
 (Published in *The Green Scene* (Pennsylvania Horticultural Society), July 1989. Named for the then President of the Pennsylvania Horticultural Society.)

**'Jan Foster' VI(c/c-d)**

Parentage: *henryi* × 'Waireka'  
 R: S.F.E. Foster (1982), G: S.F.E. Foster (1985), N: S.F.E. Foster (1988), REG: S.F.E. Foster (1988)  
 Fls persimmon orange (HCC 710/1); with small, red-brown streaks on basal third to half of each tepal; nectaries dark green; pollen brown. Tepals 152 × 38 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 134 × 76 mm, glossy dark green. Stems 1.75 m, light green spotted with dark green, with c.10 fls and some secondary buds (from larger bulbs). Mid Jan. (New Zealand)

***jankae* Kerner IX(c/d)**

Syn. of *pyrenaicum* subsp. *carniolicum* var. *jankae*.

**var. *jankae* IX(c/d)**

See *pyrenaicum* subsp. *carniolicum* var. *jankae*.

**'Janna' VII(a/b)**

Parentage: seedling 9030 × seedling 3100

R: Trior Lelie B.V. (1990), G: Trior Lelie B.V. (1993), N: Trior Lelie B.V. (1993), I: Trior Lelie B.V., REG: Trior Lelie B.V. (1996)

Inside and outside yellowish white (155D), midribs yellowish white (155B); spots yellowish white (155D), on basal part of tepals; papillae yellowish white in throat; nectaries strong yellow-green (144B); pollen dark reddish orange (175B/C); stigma dark purple (79A). Fls 230 mm wide; tepals 120 × 40-80 mm, margins ruffled, tips and main body of tepals slightly recurved. Lvs scattered, 190 × 40 mm, dark green. Stems 1.2 m, green, with c.7 fls.

**'Jánošík' I(a-b/c)**

Parentage: 'Vesír' × 'Firebird'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1984), REG: B. Mičulka (1984)

Inside intense orange-red, throat more orange; outside darker, midribs purple and beige; spots large, more-or-less numerous, dark violet, on a quarter of each tepal; nectaries pink-frosted; pollen orange-brown, stigma old rose. Fls 140 mm wide; tepals 80 × 38 mm, slightly recurved. Lvs 80 × 15 mm, glossy dark green. Stems 0.9 m, heavily spotted dark violet, slightly hairy. Early July. (It is not known which 'Firebird' is the pollen parent.)

**'Jan Paul' V(-/a)**

See *longiflorum* 'Jean Paul'.

**'Jansen's Supreme' I(a/c)**

Parentage: ('Showboat' × 'Franky') × 'Wing Commander'  
R: E.E. Fox (1997), G: E.E. Fox (1999), N: E.E. Fox (2002), I: Fox Lily Ranch (2003), REG: E.E. Fox (2002)

Inside dark red (59A), throat strong red; outside strong red (46A); spots very few, small, dark red (59A), deep in the throat; nectaries strong red (46A); pollen vivid reddish orange (33B); stigma blacker than dark red (59A). Fls 140 mm wide; tepals 70 × 34 mm, margins smooth, tips slightly recurved. Lvs scattered, 165 × 17 mm, Stems 1 m, green mottled with dark brown, with 26-28 fls. Late July to early Aug.

(This epithet was erroneously published in the *ILR Twenty-second Supplement* as 'Jansen's Surprise'. Named for Mrs Jansen, a friend of the registrant, who had admired the lily.)

**'Jansen's Surprise' I(a/c)**

Error for 'Jansen's Supreme'.

**'Jantar' I(a/b)**

Parentage: 'Bernsteintiger' × 'Sun Ray'

R: K. Braun (1981), N: K. Braun, REG: K. Braun (1985)

Inside yellow-orange, tepal-tips paler; outside dark yellow, midribs orange-yellow; spots large, brown-black, on a third of each tepal; nectaries yellow; pollen brown; stigma yellow-orange. Fls 148 mm wide; tepals 80 × 36 mm; pedicels pale brown, hairy. Lvs 98 × 13 mm, glossy dark green. Stems c.1 m, brown, hairy. Early July.

**'Jantarový Skvost' I(a/-)**

Parentage: Yellow Blaze Group × 'Connecticut King'

R: V. Baloun (1986), N: V. Baloun, REG: V. Baloun (1988)

Inside dark amber tinted with brown, tepal-tips paler; outside dark amber, midribs brownish; spots numerous, rather large, dark crimson-brown, on half of each tepal; papillae numerous; nectaries olive-green, white-frosted; pollen orange-brown; stigma dark purple. Fls 115 mm wide; tepals 80 × 37 mm, slightly recurved; pedicels 60 mm long, dark reddish brown. Lvs scattered, 80 × 11 mm, glossy light green, twisted. Stems 1 m, thick, violet-black. Early July.

**'Jan Toorop' I(a/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2000), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside vivid yellow (14A), throat light yellow-green (154D); outside vivid yellow (12A), light greenish yellow (3C) at base; spots and papillae absent; nectaries light greenish yellow (7D) changing to moderate purplish pink (54D); pollen strong orange (169C); stigma dark red (187B). Fls 200 mm wide; tepals 110 × 35-55 mm, margins smooth, tips recurved. Lvs scattered, 130 × 20 mm. Stems 1.25-1.3 m, green, with c.7 fls.

**'January Jewel' I(a-b/-)**

Parentage unknown

R: R.A. Prochaska (early 1980s), G: R.A. Prochaska, N: Hartle-Gilman Gardens (1992), I: Hartle-Gilman Gardens, REG: Hartle-Gilman Gardens (1994)

Inside deep purplish red (59B), throat dark red (187C); outside deep purplish red (59B); spots numerous, small, black, on basal half of each tepal; nectaries strong yellowish pink (32C), frosted in groove; pollen red-orange. Tepals 80 × 36 mm, rather shiny, margins smooth, tips slightly recurved. Lvs scattered, 130 × 14 mm, dark green. Stems 0.9 m, dark green, with 12-15 fls. Midseason.

Syn.: 'Garnet Gem'.

(First introduced in 1993 under the epithet 'Garnet Gem'.)

**'Jan van Wolferen' VIII(a/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside light purplish red (62C), at first strong purplish red (62A), greenish along nectaries; outside pale purplish pink (62D); spots and papillae present; nectaries green; pollen light brown; stigma light yellow. Tepal-margins slightly ruffled, tips recurved. Stems medium to tall. Early.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Japan' VIII(b-c/d)**

Parentage: derived from *speciosum*, *auratum* & *henryi*

R: Y. Asano, N: Columbia-Platte Lilies, I: Columbia-Platte Lilies (pre 1996), REG: ICRA (1998)

Inside shining crimson, with conspicuous green nectaries. Tepals rather narrow, ruffled and twisted, recurved. Stems 1-1.2 m, or more when established. Pollen fertile. Mid Aug.  
(An Orienpet (OT) lily.)

***japonicum* Thunb. ex Houltuyn IX(b/a)**

Fls pink; spots absent; nectaries green; anthers brown; pollen reddish or orange-brown. Fls scented; tepals 90-170 × 20-35 mm. Lvs scattered, 50-200 × 5-25 mm. Stems 0.5-1.5 m, with 1-5 fls. Japan.

***japonicum* 'Albomarginatum' IX(b/a)**

Parentage: selection from *japonicum*  
Fls pink. Lvs edged white. Stems 0.6-1 m.  
(Published in *Greenock Farms Cat.*, 1956.)

***japonicum* var. *album* (Wallace) E.H. Wilson**

**IX(b/a)**  
Fls white.

***japonicum* var. *platyphyllum* hort. IX(b/a)**

Lvs wider than in *japonicum* itself. Plant more vigorous.

**'Japonicumbelle' VI(-/a)**

Parentage: Pagoda Bells Group × unnamed seedling  
R: D. Foxwell, N: D. Foxwell (1975), REG: D. Foxwell (1975)  
Fls strong purplish pink (73B) throughout.  
(Published in *Lilies and other Liliaceae*, 1975: 93.)

**'Jaranto' I(a/-)**

Parentage: seedling RS 516 × seedling RS 843  
R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside strong reddish purple/deep purplish pink (70B/C), tepals flamed yellowish white (158C); outside strong reddish purple (70B), tepal-margins moderate purplish red (186A); spots few, small, dark red (187A), on inner tepals; pollen vivid orange-yellow (23A). Fls 160 mm wide; tepals 90 × 30 mm, margins ruffled, tips strongly recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 1.4 m, green with darker markings, and with c.15 fls. May.

**'Jarka' I(a/c)**

Parentage: 'Stellar Gleam' × 'Earlibird'  
R: B. Mičulka, N: B. Mičulka (1988), REG: B. Mičulka (1988)  
Inside apricot, tinted with orange, deeper over nectaries; outside pastel rose-pink, midribs green; spots numerous, large, brown-purple, on half of each tepal; nectaries white-frosted; pollen brown. Fls 130 mm wide; tepals 80 × 37 mm, slightly recurved; pedicels slightly brown-spotted. Lvs scattered, 90 × 13 mm, dark green. Stems 0.7 m, green, with a short infl. Late May.

**'Jarka' I(a/b)**

Parentage: 'Connecticut King' × 'Firebrand'  
R: Šlechtitelaká Stanice Heřmanův Městec (pre 1993), N:

**Šlechtitelaká Stanice Heřmanův Městec**

Inside orange, deeper at tepal-edges, centre of tepals apricot; spots small, sparse, inconspicuous, in the throat. Fls 125-150 mm wide, with overlapping tepals; pedicels 70-85 mm long. Lvs 65-105 × 11-18 mm, dark green. Stems 0.7-0.95 m, dark brown-violet, with c.14 fls. Late June.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1993.)

**'Jarmilka' I(a-b/b)**

Parentage: ('Pinegos Fire' × 'Tetra Nutmegger') × white-flowered tetraploid  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)  
Inside creamy tinged with beige, tepal-tips white; outside with greenish and brownish midribs; spots numerous, dark crimson-brown, large, oval, on half of each tepal; nectaries green, white-granulated; pollen chocolate-brown; stigma beige. Fls 165 mm wide; tepals thick, 100 × 47 mm, slightly recurved, the outer more so; pedicels 70 mm, thick, dotted with dark brown. Lvs scattered, 135 × 21 mm, dull dark green, dense. Stems 0.75 m, dotted with dark brown. Early July. Tetraploid.

**'Jasmine-D' VII(b/c)**

Parentage: (('Radiance' (of de Graaff) × *L. × parkmanii* 'Wildfire') × seedling 92-7-35) × *L. × parkmanii* 'Madame Pompadour'  
R: J. Hoell (1992), G: J. Hoell (1996), N: B. Dutton (2004), REG: B. Dutton (2004)  
Inside vivid red (45B), each tepal with a strong red (46A) ray, throat strong red (50A); outside deep purplish pink (55A); spots and papillae strong red (46A); nectaries light green (130B); pollen moderate brown (200D); stigma dark red (59A). Fls 185 mm wide, strongly scented; tepals 92 × 52 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 210 × 42 mm. Stems 1.2 m, green, with c.8 fls.  
(Nomenclatural standard: colour print supplied by registrant (WSY 0096357).)

**'Jasmineflare' VI(-/a)**

Parentage: unnamed seedling ex Yerex × unnamed seedling ex Yerex  
R: D. Foxwell, N: D. Foxwell, I: D. Foxwell (1973), REG: D. Foxwell (1973)  
AM 1973  
Fls vivid yellow (9B). Stems 1.2 m.  
(Published in *Lilies and other Liliaceae*, 1973/1974: 110.  
Nomenclatural standard: herbarium specimen provided by registrant (WSY 0073097).)

**'Jasnaya Poljana' I(a/-)**

Parentage: 'Connecticut King' × ('Rubinovaia' × 'Destiny')  
R: B.P. Guzhavin (1984), N: B.P. Guzhavin  
Fls red, with a dark centre; spots absent. Stems 0.7 m. July.

**'Jason' I(-/-)**

Given as a parent of 'Romaneto'. Said to have originated in Germany before 1982, but no further details.

**'Jasper' I(c/d)**

Parentage: *lanceifolium* × (*davidii* var. *willmottiae* × *L.* × *maculatum*)

R: C.F. Patterson (c. 1940), N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1949)

Fls old rose and salmon-pink, with dark spots, 100 mm wide; tepal-margins smooth. Stems 1.1 m. July.

(Published in *LYB NALS* 5: 67 (1952).)

**'Jauna Diena' I(b/-)**

Misspelling of 'Jaunā Diena'.

**'Jaunā Diena' I(b/-)**

Parentage: selection from Vasaras Prieks Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls red.

(Published in *LYB* 33: 78 (1970) and included in *ILLR* (1982) as 'Jauna Diena' which is a misspelling.)

**'Jauniba' I(c/-)**

Misspelling of 'Jauniba'.

**'Jauniba' I(c/-)**

Parentage: selection from Sapņotāja Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls pale apricot.

(Published in *LYB* 33: 79 (1970) and included in *ILLR* (1982) as 'Jauniba' which is a misspelling.)

**'Jaunty' I(a/-)**

Parentage: 'Sunrise' × 'Red Carpet'

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1982), I: Oregon Bulb Farms, Inc. (1982), REG: Oregon Bulb Farms, Inc. (1985)

Fls tricolour, red-orange-golden yellow: tepal-tips red, throat golden yellow; outside red/orange; spots copious, tiny; nectaries brown; pollen soft yellow. Fls 110-130 mm wide; tepals 60 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 0.65 m, mottled brown, with 8-25 fls. Mid June.

**'Jautri Berni' I(c/-)**

Misspelling of 'Jautrie Bēni'.

**'Jautrie Bēni' I(c/-)**

Parentage: selection from Jautrie Bēni Group

S: V.P. Orehovs (1957), N: V.P. Orehovs

Fls reddish orange; anthers sterile, lacking pollen. Fls 90-100 mm wide. Stems 1.3-1.5 m, with 18-25 fls.

Syn.: 'Gay Fellows'.

(Published in *LYB* 33: 79 (1970) and included in *ILLR* (1982) as 'Jautri Berni' which is a misspelling.)

**Jautri Berni Group I(c/c)**

Misspelling of Jautrie Bēni Group.

**Jautrie Bēni Group I(c/c)**

Parentage: 'Radostnaia' × *amabile*, *monadelphum* & *davidii* var. *willmottiae*

R: V.P. Orehovs (c. 1957), N: V.P. Orehovs

Fls orange; spots cinnamon; anthers not fully developed.

Fls 50-70 mm wide, unscented. Stems up to 2 m, with up to 50-60 fls. July.

Syn.: Gay Fellows Group.

(Published in *LYB* 33: 79 (1970) as Jautri Berni Group which is a misspelling.)

**'Jaurite' I(b/-)**

Parentage unknown

R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs

(1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)

Fls lemon-yellow; spots many, small, brown, in centre of fl.; pollen brown. Fls 130 mm wide; tepals 70 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 120 × 20 mm, mid green. Stems 1.1 m, green, with c.15 fls.

**'Java' VI(b/a)**

Parentage: 'Lesana' × unknown

R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)

Inside orange-apricot, throat deeper; outside paler, midribs greenish and red-veined; nectaries olive-green; pollen apricot. Fls 140 mm wide; tepals 140 × 46 mm, recurved; pedicels 60 mm long. Lvs 110 × 11 mm, dull green. Stems 1.1 m, slightly violet-spotted. Mid July.

**'Java Pearl' VII(a/b)**

Parentage: 'Etude' × 'Vittorea'

R: De Jong Lelies Holland B.V. (1994), G: De Jong Lelies

Holland B.V. (1998), N: De Jong Lelies Holland B.V.

(2003), I: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2003)

Inside deep purplish pink (70C), throat yellowish white (158D), midveins strong purplish red (71D), each tepal light yellow (12C) above nectary; outside light purplish pink (65B); spots deep purplish red (61A); papillae present; nectaries strong yellow-green (144B); pollen strong brown (172A); stigma light purple (77C). Fls 230 mm wide; tepals 120 × 70 mm, margins of outer tepals slightly ruffled, tips recurved. Lvs 190 × 40 mm. Stems 0.9 m, light green with darker markings, with c.3-8 fls.

**'Javorina' I(a-b/b-c)**

Parentage: (('Rosita' × unknown) × 'Windahloo') × ('Matador' × 'Amorette')

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B.

Mičulka (2003), REG: B. Mičulka (2003)

Inside yellow, tepal-centres apricot, throat pale yellow; outside pale yellow, midribs greenish; Spots moderately numerous, on a quarter of each tepal; nectaries green, white-granulated; filaments pale yellow; pollen dark brown; style yellow-green; stigma pale yellow. Fls 115 mm wide; tepals 80 × 37 mm, margins slightly ruffled, tips moderately recurved; pedicels 55 mm long, abundantly dotted, slightly hairy. Leaves scattered, 95 × 10 mm, slightly glossy dark green. Stems 0.75 m, thick, slightly brown-dotted, with a short infl. Early June.

**'Jaydene' II(c/d)**

Parentage: (*martagon* × unknown) × 'Hantsing'  
 R: F. Tarlton (1972), G: F. Tarlton (1979), N: F. Tarlton (1988), I: Honeywood Lilies, REG: F. Tarlton (1988)  
 Strong red (46A) at tips, in throat and on outside, but with middle section of each tepal almost white with strong red (46A) spots and edges of tepals with a narrow, white border; nectaries strong yellowish pink (34D); pollen strong orange (26A). Tepals 35 × 15 mm, margins smooth, tips strongly recurved. Lvs whorled, 65 × 20 mm, mid green. Stems 1.35 m, dark green, with 15 or more fls. June.

**'Jazz' I(c/-)**

Parentage: 'Judith' × 'Red Carpet'  
 R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1987), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1991)  
 Inside deep to strong red (53A/B), throat suffused with dark red (187A/B); outside strong reddish orange (42B), tepals edged deep red (53A); spots absent; nectaries deep red (60A); pollen strong brown (172A). Fls 170 mm wide; tepals 90 × 43 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 10 mm, mid green. Stems 0.6 m, with darker markings and c.6 fls. June (under glass).

**'Jealousy' I(c/-)**

Parentage: ('Edith Cecilia' × 'Lemon Lady') × 'Blondie'  
 R: L. Koehler (1959), N: L. Koehler (1960), REG: L. Koehler (1983)  
 Inside lime, tepal-tips cream; outside with dark midribs; spots medium sized, maroon, on almost entire area of tepals. Tepal-margins smooth, tips strongly recurved. Lvs scattered, mid green. Stems 1.1-1.2 m.  
 (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978).)

**'Jean Ericksen' I(b/-)**

Parentage unknown  
 R: F.J. Holmes, N: F.J. Holmes (1979)  
 Fls deep pink (51C), lightly spotted. Stems 0.8 m.

**'Jeanie' I(a/-)**

Parentage unknown  
 G: J.C. Ericksen, N: J. Wadekamper (1980), I: Borbeleta Gardens (1980), REG: Borbeleta Gardens (1981)  
 Fls red throughout with orange rays in throat; spots absent; nectaries orange-white; pollen tan. Tepals 70 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 50 mm, mid green. Stems 1 m, mid green, with up to 15 fls. July.  
 (Published in *Borbeleta Gardens Cat.*, 1980.)

**'Jeanne d'Arc' I(a/-)**

Parentage: 'Sterling Star' × 'Connecticut King'  
 R: E.A. McRae (1973), G: Oregon Bulb Farms, Inc. (1976), N: Oregon Bulb Farms, Inc. (1981), I: Oregon Bulb Farms, Inc. (1982), REG: Oregon Bulb Farms, Inc. (1983)

Fls soft cream fading to white, slightly shaded green outside; spots tiny, magenta-purple, on basal third of each tepal; nectaries white; pollen brownish orange. Fls 140-170 mm wide; tepals 70 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 70-100 × 15 mm, mid green. Stems 1 m, green, with 8-20 fls. Late June.  
 Syn.: 'Colleen'.

('Colleen' was published in *ILR Second Supplement* and registered, and was granted a USPP in 1988. However, this patent was predated by Dutch PBR (LEL 111) granted in 1984 under the epithet 'Jeanne d'Arc', and the earlier PBR epithet must be accepted. So, although 'Jeanne d'Arc' was cited as a synonym of 'Colleen' in *ILR Third Supplement*, the situation is now reversed and 'Colleen' becomes a synonym of 'Jeanne d'Arc'.)

**'Jean Paul' V(-/a)**

See *longiflorum* 'Jean Paul'.

**'Jekabpiliete' I(c/-)**

Misspelling of 'Ķekabpiliete'.

**'Ķekabpiliete' I(c/-)**

Parentage: selection from Sappotāja Group  
 S: V.P. Orehovs (c. 1960), N: V.P. Orehovs  
 Fls orange.  
 (Misspelling: 'Ekabpiliete'. Published in *LYB* 33: 79 (1970) as 'Jekabpiliete' which is a misspelling. It was included in *ILR* (1982) as 'Jakabpiliete' - also a misspelling.)

**'Ķelena Zalivskaja' VI(-/l)**

Parentage: Aurelian Group × *regale* 'Royal Gold'  
 R: V.P. Orehovs (c. 1957), N: V.P. Orehovs  
 Fls golden orange; pollen light brown. Stems up to 1.2 m. July to Aug.  
 (Misspelling: 'Elena Zalivskaja'. Published in *LYB* 33: 77 (1970) and included in *ILR* (1982) as 'Elena Zalivskaya', which is also a misspelling.)

**'Ķelgavas Zeltene' VII(b/b)**

Parentage unknown  
 R: Ē. Ieviņa (1995), G: R. Krūmiņš (1998), N: R. Krūmiņš (2000), REG: Lilium Balticum Association (2004)  
 Inside white, midveins yellow; outside with pale greenish yellow midribs; papillae reddish brown, on four-fifths of each tepal; nectaries green; pollen brown; stigma violet. Fls 200 mm wide; tepals 140 × 55 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 150 × 43 mm. Stems 1.1-1.2 m, green, with 7-8 fls. Late July.

**'Ķelgavniece' VII(b/b)**

Parentage: 'Āfricāniete' × a Dutch Oriental lily  
 R: Ē. Ieviņa (1995), G: R. Krūmiņš (1998), N: R. Krūmiņš (2000), REG: Lilium Balticum Association (2004)  
 Inside pink, each tepal with cherry-red centre; outside pink, midribs green; papillae cherry-red, on three-quarters of each tepal; nectaries green; pollen brown; stigma greyish violet. Fls up to 200 mm wide; tepals 120

× 65 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, up to 170 × 65 mm. Stems 1 m, green, with c.9 fls. Late July.

### 'Jemma' I(a/-)

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (c. 1988), G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)  
Inside brilliant yellow (20A), apical third strong yellowish pink (37B), throat brilliant yellow (20A); outside light yellowish pink (38C); spots purple-black, on a third of each tepal; nectaries white; pollen brown. Fls 180 mm wide; tepals 90 × 43 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 12 mm, mid green. Stems 0.7 m, green, with c.5 fls. Mid July.  
(Published in *Latvian Lily Register*, 1993. Named for Jemma Skulme, a Latvian painter.)

### 'Jenbeau' I(b/b)

Parentage: yellow-flowered Asiatic seedling × 'Methcal'  
R: J.C. Ericksen (pre 1975), N: J.C. Ericksen, REG: J.C. Ericksen (1975)  
Fls creamy yellow; spots absent; pollen yellow. Stems up to 1.5 m. June to July.  
(Published in *Lilies and other Liliaceae*, 1975: 93.)

### 'Jennifer' VI(-/a)

Parentage: (*leucanthum* var. *centifolium* × *regale*) × Golden Clarion Group  
R: C.W. Davidson (1959), G: C.W. Davidson (1965), N: C.W. Davidson, I: C.W. Davidson (1966)  
Inside ivory-white, throat brilliant yellow (8A); anthers strong orange (24A); stigma strong greenish yellow. Fls 125 mm long, 165 mm wide, delicately scented. Lvs 200 mm long, parsley-green. Stems 2.1 m.

### Jenny Heenan Group I(b/-)

Parentage: 'Peachblush' × 'Pumpkin Sweet'  
R: G.C. Keast (1987), G: G.C. Keast (1989), N: G.C. Keast (1991), REG: G.C. Keast (1992)  
Inside strong yellowish pink (35C), throat flushed with orange; outside moderate reddish orange (35B), midribs dark; spots tiny, maroon, in centre of fl.; nectaries lightly frosted; pollen brown. Fls 135 mm wide; tepals 65 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 16 mm. Stems 1 m, black, with c.15 fls (including secondaries). Early Dec. to early Jan. (New Zealand).

### 'Jersey' II(-/d)

Parentage: unnamed seedling × unnamed seedling  
R: E.E. Fox (1984), G: E.E. Fox (1991), N: E.E. Fox (1992), I: Fox Lily Ranch (1992), REG: E.E. Fox (1994)  
Inside cream, throat yellow-cream; outside cream, midribs mauve; spots medium sized, maroon, lightly scattered on basal third of each tepal (and spilling over onto the back); nectaries gold; pollen golden yellow. Fls 60 mm wide; tepals 35 × 17 mm, margins smooth, tips slightly recurved. Lvs whorled, 140 × 45 mm, dark green. Stems 1.45 m, green, mottled back, with 18-24 fls. Late June to early July.

### 'Jerusalem' I(a/-)

Parentage unknown  
R: P. Hoff (1987), G: Hoffgaard B.V. (1989), N: Hoffgaard B.V. (1989), I: Hoffgaard B.V., REG: Hoff Quality First (1993)  
Inside vivid yellowish orange (30C), midveins vivid reddish orange (32A), fading towards top; outside brilliant orange (29A), light orange (29B) along midribs, tepal-edges vivid yellowish orange (30C); spots dark red (183A), on basal part of each tepal; pollen absent; stigma dark red (187A). Fls 170 mm wide; tepals 90 × 40 mm. Lvs scattered, 110 × 13 mm, mid green. Stems 0.65 m, green with darker markings, and with c.9 fls.

### 'Jessica' I(a/-)

Parentage unknown  
R: Peacock B.V. (1984), G: Peacock B.V., N: Peacock B.V. (1989), I: Peacock B.V., REG: Peacock B.V. (1990)  
Inside vivid yellow (13A), each tepal with a vivid yellow (17B) flame; outside brilliant yellow (13B), midribs glowing green; spots dark red (187A), on basal half of the flame; pollen vivid orange-yellow (23A). Fls 190 mm wide; tepals 90 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 185 × 15 mm, mid green. Stems 1.8 m, green, with c.17 fls. May (under glass).

### 'Jessie' I(a/-)

Parentage: unnamed seedling × unnamed seedling  
R: H.R. & R. Cocker, G: H.R. & R. Cocker, N: H.R. & R. Cocker, I: H.R. & R. Cocker, REG: H.R. & R. Cocker (1997)  
Inside and outside vivid reddish orange (42A) fading to vivid reddish orange (32A), throat cream; spots numerous, dark brown, on basal half of each tepal; pollen sterile; stigma dark. Tepal-margins very slightly ruffled, tips not recurved. Lvs scattered. Stems 1.5 m, mid green, with 15-20 fls. July.

### 'Jessie Coulthurst' I(b/-)

Parentage: 'Citronella' × 'Joseph Fletcher'  
R: A.D. Harrison (c. 1965), N: A.D. Harrison  
Fls deep gold, lightly spotted. Tepals broad.

### 'Jessie Darby' VI(b/a)

Parentage: complex hybrid, probably *leucanthum* var. *centifolium* × *sargentiae*  
R: G.W. Darby, N: G.W. Darby, I: Mrs G.W. Darby (1967)  
PC 1967  
Fls white, each tepal with green zone in centre extending downwards. Fls with long tube; tepals reflexed. Stems tall.  
(Published in *LYB* 31: 146 (1968).)

### 'Jester' I(b/-)

Parentage: "Connecticut" hybrid × 'Connecticut Morn'  
R: D.M. Stone & F.H. Payne (pre 1978), N: D.M. Stone & F.H. Payne, REG: D.M. Stone & F.H. Payne (1983)  
Inside tan-orange, throat tan; outside greenish tan; spots absent. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 0.6-1.2 m, light green. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

**'Jetfire' I(a-b/b)**

Parentage: *L. × hollandicum* × 'Connecticut King'  
 R: E.A. McRae (1971), G: Oregon Bulb Farms, Inc. (1973), N: Oregon Bulb Farms, Inc. (1980), I: Oregon Bulb Farms, Inc. (1981), REG: E.A. McRae (1981)  
 Inside vivid reddish orange (34A/B), basal part of tepals and throat vivid yellow (12A), midveins flushed with vivid reddish orange (34A); outside vivid to strong reddish orange (34B/C) overlying soft yellow; nectaries flushed with vivid reddish orange (34A); pollen moderate reddish orange (171A). Tepals 70-90 × 25-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 80-100 × 20-30 mm, dark green. Stems 0.9-1.2 m, deep green with darker overlay, with 6-12 fls. June to July.

**'Jet Set' VII(a-b/b-c)**

Parentage: (*L. × parkmanii* 'Allegra' × 'Star Gazer') × unnamed seedling  
 R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1993)  
 Inside yellowish white (155D), midveins light greenish yellow (8B) shading to yellowish white (155D) at top; outside yellowish white (155D), midribs brilliant greenish yellow (151D) becoming strong yellow-green (144B) at base, outer tepal-tips strong yellow-green (144B); spots dark red (187B) on basal two-thirds of each tepal; pollen moderate reddish orange (171A); stigma dark red (187A). Fls 240 mm wide; tepals 130 × 67 mm, margins ruffled, tips strongly recurved. Lvs scattered, 137 × 35 mm, dark green. Stems 0.53 m, mid green, with 5-8 fls.

**'Jette' I(a/a)**

Parentage unknown  
 R: G. Steinbrück (pre 1989), N: G. Steinbrück  
 Inside golden yellow with red-brown spots and brushmark lines.

**'Jewel' III(-/-)**

Parentage: derived from *candidum* 'Cascade', *L. × testaceum* & *chalcidonicum* hybrids  
 R: J. de Graaff (pre 1954), N: J. de Graaff  
 Fls pure white; anthers scarlet.  
 (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Oregon Bulb Farms Cat.*, 1954.)

**'Jewel' IX(b/c)**

See *auratum* 'Jewel'.

**JEWEL PIXIE® I(a/b)**

Trade designation of 'Ceb Jewel'.

**Jewels Group VI(-/a)**

Parentage: selections from Aurelian Group  
 Fls in gold, apricot and lime shades. Tepal-margins ruffled. Stems 1.2 m. Late July.  
 (Published in *Greenock Farms Cat.*, 1958. Included in *ILR Fifth Supplement* as Jewels grex.)

**Jewels of Albany Group I(c/d)**

Parentage: complex hybrids involving *callosum* var. *flaviflorum*, *amabile* var. *luteum* & yellow-flowered *lancifolium* hybrids  
 R: L.D. Marshall (1976), G: L.D. Marshall (1978), N: L.D. Marshall & J.F. McRae (1979), I: Columbia-Platte Lilies/Borbeleta Gardens (1980), REG: Columbia-Platte Lilies/Borbeleta Gardens (1980)  
 Inside vivid yellow (9A) and light yellow (11B), tepal-tips and throat vivid yellow (9A) and light yellow (11B); outside vivid yellow (9B) and pale yellow (11C); spots absent or very few by the green nectaries; pollen vivid yellow (14A). Fls 40-50 mm wide; tepals 20-40 × 5-10 mm, strongly recurved. Lvs scattered, 60-100 × 5-10 mm, mid green. Stems 0.7-1.2 m, mid green, with 6-20 fls. July to Aug.  
 (Published in *Borbeleta Gardens Cat.*, 1980.)

**Jewel Tone Group I(c/d)**

Parentage: *cernuum* × *dauidii*  
 R: J. de Graaff (c. 1956), N: J. de Graaff  
 Fls ivory-white, to pale lilac and purple, with intermediate shades of salmon, terracotta and amber-pink.  
 (Published in *Oregon Bulb Farms Cat.*, 1960. Included in *ILR* (1982) as Jewel Tone grex.)

**'Jiliana' VII(-/c)**

See *L. × parkmanii* 'Jiliana'.

**'Jilliant' VII(-/c)**

See *L. × parkmanii* 'Jilliant'.

**'Jillian Wallace' VII(b/c)**

See *L. × parkmanii* 'Jillian Wallace'.

**'Jill's Sister' VII(-/c)**

See *L. × parkmanii* 'Jill's Sister'.

**'Jimbo' VI(b/a)**

Parentage: Apricot Reflections Group × 'Lady Ann'  
 R: J. Ball (1990), G: J. Ball (1992), N: J. Ball (2001), REG: D. Nelson (2001)  
 Inside light yellow (12C), tepal-tips soft yellow (13D), throat green; outside light yellow (12C) with soft brown alongside the green midribs; spots absent; pollen bright orange. Fls 200 mm wide; tepals 110-160 × 35-80 mm, very glossy, margins smooth, tips slightly recurved. Lvs scattered, 100-160 × 16-30 mm. Stems 1.2-1.4 m, dark green, with 3-6 fls. Mid July to mid Aug.  
 (Nomenclatural standard: colour print provided by registrant (WSY 0031594).)

**'Jimmy Aitken' I(b/d)**

Parentage: up-facing, golden yellow-flowered Asiatic × 'Orestes'  
 R: W.F. Murray (1992), G: W.F. Murray (1995), N: W.F. Murray (2000), REG: W.F. Murray (2001)  
 Inside vivid orange (28A) shading to strong orange (169C) towards tepal-tips, the central half of the margin of the three inner tepals edged with broken lines; outside

strong orange (169B) at edges, shading to strong orange (169D) near midribs; spots bold, dark greyish reddish brown (200A), on two-thirds of each tepal, decreasing in size toward base where spots form columns; nectaries vivid orange (28A), frosted; pollen strong orange (168B); stigma strong orange (168A), darker at apex. Fls 140 mm wide; tepals 80 × 35-45 mm, thick and glossy, margins slightly ruffled, tips strongly recurved. Lvs scattered, 150 × 18 mm. Stems 0.95 m, green overlaid with brown, with up to 21 fls; bulbils developing after flowering. July. (Published in *The Botanics* (Summer, 2001), p.14. Nomenclatural standard: colour slide provided by registrant (WSY 0029870).)

***jinfushanense* L.J. Peng & B.N. Wang IX(c/a-b)**  
Fls white or yellowish, tinged with purple in basal half; spots purple in apical part of each tepal; nectaries green. Tepals 50-60 × 10-12 mm. Lvs scattered, 50-100 × 8-15 mm. Stems 0.7-1.3 m, green with purple spots and streaks, with 3-7(-15) fls. W China (Sichuan).

**'Jitka' I(a/b)**  
Parentage: 'Connecticut King' × Yellow Blaze Group  
R: Šlechtitelaká Stanice Heřmanův Městec, N: Šlechtitelaká Stanice Heřmanův Městec, REG: Šlechtitelaká Stanice Heřmanův Městec (1994)  
Inside pale yellow, tinged green on first opening; spots moderately dense, large, conspicuous, on half of each tepal. Fls 145-165 mm wide; tepal overlapping; pedicels 50-80 mm long. Lvs 90-110 × 16-22 mm, pale green. Stems 0.75-0.9 m, green, with c.14 fls. Late June. (Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1992.)

**'Jitřenka' I(a/b)**  
Parentage: 'Destiny' × 'Tabasco'  
R: V. Baloun (1983), N: V. Baloun, REG: V. Baloun (1986)  
Inside orange, throat pale orange, tepal-tips flushed with crimson; outside orange-crimson, midribs greenish and whitish; spots numerous, large, dark purple-brown, on three quarters of each tepal; nectaries violet-frosted; pollen pale brown. Fls 150 mm wide; tepals 75 × 33 mm, margins slightly ruffled, tips slightly recurved. Lvs 65 × 8 mm, flushed with violet over half. Stems 1 m, brown-spotted. Mid July.

**'Jizera' I(c/-)**  
Parentage: 'Dukát' × 'Amber Gold'  
R: V. Jošt (1971), G: V. Jošt (1974), N: V. Jošt (1984), I: Sempra Praha a.s. (1985), REG: V. Jošt (1984)  
Inside vivid orange-yellow (23A); outside strong orange-yellow (17A); spots numerous, small, dark red (187C), on half of each tepal; nectaries frosty yellow; pollen moderate orange (167A). Fls 65-80 mm wide; tepals 80 × 34 mm, margins smooth, tips strongly recurved; pedicels with secondary buds. Lvs scattered, 110 × 3 mm, dark green. Stems 0.8-1 m, purple, with c.20 fls. July.

**'Joachim' I(a/-)**  
Parentage unknown

R: J. Petruske (pre 1994), N: J. Petruske, REG: ICRA (1996)  
Fls light yellow with a few spots. Stems 1 m. Early July. (Published in European Lily Group sales list, 1994.)

**'Joachim's Lila' I(b/-)**  
Parentage unknown  
R: J. Petruske (pre 1992), REG: J. Petruske (1994)  
Fls dark burgundy-red, with slightly reflexed tepals. Infl. long. Lvs narrow. Mid July. (Published in German Lily Group sales list, 1992.)

**'Joan' I(a/-)**  
Parentage: 'Unique' × unnamed seedling  
R: M.D. Holloway (1992), G: M.D. Holloway (1993), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)  
Inside pink, with a cream sunburst above the wine-coloured throat (the cream area increases as the fl. fades); outside the inner tepals pink with a green midrib, outer tepals greenish brown with a green midrib and dark pink margin; spots absent; nectaries frosty wine; pollen orange (little produced). Fls 203 mm wide; tepals 117 × 45 mm, with raised ridges from throat to tips, margins smooth, tips slightly recurved. Lvs scattered, 185 × 25 mm, dark green. Stems 1 m, green marked with brown, with c.7 fls. Mid July to mid Aug.

**'Joan Evans' I(a/-)**  
Parentage: selection from Mid-century Group  
S: J. de Graaff (1941), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1950)  
Fls strong orange (26A), spotted inside at base of tepals. Stems 1 m. July. (Published in *Oregon Bulb Farms Cat.*, 1950, 1952. Listed as a "Hollywood Hybrid" until 1952.)

**'Joan Houfton' I(c/d)**  
Parentage: 'Pennine Orange Beacon' × 'Progenitor'  
R: A.D. Harrison (c. 1965), N: A.D. Harrison  
Fls vivid reddish orange (43A). Fls large, *dauidii* type; tepals semi-reflexed.

**'Joanna' I(a/b)**  
Syn. of 'Yellow Giant'.

**'Joanna Harrison' I(a/-)**  
Parentage: (*dauidii* × *dauricum*) × *wilsonii* var. *flavum*  
R: A.D. Harrison (c. 1963), N: A.D. Harrison  
Fls strawberry roan with pink flush; nectaries bright green.

**'Joan Payne' VII(-/-)**  
See *L. × parkmanii* 'Joan Payne'.

**'Jock Scott' I(-/-)**  
See *L. × scottiae* 'Jock Scott'.

**Joelle Wonder Group I(a/-)**  
Parentage: derived from Golden Chalice Group, *L. × phildauricum* 'Glow' & 'Felicity'

R: J.C. Ericksen (c. 1963), N: J.C. Ericksen  
Fls yellow, tulip-shaped, scented. Stems 1 m. Late July.

**'Jogin' I(b/b)**

Parentage: ('Bold Knight' × ('Tetra Tabasco' × 'Tetra Enchantment')) × ('Hornback's Gold' × 'Tetra Mountaineer')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000),  
REG: B. Mičulka (2000)

Inside dark crimson-red, tepal-tips more orange; outside paler, midribs brown-ochre and brown, hairy; spots numerous, small, black, on four-fifths of each tepal; nectaries shiny-bordered; pollen chocolate-brown; stigma black-brown. Fls 115 mm wide; tepals 80 × 42 mm, thick, margins slightly wavy, tips moderately recurved; pedicels 75 mm long, thick, dark brown, hairy, with secondary buds. Lvs scattered, 75 × 30 mm, dull dark green. Stems 0.9 m, thick, hairy at base of leaves, glossy black-brown, with a short infl. Early July. Tetraploid.

**'Johanna' I(a-b/-)**

Parentage: 'Connecticut King' × 'Sterling Star'

R: L. Neumann (pre 1994), N: L. Neumann

Fls opening light yellow, fading to white with an apricot centre; spots large, brown; pollen light brown. Stems 0.6-0.8 m, black. Late June to early July.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Joanna'. Published in German Lily Group sales list, 1994.)

**'Johannisblut' Div. ?**

Given as a parent of 'Sigillum'. No further details. Perhaps an error for Johannisblut Group.

**Johannisblut Group I(b/-)**

Parentage: contains 'Maxwill', *L. × scottiae*, *davidii* var. *wilmottiae* & *L. × hollandicum*

R: C. Feldmaier (c. 1947), N: C. Feldmaier  
Fls dark red.

(Published in *ILR* (1982) as Johannisblut grex.)

**'Johannistag' I(b/-)**

Parentage unknown

R: H. Böhm (pre 1992), N: H. Böhm, REG: H. Böhm (1994)

Fls yellow, with a brownish centre. Stems 1 m. June.  
(Published in German Lily Group sales list, 1992.)

**'Johan's Best' VIII(a/c)**

Parentage: 'Reinesse' × 'Swing'

R: J. Vanheusden (1995), G: J. Vanheusden (1997), N: J. Vanheusden (1997), I: J. Vanheusden (1997), REG: J. Vanheusden (1997)

Inside very light salmon-apricot; outside dark pink, tepal-tips tinged with light apricot-salmon; spots many, fine, dark orange, in centre of each tepal; nectaries light green; pollen bright orange; stigma dark red-brown. Fls c.150 mm wide; tepals c.75 × 35 mm, margins slightly ruffled. Lvs scattered, c.90 × 10 mm, dark green. Stems c.0.6 m, dark brown, with 15-20 fls. Mid June.

**'John Bull' VII(-/-)**

See *L. × parkmanii* 'John Bull'.

**'John Dix' I(b/-)**

Parentage: 'Darkest Favorite' × *bulbiferum* var. *croceum*

R: A.J. van der Zwet & Sons, N: A.J. van der Zwet & Sons

AMH 1953

Fls clear orange, with small spots.

**'John Izzard' I(c/d)**

Parentage: ('Maxwill' × 'Edna Kean') × 'Dark Princess'

R: G.W. Darby (c. 1956), N: G.W. Darby

Fls Chinese orange, with darker spots. Tepals broad. Sept.

**'John Lea' VII(-/b)**

See *L. × parkmanii* 'John Lea'.

**'John McLaughlin' IV(c/d)**

Parentage: selection from Bellingham Group

S: D. Griffiths (c. 1924), N: D. Griffiths

Fls cadmium-yellow; spots black towards each tepal-base, redder towards tip and along edge; anthers dull purple-red; pollen yellow-orange. Upper lvs whorled, lower lvs scattered, all wavy. Stems 1.6-1.9 m, deep green, with 12-20 fls.

(Published in *USDA Circular* no. 299: 10 (1933). The parents are thought to be *pardalinum* and *humboldtii* var. *ocellatum*.)

**'Johnsonii' IX(c/d)**

See *pardalinum* 'Johnsonii'.

**'John T. Scheepers' IX(c/d)**

See *henryi* var. *citrinum* 'John T. Scheepers'.

**'Jojudai' I(a/b)**

See *L. × maculatum* 'Jojudai'.

**'Joker' I(a/b)**

Parentage: 'Juno' × 'Showboat'

R: J. Bodalski (1981), G: J. Bodalski (1983), N: J.

Bodalski (1987), I: J. Bodalski (1987), REG: J. Bodalski (1987)

Bicolour: tepal-tips moderate purplish red (184D), the centre of the basal third of each tepal light orange-yellow (16B); spots dark brown on half of each tepal; pollen brownish orange (171B). Tepals 95 × 30-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 12 mm, mid green. Stems 0.7 m, mid green, with c.12 fls. Mid June.

**'Jolanda' I(a/b)**

Parentage: (*davidii* × *dauricum*) × unnamed seedling

R: De Jong Lelies Beheer B.V. (c. 1979), N: De Jong Lelies Beheer B.V., REG: De Jong Lelies Beheer B.V. (1989)

Inside vivid reddish orange (33A/B); outside moderate reddish orange to brownish orange (171A/B); spots few, dark brown; pollen violet-brown. Tepals 110 × 30 mm, margins ruffled, tips slightly recurved. Lvs scattered, 120

× 20 mm, dark green. Stems 0.8-1-1 m, dark violet, with 9-13 fls. Mid July.

**'Jolanta'** I(b/-)

Unaccepted spelling of 'Iolanta'.

**'Jolie'** I(a/-)

Parentage: (pink-/white-flowered Harlequin Group × 'Connecticut King') F<sub>2</sub> pink-/white-flowered selection × 'Sweetheart'

R: Columbia-Platte Lilies (1980), G: Columbia-Platte Lilies (1982), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Inside cream/white with a deep pink blush at the throat, tepal-tips pure white, throat with a strong pink (48C/54C) area (20 × 20 mm) above each nectary; outside strong pink (54C) with a green overlay on midribs (a deep plum overlay outside in cool conditions); spots few, small, magenta, on basal third of each tepal; nectaries green, with white-downy margins; pollen moderate reddish orange (171A). Tepals 60-90 × 25-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-180 × 20-25 mm, dark green. Stems 1-1.8 m, dark green with a plum overlay, and with 7-20 fls. Late June.

**'Jolka'** VI(b-c/b-c)

Parentage: ('Oneida' × unknown) × 'Caramba'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside rich orange-apricot, each tepal with a narrow beige margin; outside pale apricot, midribs pink-veined; short, darker, raised or papillate dashes, on a quarter of each tepal; pollen brown; stigma pink-brown. Fls 160 mm wide; tepals 120 × 42 mm, margins wavy, tips moderately recurved; pedicels 75 mm long, green, slightly spotted. Lvs 110 × 16 mm, slightly glossy mid green. Stems 1.15 m, thick, stiff, slightly brown-spotted. Mid July.

**'Jollies Dream'** VII(b-c/b-c)

Parentage: seed of mixed Orientals

G: E.A. Greenwood (1996), N: E.A. Greenwood (1996), REG: E.A. Greenwood (1997)

Inside and outside white, throat pale lemon; spots very few, small, pink/purplish pink; pollen orange. Fls 120 mm wide, scented; tepals 85 × 45 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 100 × 40 mm. Stems 0.9 m, green, with c.5 fls. Dec. (New Zealand).

(Very early-flowering for an Oriental lily. Seed from the Australian Lily Society, 1991.)

**'Jollies Hope'** VII(b-c/b)

Parentage: seed of mixed Orientals

G: E.A. Greenwood (1996), N: E.A. Greenwood (1996), REG: E.A. Greenwood (1997)

Inside white, throat yellow; outside white, suffused with deep pink (185D) especially on outer tepals; spots rather few, soft pink, on basal third of inner tepals; nectaries

lemon-yellow; pollen yellow. Fls 152 mm wide, scented; tepals 110 × 40 mm, margins ruffled, tips quite strongly recurved. Lvs scattered, 130 × 50 mm, dark green. Stems 0.5 m, dark green, with c.4 strongly scented fls. Dec. (New Zealand).

(Very early-flowering for an Oriental lily. Seed from the Australian Lily Society, 1991.)

**'Jollies Star'** VI(c/c-d)

Parentage: hybrid involving 'Bright Star'

G: E.A. Greenwood (1987), N: E.A. Greenwood (1991), I: E.A. Greenwood (1992), REG: E.A. Greenwood (1992)

Inside cream, each tepal with a yellow flame, throat green; outside cream; nectaries pale yellow (18A); pollen golden. Tepals 67 × 30-40 mm, of very firm texture, margins smooth, tips distinctly, but not strongly, recurved. Lvs scattered, 60 × 40 mm, mid green. Stems 0.5-1 m, green, with 6-10 fls. Feb. to Mar. (New Zealand).

(Seed derived from breeding work done by V. Jošt.)

**'Jolly Green Giant'** I(a/-)

Parentage: selection from Chartreuse Giant Group S: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens

Inside yellow-green; spots darker; nectaries green. Fls up to 200 mm wide. Lvs broad. Stems to 1.5 m. Aug. to Sept.

**'Jolly Miller'** I(a/-)

Parentage: ('Golden Jubilee' × unknown) × unknown R: A.J. Porter (c. 1970), N: A.J. Porter (1975), I: A.J. Porter (1979), REG: A.J. Porter (1980)

Inside brilliant orange-yellow (23B), throat vivid orange-yellow (23A), tepal-tips vivid to brilliant orange-yellow (23A/B); outside light orange-yellow (23C); spots greyish red (178A); nectaries vivid orange-yellow (23A); pollen strong reddish orange (169A). Lvs scattered, moderate olive-green (147A). Stems 0.6 m.

**'Jolly Roger'** I(b/-)

Parentage: 'Lady Bowes Lyon' × 'Joseph Fletcher'

R: G.W. Darby (c. 1963), N: G.W. Darby

Fls very dark black-red. Tepals slightly reflexed.

**'Jones' Variety'** III(c/a-d)

See *L. × testaceum* 'Jones' Variety'.

**'Jonita'** I(a/b)

Parentage: 'Larancia' × 'Akina'

R: De Jong Lelies Holland B.V. (1993), G: De Jong Lelies Holland B.V. (1995), N: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2001)

Inside vivid orange (28A), throat brilliant orange (29A); outside strong orange (25A), a little darker towards tepal-edges, midribs strong orange-yellow (24B); spots few, dark red (187A), on inner tepals only; papillae absent; nectaries brilliant orange (29A); pollen strong reddish orange (169A); stigma strong red (46A). Fls 200 mm wide; tepals 115 × 40-50 mm, margins smooth, tips recurved. Lvs scattered, 80-90 × 15-20 mm. Stems 1 m, green with darker markings, and with c.6 fls. June.

**'Jonithe' I(a/b)**

Parentage unknown

R: Gebr. Mak B.V. (pre 1986), N: Gebr. Mak B.V., REG: Mak Lelieveredeling B.V. (2002)

Inside moderate red/dark red (179A/187A), washed over a strong reddish orange (169A) ground in the centre of tepals and with paler margins, markings dark brown, throat moderate red (184B); outside moderate red/greyish red (179A/178A); spots and papillae present; pollen dark orange-brown; stigma dark purple. Tepal-margins ruffled. Stems mid green at base, with some darker markings.

**Jonquil Group I(a/-)**

Parentage: derived from 'Lemon Queen' (Div. I), 'Melody' & 'Sovereign'

R: J.C. Ericksen (c. 1963), N: J.C. Ericksen

Fls bright yellow, mainly unspotted.

**Jonteel Group I(b/d)**

Parentage: 'Lemon Queen' (Div. I) × other near white-flowered Patterson Group

R: J.C. Ericksen (c. 1963), N: J.C. Ericksen

Fls cream to off-white, with dark pencilling. Stems 1-1.2 m. Early Aug.

**'Jordán' I(a-b/b)**

Parentage: ('Odysseus' × 'Preview') × ('Windahloo' × 'Endeavor')

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside golden yellow; outside hairy, midribs pink and green, brownish at base; brushmarks mahogany, diffuse; spots large, dark violet-brown, moderately numerous, on three-fifths of each tepal; nectaries white-granulated; filaments yellow; pollen brown; style yellow; stigma brownish. Fls 125 mm wide; tepals 85 × 40 mm, margins weakly wavy, tips slightly recurved; pedicels 55 mm long, thick, pale green, hairy, with secondary buds. Lvs scattered, 105 × 18 mm, dull dark green, hairy. stems thick, pale green, hairy. Early June.

**'Josef Matásek' I(a/b)**

Parentage: unknown hybrid × (unknown hybrid × *lancifolium*)

R: B. Vajgent (1982), N: B. Vajgent, REG: B. Vajgent (1986)

Inside old rose, tinted orange; outside with greenish midribs; spots numerous, large, black, on half of each tepal; nectaries greenish; pollen brownish black. Fls 130 mm wide; tepals 80 × 35 mm, tips slightly recurved. Lvs 100 × 10 mm, dark green. Stems 1.3 m, dark green. Mid July.

**'José Martí' V(b/a)**

See *longiflorum* 'José Martí'.

**'Joseph Fletcher' I(b-c/d)**

Parentage: ('Maxwill' × 'Edna Kean') self-pollinated

R: G.W. Darby (c. 1957), N: G.W. Darby

HC 1960

Fls very dark crimson; spots black.

**'Josephine Henry' IX(c/d)**

See *superbum* 'Josephine Henry'.

**'Josina' I(a/-)**

Parentage: 'Esther' × 'Summerpearl'

R: De Jong Beheer B.V. (1986), N: De Jong Beheer B.V. (1990), I: De Jong Beheer B.V. (1990), REG: De Jong Beheer B.V. (1992)

Inside vivid reddish orange (30B); outside strong reddish orange (31A/B), midribs light yellow-green (145B); spots many, dark red (187A), on basal part of tepals; nectaries striped deep purplish red (59B); pollen strong brown (172A). Fls 175 mm wide; tepals 85 × 38 mm, margins smooth, tips strongly recurved, outer tepals hairy. Lvs scattered, mid green. Stems 1.35 m, with 9-11 fls.

**'Josivee' I(b/-)**

Parentage unknown

R: J.A. Tiffin (early 1960s), N: J.A. Tiffin (1969), REG: J.A. Tiffin (between 1969 and 1981)

Fls soft pink; spots maroon. Fls c.125 mm wide; tepals somewhat reflexed. Stems 1 m, with 18-23 fls. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 14 (1978).)

**'Journey's End' VII(b/c)**

See *L. × parkmanii* 'Journey's End'.

**'Joy' VII(a-b/b)**

Parentage unknown

G: T.T. Kirsch (1975), N: T.T. Kirsch (1981), REG: Sun Valley Bulb Farms, Inc. (1981)

AGM 2002

Inside light purplish pink (63D); outside moderate purplish pink (68D); spots oblong, maroon, on basal half of tepals, either side of midrib; nectaries yellow-green; pollen rust-coloured. Fls 150-180 mm wide; tepals 100 × 45 mm, margins ruffled, more so on outer tepals, tips slightly reflexed. Lvs scattered, 100 × 25 mm, mid green. Stems 0.5-1 m, light green to red-brown, with 5-8 fls (from 16-18 cm bulbs). July.

Syn.: 'Le Rêve'.

**'Joy of Life' I(b/-)**

Parentage: selection from Vasaras Prieks Group

**'Joy of Summer' I(b/-)**

Syn. of 'Vasaras Prieks'.

**Joy of Summer Group I(b/-)**

Syn. of Vasaras Prieks Group.

**'J.S. Dijt' II(c/d)**

Syn. of 'Jacques S. Dijt'.

**'Juan de Fuca' IV(-/d)**

See *L. × burbankii* 'Juan de Fuca'.

**'Juanita' I(a/-)**

Parentage: 'Showboat' × ('Sun Ray' × yellow-flowered seedling)

R: Mak-Leek Inc. (pre 1997), N: Mak-Leek Inc.  
Inside burnt red-orange. Stems 0.6 m, dark, with high bud count. Early.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *The Lily Nook Cat.*, 1997: 15.)

**'Juanita'** II(-/c-d)  
See *L. × dalhansonii* 'Juanita'.

**'Jubilantka'** I(c/c)  
Parentage: unknown × ('Target' × 'Windahloo')  
R: B. Mićulka, N: B. Mićulka, I: B. Mićulka (2003),  
REG: B. Mićulka (2003)  
Inside dark brown-red, tepal-tips paler; outside bronze, midribs green; spots small, dark brown, scattered on a quarter of each tepal; papillae in throat; nectaries white-granulated; pollen brown; stigma black. Fls 70 mm wide; tepals 70 × 40 mm, tough, margins wavy and slightly twisted, tips slightly recurved; pedicels 75 mm long, slightly dotted. Lvs scattered, 90 × 9 mm, dull dark green. Stems 0.85 m, thick, spotted, with a medium length infl. Early June.

**'Jubilation'** I(a/-)  
Parentage: ((*pumilum* × unknown) × 'Edith Cecilia') × ('Edith Cecilia' × 'Melody')  
R: C. Robinson (1971), G: C. Robinson (1974), N: C. Robinson (1983), I: C. Robinson (1983), REG: C. Robinson (1984)  
Inside and outside deep pink (48B), tepal-tips deep yellowish pink (47C); spots dark brown, medium sized, around centre of fl.; nectaries creamy white; pollen brown. Tepals 70 × 37 mm, margins smooth, tips not recurved. Lvs scattered, 102 × 10 mm, dark green. Stems 0.6 m, dark green, with 9-10 fls. July.

**'Jubilee'** I(a/-)  
Parentage: selection from Hollywood Group  
R: J. de Graaff, N: J. de Graaff  
Fls red.  
(Published in *Oregon Bulb Farms Cat.*, 1952.)

**'Jubilee of Holland'** I(a/-)  
Parentage: (white-flowered seedling × white-flowered seedling) × (pink-flowered seedling × 'Connecticut King')  
R: De Jong Beheer B.V., G: Keukenhoff (1984), N: Keukenhoff (1990), I: De Jong Lelies (1990), REG: De Jong Lelies (1990)  
Inside yellowish white (155D) suffused with pale yellow-green (4D); outside of outer tepals suffused with dark pink (182C), midribs light yellow-green (154D); spots absent; nectaries moderate red (183D); pollen moderate orange (167A). Fls 160 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 50 × 10 mm, mid green. Stems 0.5 m, dark, with c.6 fls. July.

**'Jubileinaia'** VI(-/a)  
Unaccepted spelling of 'Jubileinaia'.

**'Jubileinaia'** VI(-/a)  
Unaccepted spelling of 'Jubileinaia'.

**'Jubileo'** I(a/b-c)  
Parentage unknown  
R: P. Hoff (1993), G: Hoffgaard B.V., N: Hoffgaard B.V. (1996), I: Hoffgaard B.V. (1997), REG: Hoffgaard B.V. (1997)  
Inside yellowish white (155B), each tepal with a vivid yellow (13A) flame; outside yellowish white (155B) suffused with brilliant yellow-green (154C), tepal-tips strong purplish pink (63C), midribs strong yellow-green (144B), becoming strong yellow-green (143A) towards top; spots dark red (187A), in the throat; papillae few, yellowish white (155B) and dark red (187A), in the throat; nectaries strong yellow-green (143C) and yellowish white (155B); pollen strong brown (172A); stigma greyish brown (166A). Fls 150 mm wide; tepals 75 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 10 mm, mid green. Stems 0.8-1 m, green with darker markings, and with 6-8 fls.

**'Judai'** I(a/b)  
See *L. × maculatum* 'Judai'.

**'Judas'** VII(-/b)  
See *L. × parkmanii* 'Judas'.

**'Judith'** Div. ?  
Given as a parent of several cvs. raised in The Netherlands. No further details.

**'Jugendzeit'** I(b-c/c)  
Parentage: Feldmaier seedling (Fe4) × Asiatic seedling  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)  
Inside moderate red (181B), each tepal with brilliant orange-yellow (21B) streaks towards base; outside moderate yellowish pink (37C); spots minute, strong brown (172A), on basal third of each tepal; nectaries strong yellow-green; pollen strong orange-yellow (24B). Fls 120 mm wide; tepals 60 × 27 mm, margins smooth, tips fairly strongly recurved. Lvs scattered, 90 × 12 mm, dark green. Stems 1 m, rather dark green, with c.15 fls. Early to mid July.

**'Jules Verne'** V(b/-)  
Parentage: seedling U 49 × seedling LFL 87-3  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V. (pre 1998), N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside and outside yellowish white (155D); spots and papillae absent; nectaries green; pollen orange-yellow; stigma grey. Tepal-margins scarcely ruffled, tips slightly recurved. Stems 1.5 m, green. Midseason.

**'Julgi'** I(a/b)  
Parentage unknown  
R: D.-V. Škimele (1990), G: D.-V. Škimele (1992), N:

D.-V. Škimele (1997), REG: D.-V. Škimele (2001)  
Inside light yellow, with a darker base and cream tepal-tips, throat yellow; outside creamy yellow, midribs greenish yellow; spots very sparse, small, dark brown, on a third of each tepal; nectaries green; pollen light orange; stigma dark maroon. Fls 140 mm wide; tepals 70 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 10 mm. Stems 1 m, dark green, with c.13 fls. Early July.

#### **'Juliana' I(a/-)**

Parentage: (('Lemon Queen' (Div. I) × 'Mega') × 'Edith Cecilia') F<sub>2</sub> × (Hallmark Group × *dauricum*)  
I: Oregon Bulb Farms, Inc. (c. 1976), REG: Oregon Bulb Farms, Inc. (1977)

Fls cream, fading to white, slightly spotted on basal half of each tepal; pollen orange-red. Stems 1 m. Midseason. (Published in *Lilies and other Liliaceae*, 1977: 78.)

#### **'Juliet' II(-/d)**

See *L. × dalhansonii* 'Juliet'.

#### **'Juligold' I(-/d)**

Syn. of 'Sonnenglocke'.

#### **'Juliia' I(-/)**

Parentage unknown  
R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1994)  
Fls in shades of cranberry-pink and red. Fls 140-150 mm wide. Stems 0.9-1 m, with 7-11 fls. (Published in M.F. Kireeva, *Lilii*, 65 (2000).)

#### **'Julisonne' I(a/b)**

Parentage: 'White Tiger' × 'Heidi'  
R: G. Thürmer (1986), G: G. Thürmer (1988), N: G. Thürmer (1999), I: G. Thürmer (2002), REG: G. Thürmer (2001)  
Inside brilliant yellow (12B), tepal-tips light yellow (12C), throat brilliant yellow (12B); outside of outer tepals reddish, of inner tepals yellow with reddish midribs; spots dark red (183A), on basal half of each tepal; nectaries greenish; pollen brownish orange (164A). Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips recurved. Lvs scattered, 90 × 13 mm. Stems 0.9 m, rather dark, hairy, with c.10 fls, and bulbils. Early to mid July.

(Nomenclatural standard: colour print provided by registrant (WST 0030335).)

#### **'Julita' I(a/b)**

Parentage: 'Connecticut Queen' × 'Red King' (Div. I)  
R: J. Bodalski (1981), G: J. Bodalski (1983), N: J. Bodalski (1985), I: J. Bodalski (1987), REG: J. Bodalski (1987)

Bicolour: tepal-tips vivid reddish orange (33B), throat vivid orange (28B); spots small, purple-brown, near centre of fl.; pollen strong orange (169B). Tepals 85 × 25-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 15 mm, mid green. Stems 1.2 m, mid green, with c.25 fls. Early July.

#### **'Julius' I(a/c)**

Parentage unknown  
R: J. Vasarietis (1990), G: J. Vasarietis (1993), N: J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J. Vasarietis (1998)  
Inside the apical half pale purplish pink (56A), shading to white towards base, throat greenish surrounded by strong purplish pink (62A); outside strong to pale purplish pink (56B/D); spots few (c.10), tiny, purple, on basal third of each tepal; nectaries greenish white; pollen brownish. Fls 140 mm wide; tepals 80 × 40 mm, margins narrowly ruffled, tips slightly recurved. Lvs scattered, 110 × 12 mm, mid green. Stems 0.75 m, greenish, with c.9 fls. Mid July. (Published in *Lilium Balticum Cat.*, 1996.)

#### **'July Green Giant' I(a/-)**

Parentage unknown  
R: R.W. Bemis, N: R.W. Bemis, I: R.W. Bemis (1967), REG: R.W. Bemis (1985)  
Inside vivid yellow (9A); outside brilliant yellow (9C); spots many, large, dark red (187A), on half of each tepal; nectaries green, white-frosted; pollen strong orange (26A). Fls 140 mm wide; tepals 106 × 42 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 14 mm, mid green. Stems 1.1 m, light green, with c.15 fls. Late July to Aug. (Published in NALS Classified List, 1968.)

#### **'July Rocket' I(a/-)**

Parentage: (('Pineapple' × ('Nutmegger' × unnamed seedling ex Windus)) × unnamed seedling ex Mattas) × white-flowered Wadekamper seedling  
R: J. Wadekamper (1979), G: J. Wadekamper (1983), N: J. Wadekamper (1992), I: Borbeleta Gardens (1992), REG: J. Wadekamper (1993)  
Inside light orange (29B), tepal-tips pale yellowish pink (29D), throat brilliant orange (29A); outside vivid reddish orange (32A); spots large, scattered on basal two-thirds of each tepal; nectaries tan; pollen rusty orange. Tepals 110 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 25 mm, dark green. Stems 0.9 m, dark brown, with 10-12 fls, which are unusual in being pink, orange and red in bud. Late. (Published in *Borbeleta Gardens Cat.*, 1992.)

#### **JUMBO®**

#### **JUMBO® AMBATO I(a/-)**

Trade designation of 'Ambato'.

#### **JUMBO® CANDY DULFER I(a/b)**

Trade designation of 'Candy Dulfer'.

#### **JUMBO® DEJA VU I(a/-)**

Trade designation of 'Déjà-vu'.

#### **JUMBO® QUITO I(a/b)**

Trade designation of 'Quito'.

**'Jumprava' I(b/-)**

Parentage: tetraploid seedling × 'Tetra Nutmegger'  
 R: A. Balode (1989), G: A. Balode, N: A. Balode, REG:  
 A. Balode (1993)

Inside brilliant greenish yellow (7C), tepal-tips light greenish yellow (7D), throat deep yellowish green (141B); outside light greenish yellow (7D), midribs moderate red (183C); spots large, oval, dark red (59A) on a third of each tepal; nectaries greenish; pollen dark brown. Fls 130 mm wide; tepals 85 × 40 mm, margins smooth, tips slightly recurved. Lvs 100 × 20 mm, dark green. Stems 0.95 m, dark green with dark brown markings especially at the base, and with c.10 fls, and bulbils. Mid July. Tetraploid.

**'Junaja' VI(-/-)**

Unaccepted spelling of 'Iunaia'.

**'Junco' IV(c/d)**

Parentage: complex *kelloggii* × *pardalinum* hybrid  
 R: J. de Graaff (c. 1965), N: J. de Graaff  
 Fls orange-red.

**'June Angel' VII(-/c)**

Parentage unknown  
 R: Sun Valley Bulb Farms, Inc., N: J. Kirsch (1975),  
 I: Sun Valley Bulb Farms, Inc. (1975), REG: J. Kirsch  
 (1975)

Inside deep pink, tepal-tips and outside pink; spots inconspicuous; nectaries paler than tepals. Lvs Oriental type. Stems 1 m. June.  
 (Published in *Lilies and other Liliaceae*, 1975: 93.)

**'June Fragrance' III(-/a)**

Parentage: *candidum* var. *salonikae* × *monadelphum*  
 R: C. Robinson, N: C. Robinson (1971), REG: C.  
 Robinson (1971)

Fls cream, deepening in throat; outside with a wine-coloured ring; spots few, minute; pollen golden yellow. Fls strongly scented; tepals to c.90 mm long. Lvs *candidum* type, up to 190 × 35 mm. Stems 1.4 m, with 6-9 fls. July.  
 (Published in *Lilies and other Liliaceae*, 1973: 112.)

**'Jungle' I(a/-)**

Parentage unknown  
 R: P. Whipple (1976), G: P. Whipple, N: P. Whipple  
 (1980), I: Borbeleta Gardens (1992), REG: J.  
 Wadekamper (1993)

Fls vivid yellow (15A), throat green; spots large, brown, on the whole of each tepal; nectaries white; pollen brown. Tepals 110 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 25 mm, mid green. Stems 0.9 m, green, with 8-12 fls. Midseason.  
 (Published in *Borbeleta Gardens Cat.*, 1992.)

**'Juno' I(a)**

Parentage: unnamed seedling × Hallmark Group  
 R: V. Jošt, N: V. Jošt, I: Borbeleta Gardens (1980), REG:  
 V. Jošt (1981)  
 Inside white to blush rose-pink, throat white; outside

tan-white; spots few, small, brown; nectaries white; pollen brown. Tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 30 mm, mid green. Stems c.0.4 m, dark green, with 6-8 fls. June.  
 (Published in *Borbeleta Gardens Cat.*, 1980.)

**'Jupiter' VII(-/-)**

Parentage: *auratum* × unknown  
 R: Lilies International Ltd, N: Lilies International Ltd  
 No further details.

**'Jupiter' II(c/d)**

See *L. × dalhansonii* 'Jupiter'.

**'Jupitor' Div. ?**

Given as a parent of 'Innes Betty' and 'Innes Harrington'.  
 No further details.

**'Jūras Zvaigzne' I(a/-)**

Parentage: selection from Jūras Zvaigzne Group  
 S: V.P. Orehovs (pre 1960), N: V.P. Orehovs  
 Fls red.

Syn.: 'Seastar'.  
 (Misspelling: 'Juras Zvaigzne'. Published in *LYB* 33: 80 (1970) and included in *ILR* (1982) as 'Yuras Zwaigzne' which is also a misspelling.)

**Jūras Zvaigzne Group I(a/b)**

Parentage: *concolor* × 'Tsvetaeva'  
 R: V.P. Orehovs (c. 1957), N: V.P. Orehovs  
 Fls orange-red to red; pollen red. Fls 100 mm wide.  
 Stems up to 0.8 m, with c.12 fls. July.  
 Syn.: Seastar Group.

(Misspelling: Iuras Zvaigzne Group. Published in *LYB* 33: 80 (1970) as Yuras Zwaigzne Group which is also a misspelling.)

**'Jurkalne' I(a/c)**

Misspelling of 'Jūrkalne'.

**'Jūrkalne' I(a/c)**

Parentage: 'Baltais Lācis' × 'Nakts Tango'  
 R: A. Balode (1996), G: A. Balode (1998), N: A. Balode  
 (1999), REG: A. Balode (1999)

Inside pale yellow-green (155A), tepal-centres strong greenish yellow (151C), throat green; outside greenish white; spots small, dark red (187B), and marblings, on half of each tepal; pollen dark brown; nectaries brown. Fls 160 mm wide; tepals 100 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 160 × 15 mm, waxy, dark green. Stems 1.2 m, dark green, with c.5 fls. Mid July.  
 (Included in *ILR Nineteenth Supplement* as 'Jurkalne' which is a misspelling.)

**JUSTINA VII(a-b/b)**

Trade designation of 'Zantrijus'.

**'Justine' I(a/b)**

Misspelling of 'Justine'.

**‘Justine’ I(a/b)**

Parentage: ‘Inčukalns’ × ‘Gran Paradiso’

R: D.-V. Škimele (1993), G: D.-V. Škimele (1995), N: D.-V. Škimele (1998), REG: D.-V. Škimele (2001)

Inside orange-pink at tepal-tips, orange-red on tepal-centre, and red at base; outside orange-pink, midribs green; spots dark maroon, on half of each tepal; nectaries cream; pollen orange; stigma dark red. Fls 160 mm wide; tepals 90 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm. Stems 1 m, green, with c.6 fls. Early July.

(Published in *Lilium Balticum Lily Register*, 1998.

Included in *ILR Twentieth Supplement* as ‘Justine’ which is a misspelling.)

**‘Just Jazz’ I(a/b)**

Parentage unknown

R: R.H. Bazett (1992), G: R.H. Bazett (1995), N: R.H. Bazett (2002), I: Valley K Greenhouses (2005), REG: R.H. Bazett (2005)

Inside mid pink, apical half of tepals lighter, throat red with yellow undertone; outside similar, midribs grey-green; spots and papillae absent; nectaries yellow edged with dark grey; pollen red-brown; style pinkish; stigma pale green. Fls 170 mm wide; tepals 95 × 45 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 150 × 17 mm. Stems 1.25 m, dark green, with c.16 fls. June to July. Tetraploid.

(Nomenclatural standard: colour print supplied by registrant (WSY 0096398).)

**‘Jutta’ I(a/-)**

Parentage unknown

R: H. Böhm (pre 1994), N: H. Böhm, REG: ICRA (1996)

Fls apricot. Stems 1 m. Late June.

(Published in European Lily Group sales list, 1994.)

**‘Juwel von Berlin’ I(a/b)**

Parentage: yellow-/white-flowered Asiatic seedling × mixed pollen of ‘Brushstroke’ & a brushmarked seedling  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)

Fls light yellow (11B); spots strong, deep purplish red (59B), on half of each tepal and some similarly coloured lines in a loose ‘brushmark’ in the centre of each tepal; nectaries with moderate yellow-green (138C) hairs; pollen dark red (187B). Fls 150 mm wide; tepals 80 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 13 mm, mid green. Stems 0.8 m, rather dark green, with c.20 fls. Early July.

**‘Kadet’ I(a-b/b)**

Parentage: (‘Ohnivák’ × Red Flare Group) × ‘Saulé’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002), REG: B. Mičulka (2002)

Inside deep crimson-red, tepal-edges narrow, white, tepal-centre and throat very dark; outside crimson-red, tepal-centre orange-red, midribs pale greenish yellow; spots sparse, small, black, on half of each tepal; nectaries

partially open, white-granulated; pollen ochre-orange; stigma brown-black. Fls 125 mm wide; tepals 70 × 38 mm, margins smooth, tips slightly recurved, the outer more so; pedicels 80 mm long, green. Lvs scattered, 80 × 17 mm, pale green. Stems 0.85 m, thick, green, with a moderately long infl. Late June.

**‘Kadina’ I(b-c/d)**

Parentage: ‘Connecticut King’ × ‘Červená Karkulka’  
R: J. Dudek, N: J. Dudek, I: J. Dudek (2001), REG: J. Dudek (2001)

Inside dark red with an orange tinge, tepal-tips paler; outside dark red, midribs red; spots small, dense, black, on three-quarters of each tepal; nectaries red; pollen brown; stigma dark red. Fls 85 mm wide; tepals 65 × 30 mm, strongly recurved; pedicels 85 mm long, brown-dotted. Lvs scattered, 140 × 6 mm, shiny dark green. Stems 1.3 m, brown-spotted, hairy. Mid July.

**‘Kaikoma 1 Gou’ V(b/a)**

Parentage: selection from Formolongi Group

Inside white, throat greenish; outside slightly suffused with green along midribs; pollen pale orange-yellow; stigma whitish. Tepal-margins smooth, tips reflexed. Lvs scattered, rather narrow and finely pointed. Stems with 3-4 fls.

(Raised in Japan before 1989. Published in *Miyoshi & Co. Cat.* 1989: 115, with colour illustration.)

**‘Kain’ I(b/b-c)**

Parentage: ‘Korál’ × creamy flowered, brushmarked seedling

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1995), REG: B. Mičulka (1995)

Inside deep yellow, throat pale; outside pale yellow, midribs greenish, brownish at base; spots sparse, medium sized, dark brown-purple, on a sixth of each tepal; brushmarks mahogany-red, medium sized; nectaries white-frosted; pollen pale brown; stigma dark brown-purple. Fls 130 mm wide; tepals 80 × 40 mm, slightly recurved; pedicels 55 mm long, dotted red-brown. Lvs scattered, 100 × 10 mm, slightly glossy mid green. Stems 1.15 m, green, slightly spotted above, with secondary fls. Early July.

**‘Kairyo-judai’ I(a/b)**

See *L. × maculatum* ‘Kairyo-judai’.

**‘Kaja Danczowska’ I(a/-)**

Parentage unknown

R: J. Kieliszek (pre 1990), N: J. Kieliszek, REG: ICRA (1999)

Fls bright yellow, green and cream, with a bright orange centre; spots dark brown. Stems 0.8-1.2 m. July.  
(Said to resemble ‘Connecticut Beauty’.)

**‘Kakutahikari’ I(a/-)**

Parentage: ‘Destiny’ × (*lancifolium* var. *flaviflorum* × *L. × maculatum*)

R: S. Fujishima (c. 1963), N: S. Fujishima  
Fls yellow.

**'Kalamai' I(a/-)**

Parentage: pale yellow-flowered seedling × 'Connecticut King'

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1980), I: V. Strasser (1986), REG: V. Strasser (1997)  
Fls yellow. Tepal-margins smooth, tips not recurved. Lvs scattered, mid green. Stems 0.9 m, rather dark green, with up to 12 fls. Early July.

**'Kalamaria' I(b/-)**

Parentage: ('Tetra Mountaineer' × 'Firemount') × tetraploid seedling 39087

R: V. Strasser (1989), G: V. Strasser (1992), N: V. Strasser (1996), REG: V. Strasser (1997)

Inside orange-red, throat red; outside red; spots strong, oval, purple; nectaries forming a frosted 'star'; pollen orange-red. Tepals 80 × 47 mm, margins smooth, tips not recurved. Lvs scattered, 230 × 30 mm, dark green. Stems rather dark green, with c.12 fls. Late June.

**'Kalapa' I(a/b)**

Parentage: 'Avignon' × red-flowered tetraploid seedling

R: D. Hercbergs (1995), G: D. Hercbergs (1998), N: D. Hercbergs (2000), I: D. Hercbergs (2001), REG: D. Hercbergs (2004)

Inside and outside vivid reddish orange (30B), throat orange-yellow; spots dark, small, on basal quarter of each tepal; nectaries orange; pollen brown. Fls 145 mm wide; tepals 80 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 15 mm. Stems 1.2 m, dark green, with c.10 fls. Mid July.

(Kalapa is the capital city of the Buddhist kingdom of Shambhala.)

**Kaleidoscope Group I(a,b/-)**

Parentage: complex cross between 'Batik' & mainly 'Gold Urn', 'Connecticut Yankee' & red- and yellow-flowered Tigers

R: W. Windus (c. 1965), N: W. Windus  
Bicolour or multicolour shades of red and orange.  
(Published in *ILR* (1982) as Kaleidoscope grex.)

**'Kalif' I(b-c/b)**

Parentage: 'Connecticut King' × 'Odysseus'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1993), REG: B. Mičulka (1993)

Inside deep apricot orange, tepal-tips paler, throat darker; outside paler, midribs light red and greenish, hairy; spots numerous, large, oval, brown, on three fifths of each tepal; papillae in the throat; nectaries white-hairy; pollen pale chocolate-brown, poorly developed; stigma whitish. Fls 145 mm wide; tepals 80 × 40 mm, margins slightly wavy; tips slightly recurved; pedicels hairy, secondary fls present. Lvs scattered, 110 × 15 mm, dark green. Stems 0.75 m, slightly brown-spotted. Late June.

**'Kalinka' I(a/b)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1984)  
Fls orange-red, almost unspotted, 130-140 mm wide; tepal-margins smooth to slightly wavy. Stems 1-1.3 m,

with 9-25 fls. July.

(Published in M.F. Kireeva, *Lilii*, 34 (2000).)

**'Kalinushka' I(c/-)**

Parentage: Fiesta Group × Amālijas Group

R: B.P. Guzhavin (1984), N: B.P. Guzhavin  
Fls bright red with very small spots. Stems up to 1.5 m. July.

**'Kallista' I(a/-)**

Parentage: *L. × maculatum* × *L. × hollandicum*

R: G.M. Chandler (c. 1943), N: G.M. Chandler  
Fls clear, light orange. Tepals broad, overlapping.

**'Kallistra' I(-/-)**

Parentage: *dauricum* × unknown

R: L.B. Tuffery, N: L.B. Tuffery

(Published in *Dunhampton Lily Fields Cat.*, 1950/51.)

**'Kalna Karalis' II(c/d)**

Parentage unknown

R: D. Hercbergs, G: D. Hercbergs (1998), N: D. Hercbergs (2002), I: D. Hercbergs (2003), REG: D. Hercbergs (2003)

Inside dark red (59A), throat paler; outside dark red (59A), midribs brownish; spots few, red-purple with a yellow border; pollen brownish orange; stigma red-purple. Fls 50 mm wide; tepals 38 × 16 mm, margins slightly ruffled, tips slightly recurved. Lvs whorled, 140 × 45 mm. Stems 1.6 m, green, with c.25 fls. Late June. (Epithet is Latvian for 'King of the Mountain'. Raised from seed obtained from NALS seed exchange.)

**'Kalorama' I(-/-)**

Parentage: 'Spotless' × unknown

R: J.L. Martin (1960), G: J.L. Martin (1963), N: J.L. Martin, I: J.L. Martin (1965)

Inside vivid reddish orange (30A); spots small, dark brown to black; pollen dark red-brown. Fls 100-115 mm wide; tepals slightly reflexed. Stems 0.75 m.

**'Kalsnava' I(a/b)**

Parentage: 'Compass' × 'Gran Paradiso'

R: A. Balode (1993), G: A. Balode (1995), N: A. Balode, REG: A. Balode (1997)

Inside strong orange-yellow (24B), tepal-tips and throat vivid orange (28B); outside orange; spots few, dark orange-brown, in the throat; nectaries green; pollen orange. Fls 150 mm wide; tepals 75 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 23 mm, dark green. Stems 0.7 m, dark green, with c.4 fls. Early July. Polyploid.

**'Kamej' I(a/c)**

Parentage: ('Suzanna' × unknown) × ('Rusalka' (of Mičulka) × unknown)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1999), REG: B. Mičulka (1999)

Inside pale pink, with a creamy yellow centre; outside with greenish midribs; spots numerous, medium sized, brown, on a third of each tepal; nectaries white- and

pink-granulated; pollen brown; stigma brown-red. Fls 120 mm wide; tepals 75 × 40 mm, slightly recurved, the outer more so; pedicels 80 mm long, spotted. Lvs scattered, 105 × 14 mm, glossy dark green. Stems 0.85 m, dark green. Early July.

**'Kamila' I(a/b)**

Parentage: 'Connecticut King' × Golden Chalice Group  
R: Šlechtitelaká Stanice Heřmanův Městec (pre 1987), N: Šlechtitelaká Stanice Heřmanův Městec

Inside golden yellow, throat and tepal-tips paler; outside pale yellow, midribs greenish, slightly tinged with crimson at base; nectaries white-felted; spots dark crimson-brown, moderately numerous, on a third of each tepal; pollen dark crimson-brown. Fls 105 mm wide; tepals 70 × 36 mm, moderately recurved; pedicels 50 mm, brownish, hairy. Lvs scattered, 85 × 13 mm, dull green. Stems 0.6 m, brown at base, paler above.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Camille'. Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1987.)

**'Kamilla' I(a/-)**

Parentage unknown

Fls deep cherry-red.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Kamila' and 'Camille'. Published in M.F. Kireeva, *Lilii*, 38 (2000).)

**'Kampa' I(b/b-c)**

Parentage: ('Dawn Star' × 'Parfait') × ('Heloma' × ('Sioux' × 'Wattle Bird'))

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005), REG: B. Mičulka (2005)

Inside orange, with small brownish flame over nectaries; outside with green midribs; spots dark pink-brown, medium sized, numerous, on three-fifths of each tepal; nectaries finely white-granulated; pollen orange-brown; stigma crimson-brown. Fls 120 mm wide; tepals 75 × 40 mm, thick and rigid, moderately recurved; pedicels 80 mm long, thick, brown-dotted. Lvs scattered, 120 × 11 mm, dull dark green. Stems 0.9 m, finely brown-dotted. Late June.

**Kanik Group I(b-c/-)**

Parentage unknown

R: H.E. Hoepner (pre 1985), G: S.R. Kaul & H.E. Hoepner, N: S.R. Kaul, I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)

Inside of tepals very pale yellow at centre, shading out to clear, glossy white tips, tepal-edges paler yellow; spots absent. Stems 1.2-1.5 m, with secondary fls and bulbils. Midseason to late.

(Two clones have been distributed under this epithet, one blooming c.1-2 weeks earlier.)

**'Kaniva' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: J.L. Martin (c. 1964), N: J.L. Martin

Fls vivid reddish orange (30A) throughout; spots absent.

Narrow tepals fully reflexed, broad tepals slightly reflexed. Stems 0.8 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 7 (1978).)

**'Kankán' VI(b-c/b)**

Parentage: Palmer hybrid 582812 × Palmer hybrid 56221

R: B. Mičulka (1986), N: B. Mičulka, REG: B. Mičulka (1987)

Inside pale yellow, fading at tepal-tips; outside paler with yellow midribs and a reddish base; fine, cinnamon spots and small papillae in the throat and on a sixth of each tepal; nectaries green; pollen pale brown; stigma green. Fls 165 mm wide, semi-pendent; tepals 105 × 43 mm, irregularly twisted and recurved, margins wavy. Lvs 150 × 15 mm, pale, slightly glossy green. Late July.

**'Kansas' I(a/c)**

Parentage unknown

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1994), I: Vletter & Den Haan (1994), REG: Vletter & Den Haan (1995)

Inside light orange-yellow (23C) suffused with pale greenish yellow (10D), throat orange; outside pale greenish yellow (9D); spots and papillae few, near base of tepals; nectaries green; pollen yellow-brown; stigma purplish red. Tepal-margins smooth, tips slightly reflexed. Lvs scattered, glossy green. Stems 0.95-1.2 m, green with darker markings, and with 6-9 fls (from 14-16 cm bulbs). Midseason to late.

**'Kantiléna' I(a/-)**

Parentage: 'Kytice' × 'Quinella'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)

Inside pale apricot, each tepal with a small, darker flame and paler tip; outside pale apricot, midribs pale brownish; spots moderately large, numerous, dark red-brown, on half of each tepal; nectaries white-frosted; pollen orange-brown. Pedicels 115 mm long, moderately spotted. Lvs scattered, 80 × 12 mm, dull deep green. Stems 1.05 m, thick, with dark brown-red spots, dense at base, less so above, infl. short. Late June.

**'Kanton' VII(a/b)**

Parentage: seedling RM 94-20 × seedling RM 97-02

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside vivid purplish red (57D), tepal-margins and tips yellowish white (155B), vivid purplish red (57C) along midveins, midveins strong purplish red (58B) in basal half, apical half strong purplish red (63A), throat yellowish white (155B); outside with outer tepals strong purplish red (63B), towards margins strong purplish pink (63C), margins yellowish white (155B), midribs strong yellow-green (144C) at base, changing into light yellow-green (154D) with strong purplish red (64B), brilliant/strong yellow-green (149A/143B) towards top, inner tepals paler; spots few, deep red (60A); papillae

deep red (60A); nectaries strong yellow-green (144C); pollen strong brown (172C); stigma light purple (75A). Fls 230 mm wide; tepals 130 × 45-55 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 120-130 × 30-40 mm, dark green. Stems 1-1.2 m, light green with some darker marking, and with c.5 fls.

**‘Kaprizá’** I(b/-)  
Misspelling of ‘Kapriže’.

**‘Kapriže’** I(b/-)  
Parentage: selection from Willtigrinum Group  
S: V.P. Orehovs (post 1959), N: V.P. Orehovs  
Fls pale orange.  
(Published in *LYB* 33: 81 (1970) and included in *ILLR* (1982) as ‘Kaprizá’ which is a misspelling.)

**‘Kaprun’** VI(-/c)  
Parentage: ‘Heidelberg’ × ‘Lednice’  
R: V. Strasser (1982), G: V. Strasser (1985), N: V. Strasser (1992), REG: V. Strasser (1992)  
Inside white, throat yellow-orange; outside white, midribs green; papillae in radiating lines; nectaries green; pollen brown. Fls 190 mm wide; tepals 125 × 36 mm, margins smooth, tips slightly reflexed. Lvs scattered, 140 × 20 mm, mid green. Stems 1.3 m, green, with up to 21 fls. Late July to mid Aug.

**‘Kapunga’** I(-/-)  
Parentage: *lanceifolium* × unknown  
(Raised in New Zealand.)

**‘Karabi’** I(b/-)  
Parentage unknown  
R: V. Strasser (pre 1983), N: V. Strasser, REG: ICRA (1996)  
Fls opening golden white, fading to white. Stems 0.8 m, with c.17 fls. Early July.

**‘Karakoma’** I(c/-)  
Parentage: *L.* × *maculatum* × (*leichtlinii* var. *maximowiczii* × *amabile*)  
R: H. Myodo (c. 1960), N: H. Myodo  
Fls orange.

**‘Karamel’** I(a-b/b-c)  
Parentage: ‘Pink Champagne’ × ‘Connecticut King’  
R: B. Mičulka (c. 1982), N: B. Mičulka, REG: B. Mičulka (1984)  
Fls ochre-orange, veined pink, throat pale yellow; spots reddish brown, large, fairly numerous, on basal quarter of the fl.; pollen brown. Fls 155 mm wide; tepals slightly twisted. Lvs 100 × 10 mm, glossy dark green. Stems 1.4 m, strongly spotted dark violet, with numerous bulbils. Mid July.

**‘Karát’** I(a-b/b)  
Parentage: ‘Sun Ray’ × (‘Connecticut Yankee’ × ‘Connecticut Glow’)  
R: K. Braun (c. 1983), N: K. Braun, REG: K. Braun (1986)

Inside and outside bronze, throat rose-pink; spots medium sized, brown, on half of each tepal; papillae creamy, in the throat; nectaries pink; pollen brown. Fls 150 mm wide; tepals 80 × 30 mm, slightly recurved; pedicels 130 mm, green, with secondary buds. Lvs 80 × 20 mm, glossy dark green. Stems 1 m, green, with c.12 fls. Bulbs white. Mid July.

**‘Karavan’** I(b/c)  
Parentage: ((‘Nutmegger’ × ‘Connecticut Red’) × (Hallmark Group × (‘Nutmegger’ × ‘Abendglühen’))) × ‘Majáles’  
R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside golden yellow, tepal-tips and throat paler; outside pale yellow, tepal-tips green, midribs deeper yellow; spots numerous, small, dark brown, on half of each tepal; nectaries partly open, white-granulated; filaments pale yellow; pollen apricot-brown; style pale yellow; stigma brown. Fls 125 mm wide; tepals 75 × 36 mm, margins slightly wavy, tips slightly recurved; pedicels 70 mm long, thick, dark green. Lvs scattered, 70 × 12 mm, dull dark green. Stems 0.75 m, thick, brown-dotted. Early June.

**‘Karel Doorman’** Div. ?  
Parentage unknown  
R: C. Colijn & Zn B.V., N: C. Colijn & Zn B.V.  
(Published in ‘Lily Buyer’s Guide’ *NALS Newsl.* 4 (1950). No further details.)

**‘Karen’** VI(b/a)  
Parentage unknown  
R: G. Brundrett (1988), G: G. Brundrett (1989), N: G. Brundrett (1998), I: G. Brundrett (1998), REG: G. Brundrett (1998)  
Inside bright apricot, throat green at base; outside apricot, streaked with red especially on midribs; faint Aurelian streaking inside; nectaries dark apricot; pollen orange; stigma bright orange. Fls 100 mm wide, strongly scented; tepals 90 × 30 mm, margins smooth, tips recurved. Lvs scattered, 130 × 16 mm. Stems 1.33 m, dark green with brown streaks, and with c.18 fls in a broadly pyramidal infl. Late July.  
(Named after the raiser’s daughter-in-law.)

**‘Karen Elizabeth’** I(a/c)  
Parentage: ‘Mohykán’ × ‘Connecticut Melon’  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2003), I: G. Steinbrück (2003), REG: G. Steinbrück (2003)  
Inside deep orange-yellow (163A), throat greenish white; outside orange-yellow, midribs light green; spots few, small, dark red (59A), at base of tepals; nectaries greenish white; filaments whitish yellow; pollen moderate reddish brown (166B); stigma strong purple (80B) on a long style. Fls 130 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 15 mm. Stems 0.9 m, dark green throughout, with 8-14 fls. Late June.  
(Named as a birthday present for Karen Elizabeth Turner. Awarded a 1st prize at the ELG International Exhibition

in Machern near Leipzig in 2003. Nomenclatural standard: colour print supplied by registrant (WSY 0096347.)

**'Karen North' I(c/d)**

Parentage: (*lankongense* × 'Maxwill') × ('Cardinal' (Div. I) × (*lancifolium* var. *flaviflorum* × 'Enchantment'))  
R: C. North (1973), G: SHRI (1975), N: C. North (1985), I: RHS Lily Group (1985), REG: RHS Lily Group (1986)

Inside orange-pink; outside orange-pink with a dark stripe along the midrib of each tepal; spots few, dark pink; nectaries orange pink; pollen dark brown. Fls 80-90 mm wide, slightly scented; tepals 75 × 19 mm. Lvs scattered, 128 × 14 mm. Stems 1.35 m, dark reddish, with 16-20 fls. Midseason. Allotriploid.

**'Karen Turner's Cottage' I(a/b)**

Parentage unknown  
G: Hartle-Gilman Gardens (1993), N: M. Hartle (2003), REG: Hartle-Gilman Gardens (2003)

Inside light orange-yellow (23D), throat green; outside pale yellow (20D), midribs green; spots absent; nectaries light orange-yellow (23D), frosted; pollen brownish orange (172C); stigma very pale rust. Fls 135 mm wide; tepals 67 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, 104 × 10 mm. Stems 0.9 m, brown-spotted, with 8 fls.

(Nomenclatural standard: colour print supplied by registrant (WSY 0096342).)

**'Karibik' I(b/b-c)**

Parentage: 'Mirage' (Div. I) × ('Leandra' × 'Windahloo')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside red-brown with bronze over an apricot-yellow ground, tepal-margins apricot-yellow; outside with yellow midribs; spots absent; nectaries green, white-granulated; pollen apricot-brown; stigma pale yellow. Fls 135 mm wide; tepals 85 × 37 mm, margins wavy, tips slightly recurved; pedicels 60 mm long, with very dark dots. Lvs scattered, 170 × 8 mm, dull mid green. Stems 0.65 m, thick, brown-red, with a medium-sized infl. Mid June.

**'Karibik-Traum' I(c/d)**

Parentage: 'Sinai' × 'Avento'  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)

Inside light yellow, paling to yellowish white (158D) at tepal-tips; outside yellowish white (158D) tinged with soft green; spots numerous, medium sized, dark red (59A), on basal half of each tepal; nectaries moderate yellow-green (146D); filaments long, pale greenish yellow (1D); pollen deep purplish red (187D); style thick, pale greenish yellow (1D); stigma large, pale orange-yellow. Fls 170 mm wide; tepals 90 × 42 mm, margins smooth, tips strongly reflexed. Lvs scattered, 71 × 11 mm. Stems 1 m, dark green with black markings, and with c.10 fls. Early July.

(Nomenclatural standard: colour print provided by registrant (WSY 0032256).)

**'Karigoromo' I(c/-)**

Parentage: selection from hybrids involving *L.* × *maculatum*, 'Destiny' & 'Hikari'  
R: S. Fujishima (1964), N: S. Fujishima  
Fls yellow.

**'Karina' I(a/b)**

Parentage: seedling C11 × 'Connecticut King'  
R: Šlechtitelaká Stanice Heřmanův Městec, N: Šlechtitelaká Stanice Heřmanův Městec, REG: Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside deep orange, darker at tepal-edges, centre of tepals orange; spots numerous, conspicuous, medium sized, on a third to half of each tepal. Fls 140-175 mm wide; tepals overlapping, pointed, slightly wavy-edged; pedicels long. Lvs scattered, 90-110 × 8-12 mm, dark green. Stems 0.8-1 m, dark brown-violet, with 10-18 fls. Early July.  
(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1991.)

**'Karissa' I(a/-)**

Parentage: unnamed seedling ex Payne × 'Connecticut King'

R: R.C. Haring, G: J. Wadekamper (1980), N: Mrs R.C. Haring (1982), I: Borbeleta Gardens (1982), REG: Borbeleta Gardens (1982)

Fls brilliant yellow (13B) with greenish throat and green-tinted outside; spots absent; nectaries apple-green; pollen orange. Tepals 90 × 48 mm, margins smooth, tips not recurved. Lvs scattered, 95 × 12 mm, dark green. Stems 0.9 m, light green, with c.17 fls. July.  
(Published in *Borbeleta Gardens Cat.*, 1982. Published erroneously in *ILR First Supplement* as 'Korissa'.)

**'Karjeriste' I(a/b)**

Parentage unknown  
R: J. Vasarietis (1989), G: J. Vasarietis (1992), N: J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J. Vasarietis (1999)

Inside light greenish yellow (7D), paling towards light greenish yellow (8C) tepal-tips, throat light greenish yellow (8C); outside light greenish yellow (8C); each tepal with a uniformly-sized purple brushmark; nectaries white on a greenish ground; pollen brown; stigma light greyish brown. Fls 140 mm wide; tepals 87 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 92 × 14 mm, mid green. Stems 0.9 m, green, with c.7 fls. Early July.

Trade designation: CAREERIST.

(Published in *Lilium Balticum Cat.*, 1996. Nomenclatural standard: colour print provided by registrant (WSY 0023024).)

**'Karkulka' VI(b-c/a)**

Parentage: (unknown × 'Schokolade') × (unknown × 'Toni')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)

Inside creamy, tepal-tips slightly pink-veined, throat with lemon-yellow rays; outside pale yellow, tepal-margins pink-veined, midribs green-yellow with pink veining; spots absent; nectaries dark green; pollen apricot; stigma whitish. Fls 130 mm wide and 80 mm long, shortly trumpet-shaped; tepals 130 × 56 mm, very recurved with twisted tips, margins slightly wavy; pedicels 65 mm, green. Lvs scattered, 130 × 9 mm, dull dark green. Stems 1.15 m, green. Early July.

**‘Karl Foerster’ VIII(b-c/c)**

Parentage: selected pink- and white-flowered seedling from (*speciosum* × *henryi*) × pink-flowered Atomic Group  
R: H. Georgi (1984), G: H. Georgi (1987), N: H. Georgi (1988), I: H. Georgi (1990), REG: H. Georgi (1989)  
Fls rose-pink, tepal-tips white for 10-20 mm, throat white with a green star; the basic rose-pink colour is strongest on the central 10-20 mm of each tepal where it tends to crimson-red; spots rose-coloured, conspicuous, mainly on the central 30-40 mm of each tepal; papillae rose-coloured, few, in the throat; nectaries green; pollen dark brown. Fls 240-260 mm wide; tepals 100-110 × 25-30 mm, somewhat twisted, margins recurved, tips slightly reflexed; pedicels 180-200 mm long. Lvs scattered, 170-180 × 50-55 mm, mid green. Stems 1.9-2.2 m, pale green, with 7-10 fls. Late June to late July.  
(The influence of *L. henryi* is hardly noticeable.)

**‘Karl Nerger’ VII(-/-)**

Parentage: *auratum* var. *pictum* × seedling from Little Fairies Group  
R: W. Daunicht (1981), G: E. Nerger (1985), N: E. Nerger (1990), REG: G. E. Nerger (1990)  
Inside rosy white, midveins narrow, red (becoming darker with age), tepal-tips and apical edges white, throat green; outside pink, outer tepals darker than inner, midribs red-brown; spots uniform red on basal half of each tepal; nectaries green; pollen red-brown. Fls 180 mm wide; tepals 120 × 52 mm, margins wavy, tips slightly reflexed. Lvs scattered, 170 × 60 mm, mid green. Stems 1.6-1.8 m, pale green, with 10-14 fls. Mid to late July.

**‘Karloš’ I(b/b)**

Parentage: (Sutter’s Gold Group × ‘Connecticut King’) × ‘Connecticut King’  
R: K. Braun (1982), N: K. Braun, REG: K. Braun (1990)  
Inside dark red; outside, tepal-edges and tips red; spots sparse, small, dark brown on a fifth of each tepal; nectaries dark red; papillae red; pollen orange. Fls 120 mm wide; tepals 61 × 34 mm, margins slightly wavy, tips recurved; pedicels 60 mm long, green. Lvs scattered, 107 × 10 mm, dark green. Stems 0.6 m, with c.12 fls in a short infl. Early July.

**‘Karmazina’ I(b/b)**

Parentage: ‘Red Bird’ × (*L. × maculatum* ‘Mahogany’ × ‘Ruby’)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1983), REG: B. Mičulka (1984)  
Inside mahogany-red, tepals with dark centres and paler tips, throat orange; outside dark red; spots numerous,

medium to large, dark violet, on three-quarters of each tepal; nectaries white-frosted; pollen brown. Fls 100 mm wide; tepals 65 × 30 mm, recurved. Lvs 70 × 11 mm, glossy dark green. Stem 1.2 m, black, hairy. Early July. (It is not known whether the ‘Ruby’ in the pollen parent is a synonym of ‘Byan’s Ruby’ or ‘Tuffery’s Ruby’.)

**‘Karmen’ I(a/-)**

Parentage: F<sub>2</sub> Preston Group seedling  
R: V. Jošt (1968), N: V. Jošt (1977), I: V. Jošt (1978)  
Fls deep red (53A) with brown spots. Stems 0.5-0.6 m. Early to midseason.  
(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Carmen’.)

**‘Karmen’ I(a/b)**

Parentage: ‘Skromnaia’ × ‘Paprika’  
R: M.F. Kireeva (1976)  
Fls cherry-red; spots dark, on basal three-quarters of each tepal; filaments pale red; anthers smoky violet with orange pollen. Fls 120-140 mm wide, slightly fragrant; tepal-margins smooth, tips recurved. Lvs 60-70 × 5 mm, glossy dark green. Stems 0.9-1.1 m, greenish brown, with 7-20 fls. July.  
(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Carmen’. Published in M.F. Kireeva, *Lili*, 54 (1984).)

**‘Karmesinroter Tiger’ I(b-c/d)**

Parentage unknown  
R: H. Böhm (pre 1980), N: H. Böhm, REG: H. Böhm (1987)  
Fls pale crimson-red, centre orange-red; spots numerous, large, on two-thirds of each tepal; nectaries rosy; pollen orange-brown. Fls 95 mm wide; tepals 95 × 30 mm. Lvs 100 × 12 mm, dull pale green. Stems 1 m, dark violet at base, hairy. Mid July.

**‘Karmin Kandelaber’ I(a/b)**

Parentage: unnamed seedling × ((*Citronella* Group × *amabile* var. *luteum*) × ‘Sterling Star’)  
R: N. Martschinke (1981), G: N. Martschinke (1984), N: N. Martschinke (1987), REG: N. Martschinke (1991)  
Inside and outside deep red (185A), tepal-margins deep pink (185D) at tips, throat deep pink (185D); spots blackish dark red (187A) in centre of fl.; nectaries strong yellow-green (145A). Fls 110 mm wide; tepals 55 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 8 mm, mid green. Stems 1.2 m, green, with c.15 fls in superposed whorls. Early July to early Aug.

**‘Karminstern’ I(b-c/-)**

Parentage: ‘Leuchfeuer’ × ‘Hagoromo’  
R: J. Klein (pre 1979), N: J. Klein, REG: ICRA (1998)  
Fls carmine-red with darker tepal-margins. Stems 1 m. July.

**‘Karnak’ VIII(a/b)**

Parentage unknown  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside strong purplish pink (68B), strong purplish red (63A) along margins and midveins, throat brilliant yellow-green (142B), yellowish white (155D) towards edge; outside strong purplish pink (63C), tepal-margins strong purplish red (63B); spots few, strong purplish red (63A); papillae strong purplish red (63A); nectaries strong yellow-green (143A); pollen strong brown (172C); stigma light greenish yellow (3C). Fls 225 mm wide; tepals 135 × 48-70 mm, margins smooth, tips recurved. Lvs scattered, 165 × 23 mm. Stems 1.1-1.5 m, green with darker markings, and with c.4 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### ‘Karnaval’ I(b/-)

Parentage: ‘Aelita’ × mixed pollen of ‘Svetlana’ & ‘Zabava’  
R: V.A. Volkov (c. 1982), N: V.A. Volkov  
Inside ruby-red, with small spots. Stems 0.6 m, with bulbils. June.  
(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to Carnival Group. The seed parent is probably ‘Svetlana’ of Kireeva.)

#### ‘Karnevāls’ I(a/b)

Parentage: ‘Metelj’ × ‘Brushstroke’  
R: D.-V. Šķimele (1993), G: D.-V. Šķimele (1995), N: D.-V. Šķimele (1998)  
Inside pale yellow with creamy tepal-tips, throat greenish yellow; outside light yellow, midribs light brownish red; spots few, dark red; brushmarks small, crimson-red; nectaries green; pollen light brown; stigma greenish brown. Fls 140 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 10 mm. Stems 0.8 m, red-brown, with c.5 fls. Mid July.  
(Unacceptable name: ICNCP, 1995: Art. 17.12 - name too similar to ‘Karnaval’. Published in *Lilium Balticum Lily Register*, 1998.)

#### ‘Karola’ I(a/-)

Parentage: *dauidii* × unnamed seedling  
R: De Jong Lelies Beheer B.V. (1974), N: De Jong Lelies Beheer B.V. (1978), I: De Jong Lelies Beheer B.V. (1979), REG: De Jong Lelies Beheer B.V. (1982)  
Inside vivid yellow (12A); outside vivid yellow (14B); spots brown, on basal part of each tepal; nectaries creamy; pollen dark brown. Fls 110 mm wide; tepals 60 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 90 × 8 mm, mid green. Stems 0.8 m, light green, with 5-10 fls. June.  
(Published in *Raad voor het Kwekersrecht*, July 1980.)

#### ‘Karolinka’ VI(b-c/b-c)

Parentage: (((*henryi* × unknown) × ‘Gold Eagle’) × (Palmer seedling 582821 × Palmer seedling 56221)) × (‘Oneida’ × Apricot Trumpets Group)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside pastel yellow tinged with green, throat deeper yellow; outside with greenish midribs; nectaries green-yellow; pollen dark brown; stigma green. Fls 145 mm wide; tepals 105 × 45 mm, thick, margins not wavy, tips strongly recurved; pedicels 90 mm long, brown-spotted.

Lvs scattered, 105 × 17 mm, slightly shiny yellowish green. Stems 1.25 m, dotted red-brown, with a medium-sized infl. Mid July.

#### ‘Karpathos’ I(a/-)

Parentage: ‘Palomino’ × ‘Roter Cardinal’  
R: V. Strasser (1974), G: V. Strasser (1977), N: V. Strasser (1981), I: V. Strasser (1983), REG: V. Strasser (1997)  
Fls red-orange throughout; pollen reddish brown. Tepals 85 mm long, margins smooth, tips not reflexed. Lvs scattered, 200 × 20 mm, dark green. Stems 1.4 m, almost black, with up to 23 fls. Early July.

#### ‘Karusel’ I(a-b/b)

Parentage unknown  
R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1996)  
Fls pale red, tepal-centres pale yellow; spots red-brown. Fls 110-120 mm wide; tepal-margins smooth, tips recurved. Stems 0.8-0.9 m, with 9-13 fls. July.  
(Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to ‘Carousel’. Published in M.F. Kireeva, *Lilii*, 59 (2000).)

#### ‘Kasan’ I(b/c)

Parentage: ‘Ännchen’ × ‘Impact’  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)  
Inside and outside moderate red (180A), tepal-margins paler, throat moderate red (180A) with a paler orange tinge; spots many, medium sized, dark red (187B), on basal three-quarters of each tepal; nectaries rose-pink, white-frosted; pollen deep purplish red (187D); stigma deep red (60A). Fls 120 mm wide; tepals 55 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 11 mm. Stems 0.8 m, dark green, with c.10 fls. Late June to early July.

#### ‘Kasei’ Div. ?

Parentage unknown  
R: unknown  
Fls dark red.

#### ‘Kashmir’ I(a/-)

Parentage unknown  
R: W. Windus (c. 1975), N: W. Windus (1981), REG: W. Windus (1981)  
Fls light orange-yellow (24C), tepal-edges strong orange-yellow (24B); spots absent; pollen moderate reddish orange (171A). Fls 75-90 mm wide. Stems 0.6-0.8 m.

#### ‘Kassandra’ I(a/-)

Parentage: ‘Byam’s Yellow’ × ‘Alpenglow’  
R: V. Strasser (pre 1981), N: V. Strasser  
Inside golden yellow, spotted. Lvs dark green. Stems 0.8-0.9 m, brown, with c.25 fls. Early July.

#### ‘Kastelán’ I(a-b/b-c)

Parentage: ((‘Sioux’ × ‘Wattle Bird’) × (‘Rusalka’ (of Mičulka) × unknown)) × (unknown × (‘Bélásek’ × ‘Mánes’))

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005),  
REG: B. Mičulka (2005)

Inside very pale golden yellow, tepal-tips whitish, centre of tepals stained with crimson-brown, throat pale yellow; outside tinged with old rose-pink (especially on outer tepals); spots dark brown, oval, medium sized, on basal half of each tepal (more numerous on inner tepals); nectaries white- and yellow-granulated; pollen brown; stigma crimson-brown. Fls 135 mm wide; tepals 80 × 37 mm, slightly curved; pedicels 70 mm long, dark brown-dotted. Lvs scattered, 125 × 14 mm, dull light green. Stems 0.85 m, thick, dark brown-dotted.

#### **‘Káta’ I(b/c)**

Parentage: ‘Käthe’ × Barber seedling 17

R: K. Vereš (1984), N: K. Vereš

Inside pale old rose, the centre tinted cream; outside with dark old rose midribs; spots dark red-brown, fairly numerous, tiny, on a third of each tepal; pollen dark orange. Fls 100-110 mm wide; tepals 60 × 25 mm, tips slightly recurved. Lvs 100 × 8 mm, dark, slightly glossy. Stems 1.7 m, dark green, with 15-19 fls. Early July.

#### **‘Katarka’ I(a/-)**

Parentage: ‘Padua’ × ‘Connecticut King’

R: V. Strasser (1979), G: V. Strasser (1981), N: V. Strasser (1984), I: V. Strasser (1987), REG: V. Strasser (1990)

Inside strong orange-yellow (17A), throat strong orange (25A); outside yellow; spots oval, purple, on half of each tepal; nectaries yellow-green; pollen brown. Fls 150 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 14 mm, dark green. Stems 1.5 m, red-brown, with c.22 fls and some bulbils. Mid July.

#### **‘Katharina’ I(b/-)**

Parentage unknown

R: G. Patzold (pre 1994), N: G. Patzold

Inside yellow, with an orange stripe. Stems 0.8 m.  
(Published in European Lily Group sales list, 1994.)

#### **‘Käthe’ I(c/-)**

Parentage unknown

R: J. Petruske, N: J. Petruske (late 1970s)

Fls creamy yellow.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Kitty’ which was registered before ‘Käthe’ became known to the ICRA.)

#### **‘Kathleen Stewart’ VII(-/b)**

See *L. × parkmanii* ‘Kathleen Stewart’.

#### **‘Kathy Jan’ I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: H.R. & R. Cocker (1988), G: H.R. & R. Cocker (1990), N: H.R. & R. Cocker, I: H.R. & R. Cocker (1997), REG: H.R. & R. Cocker (1997)

Inside vivid reddish orange (33B); each tepal with dark red (187A) brushmark over three-quarters of area and dark spots on basal half; pollen dark red-brown. Fls 110 mm wide; tepals 60 × 40 mm, margins smooth, tips

not recurved. Lvs scattered, mid green. Stems 1 m, dark green, with 10-15 fls. Midseason.

#### **‘Katie’s Smile’ I(a-b/-)**

Parentage: (‘Connecticut King’ × Hallmark Group) × (‘Appleblossom’ × ‘Sunrise’)

R: J. Wadkamper (1979), G: J. Wadkamper (1982), N: J. Wadkamper (1992), I: Borbeleta Gardens (1993), REG: J. Wadkamper (1993)

Fls vivid yellow (17B), throat white; spots brown, small, centrally placed; nectaries white; pollen orange/tan.

Tepals 60 × 12 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 12 mm, mid green. Stems 1 m, green, with 8-10 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1993.)

#### **‘Katinka’ I(b/-)**

Parentage: ‘Pink Tiger’ (Woodriff) × unknown

R: J.A. Mattas (c. 1964), N: J.A. Mattas

Inside creamy white at tepal-tips, shading towards base from salmon-pink to salmon-orange; outside wine-pink; heavily spotted maroon-red. Tepals slightly reflexed. Stems 1.1 m. July.

(Published in *ILR* (1969).)

#### **‘Katka’ I(a/b-c)**

Parentage: ‘Olga’ × (‘Red Echo’ × ‘Mánes’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2001), REG: B. Mičulka (2001)

Inside pale reddish pink, tepal-tips and narrow edges yellowish cream; outside pink-veined, midribs brownish and more pinkish; spots numerous, small, red-black on a quarter of each tepal; nectaries white-frosted; pollen ochre-brown; stigma dark brown-crimson. Fls 120 mm wide; tepals 75 × 36 mm, margins finely notched, tips slightly recurved (outer tepals more so); pedicels 60 mm long, slightly brown-dotted. Lvs scattered, 80 × 15 mm, dull mid green. Stems 0.75 m, thick, green. Late June.

#### **‘Katowice’ VI(b/b)**

Parentage: unknown × (‘Kremona’ × ‘Melone’)

R: R. Widerski, N: R. Widerski, I: R. Widerski (2004), REG: R. Widerski (2004)

Inside lemon-yellow; outside with pale green midribs; spots absent; pollen yellow-brown; stigma green-yellow. Fls 140 mm wide; tepals 130 × 55 mm, outer tepals recurved, inner less so, twisted, tough; pedicels 120 mm long, thick, green. Lvs scattered, 110 × 10 mm, dull mid green. Stems 1.5 m, thick, green, with medium-sized infl. Mid July.

#### **‘Katydid’ VI(b/b)**

Parentage: Aurelian Group × unknown

R: E. Hickling (c. 1870), N: J. Wadkamper (1974), I: J. Wadkamper (1979), REG: J. Wadkamper (1977)

Fls greenish white, throat white; spots absent; nectaries white; pollen brown. Lvs dark green. Stems 1.2 m.  
(Published in *Lilies and other Liliaceae*, 1977: 78.)

#### **‘Kavalla’ I(a/-)**

Parentage: (‘Enchantment’ × ‘Connecticut Yankee’) ×

**‘Connecticut King’**

R: V. Strasser, N: V. Strasser, I: V. Strasser (1979), REG: V. Strasser (1985)

Inside and outside vivid reddish orange (30B); spots dark red (187A); nectaries white; pollen moderate orange (167A). Fls 150 mm wide; tepals 95 × 43 mm, margins smooth, tips slightly recurved. Lvs scattered, 92 × 14 mm, mid green. Stems 0.8 m, mid green, with c.20 fls. Early July.

**‘Kay’ VII(-/-)**

Parentage: *auratum* × unknown

R: unknown

Fls dark red. Tepals broad. Stems rather short.

**‘Kaz Mynett’ I(a/b)**

Parentage: ‘Albipayne’ × ‘Bingo’

R: L.D. Marshall (1977), G: Columbia-Platte Lilies (1981), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987), REG: Columbia-Platte Lilies (1988)

Inside vivid reddish orange (33A/B), throat vivid reddish orange (33B) to vivid to strong reddish orange (34B/C); outside softer reddish orange, midribs light green; spots very inconspicuous, c.5-10 on each tepal, parallel to nectaries; nectaries soft orange; anthers cream, abnormally small, not opening, lacking pollen. Tepals 50-55 × 25-30 mm, margins smooth, tips very slightly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 1-1.8 m, dark green with a plum overlay, and with 8-30 fls in a long inf. Late June.

(Fls darker in cool conditions, more orange-brown in heat.)

**‘Keceris’ I(a/b)**

Parentage unknown

R: J. Vasarietis (1990), G: J. Vasarietis (1993), N: J. Vasarietis (1996), I: J. Vasarietis (1996), REG: J. Vasarietis (1999)

Inside vivid yellow (12A), throat brilliant greenish yellow (7C); outside brilliant yellow (12B); brushmarks c.20 mm long, vivid reddish orange (43A); spots the same colour, to the sides of and below the brushmarks; nectaries white on a pale green ground; stigma light greyish violet; pollen orange. Fls 140 mm wide; tepals 75 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 14 mm, mid green. Stems 0.9 m, green, with c.6 fls. Early to mid July.

Trade designation: HERETIC.

(Published in *Lilium Balticum Cat.*, 1996. Nomenclatural standard: colour print supplied by registrant (WSY 0023033).)

**‘Keepsake’ I(a/-)**

Parentage: yellow-flowered seedling × brushmarked seedling

R: R.F. Nelson (1980), G: R.F. Nelson (1984), N: R.F. Nelson (1985), I: R.F. Nelson (1985), REG: R.F. Nelson (1986)

Inside vivid yellow (14B), throat brilliant yellow-green (150B); outside brilliant yellow (12B) merging to dark reddish orange (178B) at base; spots absent, but the main

rib ridges with 20-mm-long, dark reddish orange (178B) smudgy lines more or less at the midpoint of each tepal; nectaries brilliant yellow-green (150B); pollen strong orange-yellow (163B). Fls 150 mm wide; tepals 75-80 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 15 mm, dark green. Stems 0.7 m, green with brown mottling, and with 8-10 fls. Dec (Australia).

**‘Keiko’ I(a/b)**

Parentage: (unknown × (‘Mohykán’ × ‘Juno’)) × (‘Odysseus’ × ‘Mánes’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005), REG: B. Mičulka (2005)

Inside pale apricot, tepal-tips paler, each tepal with a brown-crimson flame over nectary; outside with pinkish brown midribs; spots absent; nectaries white-granulated; pollen brown; stigma pale brownish old rose-pink. Fls 123 mm wide; tepals 73 × 40 mm, scarcely curved; pedicels 75 mm long, with secondary buds. Lvs scattered, 130 × 18 mm, dark green, slightly shiny. Stems 1 m, thick, green. Late June.

**‘Kekatas’ I(a/b)**

Misspelling of ‘K̄ekatas’.

**‘K̄ekatas’ I(a/b)**

Parentage: ‘Zeltstarite’ × (‘Toljatti Suvenir’ × ‘Impact’)

R: D.-V. Škimele (1992), G: D.-V. Škimele (1995), N: D.-V. Škimele (1998), REG: D.-V. Škimele (2001)

Inside golden yellow, tepals with an orange-yellow centre, throat greenish yellow; outside golden yellow, midribs brownish orange; spots few, small, dark red, on a third of each tepal; brushmark stripes vivid dark red; nectaries green; pollen dark yellow; stigma reddish brown. Fls 160 mm wide; tepals 80 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 20 mm. Stems 1.2 m, dark green, with c.9 fls. Early July.

(Published in *Lilium Balticum Lily Register*, 1999.

Included in *ILR Twentieth Supplement* as ‘Kekatas’ which is a misspelling.)

***kelleyanum* Lemmon IX(c/d)**

Fls greenish yellow, yellow or orange, tepal-tips sometimes reddish; spots purplish red or brown, towards base of each tepal; anthers brown; pollen orange or brown. Fls slightly scented; tepals 42-57 × 9-15 mm. Lvs in whorls of 7-16 at centre of stem, scattered above and below (sometimes all lvs scattered), 50-150 × 15-35 mm. Stems up to 1(-2) m, with up to 25 fls. June to July. W USA (S Oregon, California).

Syn.: *fresnense*; *inyoense*.

**‘Kelley Susan’ I(a/-)**

Parentage unknown

R: J. Wadekamper (1978), G: J. Wadekamper (1982), N: J. Wadekamper (1990), I: Borbeleta Gardens (1991), REG: J. Wadekamper (1993)

Inside moderate yellowish pink (39C), throat white; outside darker pink; spots large, brown on central third of each tepal, nectaries white; pollen dark orange. Tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs

scattered, 80 × 20 mm, mid green. Stems 0.8 m, tan, with 12-14 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1991.)

**'kelloggii Purdy' IX(c/d)**

Fls white at first, turning blush-pink to mauve and then to dull plum, each tepal usually with a yellow ray towards base; spots purple, on basal half of each tepal; pollen orange. Fls c.60 mm wide, fragrant; tepals c.50 mm long. Lvs in whorls of 12-18, 60-100 × 10-20 mm. Stems 1-1.2 m, with 10-20 fls. June to July. USA (S Oregon, NW California).

**'Kelly' VI(b-c/-)**

Parentage: *L. × kewense* 'White Henry' × 'Envy'  
R: D.K. Kölli (1988), G: D.K. Kölli (1991), N: D.K. Kölli (1993), REG: D.K. Kölli (1994)

Inside glowing apricot, blending into yellow and then to ivory at the tepal-tips, with a hint of green showing through from outside, throat apricot surrounding a prominent, deep green nectary star; outside ivory with a melon blush, midribs green; very faint, delicate cinnamon flecking towards outer edges of basal part of each tepal; some embossed papillae; pollen brown-ochre. Fls 171 mm wide, with a faint, fruity scent; tepals 111 × 46 mm, margins smooth, tips slightly recurved. Lvs scattered, up to 139 × 12 mm, mid to dark green. Stems c.1 m, mid green with ruddy flecks and up to at least 5 fls which open very slowly (over 2 days). Late July.

**'Kelly Rae' I(b/c)**

Parentage: unknown × ('Nutmegger' × unknown)  
R: H.E. Hoepner (1970s), G: H.E. Hoepner (1982/3), N: H.E. Hoepner, REG: H.E. Hoepner (1991)

Inside pure butter-yellow, throat more greenish; spots few, vermilion, on basal part of each tepal; nectaries green; pollen bronzy orange. Tepals 90 × 43 mm, margins smooth, tips strongly recurved. Lvs scattered, 125 × 18-20 mm. Stems 1.8 m, mid green, with 16-20 fls (including secondary buds), and bulbils. Mid to late season.

(Said to be very vigorous.)

**'Kelmars' VIII(-/d)**

Parentage: *martagon* var. *album* × *kelloggii*  
R: O.E.P. Wyatt (c. 1950), N: O.E.P. Wyatt  
AM 1951

Fls whitish suffused with purplish maroon; spots absent. (Published in *LYB* 15: 138 (1951/52).)

**'Kelowna Queen' I(a/b)**

Parentage unknown  
R: R. Elders (1983), G: R. Elders (1985), N: R. Elders (1993), I: R. Elders (1993), REG: R. Elders (1995)  
Inside and outside deep pink (52B), throat orange-pink; spots absent; nectaries orange; pollen dark orange. Fls c.150 mm wide; tepals 75 × 34 mm, margins smooth, tips not or only very slightly recurved. Lvs scattered, 78 × 25 mm, mid green. Stems 1 m, green, with 14-20 fls. Early July.

**'Kelso' VIII(a/b-c)**

Parentage: seedling N 066 × seedling G 90-05  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside greenish white (155C), cream when young, throat light yellow-green (145D); outside greenish white (155C), midribs light yellow-green (145D) changing to light yellow-green (145B) at top; spots very few to absent; papillae absent; nectaries strong yellowish green (141C); pollen greyish brown (166A); stigma strong purplish red (60C). Fls 185 mm wide; tepals 130 × 60 mm, margins smooth, tips slightly recurved. Lvs 164 × 23 mm. Stems 1.25 m, with dark markings, and with 4-5 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

**'Kelvin' I(a/b-c)**

Parentage unknown  
R: G. Brundrett (1986), G: G. Brundrett (1988), N: G. Brundrett (1992), I: G. Brundrett (1992), REG: G. Brundrett (1992)

Inside bright orange, slightly brighter at nectaries and slightly darker in the throat; outside orange, with wine-red towards pedicels, midribs darker; spots purple, small, but well-spaced, on all but the top 28 mm of each tepal; nectaries almost white; pollen very dark orange. Tepals 75 × 41 mm, margins smooth, tips slightly recurved and slightly cupped. Lvs scattered, 102 × 9 mm, dark green. Stems 1.65 m, dark wine-red, the colour extending to pedicels, with up to 24 well-spaced fls. Mid to late July.

**'Kenora' I(c/d)**

Parentage: complex hybrid  
R: P.M. Byam (c. 1960), N: RBG, Canada (1968), I: RBG, Canada (1968)  
Fls vivid yellow (12A), lightly spotted. Stems 1.2 m. Midseason.

**'Kenro Queen' VII(b/a)**

Parentage: miniature pink-flowered seedling × Oregon Bulb Farms seedling C16  
R: Oregon Bulb Farms, Inc. (c. 1974), G: K.L. Watkins (c. 1979), N: K.L. Watkins (1983), I: K.L. Watkins (1983), REG: K.L. Watkins (1983)

Inside strong red (53C) along centre of tepals, tips pale purplish pink (56C), margins white, throat strong red (53C); outside dark purplish pink (186C); spots evenly distributed, strong red (53C) on basal half of tepals; nectaries brilliant yellow-green (149B); pollen dark reddish orange (172B). Fls 160 mm wide; tepals 130 × 40 mm, margins slightly ruffled, tips recurved. Lvs scattered, 170 × 20 mm, mid green. Stems 0.8 m, mid green, with c.18 fls. Early to mid Jan. (Australia).

**'Kentucky' VIII(a/b)**

Parentage: ('Tango' × unknown) × ('Sterling Star' × 'Connecticut King')  
R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2001), REG: Bischoff Tulleken Lelies B.V. (2004)  
Inside light orange-yellow (24C), throat pale yellow-

green (4D); outside with outer tepals pale orange-yellow (23D), margins light orange (26C) with dark red (187B) spots, along midrib strong yellow-green (143C) changing upwards into light yellow-green (145C), inner tepals with broader margins; spots dark red (187B) on basal third of each tepal; papillae dark red (187B); nectaries moderate yellow-green (139C); pollen deep orange-yellow (163A); stigma vivid yellowish pink (30C). Fls 200-230 mm wide, fragrant; tepals 133 × 37-55 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 190 × 19 mm. Stems 1 m, green with darker markings at base, and with c.9 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Kenya'** V(b/a)  
See *formosanum* 'Kenya'.

**'Kenyon Davidson'** V(-/a)  
See *longiflorum* 'Kenyon Davidson'.

**'Kerry Gold'** VI(c/a)  
Parentage: Golden Splendor Group × *regale* 'Royal Gold'  
R: J. Buckley (c. 1966), N: J. Buckley  
Fls deep golden yellow. Fls scented. Stems 1.9 m.  
(Published in *A. Buckley Cat.*, 1966.)

**'Kerrylee'** VII(c/-)  
Parentage unknown  
R: B.G. Hayler, G: B.G. Hayler (1975), N: B.G. Hayler (1983), I: B.G. Hayler (1983), REG: B.G. Hayler (1983)  
Fls deep purplish pink (55A), tepal-tips light purplish pink (55C), throat green, edged yellow; spots red, many. Fls 250 mm wide. Lvs scattered, 140 × 45 mm, mid green. Stems 1.5 m, green, with c.15 fls. Late Jan. (Australia).

***kesselringianum* Mishchenko** IX(c/c-d)  
Fls cream to pale yellow; spots small, purple or reddish brown, towards base of each tepal; filaments green; anthers brown-purple; pollen orange; stigma brown-purple. Tepals 80-90 mm long, spreading or recurved in apical two-thirds but not reflexed except at tips. Stems 0.6-1 m, with 1-3 fls. NE Turkey, Georgia.

**var. *kessleri*** IX(b-c/a)  
See *parryi* var. *kessleri*.

× ***kewense* Watson** VI(-/l-)  
Parentage: *leucanthum* var. *centifolium* × *henryi*  
R: RBG, Kew (1897), G: RBG, Kew (1900)  
Fls creamy buff, fading to almost white with age. Tepals wide, twisted.  
(Published in *Garden* 58: 99 (1900). Included in *ILR* (1982) as *Kewense* grex.)

**Kewense Group** VI(-/l-)  
See *L.* × *kewense*.

× ***kewense* Apricot Gold Group** VI(-/c-d)  
Parentage: *henryi* × *leucanthum* var. *centifolium*  
R: L. Woodriff (pre 1958), N: L. Woodriff

Fls yellow, apricot or orange. Tepals slightly reflexed. (Published in *Woodriff Cat.*, 1958. Included in *ILR* (1982) as Apricot Gold grex.)

× ***kewense* 'Golden Heart'** VI(-/c)  
Parentage: *L.* × *kewense* 'White Henryi' × (*leucanthum* var. *centifolium* × *henryi*)  
R: L. Woodriff (c. 1957), N: L. Woodriff  
Fls white, centre deep gold; spots absent.

× ***kewense* 'North Star'** VI(-/a)  
Parentage: *leucanthum* var. *centifolium* × *henryi*  
R: F.L. Skinner (1964), N: F.L. Skinner  
Fls white with yellow star in throat. Stems up to 0.6 m. Aug.  
(Published in *LYB* 28: 134 (1965).)

× ***kewense* 'Orange Beard'** VI(-/l-)  
Parentage: *henryi* × *leucanthum* var. *centifolium*  
R: L. Woodriff (1975), G: L. Woodriff (1978), N: L. Woodriff (1980), I: L. Woodriff (1980), REG: L. Woodriff (1984)  
Fls orange; spots very few; papillae concentrated along centre of each tepal giving a cockscomb effect; nectaries green; pollen brown. Fls 100 mm wide; tepals 100 × 25 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 125 × 25 mm, mid green. Stems 1.2 m, dark brown, with c.7 fls. July.

× ***kewense* 'White Henryi'** VI(b-c/c)  
Parentage: *henryi* × *leucanthum* var. *centifolium*  
R: L. Woodriff (c. 1945), N: L. Woodriff  
Inside white, throat deep orange; red speckling of minute papillae on basal half of each tepal. Fls scented; tepals with reflexed tips. Stems 1.5 m. July.  
Syn.: 'Glowing Star'.

**'Keystone'** I(b/-)  
Parentage: 'Nutmegger' × (unspotted *L.* × *hollandicum* × unknown)  
R: D.M. Stone (c. 1958), N: D.M. Stone  
Fls brilliant yellow (12B); spots absent. Stems 0.6 m.

**'Keyuri'** I(a/b)  
See *L.* × *maculatum* 'Keyuri'.

**'Khanbalic'** I(b/-)  
Parentage: 'Roter Kardinal' × 'Tetra Mountaineer'  
R: V. Strasser (1974), G: V. Strasser (1976), N: V. Strasser (1983), I: V. Strasser (1984), REG: V. Strasser (1986)  
Fls dark red, 180 mm wide; tepals 100 mm long, margins smooth, tips not recurved. Lvs scattered, dark green. Stems 1.2 m, dark red-brown, with c.18 fls. Mid June. Triploid  
Syn.: 'Rokardmount Number 13'.  
(The pollen parent is probably 'Roter Cardinal'.)

**'Kharma'** I(a/b)  
Parentage: ('Pascal' × unnamed seedling) × ((purple-flowered seedling × orange-flowered seedling) × pink-flowered seedling)

R: Mak-Leek Inc. (pre 1997), N: Mak-Leek Inc., REG: ICRA (1998)

Inside dark pink, with a red pink centre; spots absent. Tepal-tips recurved. Stems 0.6-1 m; buds hairy. July. (Published in *The Lily Nook Cat.*, 1997: 7.)

**‘Khokhloma’ I(a/-)**

Parentage: ‘Redstart’ × ‘Golden Wedding’

R: N.A. Miroshniczenko (c. 1975), N: N.A.

Miroshniczenko

Fls reddish orange, with small spots. Stems 0.8 m. June.

**‘Khokhloma’ I(a/b)**

Parentage unknown

Fls yellow; each tepal with a narrow red brushmark.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in M.F. Kireeva, *Lilii*, 62 (2000).)

**‘Kiara’ II(c/d)**

Parentage unknown

R: D. Hercbergs (1993), G: D. Hercbergs (1997), N: D. Hercbergs (2002), I: D. Hercbergs (2002), REG: D. Hercbergs (2003)

Inside and outside strong purplish red (60B), each tepal lighter in centre, throat light green-red; pollen dark orange; stigma dark cherry-red. Fls 45 mm wide; tepals 40 × 18 mm, margins smooth, tips strongly recurved.

Lvs whorled, 150 × 40 mm. Stems 1.4 m, green, darker towards top, with c. 25 fls; buds hairy. Late June.

(Kiara is a Latvian female name.)

**‘Kibotan’ I(b/-)**

Parentage: (‘Destiny’ × *lancifolium* var. *flaviflorum*) × *L. × maculatum*

R: S. Fujishima (c. 1963), N: S. Fujishima

Fls pale yellow.

**‘Kichunova Piemina’ I(b/b)**

Misspelling of ‘Kičunova Piemiņa’.

**‘Kičunova Piemiņa’ I(b/b)**

Parentage: selection from Skumstu Group

S: V.P. Orehovs (1957), N: V.P. Orehovs

Fls orange-red; spots dark brown; filaments pale pink; anthers orange-brown. Fls 90-100 mm wide. Stems 0.8-1 m, with 7-15 fls. June.

Syn.: ‘Pamiat Kichunove’; ‘Memory of Kichunov’.

(Misspelling: ‘Kichunova Piemina’. Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as ‘Kischunova Piemina’ which is also a misspelling. M.F. Kireeva, *Lilii*, 55 (1984) gives the parentage as ‘Doch Fialkovoï’ × mixed pollen of Asiatic hybrids.)

**‘Kiel’s Gelbe’ I(c/-)**

Parentage unknown

R: K. Kiel, N: K. Kiel, REG: K. Kiel (1997)

Fls yellow, with dark brown spots. Stems 1.5 m, with up to 30 fls. Mid July.

(Published in European Lily Society sales list, 1996.)

**‘Kiev’ VII(a-b/-)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V. (pre 1998), N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V. (2000), REG: Vletter & Den Haan Beheer B.V. (2000)

Inside and outside yellowish white (155D), throat green; spots absent; papillae present; pollen reddish brown; stigma greyish green. Tepal-margins ruffled, tips recurved. Stems 1.25 m, green. Midseason.

**‘Kikak’ I(a/b)**

Syn. of *L. × maculatum* ‘Alutaceum’.

**‘Kilián’ I(a/b-c)**

Parentage: ((‘Hornback’s Gold’ × ‘Tabasco’) × ‘Tetra Nutmegger’) × white-flowered tetraploid

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B.

Mičulka (2003), REG: B. Mičulka (2003)

Inside lemon-yellow, throat paler; tepals with pale yellow centres outside, midribs greenish yellow, brownish at base; spots numerous, large, oval, dark brown-crimson, on half of each tepal; nectaries green, white-granulated and with hairy papillae; filaments yellow; pollen apricot-brown; style pale yellow-green; stigma pale yellow. Fls 115 mm wide; tepals thick, 78 × 35 mm, tips slightly recurved; pedicels 70 mm, very thick, heavily brown-dotted. Lvs scattered, dull mid green. Stems 1.15 m, very thick, heavily dotted with pale brown. Late June.

**‘Killarney’ I(b/b-c)**

Parentage: ‘Panache’ × (‘Pastel Princess’ sibling × Wadekamper brushmarked seedling)

R: W.D. Evans (1982), G: W.D. Evans (1987), N: W.D. Evans (1992), I: W.D. Evans (1992), REG: W.D. Evans (1992)

Inside moderate yellowish pink (31D), throat brilliant orange (20A); outside light yellowish pink (29C), midribs yellow-green; spots numerous, small, moderate red (185B) in the throat; nectaries white; pollen red-orange. Fls 150 mm wide; tepals 75 × 36 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 8 mm, mid green. Stems 1.1 m, green, with c.10 fls. Late July.

**‘Killarney Bells’ VI(c/b)**

Parentage: Aurelian Group

R: C. Yerex (c. 1962), N: C. Yerex

Fls sulphur-yellow (HCC 1/2), with broad external bands of willow-green (HCC 000862/1). Fls classical bell-shape; tepals with recurved tips.

**‘Killarney Pipes’ VI(-/a)**

Parentage: Aurelian Group

R: C. Yerex (c. 1946), N: C. Yerex, I: E.L. Kline

Fls white, tinted green, with apricot throat.

**‘Kim’ I(b/-)**

Parentage: *lancifolium* × unknown

R: W. Windus (c. 1979), G: W. Windus (1981), N: W. Windus (1986), REG: W. Windus (1986)

Inside and outside strong reddish orange (42B), throat

yellowish; spots dark reddish orange (178B) on almost half of each tepal; pollen dark reddish orange (175B). Tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.5 m, dark, with c.18 fls, and bulbils. Early July.

**'Kimberly Ann' I(b/-)**

Parentage: ('Nubian' × unknown) × unknown  
R: R. Simonet, G: F. Fellner, N: F. Fellner, I: Borbeleta Gardens (1979), REG: Borbeleta Gardens (1981)  
Inside strong red (46A), throat orange-red; outside light red; spots red, inconspicuous; nectaries red; pollen rust-red. Tepals 60 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 7 mm, dark green. Stems 0.9 m, mid green, with up to 40 fls. Midseason. (Published in *Borbeleta Gardens Cat.*, 1979.)

**'Kimbolton Gold' VII(-/a)**

Parentage unknown  
R: J.S. Yeates, N: J.S. Yeates  
No further details.

**'Kimbolton Pink' VII(b/c)**

See *L. × parkmanii* 'Kimbolton Pink'.

**'Kimbolton Red' VII(-/d)**

See *L. × parkmanii* 'Kimbolton Red'.

**'Kimi-Gago' I(a/b)**

See *L. × maculatum* 'Kimi-Gago'.

**'Kimigasode' I(c/-)**

Parentage: (*lancifolium* × *L. × maculatum*) × (*L. × maculatum* × *medeoloides*)  
R: S. Fujishima (c. 1963), N: S. Fujishima  
Fls vermilion.

**'Kimono' I(b-c/d)**

Parentage unknown  
R: A. Weinreich (pre 1987), N: A. Weinreich  
Inside golden yellow heavily flushed with reddish brown, tepal-edges and throat pale; outside reddish brown, outer tepals with a flame of golden yellow towards tip, inner tepals with a paler midrib; spots few, inconspicuous, on basal half of each tepal; nectaries golden yellow; filaments yellow; pollen dark brown; style yellow; stigma dark. Tepal-margins very slightly wavy, tips distinctly recurved; pedicels almost black. Stems with c.5 fls.

**Kimono Group IX(b/b)**

See *auratum* var. *platyphyllum* Kimono Group.

**'Kinbusen' I(a/b)**

See *L. × maculatum* 'Kinbusen'.

**'King' V(a-b/a)**

See *longiflorum* 'King'.

**'King Arthur' VIII(c/c)**

Parentage unknown  
R: Cebeco Lilies, Inc. (pre 1998), N: Cebeco Lilies, Inc.

(1998), REG: ICRA (1998)

Inside each tepal with a deep yellow centre, paling towards margins; outside with broad green midribs; spots absent. Tepal-margins slightly ruffled, tips recurved. Stems 1.5 m. Late. (An Orienpet (OT) lily. Published in *The Lily Nook Cat.*, 1998: 18.)

**'King Billy' I(a/c)**

Parentage: (*L. × maculatum* 'Batemanniae' × unknown) × unknown  
R: G.M. Chandler, N: G.M. Chandler (1954), I: G.M. Chandler (1958)  
Fls deep red (53A); spots absent. Fls 140 mm wide; tepals very broad, margins wavy. Stems 1 m, with 5-7 fls. (Published in *LYB* 20: 77 (1957).)

**'Kingbird' I(c/d)**

Parentage: Taylor seedling 46341 × Taylor seedling 1010-2  
R: J.C. Taylor (c. 1976), N: University of Guelph (1977), I: University of Guelph (1977), REG: University of Guelph (1977)  
Inside vivid yellow (9A); outside with moderate olive brown (199A) midribs; spots ruby-red, many. Tepals recurved. Lvs scattered, dark green. Stems 1.2-1.5 m. Early to midseason. (Published in *Lilies and other Liliaceae*, 1977: 78.)

**'King Dick' I(a/-)**

Parentage: 'Pumpkin Sweet' × 'Powder Puff'  
R: G.C. Keast (1990), G: G.C. Keast (1992), N: G.C. Keast (1993), I: G.C. Keast, REG: G.C. Keast (1994)  
Inside and outside nasturtium-red (HCC 14/2), midribs green; spots absent; pollen brown. Fls 180 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 20 mm, dark green. Stems 1 m, green, with c.6 fls. Late Dec. to late Jan. (New Zealand).

**'King Leo' I(a-b/b-c)**

Parentage: Flamboyant Group × 'Connecticut King'  
R: G. Brown (1981), G: G. Brown (1983), N: G. Brown (1983), I: G. Brown, REG: G. Brown (1987)  
Inside brilliant yellow, tepal-tips paler, throat deeper; outside paler yellow; spots few, brown, towards base of each tepal; nectaries cream; pollen medium brown. Fls 170 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 15 mm, mid green. Stems 1.45 m, mid green, with up to 27 fls (i.e. with many secondary and tertiary fls). Early to mid July.

**'King Midas' I(b/-)**

Parentage: unnamed seedling × Hallmark Group  
R: J. Wadekamper (1973), G: J. Wadekamper (1975), N: J. Wadekamper (1979), I: Borbeleta Gardens (1980), REG: Borbeleta Gardens (1981)  
Fls brilliant yellow (7A); spots large, black-brown, on half of tepal; nectaries yellow-green; pollen brown. Tepals 80 × 30 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 80 × 10 mm, dark green. Stems 1.5 m, tan-

brown, with 30–40 fls. July.  
(Published in *Borbeleta Gardens Cat.*, 1980.)

**‘King of Spiders’ I(a/b-c)**

Parentage: (‘Nutmegger’ × ‘Palomino’) × ‘Connecticut Yankee’  
R: M. Czupryński (1983), G: M. Czupryński (1985), N: M. Czupryński (1987), I: M. Czupryński (1987), REG: M. Czupryński (1987)

Inside yellow, throat greenish yellow; outside light yellow; spots absent; nectaries greenish; pollen light brown. Fls 200 mm wide; tepals 120 × 28 mm, margins smooth, tips slightly recurved; pedicels 140 mm long. Lvs scattered, 90 × 10 mm, mid green. Stems 1 m, green, with c.12 fls. Early July.

**‘King of Tyre’ IX(b/c)**

See *auratum* ‘King of Tyre’.

**‘King Pete’ I(b/b-c)**

Parentage: Panamint Group × ‘Connecticut King’  
R: H. Peters (1975), N: F.G. Mooney (1975), I: J. Wadekamper (1977), REG: J. Wadekamper (1977)  
AGM 2002

Fls cream and orange, throat orange, tepal-tips and outside cream; spots present; nectaries light yellow-green; pollen light brown. Lvs scattered. Stems 1 m. July.  
Syn.: ‘Gugerna’.  
(Published in *Lilies and other Liliaceae*, 1977: 79.)

**‘King Phillip’ I(a/-)**

Parentage unknown  
R: R.W. Bemis (1960s), N: Blackthorne Gardens (c. 1982), I: Blackthorne Gardens (c. 1982)  
Inside apricot-/melon-coloured; spots few. Lvs dark green. Stems 1.2 m, mahogany. July to Sept.

**‘King’s Ransom’ VI(b/a-b)**

Parentage: (‘Inca Princess’ × *regale* ‘Gold Cup’) × apricot-flowered trumpet seedling 62067  
R: F.H. Hayes, G: T.R. Martin (1972), N: T.R. Martin (1976), REG: T.R. Martin (1976)  
Inside strong orange (25B), throat strong orange (25A); outside strong orange-yellow (24B); spots absent; pollen brown. Lvs wide, dark green. Stems 1.5 m. Mid to late July.  
(Published in *Lilies and other Liliaceae*, 1976: 91.)

**‘Kingston’ VII(a/b)**

Parentage: (‘Montana’ × ‘Happiness’) × (‘Montana’ × ‘Camaro’)  
R: Lybelmex Hillegom B.V. (1990), G: Lybelmex Hillegom B.V. (1992), N: Lybelmex Hillegom B.V. (1996), REG: Lybelmex Hillegom B.V. (1997)  
Inside yellowish white (155D) with a very pale suffusion of strong purplish red (60D) on the apical part, tepals narrowly edged yellowish white (155D), midveins yellowish white (155D); outside similarly coloured but paler, midribs pale yellow-green (155A) at top, strong yellow-green (144C) at base; spots yellowish white (155D) on two-thirds of each tepal; papillae yellowish

white (155D) in the throat; nectaries strong yellow-green (144B); pollen strong brown/moderate reddish brown (172A/175A); stigma pale yellow-green (193A) and dark red (187B). Fls 205 mm wide; tepals 120–125 × 45–55 mm, margins ruffled, tips recurved. Lvs scattered, 165 × 35 mm, mid green. Stems 1.2 m, light green, with c.6 fls. July to Aug.

**‘King William’ I(b/-)**

Parentage: (*bulbiferum* var. *croceum* × *L.* × *maculatum* ‘Mahogany’) × (*lancifolium* × (‘Coronation’ × ‘Brenda Watts’))  
R: E.F. Palmer, N: E.F. Palmer  
Fls bright orange; spots mahogany. Fls 115 mm wide. Tepals recurved. Stems 1.5–1.9 m, with up to 40 fls. July.  
(Published in *Kline Cat.*, 1957.)

**‘Kinks’ I(a/-)**

Parentage unknown  
R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V., REG: Hoff Quality First (1993)  
Inside strong orange (24A), throat light yellow (21D); outside strong orange (24A) tinged with strong yellow-green (144B) at base, midribs brilliant orange-yellow (23B); spots dark reddish orange (175B) in the throat; pollen dark reddish orange (175B); stigma dark reddish orange (175C). Fls 170 mm wide; tepals 85 × 35 mm. Lvs scattered, 60 × 14 mm, mid green. Stems 0.45 m, mid green, with c.6 fls.

**‘Ki-no-tsukasa’ I(a/-)**

Parentage: *L.* × *maculatum* ‘Chigusa’ × ‘Kiyotsuki’  
R: S. Tanabe et al. (1982), N: S. Tanabe et al.  
Tepal-edges strong orange (24A) to strong orange-yellow (24B), centre vivid orange (28B); spots few. Fls 130 mm wide. Stems of medium height. Midseason.

**‘Kinpa’ I(a/-)**

Parentage: (‘Destiny’ × *L.* × *maculatum*) × (‘Destiny’ × ‘Hikari’)  
R: S. Fujishima (1963), N: S. Fujishima  
Fls yellow.

**‘Kinpai’ I(a/-)**

Parentage: ‘Destiny’ × ‘Kinsen’  
R: W. Suzuki (1982), N: W. Suzuki  
Fls vivid yellow (12A), up to 180 mm wide, with a few spots. Stems 0.7 m. Midseason.

**‘Kinsen’ I(a/-)**

Parentage: ‘Destiny’ × (*lancifolium* var. *flaviflorum* × *L.* × *maculatum*)  
R: S. Fujishima (c. 1963), N: S. Fujishima  
Fls yellow.

**‘Kintoki’ I(a/b)**

See *L.* × *maculatum* ‘Kintoki’.

**‘Kinzisi’ I(a/b)**

See *L.* × *maculatum* ‘Kinzisi’.

**‘Kiraku’ I(a/-)**

Parentage: ‘Enchantment’ × unknown  
 R: S. Fujishima (c. 1962), N: S. Fujishima  
 Fls red.

**‘Kirana’ I(a/-)**

Parentage: pink-flowered seedling × mixture of seedlings  
 R: De Jong Beheer B.V. (c. 1988), G: De Jong Beheer B.V., N: De Jong Beheer B.V. (1992), I: De Jong Beheer B.V. (1993), REG: De Jong Beheer B.V. (1994)  
 Inside vivid orange (28B), vivid orange (28A) towards tepal-edges, midveins vivid orange (28B); outside strong orange (30D), vivid orange (28A) at tepal-edges, with a little light orange (29B) towards base; spots and papillae absent; pollen dark reddish orange (175B); stigma dark red (183B). Fls 170 mm wide; tepals 90 × 35 mm, slightly recurved. Lvs scattered, 150 × 25 mm, mid green. Stems 0.66 m, mid green, with c.11 fls.

**‘Kiri’ I(b/-)**

Parentage: ‘Grado’ × ‘Sunrise’  
 R: V. Strasser (1977), G: V. Strasser (1980), N: V. Strasser (1981), I: V. Strasser (1986), REG: V. Strasser (1997)  
 Fls pink. Tepal-margins smooth, tips not recurved. Lvs scattered, dark green. Stems 0.8 m, rather dark green, with up to 18 fls. Late June to mid July.

**‘Kiri’ VI(b/b)**

Parentage unknown  
 R: G. Geering (pre 1986), N: G. Geering  
 Inside pale salmon-orange, fading slightly towards base; outside orange, with green midribs, purplish at base; nectaries green, prominent; stigma pale green; anthers purplish; pollen orange. Tepals smooth, tips not reflexed. Stems with up to 6 fls.  
 (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Kirschblitz’ I(a-b/-)**

Syn. of ‘Kirschroter Stern’.

**‘Kirschenmichel’ I(a/-)**

Parentage: *L. × maculatum* × unknown  
 R: F. Ewald (pre 1980), N: F. Ewald, REG: F. Ewald (1988)  
 Fls dark red. Stems 0.5 m, with many fls. Early June.  
 (Published in German Lily Group sales list, 1980.)

**‘Kirschrot’ Div. ?**

Given as a parent of ‘Sigillum’ and ‘Brokat’. No further details.

**‘Kirschroter Stern’ I(a-b/-)**

Parentage unknown  
 R: C. Feldmaier (pre 1980), N: C. Feldmaier  
 Inside dark red with few spots. Lvs dark green. Stems 0.6 m. Late June.  
 Syn.: ‘Kirschblitz’.

**‘Kirschroter Tänzer’ IV(c/d)**

Parentage: ‘Lake Tulare’ × an American hybrid with flat fls  
 R: N. Martschinke (1986), G: N. Martschinke (1992),

N: N. Martschinke (1998), I: N. Martschinke (1998), REG: N Martschinke (2000)

Inside vivid red (46B), throat light orange-yellow (16C) at tepal-edges, vivid orange-yellow (23A) in the centre; outside mostly moderate to greyish red (182A/B), light yellow (20B) near the base; dark red (59A) spots on the yellow centre of the fls; nectaries moderate olive-green (146A); pollen strong brown (172A); stigma dark red (59A). Fls 90-110 mm wide; tepals 85 × 25 mm, margins not or very slightly waved, tips strongly recurved. Lvs whorled, 110 × 25 mm, mid green. Stems 1.5 m, green, with c.10 fls. Mid June to mid July.  
 (Published in *Europäische Lillien-gesellschaft* bulb list, 1998. The epithet recalls the Polish dance Krakowiak, in which the dancers go up and down in the same place. Nomenclatural standard: colour print provided by registrant (WSY 0022859).)

**‘Kirschstern’ Div. ?**

Given as a parent of ‘Athos’, ‘Korfu’ and ‘Paros’ which were raised by V. Strasser. No further details.

**‘Kischunova Piemina’ I(b/b)**

Misspelling of ‘Kičunova Piemiņa’.

**‘Kiselevii’ V(-/-)**

Parentage: selection from seedlings of ‘Zalivskii’  
 S: I.L. Zalivski (c. 1947), N: I.L. Zalivski  
 Fls pure white. Stems 1.5 m. Aug.

**‘Kismet’ I(a/b)**

Parentage: (‘Connecticut King’ × unknown) × unnamed “bronze halo” seedling  
 R: W. Windus (1972), N: W. Windus, I: J. Wadkamper (1978), REG: J. Wadkamper (1978)  
 Inside vivid orange (28A); midribs brown; spots absent; pollen dark reddish orange (172B). Tepals wide, overlapping, margins smooth. Lvs mid green. Stems 1.1-1.2 m. Midseason.  
 (Published in *Borbeleta Gardens Cat.*, 1978.)

**‘Kispirit’ I(c/-)**

Parentage: ‘Nutmegger’ × ‘Sonnentiger’  
 R: V. Strasser (1981), G: V. Strasser (1983), N: V. Strasser (1990), I: V. Strasser (1989), REG: V. Strasser (1990)  
 Inside and outside vivid yellow (12A), throat green; spots purple on two-thirds of each tepal; nectaries green; pollen orange. Fls 110 mm wide; tepals 85 × 32 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 23 mm, dark green. Stems 1.25 m, dark green, with c.30 fls, and some bulbils. Mid July.  
 Syn.: ‘Ikaria’.  
 (Originally introduced as ‘Ikaria’ in 1989, but this epithet is unacceptable, having already been used for another lily (ICNCP, 2004: Art. 27.1).)

**‘Kissme’ I(a/b)**

Parentage unknown  
 R: R.H. Bazett (1998), G: R.H. Bazett (2000), N: R.H. Bazett (2005), I: Valley K Greenhouses (2005), REG: R.H. Bazett (2005)

Inside ivory-white, throat ivory-white to grey-green; outside with inner tepals ivory-white, outer tepals ivory white, midribs grey-green; spots and papillae absent; nectaries grey-green; pollen dark orange; stigma light brown. Fls 160 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Leaves scattered, 130 × 15 mm, dark green. Stems 1.05 m, dark green, with c.12 fls. June to July.

(Nomenclatural standard: colour photograph provided by registrant (WSY 0096417).)

#### **'Kiss Me Kate' I(a-b/-)**

Parentage: ('Connecticut King' × pink-flowered seedling of 'Edith Cecilia') × Wadekamper brushmarked seedling no. 7

R: J. Wadekamper (1979), G: J. Wadekamper (1982), N: J. Wadekamper (1992), I: Borbeleta Gardens (1993), REG: J. Wadekamper (1993)

Fls brilliant orange-yellow (23B), throat white; spots brown; nectaries green; pollen brown. Fls very large; tepals 80 × 20 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 12 mm, mid green. Stems 1 m, mid green, with c.12 fls. Late.

(Published in *Borbeleta Gardens Cat.*, 1993.)

#### **'Kiss Me Kate' VIII(a/-)**

Parentage unknown

Fls glowing salmon-pink, with a gold star in centre, fragrant. Stems 0.7 m. Midseason.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. A *longiflorum*/Asiatic (LA) hybrid. According to The Lily Nook, this cv. was produced by Van der Salm. It is possible that this lily is, in fact, 'Brigadoon' (q.v.).)

#### **'Kissproof' VII(a-b/b)**

Parentage: unnamed seedling × 'Star Gazer'

R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1994)

Inside dark red (187B/C) becoming deep purplish red (187D) near tepal-tips, each tepal with a yellowish white (155D) margin of variable width in apical part, throat yellowish white (155D) shading into tepal colour; outside deep purplish red (61A), each tepal with a yellowish white (155D) margin of variable width in apical part, midribs yellowish white (155D) suffused deep purplish red (61A), outer tepals tipped strong yellow-green (144A); spots and papillae dark red (187A) on two-thirds of each tepal; pollen deep orange-yellow (163A); stigma dark greyish reddish brown/dark purple (200A/79A). Fls 220 mm wide; tepals 115 × 50 mm, margins of outer tepals ruffled, tips slightly recurved. Lvs scattered, 110 × 40 mm, mid green. Stems 0.7 m, dark, with c.4-6 fls.

#### **'Kisukashi' I(a/b)**

See *L. × maculatum* 'Kisukashi'.

#### **'Kitadake 2 Gou' V(b-c/a)**

Parentage: selection from Formolongi Group

Inside white, throat greenish; outside tinged with pale yellowish green; stigma white; pollen dark orange.

Tepal-margins smooth, sometimes incurved, tips very slightly reflexed. Lvs scattered, finely pointed. Stems with 2-3 fls.

(Published in *Miyoshi & Co. Cat.* 1989: 115, with colour illustration. Selected and named in Japan before 1989.)

#### **'Kita-no-otome' I(a/-)**

Parentage unknown

R: S. Fujishima (pre 1982), N: S. Fujishima

Fls deep scarlet, spotted black. Lvs narrow. Stems 0.5 m, green.

#### **'Kite' I(b/-)**

Parentage: 'Pink Champagne' × ? 'Zenith'

R: W. Windus (1969), N: W. Windus (1973), REG: W. Windus (1973)

Fls brilliant greenish yellow (6C), tepal-tips pink-flushed, throat moderate red (180C); outside pinkish; spots greyish red (176A). Tepal-margins smooth. Lvs dense and waxy. Stems 1.4 m, with bulbils.

(Published in *Lilies and other Liliaceae*, 1973/1974: 110.)

#### **'Kitrinos' I(a-b/b-c)**

Parentage unknown

R: J. Hloušek, N: J. Hloušek, I: J. Hloušek (1986), REG: J. Hloušek (1993)

Inside rich glowing yellow, throat tinged with green; outside tinged with brown, midribs darker; spots small, sparse, scarlet, in the throat; nectaries pale green; pollen brown; stigma scarlet. Fls 75 mm wide; pedicels 80 mm long, brownish. Lvs scattered, 70 × 10 mm, glossy dark green. Stems 0.95 m, brownish, with numerous red-brown bulbils. Early July.

#### **'Kitty' I(a/-)**

Parentage: *L. × hollandicum* × 'Bellona'

R: Gebr. N. & B. Laan & Zn, G: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn, I: Gebr. N. & B. Laan & Zn (1979), REG: Gebr. N. & B. Laan & Zn (1980)

Fls vivid yellow (17C); anthers red-brown. Stems 0.7 m. (Published in *Bloembollencultuur*, May 1979.)

#### **'Kiwitahi' VI(b/a)**

Parentage: ('Anaconda' × unknown) × unknown R: (1993), G: M. Liddell (1996), N: M. Liddell (2002), I: M. Liddell (2002), REG: M. Liddell (2004)

Inside pure white with the outside colour showing through, throat lemon-yellow; outside bright pink-red-mauve; spots absent; nectaries green; pollen deep yellow; stigma green. Fls 145 mm wide; tepals 140 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 6 mm, mid green. Stems 0.6-0.8 m, green to bronze, with 5-8 fls. Dec. (New Zealand).

(Nomenclatural standard: colour print supplied by registrant (WSY 0096379).)

#### **'Kiyosato' V(a-b/a)**

Parentage: selection from Formolongi Group

Inside white; outside slightly suffused with green; spots

absent; pollen yellow; stigma greenish white. Stems with 4-5 fls.  
(Published in *Miyoshi & Co. Cat.* 1989: 114, with colour illustration. Selected and named in Japan before 1989.)

**‘Kiyotsuki’ I(a/-)**

Parentage unknown  
Given as a parent of ‘Ki-no-tsukasa’.  
(Grown in Japan before 1982.)

**‘Kiyotsukisukashi’ I(a/-)**

Parentage unknown  
R: Hort. Exp. Station (Niigata), N: Hort. Exp. Station (Niigata)  
Fls yellow.

**‘Kiyotu Beni’ I(a/-)**

Parentage: ‘Enchantment’ × (‘Sakigake’ × *L.* × *hollandicum* ‘Vermilion Brilliant’)  
R: Hort. Exp. Station (Niigata), N: Hort. Exp. Station (Niigata)  
Fls red.

**‘Klaas de Jong’ I(a-b/b)**

Parentage: ‘Prato’ × ‘Tetra Stella’  
R: De Jong Lelies Holland B.V. (1994), G: De Jong Lelies Holland B.V. (1996), N: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2001)  
Inside vivid orange (28A), tepal-edges vivid reddish orange (32A), throat brilliant orange (29A); outside vivid orange (28B) on a light orange (28C) ground, stronger coloured towards tepal-edges which are vivid reddish orange (30B), midribs strong orange (26B); spots absent; papillae negligible; nectaries moderate reddish orange (171A); pollen moderate reddish orange (171A); stigma vivid red (46B). Fls 170 mm wide; tepals 110 × 35-50 mm, margins smooth, tips recurved. Lvs scattered, 100-150 × 15-20 mm. Stems 1.2 m, green with darker markings, and with c.7 fls. June.

**‘Klagenfurt’ VI(-/a)**

Parentage: red-orange-flowered seedling × Copper King Group  
R: V. Strasser (1977), G: V. Strasser (1980), N: V. Strasser (1984), I: V. Strasser (1985), REG: V. Strasser (1997)  
Fls strong orange-yellow (24B). Tepal-margins smooth, tips slightly recurved. Lvs scattered, 110 × 7 mm, dark green. Stems 1.2 m, rather dark green, with c.12-15 fls. Late July.

**‘Klára’ I(a-b/-)**

Parentage: ‘Karmen’ (of Jošt) × *L.* × *scottiae* ‘Roter Prinz’  
R: V. Jošt (1971), G: V. Jošt (1974), N: V. Jošt (1984), I: Semptra Praha a.s. (1984), REG: V. Jošt (1984)  
Inside vivid reddish orange (32A) with a red overlay, tepal-tips vivid reddish orange (34A), throat vivid reddish orange (30B); outside strong reddish orange (34C); spots few, small, dark red (187A) on basal half of each tepal; nectaries white; pollen moderate reddish orange (171A). Fls 120-125 mm wide; tepals 85 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 127

× 14 mm, dark green. Stems 0.9-1 m, dark purple, with c.12 fls. July.  
(Published in *Zabradnictvo*, 1984.)

**‘Kleine Eva’ I(c/b-d)**

Parentage: Weidemann seedling AS12 × (yellow-flowered brushmarked seedling × orange-flowered brushmarked seedling)  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (2001), REG: G. Steinbrück (2002)  
Inside strong orange (170A), each tepal with a strongly developed double midvein; outside rather paler orange, midribs greyish yellow; spots absent; nectaries yellowish grey (156A); filaments yellow-white; pollen strong reddish orange (31A); style yellow-white; stigma dark purple (83A). Fls 90 mm wide; tepals 70 × 24 mm, margins smooth, tips strongly recurved. Lvs scattered, 70 × 24 mm. Stems 0.8 m, mid green, with c.9 fls. Early to mid July.  
(Nomenclatural standard: colour print provided by registrant (WSY 0032257).)

**‘Kleine Freude’ I(a/-)**

Parentage unknown  
R: G. Steinbrück (pre 1992), N: G. Steinbrück  
Fls blood-red.  
(Withdrawn and superseded by ‘Kleine Freude’ registered in 2003.)

**‘Kleine Freude’ I(a/c)**

Parentage: ‘Ancona’ × seedling ‘Col 1’  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1998), REG: G. Steinbrück (2003)  
Inside and outside moderate reddish orange (171A), the centre of the fl. inside flushed with brilliant yellow (8A); spots numerous, medium sized, moderate reddish brown (175A), on basal half of each tepal; nectaries reddish pink, hoary; pollen brownish orange (172C); stigma pale yellow (158A). Fls 120 mm wide; tepals 60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 75 × 13 mm. Stems 0.6 m, dark green, with 6-8 fls. Mid to late June.  
(Published in Steinbrück sales list, 1998. Nomenclatural standard: colour print provided by registrant (WSY 0038760).)

**‘Kleine Nachtmusik’ I(a/-)**

Parentage: ‘Byam’s Ruby’ × ‘Impact’  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)  
Inside and outside vivid red (45A), throat suffused with brilliant yellow (7B); spots few, small, strong brown (172A) around centre of fl.; nectaries with greenish white (155C) hairs; pollen strong brown (172A). Fls 140 mm wide; tepals 75 × 30 mm, margins smooth, tips not reflexed. Lvs scattered, 70 × 8 mm, mid green. Stems 0.8 m, almost black, with c.15 fls. Late June to early July.

**'Kleopatrá' I(b/c)**

Parentage unknown

R: A. Weinreich (pre 1985), N: A. Weinreich

Inside brick-red, tepal-centres yellow; spots brown on three-quarters of each tepal. Lvs light green. Stems 1.7 m, hairy, dark brown. Late July.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Cleopatrá'. Published in German Lily Group sales list, 1985.)

**'Kleopatrá' I(b/-)**

Parentage: selection from Amálijas Group

R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs

(1985), I: V.P. Orehovs

Inside and outside lilac-pink, throat whitish yellow; spots dark, in centre of fl.; nectaries crimson; pollen orange.

Fls 110 mm wide; tepals 55 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1 m, green.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Cleopatrá'.)

**'Klingsor' I(b/d)**

Parentage: 'Festiváflamme' × 'Black Butterfly'

R: A. Weinreich (1986), N: A. Weinreich, REG: ICRA (1998)

Fls blackish red with black spots. Fls 95 mm wide; tepals 80 × 35 mm. Lvs 110 × 7 mm. Stems 0.9-1 m. Early July.

**'Klintaine' I(a/b-c)**

Parentage: 'Patricija' × Tango Group

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)

Inside strong purplish red (62B), throat greenish; outside greenish pink; each tepal with a large, deep purplish red (71A) blotch and numerous spots; nectaries brown; pollen bright yellow. Fls 110 mm wide; tepals 60 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 16 mm, dark green. Stems 1 m, green, with c.5 fls. Mid July.

**'Klondike' I(b/d)**Parentage: 'Grace Marshall' × (*L. × hollandicum* × unknown)

R: G.E. Holland, N: G.E. Holland

Fls yellow-gold; spots dark brown. Stems 0.6-1 m. July. (Published in *Lilyhaven Cat.*, 1953.)**'Klostercelle' I(a/b)**

Parentage unknown

R: J. Vasarietis (1989), G: J. Vasarietis (1992), N: J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J. Vasarietis (1999)

Inside darker than strong red (46A), throat white with strong red (46A) stripes; outside strong red (46A); spots relatively inconspicuous, medium sized, dark, on basal half of each tepal; nectaries white on a greenish ground; pollen brown. Fls 120 mm wide; tepals 62 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 13 mm, dark green. Stems 0.75 m, green, with c.8 fls. Mid to late June.

Trade designation: CLOISTER CELL.

(Published in *Lilium Balticum Cat.*, 1996. Nomenclatural standard: colour print provided by registrant (WSY 0023028).)**'Kloster Maulbronn' I(a/b-c)**

Parentage: 'Späte Flamme' × 'Connecticut Yankee'

R: N. Martschinke (1972), G: N. Martschinke (1975),

N: N. Martschinke (1978), REG: N. Martschinke (1991)

Inside vivid reddish orange (30A), throat light yellow-green (145B); outside moderate yellow-green (146B); spots few, small, dark, on basal third of each tepal; papillae white, in the throat; pollen moderate reddish orange (171A). Tepals 65 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 105 × 15 mm, mid green. Stems 0.9 m, pale green, with c.15 fls. July.

**'Kluda' I(b/-)**

Misspelling of 'Klūda'.

**'Klūda' I(b/-)**

Parentage: selection from Willtigrinum Group

S: V.P. Orehovs (post 1959), N: V.P. Orehovs

Fls orange-yellow.

(Published in *LYB* 33: 81 (1970) and included in *ILLR* (1982) as 'Kluda' which is a misspelling.)**'Klunker' I(c/d)**

Parentage: 'Abraxas' × ('Radiant Pink' × unknown)

R: N. Martschinke (1980), G: N. Martschinke (1983),

N: N. Martschinke (1984), REG: N. Martschinke (1991)

Inside brilliant orange (25C), tepal-tips strong orange (25B), throat strong orange (25A); outside marked with strong yellow-green (145A); spots numerous, small, deep purplish red (59B), on basal half of each tepal; nectaries brilliant orange (25C); pollen vivid reddish orange (34A). Fls 85 mm wide; tepals 70 × 27 mm, margins smooth, tips strongly reflexed. Lvs scattered, 110 × 9 mm, mid green. Stems 1 m, dark green, with c.18 fls. July.

**'Kněžna Libuše' I(b/b-c)**

Parentage unknown

R: J. Frajman (1983), N: J. Frajman, REG: J. Frajman (1986)

Inside ruby-red, throat purple, tepal-centres with an orange flush; outside paler, midribs beige; spots fairly numerous, dark brown; nectaries purple, pink-frosted; pollen dark orange-red; stigma dark purple. Fls 130 mm wide; tepals slightly recurved at tips; pedicels dark violet. Lvs dull mid green. Stems 0.9 m, dark violet. Early July.

**'Koblentz' VI(-/-)**

Parentage: (Golden Clarion Group × pink-flowered Aurelian Group) × Copper King Group

R: V. Strasser (1973), G: V. Strasser (1977), N: V. Strasser

(1983), I: V. Strasser (1986), REG: V. Strasser (1986)

Fls yellow-white, tepal-tips pink; outside green. Tepals 130 mm long, margins smooth, tips not recurved. Lvs scattered, 140 × 12 mm, dark green. Stems 1.5 m, dark green, with c.12 fls. Mid July.

**'Kogane-no-sato'** I(a/-)

Parentage: 'Hikari' × 'Enchantment'

R: S. Tanabe et al. (1982), N: S. Tanabe et al.

Fls strong orange (24A) with medium spotting. Fls up to 160 mm wide. Stems 0.5-0.7 m, with bulbils. Late.

**'Kogane-no-taki'** I(a/-)

Parentage unknown

Inside pale yellow; spots dark, numerous, on basal half of each tepal; pollen dark. Tepal-margins slightly ruffled, tips not or slightly reflexed. Lvs scattered. Stems with c.3-4 fls in a more-or-less umbellate infll.

(Published in *Miyoshi & Co. Cat.* 1989: 113, with colour illustration. Raised and named in Japan before 1989.)**'Kognac'** VI(b-c/a)

Parentage unknown

R: H. Böhm (pre 1995), N: H. Böhm

Fls cognac-coloured. Stems 1.4 m. Early.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Cognac I' and 'Cognac III'. Published in German Lily Group sales list, 1995.)

**'Kokarde'** I(a/-)

Parentage: seedling RS 894 × seedling RS 84-5

R: Gebr. Vletter &amp; Den Haan, G: Gebr. Vletter &amp; Den Haan (1986), N: Gebr. Vletter &amp; Den Haan (1992), I: Gebr. Vletter &amp; Den Haan (1993), REG: Gebr. Vletter &amp; Den Haan (1993)

Inside with basal part of tepals moderate to strong purplish red (59C/D), apical part variegated greenish white (155C) and strong purplish red (59D), tepal-tips strong purplish red (59D); outside light purplish pink (68D), tepal-edges strong purplish red (59D), midribs pale greenish yellow (2D), the top strong yellow-green (143B); spots dark red (187A), in the throat; pollen dark reddish orange (175C); stigma pale yellow (161C) and moderate red (181C). Fls 185 mm wide; tepals 90 × 45 mm. Lvs scattered, 185 × 15 mm, mid green. Stems 0.85 m, green with darker markings, and with c.11 fls.

**'Koketka'** I(b/-)

Parentage: 'Nochka' × ('Prince Charming' (Div. I) × unknown)

R: B.P. Guzhavin, N: B.P. Guzhavin (1981)

Fls pale lavender pink with fuchsia spots. Stems 1.1 m.

**'Kokko'** I(a/-)Parentage: 'Enchantment' × *L. × maculatum*

R: S. Fujishima (1963), N: S. Fujishima

Fls vermilion.

**var. *koknese*** IX(c/d)See *martagon* var. *daugavense*.**'Kolkhoznitsa'** I(a/-)

Parentage: 'Connecticut King' × ('Rubinovaia' × 'Destiny')

R: B.P. Guzhavin (1984), N: B.P. Guzhavin

Fls bright orange; spots large, in the throat. Fls very large. Lvs dark green, broad. Stems 1 m, with some bulbils. June.

**'Kolovrat'** I(a-b/b-c)

Parentage: ('Koral' × ('Red Echo' × 'Mánés')) × 'Silver Bunny'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2001), REG: B. Mičulka (2001)

Inside creamy with a beige tint, centre brownish, throat with a hint of green; outside with greenish and yellowish midribs, brownish at base; large, dark pinkish brown brushmarks and numerous, large, oval, dark pinkish brown spots on half of each tepal; nectaries green, with white-granulated edges; pollen brown; stigma dark purple-brown. Fls 155 mm wide; tepals 90 × 37 mm, slightly recurved; pedicels 85 mm long, slightly brown-spotted. Lvs scattered, 80 × 9 mm, slightly glossy mid green. Stems 0.75 m, slightly brown-speckled. Late June.

**'Kolumbine'** I(a-b/b)

Syn. of 'Soubrette'.

**'Kolumna'** I(a/b)

Parentage: 'Tetra Gran Paradiso' × ('Apricot Supreme' × tall red-flowered seedling)

R: J. Bodalski (1989), G: J. Bodalski (1991), N: J. Bodalski (1994), I: J. Bodalski (1994), REG: J. Bodalski (1994)

Inside vivid reddish orange (42A); outside strong reddish orange (42B); spots dark brown on two-thirds of each tepal; nectaries white; pollen strong reddish orange (169A); stigma noticeably large. Tepals 75 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 15 mm, mid green. Stems 1.35 m, very stiff, dark green, with c.21 fls. Early July.

**'Komedia'** I(b/-)

Misspelling of 'Komēdija'.

**'Komēdija'** I(b/-)

Parentage: selection from Willtigrinum Group

S: V.P. Orehovs (post 1959), N: V.P. Orehovs

Fls orange-yellow.

(Published in *LYB* 33: 81 (1970) and included in *ILR Second Supplement* as 'Komedia' which is a misspelling. Included in *ILR* (1982) as 'Komeida' which is also a misspelling.)**'Komeida'** I(b/-)

Misspelling of 'Komēdija'.

**Komet Group** II(b-c/-)Parentage: *L. × dalhansonii* Paisley Group × ((*tsingtauense* & *martagon* var. *catianiae*) × *tsingtauense*)

R: J. Petruske (c. 1975), N: J. Petruske

Fl. colour varying from yellow, golden and apricot shades to wine-red; spots dark red and brown, on edges of up to two-thirds of each tepal; pollen dark apricot to orange. Fls c.30 × 70 mm, pendant or semi-pendant; tepals slightly to moderately recurved, very thick and shiny. Lvs whorled, c.130 × 45 mm. Stems 1-1.4 m, violet-dotted. Late June to July.

**'Kometex' II(c/-)**

Parentage: selection from Komet Group  
 S: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1992),  
 REG: B. Mičulka (1992)

Inside golden yellow, tepal-tips paler; outside pale yellow, midribs reddish at base; small, brownish tongues over nectaries, and numerous, small, ochre-brown spots on two-thirds or more of each tepal; pollen deep apricot; stigma pale yellow. Fls 73 mm wide; tepals 35 × 19 mm, slightly to moderately recurved. Lvs whorled, 110 × 45 mm, dark green. Stems 0.9 m, spotted dark violet, densely so at base, less so above. Late June.

**'Komtesa' I(a-b/b-d)**

Parentage: Panamint Group × 'Zlatovláška'  
 R: V. Baloun (1985), N: V. Baloun, REG: V. Baloun (1987)

Inside yellowish cream, centre of tepals yellow, tinted brown around nectaries; outside creamy, midribs pale red-brown and green; spots small, dark purple-brown, on a third of each tepal; nectaries white-frosted; pollen pale brown. Fls 90 mm wide; tepals 65 × 30 mm, recurved; pedicels dotted. Lvs 57 × 8 mm, glossy dark green. Stems 1 m, blackish at base, dotted above, with c.10 fls. Mid June.

**'Komusume' I(a/-)**

Parentage: 'Enchantment' × *L. maculatum*  
 R: S. Shinoshima (1938), N: S. Shinoshima  
 Fls pale orange-yellow. Lvs short. Stems 0.6 m, black.

**'Kongojo' IX(a/b)**

See *dauricum* 'Kongojo'.

**'Königin der Nacht' II(-/-)**

See note under 'Queen of Night'.

**'Königsmantel' I(c/-)**

Parentage: *lancifolium* hybrid complex  
 R: S. Ziepké, N: S. Ziepké, I: S. Ziepké (pre 1972), REG: S. Ziepké (1985)

Inside strong yellowish pink (32C), tepal-tips moderate reddish orange (35B), throat strong yellowish pink (32C); outside moderate reddish orange (35B), tepal-margins overlaid deep pink (48A); spots many, medium sized, dark red (187A), on half of each tepal; nectaries white; pollen dark reddish orange (178B). Fls 102 mm wide; tepal-margins smooth, tips strongly recurved. Lvs scattered, 111 × 6 mm, dark green. Stems 1.1 m, with c.24 fls. July.  
 (Published in *Liliářská ročenka*, 1983.)

**'Konstancja' VIII(a/-)**

Parentage: ('Doctor Yu' × 'Maple Cream') × Longistar Group  
 R: J. Bodalski (1988), G: J. Bodalski (1990), N: J. Bodalski (1994), I: J. Bodalski (1994), REG: J. Bodalski (1994)

Inside orange-yellow, tepal-tips light orange-yellow (22C), throat strong orange (26B); outside light yellowish pink (26D); spots pale brown on half of each tepal;

nectaries orange-yellow; pollen vivid orange (28A). Tepals 75 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 15 mm, mid green. Stems 1.6 m, stiff, green-brown, with c.20 fls. Mid July.

**'Kontiki' I(c/d)**

Parentage: 'Maxwill' × 'Leuchtstern'  
 R: D.E. Schmitzer (1974), G: D.E. Schmitzer (1976), N: D.E. Schmitzer (1979), REG: D.E. Schmitzer (1984)  
 Inside vivid orange (28A), tepal-tips, throat and outside vivid orange (28B); small spots of moderate brown (200C) on two-thirds of each tepal; nectaries vivid orange (28B), slightly frosted; pollen strong reddish orange (169A). Tepals 55 × 18 mm, margins smooth, tips strongly reflexed. Lvs scattered, 60 × 5 mm, mid green. Stems 1 m, dark green, with 8-10 fls. July.  
 (Published in *Der Staudengarten* 1980(1): 34.)

**'Kontrasts' I(a/b)**

Parentage: 'Baltais Lācis' × 'Nakts Tango'  
 R: A. Balode (1994), G: A. Balode (1996), N: A. Balode, REG: A. Balode (1997)  
 Inside pale yellow (11C), midveins strong pink (54C), throat red-purple; outside pale yellow (11D), midribs dark purplish pink (186C); numerous, large and small, dark red (187A) spots and markings on half of each tepal; nectaries greyed purple; pollen brown. Fls 170 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs 80 × 40 mm, dark green. Stems 1 m, green, with c.7 fls. Mid July.

**'Koonawarra Queen' VI(-/c)**

Parentage unknown  
 R: D.F. McPherson, G: D.F. McPherson (1966), N: D.F. McPherson, I: D.F. McPherson (1972), REG: D.F. McPherson (1972)  
 Fls light orange-yellow (24C).  
 (Published in *Lilies and other Liliaceae*, 1973: 114. Fls fade slightly in hot sun.)

**'Kopua' I(a/-)**

Parentage: (*wilsonii* × unknown) × *lancifolium* var. *flaviflorum*  
 R: R.T. Moriarty (c. 1962), N: R.T. Moriarty  
 Fls yellow, spotted brown.

**'Korál' I(a/-)**

Parentage: (Sutter's Gold Group × 'Connecticut Red') × 'Connecticut King'  
 R: K. Braun (1981), N: K. Braun, REG: K. Braun (1984)  
 Fls cinnabar-red; spots in the form of brushmarks on a third of the fl.; nectaries orange-red; pollen orange-brown. Fls 175 mm wide; tepal-tips slightly recurved. Stems 0.9 m. Mid July.

**'Korallenriff' I(a/-)**

Parentage unknown  
 R: H. Böhm (pre 1987), N: H. Böhm, REG: H. Böhm (1988)  
 Fls vivid yellowish orange (30C); spots few, small, in centre of fl.; pollen orange-brown. Fls 120-150 mm

wide, held wide open, with narrow tepals. Lvs dark green. Stems 0.8-1.5 m, dark brown, with up to 40 fls. Mid July.  
(Published in German Lily Group sales list, 1987.)

**‘Kord’ VI(c/d)**

Parentage: ‘Brno’ × ‘Gold Eagle’  
R: K. Braun (1989), N: K. Braun, REG: K. Braun (1990)  
Inside white, throat yellow; outside yellow, midribs green; spots sparse, elongated, brown, on a fifth of each tepal; nectaries green; pollen brown. Fls 50 × 160 mm; tepals 90 × 43 mm; pedicels 110 mm long, green and brown. Lvs scattered, 128 × 20 mm, green. Stems 1 m, brown and green, with c.10 fls. Mid July.

**‘Korea’ VIII(a/b)**

Parentage unknown  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside brilliant greenish yellow (6C), throat light greenish yellow (1C); outside a little paler than brilliant greenish yellow (6C), midribs suffused with strong yellow-green (144C) and strong yellow-green (144A) at top; spots and papillae absent; nectaries a little paler than pale greenish yellow (1D), hairy; pollen vivid orange-yellow (23A); stigma dark red (187B). Fls 210 mm wide; tepals 115-120 × 45-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 165 × 25 mm. Stems 0.9 m, green, with c.6 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Korfu’ I(b/-)**

Parentage: ‘Kirschstern’ × ‘Tihowa’  
R: V. Strasser (1974), G: V. Strasser (1976), N: V. Strasser (1978), I: V. Strasser (1981), REG: V. Strasser (1986)  
Fls red, except for orange throat. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.2 m, brownish green, with c.40 fls. June to July.

**‘Korissa’ I(a/-)**

Misspelling of ‘Karissa’.

**‘Korsikán’ I(a/b)**

Parentage: (‘Mirage’ (Div. I) × ‘Impact’) × (‘Target’ × ‘Windahloo’)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005), REG: B. Mičulka (2005)  
Inside pale brownish red-orange, each tepal with pale yellow margin and pale tip; outside pale orange; spots red-brown, medium-large, on half of each tepal, brushmarks large, red-mahogany, with longer lines; feathered papillae in throat; nectaries white-granulated; pollen ochre-brown; stigma brownish pink. Fls 125 mm wide; tepals 85 × 40 mm, margins incised, tips slightly curved; pedicels 65 mm long, green. Lvs scattered, 130 × 13 mm, dull dark green. Stems 0.85 m, thick, green. Early June.

**‘Korzár’ I(a-b/c)**

Parentage: (‘Parfait’ × ‘Wattle Bird’) × ‘Rosefire’  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997), REG: B. Mičulka (1997)  
Inside red-orange, tepals with a pale yellow centre and narrow yellow edges; outside yellow, tepal-edges orange, midribs greenish; filaments yellowish; pollen brown; stigma brownish old rose. Fls 155 mm wide; tepals 100 × 45 mm, gently recurved; pedicels 45 mm long, slightly dotted. Lvs scattered, 80 × 14 mm, dark slightly glossy green. Stems 0.6 m, thick, brown, with a short infl. Late June.

**kosa IX(c/d)**

See note under *monadelphum*.

**‘Kosciusko’ VII(b/c)**

Parentage: *L. × parkmanii* ‘Beecher’s Variety’ × (*speciosum* var. *album* × unknown)  
R: E.C. Genat (1953), G: E.C. Genat (1956), N: E.C. Genat, I: E.C. Genat (1961)  
Inside white, tinged with cream; spots faint pink on basal part of each tepal. Fls 150 mm wide; tepal-tips reflexed. Stems up to 2.6 m.  
(Published in *ILR* (1982) under the erroneous epithet ‘Mount Kosciusko’.)

**‘Koshijibeni’ I(a/-)**

Parentage unknown  
R: H. Takizawa (pre 1989), N: H. Takizawa  
Fls red throughout; spots absent. Tepal-margins smooth or very slightly ruffled, tips recurved. Stems with c.5 fls. (Listed in *Miyoshi & Co. Cat.* 87: 111 (1989).)

**Koshiji-sukashi Group I(a/-)**

Parentage: ‘Enchantment’ × unknown  
(Listed as a parent of ‘Beni-no-mai’, ‘Mai-pureti’. Grown in Japan before 1982. Included in *ILR Third Supplement* as Koshiji-sukashi grex.)

**‘Koshi-no-beni’ I(a/-)**

Unaccepted spelling of ‘Kosi-no-beni’.

**‘Koshino Yosooi’ I(a/-)**

Parentage: ‘Enchantment’ × (*L. × maculatum* × *L. × hollandicum* ‘Vermilion Brilliant’)  
R: Hort. Exp. Station (Niigata) (c. 1968), N: Hort. Exp. Station (Niigata)  
Fls red.

**‘Kosi-no-beni’ I(a/-)**

Parentage: *L. × maculatum* ‘Chigusa’ × (*L. × maculatum* ‘Chigusa’ × *L. × maculatum* ‘Kisukashi’ ‘red strain’)  
R: S. Tanabe et al. (1982), N: S. Tanabe et al.  
Fls vivid reddish orange (33B/34A), 130 mm wide; spots few, small. Stems 0.5-0.7 m. Midseason.  
(Published in *ILR Third Supplement* as ‘Koshi-no-beni’. Granted Japanese PBR as ‘Kosi-no-beni’ which is therefore the accepted spelling.)

**kossii IX(c/d)**

See note under *monadelphum*.

**'Kotuka' VII(-/c)**

Error for 'Kotuku'.

**'Kotuku' VII(-/c)**

Parentage: selection from Zealandia Group

S: L.B. Tuffery (c. 1967), N: L.B. Tuffery

Fls pure white, 200-250 mm wide.

(Published in *ILR* (1982) erroneously as 'Kotuka'.)

**'Kotuku' V(-/a)**

See *longiflorum* 'Kotuku'.

**'Kozetta' I(-/)**

Parentage unknown

R: M.F. Kireeva (1976)

Fls pale apricot, flushed with pink; spots brown. Fls 100-

120 mm wide. Stems 0.5-0.7 m, with 7-11 fls. July.

(Published in M.F. Kireeva, *Lilii*, 53 (2000).)

**var. *kraetzeri* IX(b-c/d)**

See *speciosum* var. *kraetzeri*.

**'K Krakatau' I(a/b)**

Parentage: up-facing Asiatic seedling × 'Connecticut Yankee'

R: F. Ewald (1973), G: F. Ewald (1977), N: G. & F. Ewald (1979), I: G. & F. Ewald (1986), REG: G. & F. Ewald (1988)
