Inside vivid reddish orange (30B); outside vivid yellowish orange (30C); spots few, dark red (187A), on basal half of each tepal; nectaries greyish orange; pollen vivid orange (28A). Fls 170 mm wide; tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 1.4 m, brown, hairy, with c.20 fls, and bulbils. Mid July.

(Published in Gesellschaft der Staudenfreunde bulb list, 1986.)

**'K Krakatit' I(b-c/c-d)**

Parentage: 'Hornback's Gold' × ('Tetra Tabasco' × 'Tetra Enchantment')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997),

REG: B. Mičulka (1997)

Inside deep orange-red, tepal-tips more orange; outside slightly beige; nectaries greyed olive, frosted white; filaments beige; pollen chocolate-brown; stigma black-purple. Fls 105 mm wide, semi-Turk's cap in form; tepals 90 × 47 mm, strongly recurved; pedicels 70 mm long, thick, brown-dotted. Lvs scattered, 90 × 18 mm, dark slightly glossy green. Stems 0.7 m, slightly spotted, black at base, with a medium length infl. Late June. Tetraploid.

**'K Krakonoš' I(a/b)**

Parentage: 'Hanka' × ('Target' × 'Endeavor')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003),

REG: B. Mičulka (2003)

Inside red fading into orange-red, throat apricot; outside with centre of tepals red-orange, midribs pale green-

yellow; brushmarks faintly mahogany-red, on half of each tepal; spots moderately numerous, large, brown-red, on two-fifths of each tepal; nectaries very white-felted; pollen cinnamon-brown; stigma pale beige. Fls 135 mm wide; tepals 80 × 40 mm, margins smooth, tips scarcely recurved; pedicels 70 mm long, thick, green, hairy. Lvs scattered, 180 × 12 mm, dull dark green. Stems 0.75 m, dark green, slightly dotted, with a short infl. Mid June.

**'Krasavka' I(b/-)**

Parentage: orange-flowered clone from Fiesta Group × *cernuum*

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls fuchsia-pink, striped cream in throat. Stems 1.7 m.

**'Krasnaia Chalma' I(c/-)**

Parentage unknown

Fls ruby-red.

(Published in M.F. Kireeva, *Lilii*, 38 (2000).)

**'Krasnaia Pyramida' I(b/-)**

Parentage unknown

R: M.F. Kireeva (1980), N: M.F. Kireeva

Fls red with spots. Stems 1.2 m. July.

(Included in *ILR Fourth Supplement* as 'Krasnaja Pyramida' which is an unaccepted spelling.)

**'Krasnaia Shapochka' I(b/-)**

Parentage: 'Zabava' × mixed pollen of 'Aelita' & 'Svetlana'

R: V.A. Volkov (c. 1982), N: V.A. Volkov

Fls blood-red with small spots. Stems 1.3 m, with bulbils. July.

(Included in *ILR Third Supplement* as 'Krasnaya Shapoczka' which is an unaccepted spelling. The seed parent is probably 'Svetlana' of Kireeva.)

**'Krasnaja Pyramida' I(b/-)**

Unaccepted spelling of 'Krasnaia Pyramida'.

**'Krasnaya Shapoczka' I(b/-)**

Unaccepted spelling of 'Krasnaia Shapochka'.

**'Krasnyi Plaphon' I(a/-)**

Parentage: 'Redstart' × 'Golden Wedding'

R: N.A. Miroshniczenko (c. 1975), N: N.A.

Miroshniczenko

Fls cherry-red with brown spots. Stems 0.6 m. June.

**'Krasnyi Zontik' I(a/b)**

Parentage: seedling 10-128 × 'Byam's Ruby'

R: M.F. Kireeva (1976), N: M.F. Kireeva

Fls deep crimson; spots absent; filaments pink; anthers pale brown. Fls 100-110 mm wide. Stems 0.5-0.8 m, with 9-26 fls. June.

(Published in M.F. Kireeva, *Lilii*, 54 (1984).)

**'Kräuselgold' I(b/-)**

Parentage unknown

R: H. Gerke (pre 1981), N: H. Gerke, REG: H. Gerke (1988)

Fls yellow. Tepal-margins ruffled. Stems 1.1 m. June to July.

(Published in German Lily Group sales list, 1981.)

**‘Kraznoznamenaiia’ I(b/-)**

Parentage: ‘Stroinaia’ × either *dauricum* or *Sestroretskaia* Group

R: V.A. Grot (1959), N: V.A. Grot

Fls scarlet, spotted. Stems 1.5 m. Very early.

(Included in *ILLR Second Supplement* as

‘Kraznoznamenajaja’ which is an unaccepted spelling.)

**‘Kraznoznamenajaja’ I(b/-)**

Unaccepted spelling of ‘Kraznoznamenaiia’.

**‘Kremona’ VI(b/a)**

Parentage unknown

R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B. Mičulka (1984)

Inside cream, tepal-edges darker, three-quarters of throat yellow; outside pink-beige; pollen soft brown; stigma green. Fls 140 mm wide; tepals 140 × 50 mm, margins ruffled, tips slightly recurved. Lvs 110 × 8 mm, dark green. Stems slender, 1.2 m, slightly violet-dotted. Early July.

**‘Krems’ VI(-/-)**

Parentage: orange-flowered seedling from (Emerald Group × *henryi*) × *henryi*

R: V. Strasser (1975), G: V. Strasser (1978), N: V. Strasser (1981), I: V. Strasser (1984), REG: V. Strasser (1986)

Inside strong orange (25A/B), tepal-tips strong orange (25A), throat green; outside orange. Fls 170 mm wide; tepals 110 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 18 mm, dark green. Stems 1.7 m, brown-green, with up to 45 fls. Late July.

**‘Kreolin’ I(a/c)**

Parentage unknown

R: H. Böhm (pre 1992), N: H. Böhm, REG: H. Böhm (1994)

Fls clear ochre-orange; spots absent. Lvs dark green. Stems 1 m. Mid July.

(Published in German Lily Group sales list, 1992.)

**‘Kreolka’ I(b/c-d)**

Parentage: (‘Advent’ × ‘Impact’) × (‘Korál’ × (‘Chinook’ × ‘Wattle Bird’))

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside salmon-apricot, each tepal pale orange in centre, paler at tip; outside paler, midribs red-brown; brushmarks mahogany, linear; spots dark brown-crimson, few, medium to large, on a sixth of each tepal; nectaries white-felted; pollen orange-brown; stigma dark brown. Fls 95 mm wide; tepals 75 × 42 mm, thick, tips moderately recurved; pedicels 70 mm long, spotted. Lvs scattered, 100 × 12 mm, glossy pale green. Stems 0.95 m, rigid, insignificantly dotted. Mid June.

**‘Krepolina’ VI(b/a-b)**

Parentage unknown

R: B. Mičulka (1989), N: B. Mičulka, REG: B. Mičulka (1989)

Inside lemon-yellow, tepal-tips fading, throat waxy yellow; outside pale yellow, midribs mahogany; pollen ochre-apricot; stigma green. Fls 120 mm wide, very broadly trumpet-shaped; tepals 100 × 50 mm, margins wavy, tips slightly recurved; pedicels slightly spotted. Lvs scattered, 60 × 8 mm, dark green. Stems 1.2 m, with moderate dark violet spots at the base, sparse spotting above. Mid July.

**‘Kresskönig’ Div. ?**

Parentage unknown

R: C. Wittneben (pre 1972), N: C. Wittneben

Fls orange, flushed with gold.

**‘Kreta’ I(a/b)**

Parentage: ‘Tetra Mountaineer’ × ‘Noris Fire’

R: V. Strasser (1979), G: V. Strasser (1982), N: V. Strasser (1990), I: V. Strasser (1991), REG: V. Strasser (1991)

Fls deep red (53A); spots dark violet, on two-thirds of each tepal; nectaries orange; pollen orange-red. Tepals 80 × 43 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 14 mm, dark green. Stems 0.75-0.9 m, dark green, with 9-13 fls. Mid June. Tetraploid.

**‘Kreutzbergstern’ I(a/-)**

Parentage unknown

R: C. Müller (pre 1986), N: C. Müller, REG: C. Müller (1988)

Fls yellowish, with many small spots; pollen wine-red. Stems 1.5 m. Mid July.

(Published in German Lily Group sales list, 1986.)

**‘Krevel’ I(a/b)**

Parentage: ‘Libuše’ × unknown

R: K. Braun, N: K. Braun, I: K. Braun (1996), REG: K. Braun (1997)

Inside red, tepal-centres orange, throat dark red; outside with orange midribs; spots fairly numerous, medium sized, brown, on half of each tepal; nectaries red-brown; pollen cinnamon; stigma red-orange. Fls 140 mm wide; tepals 70 × 33 mm, not recurved; pedicels 80 mm long, pale green. Lvs scattered, 63 × 10 mm, dull pale green. Stems 0.8 m, thick, green. Bulbs white. Early July.

**‘Krista’ I(a/b)**

Parentage: (‘Harmony’ × unknown) × (*dauricum* × unknown)

R: K. de Jong (1974), G: De Jong Lelies Holland B.V. (1976), N: De Jong Beheer B.V. (1980), I: De Jong Lelies Holland B.V. (1980), REG: De Jong Beheer B.V. (1988) Strong orange (25B) to strong orange-yellow (24B), throat strong orange; outside orange-yellow; spots dense, round, brown, mainly in the throat; nectaries violet-red; pollen reddish brown. Fls 150 mm wide; tepals 75 × 45 mm. Lvs scattered, 120 × 10 mm. Stems 1-1.2 m, green marked with brown, and with 8-12 fls (from 16-18 cm bulbs). June.

**‘Krustaps’ VI(-/a)**Parentage: *L. × aurelianense* × unknown

R: T. Gertsons, G: T. Gertsons, N: T. Gertsons (1983), I: T. Gertsons, REG: T. Gertsons (1987)

Inside reddish brown with a yellow stripe, throat green; outside dark reddish brown with a darker mid-zone; pollen yellow. Fls 190 mm wide, scented; tepals 155 × 65 mm, margins smooth. Lvs scattered, 110 × 18 mm, mid green. Stems 1 m, green.

(Published in *Dārzs un Drava* 7: 21 (1986).)**‘Kristián’ I(a-b/b)**

Parentage: (‘Sorrento’ × ‘Velehrad’) × unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside salmon-pink with brownish tinge, tepals darker at base, with pale apricot around nectaries; outside with brown midribs; spots pink-brown, large, fairly numerous, on half of each tepal; nectaries greyed olive-green, white-granulated; pollen orange; stigma dark old rose. Fls 130 mm wide; tepals 90 × 43 mm, thick, tips slightly recurved (outer tepals more so); pedicels 80 mm long, profusely brown-dotted, thick. Lvs scattered, 105 × 21 mm, dull yellowish green. Stems 0.95 m, profusely brown-dotted, thick. Late June.

**‘Kristine’s Charm’ IX(c/a)**See *leucanthum* var. *centifolium* ‘Kristine’s Charm’.**‘Krusts’ I(a/c-d)**

Parentage: ‘Nakts Tango’ × ‘Jumprava’

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)

Inside brilliant greenish yellow (6C), throat greenish; outside yellow with purple marbling; many, dense, small and large, dark red (59A) spots and marbling; nectaries brown; pollen dark orange. Fls 110 mm wide; tepals 85 × 40 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 105 × 10 mm, dark green. Stems 0.95 m, dark green with brown spots, and with c.6 fls. Early July. (Nomenclatural standard: colour print provided by registrant (WSY 0022985).)

**‘Kristýnka’ I(a/b)**

Parentage: Peters seedling 66-24-1 × ‘Connecticut King’

R: Šlechtitelaká Stanice Heřmanův Městec, N: Šlechtitelaká Stanice Heřmanův Městec, REG: Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside deep yellow, each tepal with an apricot centre extending over half of tepal; spots absent; pollen absent. Fls 110-140 mm wide, with slightly overlapping tepals; pedicels 50-80 mm long. Lvs 64-90 × 13-20 mm, mid green. Stems 0.85 m, green, with c.10 fls. Mid June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1992.)**‘Kronos’ VII(c/c)**See *L. × parkmanii* ‘Kronos’.**‘Krushevnitsa’ I(b/-)**

Parentage: (‘Rubinovaia’ × mixed pollen) × ‘Rosebelle’

R: M.F. Kireeva (1980), N: M.F. Kireeva

Fls pink, spotted. Stems 1.2 m, with bulbils. July.

**‘Krustpils’ VI(b-c/c-d)**

Parentage unknown

Fls white, each tepal with an orange flame that breaks at the edges into spots; pollen orange-red. Fls 120-130 mm wide. Stems up to 1.3 m. July.

(Published in M.F. Kireeva, *Lilii*, 89 (2000).)**‘Krysia’ VIII(b/b)**

Parentage: unknown × Longistar Group

R: J. Kapias (1995), G: J. Kapias (1997), N: J. Kapias (2001), I: J. Kapias (2001), REG: J. Kapias (2002)

Inside strong orange (25B), throat strong yellow-green (144B); outside moderate orange (168C); spots dark red (183B) on basal half of each tepal; nectaries strong orange (25B); pollen dark greyish reddish brown (200A); stigma light orange-yellow (22D). Fls 220 mm wide; tepals 140 × 40-48 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 30 mm. Stems 1.3 m (under glass), greenish brown, with c.15 fls. Mid July. Reported to be polyploid.

(A *longiflorum*/Asiatic (LA) hybrid. Nomenclatural standard: colour print provided by registrant (WSY 0031317).)**‘Kseniia’ I(a/b)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova &amp; V.V. Martynova (1994)

Fls carmine-pink. Fls c.150 mm wide; tepal-margins smooth or slightly ruffled, tips scarcely recurved. Stems 0.9-1 m, with 7-9 fls. July.

(Published in M.F. Kireeva, *Lilii*, 46 (2000).)**‘Kublai Khan’ I(c/-)**Parentage: *lancifolium* ‘Splendens’ × dark red-flowered *wilsonii*

R: L.B. Tuffery (c. 1958), N: L.B. Tuffery

Fls deep scarlet-crimson.

**‘Kufstein’ VI(-/a)**

Parentage: (‘Rosenfinger’ × unknown) × ‘Glockenturm’

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1983), REG: V. Strasser (1992)

Fls pinkish white, tepal-tips pink, throat yellow. Tepals 130 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 14 mm. Stems 1.4 m, green, with up to 21 fls. Mid July to mid Aug.

**‘Kulshan’ IV(c/d)**

Parentage: selection from Bellingham Group

R: D. Griffiths (c. 1924), N: D. Griffiths

Fls deep cadmium-orange, uniformly spotted all over with reddish maroon spots and splashed red at tepal-tips; anthers purplish red; pollen orange. Tepals c.80 mm long; pedicels ascending. Lvs whorled in upper part of stem, scattered in lower part, Stems 1.9-2.5 m, brown-mottled, with 10-20 fls. July.

(Published in *USDA Circular* no. 299: 10 (1933). The parents are thought to be *pardalinum* and *humboldtii* var. *ocellatum*.)

**‘Kupava’ IX(-/c)**

See *henryi* ‘Kupava’.

**‘Kupferturm’ Div. ?**

Given as a parent of ‘Granatglanz’. No further details.

**‘Kurojuku’ V(-/a)**

See *longiflorum* ‘Kurojuku’.

**‘Kurskij Solovej’ I(a/-)**

Parentage: ‘Nariadnaia’ × ‘Tarantella’

R: G.K. Shlomin (1987), G: G.K. Shlomin (1990), N: G.K. Shlomin (1990), I: G.K. Shlomin (1993), REG: G.K. Shlomin (1995)

Inside orange apricot; outside light orange; spots large, dark brown, on basal third of each tepal; nectaries dark orange; pollen dark brown. Fls 145 mm wide; tepals 75 × 32 mm, margins strongly ruffled, tips slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 0.7 m, dark green, with c.8 fls and with bulbils. Mid July.

**‘Kusuda’ IX(a/b)**

See *dauricum* ‘Kusuda’.

**‘Kvaker’ I(a/c)**

Parentage: ‘Ranger’ × ‘Amorette’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002), REG: B. Mičulka (2002)

Inside deep crimson-red, tepal-centres and throat apricot; outside with green midribs; spots very numerous, large, dark chocolate-brown, on three-fifths of each tepal; papillae in the throat; nectaries white-frosted; stigma tinted violet. Fls 140 mm wide; tepals 75 × 42 mm, moderately recurved; pedicels 100 mm long, thick, pale brown. Lvs scattered, 105 × 16 mm. Stems 1 m, dark green, with a short, umbellate infl. Late June.

**‘Kvarteto’ VI(b-c/b)**

Parentage unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)

Inside white, outer tepals pink-veined, centre of fl. with narrow pink rays, throat lemon-yellow; outside pink; spots absent; nectaries green; pollen red-brown; stigma brown. Fls 130 mm wide; tepals thick, 105 × 42 mm, somewhat recurved; pedicels 75 mm, brown-dotted. Lvs scattered, 100 × 11 mm, dull deep green, dense. Stems 1.15 m, dotted red-brown. Early July.

**‘Kvas’ I(a/b)**

Misspelling of ‘Kvaš’.

**‘Kvaš’ I(a/b)**

Parentage: ‘Letkis’ × ‘Advent’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1996), REG: B. Mičulka (1996)

Inside pale peach-coloured, throat tinted olive-green;

outside whiter, midribs slightly brownish green; spots sparse, small, dark crimson on a third of each tepal; nectaries olive-green, white-granulated; pollen orange-brown; stigma brown-crimson. Fls 115 mm wide; tepals 70 × 32 mm, slightly recurved; pedicels 55 mm long, spotted very dark brown. Lvs scattered, 90 × 9 mm, mid green. Stems 0.85 m, slightly brown-spotted. Early July. (Published in *ILR Fifteenth Supplement* as ‘Kvas’ which is a misspelling.)

**‘Kvazar’ I(a/c)**

Parentage: unknown × (‘Mánes’ × ‘Premier’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1996), REG: B. Mičulka (1996)

Inside pale orange-red, throat pale, tinted beige; outside pale orange-red, midribs beige; spots few, small, dark brown-pink on a quarter of each tepal; nectaries dark green, white-granulated; pollen orange-brown; stigma pink. Fls 145 mm wide; tepals 80 × 40 mm, inner slightly recurved, outer strongly recurved; pedicels 70 mm long. Lvs scattered, 80 × 10 mm, slightly glossy yellowish green. Stems 0.75 m, green, brownish at base. Mid July.

**‘Květa’ I(a-b/b)**

Parentage: ‘Salmonstar’ × (‘Parfait’ × ‘Wattle Bird’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1995), REG: B. Mičulka (1995)

Inside pale apricot, tinted beige, throat darker, tepal-tips tinted pale salmon; outside pale apricot-beige, midribs brown-red, slightly hairy; small, fairly numerous, dark brown spots and short dashes on a sixth of each tepal; nectaries olive-green; pollen brown-orange; stigma pale red. Fls 125 mm wide; tepals 90 × 33 mm, margins very slightly ruffled, tips moderately recurved; pedicels 80 mm long, strongly spotted red-brown. Lvs scattered, 70 × 8 mm, dark green, twisted. Stems 0.7 m, slightly brown-spotted. Late June.

**‘Kvinde’ VI(b/a-b)**

Parentage: ((Palmer seedling 582812 × ‘Gold Eagle’) × ‘Mimosa Star’) × ‘Kankán’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2001), REG: B. Mičulka (2001)

Inside apricot, shaded beige, throat deeper, tepal-tips paler; outside with pale red-brown midribs; spots absent; nectaries yellow-green; pollen dark brown; stigma brownish. Fls 150 mm wide, semi-trumpet-shaped; tepals 105 × 43 mm, margins slightly wavy, tips slightly recurved pedicels 40 mm long, green. Lvs scattered, 95 × 12 mm, dull mid green. Stems 1.15 m, green, slightly speckled at base. Mid July.

**‘Kvintán’ I(a-b/b)**

Parentage: (((‘Quinella’ × unknown) × (‘Juno’ × unknown)) × ‘Majáles’) × (‘Windahloo’ × ‘Endeavor’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002), REG: B. Mičulka (2002)

Inside lemon-yellow, tepal-tips paler and tinted pale red; outside tinged pinkish, midribs yellow-green; small brushmarks, like diffused mahogany blotches, and numerous, large, dark brown-red spots, on two-thirds

of each tepal; nectaries green, white-granulated; pollen orange-brown; stigma pinkish beige. Fls 105 mm wide; tepals 65 × 37 mm, not recurved; pedicels 60 mm long, strongly spotted. Lvs scattered, 80 × 8 mm, dark green. Stems 0.45 m, thick, slightly spotted and with a moderately long infl. Early June.

**‘Kwartet’ I(b/b)**

Parentage: ‘Gran Paradiso’ × tetraploid seedling  
R: D. Thomas, G: J. Bodalski (1987), N: J. Bodalski (1994), I: J. Bodalski (1994), REG: J. Bodalski (1994)  
Inside vivid orange (28A); outside strong reddish orange (31B); spots absent; nectaries orange; pollen vivid orange (28A). Tepals 90 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 15 mm, dark green. Stems 1 m, dark green, stiff, with c.22 fls. Early July.

**‘Kylie’ VII(-/-)**

Parentage: ‘Miss Bowen’ × Bridal Bouquet Group  
R: V.E. Bowen (pre 1996), N: V.E. Bowen  
Inside white, with a sulphur-yellow ray on the basal half of each tepal above the green nectary, continuing apically as a purplish pink ray for a short distance, some purplish pink suffusion on outer tepal-edges; spots small, scattered, round, on basal half of each tepal; pollen orange; stigma purplish. Tepal-margins strongly ruffled.  
(Named for the raiser’s granddaughter.)

**‘Kyokko’ I(a/-)**

Parentage: ‘Enchantment’ × *L. × maculatum*  
R: S. Fujishima (c. 1959), N: S. Fujishima  
Fls red.

**‘Kyoto’ VII(b/d)**

Parentage: (*L. × parkmanii* Little Rascal Group × ‘Star Gazer’) × ‘Freedom’  
R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1984), N: H.J.A. Rooyakkers (1989), I: H.J.A. Rooyakkers (1989), REG: H.J.A. Rooyakkers (1992)  
Inside and outside yellowish white (155B); midribs tinged with light yellow-green (150D); spots many, dark red (187C) on basal part of each tepal; nectaries dark purple (79A); pollen strong orange (25A). Fls 265 mm wide; tepals 130 × 62 mm, margins ruffled, tips strongly recurved. Lvs scattered, 170 × 45 mm, mid green. Stems 0.9 m, mid green, with c.5 fls. July.

**‘Kyoto’ I(a/c)**

Parentage unknown  
R: A. Weinreich (pre 1992), N: A. Weinreich  
Inside pink, tepals with very pale edges and a narrow, pale flash above nectary; dark spots on basal third of each tepal. Tepals slightly reflexed.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Kytice’ I(b-c/d)**

Parentage: Hallmark Group × mixed pollen of ‘Nutmegger’ & ‘Abendglühen’  
R: B. Mičulka (c. 1982), N: B. Mičulka, REG: B.

Mičulka (1984)

Inside butter-white, throat greenish white; outside with light green-pink midribs; spots numerous, medium sized, violet, on half of fl.; pollen brown. Fls 95 mm wide; tepals 80 × 30 mm, margins curled, tips strongly recurved. Lvs 70 × 8 mm, yellowish green. Stems 1.1 m. Late June.

**‘La Boheme’ I(c/-)**

Parentage: *lancifolium* × (*bulbiferum* var. *croceum* × *L. × hollandicum*)  
R: J. Koeman (c. 1965), N: J. Koeman, REG: (1969)  
Fls vivid yellow (14B) with purple-brown spots; anthers brown.  
(Published in *LYB* 33: 255 (1970).)

**‘La Center’ I(a/b)**

Parentage: ‘Petit Urk’ × white-flowered seedling  
R: Mak-Leek Inc. (1990), G: Mak-Leek Inc. (1992), N: Mak-Leek Inc. (1996), REG: Mak-Leek Inc. (1997)  
Inside vivid yellow (12A) over most of each tepal and at edges towards the base, throat vivid reddish orange (42A); outside greyish red (178A), midribs 178A flamed with vivid yellow (15B); spots absent; a vivid reddish orange (42A) brushmark extending over basal third of each tepal; nectaries vivid yellow (12A); pollen vivid orange-yellow (23A); stigma dark red (187A). Fls 155 mm wide; tepals 80 × 30-45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 20 mm, strong yellow-green (143A). Stems 0.85-1.2 m, close to light yellow-green (144D) with moderate reddish brown (175A) stripes, and with 6-14 fls. Late June to early July.

**‘Lachsarelian’ VI(b/a)**

Parentage unknown  
R: H. Böhm (pre 1985)  
Fls dark salmon-pink.

**‘Lachsglanz’ I(a/-)**

Parentage: (*lancifolium* × *L. × maculatum*) × ‘Enchantment’  
R: L. Denkwitz (pre 1980), N: L. Denkwitz, REG: L. Denkwitz (1988)  
Fls vivid salmon-orange; each tepal with a golden yellow blotch and a few spots. Stems 1.2 m, with up to 30 fls. July to Aug.  
(Published in German Lily Group sales list, 1981.)

**‘Lachs-lady’ I(a/-)**

Parentage unknown  
R: J. Klein (pre 1985), N: J. Klein, REG: J. Klein (1988)  
Fls salmon. Stems 1 m. Early July.  
(Published as ‘Lachs-Lady’ in *ILR Eighth Supplement*, but (under ICNCP, 2004: Art. 19.3 - word following a hyphen does not have initial capital letter) the epithet is now changed to ‘Lachs-lady’.)

**‘Lachsrispe’ I(a/-)**

Parentage unknown  
R: J. Klein (pre 1986), N: J. Klein, REG: J. Klein (1988)

Fls salmon. Stems 1 m, with many fls. Early July.  
(Published in German Lily Group sales list, 1986.)

**‘Lachsstern’ I(a/-)**

Parentage unknown  
R: J. Klein (pre 1985), N: J. Klein, REG: J. Klein (1988)  
Fls light salmon; pollen brown. Stems 0.7-1 m, with up to 15 fls. Mid to late July.  
Syn.: ‘Flamingo’.  
(Published in German Lily Group sales list, 1985.)

**‘Lacorno’ VIII(a-b/b)**

Parentage: seedling LA OR 93-3 × seedling Aj 94012  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside strong orange (25A/B), tepal-edges and midveins strong orange (25A), throat paler; outside light orange-yellow (23C/24C) shading to strong orange (25A) towards tepal-edges, outer tepals tipped strong yellow-green (144A), the base flushed with reddish brown; spots and papillae absent; nectaries light orange-yellow (25D), hairy; pollen strong brown (172A); stigma vivid orange (28B), with a darker rim. Fls 180 mm wide; tepals 110 × 40-55 mm, margins smooth, tips not or scarcely recurved. Lvs scattered, 180 × 20 mm. Stems 1.3 m, green with a little darker marking, and with 6-11 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Lada’ I(b/-)**

Parentage: ‘Svetlana’ × ‘Iolanta’  
R: B.P. Guzhavin, N: B.P. Guzhavin (1983)  
Fls cream, with purplish shading in throat; spots large, black. Stems 1 m, with bulbils.  
(The seed parent is probably ‘Svetlana’ of Kireeva.)

**‘Ladaho’ VI(b/a)**

Parentage: (*regale* × unknown) × unknown  
R: J. Dudek, N: J. Dudek, I: J. Dudek (2001), REG: J. Dudek (2001)  
Inside creamy white, throat orange-yellow; outside creamy, midribs pink; spots absent; nectaries green. Fls 120 mm wide; tepals 120 × 48 mm, margins wavy, tips recurved; pedicels 90 mm long, brown-spotted. Lvs scattered, 72 × 8 mm, dull green. Stems 1.45 m, spotted with purple and with an umbellate infl. Mid July.

**Ladies’ Choice Group I(b/-)**

Parentage: ‘Sunrise’ × ‘Winesap’  
R: J.F. McRae (1976), G: J.F. McRae (1978), N: Columbia-Platte Lilies (1983), I: Columbia-Platte Lilies (1983), REG: Columbia-Platte Lilies (1984)  
Inside cream to white, tepal-tips vivid purplish red (57D) to strong purplish red (59D), throat cream to light pink; outside green to cream; spots small, deep magenta, on basal half of tepals; nectaries green; pollen moderate red (179A). Tepals 50-80 × 25-30 mm, margins not or very slightly ruffled, tips slightly recurved. Lvs scattered, 100-150 × 20-30 mm, mid to dark green. Stems 0.3-0.5 m, green, with a dark plum overlay in cool weather, and with

4-7 fls. June.  
(Published in *Rex Lilies Cat.*, 1983. Included in *ILR Third Supplement* as Ladies’ Choice grex.)

**‘Ladrofino’ I(a/-)**

Parentage: ‘Lady Savoy’ × ‘Lavender Dream’  
R: Gebr. N. & B. Laan & Zn (1984), G: Gebr. N. & B. Laan & Zn (1986), N: Gebr. N. & B. Laan & Zn (1988), I: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1996)  
Inside moderate yellowish pink/moderate pink (37C/49B), tepal-edges suffused with light orange-yellow (22B), midveins strong red (53B) at base; outside light yellowish pink (37D), tepal-tips suffused with strong orange-yellow (22A); spots and papillae present; nectaries green; pollen reddish brown; stigma violet. Fls 180 mm wide; tepals 100 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 120 × 20 mm, mid green. Stems 1.4 m, green with darker markings, and with c.10 fls. Late.

**‘Lady Alice’ VI(-/d)**

Parentage unknown  
R: De Jong Lelies (c. 1971), N: De Jong Lelies, REG: ICRA (1998)  
Inside apricot-orange, tepal-tips fading to white; outside pale apricot, midribs yellowish; spots scarce, small, cinnamon; papillae in the throat; nectaries green. Tepals 90 × 34 mm, strongly recurved. Lvs 125 × 20 mm, glossy green. Stems 1.1 m, dotted dark violet-brown. July.

**‘Lady American’ I(a/-)**

Parentage: ‘Bright Beauty’ × ‘Gold Lode’  
R: N. Laan (1983), G: Gebr. N. & B. Laan & Zn (1985), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1987), REG: Gebr. N. & B. Laan & Zn (1988)  
Inside brilliant to light yellow (12B/C), tepal-tips pinkish yellow; outside light yellow (10B), with orange basal markings, midribs broad, yellowish pink and brighter yellow; spots dark brown in the middle of each tepal; pollen strong orange (168B). Fls 190 mm wide; tepals 90 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 170 × 30 mm, pale green. Stems 1.5 m, pale green, with c.8-9 fls. June to July.

**‘Lady Ann’ VI(b/b-c)**

Parentage: (*henryi* × unknown) × (*leucanthum* var. *centifolium* × unknown)  
R: Gebr. N. & B. Laan & Zn (1974), G: Gebr. N. & B. Laan & Zn (1976), N: Gebr. N. & B. Laan & Zn (1982), I: Gebr. N. & B. Laan & Zn (1982), REG: Gebr. N. & B. Laan & Zn (1982)  
Fls pale greenish yellow (10D), throat strong orange (25B), outside greenish yellow; spots absent; nectaries dark green; pollen brown. Fls 300 mm wide; tepals 120 × 70 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 7 mm, pale green. Stems 1.5 m, dark green, with 8-15 fls. Late July.  
(Published in *Bloembollencultuur*, June 1982.)

**'Ladybird' I(c/-)**

Parentage: 'Petra' × 'Pygmalion'

R: G.W. Darby (c. 1963), N: G.W. Darby

Fls fire-red, with heavy spots. Tepals half reflexed.

**'Lady Bowes Lyon' I(c/d)**Parentage: ('Maxwill' × 'Edna Kean') F<sub>3</sub> × 'Dark Princess'

R: G.W. Darby (c. 1956), N: G.W. Darby

PC 1959, AM 1960

Fls rich red; spots black. Stems up to 1.5 m.

(Published in *LYB* 23: 174 (1960).)**'Lady Byng' IX(c/d)**See *dauidii* 'Lady Byng'.**'Lady Citron' I(a/-)**

Parentage: Laan yellow-flowered hybrid × Yellow Blaze Group

R: Gebr. N. &amp; B. Laan &amp; Zn (1985), G: Gebr. N. &amp; B. Laan &amp; Zn (1987), N: Gebr. N. &amp; B. Laan &amp; Zn (1989), I: Gebr. N. &amp; B. Laan &amp; Zn (1990), REG: Gebr. N. &amp; B. Laan &amp; Zn (1991)

Inside light greenish yellow (7D), throat strong yellow-green (144C); outside light greenish yellow (6D/8B), 'tube' suffused with moderate orange (173C); spots dark red (187A) on basal half of each tepal; nectaries moderate orange-yellow (165C); pollen brownish orange (164A). Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 155 × 12 mm, mid green. Stems 1 m, green with darker markings, and with c.11 fls. July (under glass).

**'Lady Cora' I(b-c/c-d)**Parentage: *lanceifolium* var. *flaviflorum* × 'Grand Slam'

R: Bischoff Tulleken Lelies B.V. (1968), G: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (c. 1977), I: Bischoff Tulleken Lelies B.V., REG: ICRA (1998)

Fls clear red, with dark spots on the basal half of each tepal. Tepal-tips recurved. Lvs dark green. Stems 0.9 m, dark, with c.8 fls, and bulbils. June.

(Production ceased in 1987.)

**'Lady Dawn' I(b/b)**Parentage: (*cernuum* × unknown) × unknown

R: J. Barber, N: A.J. Porter (1974), REG: A.J. Porter (1975)

Bicolour: throat pale greenish yellow (10D), tepal-tips and outside deep red (185A); spots present; nectaries deep red (185A); pollen strong reddish orange (169A). Tepal-margins smooth. Lvs scattered, narrow, moderate olive-green (146A). Stems 1 m. July.

(Published in *Lilies and other Liliaceae*, 1975: 93.)**'Lady Di' VIII(b-c/b)**Parentage: 'Casa Blanca' × ('Starburst Sensation' × (*L.* × *kewense* 'White Henryi' × 'Dominique'))

R: R.H. Bazett (1997), G: R.H. Bazett (1999), N: R.H. Bazett (2001), I: B &amp; D Lilies, REG: R.H. Bazett (2001)

Inside pale purplish pink (65C/D), shading to white at tepal-tips and margins, throat light purplish pink

(65B); outside with pink inner surface showing through, midribs creamy white with a touch of green towards the base; spots absent or very few, insignificant, deep pink; nectaries pale yellow-green; pollen strong orange (168B); stigma purple-green. Fls 160 mm wide, slightly scented; tepals 130 × 55 mm, margins slightly ruffled, tips slightly reflexed. Lvs scattered, 260 × 37 mm. Strong stems to 1.8 m, pale grey-green, with up to 23 fls including secondaries, in a pyramidal infl. Mid July. (An Orienpet (OT) lily. Nomenclatural standard: colour print provided by registrant (WSY 0030917).)

**'Lady Eva Price' I(-/d)**Parentage: *dauidii* var. *unicolor* × 'Apricot Orange'

R: W.A. Constable Ltd, N: W.A. Constable Ltd

Fls rich orange; spots absent. Lvs dark green.

(Published in *Constable Cat.*, 1951.)**'Lady Fair' I(a/-)**

Parentage: 'Connecticut Lass' × 'Yellow Blaze'

R: D.M. Stone &amp; F.H. Payne (c. 1966), N: D.M. Stone &amp; F.H. Payne

Fls vivid yellow (13A), with large, neatly arranged, brown spots on basal third of each tepal. Pollen absent. Tepal-margins smooth. Stems 1.5 m. July.

(Published in *ILR* (1969).)**'Lady Freyberg' VI(-/-)**Parentage: (*L.* × *sultianense* 'Sulphur Queen' × unknown) × (*L.* × *urelianense* × unknown)

R: A.C. McKillop (c. 1955), N: A.C. McKillop

Fls deep apricot; spots absent. Tepals tend to twist with age. Stems to 3 m.

(Published in *LYB* 20: 70 (1957).)**'Lady in Red' I(a/-)**

Parentage: 'Lady American' × 'Roter Cardinal'

R: Gebr. N. &amp; B. Laan &amp; Zn (1986), G: Gebr. N. &amp; B. Laan &amp; Zn (1988), N: Gebr. N. &amp; B. Laan &amp; Zn (1992), I: Gebr. N. &amp; B. Laan &amp; Zn (1992), REG: Gebr. N. &amp; B. Laan &amp; Zn (1993)

Inside strong orange (24A), striped strong red (47B) to deep yellowish pink (47C), fading towards tepal-tips; outside vivid to strong reddish orange (42A/B), tepals with a narrow edge of strong orange (24A), midribs moderate red (180B); spots absent; nectaries moderate red (180B); pollen strong brown (172A); stigma moderate orange (170C). Fls 190 mm wide; tepals 90 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 13 mm, dark green. Stems 1 m, mid green with darker markings.

**'Lady Jane' I(b/-)**

Parentage: ('Gwen Mills' × unknown) × mixed pollen

R: J. Aldred (c. 1966), N: J. Aldred, REG: J. Aldred (1971)

Fls grading from light yellow (10C) at tepal-tips to vivid yellow (9A) in throat; spots sparse. Stems 0.4-0.8 m.

(Published in *Lilies and other Liliaceae*, 1973: 113.)

**'Ladykiller' I(a/b)**

Parentage: (*lancifolium* × unknown) × 'Harmony'  
 R: Gebr. N. & B. Laan & Zn (pre 1974), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1974)  
 Fls vivid orange (28B); spots blood-red; anthers pale brown. Stems 0.9-1.2 m, with 12-16 fls (from 14-16 cm bulbs), and with bulbils. Early July.  
 (Published in *Lilies and other Liliaceae*, 1975: 93.)

**'Lady Limeheart' II(-/)**

Parentage unknown  
 R: J.C. Ericksen (pre 1984), G: D. Dale (1991), N: D. Dale (1993), I: Parkland Perennials, REG: D. Dale (1993)  
 Inside white, throat lime-green; outside white, midribs mauve-pink; some tiny, maroon spots on tepal-margins, and sparse, very dark maroon spots on basal half of each tepal; nectaries pale green; pollen rust-coloured. Fls 65 mm wide; tepals 37 × 22 mm, margins smooth, tips slightly recurved. Lvs whorled, 170 × 30 mm, mid green. Stems 1.4 m, light green, mottled dark green, with 36-42 fls; buds hairy, becoming rose-pink for 10 days before opening. Early July.

**'Lady Lou' I(c/d)**

Parentage: *L. × hollandicum* × *davidii* var. *willmottiae*  
 R: F.L. Skinner, N: F.L. Skinner  
 Fls deep orange, finely spotted at base.  
 (Published in *Skinner Nursery Cat.*, 1954.)

**'Lady Love' VII(-/c)**

Parentage unknown  
 R: L. Woodriff (1958), G: H.J. & R.L. Strahm (1962), N: R.L. Strahm (1970), I: H.J. & R.L. Strahm, REG: H.J. & R.L. Strahm (1984)  
 Inside white turning to pink or lavender, tepal-tips white; outside white; spots pink, small, few. Fls 175 mm wide; tepals 75 × 45 mm, not recurved. Lvs scattered. Stems 1 m. July to Aug.  
 (Included in *ILR* (1982) with almost no information; given a classification in *ILR Third Supplement*. Published in *Rex Bulb Farms Cat.*, 1971.)

**'Lady Marion' VII(c/d)**

Parentage: 'Tetra Black Beauty' × *L. × parkmanii* 'Tetra Journey'  
 R: LeV. Freimann (1981), G: LeV. Freimann (1983), N: LeV. Freimann (1984), REG: LeV. Freimann (1988)  
 Inside strong purplish red (54A), tepal-tips white, throat green; outside strong purplish red (54A); spots deep pink on whole of each tepal; nectaries grey-green; pollen yellow. Tepals 150 × 65 mm, margins smooth, tips slightly recurved. Lvs scattered, 165 × 65 mm, mid green. Stems 1.5-1.9 m, brownish black, with 15-20 fls. Late Aug. to early Sept.

**'Lady Melva' VI(b-c/a)**

Parentage unknown  
 R: unknown, G: M. Heinrich (1981), N: M. Heinrich (1986), I: M. Heinrich (1986), REG: M. Heinrich (1986)

Fls brilliant yellow (7A), midribs with a slight maroon tinge; spots absent; nectaries light yellow-green (145C); pollen vivid orange-yellow (23A). Tepals 130 × 50 mm, margins smooth, tips recurved. Lvs scattered, 170 × 10 mm, dark green. Stems 1.5-2 m, mid green flecked maroon, with 15-20 fls. Jan. (Australia).  
 (Derived from mixed Australian Lily Society seed.)

**'Lady Morvyth' I(a/-)**

Parentage: *bulbiferum* var. *croceum* × *L. × hollandicum*  
 Fls orange-red. Tepals broad.  
 (Published in *Constable Cat.*, 1944.)

**'Lady Pelly' I(a/b)**

See *L. × maculatum* 'Lady Pelly'.

**'Lady Pure Yellow' I(a/-)**

Parentage: 'Dreamland' × 'Lavender Dream'  
 R: Gebr. N. & B. Laan & Zn (1985), G: Gebr. N. & B. Laan & Zn (1987), N: Gebr. N. & B. Laan & Zn (1989), I: Gebr. N. & B. Laan & Zn (1990), REG: Gebr. N. & B. Laan & Zn (1991)  
 Inside vivid yellow (17B/C), throat flushed green-yellow; outside vivid yellow (17C) suffused with brilliant yellow (12B) along midribs and strong yellow-green (145A) at the base; spots absent; nectaries spotted strong red (53B); pollen vivid orange-yellow (21A). Fls 165 mm wide; tepals 80 × 52 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 13 mm, mid green. Stems 0.75 m, green with some darker markings. June (under glass).

**'Lady Rhea' I(a/b)**

Parentage: 'Geneve' × mixed pollen of 'Abu Hassan' & 'Longida'  
 R: K. Braun, N: K. Braun, I: K. Braun (1996), REG: K. Braun (1998)  
 Inside white, throat greenish; outside white, midribs creamy; spots moderate in number, small, dark, on two-thirds of each tepal; nectaries green; pollen brown-orange. Fls 138 mm wide; tepals 80 × 34 mm, slightly recurved; pedicels 70 mm long, green. Lvs scattered, 90 × 14 mm, glossy mid green. Stems 0.85 m, green. Bulbs white. Late June.

**'Lady Rosa' I(a/-)**

Parentage: pink-flowered hybrid × 'Passat'  
 R: Gebr. N. & B. Laan & Zn (1981), G: Gebr. N. & B. Laan & Zn (1983), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1990), REG: Gebr. N. & B. Laan & Zn (1991)  
 Inside strong pink (50C), midveins light orange-yellow (16B) on basal half of each tepal, throat moderate purplish red (64A); outside strong purplish red (59D) suffused with pale greenish yellow (2D); spots dark red (187A) on basal half of each tepal; nectaries dark red (187A); pollen moderate reddish orange (171A). Fls 170 mm wide; tepals 90 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 13 mm, mid green. Stems 0.9 m, with dark markings, and with c.8 fls. June (under glass).

**'Lady Savoy' I(a/-)**

Parentage: 'Pink Shower' × 'Lavender Dream'

R: Gebr. N. & B. Laan & Zn (1982), G: Gebr. N. & B. Laan & Zn (1984), N: Gebr. N. & B. Laan & Zn (1986), I: Gebr. N. & B. Laan & Zn (1987), REG: Gebr. N. & B. Laan & Zn (1989)

Inside moderate yellowish pink (38B), throat flamed deep purplish pink (54B); outside moderate pink (51D), midribs light greenish yellow (3D); spots dark red; pollen dark purple (79A). Fls 205 mm wide; tepals 100 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 30 mm, mid green. Stems 1.2 m, green, with c.8 fls.

(A note in *ILR Eleventh Supplement* said that the epithet should be spelt 'Lady Savoye'. However, in 1990 Dutch PBR (LEL 553) were granted under the epithet 'Lady Savoy', so the spelling of the epithet must revert to the original epithet as registered (ICNCP, 2004: Art. 24.4).)

**'Lady Savoye' I(a/-)**

See note under 'Lady Savoy'.

**'Lady Trim' IX(b/c)**

See *auratum* 'Lady Trim'.

**'Lady Willemse' I(a/b)**

Parentage unknown

R: R.J. Griesbach, N: Lily Company B.V. (2004), REG: Lily Company B.V. (2004)

Inside vivid reddish orange (30A), each tepal with a large, dark greyish purple/dark red (202A/187A) flame; outside strong reddish orange (31A), tepal-margins vivid reddish orange (32A); spots few, dark greyish purple/dark red (202A/187A); papillae vivid reddish orange (30A); nectaries strong yellow-green (143A); pollen dark reddish orange (173A); stigma strong reddish orange (31A). Fls 120 mm wide; tepals 55 × 16-25 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 20 mm, dark green. Stems 0.65-0.7 m, green with darker markings, and with c.5 fls.

**'Laetitia' I(b/b)**

Parentage unknown

R: A. Weinreich (pre 1992), N: A. Weinreich

Inside yellow with a few reddish spots on basal third of each tepal; pollen orange. Tepal-margins slightly ruffled.

**'La Fleurie' VII(-/a)**

Parentage: 'Barbaresco' × seedling 89-13

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1996), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1997)

Inside dark red (59A) and deep purplish red (59B), midveins moderate purplish red (59C) with strong purplish red (60B) stripes; outside moderate purplish red (64A), tepals narrowly edged dark red (59A), strong yellow-green (144C) at base, midribs yellowish white (155B) with a reddish suffusion at top; spots greyish brown (166A) in the throat; papillae absent; nectaries strong yellow-green (144B), surrounded by a greenish

white (155C) rim; stigma dark red (187A); pollen a little brighter than strong orange (26A). Fls 220 mm wide; tepals 120 × 45-65 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 25 mm, mid green. Stems 1 m, green, with slight darker markings and few fls. Syn.: 'Fleuralia'.

**'Lagio' I(a/b)**

Parentage: seedling W 481 × 'Sancerre'

R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside pale yellow-green (4D), the apical part of each tepal yellowish white (155D) in the centre, midveins and throat strong yellow-green (144B); outside yellowish white (155D), outer tepals and midribs suffused with brilliant yellow-green (150C); spots dark red (187A) in the throat on inner tepals only; nectaries dark red (187A/B); pollen brownish orange (172C). Fls 190 mm wide; tepals 90 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, mid green. Stems 1-1.1 m, with 5-7 fls (from 14-16 cm bulbs).

**'Lagor' I(a-b/-)**

Parentage: seedling 89-68-10 × unknown

R: World Flower B.V. (1992), G: World Flower B.V. (1994), N: World Flower B.V. (2000), I: World Flower B.V. (2000), REG: World Flower B.V. (2000)

Inside strong orange (24A), tepal-tips vivid orange-yellow (23A); outside similarly coloured; spots few; some papillae present; nectaries orange; pollen and stigma red-orange. Fls 130 mm wide; tepals 80 × 45 mm, margins ruffled, tips recurved. Lvs scattered, 130 × 20 mm, green. Stems 1.1 m, green with dark spots and stripes, and with c.7 fls. Early.

**'Laguna' VII(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Trior Lelie B.V., G: Trior Lelie B.V., N: Trior Lelie B.V. (1996), I: Trior Lelie B.V. (1998), REG: Trior Lelie B.V. (1997)

Inside yellowish white (155D), midveins pale yellow-green (155A); outside yellowish white (155D), tepal-tips strong yellow-green (143A), midribs lighter than light yellow-green (150D); spots yellowish white (155D) on more than half of each tepal; papillae yellowish white (155D) in the throat; nectaries strong yellow-green (145A); pollen strong orange (25A); stigma darker than dark red (187A). Fls 215 mm wide; tepals 115-125 × 55-65 mm, margins slightly ruffled, tips recurved. Lvs scattered, 210 × 40 mm, mid green. Stems 1.4 m, light green, with c.8 fls.

**'Laimrota' VI(-/a)**

Parentage: Golden Clarion Group × mixed pollen of *L. aurelianense* hybrids

R: Å. Zorgevics (1971), G: Å. Zorgevics (1975), N: Å. Zorgevics (1976), I: Å. Zorgevics (1982), REG: Å. Zorgevics (1987)

Inside light apricot, throat yellow-orange; outside light orange; nectaries light yellow; pollen light brown. Fls 120

mm wide; tepals 120 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 75 × 12 mm. Stems 1.4-1.6 m, dark green, with c.8 fls. Late July to early Aug. (Published in *Dārzs un Drava* no. 7 (1986).)

#### 'Lajmdota' VI(b/a)

Parentage unknown

Fls white, 140-160 mm wide. Stems 0.9 m. Late July. (Published in *Cvetovodstvo*, 1981. Raised and named in the Baltic Republics.)

#### 'Lake Carey' VII(a/b-c)

Parentage: red-flowered seedling × ('Rosalie' × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2004)

Inside deep/strong purplish red (61A/67A), strong purplish red (60D) towards tepal-margins, apical half of tepals with a narrow yellowish white (155D) margin, strong red (53B) along midveins towards top, throat yellowish white (155D); outside with outer tepals strong purplish red (64C), apical half with moderate purplish pink (65A) margin, base yellowish white (155D), midribs strong yellow-green (144C) at base, changing into yellowish white (155D) with moderate purplish pink (65A), at top with some moderate yellow-green (146D), inner tepals similar but with narrow yellowish white (155D) margins; spots absent; papillae few, (59B); nectaries strong yellow-green (144C) with narrow brilliant greenish yellow (1B) edge; pollen moderate reddish orange (171A); stigma dark purple (79A). Fls 215-250 mm wide, fragrant; tepals 123 × 50-65 mm, margins slightly ruffled, tips recurved. Lvs scattered, 115 × 40 mm. Stems 0.8-1.2 m, green, darker at base, with c.4 fls.

#### 'Lake Eleanor' IV(-/-)

Parentage: very pale pink-flowered, self-sown hybrid × big pink-flowered hybrid from (rose-red-flowered Bullwood Group × *bolanderi*)

R: D.B. Fox (1975), G: D.B. Fox (1980), N: D.B. Fox (1988), I: D.B. Fox (1988), REG: D.B. Fox (1988)

Fls palest pink with a white centre and some suffusion of orange. July.

#### 'Lake Huron' VII(a/b)

Parentage: (unnamed seedling × 'Hit Parade') × (*L.* × *parkmanii* 'Allegra' × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2004)

Inside moderate purplish pink (186D), basal half of each tepal with light greenish yellow (3C) along midveins, pale yellow (19C) towards top, throat yellowish white (155D); outside moderate purplish pink (186D), dark purplish pink (186C) towards tepal-margins, base yellowish white (155D), midribs strong yellow-green (144C) at base, changing into light yellow-green (145D), strong yellow (153D) towards top; spots dark purplish pink (186C); papillae light greenish yellow (3C) and yellowish white

(155D); nectaries strong yellow-green (144C); pollen moderate reddish orange (178C); stigma pale green (189C). Fls 255 mm wide, fragrant; tepals 150 × 45-63 mm, margins smooth to ruffled, tips recurved. Lvs scattered, 140 × 35 mm. Stems 0.9-1.25 m, green with darker markings, and with c.6 fls.

#### 'Lake Tahoe' IV(c/d)

Parentage: 'Peachwood' × *bolanderi*

R: D.B. Fox, N: D.B. Fox (1977), REG: D.B. Fox (1977) Pale purplish pink (56A), pale purplish pink (56B) on recurved part of tepals, basal half white with a gold ray, green at base; spots deep pinky red; pollen dark brown. Lvs whorled. Stems 1.9 m or more.

(Published in *Lilies and other Liliaceae*, 1977: 79.)

#### 'Lake Toya' VII(a/b)

Parentage: ((*L.* × *parkmanii* 'Allegra' × 'Star Gazer') × 'Furore') × ((*speciosum* × 'Star Gazer') × (*L.* × *parkmanii* Little Rascal Group × 'Star Gazer'))

R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1996), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside yellowish white (155D), midveins light greenish yellow (4B/C); outside yellowish white (155D), midribs light yellow (10B/C), tinged with strong yellow-green (143B) at base and strong yellow-green (143C) at top; spots yellowish white (155D) and brilliant yellow (10A) on two-thirds of each tepal; papillae yellowish white (155D); nectaries strong yellow-green (143B); pollen dark reddish orange (175B); stigma dark purple (79A). Fls 220 mm wide; tepals 110 × 40-65 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 60 mm, dark green. Stems 1.1 m, green, with c.6 fls. July.

#### 'Lake Tulare' IV(c/c-d)

Parentage: Bullwood Group × *bolanderi*

R: D.B. Fox, N: D.B. Fox (1977), REG: D.B. Fox (1977) Fls close to deep purplish pink (55A), tepal-tips strong purplish pink (55B), basal half white with gold rays, green at base hardly noticeable; spots dark red; pollen brown. Tepals partially reflexed. Lvs whorled. Stems 1.9 m or more.

(Published in *Lilies and other Liliaceae*, 1977: 79.)

#### 'Lake Volta' VII(b/b)

Parentage: 'Aubade' × unknown

R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2004)

Inside yellowish white (155D), each tepal with a light greenish yellow (6D) flame, brilliant greenish yellow (6C) along basal half of midveins; outside yellowish white (155D), midribs strong yellow-green (144C) at base, above base with a streak of strong purplish red (63A), brilliant greenish yellow (4A) towards top; spots absent; papillae brilliant greenish yellow (6A); nectaries strong yellow-green (144A); pollen dark reddish orange (172B); stigma dark red (187A). Fls 240 mm wide; tepals 160 × 50-70 mm, margins slightly ruffled, tips recurved. Lvs

scattered, 140-170 × 40-50 mm, dark green. Stems 0.8-1.15 m, light green with some darker markings, and with c.6 fls.

#### 'La Loren' I(a/-)

Parentage: unnamed seedling × unnamed seedling  
R: P. Hoff (1982), G: Hoffgaarde B.V. (1984), N: P. Hoff (1987), I: Hoffgaarde B.V. (1987), REG: Hoffgaarde B.V. (1989)

Inside strong purplish pink (62A), throat yellowish; outside moderate purplish pink (65A); spots inconspicuous, dark brown, in the throat; pollen chrome-yellow. Fls 170 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 25 mm. Stems 1 m, dark green, with c.16 fls.  
Syn.: 'Sophia Loren'.

(First registered as 'Sophia Loren' but in 1993 Dutch PBR (LEL 883) were granted under the epithet 'La Loren', so this epithet must be accepted (ICNCP, 2004: Art. 24.4).)

#### 'La Mancha' VII(a/b)

Parentage: ('Star Gazer' × unnamed seedling) × (*L. × parkmanii* 'Allura' × 'Star Gazer')  
R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1994), I: Coöp. Kwekersvereniging "The Originals" U.A. (1995), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside strong purplish pink (68B), tepal-edges yellowish white (155D); outside strong purplish pink (68B); spots strong red (53B) towards base of tepals; papillae present; nectaries yellow-green changing to yellow; pollen orange-brown; stigma violet. Fls 280 mm wide; tepals 140 × 50 mm, margins ruffled, tips strongly recurved. Lvs scattered, 180 × 50 mm, mid green. Stems green with darker markings, and with c.5-8 fls.

#### 'Lambada' I(a/b)

Parentage: unnamed seedling × unnamed seedling  
R: Gebr. N. & B. Laan & Zn (1991), G: Gebr. N. & B. Laan & Zn, N: Bloembollenbureau Cebeco (1998), REG: Bloembollenbureau Cebeco (2001)

Inside vivid reddish orange (34A), with a little vivid orange (28A) on each midvein above nectary, throat vivid reddish orange (34A) and vivid orange (28A); outside strong yellowish pink (37A), towards tepal-edges vivid reddish orange (34A/B), tips dark red (187A); spots dark red (187A); papillae absent; nectaries vivid reddish orange (34A); pollen strong reddish orange (169A); stigma dark red (187A/B). Fls 160 mm wide; tepals 90 × 30-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 145 × 25 mm. Stems 1.15 m, light green with darker markings, and with c.9 fls.

#### 'Lambada' I(a/b)

Parentage unknown  
R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1993)  
Fls mid pink, each tepal-centre creamy white with deep purple spots. Tepal-margins smooth, tips scarcely recurved. Stems 1.1-1.3 m, with 16-17 fls. June.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 -

name already used for another lily. Published in M.F. Kireeva, *Lilii*, 45 (2000). This 'Lambada' only came to the attention of the ICRA after 'Lambada' had been registered by Bloembollenbureau Cebeco.)

#### 'Lambarosa' VIII(a/b)

See 'Lambarossa'.

#### 'Lambarossa' VIII(a/b)

Parentage: unnamed seedling × (*longiflorum* × 'Aristo')  
R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2001), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside strong red to deep pink (51A/B), throat strong yellow-green (144C); outside of inner tepals strong red to deep pink (51A/B), midribs strong yellow-green (144C) at base; outside of outer tepals strong purplish red (59D), deep red (60A) at tip, all tepals edged strong red (47B); spots and papillae dark red (59A); nectaries light orange (28C); pollen moderate reddish orange (178C); stigma strong red (51A). Fls 160-170 mm wide; tepals 125 × 45-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 130-190 × 15-20 mm. Stems 0.9-1.3 m, green with darker markings, and with c.7 fls.

(A *longiflorum*/Asiatic (LA) hybrid. Registered as 'Lambarosa' and published as such in *ILR Twentieth Supplement*. However, in 2002 Dutch PBR were awarded under the epithet 'Lambarossa', so this spelling must be accepted (ICNCP, 2004: Art. 24.4).)

#### 'Laminuette' VII(a/c)

Parentage unknown

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1993)

Inside with apical part of tepals suffused with strong purplish red (63B) on a yellowish white (155D) ground, tipped and edged yellowish white (155D), outer tepals more strongly coloured; outside suffused with moderate purplish red (58A) on a yellowish white (155D) ground, outer edges stronger coloured, midribs brilliant greenish yellow (151D) becoming strong yellow-green (144A) at base; spots and papillae yellowish white (155D) and strong purplish red (63A), on basal part of each tepal; pollen brownish orange (172C); stigma pale yellow-green (193A). Fls 200 mm wide; tepals 115 × 50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 157 × 44 mm, dark green. Stems 0.44 m, mid green, with c.4 fls.

#### *lancifolium* Thunb. IX(c/d)

Fls pinkish orange to orange-red; spots and papillae deep purple; nectaries bordered by hairy ridges; anthers orange-red to purplish; pollen red-brown to purplish brown; stigma purple. Fls c.125 mm wide; tepals 70-100 × 10-25 mm; pedicels up to 100 mm long, shortly hairy, sometimes with 2 fls. Lvs scattered, 120-200 × 10-20 mm, glossy dark green. Stems 0.6-2 m, with up to 40 fls, purplish black, white-hairy, and with shiny purplish black

bulbils. Japan, Korea, E China.  
Syn.: *tigrinum*.

***lancifolium* 'Adam Bryden's Variety' IX(c/d)**  
Parentage: derived from *lancifolium* 'Splendens'  
I: Dobbie & Co. (1934)  
Fls large, bright orange, spotted. Lvs narrow, bright green.

***lancifolium* 'A.M. Vollmer' IX(c/d)**  
Syn. of *lancifolium* var. *flaviflorum*.

***lancifolium* 'B.C.R.' IX(c/d)**  
Parentage: selection from *lancifolium*  
Later flowering than other forms of *lancifolium*.  
Syn.: *tigrinum* 'B.C.R.'.  
(Published in *Sandyloam Cat.*, 1943/44. Received by Sandyloam Nursery in a consignment of wild-collected bulbs labelled *speciosum*. This cv. covers more than one clone.)

***lancifolium* 'Burnham Variety' IX(c/d)**  
Parentage: selection from *lancifolium* 'Splendens'  
S: W.A. Constable Ltd, I: W.A. Constable Ltd  
Fls rich salmon-red; spots purple. Fls large.  
Syn.: *tigrinum* 'Burnham Variety'.  
(Published in *Constable Cat.*, 1937: 96.)

***lancifolium* 'Diploid' IX(c/d)**  
Parentage: variant of *lancifolium*  
Similar to *lancifolium*, but tepals narrower and spots smaller.  
Syn.: *tigrinum* 'Diploid'.  
(Published in *Gard. Chron.*, ser.3, 100: 230-31, figs 100, 101 (1936). Received from Japan by I. Preston, 1930.)

***lancifolium* var. *flaviflorum* Makino IX(c/d)**  
AMH 1957  
Fls yellow; spots dark purple; anthers brick-coloured.  
Stems with purple bulbils. Japan.  
Syn.: *tigrinum* var. *flaviflorum*; *lancifolium* 'A.M. Vollmer';  
*tigrinum* 'A.M. Vollmer'; 'A.M. Vollmer'.  
(Haarlem award as 'A.M. Vollmer'.)

***lancifolium* var. *flaviflorum* 'Yellow Tiger' IX(c/d)**  
Parentage: selection from *lancifolium* var. *flaviflorum*  
S: C.A. Best (c. 1953), N: C.A. Best  
Fls lemon-yellow; spots dark purple over whole area of tepals except tips.  
Syn.: *tigrinum* 'Yellow Tiger'.  
(Published in *Greenock Farms Cat.*, 1958/59.)

***lancifolium* 'Flore Pleno' IX(c/d)**  
Parentage: sport from *lancifolium*  
N: E.A. Regel  
FCC 1870  
Fls double, with 24-36 narrow tepals, bright orange; spots purple-black, profuse; stamens absent. July to Aug.  
Syn.: *tigrinum* 'Flore Pleno'.  
(Published in *Gartenflora* 19: 98, t.646 (1870).)

***lancifolium* 'Foliis Variegatis' IX(c/d)**  
Parentage: sport from *lancifolium*  
Lvs variegated.  
Syn.: *tigrinum* 'Foliis Variegatis'.  
(Known since 1873.)

***lancifolium* var. *fortunei* (Standish) Matthews IX(c/d)**  
Fls salmon-orange. Stems up to 1.9 m, densely woolly, with up to 30-50 fls. Sept. to Oct. Japan, China.  
Syn.: *tigrinum* var. *fortunei*.

***lancifolium* 'Malmo' IX(c/d)**  
Parentage: selection from *lancifolium* 'Splendens'  
I: E.L. Kline  
Fls fire-red, more brilliant than in 'Splendens'.  
Syn.: *tigrinum* 'Malmo'.  
(Published in *Kline Cat.*, 1939/40.)

***lancifolium* 'Ravenglass Variety' IX(c/d)**  
Parentage: selection from *lancifolium*  
Fls fully double, bright salmon, profusely spotted.  
Syn.: *tigrinum* 'Ravenglass Variety'.  
(Published in *Constable Cat.* 1950: 20. Introduced from gardens at Ravenglass, Cumberland.)

***lancifolium* var. *splendens* (van Houtte) Matthews IX(c/d)**  
Syn. of *lancifolium* 'Splendens'.

***lancifolium* 'Splendens' IX(c/d)**  
Parentage: selection from *lancifolium*  
N: M. Leichtlin, I: L. van Houtte  
FCC 1870  
Fls rich fire-red, unusually large, numerous and boldly spotted. Aug. to Sept.  
Syn.: *tigrinum* 'Splendens'; *tigrinum* var. *splendens*;  
*lancifolium* var. *splendens*.  
(Bulbs imported from Japan in 1867. Plants have an especially vigorous habit.)

***lancifolium* 'White Lady' I(c/d)**  
See note under 'White Lady' (Div. I).

***lancifolium* 'Yellow Tiger' IX(c/d)**  
See *lancifolium* var. *flaviflorum* 'Yellow Tiger'.

**'Landhochzeit' I(a/-)**  
Parentage unknown  
R: G. Köpke (pre 1993), N: G. Köpke, REG: G. Köpke (1994)  
Fls orange; buds white-hairy. Stems 1.2 m. Early June.  
(Published in German Lily Group sales list, 1993.)

**'Landini' I(a/b)**  
Parentage: seedling OR 93-16 × seedling AF 96-2  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside and outside dark red (187A), throat deep red (185A); spots and papillae dark red (187A); nectaries

dark bluish green (133A); pollen moderate brown (165A); stigma dark red (187A). Fls 180 mm wide; tepals 105 × 44 mm, margins smooth, tips recurved. Lvs 185 × 20 mm. Stems 1.3 m, green with darker markings, with c.6 fls.

**'Landsberg'** I(a/-)

Parentage: 'Paros' × 'Roter Cardinal'

R: V. Strasser (1978), G: V. Strasser (1981), N: V. Strasser (1984), I: V. Strasser (1991), REG: V. Strasser (1991)  
Inside and outside strong reddish orange (31B), throat strong reddish orange (42B); spots oblong, purple, on two-thirds of each tepal; nectaries white-frosted; pollen red-brown. Fls 170 mm wide; tepals 100 × 45 mm, margins smooth, tips not reflexed. Lvs scattered, 130 × 13 mm, dark green. Stems 1.3 m, almost black, with c.15 fls. Mid July.

**'Landshut'** VI(-/a)

Parentage: Aurelian seedling × Aurelian seedling

R: V. Strasser (1971), G: V. Strasser (1975), N: V. Strasser (1983), REG: V. Strasser (1997)

Fls yellow. Tepal-margins smooth, tips not recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 1.3 m, rather dark green, with up to 15 fls. Mid July.

**'Langtry'** I(c/-)

Parentage: 'Verna' × *leichtlinii*

R: D.B. Fox, N: D.B. Fox (1975), REG: D.B. Fox (1975)

Fls brilliant greenish yellow (6A); spots maroon; pollen rich brown. Tepals strongly recurved. Lvs dark green. Stems 1 m, dark, slightly hairy, with bulbils.  
(Published in *Lilies and other Liliaceae*, 1975: 93.)

***lankongense* Franch.** IX(c/d)

Fls pink sometimes flushed with mauve or rose-pink, each tepal with a green ray; spots reddish purple, especially on incurved tepal-margins; nectaries green bordered with white papillae; anthers purplish; pollen orange-brown. Fls scented; tepals 40-65 × 10-25 mm, tips papillate. Lvs scattered, 30-100 × 4-8 mm, dark green. Stems up to 1.2 m, green, with up to 15 fls. W China (Yunnan, Xizang).

**'Lanzarote'** I(a/-)

Parentage: unnamed seedling × unnamed seedling

R: Peacock B.V. & Imanse Lelieveredeling B.V.

(1993), G: Peacock B.V., N: Peacock B.V. & Imanse

Lelieveredeling B.V. (1995), I: Peacock B.V. & Imanse

Lelieveredeling B.V. (1995), REG: Peacock B.V. (1997)

Inside moderate red/deep red (179A/185A), the base dark red (187A/B), throat more-or-less moderate red (179B); outside moderate red (179A), becoming moderate red/deep red (179A/185A) towards tepal-edges; spots darker than dark red (187A); papillae few, along the nectaries; nectaries strong yellow-green (144A), white-hairy; pollen dark reddish orange (175A); stigma dark red (59A). Fls 200 mm wide; tepals 115-120 × 35-55 mm, margins smooth, tips a little recurved. Lvs scattered, 160 × 30 mm, mid green. Stems 1.6 m, green with darker markings, and 3-5 fls. Midseason.

**'La Paloma'** I(a/b)

Syn. of 'Dove of Peace'.

**'Lapassa'** VII(a-b/-)

Parentage: unnamed seedling × 'Joy'

R: Imanse Lelieveredeling B.V. (1992), N: Peacock B.V.

(1998), I: Peacock B.V. (1998), REG: Peacock B.V.

(2002)

Inside rose-pink (moderate purplish pink (65A)) on a pale yellow-green (155A) ground, midveins yellow at base, throat rose-pink; outside pale purplish pink (65C); spots and papillae present; nectaries greenish; pollen yellow-brown; stigma dark purple. Fls 200 mm wide; tepals 120 × 30 mm, margins ruffled, tips slightly recurved. Lvs scattered, 120 × 40 mm. Stems 0.95 m, brown and green, with 2-6 fls. Early to midseason.

**'La Paz'** VIII(a/-)

Parentage: unnamed seedling × unnamed seedling

R: Peacock B.V. & Imanse Lelieveredeling B.V.

(1993), G: Peacock B.V., N: Peacock B.V. & Imanse

Lelieveredeling B.V. (1996), I: Peacock B.V. & Imanse

Lelieveredeling B.V. (1995), REG: Peacock B.V. (1997)

Inside moderate red (47A), each tepal paler towards tip and with a strong orange (26A) edge, throat deep yellowish pink (39B) and paler towards edges; outside strong red/deep pink (51A/B) on a paler ground, midribs strong orange (26A), base with some yellowish white (155B) and strong purplish red (60D), top vivid yellow (12A); spots moderate reddish brown (175A) on basal part of each tepal; papillae absent; nectaries deep yellowish pink (39B) surrounded by a strong yellow-green (145A) rim; pollen moderate reddish brown (175A); stigma strong orange (26A). Fls 210 mm wide; tepals 110 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 200 × 25 mm, mid green. Stems 1.2 m, green, with 9-11 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'La Petite'** VII(-/b)

See *L. × parkmanii* 'La Petite'.

**'Lapkritis'** I(a/b)

Parentage: 'Rotaļa' × seedling 420-S-88

R: Ā. Zorgevics (1985), G: Ā. Zorgevics (1989), N:

Ā. Zorgevics (2005), I: University of Latvia Botanical

Garden (2005), REG: Ā. Zorgevics (2005)

Inside vivid reddish orange (33A), throat light red; outside vivid reddish orange (33A); spots and papillae absent; nectaries orange; pollen dark brown; stigma pale. Fls 120 mm wide; tepals 80 × 40 mm, margins very slightly ruffled, tips slightly recurved. Lvs scattered, 70 × 10 mm. Stems 1.1m, green, with c.9 fls. Early July. (Nomenclatural standard: colour photograph provided by registrant (WSY 0096416).)

**'La Plagne'** VII(-/a-b)

Parentage: 'Acapulco' × seedling 88-21

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den

Haan Beheer B.V., N: Vletter & Den Haan Beheer

B.V. (1995), I: Vletter & Den Haan Beheer B.V., REG:

Vletter & Den Haan Beheer B.V. (2001)

Inside deep purplish pink (73A), midveins yellow with a red flush, changing into red-purple; outside deep/light purplish pink (73A/C); spots and papillae present; nectaries yellow-green; pollen yellow-brown; stigma grey. Tepal-margins ruffled, tips recurved. Stems 1.2 m, green with darker stripes and spots. Early.

#### 'Larancia' I(a/-)

Parentage: 'Ladykiller' × seedling 20-83

R: Gebr. N. & B. Laan & Zn (1983), G: Gebr. N. & B. Laan & Zn (1985), N: Gebr. N. & B. Laan & Zn (1989), I: Gebr. N. & B. Laan & Zn (1990), REG: Gebr. N. & B. Laan & Zn (1991)

Inside vivid orange (28B), tips of outer tepals dark red (187B); outside vivid orange (28A), midribs brilliant orange (25C), 'tube' slightly suffused with strong yellow-green (144C); spots dark red (187B) on basal part of each tepal; nectaries dark red (187A); pollen strong reddish orange (169A). Fls 190 mm wide; tepals 120 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 135 × 15 mm, mid green. Stems 0.8 m, green, with c.11 fls. June (under glass).

#### 'La Reine' VIII(a/b)

Parentage: (*wilsonii* × *pumilum*) × (*longiflorum* × white-flowered Asiatic seedling)

R: Mak-Leek Inc. (1991), G: Mak-Leek Inc. (1993), N: Mak-Leek Inc. (1997), I: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside strong to brilliant orange (26A/25C), throat strong orange; outside close to vivid reddish orange (30C), midribs pale green; lightly spotted with more-or-less strong reddish orange (34C) on basal half of each tepal; nectaries green-orange; pollen moderate reddish brown (175A). Fls c.120 mm wide, slightly fragrant; tepals 65 × 35-45 mm, tips slightly recurved. Lvs scattered, 130 × 30 mm, mid green. Stems 0.75-1 m, green with darker markings, and with 8-15 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid. Stem height and fl. colour may be slightly affected by light intensity and temperature.)

#### 'Larendita' I(a/-)

Parentage: yellow-flowered hybrid × yellow-flowered hybrid

R: Gebr. N. & B. Laan & Zn (1987), G: Gebr. N. & B. Laan & Zn (1989), N: Gebr. N. & B. Laan & Zn (1993), I: Gebr. N. & B. Laan & Zn (1993), REG: Gebr. N. & B. Laan & Zn (1996)

Inside and outside vivid yellow (12A); spots very small; papillae absent; nectaries yellowish green; pollen pale brown; stigma violet-red. Fls 120 mm wide; tepals 100 × 30 mm, margins ruffled, tips recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1.1 m, green, with c.12 fls. Midseason to late.

#### 'Large Copper' IV(-/-)

Parentage: 'Shuksan' × *L. × burbankii*

R: O.E.P. Wyatt, N: O.E.P. Wyatt

(Published in *LYB* 13: 170 (1949). No further details.)

#### 'Larino' I(a-b/-)

Parentage: unnamed seedling × unnamed seedling

R: Vletter & Den Haan (1991), G: Vletter & Den Haan, N: Vletter & Den Haan (1994), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)

Inside yellowish white (155D), midveins green changing into white; outside yellowish white (155D); very few spots and some papillae present; nectaries green; pollen light brown; stigma purple. Tepal-margins slightly ruffled, tips recurved. Stems 1 m, green with darker markings. Late.

#### 'Larissa' II(-/d)

Parentage: (*martagon* × unknown) × *tsingtauense*

R: O. Beutnagel (pre 1988), N: O. Beutnagel, REG: ICRA (1992)

Fls yellow with red spots; pollen red. Late June.

(Published in German Lily Group sales list, 1988.)

#### 'La Rochelle' VII(b/b)

Parentage: *L. × parkmanii* 'Pink Beauty' × unnamed seedling

R: W.M. Gardiner (1968), G: W.M. Gardiner (1971), N: W.M. Gardiner (1972), I: K.L. Watkins (1979), REG: K.L. Watkins (1980)

Inside deep purplish pink (58D) fading to white at tepal-tips and along margins; this colour shows through on outside; heavily spotted strong purplish red (59D) on most of tepal; nectaries light yellow-green (145C); pollen strong orange (24A). Tepals 125 × 35-50 mm, tips slightly recurved. Lvs scattered, 160 × 40 mm, dark green. Stems 1.8 m, mid green, with 10-15 fls. Feb. (Australia).

#### 'La Rougette' VII(-/c)

Parentage unknown

R: W.M. Gardiner (1971), G: W.M. Gardiner (1974), N: W.M. Gardiner, REG: E.L. Gardiner (1991)

Inside strong purplish red (61B) with very narrow, white tepal-margins and tips, throat light yellow-green (142D); outside light purplish pink (62C), midribs dark pink (182C); heavy spotting and numerous papillae of deep purplish red (61A) present; nectaries light yellow-green (142D); pollen greyish brown (166A). Fls 170 mm wide; tepals 115 × 60 mm, margins ruffled, tips strongly recurved. Lvs scattered, 110 × 57 mm, mid green. Stems 1.6 m, moderate yellow-green (138C), with c.8 fls. Jan. to Feb. (Australia).

#### 'La Seine' VII(a-b/b)

Syn. of 'Windsor'.

#### 'Laser' I(a-b/b)

Parentage: (Yellow Blaze Group × 'Connecticut King') × ('Sahara' × 'Crescendo')

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1993), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside vivid yellow (9A), vivid orange-yellow (23A) at base and along midveins, throat orange; outside vivid yellow (9B); spots (small) and papillae present; nectaries

green; stigma dark purple; pollen red-brown. Tepals 112 × 32 mm, margins smooth, tips slightly recurved. Lvs scattered, 128 × 15 mm, mid green. Stems 1.1 m, green, with 6-7 fls (from 12-14 cm bulbs). Late.

**‘Laserena’ I(a/-)**

Parentage: white-flowered hybrid × white-flowered hybrid

R: Gebr. N. & B. Laan & Zn (1985), G: Gebr. N. & B. Laan & Zn (1987), N: Gebr. N. & B. Laan & Zn (1989), I: Gebr. N. & B. Laan & Zn (1991), REG: Gebr. N. & B. Laan & Zn (1993)

Inside pale yellow-green (4D), throat with dark red (187A) edge; outside pale yellow-green, midribs strong yellow-green (144C) becoming strong yellow-green (144A) at top; spots dark red (187A) in the throat; stigma brownish orange (164A). Fls 180 mm wide; tepals 93 × 48 mm. Lvs scattered, 212 × 12 mm, mid green. Stems 0.97 m, green with darker markings, and with c.7 fls.

**LA SERENISSIMA I(c/-)**

Trade designation of ‘Red Fox’.

**‘La Sonrisa’ VII(-/b)**

Parentage: seedling 201 × seedling 503

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside pale purplish pink (65D) changing to moderate purplish pink (65A), throat strong yellow-green (144C); outside pale purplish pink (62D), midribs light yellow-green (144D); papillae vivid purplish red (66A) to pale purplish pink (65D); nectaries light yellowish green (134D); pollen strong reddish orange (169A). Fls 240 mm wide. Lvs scattered, 150 × 27 mm, mid green. Stems 1.3 m, green, with c.6 fls.

(Registered and included in *ILR Eleventh Supplement* as ‘Lasonrisa’, but in 1992 Dutch PBR (LEL 803) were granted under the epithet ‘La Sonrisa’, so this latter form of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Lasonrisa’ VII(-/b)**

See ‘La Sonrisa’.

**‘La Spezia’ VIII(a/b)**

Parentage: seedling LA OR 93-2 × seedling AG 94-01  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside light greenish yellow (5C), throat pale yellow-green (4D); outside pale greenish yellow (2D), tepal-edges vivid greenish yellow (2A); spots and papillae absent; nectaries white-hairy; pollen deep orange-yellow (163A); stigma brilliant yellow (13B). Buds hairy. Fls 170 mm wide; tepals 125 × 50 mm, margins smooth, tips recurved. Lvs scattered, 155 × 20 mm. Stems 1.5 m, dark, with c.7 fls. (*A longiflorum*/Asiatic (LA) hybrid. La Spezia is a town near Genoa, Italy.)

**‘Last Dance’ I(c/d)**

Parentage: (*leichtlinii* var. *maximowiczii* ‘Unicolor’ × white-flowered Pastel Group) × (*leichtlinii* var. *maximowiczii* × cream-yellow-flowered Pastel Group)  
R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987), REG: Columbia-Platte Lilies (1988)

Inside brilliant yellow (8A) to light greenish yellow (8B), tepal-tips brilliant yellow (8A), throat brilliant yellow to light greenish yellow (8A/B); outside light greenish yellow (8B/C) overlaid with green; spots absent; nectaries soft green; pollen greyish red (176A). Tepals 70-80 × 20-30 mm, margins smooth, tips strongly recurved. Lvs scattered, 100-150 × 10-20 mm, mid green. Stems 1-2 m, mid green, with 8-30 fls (including many secondary buds). Early to mid July.

(Published in *B & D Lilies Cat.*, 1987.)

**‘Last Emperor’ I(a/b)**

Parentage: ‘Connecticut Beauty’ × red-flowered brushmarked seedling

R: A. Jasiński (1985), G: A. Jasiński (1987), N: A.

Jasiński (1987), I: A. Jasiński (1988), REG: A. Jasiński (1988)

Inside near vivid yellow (14B), with a vivid yellow (17C) blush; outside vivid yellow (14A) with a light green tint, the base deep to strong greenish yellow (153A/B); several dark brown spots in the throat, brushmarks large, 20 × 27.5 mm, dark red (187A); nectaries cream-green, white-frosted; pollen reddish brown. Fls 150 mm wide; tepals 90 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 14 mm, dark green. Stems 0.7 m, dark green, with 8-12 fls. July.

**‘Lastochka’ I(a/c)**

Parentage: (*pumilum* × ‘Paprika’) × ‘Vostok-2’

R: M.F. Kireeva (1988), N: M.F. Kireeva

Fls bright red; spots absent. Fls 100-110 mm wide, scented. Stems 0.6-0.9 m, with 7-11 fls. June.

Syn.: ‘Svirel’.

(Unaccepted spelling: ‘Lastoczka’, ‘Lastočka’. Published in M.F. Kireeva, *Lilii*, 35 (2000).)

**‘Lastočka’ I(a/c)**

Unaccepted spelling of ‘Lastochka’.

**‘Lastoczka’ I(a/c)**

Unaccepted spelling of ‘Lastochka’.

**‘Las Vegas’ I(a/b)**

Parentage unknown

R: P. Hoff (1987), G: Hoffgaard B.V. (1989), N:

Hoffgaard B.V. (1989), I: Hoffgaard B.V., REG: Hoff Quality First (1993)

Inside vivid yellow (14A); outside brilliant yellow (14C), tepal-edges vivid yellow (14A), midribs strong yellow-green (143C) at the base, fading towards top; spots dark purple (79A) in the throat; pollen deep orange-yellow (163A); stigma vivid reddish orange (34B). Fls 190 mm wide; tepals 100 × 45 mm, margins ruffled, tips slightly

recurved. Lvs scattered, 110 × 15 mm, dark green. Stems 0.8-1.1 m, mid green, with c.9 fls.

**‘Latecomer’ IX(b-c/d)**

See *speciosum* ‘Latecomer’.

**‘Late Date’ I(a/-)**

Parentage unknown

R: J. Wadekamper (1978), G: J. Wadekamper (1982), N: J. Wadekamper (1992), I: Borbeleta Gardens (1993), REG: J. Wadekamper (1993)

Fls pale greenish yellow (13D), throat white; spots few, brown; nectaries green; pollen brown. Tepals 85 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 15 mm, mid green. Stems 0.95 m, tan-green, with 8-10 fls. Late July.

(Published in *Borbeleta Gardens Cat.*, 1993.)

**Latgales Group IX(b-c/d)**

See *henryi* Latgales Group.

**Latgalia Group IX(b-c/d)**

See *henryi* Latgales Group.

**‘Latina’ I(a/-)**

Parentage: seedling G 413 × ‘Paris’

R: Vletter & Den Haan, G: Vletter & Den Haan (1983), N: Vletter & Den Haan (1988), I: Vletter & Den Haan, REG: Vletter & Den Haan (1993)

Inside vivid yellow (12A); outside brilliant yellow (12B), tepal-edges vivid yellow (12A), outer tepals strong yellow-green (144B) at base and tipped strong yellow-green (143A); spots dark red (187A) on a third of each tepal; pollen strong orange (169B); stigma dark red (187C). Fls 180 mm wide; tepals 95 × 45 mm. Lvs scattered, 100 × 17 mm, dark green. Stems 0.8 m, mid green with some darker markings, and with c.7 fls.

**‘La Tisha’ I(a/b)**

Parentage: (‘Mont Blanc’ × ‘Pascal’) × (((‘Showboat’ × ‘Sterling Star’) × (‘Sunrise’ × ‘Connecticut King’)) × (‘Showboat’ × ‘Connecticut King’))

R: Mak-Leek Inc. (1990), G: Mak-Leek Inc. (1992), N: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside strong purplish red (63B); outside deep purplish red (59B); spots few, dark red (187A), on basal half of each tepal; nectaries strong purplish red (63A); pollen vivid orange (28A); stigma light purple (80C). Fls 140 mm wide; tepals 65 × 25-35 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 15 mm, moderate olive-green (137A). Stems 0.8-1 m, moderate reddish brown (177A), with 5-12 fls. Late June.

**‘Latour’ VII(a/b)**

Parentage: seedling 87-112 × ‘Barbaresco’

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1995), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)

Inside strong purplish red (60D), white at base, midveins yellow-green changing into strong red (53B); outside strong purplish red (59D); spots and papillae present;

nectaries yellow-green; pollen orange-brown; stigma grey. Tepal-margins slightly ruffled, tips recurved. Stems 1 m, green with dark stripes and spots. Midseason.

**‘La Toya’ I(a/b)**

Parentage: (unnamed seedling × ‘Sterling Star’) × ((‘Showboat’ × ‘Sterling Star’) × (‘Connecticut Star’ × ‘Sunrise’))

R: Gebr. Mak B.V. (1983), G: Gebr. Mak B.V. (1985), N: Gebr. Mak B.V. (1989), I: Gebr. Mak B.V. (1989), REG: . Gebr. Mak B.V. (1989)

Inside deep purplish red (187D), tepal-edges dark red (187A/B); outside deep to moderate purplish red (59B/C), tepal-edges dark red (187A/B); spots few, small, dark red (187A), in the throat; pollen vivid orange-yellow (21A). Fls 185 mm wide; tepals 90 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 0.75-1.25 m, green with darker markings, and c.6 fls. July.

(Registered and included in *ILR Ninth Supplement* as ‘Latoya’, but in 1989 Dutch PBR (LEL 437) were granted under the epithet ‘La Toya’, so this latter form of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Latoya’ I(a/b)**

See ‘La Toya’.

**‘La Traviata’ I(a/-)**

Parentage: “*elatum*” × *bulbiferum* var. *croceum* × (*lancifolium* × ‘La Boheme’)

R: J. Koeman (pre 1978), N: J. Koeman, REG: J. Koeman (1978)

Fls brilliant greenish yellow (4A); spots dark to moderate red (183B/C); anthers dark brown. Tepals somewhat green along veins.

(Published in *Lilies and other Liliaceae*, 1978/9: 110.)

**‘Latvia’ I(a/b)**

Parentage: (‘Connecticut King’ × (‘Lime Ice’ × unnamed seedling)) × ‘Tango Nocturno’

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside brilliant yellow (7B), throat strong to moderate yellow-green (144C/D); outside brilliant yellow (6B), tepal-tips strong yellow-green (143A); dense dark red (187A&B) speckles on up to a third of each tepal, including tepal-margins towards tip, both inside and outside; nectaries white-hairy; pollen brownish orange (164A); stigma greyish red (184A). Fls 170 mm wide; tepals 90 × 30-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 27.5 mm. Stems 0.9-1.1 m, green, with 6-9 fls. June.

**‘Latvian Maid’ I(a/b)**

Parentage unknown

R: J. Vasarietis (1984), G: J. Vasarietis (1987), N: J. Vasarietis (1990), I: J. Vasarietis (1990), REG: J. Vasarietis (1992)

Fls vivid orange-yellow (23A) throughout; spots absent;

nectaries greenish white; pollen orange. Fls 140-150 mm wide; tepals 80 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1 m, green, with up to 22 fls. Late June to early July.

**‘Lauma’ VII(c/b)**

Parentage unknown

R: K. Zeltans (pre 1999), N: K. Zeltans

Inside white, each tepal with a broad cherry-red ray and numerous cherry-red spots; nectaries green; pollen orange-brown. Tepals strongly ruffled and twisted, tips recurved.

**‘Laura’ VII(-/-)**

Syn. of ‘Lauralee’.

**‘Laura’ I(a/b)**

Parentage: ‘Destiny’ × ‘Enchantment’

R: K. Mynett & A. Wilkońska (1972), R: K. Mynett & A. Wilkońska (1972), G: K. Mynett & A. Wilkońska (1975), N: K. Mynett & A. Wilkońska (1985), I:

Research Institute of Pomology & Floriculture

Inside vivid orange (28B), throat brilliant orange (29A); outside strong yellowish pink (33C); spots few, light bronze, in the throat; nectaries light green; pollen dark bronze; stigma bronze. Fls 120 mm wide; tepals 80 × 25 mm, margins narrowly ruffled, tips slightly recurved. Lvs scattered, 100 × 15 mm, pale green. Stems 0.54 m, light green, with an average of 6-7 fls. Mid June. Jan. to Mar. (Registered with the Polish Research Centre for Cultivars and patented there under no.319. However, the name is unacceptable: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Lauralee’ VII(-/-)**

Parentage unknown

R: Sun Valley Bulb Farms, Inc. (1973), N: Sun Valley Bulb Farms, Inc. (1980), I: Sun Valley Bulb Farms, Inc. (1980), REG: Sun Valley Bulb Farms, Inc. (1980)

Inside with vivid red (57A) midveins, tepal-centres strong purplish red (63B), tips strong purplish red (63B) with yellowish white (155D); outside of outer tepals deep purplish pink (66C), of inner tepals moderate purplish pink (65A); spots present; nectaries lime-green; pollen rust-coloured. Tepals 200-235 mm long, margins slightly ruffled. Lvs ovate, abruptly pointed, moderate olive-green (147A). Stems 1-1.5 m.

Syn.: ‘Laura’ (Div. VII).

(Registered and included in *ILR Third Supplement* as ‘Laura’. However, in 1984 Dutch PBR (LEL 113) were granted to this cv. under the epithet ‘Lauralee’, and the latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Laura Patterson’ I(b/-)**

Parentage: complex parentage involving *dauidii* var. *willmottiae* & *cernuum*

R: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1970)

Fls rose-madder (HCC 23/2) with c.13 mm ray of cadmium orange (HCC 8/3) above nectaries; spots

purple madder (HCC 0128) on basal half of fl.; pollen Indian orange (HCC 713/1). Tepals half reflexed. Stems 1-1.2 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 14 (1978).)

**‘Laurence’ VI(b-c/a)**

Parentage unknown

R: G. Brundrett (1988), G: G. Brundrett (1989), N: G. Brundrett (1998), I: G. Brundrett (1998), REG: G. Brundrett (1998)

Inside brilliant apricot, throat green at base; outside intense apricot with a greenish base; faint Aurelian streaking inside; nectaries green; pollen bright rust-coloured; stigma dark brown. Fls 135 mm wide, strongly scented; tepals 120 × 35 mm, margins very slightly waned, tips recurved. Lvs scattered, 150 × 18 mm. Stems 1.75 m, green with brown stippling, and with c.18 fls in a pyramidal infl. Late July.

(Named after the raiser’s son.)

**‘Laurion’ I(a/-)**

Parentage: ‘John Dix’ × ‘Connecticut King’

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1981), I: V. Strasser (1985), REG: V. Strasser (1997)

Fls brilliant yellow (13B); spots soft purple on a third of each tepal. Tepals 150 mm long, margins ruffled, tips slightly recurved. Lvs scattered, 130 × 15 mm, dark green. Stems rather dark green, with up to 17 fls. Early July.

**‘Lausanne’ I(a/-)**

Parentage: orange-yellow-flowered hybrid × ‘Connecticut King’

R: Gebr. N. & B. Laan & Zn (1988), G: Gebr. N. & B. Laan & Zn (1990), N: Gebr. N. & B. Laan & Zn (1993), I: Gebr. N. & B. Laan & Zn (1994), REG: Gebr. N. & B. Laan & Zn (1994)

Inside vivid yellow (14A), up to a third of each tepal brilliant greenish yellow (151D); outside vivid yellow (9B) shading to vivid yellow (14A) at tepal-edges; spots and papillae absent; nectaries strong yellow-green (144A/B), with white hairs; pollen deep orange-yellow (163A). Fls 185-190 mm wide; tepals 90-110 × 43 mm, margins smooth, tips slightly recurved. Lvs scattered, 95-180 × 20-30 mm, mid green. Stems 0.5-1.5 m, mid green, with 4-6 fls.

Syn.: ‘Maggiore’.

(‘Lausanne’ was registered and included in *ILR Thirteenth Supplement* and ‘Maggiore’ was registered in 1996 and included in *ILR Sixteenth Supplement*. Later information gave these two cvs as being the same cv. Because Dutch PBR (LEL 1030) were granted to ‘Lausanne’ in 1994, this epithet must be must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Lausks’ Div.?**

Parentage unknown

R: V.P. Orehova

Fls smoky violet-pink.

**LAVA I(a/-)**

Trade designation of 'Brandaris'.

(In *ILR Twenty-second Supplement* LAVA was erroneously given as a trade designation of 'Apollo'.)

**'Lavaglut' I(a)**

Parentage unknown

R: J. Klein (pre 1987), N: J. Klein, REG: J. Klein (1988)

Fls orange-red, 120 mm wide. Stems 0.9 m, infl. with secondary buds. Early July.

(Published in German Lily Group sales list, 1987.)

**Lavender and Lemon Glory Group I(-/-)**

Parentage: selections from Futura Group

S: Blackthorne Gardens, N: Blackthorne Gardens, I: Blackthorne Gardens (1982)

Fls lavender and lemon.

**'Lavender Dream' I(a/c)**

Parentage: (*cernuum* × *concolor*) × (*L.* × *hollandicum* × *L.* × *hollandicum*)

R: Gebr. N. & B. Laan & Zn (1979), G: Gebr. N. & B. Laan & Zn (1981), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1988)

Inside deep pink (185D), each tepal with a deep pink (52C) flame, tepal-base grey; outside dark pink (182D) to moderate purplish red (186A/B), midribs moderate orange (171D); spots dark brown on a white ground around the throat; pollen greyish red. Fls 145 mm wide; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 15 mm, mid green. Stems 0.8-1 m, dark green with some darker markings, and with 7-12 fls (from 16-18 cm bulbs). June.

(Published in *Bloembollencultuur* 96(22): 15 (1986).)

**'Lavender Lady' II(c/d)**

Syn. of 'Carolyn Rollison'.

**Lavender Lady Group VII(-/b)**

See *L.* × *parkmanii* Lavender Lady Group.

**'Lavender Lady Marion' VII(-/c)**

Syn. of 'Marion'.

(Published in *LYB* 34: 201 (1971). Included in *ILR* (1982) as 'Lavender Lady Marion'.)

**'Lavender Princess' VII(b/c)**

See *L.* × *parkmanii* 'Lavender Princess'.

**'Lavender Splash' I(a/c)**

Parentage: 'Tamara' × 'Beaudacious'

R: Oregon Bulb Farms, Inc. (1986), G: Oregon Bulb Farms, Inc. (1989), N: Cebeco Lilies, Inc. (1998), I: Cebeco Lilies, Inc. (1998), REG: Cebeco Lilies, Inc. (1998)

Inside light purplish pink (55C) at tepal-tips darkening to moderate purplish red (59C) towards midpoint of each tepal, throat white (158C); outside white (158C) with 10 mm-wide, moderate reddish brown (166B) margins; spots large, oval, dark red (187A), on either side of each

nectary; brushmarks deep to moderate red (185A/B); nectaries white, tipped dark red (187A); pollen vivid reddish orange (33A); stigma dark red (59A). Fls 130 mm wide; tepals 67 × 33 mm, margins inrolling slightly at the widest point, tips slightly recurved. Lvs scattered, 100 × 13 mm. Stems 0.74 m (under glass), strong yellow-green (144A), with 7 or more fls. Lf-axils, basal margins of lvs, pedicels and buds with white hairs. Very early. (It is not known whether the seed parent is 'Tamara' of De Jong or 'Tamara' of Orehovs. 'Tamara' of Miroshniczenko is unlikely because it is in Div. VI.)

**'Lavendrina' VI(b/a-b)**

Parentage unknown

R: C. Yerex, REG: (1985)

Fls lavender, throat greenish white. Tepal-tips slightly recurved. Lvs scattered. Stems 1.5 m. July.

(Published in *Rex Bulb Farms Cat.*, 1968/69.)

**'Laveno' VIII(a/b)**

Parentage: seedling CM 95-21 × seedling W 93-4

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside moderate purplish pink (62B), midveins moderate purplish red (186B), throat pale purplish pink (65C); outside light purplish pink (62C), midribs and tepal-edges dark purplish pink (186C), midribs on outer tepals suffused with pale yellow (161C); spots and papillae absent; nectaries pale purplish pink (65C); pollen brownish orange (164A); stigma brilliant yellow-green (154C). Fls 180 mm wide; tepals 110 × 40-50 mm, margins smooth, tips recurved. Lvs scattered, 160 × 15 mm. Stems 1.1-1.3 m, green with darker markings, and with c.4 fls.

(*A longiflorum*/Asiatic (LA) hybrid.)

**'La Vie' VII(a/-)**

Parentage: 'Joy' × unnamed seedling

R: Vletter & Den Haan (1989), G: Vletter & Den Haan, N: Vletter & Den Haan (1996), I: Vletter & Den Haan (1996), REG: Vletter & Den Haan (1996)

Inside yellowish white (155D) suffused with strong purplish red (59D), throat 155D; outside with a very pale suffusion of strong purplish red (59D) on a yellowish white (155D) ground, midribs light yellow-green (150D), shading to strong yellow-green (144C) at top and base; spots dark red (59A) on basal part of each tepal; papillae brilliant yellow (8A) with a little dark red (59A), in the throat; nectaries strong yellow-green (144C); pollen strong brown (172B); stigma dark purple (79B). Fls 200 mm wide; tepals 115 × 35-55 mm, margins ruffled, tips recurved. Lvs scattered, 160 × 35 mm, dark green. Stems 0.9 m, pale green with a little darker marking, and with 4-6 fls.

**'Lavish Lady' I(b/-)**

Parentage: 'Edith Cecilia' × Preston Group

R: E. Robinson (c. 1962), N: E. Robinson (1966)

Fls light mauve with few spots. Stems 1-1.5m. July.

(Published in *ILR* (1969).)

**'Lavita' I(a/-)**

Parentage: 'Nutmegger' × 'Delphi'

R: Gebr. N. & B. Laan & Zn (1982), G: Gebr. N. & B. Laan & Zn (1984), N: Gebr. N. & B. Laan & Zn (1990), I: Gebr. N. & B. Laan & Zn (1990), REG: Gebr. N. & B. Laan & Zn (1991)

Inside vivid to brilliant yellow (12A/13B), changing to vivid yellow (14B), throat slightly suffused with brilliant to light greenish yellow (3B/C); outside vivid yellow (13A), midribs suffused with vivid to brilliant yellow (12A/B), the 'tube' suffused with strong yellow-green (144C); spots dark red (187A) in the centre of the basal part of each tepal; nectaries deep purplish red (187D); pollen moderate orange (167B). Fls 185 mm wide; tepals 90 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 15 mm, mid green. Stems 1 m, green, with c.9 fls. July (under glass).

**'Lavon' VIII(a-b/b-c)**

Parentage: seedling 819-1 × seedling 90-033-1

R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)

Inside light greenish yellow (5D), each tepals with a deep pink (50B) flame from top of nectary, midveins purple-red at base; outside light greenish yellow (5D) with some dark pink-red; spots and papillae present; nectaries green, yellow-green at top; pollen brown-red; stigma green with purple star. Fls 180 mm wide; tepals 137-144 × 40-60 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 160-195 × 30-40 mm, dark green. Stems 0.9-1.1 m, green with darker spots and stripes, and with 1-9 fls. Very late.

(An Orienpet (OT) lily.)

**'Lazalma' I(a-b/b)**

Parentage: unnamed hybrid ex Laan × unnamed hybrid ex Laan

R: Gebr. N. & B. Laan & Zn (1987), G: Gebr. N. & B. Laan & Zn (1989), N: Gebr. N. & B. Laan & Zn (1991), I: Gebr. N. & B. Laan & Zn (1994), REG: Gebr. N. & B. Laan & Zn (1996)

Inside light yellowish pink (29C), light orange (29B) at base; outside a little paler than light yellowish pink (29C); spots and papillae present; nectaries orange-pink; pollen red-brown; stigma violet. Fls 150 mm wide; tepal-margins slightly ruffled, tips slightly recurved. Lvs scattered, mid green. Stems 1.05 m, dark, with 5-6 fls (from 14/16 cm bulbs). Midseason.

**'L.B. Tuffery' VII(-/c)**

See *L. × parkmanii* 'L.B. Tuffery'.

**'Leading Lady' I(c/-)**

Parentage: Barber seedling 2 × 'Jubilation'

R: C. Robinson (1975), G: C. Robinson (1979), N: C. Robinson (1985), I: C. Robinson (1985), REG: C. Robinson (1985)

Fls light orange-yellow (24C); with minute streaks covering the centre half of fl.; nectaries light orange-yellow; pollen orange-brown. Fls 145 mm wide; tepals 70 × 40 mm, margins smooth, tips strongly recurved. Lvs

scattered, 105 × 5 mm. Stems 1.1 m, mid green, with c.20 fls. Early July.

**'Leandra' I(a/-)**

Parentage: 'Appleblossom' × 'Wattle Bird'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)

Inside intense rose-pink, with deeper, veined tepal-tips, tinted with apricot around nectaries, throat whitish; outside with brownish olive midribs; nectaries white-feathered; pollen orange. Fls 130 mm wide; tepals 65 × 35 mm, rigid, slightly recurved; pedicels 110 mm long, moderately spotted dark violet. Lvs scattered, 120 × 15 mm, glossy deep green, held horizontally, sparse. Stems 0.9 m, slender, dark green, slightly spotted brown above. Early July.

**'Leanne Marie' VII(b/c)**

Parentage unknown

G: B.G. Hayler (1982), N: B.G. Hayler (1986), REG: B.G. Hayler (1986)

Fls white, flushed with deep purplish pink (73A); spots sparse, lavender; nectaries light green; pollen orange-brown. Fls 190 mm wide; tepals 100 × 70 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 60 mm, mid green. Stems 1.5 m, light green, with c.12 fls. Feb. (Australia).

**'Lebensfreude' I(b/c-d)**

Parentage: Asiatic seedling × Asiatic seedling

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside pale yellowish pink (29D) tinged with soft pink, throat light yellowish pink (36C); outside light yellowish pink (36C); spots numerous, medium sized, dark purple (79A), on basal half of each tepal; nectaries large, deep light greenish grey (190C); filaments long, soft green at base, soft pink towards top; pollen moderate red (179A); style long, soft green; stigma deep purplish pink (54B). Fls 130 mm wide; tepals 80 × 32 mm, margins smooth, tips slightly recurved; pedicels dark violet. Lvs scattered, very numerous and densely packed on the stem, 100 × 15 mm. Stems 1.15 m, dark violet, with c.19 fls. Mid July. (Nomenclatural standard: colour print provided by registrant (WSY 0028910).)

**'Le Blanc' V(-/a)**

Syn. of *longiflorum* 'Shovav'.

**'Le Chic' VII(a/b)**

Parentage: sport from 'Joy'

G: Cebeco Lilies, Inc. (1996), N: Bloembollenbureau Cebeco (1998), I: Bloembollenbureau Cebeco (1999), REG: Bloembollenbureau Cebeco (2001)

Inside moderate purplish red (58A) on a white ground, midveins slightly darker, throat yellowish white (155D); outside moderate purplish red (58A) on a yellowish white (155D) ground, midribs light yellow-green (150D) at base, shading to strong yellow-green (144C) at top; spots deep purplish red (187D) on basal part of each tepal;

papillae deep purplish red (187D) and brilliant yellow (9C), in the throat; nectaries strong yellow-green (144B) surrounded by a brilliant yellow (9C) rim and fading into the midvein; pollen strong reddish orange (169A); stigma a little paler than moderate purple (79D). Fls 200 mm wide; tepals 120-130 × 40-50 mm, margins of outer tepals ruffled, tips recurved. Lvs scattered, 190 × 35 mm. Stems 0.9 m, green, with c.3-6 fls.

**'Leda' VIII(a-b/b)**

Parentage: seedling E 164-1 × seedling 90-045-8  
R: World Breeding B.V., N: World Breeding B.V. (2001),  
REG: World Breeding B.V. (2004)  
Inside pale yellow (20D), lighter towards tepal-tips, basal half of each tepal brilliant yellow (14C) in centre, midveins brilliant yellow (14C) at base; outside pale orange-yellow (19D); spots absent; papillae present; nectaries green; filaments pale green; pollen dark yellow-orange; style green; stigma purple. Fls 200 mm wide; tepals 155-160 × 36-63 mm, margins slightly to strongly ruffled, tips strongly recurved. Lvs scattered, 139-224 × 24-39 mm, dark green. Stems 1-1.2 m, green, with 1-9 fls. Late.  
(An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096397).)

**ledebourii (Baker) Boiss. IX(c/d)**

Fls creamy white, becoming greenish yellow; spots tiny, red or purple, towards base; pollen orange-red. Fls fragrant; tepals thick, 60-75 × c.13 mm, pointed. Lvs scattered, up to 120 × 20 mm. Stems to 1.2 m, green, with up to 5 fls. Azerbaijan, NW Iran.

**'Lednice' VI(-/-)**

Parentage: orange-flowered seedling from (Emerald Group × *henryi*) × *henryi*  
R: V. Strasser (1975), G: V. Strasser (1978), N: V. Strasser (1981), I: V. Strasser (1984), REG: V. Strasser (1986)  
Fls strong orange (25B), throat green. Fls 150 mm wide; tepals 110 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 19 mm, dark green. Stems 1.6-1.7 m, mid green marked red-brown, with c.22-27 fls. Late July.

**'Legacy' VI(b/b)**

Parentage: white-flowered trumpet × white-flowered bowl-shaped seedling  
R: C. Helsley (1980), G: C. Helsley (1985), N: C. Helsley (1989), I: Ozark Mountain Lilies, REG: C. Helsley (1989)  
Inside and outside white, throat yellow (the colour gradually blending into the centre of the tepals); spots absent; nectaries green; pollen golden brown. Fls 180 mm wide; tepals 130 × 30-50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 170 × 10 mm, mid green. Stems 1.5-2 m, light green with purple spots, with c.16 fls (including secondaries on lower pedicels). Late June.

**leichtlinii Hooker fil. IX(c/d)**

Fls yellow; spots purplish maroon; nectaries hairy; pollen

reddish brown. Buds usually white-hairy. Tepals 65-85 × 12-27 mm. Lvs scattered, up to 150 × 12.5 mm, dark green. Stems up to 1.2(-2) m, green, hairless or with sparse white hairs especially at lf-bases, and with 1-6 fls. Japan.

**leichtlinii 'Akatsuki' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Akatsuki'.

**leichtlinii 'Alpha' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Alpha'.

**leichtlinii 'Beta' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Beta'.

**leichtlinii 'Delta' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Delta'.

**leichtlinii 'Fuji Hirado' IX(c/d)**

Unaccepted spelling of *leichtlinii* 'Fuji Hirado'.

**leichtlinii 'Fuji Hirato' IX(c/d)**

Parentage: selection from *leichtlinii*  
Fls orange-red; spots black.  
(Unaccepted spelling: 'Fuji Hirado'. Raised in Japan before 1898.)

**leichtlinii 'Gamma' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Gamma'.

**leichtlinii 'Grandiflorum' IX(c/d)**

Given as a parent of 'Hirakoma'. No further details.

**leichtlinii var. maximowiczii (Regel) Baker IX(c/d)**  
FCC 1872

Fls orange-red to cinnabar-red; spots purplish brown, profuse except at tepal-tips; nectaries papillate. Fls up to 12 per stem. July to Sept. Japan, Korea, eastern former USSR.

Syn.: *maximowiczii*.

**leichtlinii var. maximowiczii 'Akatsuki' IX(c/d)**

Parentage: selection from *leichtlinii* var. *maximowiczii*  
S: Y. Yamada, N: Y. Yamada (1951)  
Fls orange; spots absent.  
(Published in *ILR* (1982) as 'Akatsuki'.)

**leichtlinii var. maximowiczii 'Alpha' IX(c/d)**

Parentage: selection from *leichtlinii* var. *maximowiczii*  
R: USDA (c. 1951), N: USDA  
Fls orange-red. Stems up to 1.2 m. Early flowering.  
Syn.: *maximowiczii* 'Alpha'.  
(Published in *Strawberry Hill Cat.*, 1952/53.)

**leichtlinii var. maximowiczii 'Beta' IX(c/d)**

Parentage: selection from *leichtlinii* var. *maximowiczii*  
R: USDA (c. 1951), N: USDA  
Later-flowering than *leichtlinii* 'Alpha', and with more fls on 1.9-2.2 m stems.  
Syn.: *maximowiczii* 'Beta'.  
(Published in *Strawberry Hill Cat.*, 1952/53.)

**leichtlinii var. maximowiczii 'Delta' IX(c/d)**

Parentage: selection from *leichtlinii* var. *maximowiczii*  
R: USDA (c. 1951), N: USDA  
Later-flowering than *leichtlinii* 'Alpha', 'Beta' and 'Gamma'.

Syn.: *maximowiczii* 'Delta'.

(Published in *Strawberry Hill Cat.*, 1952/53.)

**leichtlinii var. maximowiczii 'Gamma' IX(c/d)**

Parentage: selection from *leichtlinii* var. *maximowiczii*  
Flowers two weeks later than *leichtlinii* 'Beta'. Fls darker orange-red. Stems 1.5 m.

Syn.: *maximowiczii* 'Gamma'.

(Published in *Strawberry Hill Cat.*, 1952/53.)

**leichtlinii var. maximowiczii 'Grandiflorum' IX(c/d)**

Given as a parent of 'Hagoromo'. No further details.

**leichtlinii var. maximowiczii 'Motomurayuri' IX(c/d)**

Parentage: selection from *leichtlinii* var. *maximowiczii*  
(Raised in Japan. No further details.)

**leichtlinii var. maximowiczii 'Praecox' IX(c/d)**

Parentage: selection from wild *leichtlinii* var. *maximowiczii*

Fls paler than in *leichtlinii* itself. Stems 0.15-0.4 m. June.  
(Published in *Wada Cat.*, 1937.)

**leichtlinii var. maximowiczii 'Unicolor' IX(c/d)**

Parentage: said to be a sport from *leichtlinii*  
Fls unspotted. Lvs broader and sparse than var. *maximowiczii* itself.

(Found in cultivation in Japan (Hokkaido) before 1966.  
Obtained by Oregon Bulb Farms from Edgar Kline and used as a parent of several cvs. Very virus-tolerant.  
Published in *LYB* 30: 59 (1967).)

**leichtlinii var. maximowiczii 'Wadai Flore Pleno' IX(c/d)**

Parentage: selection from *leichtlinii* var. *maximowiczii*  
N: K. Wada (c. 1936), I: K. Wada (c. 1936)

Fls double.

(Published in *Wada Cat.*, 1936.)

**leichtlinii var. maximowiczii 'Wadai Magnificum' IX(c/d)**

Parentage: selection from *leichtlinii* var. *maximowiczii*  
N: K. Wada (c. 1936), I: K. Wada (c. 1936)

Fls very large, with overlapping tepals.

(Published in *Wada Cat.*, 1936.)

**leichtlinii var. maximowiczii 'Wada's Variety' IX(c/d)**

Parentage: selection from *leichtlinii* var. *maximowiczii*  
Fls rich salmon, spotted deep red-purple.

Syn.: *maximowiczii* 'Wada's Variety'.

(Published in *Constable Cat.* 1958/59: 78.)

**leichtlinii 'Motomurayuri' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Motomurayuri'.

**leichtlinii 'Orange Red' IX(c/d)**

Parentage: selection from *leichtlinii*

Fls orange-red.

(Originated from Yokohama Nursery Co. Ltd before 1899.)

**leichtlinii 'Praecox' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Praecox'.

**leichtlinii 'Ungeri' IX(c/d)**

Parentage: *leichtlinii* self-pollinated

Red-flowered form of *leichtlinii*.

(Published in *LYB* 11: 81 (1947). Original form given to G. Errey by Alfred Unger before 1918.)

**leichtlinii 'Unicolor' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Unicolor'.

**leichtlinii 'Wadai Flore Pleno' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Wadai Flore Pleno'.

**leichtlinii 'Wadai Magnificum' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Wadai Magnificum'.

**leichtlinii 'Wada's Variety' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Wada's Variety'.

**'Leilani Llenos' I(a/-)**

Parentage: 'Connecticut King' × ('Rosabelle' × 'Victoria Meyers')

R: N.F. Bieniasz (1979), N: N.F. Bieniasz (1984), REG: N.F. Bieniasz (1984)

Inside deep pink (51C), throat light orange-yellow (16C); outside deep pink (51C), midribs green; spots very few; nectaries frosty; pollen moderate reddish orange (173B). Lvs wide, dark green. Stems 0.85 m.

**Leinenkugel Group I(b-c/-)**

Parentage: 'August Gold' × unknown

R: S.R. Kaul (1990), G: S.R. Kaul (1993), N: S.R. Kaul (1996), I: S.R. Kaul (1996), REG: S.R. Kaul (1996)

Colour ranging from strong, clear, bright yellow to burnt orange, shaded red, and from strong orange to soft orange, some with greenish throat; all tan at base outside; unspotted to heavily spotted; nectaries self-coloured to conspicuous and green; pollen deep rust-orange. Tepals vary from slightly to strongly recurved. Stems tall, often downy, usually with bulbils, all with secondary stems and a long infl. of numerous, well-spaced fls. Mid to late season.

**'Leinenkugel Autumn' I(c/-)**

Parentage: 'August Gold' × unknown

R: S.R. Kaul (1990), G: S.R. Kaul (1993), N: S.R. Kaul (1996), I: S.R. Kaul (1996), REG: S.R. Kaul (1996)

Inside strong orange, throat with a very slight green tinge; outside tannish green at base, shading through orange to green at tepal-tips; spots many, tiny to small, maroon,

deep in the throat, grading to fewer, larger spots to within 25 mm of tepal-tips; nectaries slightly greenish; filaments and style light orange; stigma and anthers deep rust-brown; pollen deepest rust-brown. Tepals 88 × 38 mm, margins smooth, tips strongly recurved. Lvs scattered, 155 × 15 mm. Stems 1.6 m, mid green to deep brown, downy, with a long, open infl. of 14 or more fls. Mid to late season.

#### 'Leinenkugel Red' I(c/-)

Parentage: 'August Gold' × unknown

R: S.R. Kaul (1990), G: S.R. Kaul (1993), N: S.R. Kaul (1996), I: S.R. Kaul (1996), REG: S.R. Kaul (1996)

Inside deep red in centre, shading to soft orange-red and to light red at tepal-tips, throat greenish yellow; outside tan at midribs, flaring out to reddish tan; spots absent; nectaries green to yellow (producing a prominent 'star'); filaments shading from reddish tan to red and yellow; pollen dark gold; style shading from reddish tan to red and to yellow above ovary; stigma deep brown. Tepals 80 × 32 mm, margins very ruffled, tips slightly recurved. Lvs scattered, 185 × 18 mm, mid to dark green. Stems 1.5 m or more, mid to dark green, with c.26 fls (including secondaries) and bulbils. Mid to late season.

#### 'Leine-tiger' I(a/c)

Parentage: ('Pink Champagne' × unknown) × 'Spinnentiger'

R: W. Reich (1989), N: W. Reich, REG: W. Reich (1990)

Fls light yellow; spots brownish, on basal half of each tepal. Fls 140 mm wide; tepals slightly recurved; pedicels long. Stems 1.4 m, dark, with c.15 fls and some bulbils. Mid July.

#### 'Lelde' III(c/d)

Parentage: *monadelphum* × *candidum* 'Sultan Zamback'

R: V.P. Orehovs, G: V.P. Orehovs (1981), N: V.P. Orehovs (1981)

Fls yellowish white; spots absent. Fl. form similar to *monadelphum*.

(Epithet given to two similar seedlings.)

#### Lemgo Group VIII(b-c/b-d)

Parentage: yellow-flowered Trumpet × ('Black Beauty' × (*auratum* × *henryi*))

R: H. Dierssen (1997), N: H. Dierssen, I: H. Dierssen, REG: H. Dierssen (2004)

Inside deep crimson, tepal-margins and tips pale beige-apricot; outside beige, midribs green with mahogany speckles; spots dash-like, raised, dark crimson, on a third of each tepal; nectaries deep yellow-green; pollen chocolate-brown; stigma violet-red. Fls 155 mm wide; tepals 140 × 42 mm, strongly reflexed, margins ruffled; pedicels 120 mm, strongly spotted. Lvs scattered, 85 × 18 mm, slightly glossy dark green. Stems 1.15 m, moderately thick, strongly brown-speckled. Mid July. (Oriental (OT) lilies.)

#### 'Lemonade' VI(-/d)

Parentage: 'T.A. Havemeyer' × unknown

R: T. Barry, N: P.M. Byam (1944), I: C.A. Best

Fls lemon-yellow; papillae few, red-tipped. Fls 150 mm wide. Stems 2 m, with c.13 fls. Aug.

(Published in *Greenock Farms Cat.*, 1955.)

#### 'Lemon and Lime' VI(c/-)

Parentage unknown

R: unknown, G: Kesswald Park Nursery, N: Kesswald Park Nursery (1991), I: Kesswald Park Nursery (1991), REG: Kesswald Park Nursery (1991)

Inside vivid yellow (9A), tepal-edges light yellow (10C), throat vivid yellow (12A); outside vivid yellow (9A); spots absent; nectaries strong yellow-green (144A); pollen brownish orange (165B). Tepals narrow, more-or-less oblong, margins smooth, tips strongly recurved. Lvs scattered. Stems 2 m, with c.7 fls. Dec. to Jan. (Australia).

#### Lemon Ball Group I(c/d)

Parentage: *davidii* var. *wilmottiae* × unknown

R: R.W. Bemis, N: R.W. Bemis, I: R.W. Bemis, REG: R.W. Bemis (1985)

Fls shades of yellow and lemon. Stems 1.2-1.8 m. July. (Published in *Blackthorne Gardens Cat.*, 1966/67; 'Deep-Freeze' *Lilies Cat.*, 1966/67: 3.)

#### 'Lemon Charm' I(a/c)

Parentage: 'Reinesse' × 'Connecticut King'

R: J. Vanheusden (1995), G: J. Vanheusden (1997), N: J. Vanheusden (1997), I: J. Vanheusden (1997), REG: J. Vanheusden (1997)

Inside very light lemon-yellow, midveins slightly darker; outside white/lemon; spots absent; nectaries light green; pollen light orange; stigma red-orange. Fls c.120 mm wide; tepals c.60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, c.60 × 10 mm, dark green. Stems 0.5 m, dark green, with 10-15 fls. Mid July.

#### 'Lemon Chiffon' VI(-/d)

Parentage: 'El Greco' × gold-flowered seedling from 'Thunderbolt'

R: W.T. Craig, G: W.T. Craig, N: W.T. Craig (1987), I: Ozark Mountain Lilies, REG: C. Helsley (1989)

Inside brilliant yellow (9C), the centre of each tepal vivid yellow (9B), throat vivid yellow (9B); outside yellow; spots absent; papillae in centre of fl.; nectaries green; pollen golden brown. Fls 160 mm wide; tepals 180 × 30-45 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 160 × 30 mm, mid green. Stems 1 m, green, with c.12 fls (including secondaries on lower pedicels). Mid July.

#### 'Lemon Cup' VI(-/c)

Parentage: selection from Aurelian Group

S: J. de Graaff (pre 1956), N: J. de Graaff

Fls lemon-yellow. Stems 1-1.2 m. July to Aug.

(Published in *Walter Marx Gardens Cat.*, 1956/57.)

#### 'Le Monde' VIII(a-b/b)

Parentage unknown

REG: World Breeding B.V. (2003)

Outside vivid yellow (13A) at base, becoming brilliant yellow (10A) towards tepal-tips; outside brilliant yellow

(10A); spots absent; papillae few; nectaries green; pollen orange-brown; stigma green. Tepal-margins slightly ruffled, tips strongly recurved. Stems tall, with some dark markings, fls few. Midseason.  
(An Oripenet (OT) lily.)

**'Lemon Delight' I(a/-)**

Parentage: (Panamint Group × 'Ambrosia') × ('August Gold' × 'Connecticut Dream')

R: Hartle-Gilman Gardens (1982), G: Hartle-Gilman Gardens (1984), N: Hartle-Gilman Gardens (1990), I: Hartle-Gilman Gardens (1990), REG: Hartle-Gilman Gardens (1990)

Pale yellow-green (4D), tepal-edges and tips brilliant yellow (7A), throat pale yellow-green (4D); outside brilliant yellow (7A); spots absent; nectaries light green; pollen dark brown. Tepals 90 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 0.75 m, mid green, with 8-12 fls. Midseason.

**'Lemon Drop' I(c/-)**

Parentage unknown

R: W.C. Horsford (pre 1952), N: W.C. Horsford  
Similar to 'Maxwill', but with yellow fls. Stems 1 m. July.  
(Published in *Horsford Cat.*, 1952.)

**'Lemon Fair' VI(-/a)**

Parentage: *L. × aurelianense* × unknown

N: F.M. Abbey, I: F.M. Abbey

Fls lemon-yellow.

(Published in *LYB NALS* 10: 88 (1957).)

**'Lemonflare' VI(b/b)**

Parentage: unnamed seedling ex Foxwell × unnamed seedling ex Yerex

R: D. Foxwell, N: D. Foxwell (1975), REG: D. Foxwell (1975)

Fls vivid yellow (13A) throughout; buds green.

(Published in *Lilies and other Liliaceae*, 1975: 93.)

**'Lemon Glow' I(a/d)**

Parentage: unnamed Preston seedling × unnamed seedling ex Preston

R: E. Robinson (c. 1961), N: E. Robinson

Fls bright lemon-yellow. Lvs dark green. Stems 1 m. July.  
(Published in *ILR* (1969).)

**'Lemon Ice' VII(b/b)**

Parentage: *L. × parkmanii* 'Frosty Morn' × 'Mount Fuji'

R: J. Hoell (1982), G: J. Hoell (1986), N: J. Hoell (1988), REG: J. Hoell (1988)

Inside tepal vivid yellow-green (154A) centre, tips and edges pale yellow-green to greenish white (155A/C), throat brilliant yellow-green (150A); outside light yellow-green (154D); spots lavender on three-quarters of each tepal; nectaries green; pollen red. Fls 160 mm wide, scented; tepals 100 × 50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 180 × 40 mm, dark green. Stems 1.5 m, mid green, with c.15 fls. Jan. (Tasmania).

**'Lemon Jade' I(a/d)**

Parentage: ('Sovereign' × unknown) × ('Sovereign' × unknown)

R: E. Robinson (c. 1956), N: E. Robinson

Fls lemon-yellow, with greenish tinge; spots present.

Stems 1 m. July.

**'Lemon King' Div. ?**

Parentage unknown

R: J.E.H. Stooke, N: J.E.H. Stooke

Fls lemon-yellow, spotted brown.

(Published in Woodcock & Stearn, *Lilies of the World*, 249 (1950).)

**'Lemon Kiss' I(a/-)**

Parentage: 'Impala' × ('Mont Blanc' × Longistar Group)

R: E.E. Fox (1987), G: E.E. Fox (1989), N: E.E. Fox

(1991), I: Fox Lily Ranch (1993), REG: E.E. Fox (1992)

Inside with basal two-thirds of each tepal lemon-yellow, apical third paling from lemon to white at the tip, throat pale yellow or cream; outside yellow, midribs pronounced, brown; spots few, quite small, maroon, in the throat; nectaries lime-green, frosted white; pollen gold. Fls 140 mm wide; tepals 65 × 35 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1 m, brown shading to green, with 16-22 fls in a symmetrical, racemose infl. Early July.

**'Lemon Lady' I(c/-)**

Parentage: *davidii* × unknown

R: F.L. Skinner (pre 1951), N: F.L. Skinner, I: F.L.

Skinner

AM 1960, HC 1966

Fls vivid yellow (9A), spotted black at base. Stems 1-1.2 m. July.

(Published in *Skinner Nursery Cat.*, 1951.)

**'Lemon Lode' I(b/-)**

Parentage: ('Sovereign' × unknown) × ('Sovereign' × unknown)

R: E. Robinson (c. 1956), N: E. Robinson

Fls deep lemon-yellow, heavily orange-veined outside.

Tepals slightly reflexed. Stems 1 m. July.

(Published in *ILR* (1969).)

**'Lemon Meringue' VII(-/d)**

Parentage unknown

R: L. Woodriff (1955), G: H.J. & R.L. Strahm (1962),

N: R.L. Strahm (1979), I: Strahm's Lilies, Inc., REG: Strahm's Lilies, Inc. (1983)

Inside white, throat strong yellow-green (143C); outside white, outer tepals tinged with pale pink; spots small, dark red (53B) on all but tepal-tips; papillae yellow, around the throat; nectaries light greenish yellow (8B); pollen orange. Fls 150 mm wide; tepals 125 × 75 mm, margins smooth, tips strongly recurved. Lvs scattered, 125 × 50 mm, dark green. Stems up to 1.5 m, green, with 4-10 fls. Late July.

**'Lemon Peal' I(a/-)**

Parentage unknown

R: J. Petruske (pre 1970), G: J. Petruske, N: J. Petruske  
Inside vivid yellow (9A), throat light greenish yellow (8B); outside vivid yellow (9B); spots tiny, magenta-purple on a quarter of each tepal; nectaries green; pollen moderate orange (167A). Fls 130 mm wide; tepals 86 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 80 × 11 mm, mid to dark green. Stems 0.7 m, mid green, with c.7 fls. July.

**'Lemon Pixie' I(a/b)**

Parentage: Pastel Group clone OH 6 × ('Connecticut Lemonglow' × 'Red Carpet') selections  
R: E.A. McRae (1977), G: Oregon Bulb Farms, Inc. (1980), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1986)

Fls bright yellow; spots numerous, raised, oxblood-red; nectaries green; pollen soft golden yellow. Fls 120-150 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 0.3-0.4 m, light green, with 6-20 fls. Mid to late June.

**'Lemon Pudding' I(b/d)**

Parentage: tetraploid, yellow-flowered seedling × ('Ivory Sands' × 'Donna Sylvester')

R: E.E. Fox (1991), G: E.E. Fox (1994), N: E.E. Fox (1996), I: Fox Lily Ranch (2002), REG: E.E. Fox (2001)  
Inside brilliant greenish yellow (6A), throat brilliant greenish yellow (6C); outside brilliant greenish yellow (6C); spots absent; nectaries brilliant greenish yellow (6C), frosted white; pollen moderate reddish brown (174A); stigma dark red (183A). Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 100 × 7 mm. Stems 1 m, mid green, with 12-16 fls. Mid July.  
(Epithet suggested by colour of fls.)

**'Lemon Queen' I(b/d)**

Parentage: 'Grace Marshall' × seedling L. 37-538-1  
R: C.F. Patterson (c. 1945), N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1952)  
Fls lemon-yellow; spots deep brown. Stems 1.4 m, with up to 35 fls. Early July.  
(Published in *LYB* 19: 64 (1956).)

**'Lemon Queen' II(-/-)**

See *L. × dalhansonii* 'Lemon Queen'.

**Lemon Royal Group VI(-/b)**

Syn. of Lemon Royal Bowls Group (of Bemis)

**Lemon Royal Bowls Group VI(-/b)**

Parentage: *henryi* × unknown  
R: R.W. Bemis, N: R.W. Bemis, I: R.W. Bemis, REG: R.W. Bemis (1984)  
Fls yellow; spots absent. Pollen orange-red. Tepal-margins smooth, tips strongly recurved. Lvs scattered. Stems 1.3-1.6 m. July.  
Syn.: Lemon Royal Group.  
(Published in *'Deep-Freeze' Lilies Cat.*, 1978/79: 4.  
Included in *ILR* (1982) as Lemon Royal grex.)

**Lemon Royal Bowls Group VI(b/b)**

Parentage: selections from Royal Group  
S: Blackthorne Gardens (pre 1963), N: Blackthorne Gardens  
Fls lemon-yellow throughout; spots absent; nectaries lemon-yellow; pollen orange-red. Tepal-margins smooth, tips strongly recurved. Lvs scattered. Stems 1.2-1.5 m. July.  
(Almost certainly the same as Lemon Royal Bowls Group of R.W. Bemis (of Blackthorne Gardens).)

**'Lemon Sherbert' I(a/-)**

Parentage unknown  
R: J. Wadekamper (1982), G: J. Wadekamper (1984), N: J. Wadekamper (1992), I: Borbeleta Gardens (1992), REG: J. Wadekamper (1993)  
Fls light yellow (11B), throat green; spots absent; nectaries white; pollen tan. Tepals 75 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 23 mm, mid green. Stems 1 m, mid green, with 8-10 fls. Midseason.  
(Published in *Borbeleta Gardens Cat.*, 1992.)

**'Lemon Spice' II(-/-)**

Parentage: *martagon* var. *album* × yellow-flowered seedling  
R: D. Dale (1983), G: D. Dale (1988), N: D. Dale (1991), I: Parkland Perennials (1994), REG: D. Dale (1993)  
Inside lemon-yellow, shading to deeper bright yellow at tepal-margins, throat lemon-yellow; outside white, midribs lemon, tepal-edges deep yellow; spots sparse, tiny, in a band in the middle of each tepal; nectaries cream; pollen rust-coloured. Fls 75 mm wide; tepals 45 × 17 mm. Lvs whorled, 140 × 47 mm, mid green, somewhat ruffled. Stems 1 m, dark green, with 18-24 fls. Early July.

**'Lemon Tree' I(a-b/-)**

Parentage: unnamed seedling × unnamed seedling  
R: Hoffgaarde B.V. (1992), G: Hoffgaarde B.V., N: Hoffgaarde B.V. (1994), I: Hoffgaarde B.V. (1996), REG: Hoffgaarde B.V. (1998)  
Inside light greenish yellow (6D) ageing to pale greenish yellow (9D); outside pale greenish yellow (9D), tepal-margins light greenish yellow (6D); spots and papillae present; nectaries yellow-green; pollen brown; stigma purple-red. Tepals 90 × 35 mm, margins a little waved, tips slightly recurved. Lvs scattered, 110 × 30 mm, mid green. Stems 1.4 m, green with dark spots and stripes, and with 4-6 fls. Midseason to late.  
Trade designation: HOFFRICA<sup>®</sup> LEMON TREE.

**'Léniga' I(a/b)**

Parentage unknown  
R: J. Vasarietis (1991), G: J. Vasarietis (1994), N: J. Vasarietis (1997), I: J. Vasarietis (1997), REG: J. Vasarietis (2001)  
Inside deep purplish pink (55A), throat pale purplish pink (55D); outside deep purplish pink (55A) on tepal-edges, strong purplish pink (55B) around midribs; spots sparse, medium sized, dark, on basal quarter of each

tepals; nectaries white; pollen orange brownish; stigma pale greyish. Fls 150 mm wide; tepals 80 × 45 mm, margins smooth, tips slightly recurved; pedicels long. Lvs scattered, 120 × 8 mm. Stems 0.95 m, green, with c.15 fls. Early July.

(Published in *Lilium Balticum Lily Register*, 2000. Lēnīgā is Latvian for a person who is gentle, mild, meek or soft. Nomenclatural standard: colour print provided by registrant (WSY 0030813).)

#### **‘Lenka’ I(a/b)**

Parentage: ‘Connecticut King’ × ‘Karmen’

R: Šlechtitelaká Stanice Heřmanův Městec, G: Šlechtitelaká Stanice Heřmanův Městec, REG: Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside orange-red, centre red-orange to orange; spots small, sparse but conspicuous, on a third of each tepal. Fls 110-144 mm wide; tepals overlapping, margins smooth, tips slightly recurved. Lvs 65-90 × 12-15 mm, dark green. Stems 0.5-0.7 m, green mottled red-brown, darker at base, with 6-12 fls. Late June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1991. The pollen parent is probably ‘Karmen’ of V. Jošt.)

#### **‘Lennox’ I(a/-)**

Parentage unknown

R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V., REG: Hoff Quality First (1993)  
AGM 2002

Inside and outside yellowish white (155D); midribs brilliant greenish yellow (151D) becoming darker towards top, outer tepals tipped dark red (183A); spots few, dark red (187A); pollen dark reddish orange (175C); stigma dark red (187B). Fls 190 mm wide; tepals 100 × 48 mm. Lvs scattered, 125 × 17 mm, dark green. Stems 0.59 m, mid green with darker markings, and with c.5 fls.

#### **‘Lenora’ I(a-b/b)**

Parentage: ‘Tetra Gloria’ × seedling 3219-OJ

R: De Jong Beheer B.V. (1995), G: De Jong Lelies Holland B.V. (1997), N: De Jong Beheer B.V. (1999), I: De Jong Lelies Holland B.V. (1999), REG: De Jong Lelies Holland B.V. (2000)

Inside vivid orange (28A), throat brilliant orange (25C); outside brilliant orange (29A), tepal-edges vivid orange (28A), midribs brownish orange (164A); spots absent; papillae few, in the throat; nectaries white-hairy; pollen moderate reddish brown (166B); stigma dark red (187B). Fls 170 mm wide; tepals 100 × 50 mm, margins smooth, tips recurved. Lvs scattered, 140 × 25 mm. Stems 0.8-1.1 m, green with a little darker marking, and with c.5-7 fls. June.

#### **‘Leo’ I(a/-)**

Parentage: (yellow-flowered *lancifolium* hybrid ex Slate × ‘Connecticut Queen’) × yellow-flowered selection from (‘Stroinaia’ × ‘Scamp’)

R: Columbia-Platte Lilies (1977), G: Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1988), I:

Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Inside vivid yellow (9A), throat vivid yellow (9A/B); outside vivid yellow (9A/B) overlaid with plum giving a very dark bronze effect; papillae small, usually uncoloured, on basal third of each tepal; nectaries yellow; pollen strong to moderate orange (168B/C). Tepals 60-90 × 25-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-180 × 20-25 mm, dark green overlaid with plum. Stems 1.25-1.8 m, very dark plum-bronze to black, with 7-20 fls. Late July.

#### **‘Leonard Joerg’ I(a/b)**

See *L. × maculatum* ‘Leonard Joerg’.

#### **‘Leonard Messel’ VI(-/-)**

See *L. × aurelianense* ‘Leonard Messel’.

#### **‘Leonora’ VIII(a-b/b)**

Parentage: yellow-flowered Div. VI trumpet seedling × ‘Rubinstern’

R: P. Geiser (1983), G: P. Geiser (1985), N: P. Geiser (1987), I: P. Geiser (1987), REG: P. Geiser (1987)

Inside brilliant yellow (13B); outside brilliant yellow (13B) and moderate red (180B); heavily spotted moderate reddish brown (174A) on three-quarters of each tepal; nectaries vivid reddish orange (34B); pollen dark reddish orange (175C). Fls 130 mm wide, unscented; tepals 80-90 × 15-19 mm, margins smooth, tips slightly recurved; filaments whitish at first, becoming red. Lvs scattered, 100-120 × 12-15 mm, dark green. Stems 0.8-0.9 m, dark greyish reddish brown (200A), with 5-9 fls, and bulbils. July to Aug. A sterile, or sometimes partly fertile, diploid.

#### **‘Leopard’ I(-/-)**

Parentage: selection from Egmont Group

S: R.E. Harrison (pre 1970), N: R.E. Harrison, I: R.E. Harrison

Inside soft lemon; spots brownish maroon. Stems 0.6-1 m.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cultivar Group.)

#### **Leopard Group IV(-/-)**

See *L. × burbankii* Leopard Group.

#### **‘Leopoldovich’ I(-/-)**

Misspelling of ‘Leopoldovič’.

#### **‘Leopoldovič’ I(-/-)**

Parentage: *dauricum* × unknown

R: V.P. Orehovs (pre 1960), N: V.P. Orehovs

Fls red, centre orange-gold; spots large, dark; pollen orange-red. Fls 150 mm wide. Tepal-tips slightly reflexed. Stems up to 1.5 m. June to July.

(Published in *LYB NALS* 15: 101 (1962) and included in *ILR* (1982) as ‘Leopoldovich’ which is a misspelling.)

#### **‘Lepanto’ VII(a/b)**

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2003), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside light purplish pink/very pale purple (73C/D), tepal-margins light purple (75A), throat greenish white (155C); outside with inner tepals very pale purple/light purplish pink (69C/73C), margins vivid reddish purple (74A), midribs strong yellow-green (144B) at base, changing into deep purplish pink (73A), outer tepals dark/moderate purplish pink (186C/D), dark purplish pink (186C) along midribs, midribs strong yellow-green (144B) at base and top, in between moderate orange (170C); spots absent; papillae white and very pale purple (73D); nectaries strong yellow-green (144B); pollen strong reddish orange (169A); stigma moderate/very pale purple/(79D/84D). Fls 275 mm wide; tepals 165-172 × 54-76 mm, margins ruffled, tips recurved. Lvs scattered 205 × 36 mm, dark green. Stems 1.2 m, light green with darker markings, and with c.4 fls.

#### 'Leprechaun' I(b/-)

Parentage: 'Fuchsia Lady' × unknown

R: J.C. Erickson (pre 1975), N: J.C. Erickson, REG: J.C. Erickson (1976)

Fls mauve with darker spots. Stems 1 m. July.  
(Published in *Lilies and other Liliaceae*, 1976: 91.)

#### 'Le Rêve' VII(a-b/b)

Syn. of 'Joy'.

#### 'Lesana' VI(b/a)

Parentage: *regale* 'Royal Gold' × unknown

R: B. Mičulka (1986), N: B. Mičulka, REG: B. Mičulka (1987)

Inside rich gold shaded greenish, tepal-edges pinkish, throat greenish; outside greenish, midribs mahogany-red; pollen brown. Fls 145 mm wide; tepals 135 × 51 mm, recurved; pedicels dark-dotted. Lvs 110 × 10 mm, dark green. Stems 1.4 m, violet-dotted. Mid July.

#### 'Lesgor' I(a/-)

Parentage: 'Gran Paradiso' × seedling 85-63-53

R: World Flower B.V. (1991), G: World Flower B.V. (1993), N: World Flower B.V. (2000), I: World Flower B.V. (2000), REG: World Flower B.V. (2000)

Inside vivid/strong reddish orange (32A/169A), a little paler at base, midveins red near the nectaries; outside vivid/strong reddish orange (32A/169A), paler at base; spots absent; some papillae present; nectaries red, with greenish orange-red at base; pollen orange-red; stigma purple. Fls 150 mm wide; tepals 80 × 45 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 25 mm. Stems 1.4 m, green with dark spots and stripes, and with c.8 fls. Early to midseason.

#### 'Leslea Irene' I(a/b)

Parentage unknown

R: unknown, G: Hartle-Gilman Gardens, N: Hartle-Gilman Gardens, I: Hartle-Gilman Gardens, REG: Hartle-Gilman Gardens (1996)

Inside a blend of orange/orange-yellow (25A/D), throat

green to orange; outside brilliant orange (25C); spots absent; nectaries slightly green-frosted; pollen rust-red. Tepals 88 × 42 mm, margins smooth, slightly recurved, more so at tips. Lvs scattered, 130 × 20 mm, dark green. Stems 1 m, yellow-green, with c.11 fls. Midseason.

#### 'Lesley Kaye' VI(-/a)

Parentage unknown

R: unknown (c. 1966), G: R.F. Nelson (c. 1970), N: R.F. Nelson (1984), I: R.F. Nelson, REG: R.F. Nelson (1984)

Inside brilliant yellow (14C); outside moderate red (180C); spots absent; nectaries light green; pollen orange. Tepals 100 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 70-80 × 12-15 mm, dark green. Stems 1.2 m, green heavily marked with brown, with 10-12 fls. Jan. (Australia).

(Grown from Australian Liliium Society seed.)

#### 'Leslie Woodriff' VIII(b-c/d)

Parentage: 'Tetra Black Beauty' × 'Tetra White Henry'  
R: R.J. Griesbach, G: R.J. Griesbach, N: R.J. Griesbach (1987), I: Borbeleta Gardens (1987), REG: Borbeleta Gardens (1988)

Inside with most of tepal-surface cherry-red, tips and margins white, throat with prominent nectaries surrounded by yellow; outside green/red; papillae numerous, dark; nectaries green; pollen dark brown. Tepals 120 × 70 mm, margins slightly ruffled, tips distinctly recurved. Lvs scattered, 90 × 50 mm, dark green. Stems 1.5 m, dark green, with 12-15 fls. July. Tetraploid.

(Published in *Borbeleta Gardens Cat.*, 1987.)

#### 'Lesnaia Skazka' I(b/-)

Parentage: 'Nochka' × 'Sniegurochka'

R: B.P. Guzhavin, N: B.P. Guzhavin (1981)

Fls pale bronze, throat yellow-green. Pollen brown. Stems up to 1.2 m, with bulbils.

(Unaccepted spelling: 'Lesnaya Skazka'.)

#### 'Lesnaya Skazka' I(b/-)

Unaccepted spelling of 'Lesnaia Skazka'.

#### 'Lesterina' IX(b/a)

See *regale* 'Lesterina'.

#### 'Letaba Hybrid' I(-/l)

Parentage: 'Maxwill' × *L. × hollandicum*

R: S.V. Gilkison, N: S.V. Gilkison

Bulb sent to F.C. Stern by the raiser. No further details.

#### 'L'Été Orange' I(a/-)

Parentage: ('Sinai' × *dawricum*) × 'Gran Paradiso'

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside vivid reddish orange (32A), stronger coloured towards tepal-tips and suffused light orange (29B) around nectaries; outside vivid reddish orange (32A), midribs strong orange (26B); spots dark red (187A), in the throat;

papillae in the throat; pollen reddish orange (32A); stigma dark red (187A). Fls 180 mm wide; tepals 90 × 30-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 1.5 m, green, with c.8 fs. June.

**'Letkis' I(a/b)**

Parentage: 'Hawaiian Punch' × 'Wattle Bird'  
R: B. Mičulka (pre 1988), N: B. Mičulka, REG: B. Mičulka (1988)

Inside pale apricot-beige, tepal-tips and throat paler, deeper apricot over nectaries; outside white-apricot, midribs greenish; spots sporadic, tiny, dark brown-purple, in the throat; papillae few; nectaries white-granulated; pollen orange-brown; stigma dark purple. Fls 115 mm wide; tepals 85 × 35 mm, margins slightly waved, tips moderately recurved; pedicels 85 mm long, spotted violet-brown, with some secondary buds. Lvs scattered, 110 × 13 mm, slightly glossy dark green. Stems 0.9 m, silver-violet. Early July.

**'Letnii Khorovod' I(b-c/c)**

Parentage unknown  
R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1992)  
Fls smoky pink. Fls 130-140 mm. Stems 1.2-1.25 m, with 15-20 fs. July.  
(Published in M.F. Kireeva, *Lilii*, 47 (2000).)

**'Letuška' I(a/b)**

Parentage: ('Rusalka' (of Mičulka) × 'Bianca') × ('Orion' × ('Parfait' × 'Wattle Bird'))

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside pale beige-apricot, tepal-tips paler; outside paler, midribs pinkish; spots small, dark brown, on two-fifths of each tepal; nectaries open, olive-green and light violet, white-granulated; filaments pale apricot; pollen orange-brown; style brownish; stigma brown-pink. Fls 110 mm wide; tepals 65 × 36 mm, tips scarcely recurved; pedicels 80 mm, dark green with light brown dots. Lvs scattered, glossy dark green, slightly drooping. Stems 0.75 m, dark green. Mid June.

***leucanthum* (Baker) Baker IX(b-c/a)**

Fls white, tinged with pale yellow in basal half; outside with purple or brownish midribs; nectaries smooth; filaments downy towards base; anthers pale yellow; pollen brown. Fls 1-4, slightly fragrant; tepals 120-150 × 12-40 mm, tips somewhat recurved. Lvs scattered, 80-170 × 6-15 mm. Stems 0.6-1.5 m, with 3-5 fs. W China. (Much confusion surrounds the identification of the original introduction of this lily by Augustine Henry in 1889 and it was thought to be a variety of *longiflorum* and *brownii* before eventually being published as a distinct species. The plants flowered in 1894 but eventually died. Subsequent introductions by E.H. Wilson in 1903-04 into both Europe and the USA also died. Some seedlings from further introductions into the USA, cultivated by Dr D. Griffiths in the 1930s could not be distinguished from var. *centifolium*. *Flora of China* 24 (2000) recognizes both *leucanthum* and *leucanthum* var. *centifolium*.)

***leucanthum* 'Black Dragon' IX(b-c/a)**

See *leucanthum* var. *centifolium* 'Black Dragon'.

***leucanthum* Black Dragon Group IX(b-c/a)**

See *leucanthum* var. *centifolium* Black Dragon Group.

***leucanthum* 'Black Magic' IX(b-c/a)**

See *leucanthum* var. *centifolium* 'Black Magic'.

***leucanthum* Black Magic Group IX(b-c/a)**

See *leucanthum* var. *centifolium* Black Dragon Group.

***leucanthum* var. *centifolium* (Stapf) Stern IX(b-c/a)**

Fls white, throat yellow; outside suffused with purple and green, midribs yellow-green; nectaries green; filaments downy towards base; pollen red-brown to dark brown. Fls fragrant; tepals 140-180 × 30-60 mm, tips strongly recurved. Lvs scattered, 150-200 mm long. Stems 2-3 m, with up to 18 fs. W China.

Syn.: *centifolium*; *leucanthum* var. *chloraster*.

***leucanthum* var. *centifolium* 'Black Dragon' IX(b-c/a)**

Parentage: selection from *leucanthum* var. *centifolium*

S: J. de Graaff (c. 1950), N: J. de Graaff

Inside white; outside dark red; pollen dark red. Stems 1.5 m, with 12 or more fs. July.

(Published in *LYB* 21: 62 (1958).)

***leucanthum* var. *centifolium* Black Dragon Group IX(b-c/a)**

Parentage: selection from *leucanthum* var. *centifolium*

R: J. de Graaff (1960s)

Fls white inside; outside dark red. Fls very fragrant. Buds, pedicels and upper part of stem maroon. Stems to 2.5 m. July to Aug.

Syn.: Black Magic Group.

(Originally called Black Magic Strain in the 1960s, but renamed Black Dragon Strain about 1970.)

***leucanthum* var. *centifolium* 'Black Magic' IX(b-c/a)**

Parentage: selection from *leucanthum* var. *centifolium* Black Dragon Group

S: J. de Graaff (c. 1959), N: J. de Graaff

Buds dark maroon. Inside white, throat pale yellow.

(Published in *LYB* 23: 128 (1960).)

***leucanthum* var. *centifolium* Black Magic Group IX(b-c/a)**

Syn. of *leucanthum* var. *centifolium* Black Dragon Group.

***leucanthum* var. *centifolium* 'Ice Cap' IX(b-c/a)**

Parentage: selection from *leucanthum* var. *centifolium*

S: J. de Graaff (c. 1946), N: J. de Graaff

(Published in *LYB* 21: 62 (1955). No further details.)

***leucanthum* var. *centifolium* 'Kristine's Charm' IX(c/a)**

Parentage: *leucanthum* var. *centifolium* 'Black Dragon' × *leucanthum* var. *centifolium*

R: K. Paszyńska (1984), G: K. Paszyńska (1979), N: K. Paszyńska (1992), I: K. Paszyńska (1992), REG: K. Paszyńska (1992)

Inside white, with a green-streaked, lemon-yellow throat extending as a streak to about mid-point of each tepal; outside suffused with pink; spots absent; nectaries lemon-yellow; pollen dark brown. Fls 160 mm wide, wide-opening, scented; tepals 150 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 1.6 m, green, with 9-12 fls in a shortly pyramidal infl. Mid July.

***leucanthum* var. *centifolium* Sentinel Group IX(-/a)**  
Parentage: selections from white-flowered *leucanthum* var. *centifolium*

S: J. de Graaff (c. 1958), N: J. de Graaff  
Fls white with yellow at base; outside with pale yellow-green midribs; pollen reddish. Fls large. Stems 1.2-1.5 m. June to July.  
(Published in *Oregon Bulb Farms Cat.*, 1958. Included in *ILR* (1982) as Sentinel grex.)

***leucanthum* var. *chloraster* (Baker) E.H. Wilson IX(b-c/a)**

Syn. of *leucanthum* var. *centifolium*.

***leucanthum* 'Ice Cap' IX(b-c/a)**

See *leucanthum* var. *centifolium* 'Ice Cap'.

***leucanthum* 'Kristine's Charm' IX(c/a)**

See *leucanthum* var. *centifolium* 'Kristine's Charm'.

***leucanthum* Sentinel Group IX(-/a)**

See *leucanthum* var. *centifolium* Sentinel Group.

**'Leuchfeuer' I(b/-)**

Parentage: *dauidii* × (*L.* × *maculatum* × unknown)  
R: C. Feldmaier (c. 1956), N: C. Feldmaier  
Fls vivid orange (28B), deepening to moderate reddish orange (35A) at tepal-margins; spots brown, on basal half of each tepal. Tepals recurved.

**'Leuchtorange Trichter' I(b/a-b)**

Parentage unknown  
R: J. Klein (pre 1987), N: J. Klein, REG: J. Klein (1988)  
Fls bright orange. Fls remain funnel-shaped. Stems 1 m. Early July.  
(Published in German Lily Group sales list, 1987.)

**'Leuchtstern' Div. ?**

Given as a parent of 'Gelbona', 'Kontiki', 'Roxelane' and 'Rosanna'. No further details.

**'Leuchtturm' I(c/-)**

Parentage: *leichtlinii* var. *maximowiczii* × 'Xerxes'  
R: J. Welsch (pre 1983), N: J. Welsch  
Fls orange-red with dark spots. Stems 1.5-2 m. July.

**'Levant' I(c/-)**

Parentage: 'Golden Souvenir' × 'Amber Gold'  
R: Gebr. N. & B. Laan & Zn (c. 1975), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1977)  
Fls vivid yellow (12A), spotted.  
(Published in *Lilies and other Liliaceae*, 1977: 79.)

**'Lhotecký Pirát' I(a/b)**

Parentage: unknown hybrid × (*lancifolium* × unknown)  
R: B. Vajgent (pre 1986), REG: B. Vajgent (1987)  
Inside with tepal-tips rose-red, centre of tepals yellow, throat red; outside dull, dark pink, midribs darker; spots sparse, oval, black, on half of each tepal; nectaries green, with dark red frosting; pollen chocolate-brown. Fls 145 mm wide; tepals 85 × 30 mm, recurved; pedicels with secondary buds. Lvs 125 × 9 mm, rich green. Stems 0.7 m, dark green, with c.10 fls. Mid July.

**'Liära' I(b-c/c)**

Parentage: 'Inčukalns' × brushmarked seedling  
R: D.-V. Škimele (1990), G: D.-V. Škimele (1992), N: D.-V. Škimele (1995), REG: D.-V. Škimele (2001)  
Inside vivid light orange, throat light orange; outside light orange; spots absent; brushmarks small, brownish red; nectaries creamy; pollen vivid orange-red; stigma dark red. Fls 180 mm wide; tepals 100 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm. Stems 0.8 m, green, with c.6 fls. Early July.  
(Published in *Lilium Balticum Lily Register*, 1995.)

**'Libelle' VII(-/-)**

Parentage unknown  
R: Vletter & Den Haan, G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1992), I: Vletter & Den Haan, REG: Vletter & Den Haan (1993)  
Inside suffused with light purplish pink (65B) on a greenish white (155C) ground, tepals edged greenish white (155C), midveins light greenish yellow (8C), fading towards the top; outside yellowish white (155B) suffused with light purplish pink (65B) at tepal-tips, fading towards base, midribs strong yellow-green (145A), becoming strong yellow-green (144B) towards the top, tipped strong yellow-green (143B) and becoming strong yellow-green (143C) at base; spots deep purplish red (59B) on basal half of each tepal; pollen dark reddish orange (175C); stigma deep purplish red (71A). Fls 270 mm wide; tepals 140 × 70 mm, margins ruffled, tips slightly recurved. Lvs scattered, 170 × 30 mm, dark green. Stems 0.97 m, pale green, with c.6 fls.

**'Liberation' I(a/b)**

Parentage unknown  
R: unknown (pre 1985)  
Inside clear pink, with a few maroon spots around centre of fl. Stems 0.6 m. June to July.

**'Liberty' I(a/-)**

Syn. of 'Glee'.

**'Liberty Bell' I(a/-)**

Parentage: 'Citronella' × 'Lemon Lady'  
R: L. Lutz (c. 1965), G: L. Lutz (1965), N: L. Lutz (1968)  
Fls golden yellow with dark spots; lower pedicels 65 mm long.  
(Published in *ILR* (1969).)

**‘Liberty Hall’ VI(b/d)**

Parentage: ‘Olympic Hybrids Special’ × Golden Splendor Group

R: J. Buckley (c. 1966), N: J. Buckley

Inside ivory-white, throat deep yellow; outside pink brown and greenish. Tepals completely recurved. Stems 2 m.

**‘Liberty Hyde Bailey’ I(b/b-d)**

Parentage unknown

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)

Inside red-orange. Stigma dark. Tepal-margins smooth, tips strongly recurved. Stems 1.2-1.5 m. June.

(Published in *The Lily Garden Cat.*, 1996/67: 13.)

**‘Libiete’ I(b/-)**

Syn. of ‘Livs’.

**‘Libretto’ I(b/c)**

Parentage: ‘Panache’ × (‘Pastel Princess’ sibling × Wadekamper brushmarked seedling)

R: W.D. Evans (1982), G: W.D. Evans (1987), N: W.D. Evans (1992), I: W.D. Evans (1992), REG: W.D. Evans (1992)

Inside pale orange-yellow(23D) at tepal-tips, shading to brilliant orange-yellow (23B) at base; outside pale orange-yellow (23D) at tepal-tips, moderate reddish orange (42D) at base; the throat with numerous pale orange-yellow (24D) papillae and with numerous, deep red (53A) spots on all but tips; nectaries pale orange-yellow (24D); pollen strong reddish orange (169A). Fls 135 mm wide; tepals 70 × 35 mm, margins smooth, tips recurved. Lvs scattered, 100 × 57 mm, mid green. Stems 1.15 m, green, with c.15 fls. Late July.

**‘Libuše’ I(b/-)**

Parentage: Hallmark Group × mixed pollen of Golden Chalice Group & ‘Tabasco’

R: K. Braun (1981), N: K. Braun, REG: K. Braun (1984) Fls old rose-purple which does not fade; spots dense, on two-thirds of each tepal. Fls 115 mm wide; tepal-tips slightly recurved. Lvs dark green. Stems 0.75 m, dark green. Early July.

**‘Lichterbaum’ I(a/-)**

Parentage unknown

R: H. Böhm, N: H. Böhm, REG: H. Böhm (1997)

Fls yellow, with red spots in centre. Stems 1.4 m, with large, wide open, long-lasting fls in a large infl. Early July. (Published in European Lily Society sales list, 1996.)

**‘Licsna’ VI(-/c)**

Misspelling of ‘Liksna’.

**‘Lictenis’ I(b/c)**

Misspelling of ‘Liktenis’.

**Liddell Group VI(b-c/a)**

Parentage: orange-flowered trumpet × yellow-flowered trumpet

R: (1989), G: M. Liddell (1990), N: M. Liddell (2003), REG: M. Liddell (2004)

Inside lemon-yellow to gold or orange; outside gold to orange, with slight bronze coloration at base; spots absent; nectaries green; pollen orange; stigma bronze. Fls 140 mm wide; tepals 130 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 1-1.5 m, green to bronze, with 6-10 fls. Dec. to Feb. (New Zealand).

(Nomenclatural standard: colour print supplied by registrant (WSY 0096380).)

**‘Lidka’ I(a-b/d)**

Parentage: ‘Grun-weiss’ × (‘Blizzard’ × (‘Leandra’ × ‘Windahloo’))

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002), REG: B. Mičulka (2002)

Inside creamy, centre yellowish, throat white; outside with greenish and brownish midribs; spots moderately numerous, large, dark brownish pink, on a third of each tepal; nectaries green, white-granulated; pollen brown; stigma dark brown. Fls 143 mm wide; tepals 85 × 38 mm, very slightly recurved; pedicels 70 mm long, slightly marked brown, slightly hairy. Lvs scattered, 70 × 14 mm, dark green. Stems 0.85 m, thick, with fine brown spots, fairly hairy and with an umbellate infl. Late June.

**‘Lido’ VII(a/b)**

Parentage: seedling 93-40 × seedling RW 97-01

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside moderate/light purplish pink (62B/C), strong purplish pink (62A) towards tepal-tips, throat yellowish white (155B); outside light/pale purplish pink (65B/C), midribs strong yellow-green (144B) at base, light yellow-green (154D) towards top; spots absent; papillae strong purplish red (63B) and yellowish white (155B); nectaries strong yellow-green (144B); pollen dark reddish orange (175C); stigma brilliant/light yellow-green (142B/C). Fls 250 mm wide; tepals 150 × 55-80 mm, margins ruffled, tips recurved. Lvs scattered, 130-155 × 30-40 mm, dark green. Stems 0.8-1.2 m, light green with darker markings, and with c.3 fls.

**‘Liebergruss’ I(a/-)**

Parentage: *L. × hollandicum* × *lancifolium*

R: Gebr. N. & B. Laan & Zn (c. 1965), N: Gebr. N. & B. Laan & Zn

Fls strong orange (30D), veined vivid reddish orange (32A); spots deep purple. (Published in *JLR* (1969).)

**‘Liebesduett’ I(a/c-d)**

Parentage: ‘King Pete’ × ‘Wemdenschloss’

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Inside pale yellow-green (157A), tepal-tips very pale purple (69A), the margins and throat also suffused with very pale purple (69A); spots many, elongated, medium

sized, strong brown (172A), on basal half of each tepal; nectaries greenish white (157D); pollen strong orange (25A). Fls 150 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 25 mm. Stems 1 m, dark green, with c.10 fls. Mid July. (Nomenclatural standard: colour print provided by registrant (WSY 0024700).)

**‘Liels Valsis’ I(b/c)**

Parentage: ‘Poruka Piemiņa’ × mixed pollen of Tango Group  
R: D.-V. Šķimele (1993), G: D.-V. Šķimele (1995), N: D.-V. Šķimele (1998), REG: D.-V. Šķimele (2001)  
Inside with a third of each tepal creamy white, throat dark red; outside creamy, midribs darker, tepals with dark red marbling near the margins; spots numerous, conspicuous, dark brown-red, dense, on two-thirds of each tepal; nectaries greenish white; pollen brownish orange; stigma brown. Fls 150 mm wide; tepals 80 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm. Stems 0.8 m, brownish green. Mid July. (Published in *Lilium Balticum Lily Register*, 1999.)

**‘Lielziedu Henrijs’ IX(-/d)**

See *henryi* ‘Lielziedu Henrijs’.

**‘Lielziedu Henry’ IX(-/d)**

See *henryi* ‘Lielziedu Henrijs’.

**‘Liepaja’s Dzintars’ I(a/b)**

Misspelling of ‘Liepājas Dzintars’.

**‘Liepājas Dzintars’ I(a/b)**

Parentage: ‘Monaco’ × selection from Tango Group  
R: A. Balode (1996), G: A. Balode (1998), N: A. Balode (1999), REG: A. Balode (1999)  
Inside vivid yellow (12A), tepals with a strong yellow-green (141D) centre, throat bright green; outside greenish; small, dark red (187B) spots and marbling on two-thirds of each tepal; nectaries orange-red; pollen bright orange. Fls 150 mm wide; tepals 100 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 15 mm, waxy, dark green. Stems 1.3 m, dark green, with c.7 fls. Mid July. (Included in *ILR Nineteenth Supplement* as ‘Liepaja’s Dzintars’ which is a misspelling.)

**‘Liesma’ VII(-/c)**

Parentage unknown  
R: K. Zeltans (pre 1983), N: K. Zeltans  
Inside phlox pink (HCC 625/1), deeper at base, tepal-tips and margins white; outside with green rays; spots carmine; nectaries green with yellow margins; pollen brown. Fls 200 mm wide. Lvs 150 × 55 mm. Stems 1.6 m, green. Early Aug.

**‘Life’ VI(-/a)**

Parentage: selection from Golden Splendor Group  
S: J. de Graaff (c. 1958), N: J. de Graaff  
Inside deep yellow; outside red; spots absent; anthers dark red-brown. Stems 1.5 m. July.

**‘Lifestyle’ VII(b/b-d)**

Parentage: white-flowered seedling × ‘Star Gazer’  
R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside moderate purplish pink (62B) suffused with moderate purplish pink (66D), midvein on basal part of each tepal strong purplish red (60B/C), tepal-tips pale yellow-green (155A), throat light yellow-green (145B) with pale yellow-green (155A) edge; outside strong purplish red and deep purplish pink (64C/D & 66C) on a yellowish white (155B) ground; papillae dark red (187A) on basal half of each tepal; nectaries very pale green (192C); pollen brownish orange (166C). Fls 210 mm wide; tepals 110 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 160 × 50 mm, mid green. Stems 0.8 m, green, with c.6 fls. July (under glass).

**‘Lightening’ VI(-/c)**

Error for ‘Lightning’.

**‘Lightface’ I(b/-)**

Parentage: ‘Radiant Glow’ × ‘Edith Cecilia’  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1971), REG: E. Robinson (1971)  
Fls with light straw-yellow face, tepal-centres and tips fuchsia-red; outside fuchsia. Stems 1 m. Early July. (Published in *Lilies and other Liliaceae*, 1973: 113.)

**‘Light Future’ I(b/-)**

Parentage: selection from Vasaras Prieks Group

**‘Lighthearted’ I(b/c)**

Parentage unknown  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Inside deep pink, shading to a small white area at the base; spots few, darker, in and around the white area. Tepal-margins smooth, tips not or only very slightly recurved. Stems 1-1.2 m. June. (Published in *The Lily Garden Cat.*, 1996/97: 2, with colour illustration.)

**‘Lighthouse’ I(a/b)**

Parentage: ‘Enchantment’ × ‘Fireflame’  
R: J. de Graaff (c. 1949), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (c. 1955)  
Fls pinkish orange, large. Stems 1.2 m. July. (Published in *Oregon Bulb Farms Cat.*, 1955.)

**‘Lightning’ VI(-/c)**

See *L. × aurelianense* ‘Lightning’.

**‘Lightning Bug’ II(b/d)**

Parentage: ‘Cornell’s Yellow’ × *tsingtauense*  
R: E.E. Fox (1988), G: E.E. Fox (1995), N: E.E. Fox (2000), I: Fox Lily Ranch (2004), REG: E.E. Fox (2004)  
Inside vivid orange-yellow (21A), with strong orange-yellow (22A) near the throat, throat brilliant orange-yellow (23B); outside light yellow (17D); spots absent;

nectaries strong orange-yellow (22A); anthers vestigial, lacking pollen; style not straight, but with 1-2 kinks; stigma brilliant yellow (14C). Fls 55 mm wide; tepals 30 × 15 mm, margins smooth, tips slightly recurved. Lvs whorled, 150 × 40 mm. Stems 1.3 m, green, with c.12 fls. Late June to early July.

(Named in allusion to the fls being the colour of lightning flashes. Nomenclatural standard: colour print supplied by registrant (WSY 0096384).)

**'Light Pool' I(b/-)**

Parentage: selection from Vasaras Prieks Group

**Ligo Group I(c/d)**

Misspelling of Ligo Group.

**Ligo Group I(c/d)**

Parentage: 'Sapnotāja' × 'Skumstu'

R: V.P. Orehovs (c. 1964), N: V.P. Orehovs

Fls pale yellow to dark red, with large brown spots; pollen dark brown. Fls 110-130 mm wide, unscented. Stems up to 1 m, with 6-7 fls. Late June to early July.

(Published in *LYB* 33: 80 (1970) and included in *ILR* (1982) as Ligo Hybrids - a misspelling.)

**'Ligo Night' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis, G: J. Vasarietis (1989), N: J. Vasarietis, I: J. Vasarietis, REG: J. Vasarietis (1993)

Inside browner than vivid reddish orange (42A), tepal-tips light orange (28C), throat vivid yellow (14A); outside moderate red (182A), shading to moderate red (179B) at tepal-tips; spots absent; nectaries greenish white; pollen orange-yellow. Fls 160 mm wide; tepals 95 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 40 mm, dark green. Stems 1 m, green, with 7-11 fls. Mid July.

(Published in *Latvian Lily Register*, 1993.)

**'Liguria' VII(b/b-d)**

Parentage: 'Star Gazer' × seedling 199

R: Vletter & Den Haan, G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1988), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1991)

Inside deep purplish pink (64D), tepal-edges narrow, yellowish white (155D), throat yellowish white (155D), midveins on outer tepals moderate red (180C); outside very light purple (75C) suffused with deep purplish pink (72D), midribs pale yellow-green (4D); spots and papillae moderate purplish red (64A) on basal half of each tepal; nectaries light brownish grey (201B), edged deep purplish red (77A); filaments pale green; pollen brownish orange (164A). Fls 240 mm wide; tepals 120 × 65 mm, margins ruffled, on outer tepals more so, tips strongly recurved. Lvs scattered, 190 × 45 mm, mid green. Stems 0.73 m, pale green, with 5-7 fls. July (under glass).

***lijiangense* L.J. Peng IX(c/d)**

Fls yellow; spots purple or brown; nectaries red or blackish; pollen brownish orange. Tepals 40-45 × 8-15 mm. Lvs scattered, 50-110 × 15-30 mm, white-hairy in

the axils. Stems 0.5-0.6 m, green with purple spots and streaks, with 1-5 fls. W China (Yunnan, Sichuan).

**'Likсна' VI(-/c)**

See *L. × aurelianaense* 'Likсна'.

**'Liktenis' I(b/c)**

Parentage: Asiatic hybrid × *monadelphum*

R: V.P. Orehovs (between 1970 and 1983), N: V.P. Orehovs

Fls red, each tepal with a central yellow stripe; spots black. Stems 0.7 m. July.

(Included in *ILR Third Supplement* as 'Lictenis' which is a misspelling.)

**'Lilac' VI(-/a)**

Parentage: contains *regale*, *leucanthum* var. *centifolium* & *sargentiae*

R: LeV. Freimann (c. 1950), N: LeV. Freimann

Fls lilac, throat greenish yellow.

(Published in *LYB NALS* 6: 85, 86 (1953).)

**'Lilac Chiffon' I(b/-)**

Parentage: 'Edith Cecilia' × 'Radiant Glow'

R: E. Robinson, N: E. Robinson, I: E. Robinson (1972), REG: E. Robinson (1972)

Fls lavender on straw-pink; centre frosted. Fls large. Stems 1 m.

(Published in *Lilies and other Liliaceae*, 1973: 114.)

**'Lilac Queen' VII(-/a)**

Parentage: seedling of Zealandia Group × *auratum* var. *platyphyllum*

R: L.B. Tuffery (c. 1956), N: L.B. Tuffery

Fls lilac-pink.

**'Lilac Surf' II(-/d)**

Parentage: (*martagon* var. *cattaniae* × *L. × dalhansonii* 'Juanita') × 'Morning Melody'

R: E.E. Fox (1987), G: E.E. Fox (1995), N: E.E. Fox (1997), I: Fox Lily Ranch (1997), REG: E.E. Fox (1997)

Inside and outside strong purplish red (64B), throat white, mottled strong purplish red (64B); spots dark red (59A), outlined in white, on basal half of each tepal and spilling onto margins outside; nectaries deep purplish pink (64D); pollen strong orange (26A); stigma palest translucent green. Fls 75 mm wide; tepals 33 × 18 mm, margins smooth, tips slightly recurved. Lvs whorled, 150 × 36 mm, mid green. Stems 1.6 m, moderate yellow-green (138C), with 24-34 fls. Mid July.

**'Lilac Weekes' III(b/d)**

See *L. × testaceum* 'Lilac Weekes'.

**'Lilac Wonder' I(c/-)**

Parentage: selection from Harlequin Group

S: Gebr. N. & B. Laan & Zn (pre 1972), N: Gebr. N. & B. Laan & Zn

Inside dark rose-pink.

**'Lila Favorit' VI(b-c/a)**

Parentage: (Mabel Violet Group × 'Damson') F<sub>3</sub>  
 R: J. Hloušek, N: J. Hloušek, I: J. Hloušek (1990), REG: J. Hloušek (1993)

Inside dark violet-pink, throat greenish yellow; outside violet-brown; nectaries green; pollen brown; stigma greyed. Fls 100 × 130 mm; tepals 120 × 50 mm; pedicels 150 mm long, green. Lvs scattered, 100 × 6 mm, dull green. Stems 1.5 m, greyed green, thick. Early July.

**'Lilaurel' VI(b/a)**

Parentage unknown  
 R: B. Mičulka (1977), N: B. Mičulka, REG: B. Mičulka (1984)

Inside pale pink, throat pale yellow-green; outside with darker midribs; pollen apricot. Fls 130 mm wide; tepal-margins slightly curled, tips slightly recurved. Lvs 100 × 11 mm, slightly glossy dark green. Stems 1 m, with dark dots at base. Mid July.

**'Lilian' VI(c/-)**

Parentage: 'T.A. Havemeyer' × *L.* × *aurelianense*  
 R: G.W. Darby, N: G.W. Darby

Fls creamy yellow, fading to white, central zone bright yellow.  
 (Published in *JRHS* 82: 23 (1957).)

**'Lilian Gold' I(b/c)**

Parentage: Preston seedling × 'Edith Cecilia'  
 R: E. Robinson (1962), G: E. Robinson (1965), N: E. Robinson (1978), REG: E. Robinson (1980)  
 Inside and outside pale orange, tepal-tips cream; spots few. Tepals slightly recurved. Lvs scattered, mid green. Stems 0.6-1 m, with c.10 fls.

**'Liliette' I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Gebr. N. & B. Laan & Zn (1991), G: Gebr. N. & B. Laan & Zn, N: Bloembollenbureau Cebeco (1998), REG: Bloembollenbureau Cebeco (2001)  
 Inside brilliant/light greenish yellow (6C/D) with brilliant greenish yellow (6C) veins and midveins, tepals narrowly edged brilliant greenish yellow (6C), throat pale yellow-green (4D); outside pale greenish yellow (2D), outer tepals a little greener, narrowly edged brilliant greenish yellow (6B); spots absent or very sparse, dark red (187A); papillae absent; nectaries light yellow-green (145C); pollen absent; stigma vivid yellow (9A). Fls 120 mm wide; tepals 65 × 30 mm, margins smooth, inner tepals only with slightly recurved tips. Lvs scattered, 115 × 20 mm. Stems 0.9 m, green, with c.5 fls.

**'Lili Marlene' VI(c/b)**

Parentage unknown  
 R: E. Hickling, N: E. Hickling, I: Borbeleta Gardens (1981), REG: Borbeleta Gardens (1981)  
 Inside pale greenish yellow (9D) with brown marks in centre, tepal-tips yellow, throat green; outside pale yellow and green; spots absent; nectaries green; pollen brown. Tepals 110 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 25 mm, mid green. Stems

0.8 m, green flecked with brown, with 10-12 fls. July to Aug.  
 (Published in *Borbeleta Gardens Cat.*, 1981.)

**'Lilit' II(c/-)**

Parentage: selection from Marhan Group  
 S: V.G. Otroshko (1973), N: V.G. Otroshko, REG: A.V. Otroshko (1991)  
 Fls pear-scented, in a long infl. Stems 1.8 m.

**'Lillass' I(b/-)**

Parentage: ('Edith Cecilia' × unknown) × creamy yellow-flowered seedling  
 R: J.C. Ericksen (c. 1961), N: J.C. Ericksen  
 Fls orchid-pink, throat candy and pink-red; each tepal with a lighter orchid-pink ray, the basal half spotted candy pink-red; pollen pinkish red. Lvs numerous. Stems up to 1.5 m.

**'Lillehammer' VIII(a/b)**

Parentage: seedling BG 95-53 × seedling G 90-05  
 R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)  
 Inside vivid yellow (14A), throat pale greenish yellow (1D); outside brilliant yellow (13B), margins and tip of each tepal vivid yellow (14B); spots absent; papillae vivid yellow (14A); nectaries moderate yellow-green (138B); pollen greyish red (176A); stigma brilliant greenish yellow (5A). Fls 185 mm wide, slightly fragrant; tepals 120 × 55 mm, margins smooth, tips slightly recurved. Lvs 155 × 21 mm. Stems 1.2 m, green, with c.5 fls.  
 (*A longiflorum*/Asiatic (LA) hybrid.)

**'Lillian Cummings' I(c/-)**

Parentage: Stenographer Group selection from Preston Group  
 S: I. Preston, N: I. Preston (1934)  
 AM 1949  
 Fls poppy-red (HCC 16); spots maroon; each tepal with a purplish blotch at base. Tepals slightly reflexed. Stems 1-1.9 m. July.  
 (Published in *Gard. Chron.* ser. 3, 98: 209 (1935).)

**'Lilliput' I(a/-)**

Parentage unknown  
 R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1989)  
 Inside vivid to moderate red (46B/47A), throat blushed vivid reddish orange (33B); outside vivid to strong reddish orange (42A/B), outer tepals flushed with strong yellowish pink (34D); little blackish spots in the throat; pollen strong brown (172A). Fls 155 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 0.45 m, green with darker markings, and with c.7 fls. June.

**'Liloot' I(a/b)**

Error for 'Liloot'.

**'Liloot' I(a,b/-)**

Parentage: 'Northern Lights' × white-flowered seedling  
R: J.C. Ericksen (c. 1971), N: J.C. Ericksen, REG: J.C. Ericksen (1975)

Fls white; spots few, deep lilac, in the throat; pollen yellow. Fls large. Stems 0.6 m. July.  
(Published in *Lilies and other Liliaceae*, 1975: 93 erroneously as 'Liloot'. Here, the pollen parent is given as 'Olsen's White' but this epithet has not been traced.)

**'Lilydale Sunset' I(-/-)**

Parentage: 'Lord Melbourne' × *L. × maculatum* 'Yellow Tulip'

R: G. Errey, N: G. Errey

Fls the colour of a rosy sunset. Stems up to 0.3 m.  
(Published in *Ball Cat.*, 1950.)

**'Lily Pons' V(b/a)**

See *longiflorum* 'Lily Pons'.

**'Lily Simonet' I(a/-)**

Parentage: 'Nubian' × Red Knight Group  
R: R. Simonet & F. Fellner (1974), N: F. Fellner (1977), I: J. Wadekamper & Piedmont Gardens (1978), REG: J. Wadekamper (1978)

Fls mid red, lightly spotted; nectaries cream; pollen brown. Tepal-margins smooth. Lvs scattered. Stems 0.6-1 m, with 18 or more fls. Late midseason.  
(Published in *Lilies and other Liliaceae*, 1978/9: 110.)

**'Limasol' VII(a/b)**

Parentage: seedling 92-78 × seedling 92-48  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside strong purplish red (64C) with a little strong purplish red (64B), throat yellowish white (155B); outside strong purplish red (64B) on a white ground; spots dark red (187B); papillae yellowish white (155B) in the throat, the tips dark red (187B); nectaries strong yellow-green (143C); pollen strong orange (25A); stigma light yellow-green (150D). Fls 190 mm wide; tepals 80 × 35-45 mm, margins of outer tepals ruffled, tips slightly recurved. Lvs scattered, 170 × 40 mm, dark green. Stems 1.35 m, dark green, with c.6 fls.

**'Limbo' VII(b/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1997), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside moderate purplish pink (66D), midveins deep purplish pink (66C), throat yellowish white (155B) along the nectaries; outside deep purplish pink (64D), base yellowish white (155B); spots dark red (59A) on up to a third of each tepal; papillae in the throat, yellowish white (155B) and dark red (59A); nectaries strong yellow-green (144B); pollen strong brown (172A); stigma yellowish grey (194C). Fls 240 mm wide; tepals 120 × 50-65 mm,

margins ruffled, tips slightly recurved. Lvs scattered, 160 × 40 mm. Stems 0.8 m, green with darker markings, and with c.3 fls.

**'Limebelle' VI(-/a)**

Parentage: selection from Golden Trumpet Group

N: D. Foxwell (1960)

Fls light greenish yellow (5C); buds 125 mm long, green.

**'Lime Frost' I(a/-)**

Parentage: unknown seedling × ('Connecticut Dream' × 'Cabaret')

R: V.E. Bowen (1981), G: V.E. Bowen (1983), N: V.E. Bowen (1988), REG: V.E. Bowen (1988)

Inside light greenish yellow (4C) fading to yellowish white (158D); outside of inner tepals with pronounced green midribs, outside of outer tepals green throughout; spots absent; nectaries green; pollen golden orange. Fls 160 mm wide; tepals 80 × 35 mm, margins sometimes slightly ruffled, tips slightly recurved. Lvs scattered, 120-130 × 30 mm, pale green. Stems 1.4 m, dark green, bronzed at base, with 10-14 fls. Mid June.

**'Lime Glory Group' I(-/-)**

Parentage: selections from Futura Group

S: Blackthorne Gardens, N: Blackthorne Gardens, I: Blackthorne Gardens (1982)

Fls lime-green.

**'Lime Gold' VI(b/b/-c)**

Parentage: Aurelian Group seedling

R: E.C. Genat (1950), G: E.C. Genat (1953), N: E.C. Genat, REG: E.C. Genat (1961)

Fls yellow, tinged with green and overlaid with golden orange. Fls *henryi* shape, somewhat funnel-shaped at first, opening flat, 150 mm wide. Tepals overlapping, Stems 1.9 m.

(Published in *LYB* 20: 78 (1957).)

**'Lime Ice' I(a/-)**

Parentage unknown

R: W. Windus (1970), N: W. Windus (1975), REG: W. Windus (1975)

Fls brilliant greenish yellow (2B) except for brilliant yellow-green (149C) inner throat; spots 3-4, only on edge of inner tepals; nectaries strong yellow-green (143B); pollen strong orange (26A). Tepal-margins smooth. Lvs mid green. Stems 1.2 m, mid green. July.

(Published in *Lilies and other Liliaceae*, 1975: 94. Fades in sun to overall brilliant greenish yellow (2B).)

**'Limelight' VI(b-c/a)**

Parentage: selection from Golden Dawn Group

S: J. de Graaff (c. 1958), N: J. de Graaff

Fls brilliant yellow (12B) to pale yellow (12D); spots absent; pollen orange. Stems 1-1.5 m. July.

(Published in *Greenock Farms Cat.*, 1958/59: 14.)

**'Limelight Group' VI(b/b)**

Syn. of Golden Dawn Group.

**'Lime On' VI(-/a)**

Parentage: Aurelian Group seedling × unknown  
 R: E. Hickling, N: E. Hickling (1978), I: Borbeleta Gardens (1979), REG: Borbeleta Gardens (1981)  
 Inside pale yellow-green (4D) to brilliant greenish yellow (6A), throat yellow; outside green; spots absent; nectaries green; pollen dark brown. Tepals 130 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 12 mm, dark green. Stems 1.5 m, blue-green, with c.8 fls. July. (Published in *Borbeleta Gardens Cat.*, 1979.)

**'Limerick' VIII(c/d)**

Parentage: 'June Fragrance' × 'Coquet'  
 R: E. Hickling (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987), REG: Columbia-Platte Lilies (1988)  
 Fls light greenish yellow (3C/D); spots many, very tiny and inconspicuous; nectaries light green; pollen greyish red (178A). Fls scented; tepals 50-55 × 25-30 mm, margins slightly ruffled, tips strongly recurved. Lvs almost whorled, 80-150 × 20-30 mm, pale green, strongly ciliate. Stems 0.8-1.2 m, light green, with 8-25 fls; bulbs large, yellow. Late May. (Published in *B & D Lilies Cat.*, 1987.)

**'Lime Star' VII(a/c)**

Parentage: 'Virgo' × 'Opus One'  
 R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (1999), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2000)  
 Inside greenish white (155C) with a brilliant greenish yellow (6C) mark above each nectary; outside greenish white (155C), outer tepals tipped strong yellow-green (143C); spots absent; papillae greenish white (155C) tipped brilliant greenish yellow (6C); nectaries brilliant yellow-green (154B); pollen strong brown (172A); stigma light grey (188D) with a little dark purple (83A). Fls 260 mm wide; tepals 130-145 × 45-70 mm, margins a little ruffled, tips recurved. Lvs scattered, 175 × 72.5 mm. Stems 1.15 m, light green, with c.6 fls. July.

**'Limey Group' VI(b/b)**

Parentage: bred from Narina Group  
 R: L.B. Tuffery (c. 1966), N: L.B. Tuffery  
 Fls lime-yellow. Stems up to 2 m, maroon. Similar to Narina Group in form and growth.

**'Limoncello' VIII(a/b)**

Parentage: unnamed seedling × (*longiflorum* × 'Sterling Star')  
 R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2001), REG: Bischoff Tulleken Lelies B.V. (2001)  
 Inside light greenish yellow (5C), midveins brilliant greenish yellow (6A) on up to a half of each tepal, tepal-edges brilliant greenish yellow (6A), throat pale greenish yellow (1D); outside moderate reddish orange (35B), with pale greenish yellow (2D) along midribs, tepal-edges brilliant greenish yellow (5A); spots and papillae absent;

nectaries pale greenish yellow (1D); stigma deep red (60A); pollen brownish orange (164A). Fls 210 mm wide; tepals 140 × 40-60 mm, margins smooth, tips recurved. Lvs scattered, 130-210 × 20 mm. Stems 1.4 m, green with darker markings, and with c.4 fls. June. (*A longiflorum*/Asiatic (LA) hybrid.)

**'Limonen Rispe' I(b-c/d)**

Parentage: 'Creme Rispe' × 'King Pete'  
 R: N. Martschinke (1983), G: N. Martschinke (1985), N: N. Martschinke (1994), I: N. Martschinke (1994), REG: N. Martschinke (1996)  
 Inside brilliant to light greenish yellow (5B/C), throat vivid yellow-green (154A); outside brilliant greenish yellow (4A) with stripes of vivid yellow-green (154A) and moderate orange-yellow (165C); spots dark red (187A), especially on inner tepals; papillae in throat; pollen yellow; stigma brilliant yellow-green (154C). Fls 90 mm wide; tepals 65 × 32 mm. Lvs scattered, 90 × 7 mm. Stems 1.3 m, green with brown spots, and with c.10 fls. Early July. (Published in the European Lily Society sales list, 1994. The entry here has been updated since that published in the *ILR Fifteenth Supplement*.)

**'Limonnaja' I(-/-)**

Parentage unknown  
 R: N.S. Nezovibatko (pre 1981), N: N.S. Nezovibatko  
 No further details.

**'Limonnitsa' I(b/-)**

Parentage: complex hybrid involving *cernuum*, 'Liudmila' (of Kireeva), *L. × maculatum* etc.  
 R: M.F. Kireeva (1982), N: M.F. Kireeva  
 Fls lemon-white, spotted. Stems 1.4 m, with bulbils. July.

**'Limpopo' Div. ?**

Given as a parent of 'Ambos Mundos' and 'Blankenfelder Juwel', both raised by G. Steinbrück. No further details.

**'Linda' I(a/b)**

Parentage unknown  
 R: W.C. Horsford (pre 1956), N: W.C. Horsford  
 Fls yellow, large. Stems 0.6 m. (Published in *Greenock Farms Cat.*, 1956.)

**'Linda Gail' I(a/-)**

Parentage unknown  
 R: M.D. Holloway (1992), G: M.D. Holloway, N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)  
 Inside lemon-yellow, darkening towards the centre half of outer tepals, as fl. fades tepal-tips become almost white, throat coloured as tips of outer tepals; outside greenish yellow; spots absent; nectaries dark green; pollen dark brown. Fls 160 mm wide; tepals 95 × 41 mm, margins smooth, tips slightly recurved. Lvs scattered, 69 × 20 mm, mid green. Stems 0.8 m, dark brown, with c.10 fls. Mid July to mid Aug.

**'Linda May' I(b-c/-)**

Parentage: 'Carol Jean' × 'Connecticut Lemonglow'  
 R: F. Fellner (1979), G: F. Fellner (1982), N: F. Fellner (1993), I: Riverside Gardens, REG: F. Fellner (1993)  
 Fls creamy yellow with pinkish tepal-tips; some dark spots in centre of fl.; pollen reddish brown. Fls 125 mm wide; tepals 75 × 30 mm, somewhat reflexed. Lvs scattered, 75 × 10 mm. Stems 0.6 m, black, with 8-10 fls. Mid July.

**'Lindau' I(a-b/-)**

Parentage: orange-flowered seedling × 'Connecticut King'  
 R: V. Strasser (1974), G: V. Strasser (1977), N: V. Strasser (1980), I: V. Strasser, REG: V. Strasser (1997)  
 Fls vivid orange-yellow (23A). Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.15 m, rather dark green, with up to 25 fls. Mid July.

**'Lindsey Jennifer' I(a/-)**

Parentage: Sundrop Group × 'Connecticut King'  
 R: F. Fellner, N: F. Fellner, I: Riverside Gardens (1986)  
 Fls soft orange; spots absent. Stems 1-1.1 m, with 10 or more fls. Midseason.  
 (Published in *Riverside Gardens Cat.*, 1986.)

**'L'Innocence' V(b/a)**

See *longiflorum* 'L'Innocence'.

**'Lino' I(a/-)**

Parentage: seedling OR 400 × seedling G 848  
 R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
 Inside vivid yellow (9A); outside vivid yellow (9A/B), outer tepals and midribs tinged with greyish reddish orange (176C); spots absent; pollen greyish reddish brown (200B). Fls 165 mm wide; tepals 80 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 1.2 m, green with slightly darker markings, and with 5-8 fls. May.

**'Linosa' I(a/-)**

Parentage: seedling OR 91-15 × seedling G 93-7  
 R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)  
 Inside vivid yellow (12A), each tepal vivid yellow (17B) at base; outside vivid to brilliant yellow (12A/B); spots absent; papillae present; nectaries yellow-green; pollen yellow-brown; stigma purple. Tepal-margins slightly ruffled, tips slightly recurved. Stems 1.25 m, with reddish markings. Early.

**'Linzer Gold' VI(-/a)**

Parentage: 'Aurach Gold' × Holland Festival Group  
 R: V. Strasser (1977), G: V. Strasser (1977), N: V. Strasser (1983), I: V. Strasser (1985), REG: V. Strasser (1997)  
 Fls brilliant yellow (12B). Tepal-margins smooth, tips not recurved. Lvs scattered, dark green. Stems 1.2 m, rather dark green, with up to 12 fls.

**'Lion' I(a/-)**

Parentage unknown  
 R: P. Hoff (1993), G: Hoffgaarde B.V., N: Hoffgaarde B.V. (1996), I: Hoffgaarde B.V. (1997), REG: Hoffgaarde B.V. (1997)  
 Inside a little lighter than strong orange (25A); outside strong orange/strong orange-yellow (24A/B), tepals edged vivid orange (28B), becoming strong yellow-green (144B) towards tips, and tipped strong yellow-green (143A); spots dark red (187A) in the throat; papillae dark red (187A) and paler than strong orange (25A), also in the throat; nectaries strong yellow-green (144A) and pale orange-yellow (23D); pollen moderate reddish brown (175A); stigma vivid orange (28B). Fls 150 mm wide; tepals 75 × 25-35 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 1 m, green with darker markings, and with c.5 fls.

**'Lionella' I(a/b)**

Parentage unknown  
 R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1992)  
 Fls pale apricot, flushed with pink; spotted towards base of each tepal. Fls 120-140 mm wide. Stems up to 1.3 m, with 11-17 fls.  
 (Published in M.F. Kireeva, *Lilii*, 54 (2000).)

**'Lipari' I(a/-)**

Parentage: 'Blizzard' × seedling RS 870  
 R: Vletter & Den Haan, G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1988), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)  
 Inside pale yellow-green (155A), midveins suffused with deep red (60A); outside pale yellow-green (155A), midribs suffused with deep red (60A), outer tepals tipped strong yellow-green (144B); spots dark red (187A) around nectaries; pollen deep orange-yellow (163A); stigma pale yellow (161C) tinged with deep red (60A). Fls 175 mm wide; tepals 95 × 46 mm, margins smooth. Lvs scattered, 97 × 20 mm, dark green. Stems c.0.7 m, mid green with darker markings, and with c.5 fls.

**'Lippizaner' I(a)**

Parentage unknown  
 R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V., REG: Hoff Quality First (1993)  
 Inside yellowish white (155A); outside yellowish white (155A) tinged with strong yellow-green (143A) at base, midribs yellowish white (155A) becoming strong yellow-green (144C) at base; spots dark red (187A) on a third of each tepal; pollen deep orange-yellow (163A); stigma yellowish white (158C) and dark red (187B). Fls 170 mm wide; tepals 90 × 45 mm. Lvs scattered, 130 × 15 mm, dark green. Stems 0.73 m, green with a lot of darker markings, and with c.10 fls.

**'Lira' I(-/c)**

Parentage: derived from 'Stroinaia', 'Enchantment' & *dauidii* var. *wilmottiae*  
 R: M.F. Kireeva (1972)  
 Fls bright orange; anthers red-orange. Fls 120-140 mm

wide. Stems 0.9-1 m, with 9-15 fls. June.  
(Published in M.F. Kireeva, *Lilii*, 55 (1984).)

**‘Lisa’ VI(c/b)**

Parentage: *regale* ‘Royal Gold’ × ‘Gold Eagle’  
R: B. Baumer (1994), G: B. Baumer (1997), N: B. Baumer (1997), I: B. Baumer (1997), REG: B. Baumer (1998)

Inside deep yellow; outside of inner tepals deep yellow with a precise, 3 mm-wide, dark brown stripe from base to tip, outside of outer tepals suffused with dark brown, more heavily on the midribs, with a narrow yellow border; spots absent; nectaries mid green; pollen light brown; stigma light green. Fls 200 mm wide, scented; tepals of very heavy substance, 140 × 40-60 mm (inner 60 mm wide, outer 40 mm wide), margins very slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 20 mm, dark green. Stems 1.25 m, dark green, with 2-3 fls. Mid July.

**‘Litouwen’ VIII(a/b-c)**

Parentage: seedling BW 96-2 × seedling W 92-1  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside yellowish white (155D), throat light yellow-green (145D); outside yellowish white (155D), at base light yellow-green (138D) changing to light purplish pink (62C) above; spots absent; papillae yellowish white (155D); nectaries moderate yellow-green (139C); pollen moderate reddish brown (176B); stigma light yellow-green (154D). Fls 230 mm wide, slightly fragrant; tepals 130 × 73 mm, margins smooth, tips recurved. Lvs 170 × 27 mm. Stems 1.3 m, dark reddish, with c.5 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Little Baby Love’ VII(a-b/b)**

Syn. of ‘Baby Love’.

**‘Little Egypt’ VII(b/b)**

Parentage unknown  
R: L. Woodriff (1972), G: L. Woodriff (1974), N: Bowman Creek Farm (1981), REG: Bowman Creek Farm (1981)

Fls light pink; with moderate darker pink spotting on basal third of each tepal; nectaries light green; pollen yellow-orange. Fls 180 mm wide, scented; tepals 110 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 35 mm, dark green. Stems 0.5 m, light green, with 10-12 fls. June.

**Little Fairies Group VII(-/a)**

Parentage: *auratum* × *rubellum* & *japonicum*  
R: L. Woodriff (pre 1958), N: L. Woodriff  
Fls white to deep pink, scented; some spotted.  
(Published in *Woodriff Cat.*, 1958. Included in *ILR* (1982) as Little Fairies grex.)

**‘Little Gem’ IX(b/c)**

See *auratum* var. *platyphyllum* ‘Little Gem’.

**‘Little Girl’ VII(b/b)**

Parentage: ‘Darling’ × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1992)  
Inside yellowish white/pale purplish pink (155D/62D), blushed light to pale purplish pink (62C/D), the basal half of each tepal with a strong yellowish pink (35C) midvein, throat strong yellow-green (144C) edged light greenish yellow (8C); outside pale purplish pink (62C/D), outer tepals moderate purplish pink (62B), midribs light greenish yellow (1C); spots dark red (59A) on basal half of each tepal; papillae in the throat; nectaries moderate purple (79D); pollen strong reddish orange (169A). Fls 230 mm wide; tepals 105 × 55 mm, margins slightly ruffled, outer tepals more so, tips slightly recurved. Lvs scattered, 145 × 40 mm, mid green. Stems 0.65 m, green, with c.7 fls.

**Little Gold Rascal Group VII(-/b)**

Parentage: *auratum* ‘Tom Thumb’ × unknown  
R: J. de Graaff (1960s), N: J. de Graaff, REG: Oregon Bulb Farms, Inc. (1969)  
Fls similar to those of Little Rascal Group, but each tepal with a gold ray.  
(Published in *LYB* 33: 255 (1970).)

**‘Little Jane’ VII(-/b)**

See *L. × parkmanii* ‘Little Jane’.

**‘Little John’ VII(a-b/b)**

Parentage: ‘Joy’ × unnamed seedling  
R: P.N.A. van den Berg (1993), G: M.A. van den Berg (1995), N: M.A. van den Berg & J.A. van der Salm (2000), I: M.A. van den Berg & J.A. van der Salm (1999), REG: M.A. van den Berg & J.A. van der Salm (2003)

Inside light purplish pink (73C), base of midveins yellow; outside light purplish pink/very pale purple (73C/D); spots and papillae present; nectaries green; pollen orange; stigma purple. Fls 160 mm wide; tepals 80 × 50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 95 × 37 mm, light green. Stems 0.45 m, with c. 5 fls. Midseason.

**‘Little Joy’ VII(b-c/b-c)**

Parentage: ‘Darling’ × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1992)  
Inside greenish white (155C), tepal-centres suffused with very pale purple (73D), midveins strong red (47B) in central part, throat strong yellow-green (144B) edged light greenish yellow (8C); outside of outer tepals strong reddish purple (72B), outside of inner tepals yellowish white (155B), suffused with strong reddish purple (72B), midribs pale yellow-green (4D); spots and papillae deep purplish red (59B) on basal half of each tepal; nectaries greyish yellow-green (198A), spotted

moderate violet (86A); pollen moderate reddish orange (171A). Fls 165 mm wide; tepals 80 × 40 mm, margins slightly ruffled, outer tepals more so, tips slightly recurved. Lvs scattered, 125 × 50 mm, mid green. Stems 0.5 m, green, with c.8 fls.

#### 'Little Kiss' I(a/-)

Parentage: 'Exception' × 'Exception'  
R: Gebr. N. & B. Laan & Zn (1979), G: Gebr. N. & B. Laan & Zn (1981), N: Gebr. N. & B. Laan & Zn (1983), I: Gebr. N. & B. Laan & Zn (1983), REG: Gebr. N. & B. Laan & Zn (1985)

Fls pale pink; spots absent; nectaries pale pink; pollen absent. Fls 90 mm wide, the stamens tepaloid so the fls have 12 tepals; tepals 60 × 30 mm, margins ruffled, tips not recurved. Lvs scattered, 80 × 20 mm, dark green. Stems 0.5 m, green, with c.8 fls. July.  
(Published in *Bloembollencultuur*, 1984.)

#### 'Little Lavender' VII(-/b)

See *L. × parkmanii* 'Little Lavender'.

#### 'Little Love' VII(b/b)

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × *L. × parkmanii* Little Rascal Group  
R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside yellowish white (155D), midveins light greenish yellow (6D); outside yellowish white (155D), midribs suffused with pale greenish yellow (10D); spots yellowish white (155D) and brilliant greenish yellow (6C) on two-thirds of each tepal; papillae brilliant greenish yellow (6C) near the nectaries; nectaries strong yellow-green (144C); pollen strong orange (169C); stigma dark red (59A). Fls 130 mm wide; tepals 80 × 35 mm, margins ruffled, tips slightly recurved. Lvs scattered, 65 × 50 mm, mid green. Stems 0.3 m, pale cream, with c.6 fls.  
Trade designation: RASCAL LITTLE LOVE.

#### 'Little Miracle' VII(a/b)

Syn. of 'Rascal Miracle'.

#### 'Little Moons' I(a/c)

Parentage: red and yellow bicolor seedling × unnamed seedling with red fls with a yellow streak by nectaries  
R: E.E. Fox (1991), G: E.E. Fox (1993), N: E.E. Fox (1996), I: Fox Lily Ranch (2002), REG: E.E. Fox (2001)  
Inside with vivid yellow (9B) circular markings at mid tepal, tepal-tips vivid red (45B), throat strong red (46A); outside strong red (45D); spots absent; nectaries strong red (46A), frosted white; pollen moderate reddish brown (166B); stigma greyish brown (166A). Fls 120 mm wide; tepals 60 × 27 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 12 mm. Stems 1 m, pale green, with 28-38 fls. Late July.  
(Epithet suggested by the yellow circular markings, like little moons.)

#### 'Little Orange' I(a/-)

Parentage: Sundrop Group × 'Red Carpet'  
R: J. Wadekamper (1978), G: J. Wadekamper (1980), N: J. Wadekamper (1984), I: Borbeleta Gardens (1985), REG: J. Wadekamper (1985)

Fls bright orange, throat paler; spots few, brown. Tepal-margins smooth, tips not recurved. Lvs scattered, mid green. Stems 0.3 m, bright green. Early June.  
(Published in *Borbeleta Gardens Cat.*, 1985.)

#### 'Little Orange' I(a/-)

Parentage: (('Oranje Zon' × 'Red Carpet') × 'Pineapple') × dwarf orange-flowered Asiatic  
R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1992)  
Inside vivid yellowish pink (28A), throat light orange (28C); outside close to light orange (28C), strong orange (30D) towards tepal-margins; spots greyish red (178A) on a third of each tepal; papillae vivid yellowish pink (28A), few, in the throat; nectaries hairy; pollen a little darker than strong reddish orange (169A); stigma dark red (187A). Fls 170 mm wide; tepals 95 × 25 mm, margins slightly ruffled, tips slightly recurved. Lvs 70 × 7 mm, mid green. Stems 0.3 m, green with some darker markings, and with c.8 fls.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

#### 'Little Prestige' VII(b/b)

Syn. of 'Rascal Prestige'.

#### 'Little Rainbow' VII(a/b)

Parentage: "Rascal type" × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2002)  
Inside yellowish white (155D), with light greenish yellow (6D) above nectaries, throat yellowish white (155D); outside yellowish white (155D), midribs light yellow-green (150D) shading into brilliant yellow-green (150C) towards top; spots strong red (39A); papillae brilliant greenish yellow (6A); nectaries strong yellow-green (144C); anthers relatively large in comparison with fl. size, pollen vivid orange-yellow (23A); stigma dark purple (79B). Fls 130 mm wide, scented; tepals 80 × 52 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 45 mm. Stems 0.34 m, green with dark markings, with c.2 fls.

#### Little Rascal Group VII(b/b)

See *L. × parkmanii* Little Rascal Group

#### Little Red Rascal Group VII(-/b)

Parentage: *auratum* 'Tom Thumb' × unknown  
R: J. de Graaff (1960s), N: J. de Graaff, REG: Oregon Bulb Farms, Inc. (1969)  
Similar to Little Rascal Group, but each tepal with a crimson ray.  
(Published in *LYB* 33: 255 (1970).)

**'Little Robin' VII(-/b)**

See *L. × parkmanii* 'Little Robin'.

**'Little Santa Barbara' VII(-/d)**

Syn. of 'Rascal Santa Barbara'.

**'Little Star' IX(b-c/d)**

See *speciosum* 'Little Star'.

**'Little Thriller' VII(b/c)**

Syn. of 'Rascal Thriller'.

**'Liu' I(a-b/-)**

Parentage unknown

R: G.A. Verdegaal & Zn Export B.V. (1995), I: G.A.

Verdegaal & Zn Export B.V. (1997), REG: G.A.

Verdegaal & Zn Export B.V. (1997)

Inside deep purplish pink (58D); outside deep purplish pink/strong pink (54B/C); spots and papillae present; stigma purple; pollen orange. Fls 85 mm wide; tepals 55 × 28 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 60 × 8 mm, green. Stems 1.3 m (from 12-14 cm bulbs), green, with 7-9 fls. Midseason.

(Found as an unnamed plant in Italy.)

**'Liuba' I(b/-)**

Unaccepted spelling of 'Ljuba'.

**'Liubimaia' VI(-/a)**

Parentage: 'Gloriosum' (Russian origin) × *formosanum*

R: V.A. Grot (c. 1960), N: V.A. Grot

No further details.

(Unaccepted spelling: 'Lubimaja'.)

**'Ljudmila' I(b-c/b)**

Parentage unknown

R: M.F. Kireeva (1980), N: M.F. Kireeva

Fls creamy pink; spots dark on basal half of each tepal. Fls 110-120 mm wide. Stems 1.5 m, with 8-12 fls. July.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Ludmila'. Unaccepted spelling: 'Ludmila'. Published in M.F. Kireeva, *Lilii*, 47 (2000).)

**'Ljudmila' VI(-/a)**

Parentage: selection from trumpet seedlings

S: N.A. Miroshniczenko (1982), N: N.A.

Miroshniczenko

Fls lilac-violet. Stems 1.7 m. July to Aug.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Ludmila' and ICNCP, 2004: Art. 27.1 - name already used for another lily. Unaccepted spelling: 'Ludmila'.)

**'Ljudmila' I(b/-)**

Misspelling of 'Ludmila' (of Orehovs).

**'Liverpool' I(a/-)**

Parentage unknown

R: Hoffgaard B.V., G: Hoffgaard B.V., N: Hoffgaard B.V., I: Hoffgaard B.V., REG: Hoffgaard B.V. (1989)

Inside moderate purplish red (184C/D), throat yellowish white (158C); outside moderate purplish red (184C), tepal-edges moderate red (185B); spots few, small, dark red (187A), in the throat; pollen brownish orange (165B). Fls 175 mm wide; tepals 90 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 1.25 m, green, with c.10 fls. June.

**'Livija Stepite' Div. ?**

Given as a parent of 'Berta'.

**'Living Jewel' VII(-/b)**

Parentage unknown

R: L.G. Farina (1972), N: L.G. Farina (1973), I: L.G.

Farina (1973), REG: (between 1973 and 1981)

Inside deep pink, with some white in throat; outside and tepal-tips pink; spots absent; nectaries green; pollen light brown. Lvs wide. Stems 1 m, green.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 38 (1978).)

**'Livorno' VII(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside yellowish white (155D) striped deep purplish red (61A), base, midveins and tepal-edges white; outside white; spots and papillae present; nectaries green; pollen orange-brown; stigma green. Tepal-margins ruffled, the outer tepals more so, tips recurved. Stems 1.4 m, green, with c.9 fls.

**'Livs' I(b/-)**

Misspelling of 'Livs'.

**'Livs' I(b/-)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (1984), G: J. Vasarietis (1987), N:

J. Vasarietis (1990), I: J. Vasarietis (1990), REG: J.

Vasarietis (1992)

Inside light orange-yellow (23C) in the throat, tepal-tips pale orange-yellow (23D); outside pale orange-yellow (23D); spots few, black, on half of each tepal; nectaries white; pollen orange-brown. Fls 150 mm wide; tepals 80 × 38 mm, margins smooth, tips slightly recurved; pedicels 100 mm long. Lvs scattered, 120 × 16 mm, mid green. Stems 1-1.2 m, black, with c.15 fls. Early July.

Syn.: 'Libiete'.

(Included in *ILR Eleventh Supplement* as 'Livs' which is a misspelling.)

**'Liz Williamson' I(c/d)**

Parentage: 'Violet M. Constable' × 'Ann Constable'

R: S.V. Gilkison (pre 1963), N: S.V. Gilkison, REG:

ICRA (1997)

Fls clear canary-yellow, with many purple spots.

**'Ljuba' I(c/d)**

Syn. of 'Marksova Ljuba'.

**'Loblanca' VIII(a/b)**Parentage: *longiflorum* × 'Mont Blanc'

R: J.M. van Tuyl (1980), G: J.M. van Tuyl (1982), N: J.M. van Tuyl (1985), I: IVT (1985), REG: IVT (1985)  
 Fls white; spots very few; nectaries greenish yellow; pollen brown. Tepal-margins smooth, slightly recurved at tips. Stems 0.8-1.2 m, dark green, with 1-10 fls. (2n = 24)  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Lockinvar' VII(b/c)**

Parentage unknown

G: B.G. Hayler (1981), N: B.G. Hayler (1986), REG: B.G. Hayler (1986)

Inside strong purplish red (61B) darkening with age, tepal-tips and margins white, throat strong purplish red (61B); outside deep purplish pink (61D); spots raised, black, over whole surface of tepals; nectaries light green; pollen light brown. Fls 160 mm wide; tepals 160 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.75 m, purple-green, with c.15 fls. Feb. (Australia).

**'Loire' VII(a/b)**

Parentage: seedling 88-171 × seedling RM 96-24

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside light purplish pink (65B), tepal margins deep purplish red (59B), throat very pale purple (69D); outside light purplish pink (65B), midribs moderate purple (79D) in basal third; spots moderate purplish red (64A); papillae present; nectaries strong yellow-green (144C); pollen strong brown (172A); stigma dark pink (182D). Fls 295 mm wide; tepals 140 × 65 mm, margins slightly ruffled, tips recurved. Lvs 200 × 78 mm, dark green. Stems 1.25 m, light green, with c.3 fls.

**'Lois Hole' II(c/d)**

Parentage unknown

R: (1994), G: M. Joslin (2001), N: M. Joslin (2004), I: Estate Perennials (2004), REG: M. Joslin (2004)

Inside vivid yellow (9A); outside white; spots and papillae absent; nectaries yellow; pollen orange; stigma yellow. Fls 85 mm wide; tepals 35 × 10 mm, margins smooth, tips slightly recurved. Lvs whorled, 40 × 9 mm, mid green. Stems 1-1.2 m, mid green, with 13-15 fls. Early July. (Named for Lois Hole, Lieutenant Governor of Alberta, Canada. Nomenclatural standard: colour print provided by registrant (WSY 0096938).)

**'Loki' I(-/-)**

Parentage unknown

R: C. Wittneben (pre 1972), N: C. Wittneben  
 Fls dark black-red.

**'Lola' I(a/b-c)**

Parentage unknown

R: P. Hoff (1993), G: Hoffgaarde B.V., N: Hoffgaarde B.V. (1996), I: Hoffgaarde B.V. (1997), REG: Hoffgaarde B.V. (1997)

Inside a little stronger than vivid yellow (12A), tepal-

tips strong orange-yellow (17A), throat brilliant yellow (7A); outside vivid yellow (12A), tepal-edges vivid yellow (13A); spots dark red (187A) on a third of each tepal; papillae brilliant yellow (7A) and dark red (187A), in the throat; nectaries strong yellow-green (144B); pollen dark reddish orange (175C); stigma vivid yellow (12A) with a dark red (187A) rim. Fls 200 mm wide; tepals 100 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 20 mm, mid green. Stems 1.25-1.45 m, green with reddish brown around lf-bases, and with c.5 fls.

**'Lolita' I(a/-)**

Parentage: Pastel Group (yellow-flowered) × 'Keystone'

R: E.A. McRae (1970), G: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc. (1979), I: Oregon Bulb Farms, Inc. (1982), REG: Oregon Bulb Farms, Inc. (1983)

Fls vivid yellow (9A); papillae very few, pigmented, parallel to nectaries; nectaries green; anthers lacking pollen. Fls 120-140 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 15 mm, dark green. Stems 1 m, green, with 5-25 fls. June.

**'Lolita' I(a/b)**

Syn. of 'Amapola'.

**'Lolly' I(a/-)**

Parentage: 'Gold Medal' × 'Brushmarks'

R: A. Balode (1991), G: A. Balode (1993), N: A. Balode, REG: A. Balode (1996)

Inside vivid yellow (12A), throat brilliant yellow-green (150B); outside brilliant yellow-green (150C); spots absent; each tepal with a dark red (59A) brushmark; nectaries yellow-green; pollen orange-brown. Fls 100 mm wide; tepals 80 × 35 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 90 × 6 mm, mid green. Stems 0.9 m, green, with c.7 fls. Mid July.

**LOLLYPOP I(a/b)**

Trade designation of 'Holebibi'.

**'Lombardia' VII(a/b)**

Parentage unknown

R: Vletter & Den Haan, G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1992), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)

Inside yellowish white (155D) suffused with strong purplish red (63B) except at base and tepal-tips; outside strong purplish red (63B) on a yellowish white (155D) ground, the colour stronger at tepal-edges, with a yellowish white flare; spots purplish red; pollen moderate reddish orange (171A); stigma moderate yellow-green (147D). Fls 230 mm wide; tepals 132 × 72 mm, margins ruffled, outer tepals more so, tips slightly reflexed. Lvs scattered, 202 × 45 mm, dark green. Stems 1.05 m, mid green, with c.7 fls.

**'Lomonta' I(a/b)**

Parentage: 'Loblanca' × 'Mont Blanc'

R: J.M. van Tuyl (1985), G: J.M. van Tuyl (1986), N:

J.M. van Tuyl (1987), I: J.M. van Tuyl (1987), REG: IVT (1991)

Inside light greenish yellow (5D); outside pale yellow-green (4D), tepal-edges light greenish yellow (5C), outer tepals and midribs suffused with moderate red (181B); spots dark red (187A) in the throat; nectaries light yellow-green (145C); pollen moderate orange (167A). Fls 185 mm wide; tepals 90 × 50 mm, margins smooth, tips slightly reflexed. Lvs scattered, 155 × 24 mm, mid green. Stems 0.65 m, green with darker markings and c.2 fls. Apr. (under glass).

#### 'London' I(a/b)

Parentage: seedling OR 400 × 'Avignon'

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside vivid yellow (9A); outside vivid yellow (9A) tinged with greyish red (182B) at junction with pedicels; spots dark red (187A) in the throat; pollen greyish brown/moderate reddish brown (166A/B). Fls 170 mm wide; tepals 85 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 195 × 19 mm, mid green. Stems 1-1.45 m, with darker markings and 7-10 fls (from 14-16 cm bulbs). May to June.

#### 'Longda' VIII(b/b)

Error for 'Longida'.

#### 'Longicanda' VIII(a-b/b)

Parentage: 'Candy Apple' × Longistar Group

R: B. Kondrot (1988), G: B. Kondrot (1989), N: B. Kondrot (1992), I: B. Kondrot (1992), REG: B. Kondrot (1994)

Inside cherry-red; outside red-brown; spots few, tiny, brown, on basal half of each tepal; nectaries pink; pollen yellow. Fls 180 mm wide; tepals 120 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 25 mm, mid green. Stems 1.4 m, green with dark brown markings, and with c.14 fls (and secondary buds). Mid July. Tetraploid.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Longida' VIII(b/b)

Parentage: (Preston Group seedling × 'Mont Blanc') × Longistar Group

R: B. Kondrot (1988), G: B. Kondrot (1989), N: B. Kondrot (1990), I: B. Kondrot (1991), REG: B. Kondrot (1994)

Inside creamy yellow, darker towards the base, throat green-yellow; outside green-brown; spots tiny, brown, on half of each tepal; nectaries cream-green; pollen dark brown. Fls 170 mm wide; tepals 110 × 48 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 17 mm, dark green. Stems 1.1 m, stiff, dark carmine-brown, with 12 (and secondary buds). Mid July. Tetraploid. (A *longiflorum*/Asiatic (LA) hybrid. Published in *Liliarskie Zprawy* 1992 no. 2: 31-33. Included in *ILR Fourteenth Supplement* erroneously as 'Longda' - this spelling was corrected in the *Fifteenth Supplement*.)

#### *longiflorum* Thunb. IX(b/a)

AGM 1993

Fls white; nectaries green; pollen yellow. Fls fragrant; tepals 130-200 × 35 mm, tips slightly recurved; pedicels up to 120 mm. Lvs scattered, 100-200 × 5-15 mm. Stems 0.3-1 m, with 1-6 fls. S Japan, Taiwan.

#### *longiflorum* 'Albivetta' V(b/a)

Parentage: *longiflorum* 'White American' × *longiflorum* 'Mount Everest'

R: J.M. van Tuyl (1980), G: J.M. van Tuyl (1981), N: J.M. van Tuyl (1985), I: IVT (1985), REG: IVT (1985) Fls white; pollen yellow. Tepal-margins smooth, tips slightly recurved. Stems 1-1.2 m, green, with 1-10 fls. (2n = 24)

#### *longiflorum* 'Albomarginatum' V(b/a)

Parentage: sport from *longiflorum*

Lvs bluish green, with broad, white margin. (Published in *Fl. & Pomol.* 1874: 173.)

#### *longiflorum* 'Avita' V(a-b/a)

Parentage: (*longiflorum* 'White Fox' × *longiflorum* 'White Europe') × *longiflorum* 'White Fox'

R: J.W.A. van der Wereld B.V. (1985), G: J.W.A. van der Wereld B.V. (1986), N: J.W.A. van der Wereld B.V. (1989), I: J.W.A. van der Wereld B.V. (1988), REG: J.W.A. van der Wereld B.V. (1990)

Inside greenish white (155C), throat light yellow-green (145D); outside greenish white, midribs yellowish white (155B) suffused with light yellow-green (145D) at base; spots absent; pollen vivid yellow (15A). Fls 110 mm wide; tepals 160 × 50 mm, margins smooth, tips recurved. Lvs scattered, 180 × 22 mm, mid green. Stems 1.6 m, green, with c.6 fls. May (under glass).

#### *longiflorum* 'Blancivetta' V(b/a)

Parentage: selection from *longiflorum* 'Indian Summer' × *longiflorum* 'White American'

R: J.M. van Tuyl (1980), G: J.M. van Tuyl (1981), N: J.M. van Tuyl (1985), I: IVT (1985), REG: IVT (1985) Fls white; pollen yellow. Tepal-margins smooth, tips recurved. Stems 1-1.2 m, green, with 1-8 fls. (2n = 24)

#### *longiflorum* 'Boehmer's Special' V(b/a)

Parentage: selection from *longiflorum*

S: L. Boehmer (pre 1904), N: L. Boehmer  
No further details.

(Published in *L. Boehmer & Co., Cat.* 1904/05: 5.)

#### *longiflorum* 'Calgary' V(b-c/a)

Parentage: *longiflorum* 'White Europe' × *longiflorum* 'White Fox'

R: J.W.A. van der Wereld (1985), G: J.W.A. van der Wereld (1986), N: J.W.A. van der Wereld (1988), I: J.W.A. van der Wereld (1987), REG: J.W.A. van der Wereld (1990)

Inside greenish white (155C), throat tinged with light yellow-green (145B/C); outside greenish white (155C), midribs yellowish white (155D); spots absent; pollen vivid yellow (14B). Fls 145 mm wide; tepals 160 × 55

mm, margins smooth, tips recurved. Lvs scattered, 220 × 26 mm, mid green, slightly curved. Stems 1.4 m, pale green, with 5-7 fls. May (under glass).

***longiflorum* ‘Caserta’ VIII(b/a)**

Syn of ‘Caserta’.

***longiflorum* ‘Catharina’ V(b/a)**

Parentage: *longiflorum* ‘Mount Everest’ × *longiflorum* ‘Mount Everest’

R: Bottema Lelie B.V. (1988), G: Bottema Lelie B.V., N: G. Bottema (1995), REG: Bottema Lelie B.V. (1996)  
Inside yellowish white (155D), midveins green at base changing to white, throat green; outside yellowish white (155D); spots and papillae absent; pollen yellow; stigma white. Tepal-margins ruffled, tips strongly recurved. Lvs scattered, mid green. Stems vigorous, 1.1 m, green, with 3-5 fls.

***longiflorum* Coral Reef Group V(b/a)**

Parentage: selections from *longiflorum*

S: Blackdown Lilies (1968), G: Blackdown Lilies (1969), N: Blackdown Lilies (1975), I: Blackdown Lilies (1975), REG: Blackdown Lilies (1988)

Fls white except for a green throat; spots absent; nectaries green; pollen yellow. Fls short (for *longiflorum*), broadly flaring, scented; tepal-margins smooth, tips strongly recurved (for *longiflorum*). Lvs scattered, mid green. Stems usually 1 m, pale green, with c.6-10 fls. Late July to Aug.

(Original seed from New Zealand (as *longiflorum* × *formosanum*), hand-pollinated through several generations of outdoor cultivation. There is more than one clone included under this epithet. The raiser considers that this is pure *longiflorum* and it is here included under *longiflorum* for convenience.)

***longiflorum* ‘Creole’ V(-/a)**

See *longiflorum* var. *eximium* ‘Creole’.

***longiflorum* ‘Creole White Lady’ V(b/a)**

Parentage: selection from *longiflorum*

S: USDA

(Published in *R.B. Ware Cat.*, 1946. No further details.)

***longiflorum* ‘Croft’ V(b/a)**

Parentage: selection from *longiflorum*

S: S.M. Croft (c. 1928), N: D. Griffiths, I: USDA (1931)

Fls bell-shaped, very long; style longer than stamens. Lvs very long. Stem and lvs usually light green. Plant medium height, pyramidal.

(Published in *Florists’ Exchange and Hort. Trade World* 102: 10 (1944).)

***longiflorum* ‘Curli’ V(b/a)**

Parentage: selection from *longiflorum*

Lvs twisted.

(Published in *Florists’ Exchange and Hort. Trade World* 104: 21 (1945).)

***longiflorum* ‘Downingii’ V(-/a)**

See *longiflorum* var. *takeshima* ‘Downingii’.

***longiflorum* ‘Dutch Glory’ V(b/a)**

Parentage: reselected seed strain of *longiflorum* ‘Holland’s Glory’

Fls white; pollen orange. Stems 0.6-1 m, with 6-15(-30) fls. Dec. (New Zealand).

(Said to have been raised in New Zealand. However, according to R.E. Harrison in his book *Know your lilies*, 56 (1970), this cv. was developed in The Netherlands. The original clone was marked with purple on the outside of the fl., but subsequent selection eliminated this colour.)

***longiflorum* ‘Easter Parade’ V(b/a)**

Parentage: selection from *longiflorum*

S: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens

Fls pure white. Stems 0.6 m. Aug.

***longiflorum* ‘Edelweiss’ V(b/a)**

Parentage: selection from *longiflorum*

Fls white.

(Grown in Germany? Included in *ILR* (1982) erroneously as *longiflorum* ‘Eidelweiss’.)

***longiflorum* ‘Eidelweiss’ V(b/a)**

Error for *longiflorum* ‘Edelweiss’.

***longiflorum* ‘Ellender’ V(-/a)**

Syn. of *longiflorum* var. *eximium* ‘Creole’.

***longiflorum* ‘Erabu’ V(-/a)**

See *longiflorum* var. *nobile* ‘Erabu’.

***longiflorum* ‘Erabu-no-hikari’ V(-/a)**

Parentage: *longiflorum* ‘Hinomoto’ × *longiflorum*

R: R. Yoshii (c. 1975), N: R. Yoshii

Fls white.

***longiflorum* ‘Estate’ V(-/a)**

Parentage: selection from *longiflorum*

S: S.M. Croft (c. 1929), I: W.L. Crissey (c. 1939)

Fls narrowly trumpet-shaped, anthers red. Lvs very short, yellowish green. Stems 1.2-1.9 m, with 6-9 fls.

(Published in *Florists’ Exchange and Hort. Trade World* 102: 10 (1944).)

***longiflorum* ‘Evert van Benthem’ VIII(-/a)**

Syn. of ‘Evert van Benthem’.

***longiflorum* var. *eximium* (Courtois) Baker IX(b/a)**

FCC 1883

Fl. tube narrower, more cylindrical than *longiflorum* itself; tepal-tips more recurved.

***longiflorum* var. *eximium* ‘Creole’ V(-/a)**

Parentage: selection from *longiflorum* var. *eximium*

Fls bell-shaped, smaller than *longiflorum* ‘Croft’; inner edges of tepals appearing frayed. Lvs short, green, usually

mottled. Stems green, tall. Plant columnar.  
Syn.: *longiflorum* 'Floridii'; 'Floridii'; *longiflorum*  
'Ellender'; 'Ellender'.  
(Reported to have originated near New Orleans in the  
1880s.)

***longiflorum* var. *eximium* 'Harrisii' V(b-c/a)**

Parentage: selection from *longiflorum* var. *eximium*  
I: W.K. Harris (1880)  
Fls pure white. Tepal-tips reflexed. Plant very vigorous,  
with many fls.

***longiflorum* 'Fairy Isle' V(-/a)**

Parentage: selection from *longiflorum*  
(Grown in USA before 1928. No further details.)

***longiflorum* 'Flevo' V(-/a)**

Parentage: selection from Indian Summer Group  
S: J. Boon (c. 1981), N: J. Boon  
Fls pure white, with lemon-yellow anthers.

***longiflorum* 'Floridii' V(-/a)**

Syn. of *longiflorum* var. *eximium* 'Creole'.

***longiflorum* 'Foliis Albo Marginatis' V(-/a)**

(Published in *L. Boehmer Cat.*, 1903/04. No further  
details. The epithet suggests that the lvs have white  
margins. Probably synonymous with *longiflorum*  
'Albomarginatum'.)

***longiflorum* 'Foliis Variegatis' V(b/a)**

Parentage: selection from *longiflorum*  
Fls white. Stems 0.4 m.  
(Published in *Barr & Sugden Cat.*, 1871. The epithet  
suggests that the lvs are variegated.)

***longiflorum* 'Gelria' V(a-b/a)**

Parentage: *longiflorum* 'Slocum's Ace' × *longiflorum*  
'Mount Everest'  
R: J.M. van Tuyl (1978), G: J.M. van Tuyl (1979), N:  
J.M. van Tuyl (1983), I: IVT (1983), REG: IVT (1985)  
Fls white; pollen yellow. Tepal-margins smooth, tips  
slightly recurved. Stems 1-1.7 m, green, with 3-7 fls  
(from 16-18 cm bulbs). (2n = 24)

***longiflorum* 'Georgia' V(a-b/a)**

Parentage: selection from *longiflorum*  
S: unknown (c. 1940s)  
Lvs long, flat, tending to point upwards. Plant tall,  
columnar. Earlier than *longiflorum* 'Croft', and very  
floriferous.  
(Same plant as *longiflorum* 'Georgia Belle'?)

***longiflorum* 'Georgia Belle' V(b/a)**

Parentage: selection from *longiflorum*  
Fls pure white.  
(Published in *Baileya* 4(1): 45 (1956).)

***longiflorum* 'G.F. Berthoud' V(b/a)**

Parentage: selection from *longiflorum*

Stems tall, with up to 13 fls.  
(Raised in Australia about 1938.)

***longiflorum* 'Gibson' V(-/a)**

Parentage: seedling of *longiflorum* 'Kenyon Davidson'  
S: H.L. Gibson (1937)  
Soft foliage and poor fls.  
(Selected from USDA bulblets.)

***longiflorum* 'Harbor' V(-/a)**

Parentage: (*longiflorum* 'Slocum's Ace' × *longiflorum*  
'Nellie White') × (*longiflorum* 'Gibson' × *longiflorum*  
'King')  
R: A.N. Roberts (1971), G: A.N. Roberts (1973), N:  
A.N. Roberts (1980), I: Oregon State University (1980),  
REG: A.N. Roberts (1980)  
Fls pure white except for greenish white at base of throat;  
spots absent; nectaries creamy white; pollen yellow. Tepals  
140 × 25-45 mm, margins smooth, tips slightly recurved.  
Lvs whorled, dark green. Stems 0.35 m, green, tinged  
carmine at lf-bases, with 7-9 fls. July (out of doors).  
(Forces 10 days earlier than *longiflorum* 'Slocum's Ace'.)

***longiflorum* 'Harrisii' V(b-c/a)**

See *longiflorum* var. *eximium* 'Harrisii'.

***longiflorum* 'Harson' V(a-b/a)**

Parentage: selection from *longiflorum* 'Georgia'  
S: Harson Growers (1964), N: Harson Growers (1964)  
More vigorous and floriferous than *longiflorum* 'Georgia'.

***longiflorum* 'Hayai' V(-/a)**

Parentage: selection from *longiflorum*  
Resembles *longiflorum* var. *nobile* 'Erabu', but flowers  
earlier.  
(Grown in Germany?)

***longiflorum* 'Helen Pike' V(b/a)**

Parentage: selection from *longiflorum*  
S: unknown  
AMH 1953, FCCCH 1956  
Fls ivory-white, with light green midribs.

***longiflorum* 'Hinamoto' V(b/a)**

See *longiflorum* 'Hinamoto'.

***longiflorum* 'Hinomoto' V(b/a)**

Parentage: selection from wild *longiflorum*  
N: K. Nakahara (c. 1965)  
Fls white inside; spots absent; pollen yellow. Tepal-  
margins smooth, tips recurved. Stems with 3 fls.  
(Included and illustrated in *Miyoshi & Co. Cat.* no. 87:  
113 (1989) as 'Hinamoto'.)

***longiflorum* 'Holland's Glory' V(-/a)**

Parentage: *longiflorum* var. *takeshima* × *longiflorum* var.  
*nobile* 'Erabu'  
R: van Zonneveld Bros & Philippo, N: van Zonneveld  
Bros & Philippo  
AM 1948, AMH 1951  
Fls pure white, 200 mm long.

(Published in *LYB* 12: 89, fig. 23 (1948). Often grown from seed, this cv. is therefore not a clone.)

***longiflorum* 'Howardii' V(-/a)**

Parentage: seedling of *longiflorum* var. *eximium*  
R: H.E.D. Smith (1920), G: H.E.D. Smith (1922), N: H.E.D. Smith, I: H.E.D. Smith (1938)  
Fls pure white, with firmer texture than many. Early (about 3 months earlier than *longiflorum* var. *eximium* 'Harrisii').  
Syn.: 'Hollisii'; 'Romanii'.  
(Published in *Gard. Chron.* ser. 3, 104: 332 (1938).)

***longiflorum* 'Indian Summer' V(-/)**

Given as a parent of *longiflorum* 'Blancivetta', *longiflorum* 'Longivetta', *longiflorum* 'White Ideal' and 'White Friendship'. No further details.

***longiflorum* var. *insulare hort. ex Mallett* IX(b/a)**

Fls borne horizontally, at right angles to pedicels.  
(Originally selected by Japanese growers for forcing. Said to be hardier than *longiflorum* itself.)

***longiflorum* 'Jamesii' V(-/a)**

Parentage: seedling of *longiflorum*  
R: R. James (pre 1913)  
Late.

***longiflorum* 'Jan Paul' V(-/a)**

See *longiflorum* 'Jean Paul'.

***longiflorum* 'Jean Paul' V(-/a)**

Parentage: selection from Indian Summer Group  
S: J. Boon (c. 1981), N: J. Boon  
Fls pure white, with buttercup-yellow anthers.  
(Sometimes seen as 'Jan Paul'.)

***longiflorum* 'José Marti' V(b/a)**

Parentage: seed strain of *longiflorum* from Cuba  
I: J. Marks (1962)  
Fls pure white. Lvs yellowish green. Stems 0.6-0.8 m.

***longiflorum* 'Kenyon Davidson' V(-/a)**

Parentage: selection from *longiflorum*  
(Published in *Wallace Cat.*, undated but c.1948. Special strain of Easter Lilies raised in Oregon. No further details.)

***longiflorum* 'King' V(a-b/a)**

Parentage: selection from *longiflorum* 'Georgia'  
S: Northwest Gardens (1950s), N: Northwest Gardens  
Stems shorter than in *longiflorum* 'Georgia'.

***longiflorum* 'Kotuku' V(-/a)**

Parentage: selection from *longiflorum* 'Dutch Glory'  
S: C. Hastings, N: C. Hastings  
No further details.

***longiflorum* 'Kurojuku' V(-/a)**

See *longiflorum* var. *takeshima* 'Kurojuku'.

***longiflorum* 'Le Blanc' V(-/a)**

Syn. of *longiflorum* 'Shovav'.

***longiflorum* 'Lily Pons' V(b/a)**

Parentage: selection from *longiflorum*  
I: Horticultural Trading Co. (1948)  
(Published in *Florists' Exchange and Hort. Trade World* 110: 18 (1948). No further details.)

***longiflorum* 'L'Innocence' V(b/a)**

Parentage: selection from *longiflorum*  
Fls white.  
(Grown in Germany?)

***longiflorum* 'Longivetta' V(b/a)**

Parentage: selection from *longiflorum* 'Indian Summer' × *longiflorum* 'White American'  
R: J.M. van Tuyl (1980), G: J.M. van Tuyl (1981), N: J.M. van Tuyl (1985), I: IVT (1985), REG: IVT (1985)  
Fls white; pollen yellow. Tepal-margins smooth, tips very slightly recurved. Stems 1-1.5 m, green, with 1-10 fls. (2n = 24)

***longiflorum* 'Lorina' V(b/a)**

Parentage: *longiflorum* 'Georgia' × (*longiflorum* 'White Queen' × Albino Group)  
R: De Jong Lelies Holland B.V. (1968), G: De Jong Lelies Holland B.V., N: De Jong Lelies Holland B.V. (1986), I: De Jong Lelies Holland B.V., REG: De Jong Beheer B.V. (1989)  
Inside yellowish white (155D); outside yellowish white (155B), flushed with pale yellow-green (4D); spots absent; pollen vivid yellow (14A). Fls 140 mm wide; tepals 165 × 50 mm, margins smooth, tips recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 0.7-1.3 m, green, with 6-7 fls (from 16-18 cm bulbs). July.  
(Treated as a *longiflorum* cv. despite any possible influence of the Albino Group.)

***longiflorum* 'Lovita' V(-/a)**

Parentage: (*longiflorum* 'White Queen' × Albino Group) × *longiflorum* 'Georgia'  
R: K. de Jong (1968), G: De Jong Lelies (1970), N: De Jong Beheer B.V. (1983), I: De Jong Lelies (1972), REG: De Jong Lelies (1988)  
Inside ivory-white to white, throat white with yellow-green midveins; outside light yellow-green (145D) at base, the remainder ivory-white, each tepal with a green-white midrib and a green-white flame on outer tepals; pollen vivid yellow (17C). Fls 170 mm wide; tepals 160 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 60 mm. Stems 0.5 m, pale green, with 5-6 fls. July to Aug.  
(Treated as a *longiflorum* cv. despite any possible influence of the Albino Group.)

***longiflorum* 'Madame von Siebold' V(b/a)**

Parentage: selection from *longiflorum*  
S: T.S. Ware (pre 1879)  
Fls with a short tube. Early.

***longiflorum* 'Mexicana' V(b/a)**

Syn. of *longiflorum* 'Shangri-la'.

***longiflorum* 'Mount Everest' V(b/a)**

Parentage: selection from *longiflorum*

S: A.J. van der Zwet & Sons (c. 1961), N: A.J. van der Zwet & Sons

Inside silvery white, throat greenish yellow; outside creamy white. Anthers yellow.

***longiflorum* 'Multiflorum' V(b/a)**

Parentage: selection from *longiflorum*

More fls than *longiflorum* itself. Lvs longer and narrower. Early.

(Published in *L. Boehmer & Co., Cat.* 1903/04.)

***longiflorum* 'Nellie White' V(b/a)**

Parentage: selection from *longiflorum*

S: J. White (1955), N: J. White

Fls adequate in size, substance and number. Lvs medium-long, dark green, horizontal to stem axis. Plant short, columnar.

***longiflorum* var. *nobile* (E.H. Wilson) hort. IX(b/a)**

Fls greenish to pure white. Lvs up to 25 mm wide, leathery, dark green. Stems to 1 m, with up to 12 fls.

***longiflorum* var. *nobile* 'Erabu' V(-/a)**

Parentage: selection from *longiflorum* var. *nobile*

N: Yokohama Nursery Co. (1907), I: Yokohama Nursery Co. (1907)

Taller than var. *takeshima* and more floriferous. (Found on Erabu Island, Japan.)

***longiflorum* 'Okino-kaori' V(-/a)**

Parentage: *longiflorum* 'Georgia' × "no. 2-5"

R: M. Kobayashi & M. Himeno et al. (1978), N: M. Kobayashi & M. Himeno et al.

Fls white, large. Lvs dark green. Stems tall. Late. (Treated as a cv. of *longiflorum*.)

***longiflorum* 'Okino-komachi' V(-/a)**

Parentage: *longiflorum* 'Georgia' × wild form of *longiflorum* from Kikai Is.

R: M. Kobayashi & M. Himeno et al. (1978), N: M. Kobayashi & M. Himeno et al.

Fls white, medium sized, with thick tepals and good keeping quality. Lvs dark green. Stems medium height. Midseason.

***longiflorum* 'Oregon Glory' V(-/a)**

Parentage: selection from *longiflorum* 'Kenyon Davidson' Similar to *longiflorum* 'Croft'.

(Published in *Gill Bros Seed Co. Cat.*, 1950.)

***longiflorum* 'Osnat' V(-/a)**

Parentage: derived from crosses between *longiflorum* seedlings

R: H. Yahel (1971), G: H. Yahel (1972), N: H. Yahel (1979), I: Cor van Duyen B.V. (1984)

Inside pale greenish yellow (1D) merging to white

at tepal-edges, throat pea-green with Scheele's green midveins; outside light yellow-green (145C) below, inner tepals greenish white with a yellow-green midrib; spots absent; nectaries greenish white; pollen lemon-yellow. Fls 150 mm wide; tepals 175 × 55 mm, tips reflexed. Lvs scattered, 170 × 30 mm, mid green. Stems 1.25 m, green, with c.3 fls.

(Published in *Bloembollencultuur*, 1984.)

***longiflorum* 'Pacifica' V(b/a)**

Parentage: selection from *longiflorum* 'Slocum's Ace'

Very similar to *longiflorum* 'Slocum's Ace'.

(Raised and named in the 1950s.)

***longiflorum* 'Peerless' V(-/a)**

Parentage unknown

Fls very large, well shaped, scented. Stems 0.6 m.

(Published in *Sandyloam Cat.*, 1946. Developed on Long Island.)

***longiflorum* 'Reina Dione' V(a-b/a)**

Parentage unknown

R: Fa Jaap Boon, G: Fa Jaap Boon, N: Fa Jaap Boon,

REG: Fa Jaap Boon (2001)

Inside greenish white (155C), throat pale yellow-green (149D) edged with greenish white (155C); outside greenish white (155C), midribs greenish white (155D), with strong yellow-green (143C) at base; spots and papillae absent; nectaries strong yellow-green (143C); pollen strong orange-yellow (17A); stigma light yellow-green (150D). Fls 220 mm wide; tepals 170-190 × 50-65 mm, margins smooth, tips recurved. Lvs scattered, 190 × 40 mm. Stems 1.4 m, light green, with c.2-3 fls.

***longiflorum* 'Roni' V(-/a)**

Parentage: derived from *longiflorum*

R: V. Naor (1987), N: V. Naor, REG: V. Naor (1999)

Fls large, white throughout. Lvs long, horizontal, dark green. Stems tall. Early.

***longiflorum* 'Royal American' V(b/a)**

Parentage: selection from *longiflorum*

Fls pure white. Described as an improved *longiflorum* 'Croft'.

(Published in *Horticulture* 26: 351, advertisement, Sept. 1948.)

***longiflorum* 'Sacré Coeur' V(a-b/a)**

Parentage: *longiflorum* 'Gelria' × seedling Lfl 84-3

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside and outside ivory-white; spots absent. Tepal-margins smooth, tips recurved. Lvs scattered, 190 × 25 mm, mid green. Stems 1 m, green, with 3-6 fls.

***longiflorum* 'Saga' V(b/a)**

Parentage: selection from *longiflorum*, probably of var. *insulare*

N: unknown (1950s)

Lvs dark green, broad, ascending. Stems short. Early.

***longiflorum* ‘Saint David’s Star’ V(b/a)**

Parentage: selection from *longiflorum*

S: H.E.D. Smith, N: H.E.D. Smith, I: H.E.D. Smith (1954)

(Misspelling: *longiflorum* ‘St. David’s Star’. Published in *LYB* 20: 61 (1957). Named after the town of St David, Bermuda where the raiser lived. Buds long-keeping.)

***longiflorum* ‘Shangri-la’ V(b/a)**

Parentage: selection from *longiflorum*

Similar to *longiflorum* var. *eximium* ‘Creole’, but lacking the frayed-looking inner edges to tepals.

Syn.: *longiflorum* ‘Mexicana’.

***longiflorum* ‘Shovav’ V(-/a)**

Parentage: derived from crosses between *longiflorum* seedlings

R: H. Yahel (1972), G: H. Yahel (1973), N: H. Yahel (1979), I: Cor van Duyn B.V. (1984), REG: Cor van Duyn B.V. (1985)

Inside white, throat-pea green with Scheele’s green midveins; outside white, midribs primrose-yellow; spots absent; nectaries pea-green; pollen brilliant yellow (13B). Fls 210 mm wide; tepals 185 × 60 mm. Lvs scattered, 240 × 25 mm. Stems 0.9 m, green, with 3-4 fls.

Syn.: *longiflorum* ‘Le Blanc’.

(Published in *Bloembollencultuur*, 1984.)

***longiflorum* ‘Slocum’s Ace’ V(b/a)**

Parentage: selection from *longiflorum*

S: D. Plymale, N: C. Slocum (1935), I: C. Slocum (1935)

Fls bell-shaped, more floriferous but smaller than *longiflorum* ‘Croft’. Lvs darker green than ‘Croft’, downcurved at tips, folding upward along length. Stems of medium height, infl. pyramidal.

(Published in *Florists’ Exchange and Hort. Trade World* 104: 21 (1945). Often referred to as ‘Ace’.)

***longiflorum* ‘Snir’ V(-/a)**

Parentage: derived from *longiflorum*

R: V. Naor (1987), N: V. Naor, REG: V. Naor (1999)

Fls large, white throughout. Lvs long, directed downwards, light green. Stems medium height. Early.

***longiflorum* ‘Snowdrift’ V(b/a)**

Parentage: selection from *longiflorum*

S: A.T. Jeremy (pre 1945), N: A.T. Jeremy

Very similar to *longiflorum* ‘Croft’.

(Published in *LYB* 11: 78 (1947).)

***longiflorum* ‘Snow Maid’ V(b/a)**

Parentage: selection from *longiflorum*

S: A.T. Jeremy, N: A.T. Jeremy

Fls pure white, 175 mm wide. Stems 1 m, with up to 12 fls.

(Published in *LYB* 10: 61 (1946).)

***longiflorum* ‘Snow Trumpet’ V(-/a)**

Given as a parent of *longiflorum* ‘White Fox’ and *longiflorum* ‘White Lace’. No further details.

***longiflorum* ‘Snow White’ V(b/a)**

Parentage: seedling from *longiflorum* ‘Snowdrift’

R: G.M. Chandler (c. 1945), N: G.M. Chandler

Fls pure white, 210-220 mm wide. Stems 1 m, with up to 7 fls.

(Published in *LYB* 10: 61 (1946).)

***longiflorum* ‘St. David’s Star’ V(b/a)**

Misspelling of *longiflorum* ‘Saint David’s Star’.

***longiflorum* ‘Takachiho’ V(b/a)**

Parentage: selected seedling from *longiflorum*

S: N. Saeki (c. 1959), N: N. Saeki

Fls white.

***longiflorum* var. *takeshima* Duchartre IX(-/a)**

FCC 1872

Fls pure white, outside often flushed purple-brown; pollen orange-yellow. Fls very fragrant. Stems tall, purple-brown.

Syn.: *eximium* ‘Giganteum’.

(Sometimes grown as “*L. giganteum*” or “Big Lily”.)

***longiflorum* var. *takeshima* ‘Downingii’ V(-/a)**

Parentage: selection from *longiflorum* var. *takeshima*

S: C.E. Downing (1920s), N: C.E. Downing

No further details.

***longiflorum* var. *takeshima* ‘Kurojuku’ V(-/a)**

Parentage: selection from *longiflorum* var. *takeshima*

Buds purplish brown; pollen orange-yellow. Fls scented. Stems fairly short, black.

(Named in Japan in the 1890s.)

***longiflorum* ‘Tetrabel’ V(-/a)**

Parentage: from seed of artificially produced tetraploid *longiflorum*

R: John Innes Horticultural Institute, N: John Innes Horticultural Institute

PC 1954, FCC 1955

Fls white, with more closely placed fls than the diploid. Lvs dark green.

(Published in *LYB* 19: 146, fig.1 (1956). Original bulb given to F.C. Stern by S.L. Emsweller.)

***longiflorum* ‘Thialf’ V(-/a)**

Parentage: probably a selection from *longiflorum*

R: J. Boon (pre 1982), N: J. Boon, REG: J. Boon (1983)

Inside bright white, throat with yellow-green veins; outside of ‘tube’ light yellow-green (138D); nectaries pea-green; pollen lemon-yellow. Tepal-tips strongly recurved. (J.M. van Tuyl (*in litt.* Oct. 1985) says that it is a selection from *longiflorum* ‘Indian Summer’, a cv. about which nothing is known, although it has been used as a parent.)

***longiflorum* ‘Togo’ V(b/a)**

Parentage: selection from *longiflorum*

(Grown in Japan before 1958. No further details.)

***longiflorum* ‘Toguro’ V(b/a)**

Parentage: selection from *longiflorum*  
Fls white. Resembles *longiflorum* ‘Togo’.  
(Grown in Japan before 1958.)

***longiflorum* ‘Tule’ V(-/a)**

Parentage: unnamed seedling × unnamed seedling  
R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)  
Inside yellowish white (155B) with light yellow-green (145B) midveins in the throat; outside pale yellow-green (157C) towards base, pale yellow-green (155A) towards tepal-tips; spots absent; nectaries light yellow-green (145C/D); pollen vivid yellow (14A). Fls 200 mm wide; tepals 185 × 58 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 25 mm, mid green. Stems 0.9 m, green, with c.3 fls.

***longiflorum* ‘Unzen’ V(-/a)**

Parentage: selected seedling from *longiflorum*  
S: S. Fukuda (c. 1957), N: S. Fukuda  
Fls white.

***longiflorum* ‘Vittatum’ V(b/a)**

Parentage: sport from *longiflorum*  
Lvs edged reddish brown, margins silvery white.  
(Published in E.H. Wilson, *The Lilies of eastern Asia*: 26 (1925).)

***longiflorum* ‘White American’ V(b/a)**

Parentage: selection from *longiflorum*  
S: A.N. Roberts (1977), G: IVT (1979), N: J.M. van Tuyl (1981), I: J.M. van Tuyl (1981), REG: IVT (1982)  
Inside and outside greenish white (155C), tepal-tips green; nectaries green; pollen deep yellow. Fls 110 mm wide; tepals 150 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, up to 230 × 25 mm, mid green. Stems 1 m, light to medium green, with 4-8 fls.

***longiflorum* ‘White Europe’ V(b/a)**

Parentage: sport from *longiflorum* ‘Arai no. 5’ from Japan (= *longiflorum* ‘Georgia’)  
S: G.A. van Veen (1973), G: G.A. van Veen (1974), N: G.A. van Veen (1978), I: G.A. van Veen (1979), REG: G.A. van Veen (1983)  
Inside dim, gleaming white, throat with lettuce-green midveins; outside greenish white below, dim, gleaming greenish white (155C) above, midribs creamy; spots absent; nectaries yellow-green; pollen lemon-yellow. Tepals 190 × 80 mm, margins smooth, tips strongly recurved. Lvs scattered, 220 × 35 mm, dark green. Stems 0.9-1 m, dark green, with 4-6 fls (from 16-18 cm bulbs).

***longiflorum* ‘White Forest’ V(-/a)**

Parentage: *longiflorum* ‘White Europe’ × seedling 82-37-1  
R: J. van den Bos & Zn B.V. (1987), G: J. van den Bos & Zn B.V., N: J. van den Bos & Zn B.V. (1994), I: J. van den Bos & Zn B.V. (1994), REG: J. van den Bos & Zn B.V. (1996)

Inside and outside yellowish white (155D); spots and papillae absent; nectaries green; pollen yellow; stigma pale green. Fls c.150 mm wide; tepals 170 × 45 mm, margins slightly ruffled, tips recurved. Lvs scattered, 240 × 33 mm, mid green. Stems 1.45 m, green with darker markings, and with 2-4 fls. Late to very late.

***longiflorum* ‘White Fox’ V(b/a)**

Parentage: *longiflorum* ‘Hinomoto’ × *longiflorum* ‘Snow Trumpet’  
R: G.A. van Veen (1976), G: G.A. van Veen (1977), N: G.A. van Veen (1980), I: G.A. van Veen (1981), REG: G.A. van Veen (1985)  
Inside white, with light yellow-green (145B) midveins in the throat; outside white with cream/white midribs; nectaries greenish white; pollen vivid yellow (15A). Fls 210 mm wide; tepals 180 × 60 mm, tips recurved. Lvs scattered, 150 × 35 mm, mid green. Stems 1 m, green, with c.3 fls.

***longiflorum* ‘White Heaven’ V(b/a)**

Parentage: *longiflorum* ‘White Fox’ × *longiflorum* ‘Calgary’  
R: J.W.A. van der Wereld (1990), G: J.W.A. van der Wereld (1993), N: J.W.A. van der Wereld (1999), I: J.W.A. van der Wereld (1996), REG: J.W.A. van der Wereld (2001)  
Inside yellowish white (155B); outside yellowish white (155D); spots and papillae absent; nectaries green; pollen white; stigma orange-yellow. Tepal-tips strongly recurved. Stems 1.45 m, green, with 3-6 fls (from 16-18 cm bulbs). Midseason.

***longiflorum* ‘White Horn’ V(b/a)**

Parentage: *longiflorum* ‘Mount Everest’ × *longiflorum* ‘White American’  
R: G.A. van Veen (1980), G: G.A. van Veen (1981), N: J.W.A. van der Wereld (1986), I: J.W.A. van der Wereld (1986), REG: J.W.A. van der Wereld (1986)  
Inside greenish white, with Scheele’s green midveins; outside ivory-white, with a greenish white tube; spots absent; nectaries light yellow-green (145C); pollen vivid yellow (15A). Fls 130 mm wide; tepals 140 mm long, tips slightly recurved. Lvs scattered, 180 × 35 mm. Stems 1.25 m, green, with 3-6 fls.

***longiflorum* ‘White Ideal’ V(-/a)**

Parentage: selection from *longiflorum* ‘Indian Summer’ × *longiflorum* ‘Mount Everest’  
R: G.A. van Veen (1980), G: G.A. van Veen (1981), N: J.W.A. van der Wereld (1986), I: J.W.A. van der Wereld (1986), REG: J.W.A. van der Wereld (1986)  
Inside transparent white, with Scheele’s green midveins in the throat; outside transparent white with a pale greyish green tube, midribs ivory-white, tepal-tips chartreuse; spots absent; nectaries pale yellow-green (193D); pollen vivid yellow (15A). Fls 130 mm wide; tepals 120 mm long. Lvs scattered, 170 × 30 mm. Stems 1 m, pale green, with 3-4 fls.

**longiflorum 'White Lace' V(b/a)**

Parentage: *longiflorum* 'Snow Trumpet' × selection from Indian Summer Group  
R: J.W.A. van der Wereld (1986), G: J.W.A. van der Wereld, N: J.W.A. van der Wereld (1988), I: J.W.A. van der Wereld (1987), REG: J.W.A. van der Wereld (1990)  
Inside greenish white (155C), throat with light yellow-green (145C) midveins; outside yellowish white (155B) tinged with greenish white (157D) at base; spots absent; pollen vivid yellow (14A). Fls 180 mm wide; tepals 150 × 55 mm, margins smooth, tips recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 1.5-1.8 m, green, with 4-6 fls (from 16-18 cm bulbs). May to June (under glass).

**longiflorum 'White Pygmy' V(b/a)**

Parentage: selection from *longiflorum*  
(Grown in New Zealand. No further details.)

**longiflorum 'White Queen' V(b/a)**

Parentage: selection from *longiflorum*; originally a seed line  
AMH 1937  
Fls white, with greenish throat. Stems 1 m. July to Aug. (Raised and named in the 1900s.)

**longiflorum 'White Sapphire' V(-/a)**

Parentage: *longiflorum* 'Mount Everest' × *longiflorum* 'White Queen'  
R: G.A. van Veen (1978), G: G.A. van Veen (1979), N: G.A. van Veen (1985), I: J.W.A. van der Wereld (1986), REG: J.W.A. van der Wereld (1986)  
Inside white, with green midveins in the throat; outside white to ivory-white; spots absent; nectaries light yellow-green (145D); pollen vivid yellow (14A). Fls 160 × 150 mm; tepal-tips strongly recurved. Lvs scattered, 180 × 25 mm. Stems 1.3 m, pale green, with c.3 fls. (The spelling 'Sapphire' is deliberate.)

**longiflorum 'White Satin' V(b-c/a)**

Parentage unknown  
R: J.W.A. van der Wereld B.V., N: J.W.A. van der Wereld B.V., REG: J.W.A. van der Wereld B.V. (2002)  
Inside and outside yellowish white (155B) with a pale yellow-green (155A) base; spots and papillae absent; nectaries green; pollen orange-yellow; stigma light green to almost white. Tepal-margins slightly ruffled, tips recurved. Late.

**longiflorum 'White Sheen' V(b/a)**

Parentage: (*longiflorum* 'Slocum's Ace' × *longiflorum* 'Nellie White') × *longiflorum* 'White American'  
R: G.A. van Veen (1979), G: G.A. van Veen (1980), N: J.W.A. van der Wereld (1986), I: J.W.A. van der Wereld (1986), REG: J.W.A. van der Wereld (1986)  
Inside white, midveins light yellow-green (144D) in the throat; outside transparent white with yellowish white (155D) midribs and a greenish white tube; spots absent; nectaries yellow-green; pollen bright lemon-yellow. Fls 120 mm wide; tepals 160 × 20 mm, margins smooth, tips rather strongly recurved. Lvs scattered, 160 × 20 mm. Stems 0.55 m, green, with 4-5 fls.

**longiflorum 'White Shot' V(b/a)**

Parentage: *longiflorum* 'Lorina' × *longiflorum* 'Avita'  
R: De Jong Lelies Holland B.V. (2000), G: De Jong Lelies Holland B.V. (2002), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2003)  
Inside and outside yellowish white (155D); spots and papillae absent; nectaries strong yellow-green (144C); pollen vivid yellow (12A); stigma pale yellow-green (4D). Fls 165 mm wide, slightly fragrant; tepals 185 × 58 mm, margins smooth, tips slightly recurved. Lvs 182 × 22 mm, light green. Stems 1.4-1.5 m, light green, with c.4 fls. Late June to July.  
(Included in *ILR Twenty-third Supplement* as 'White Shot', which is acceptable, but because of its parentage, the epithet may also be attached to the species *longiflorum*.)

**longiflorum var. wilsonii T. Moore IX(-/a)**

Very similar to var. *eximium*, but with longer fls and shorter stems.

**longiflorum 'Wonderbell' V(b/a)**

Parentage: selection from *longiflorum*  
(Published in *LYB* 10: 47 (1946). Raised in the USA. No further details.)

**longiflorum 'Wonderbell Improved' V(-/a)**

Parentage: selection from *longiflorum* var. *eximium* 'Creole'  
With larger and more fls per stem than *longiflorum*. (Published in *Baileya* 4(1): 45 (1956).)

**var. longii IX(a/b)**

See *catesbaei* var. *longii*.

**'Longiklara' VIII(a-b/b)**

Parentage: (orange-flowered seedling × cream-flowered seedling) × Longistar Group  
R: B. Kondrot (1988), G: B. Kondrot (1990), N: B. Kondrot (1995), I: B. Kondrot (1995), REG: B. Kondrot (1995)  
Inside light orange-yellow (25D), tepals edged dark reddish orange (172B) in basal third, throat moderate yellow (160A); outside light orange-yellow (25D), midribs green-brown; spots moderate red (179A), on basal quarter of each inner tepal, fewer on outer tepals; nectaries greenish white (155C); pollen strong reddish orange (169A). Fls 170 mm wide; tepals 120 × 40 mm, margins smooth, tips slightly recurved; pedicels 80-110 mm long. Lvs scattered, 110 × 18 mm, mid green. Stems 1.2 m, rather dark green, with c.18 fls (including secondaries). Early to mid July. Tetraploid.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Longiora' VIII(a-b/b)**

Parentage: (orange-flowered seedling × cream-flowered seedling) × Longistar Group  
R: B. Kondrot (1988), G: B. Kondrot (1990), N: B. Kondrot (1994), I: B. Kondrot (1994), REG: B. Kondrot (1995)

Inside brilliant orange (25C), throat moderate yellow (160A); outside brilliant greenish yellow (151D), a third of each tepal suffused with dark red (187A), midribs greyed purple; spots tiny, sparse, moderate reddish brown (175A), on basal third of each tepal; nectaries yellowish white (155B); pollen dark reddish orange (173A). Fls 170 mm wide, slightly scented; tepals 120 × 50 mm, margins smooth, tips slightly recurved; pedicels 90-120 mm long. Lvs scattered, 160 × 22 mm, mid green. Stems 1.25 m, rather dark green, with c.14 fls (including secondaries). Early to mid July. Triploid.

(A *longiflorum*/Asiatic (LA) hybrid. Published in the European Lily Society sales list, 1995.)

#### 'Longipinka' VIII(a-b/b)

Parentage: 'Candy Apple' × Longistar Group  
R: B. Kondrot (1988), G: B. Kondrot (1990), N: B. Kondrot (1994), I: B. Kondrot (1994), REG: B. Kondrot (1995)

Inside strong pink (48D), suffused with strong purplish red (58B) on three-quarters of each tepal and with a brilliant greenish yellow (151D) stripe above each nectary, throat brilliant yellow-green (149C); outside strong pink (48D), suffused with strong purplish red (58D), midribs strong yellow-green (144A) with a dark red (187A) base; spots sparse, moderate reddish orange (178D), on the centre three-quarters of each tepal; nectaries greenish white (155C); pollen strong orange (169B). Fls 160-180 mm wide; tepals 120 × 45 mm, margins smooth, tips slightly recurved; pedicels 80-110 mm long. Lvs scattered, 125 × 20 mm, dark green. Stems 1.25 m, rather dark green, with c.16 fls (including secondaries). Early to mid July.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Longistar I' VIII(-/-)

See note under Longistar Group.

#### 'Longistar II' VIII(-/-)

See note under Longistar Group.

#### Longistar Group VIII(b/b)

Parentage: *longiflorum* × 'Sterling Star'  
R: P. Schenk, G: P. Schenk, N: P. Schenk (1983), I: Borbeleta Gardens (1984)

Inside greenish cream; outside greenish; spots few, scattered, brownish, on basal third of each tepal. Tepal-margins smooth, tips not recurved, very brittle. Lvs scattered, mid green. Stems 0.9 m, mid green, with up to 19 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1984. Individual clones were sold by Borbeleta as 'Longistar I', 'Longistar II', etc.)

#### 'Longivetta' V(b/a)

See *longiflorum* 'Longivetta'.

#### 'Long John' I(b/-)

Parentage: 'Connecticut Yankee' × *davidii* var. *unicolor*  
R: D.M. Stone (1968), N: D.M. Stone & F.H. Payne (1971), I: D.M. Stone & F.H. Payne (1974), REG:

Piedmont Gardens (1980)

Inside brilliant yellow (12B), tepal-tips light yellow (12C), throat vivid yellow (12A); outside vivid yellow (12A); nectaries vivid yellow (12A); pollen yellow. Fls 150 mm wide; tepals 65 × 35 mm, slightly recurved. Lvs scattered, 175-200 × 35 mm, mid green. Stems 1.5 m, mid green, with c.15 fls. Aug.

(Published in Stone & Payne list, 1975.)

#### 'Longshot' VIII(b/b-c)

Parentage: *longiflorum* 'Nellie White' × 'Polar Bear'  
R: W.D. Evans (1984), G: W.D. Evans (1988), N: W.D. Evans (1992), I: W.D. Evans (1992), REG: W.D. Evans (1992)

Inside brilliant greenish yellow (6C); outside brilliant greenish yellow (6B) fading to light greenish yellow (6D), midribs deep red (53A); spots absent; nectaries brilliant greenish yellow (6B); pollen light orange-yellow (16C). Fls 130 mm wide; tepals 90 × 50 mm, margins very slightly ruffled, tips somewhat recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 1.1 m, green with dark brown flecks, and with c.15 fls. Buds are like *longiflorum* in shape. Late July.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Long Tall John' I(a/-)

Parentage: unnamed hybrid ex Laan × 'Syndicate'  
R: Gebr. N. & B. Laan & Zn (1989), G: Gebr. N. & B. Laan & Zn (1991), N: Gebr. N. & B. Laan & Zn (1995), I: Gebr. N. & B. Laan & Zn (1996), REG: Gebr. N. & B. Laan & Zn (1996)

Inside strong orange/strong orange-yellow (24A/B) in basal part, apical part paler, tepal-tips strong orange (25A), throat strong orange-yellow (24B), paler at tepal-edges; outside pale orange-yellow (24D) to light orange-yellow (24C), midribs suffused with strong yellow-green (144C) and tipped strong yellow-green (143A); spots dark red (187A) in the throat; papillae strong orange-yellow (24B) in the throat; pollen strong reddish orange (169A); stigma strong orange-yellow (24B). Fls 200 mm wide; tepals 100 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 1.7 m, green with much darker markings, and with c.9 fls. June.

#### 'Looking Up' VII(a/-)

Parentage unknown  
Inside soft pink. Stems 0.6 m. Early.  
(Listed by Borbeleta Gardens in 1994. No further details.)

#### *lophophorum* var. *linearifolium* (Sealy) S. Yun Liang IX(c/b)

Fls always with red-purple spots. Lvs very narrow.

#### *lophophorum* var. *lophophorum* (Bureau & Franch.) Franch. IX(c/b)

Fls yellow or greenish yellow; spots absent; nectaries papillate. Fls at first with tepals touching at tips, forming a globular shape, the tips eventually separating; tepals 45-57 × 9-16 mm. Lvs clustered to scattered, very variable,

50-120 × 3-20 mm. Stems 0.1-0.5 m, with 1(-3) fls. W China (Xizang, Sichuan, Yunnan).

**'Lord Keon' I(a/b-c)**

Parentage: 'Pirate' × 'Connecticut King'

R: F. Ewald (1973), G: R.M. Withers (1976), N: K.L. Watkins (1982), I: K.L. Watkins (1982), REG: K.L. Watkins (1983)

Inside and outside vivid yellowish orange (30C), throat strong orange (24A) merging to vivid yellowish orange (30C); spots fine, dark red (183A) around top of nectaries; nectaries pale yellowish pink (29D); pollen dark reddish orange (175B). Fls 140 mm wide; tepals 75 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 1 m, dark red (187A) at base, heavily speckled dark green above, with 12-18 fls. Early to mid Dec. (Australia).

**'Lord Melbourne' I(a/-)**

Parentage: *bulbiferum* var. *croceum* × *L. × maculatum* 'Yellow Tulip'

R: G. Errey, N: G. Errey

Fls rich yellow. Stems 1.2-1.5 m.

(Published in *LYB* 11: 80 (1947).)

**'Lorelei' I(a/b)**

Parentage unknown

R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1989)

Inside strong red (53D), tepals flamed pale yellow (8D); outside strong purplish red (60C), midribs flushed with light yellow-green (145C); spots small, dark red (187A), on basal half of each tepal; pollen dark reddish orange to brownish orange (172B/C). Fls 190 mm wide; tepals 95 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 95 × 12 mm, mid green. Stems 0.75-0.9 m, green with darker markings, and with c.17 fls. June.

**'Loreto' I(a/b)**

Parentage unknown

R: Vletter & Den Haan, N: Vletter & Den Haan, REG: Vletter & Den Haan (1994)

Inside strong orange (25A/B) shading to strong orange (25A) at tepal-edges, each tepal with a flame of dark red (187A) extending from a quarter to half way up, throat vivid orange (28B); outside vivid orange (28B), outer tepals tipped dark red (187A); pollen moderate reddish brown (175A); stigma dark red (187B), paler at base. Fls 170 mm wide; tepals 90 × 50 mm. Lvs scattered, 110 × 10 mm, mid green. Stems 0.6-1.1 m, green with much darker marking, and with c.4-8 fls. July.

**'Lorina' V(b/a)**

See *longiflorum* 'Lorina'.

**'Lorinda' I(a/-)**

Parentage: 'Connecticut King' × 'Croesus'

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1982), I: Oregon Bulb Farms, Inc. (1984), REG: Oregon Bulb Farms, Inc. (1985)

Fls vivid yellow (12A), with a vivid orange-yellow (21A) flush; more-or-less unspotted (traces of spots in centre); nectaries green; pollen brown/gold. Tepals 70 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 40 mm, dark green. Stems 1.2 m, light green, with 7-20 fls; buds very downy. Mid June.

**'Lorraine Laten' VII(b-c/d)**

See *L. × parkmanii* 'Lorraine Laten'.

**'Los Angeles' I(a/b)**

Parentage unknown

R: Fa P. Hoff & Zn (1977), G: Fa P. Hoff & Zn (1979), N: Fa P. Hoff & Zn (1985), I: Hoffgaarde B.V. (1987), REG: Hoffgaarde B.V. (1986)

Tepals inside flamed pale yellow, tips rose-pink, throat rose-pink; outside greyish red, each tepal with a brown flame; spots dark brown, on the yellow flame; nectaries bronze; pollen brown. Fls 170 mm wide; tepals 75 × 35 mm, slightly recurved. Lvs scattered, 150 × 20 mm, pale green. Stems 1.1-1.3 m, green, with 13-14 fls.

**'Lotte' VII(b/c)**

Parentage: 'Liesma' × 'Meret'

R: A. Balode (pre 1996), N: A. Balode (1997), REG: A. Balode (1997)

Inside strong purplish red (61B) with white tepal-margins, throat brilliant yellow (7B); outside white, midribs strong purplish red (63B); spots large, ovate, deep purplish red (61A); nectaries green; pollen orange. Fls 200 mm wide; tepals 90 × 35 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 75 × 35 mm, mid green. Stems 0.8 m, with c.5 fls. Mid July.

**'Lotus' VI(-/a)**

Parentage unknown

R: E.C. Genat (pre 1964), I: Rowse Bros Pty Ltd  
Fls cream, with deep green centre. Tepals slightly recurved. Stems 1.5 m. Jan. (Australia).

**LOTUS I(a/-)**

Trade designation of 'Holebb'.

**'Louis d'Or' I(a/-)**

Parentage: seedling G 86-3 × seedling OR 87-6

R: Vletter & Den Haan (1992), G: Vletter & Den Haan, N: Vletter & Den Haan (1997), I: Vletter & Den Haan (1997), REG: Vletter & Den Haan (1997)

Inside vivid orange-yellow (21A/23A), with brilliant greenish yellow (4A) towards the edges in the throat; outside with vivid yellow (12A) tepal-margins, midribs suffused with strong yellow-green (143C), with strong yellow-green (143C) at top; spots absent; papillae vivid orange-yellow (21A) in the throat; nectaries strong yellow-green (143A) and pale greenish yellow (2D); stigma and pollen strong brown (172A). Fls 170 mm wide; tepals 90 × 30-45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 160 × 15 mm, mid green. Stems 1.1 m, green with some darker markings, few (1-2) fls, and bulbils.

**'Louise' VI(c/d)**

Parentage: (*henryi* × unknown) × unknown  
 R: L. Koehler (1968), N: M.C. Eisel (1972), I: J. Wadekamper (1973), REG: J. Wadekamper (1973)  
 Inside white, throat green; outside pale green; papillae tan, in the throat; pollen tan. Lvs dark green, *henryi* type. Stems 1.6 m. July.  
 (Published in *Lilies and other Liliaceae*, 1973/1974: 110.)

**'Louis-Philippe' I(-/)**

Parentage: "common orange-flowered bulbiferous lily" × *L. × maculatum*  
 R: H. Groom (c. 1848), N: H. Groom  
 Fls rich crimson, shading to orange, mottled with blood-crimson. Stems 0.3 m.  
 (Published in *JRHS* 3: xliii (1848). The seed parent is almost certainly *bulbiferum*.)

**'Louvre' VII(a-b/b)**

Parentage unknown  
 R: Vletter & Den Haan, G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1992), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)  
 Inside light purplish pink (63D) on a yellowish white (155D) ground; outside yellowish white (155D), only the outer tepals slightly suffused with light purplish pink (63D), midribs brilliant greenish yellow becoming strong yellow-green (144C) at the base; spots moderate purplish red (58A), on two-thirds of each tepal; pollen strong orange (169B); stigma moderate yellow-green (147D). Fls 190 mm wide; tepals 110 × 67 mm, margins very slightly ruffled, tips reflexed. Lvs scattered, 150 × 36 mm, dark green. Stems 1 m, mid green with darker markings, and with c.6-9 fls.

**'Love Affair' I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: J. Vasarietis (1983), G: J. Vasarietis (1987), N: J. Vasarietis (1990), I: J. Vasarietis (1990), REG: J. Vasarietis (1992)  
 Bicolour: inside tepal-tips vivid red (44A), throat vivid orange-yellow (23A); outside vivid reddish orange (32A); spots few, tiny, black, on a fifth of each tepal; nectaries shiny white; pollen brown. Fls 140 mm wide, hardly fading; tepals 65 × 36 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 18 mm, dark green. Stems 0.7 m, green, with c.7 fls. Late June to early July.

**'Lovedream' I(a/b)**

Parentage unknown  
 R: W. Paauw & Zn B.V. (pre 1987), REG: Peacock B.V. (2002)  
 Inside strong orange (39A) in centre of tepals, tips deep yellowish pink (39B), base with a strong orange (24A) spot, markings brown, throat pink/orange; spots and papillae present; stigma purple; pollen red-brown. Tepal-margins smooth, tips recurved. Stems brown to mid green, with darker markings.

**'Loveliness' I(a/b)**

See *L. × maculatum* 'Loveliness'.

**'Lovely Diana' VII(b/b)**

Parentage: 'Alina' × 'Rose Queen' (Div. VII)  
 R: G.C. Keast (1990), G: G.C. Keast (1995), N: G.C. Keast (1997), REG: G.C. Keast (1998)  
 Inside each tepal with a deep pink ray, suffused out into the broad white margins and tips, which are tinted light green at first; outside white with green tepal-tips, throat light green; papillae numerous, deep pink, on basal half to two-thirds of each tepal; nectaries green; pollen brown. Fls 180 mm wide, scented; tepals 110 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 40 mm, dark green. Stems 0.69 m, light green, with c.4 fls. Mid to late Jan. (New Zealand).

**'Lovely Girl' VII(-/b)**

Parentage: white-flowered seedling × 'Star Gazer'  
 R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1993), REG: Bischoff Tulleken Lelies B.V. (1995)  
 Inside yellowish white (155D), midveins light yellow (10C); outside yellowish white (155D), with pale yellow-green (155A) midribs and a little reddish brown at the base; spots dark red (187A), on three-quarters of each tepal; papillae yellowish white (155D), light yellow (10C) and dark red (187A) near nectaries; nectaries strong yellow-green (144B); pollen strong orange (24A); stigma dark red (187B). Fls 180 mm wide; tepals 105 × 35 mm, margins ruffled, tips strongly recurved. Lvs scattered, 150 × 50 mm, mid green. Stems 0.75 m, mid green with some darker markings, and with c.7 fls.

**'Lovely Lady' VI(-/a)**

See *L. × imperiale* 'Lovely Lady'.

**'Lovesong' I(a/-)**

Parentage: 'Byam's Ruby' × 'Red Carpet'  
 R: Oregon Bulb Farms, Inc. (1968), G: Oregon Bulb Farms, Inc. (1971), N: Oregon Bulb Farms, Inc. (1975), I: Oregon Bulb Farms, Inc. (1976), REG: Oregon Bulb Farms, Inc. (1981)  
 Fls deep burgundy-red; spots few, small, black; nectaries brown; pollen dark brown. Fls 150 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 0.7 m, green, with 6-20 fls. June.

**'Loving Red' VII(a/b)**

Parentage: unnamed seedling × 'Kissproof'  
 R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2001), REG: Bischoff Tulleken Lelies B.V. (2001)  
 Inside strong purplish red (60D), midveins deep red (60A), tepal-edges deep purplish pink (64D), throat yellowish white (155D); outside darker than vivid purplish red (57C/D), midribs pale purplish pink (62D), changing to strong yellow-green (144B) towards top, and tipped strong yellow-green (144A); spots dark red (187A); papillae coloured as tepals; pollen strong brown (172A); stigma light grey (188D) with a purple flush. Fls 210 mm wide; tepals 130-135 × 40-50 mm, margins

ruffled, tips recurved. Lvs scattered, 155 × 60 mm. Stems 0.9-1.1 m, light green with a little darker marking, and with c.6 fls. July.

**'Lovita' V(-/a)**

See *longiflorum* 'Lovita'.

**'Luba' I(b/-)**

Misspelling of 'Luba'.

**'Luba' I(b/-)**

Parentage: selection from Vasaras Prieks Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls light orange.

(Misspelling: 'Liuba'. Published in *LYB* 33: 78 (1970) and included in *ILR* (1982) as 'Luba', which is also a misspelling.)

**'Lubimaja' VI(-/a)**

Unaccepted spelling of 'Lubimaia'.

**'Lubov Moja' VI(-/a)**

Parentage: *henryi* 'Kupava' × 'Solntse Rossii'

R: V.A. Volkov (1984), N: V.A. Volkov

Fls bright orange, throat reddish orange. Stems 1.3 m.

Aug.

**'Lucca' I(a/b)**

Parentage: 'Kismet' × seedling OR 213

R: Vletter & Den Haan, G: Vletter & Den Haan (1984),

N: Vletter & Den Haan (1988), I: Vletter & Den Haan

(1993), REG: Vletter & Den Haan (1993)

Inside vivid reddish orange (32A); outside moderate

orange-yellow (167D), tepal-margins vivid reddish orange

(30A/B), midribs moderate orange-yellow (167D), fading

towards top and slightly suffused with strong red (45D)

at base; spots greyish brown (166A) on basal part of

tepals; pollen moderate reddish brown (175A); stigma

deep purplish red (187D). Fls 180 mm wide; tepals 90 ×

45 mm, slightly recurved. Lvs scattered, 110 × 10 mm,

dark green. Stems 1.-1.2 m, pale green, with 7-11 fls

(from 14-16 cm bulbs).

**'Lucera' VII(a-b/b)**

Parentage: seedling 93-25 × seedling RM 96-20

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den

Haan Beheer B.V. (1999), REG: Vletter & Den Haan

Beheer B.V. (2003)

Inside moderate purplish pink (66D), midveins deep

purplish pink (66C), throat yellowish white (155D);

outside deep purplish pink (66C), midribs light yellow-

green (144D) at base, passing to yellowish white (155D)

in basal third and deep purplish pink (66C) in apical two-

thirds; spots strong purplish red (61B); papillae yellowish

white (155D); nectaries strong yellow-green (144C);

pollen moderate reddish orange (171A); stigma very pale

green (192C). Fls 225 mm wide, slightly fragrant, older

fls with light yellow (162C) stripes; tepals 143 × 72 mm,

margins ruffled, tips slightly recurved. Lvs 175 × 50 mm.

Stems 1.1 m, green with darker markings, with c.4 fls.

**'Luchezarnaia' I(a/b-c)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1993)

Fls pale gold; spots absent; pollen orange. Fls 130-140

mm. Stems 0.8-0.9 m, with 11-18 fls. June.

(Published in M.F. Kireeva, *Lilii*, 53 (2000).)

**'Luchistaia' I(a/b-c)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1992)

Fls orange-apricot, deeper towards base; spots brown, at

base. Stems 0.8-0.9 m, with 9-11 fls.

(Published in M.F. Kireeva, *Lilii*, 54 (2000).)

**'Luchower Entzücken' I(a/b)**

Misspelling of 'Lüchower Entzücken'.

**'Lüchower Entzücken' I(a/b)**

Parentage unknown

R: C. Wittneben (pre 1972), N: C. Wittneben

Fls gold.

(Published in *ILR* (1982) as 'Luchower Entzücken', which is a misspelling. Similar to 'Enchantment'.)

**'Lüchower Feuerkönig' I(b/b)**

Parentage unknown

R: C. Wittneben (pre 1970), N: C. Wittneben, REG:

ICRA (1993)

Inside glowing orange-red, throat darker, centre of

tepals orange; outside with greenish midribs; spots

small, numerous, dark brown, on half of each tepal;

nectaries white and pale violet-granulated; pollen clear

brown; stigma violet. Buds hairy. Tepals 100 × 40 mm,

moderately recurved; pedicels hairy. Lvs scattered, 75 × 7

mm. Stems 0.9 m, green, slightly hairy. Mid June.

**'Lucibee' VI(-/a)**

Parentage: 'Greatheart' × white-flowered trumpet

seedling

R: O.M. Witte, N: O.M. Witte, I: J. Wadkamper

(1978), REG: J. Wadkamper (1978)

Inside white; outside cream; spots absent; nectaries

greenish; pollen light tan. Tepal-margins slightly ruffled.

Lvs scattered, dark green. Stems 1.2 m. Late.

(Published in *Lilies and other Liliaceae*, 1978/9: 110.)

**'Lucie' VI(-/c)**

Parentage: *henryi* × ('Bright Star' × unknown)

R: B. Král (1975), G: B. Král (1978), N: B. Král (1984),

I: B. Král (1984), REG: B. Král (1986)

Tepal-tips and outside white, throat orange; spots brown,

spare; nectaries light green; pollen red-brown. Fls 80 mm

wide; tepals 60 × 20 mm, margins smooth, tips slightly

recurved. Lvs scattered, 110 × 25 mm, dark green. Stems

1.2-1.6 m, green with a brown overlay. Late July to Aug.

**'Lucie Marie Countess Reventlow' VI(-/l)**

Parentage: 'T.A. Havemeyer' × unknown

R: W.A. Constable Ltd, N: W.A. Constable Ltd

Fls deep, clear yellow, with green nectary-star. Tepals

flushed with green, slightly reflexed.  
(Published in *Constable Cat.*, Autumn 1952.)

**'Lucie Wilson' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Lucie Wilson'.

**'Lucifer' I(a/-)**

Parentage: 'Lillian Cummings' × unknown

R: G.L. Slate (c. 1942), N: G.L. Slate

Fls orange, lightly spotted. Stems 1 m. July.

(Published in *Greenock Farms Cat.*, 1955.)

**'Lucija Baumann' Div. ?**

Parentage unknown

R: V.P. Orehovs

Fls light pink with dark pink spots.

**'Lucille Payne' VI(-/a)**

Parentage: *leucanthum* var. *centifolium* × *sulphureum*

R: G.O. Payne (c. 1951), N: G.O. Payne

Inside white, throat deep yellow; outside wine-brown; anthers dark chocolate-brown.

**'Lucinka' I(a/b)**

Parentage: 'Connecticut King' × 'Lemon Queen' (Div. I)

R: Šlechtitelaká Stanice Heřmanův Městec, N:

Šlechtitelaká Stanice Heřmanův Městec, REG:

Šlechtitelaká Stanice Heřmanův Městec (1992)

Inside orange, tepal-tips paler, deeper in centre; spots small, sparse, in the throat. Fls 110-130 mm wide, tepals overlapping; pedicels 60-70 mm long. Lvs scattered, 75-90 × 12-17 mm. Stems 0.7 m, brown-violet, hairy, with c.10 fls. Mid June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1992.)

**'Lucja Prus' VII(-/c)**

Parentage unknown

R: J. Wiśniewski (1986), G: J. Wiśniewski (1991), N:

J. Wiśniewski (1993), I: W. Peryt, REG: J. Wiśniewski (1993)

Inside yellowish white (156D), throat brilliant greenish yellow (7C); outside yellowish white (156D); spots brownish orange (166C), on basal third of tepals; nectaries strong yellow-green (143C); pollen strong orange (169C); papillae present. Fls 210 mm wide; tepals 170 × 53 mm, margins smooth, tips strongly recurved. Lvs scattered, 297 × 57 mm, dark green. Stems 1.78 m, moderate yellow-green (137C), with c.16 fls. July.

**'Luckauer Gartenschau' I(a/d)**

Parentage: 'Zitronenmädchen' × 'Connecticut Melon'

R: G. Steinbrück (1989), G: G. Steinbrück (1993), N:

G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2003)

Inside light yellow (17D), tepal-tips and throat strong yellowish pink (34D); outside strong yellowish pink (34D); spots absent; nectaries light orange-yellow (25D), hoary; filaments light orange-yellow (25D); pollen moderate red (179A); style light orange-yellow (25D); stigma deep pink (180D). Fls 120 mm wide; tepals 70

× 27 mm, margins smooth, tips strongly recurved. Lvs scattered, 150 × 8 mm. Stems 0.7 m, pale green, with 6-8 fls. Mid June.

(Published in ELG sales list, 2000. Nomenclatural standard: colour print provided by registrant (WSY 0038756).)

**'Luckauer Schöne' I(a/c)**

Parentage: 'Dawn Star' × mixed pollen of 'Brushmarks' & brushmarked seedlings

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N:

G. Steinbrück (1998), I: G. Steinbrück (2000), REG: G. Steinbrück (2003)

Inside vivid yellow (17B), tepal-tips cream (158D); outside vivid yellow (17B); spots numerous, small, vivid reddish orange (34A) on basal half of each tepal; nectaries moderate yellow-green (138C), white-hoary, violet at top; filaments soft green; pollen strong reddish orange (169A); style soft green; stigma light purple (80C). Fls 125 mm wide; tepals 70 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 16 mm. Stems 0.7 m, dark green, with 8-10 fls. Early to mid July.

(Published in ELG sales list, 2000. Nomenclatural standard: colour print provided by registrant (WSY 0038759).)

**'Lucky Gem' I(a/-)**

Parentage unknown

R: H.E. Hoepner (1978), G: H.E. Hoepner (1984), N:

H.E. Hoepner (1990), REG: H.E. Hoepner (1990)

Inside soft lemon-yellow, suffused with pure white, tepal-tips soft cream, throat lemon-yellow; outside soft lemon-yellow; traces of tiny spots in centre of fl.; nectaries soft cream; pollen soft copper. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1 m. June.

**'Lucky Star' I(b/-)**

Parentage: selection from *lancifolium* hybrids

S: J. de Graaff, N: J. de Graaff

Fls large, red. Stems 1.2 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1956.)

**'Lucky Strike' I(a/b)**

Parentage: 'Sunny Side Up' × yellow-flowered, up-facing Asiatic seedling

R: R.H. Bazett (pre 1979), N: R.H. Bazett, REG: ICRA (1997)

Fls yellow, with spots in the fl. centre. Tepal-tips slightly recurved. Stems 1.07 m, with c.16 fls (including secondaries). Tetraploid.

**'Lucy' VII(a-b/b-c)**

Syn. of 'Miss Lucy'.

**'Lucyda' I(a/-)**

Parentage: 'Blizzard' × seedling W 659

R: Vletter & Den Haan, G: Vletter & Den Haan, N:

Vletter & Den Haan (1987), I: Vletter & Den Haan,

REG: Vletter & Den Haan (1997)

Inside and outside pale yellow-green (155A); spots and

papillae absent; stigma light green-yellow; pollen orange-brown. Tepal-margins ruffled, tips recurved. Stems 0.9 m, light green. Early to midseason.

**‘Luczezarnaya’ VI(-/d)**

Parentage: *henryi* × double-flowered ‘Louise’  
R: B.P. Guzhavin (1984), N: B.P. Guzhavin  
Fls cream, with white stripes. Fls *henryi* type. Stems 1.7 m. Aug.

**‘Ludmila’ I(b/-)**

Parentage: selection from Willtigrinum Group  
S: V.P. Orehovs (post 1959), N: V.P. Orehovs  
Fls pale orange.  
(Misspelling: ‘Liudmila’. Published in *LYB* 33: 81 (1970).)

**‘Ludmila’ I(b-c/b)**

Unaccepted spelling of ‘Liudmila’ (of Kireeva).

**‘Ludmila’ VI(-/a)**

Unaccepted spelling of ‘Liudmila’ (of Miroschniczenko).

**‘Lugano’ I(b/-)**

Parentage: ‘Roter Cardinal’ × ‘Tetra Mountaineer’  
R: V. Strasser (1974), G: V. Strasser (1976), N: V. Strasser (1980), I: V. Strasser (1981), REG: V. Strasser (1991)  
Inside blood-red; outside red. Tepal-margins smooth, tips not recurved. Lvs scattered, 110 × 14 mm, dark green. Stems 1.15 m, with c.21 fls. Mid June. Triploid.  
(Published in *Der Staudengarten*, 1981.)

**‘Lugos’ I(a-b/-)**

Parentage unknown  
R: World Flower B.V. (pre 2000), N: World Flower B.V. (2002), I: World Flower B.V. (2002), REG: World Flower B.V. (2002)  
Inside strong purplish red/deep purplish pink (54A/58D), tepal-tips paler, base white; outside deep purplish pink (58D); spots and papillae present; nectaries green; pollen brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems 0.95 m, green with dark stripes and spots. Very early to early.

**‘Lumière’ I(b-c/-)**

Parentage unknown  
R: W. Windus, G: W. Windus, N: W. Windus (1982), I: Borbeleta Gardens (1983), REG: J. Wadkamper (1983)  
Inside vivid reddish orange (30B); outside strong orange (26A); spots brown, on centre third of each tepal; nectaries white-orange; pollen red-brown. Tepals 70 × 35 mm, margins smooth, tips more-or-less strongly recurved. Lvs scattered, 70 × 10 mm, mid green. Stems 1.1 m, with 17-21 fls. Late.  
(Published in Borbeleta list, 1983 as ‘Luminaire’.)

**‘Luminaire’ I(b-c/-)**

Error for ‘Lumière’.

**‘Luminary’ VI(-/c)**

Parentage: (*henryi* × *sargentiae*) × (*henryi* × *leucanthum*

*var. centifolium* × *sargentiae*)

R: H.S. Fothergill, N: H.S. Fothergill (1973), REG: H.S. Fothergill (1973)  
Fls vivid yellow (12A), flushed with vivid orange-yellow (21A) along centre of tepals; pollen deep red-brown. Fls markedly scented. Stems 2.2 m.  
(Published in *Lilies and other Liliaceae*, 1973/1974: 110.)

**‘Luna’ VI(-/a)**

Parentage: Aurelian origin  
R: J. de Graaff (c. 1954), N: J. de Graaff  
Fls soft yellow, tepals paler at edges. Stems 1.2-1.5 m. July.

**‘Lunar Landing’ I(b/-)**

Parentage: ‘Primrose Lady’ × unknown  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1970)  
Fls pale primrose-yellow, spotted. Stems 1.2-1.5 m.

**‘Lunar Look’ I(b/-)**

Parentage unknown  
R: E. Robinson (pre 1969), N: E. Robinson  
Fls large, golden yellow, lightly spotted. Lvs broad. Stems 1-1.2 m. July.  
(Published in *ILR* (1969) Addenda.)

**‘Lüneburg’ I(b/-)**

Parentage: (‘Maxwill’ × unknown) × *davidii* ‘Rex’  
R: L. Denkwitz (pre 1976), N: L. Denkwitz, REG: L. Denkwitz (1988)  
Fls orange with small spots. Stems 1 m, with up to 20 fls. Late June to early July.

**‘Lunetka’ I(b-c/d)**

Parentage: (‘True Grit’ × (‘Connecticut Red’ × ‘Robin Hood’)) × (‘Stellar Gleam’ × ‘Odysseus’)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1994), REG: B. Mičulka (1994)  
Inside pale creamy yellow, yellowish around nectaries, tepal-tips paler; outside brownish; spots tiny, sparse, dark red-brown, on a sixth of each tepal; nectaries green, white-granulated; pollen apricot-brown; stigma dark green. Fls 105 mm wide; tepals 75 × 35 mm, strongly recurved; pedicels 90 mm long, slightly dotted. Lvs scattered, 95 × 15 mm, slightly glossy dark green. Stems 0.95 m, green. June.

**‘Lunnaia’ VI(-/l)**

Parentage: ‘Nezhnaia’ × *L. × centigale*  
R: V.A. Grot (c. 1963), N: V.A. Grot  
(Unaccepted spelling: ‘Lunnaja’. No further details.)

**‘Lunnaja’ VI(-/l)**

Unaccepted spelling of ‘Lunnaia’.

**‘Lush’ IX(c/d)**

See *martagon* ‘Lush’.

**‘Lu Shan’ VI(b/b)**

Parentage unknown  
R: C. Yerex, N: C. Yerex, I: Rex Bulb Farms (1967),

REG: (1984)

Fls white with deep yellow throat; spots absent; pollen dark brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered. Stems 1.8 m. July.  
(Published in *Rex Bulb Farms Cat.*, 1968/69: 25. Named after Lu Shan Botanic Garden, Kuling, China.)

### 'Lusher' II(b/c-d)

Parentage: *martagon* var. *cattaniae* × *tsingtauense*

R: R.K. Lusher, N: B. Mičulka, I: B. Mičulka (1995),  
REG: B. Mičulka (1997)

Inside dark brownish carmine, each tepal-centre with an orange tint and a little pale 'tongue', tips darker; outside with darker midribs; spots very numerous, tiny, dark brown, on two-thirds of each tepal; nectaries dark red; filaments brownish; pollen orange-brown; stigma whitish and black-brown. Fls 65 mm wide; tepals 45 × 18 mm, strongly recurved. Lvs whorled at base, scattered above, 70 × 30 mm, dull dark green. Stems 1 m, dark violet-grey, with a medium-length infl. Late June.

### 'Lush Life' VII(b/d)

Parentage: ('Merci' × 'Freedom') × 'Joy'

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1993),  
REG: Bischoff Tulleken Lelies B.V. (1995)

Inside yellowish white (155D) suffused with very pale purple (75D), midveins over two-thirds of each tepal, light yellow (10C), throat yellowish white (155D); outside yellowish white (155D) suffused with very pale purple (75D), midribs tinged with light yellow-green (144D); spots dark red and deep purplish red (187A & D) on two-thirds of each tepal; papillae, coloured both as the nectaries and as the spots, in the throat along the nectaries; nectaries brilliant greenish yellow (151D); pollen strong brown (172A); stigma a little paler than pale yellow (162D). Fls 160 mm wide; tepals 115 × 35 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 180 × 35 mm, pale green. Stems 0.95 m, pale green, with c.6 fls.

See *wilsonii* 'Luteum'.

### 'Lutine' VII(a/b)

Parentage: seedling 92-12 × seedling RW 96-05

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals moderate purplish red (70A), strong reddish purple (72B) towards margins, midveins

strong purplish red (71B), yellowish white (155D) at top, outer tepals strong purplish red (71B), moderate purplish red (71A) towards margins, midveins strong purplish red (64B), yellowish white (155D) at top, throat yellowish white (155D); outer tepals with inner tepals strong reddish purple (70B), moderate purplish red (71A) towards margins, base with some yellowish white (155D), midribs strong yellow-green (144C) at base, moderate purplish pink (70D) towards top, yellowish white (155D) at top, outer tepals moderate purplish red (70A), moderate purplish red (71A) towards margins, base with some yellowish white (155D), midribs strong yellow-green (143C) at base and top, in between light yellow-green (154D) with moderate purplish red (70A); spots absent; papillae strong purplish red (60B); nectaries moderate yellow-green (139D), yellowish white (155D) along edges; pollen moderate reddish brown (166B); stigma moderate brown (200D). Fls 260 mm wide, fragrant; tepals 170 × 55-80 mm, margins ruffled, tips recurved. Lvs scattered, 200 × 53 mm. Stems 1.2-1.25 m, green with some darker markings, and with c.3 fls.

### 'Luxor' Div. ?

Given as a parent of 'Blumenarie', 'El Moro' and 'Tanz der Feen'. No further details.

### 'Luxury' VII(-/b)

Parentage: derived from *speciosum*, *auratum* & *rubellum*

R: L. Woodriff (1958), G: H.J. & R.L. Strahm (1962), N: R.L. Strahm (1971), I: H.J. & R.L. Strahm (1971),  
REG: H.J. & R.L. Strahm (1984)

Inside strawberry-red, tepal-tips slightly paler; outside strawberry-pink; spots dark crimson on whole of tepals. Fls 225 mm wide; tepals 115 × 40 mm. Lvs scattered. Stems 1 m. July.

(Published in *Rex Bulb Farms Cat.*, 1971.)

### 'Lužánky' I(a-b/b)

Parentage: (('Quinella' × unknown) × ('Juno' × 'Honey Creme')) × ('Polárka' × unknown)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005),  
REG: B. Mičulka (2005)

Inside pale pink, with gold shining though around nectaries, throat crimson-pink; outside pink with beige midribs; spots present; nectaries pink-granulated; pollen ochre; stigma greenish. Fls 130 mm wide; tepals 73 × 36 mm, margins slightly ruffled, tips slightly curved; pedicels 70 mm long, dotted. Lvs scattered, 75 × 14 mm, dull mid green. Stems 0.85 m, thick, freely finely brown-dotted. Mid June.

### 'Luzia' VII(a-b/c)

Parentage: ('All Right' × *L. × parkmanii* Little Rascal Group) × ('All Right' × unnamed seedling)

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2003),  
REG: Bischoff Tulleken Lelies B.V. (2002)

Inside yellowish white (155D), midveins light greenish yellow (5D) in basal two-thirds; outside yellowish white (155D), midribs pale greenish yellow (2D); spots light

greenish yellow (6D); papillae present; nectaries strong yellow-green (144C); pollen greyish red to dark reddish orange (178A/B); stigma greyish red (178A). Fls 180 mm wide; tepals 105 × 50 mm, margins ruffled, outer tepals more so, tips strongly recurved. Lvs scattered, 110 × 28 mm. Stems 0.58 m, green with darker markings, with c.8 fls. July.

**'Lydia'** I(-/-)

Parentage: selection from Green Bush Group  
Fls orange.  
(Published in *Horsford Cat.*, 1952. No further details.)

**'Lyla McCann'** I(c/d)

Parentage: Stenographer Group selection from Preston Group  
S: I. Preston, N: I. Preston (1934)  
AM 1937  
Fls orange, spotted. Stems 1-1.2 m. July.  
(Published in *Gard. Chron.*, ser. 3, 98: 209 (1935).)

**'Lynda'** I(a/-)

Parentage: selection from Green Bush Group  
Fls yellow. Stems 0.6-1 m.  
(Published in *Horsford Cat.*, 1952. No further details.)

**Lyndale Aurelians Group VII(-/c)**

Parentage: a strain of Sunburst type developed in New Zealand  
R: N. Copsey, N: N. Copsey  
Fls creamy white through lemon-yellow, buff, deep apricot to flame orange; nectaries deep green; many with a golden orange star in the throat. Lvs broad, glossy green. Stems with up to 30 fls.  
(Published in *ILR* (1982) as Lyndale Aurelians grex.)

**'Lynette'** I(b/-)

Parentage: 'Pumpkin Sweet' × 'Ambrosia'  
R: G.C. Keast (1987), G: G.C. Keast (1989), N: G.C. Keast (1990), I: G.C. Keast, REG: G.C. Keast (1990)  
Fls light peach-flesh colour throughout, midribs green; spots minute, maroon, in centre of fl.; nectaries frosted; pollen brown. Fls 50 mm wide; tepals 30 × 16 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 12 mm, dark green. Stems 1 m, green, with c.6 fls. Dec. (New Zealand).

**'Lynos'** I(b-c/-)

Parentage: 'Goldstern' × 'Keystone'  
R: V. Jošt (1974), G: V. Jošt (1977), N: V. Jošt (1984), I: V. Jošt (1985), REG: V. Jošt (1984)  
Inside vivid yellow (14B), throat vivid orange-yellow (23A); outside brilliant yellow (13B), with a green purple overlay on midribs and 3 tepals; spots medium to large, dark red (187A/C), on half of each tepal; nectaries frosty white; pollen dark reddish orange (175C). Fls 130 mm wide; tepals 85 × 37 mm, margins smooth, tips strongly recurved. Lvs scattered, 109 × 14 mm, dark green. Stems 0.75 m, dark purple, with c.13 fls. July.

**'Lyon'** I(a-b/b)

Parentage: unnamed seedling × seedling OR 87-13  
R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1995), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)  
Inside vivid orange/vivid yellowish pink (28A/30C), orange at base; outside vivid yellowish pink/strong orange (30C/D); spots absent; some papillae present; nectaries orange; pollen reddish brown; stigma purple. Tepal-margins ruffled, tips slightly recurved. Lvs rather narrow, glossy green. Stems 1.1-1.3 m, green with darker markings, and with 5-7 fls (from 14-16 cm bulbs). Midseason.

**'Lysander'** I(a/-)

Parentage: Fighter Group selection from Preston Group  
S: I. Preston, N: I. Preston (1946)  
Fls scarlet, with small, reddish brown spots. Stems up to 1.4 m. July.  
(Published in *LYB* 10: 42 (1946).)

**'Lysterfire'** I(a-b/b-c)

Parentage: unknown × 'Persimmon'  
R: G.M. Chandler (1973), G: G.M. Chandler (1975), N: K.L. Watkins (1982), I: K.L. Watkins (1982), REG: K.L. Watkins (1983)  
Fls vivid orange (28B); spots greyish brown (166A) around the throat; nectaries light yellowish pink (27B), lightly frosted; pollen dark reddish orange (175B). Fls 130 mm wide; tepals 70 × 28 mm, margins smooth, tips recurved. Lvs scattered, 90 × 12 mm, dark green. Stems 1 m, greyish reddish brown (200B), with 10-15 fls. Mid to late Dec. (Australia).

**'Maart vanden Haak'** I(a-b/-)

Parentage unknown  
REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside and outside strong purplish pink (68B); spots and papillae present; nectaries green with white edge; pollen orange-brown; stigma light green with purple-red spots. Tepal-margins slightly ruffled, tips slightly recurved. Stems medium to tall, with reddish markings. Very early to early.

**'Mabel B. Ronna'** VI(c/-)

Parentage: 'T.A. Havemeyer' × unknown  
R: Barry (1941), N: Barry  
(Published in *Florists' Exchange and Hort. Trade World*: 11 (19 Feb. 1944). No further details.)

**'Mabel Violet'** Div. ?

Given as a parent of 'Prince of Nitra', 'Quintana', 'Rüzenka' and 'Zobor'. No further details. Perhaps an error for Mabel Violet Group.

**Mabel Violet Group VI(b/a)**

Parentage: Pink Pearl Group × Pink Perfection Group  
R: Gebr. N. & B. Laan & Zn (1970), G: Gebr. N. & B. Laan & Zn (1971), N: Bulb Center, Hillegom (1974), I: Gebr. N. & B. Laan & Zn (1974), REG: Gebr. N. & B. Laan & Zn (1981)

Inside dark pink, tepal-tips pink, throat greenish pink; outside maroon-pink; spots absent; nectaries green; pollen maroon-brown. Fls 120 mm wide; tepals c.200 × 100 mm. Lvs scattered, 120 × 6 mm, dark green. Stems 1.2 m, dark green, with c.15 fls. July.  
(Included in *ILR First Supplement* as Mabel Violet grex.)

**‘Macas’ I(a/-)**

Parentage unknown

R: Hoffgaarde B.V. (1991), G: Hoffgaarde B.V. (1993), N: Hoffgaarde B.V. (1996), REG: Hoffgaarde B.V. (2001)

Inside and outside deep purplish red (54A); spots and papillae present; nectaries green; pollen light brown; stigma purple. Fls 180 mm wide; tepals 100 × 30 mm, margins ruffled, tips recurved. Lvs scattered, 100 × 15 mm. Stems 1.4 m, green with darker stripes and spots, and with 3-5 fls (from 12-14 cm bulbs). Early to midseason.

**‘Ma Chère’ VII(-/d)**

Parentage unknown

R: L. Woodriff (c. 1958), G: H.J. & R.L. Strahm (1962), N: R.L. Strahm (1971), I: H.J. & R.L. Strahm (1972), REG: H.J. & R.L. Strahm (1984)

Fls light pink, each tepal with a dark pink ray; spots raised, dark red. Tepal-margins smooth, tips strongly recurved. Stems 1.2 m. Aug.  
(Published in *Rex Bulb Farms Cat.*, 1972.)

**‘Macho’ VII(b/b)**

Syn. of ‘Rascal Macho’.

***mackliniae* Sealy IX(c/a)**

Inside pale purple; outside purple-pink; spots absent; nectaries green; anthers purple; pollen usually yellow. Fls 40-70 mm wide; tepals 45-50 × 16-18 mm, tips not or scarcely recurved. Lvs scattered, or more or less whorled in upper part of stem, 30-60 × 4-10 mm, hairy at base. Stems 0.2-1 m, green or tinged with brown-purple, with 1-6(-19) fls. May to June. NE India.

**‘Macon’ I(a/b)**

Syn. of ‘Habbekrats’.

**‘Macranthum’ IX(c/d)**

See *dauidii* ‘Macranthum’.

**‘Macranthum’ IX(b-c/d)**

See *speciosum* ‘Macranthum’.

**× *maculatum* Thunb. I(a/b)**

Parentage: *dauricum* × *concolor*

Fls in deep red, orange and yellow shades; spots sparse or dense; nectaries hairy; anthers reddish. Tepals 80-100 mm long, clawed at base. Lvs scattered, 40-100 × 10-20 mm. Stems 0.3-1 m, hairless or sparsely hairy, with 1-12 fls. June to Aug. Japan.

Syn.: *elegans*; *thunbergianum*.

(Regarded by some botanists as a species rather than a hybrid, perhaps because it has been cultivated in Japan

for so long. Introduced into European gardens by von Siebold about 1830. Cross remade by F. Berckmüller in 1932.)

**‘Maculatum’ IX(b/a)**

See *candidum* ‘Maculatum’.

**var. *maculatum* IX(b-c/d)**

See *chalconicum* var. *maculatum*.

**var. *maculatum* IX(b-c/a-c)**

See *henrici* var. *maculatum*.

**× *maculatum* ‘Alice Wilson’ I(a/b)**

Parentage: selection from *L. × maculatum* FCC 1877

Tepals clear lemon-yellow; spots dark red.

Syn.: *L. × maculatum* ‘The President’.

(Published in Elwes, *Monograph of the genus Lilium*, t.19 (1878). Alice Wilson was the daughter of G.F. Wilson, whose estate was later purchased by Sir Thomas Hanbury and given to the RHS: it became Wisley Gardens.)

**× *maculatum* ‘Alutaceum’ I(a/b)**

Parentage: selection from *L. × maculatum*

Fls deep apricot, with numerous purple-black spots in throat. Stems less than 0.3 m, with 1 fl.

Syn.: *elegans* var. *alutaceum*; ‘Kikak’.

(Published in *Gard. Chron.* 1872: 1356. Raised and named in Japan before 1871. As ‘Kikak’ it was introduced by Krelage and Groenewegen as a cv. of *thunbergianum*.)

**× *maculatum* ‘Alutaceum Grandiflorum’ I(a/b)**

Parentage: selection from *L. × maculatum*

Similar to ‘Alutaceum’, but fls bigger and brighter.

(Published in *Wallace Cat.*, 1900.)

**× *maculatum* ‘Armeniacum’ I(a/b)**

Parentage: selection from *L. × maculatum*

Fls unspotted. Stems 0.3 m, with 1-2 fls.

(Published in *Gard. Chron.* 1872: 1356.)

**× *maculatum* ‘Atrorubrum’ I(a/b)**

Parentage: selection from *L. × maculatum*

Fls very deep crimson.

(Published in *Wada Cat.*, 1936.)

**× *maculatum* ‘Atrosanguineum’ I(a/b)**

Parentage: selection from *L. × maculatum*

Tepals dark red, paler at tips, with copious black spots.

Stems 0.4-0.6 m, with 1 fl.

Syn.: *elegans* var. *atrosanguinum*.

(Published in *Gard. Chron.* 1872: 1356.)

**× *maculatum* ‘Aurantiacum’ I(a/b)**

Parentage: selection from *L. × maculatum*

Fls deep orange-red; spots absent.

Syn.: *aurantiacum* Paxton.

**× *maculatum* ‘Aureum’ I(a/b)**

Parentage: selection from *L. × maculatum*

Fls orange-yellow with black spots.  
Syn.: 'Marmoratum Aureum'; 'Robustum'.

× *maculatum* 'Batemanniæ' I(a/b)

Parentage: selection from *L. × maculatum*  
AM 1935  
Fls rich apricot; spots absent. Stems 1-12 m. Aug.  
Syn.: *elegans* var. *batemanniæ*.  
(Published in *The Garden* 40: 194 (1891).)

× *maculatum* 'Beautiful Star' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls rich orange-red.  
(Published in *Wallace Cat.*, 1900.)

× *maculatum* 'Beauty' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls orange, tinted with yellow.  
(Published in *Wallace Cat.*, 1902.)

× *maculatum* 'Beni-no-tsukasa' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls crimson; spots absent; buds slightly hairy. Stems  
hairless.  
(Grown in Japan.)

× *maculatum* 'Bicolor' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls brilliant orange, tepal-margins fiery red; spots few and  
faint. Stems 0.3-0.6 m, with 1-2 fls.  
(Published in *Fl. Mag.* 9: 504 (1870).)

× *maculatum* 'Brevifolium' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls pale scarlet with small black spots in throat; pollen  
bright scarlet. Stems less than 0.3 m, with 1 fl.  
(Published in *Gard. Chron.* 1872: 1356.)

× *maculatum* 'Chigusa' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls scarlet, spotted; buds and stems hairless.  
(Published in *Chugai Cat.*, 1932/33. Grown in Japan.)

× *maculatum* 'Citrinum' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls pale orange; spots absent. Stems 0.6-0.8 m, with up  
to 3 fls.  
(Published in *Gard. Chron.* 1972: 1356.)

× *maculatum* 'Crimson King' I(a/b)

Parentage: selection from *L. × maculatum*  
Tepals velvet crimson, spotted black at base. Late.  
(Published in *Wada Cat.*, 1937. Found in a Japanese  
garden by K. Wada.)

× *maculatum* 'Decorum' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls apricot, suffused with orange. Stems dwarf, with  
2-3 fls.  
(See *Constable Cat.* 1936/37: 93; *Wada Cat.*, 1936.)

× *maculatum* 'Diadem' I(a/b)

Syn. of *L. × maculatum* 'Leonard Joerg'.

× *maculatum* 'Double Apricot' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls deep apricot-orange, with 16 tepals.  
(Published in *K. Wada Cat.*, 1936.)

× *maculatum* 'Double Queen' I(a/b)

Parentage: *L. × maculatum* 'Orange Queen' × *L. ×*  
*maculatum* 'Double Apricot'  
Looks like a double-flowered *L. × maculatum* 'Orange  
Queen'.  
(Published in *K. Wada Cat.*, 1936.)

× *maculatum* 'Double Scarlet' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls rosy pink, with clusters of paler tepaloids in centre,  
edged with white. Stems less than 0.3 m.  
(Published in *K. Wada Cat.*, 1936.)

× *maculatum* 'E.A. Bowles' I(a/b)

Parentage: selection from *L. × maculatum*  
S: A. Perry, I: A. Perry (1912)  
Fls orange-yellow, flushed with dark salmon; spots  
maroon. Fls over 170 mm wide. Stems 0.4 m.  
(Published in *Perry Cat.* no. 154 (1913).)

× *maculatum* 'Early Dazzler' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls rich, dazzling red. Stems 0.3 m. June.  
(Published in *Constable Cat.*, 1936.)

× *maculatum* 'Extra Red' I(a/b)

Parentage: selection from *L. × maculatum*  
(Published in *LYB* 7: 143 (1938).)

× *maculatum* 'Ezonishiki' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls crimson-red, strongly spotted; buds and stems hairy.  
(Grown in Japan.)

× *maculatum* 'Fekinata' I(a/b)

Parentage: selection from *L. × maculatum*  
(Raised and named in Japan before 1871. Introduced  
by Krelage and Groenewegen as a cv. of *thunbergianum*.  
Published in *Rev. Hort.* 1871: 592, without description.)

× *maculatum* 'Fiu-kwama' I(a/b)

Parentage: selection from *L. × maculatum*  
(Published in *Rev. Hort.* 1871: 592. Raised and named  
in Japan before 1871. Introduced by Krelage and  
Groenewegen as a cv. of *thunbergianum*.)

× *maculatum* 'Flore Pleno' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls semi-double, red with black spots; stamens tepaloid,  
deeply notched at tip with a rudimentary pollen-less  
anther.  
(Published in *Fl. Mag.* 2: t.116 (1862), as 'Lilium (nova  
species)'.)

× *maculatum* 'Fulgens' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls deep crimson, almost unspotted. Stems 0.3 m, with 4-6 fls.  
(Published in *Acad. Sc. Brux. Mem. Couronn.* 19 (1845).)

× *maculatum* 'Garden Beauty' I(a/b)

Parentage: selection from *L. × maculatum*  
S: A.J. van der Zwet & Sons, N: A.J. van der Zwet & Sons  
AMH 1950, FCCH 1952  
Fls brilliant ochre-red.

× *maculatum* 'Helen Carroll' I(a/-)

Parentage: *L. × maculatum* form × *L. × maculatum* form  
R: F.L. Skinner, N: F.L. Skinner, I: F.L. Skinner (1945)  
PC 1951  
Fls clear yellow; spots absent. Fls 150-175 mm wide.  
Stems 0.2-0.5 m. July.  
(Published in *LYB NALS* 2: 113 (1949).)

× *maculatum* 'Hoohkaku' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls semi-double, crimson, spotted; buds very hairy. Stems hairy.  
(Grown in Japan.)

× *maculatum* 'Horsmannii' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls crimson-mahogany.  
(Published in *Wallace Cat.*, 1900.)

× *maculatum* 'Ja-ethal' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls orange-red, tepals orange in the centre; spots red-brown. Fls large, 2-3 per stem.  
(Published in *Rev. Hort.* 1871: 592. Raised and named in Japan before 1871. Introduced by Krelage and Groenewegen as a cv. of *thunbergianum*.)

× *maculatum* 'Jojudai' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls purplish crimson, spotted; buds and stems hairless.  
(Grown in Japan.)

× *maculatum* 'Judai' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls deep red, spotted; buds slightly hairy. Stems hairless.  
(Grown in Japan.)

× *maculatum* 'Kairyo-judai' I(a/b)

Parentage: selection from *L. × maculatum*  
(Grown in Japan. No further details.)

× *maculatum* 'Keyuri' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls orange-yellow, heavily spotted; buds and stems very hairy.  
(Grown in Japan.)

× *maculatum* 'Kimi-Gago' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls orange-yellow.  
(Raised and named in Japan before 1871. Published in *Rev. Hort.* 1871: 592, without description.  
Introduced by Krelage and Groenewegen as a cv. of *thunbergianum*.)

× *maculatum* 'Kinbusen' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls rich orange, centre shaded yellow, tepal-tips flushed with crimson. Stems 0.6-1 m.  
(Published in *Chugai Cat.*, 1932/33.)

× *maculatum* 'Kintoki' I(a/b)

Parentage: selection from *L. × maculatum*  
Buds very hairy. Fls deep red, heavily spotted. Stems hairless.  
(Introduced into Japan from Manchuria, c.1925.)

× *maculatum* 'Kinzisi' I(a/b)

Parentage: selection from *L. × maculatum*  
Buds very hairy. Fls double, orange with dark spots. Stems hairy.

× *maculatum* 'Kisukashi' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls yellow, spotted; buds and stems hairless.  
(Grown in Japan.)

× *maculatum* forma *kunthianum* Nakai I(a/b)

Syn. of *L. × maculatum* 'Venustum'.

× *maculatum* 'Lady Pelly' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls rich yellow; spots very few, brown.  
(Published in *JRHS* 26: clxix (1902).)

× *maculatum* 'Leonard Joerg' I(a/b)

Parentage: selection from *L. × maculatum*  
Fls rich apricot-pink (or crimson according to *Wallace Cat.*), each tepal with a yellow streak and slightly spotted with crimson.  
Syn.: 'Diadem'; 'E.L. Joerg'.  
(Published in *Wallace Cat.*, 1900.)

× *maculatum* 'Loveliness' I(a/b)

Parentage: selection from *L. × maculatum*  
S: G. Errey, N: G. Errey  
Fls up to 150 mm wide.  
(Published in *LYB* 10: 61 (1946).)

× *maculatum* 'Mahogany' I(a/b)

Parentage: selection from *L. × maculatum*  
S: K. Zaadnoordijk, N: K. Zaadnoordijk  
AM 1931, AMH 1925, FCCH 1938  
Deep, glowing crimson; tepals broad.  
Syn.: 'Mahony'.  
(Published in *Wallace Cat.*, 1927.)

× *maculatum* 'Naeba-no-tsuki' I(a/-)  
Parentage: (*L.* × *maculatum* 'Chigusa' × *L.* × *maculatum* 'Kisukashi') × *L.* × *maculatum* 'Kisukashi'  
R: S. Tanabe et al. (1982), N: S. Tanabe et al.  
Tepal-margins vivid yellow (15A), midveins vivid yellow (17B); spots numerous. Fls 170 mm wide. Stems 0.8 m. Late.

× *maculatum* 'Nagoya-benisukashi' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls vermilion-red, heavily spotted; buds and stems hairy. (Grown in Japan.)

× *maculatum* 'Nigromaculatum' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls apricot with many, small black spots.  
Syn.: 'Aureum Nigromaculatum'.  
(Published in *Flore des Serres* 16: 33, t.1627 (1865).)

× *maculatum* 'Ogon' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls golden yellow, very large.  
(Published in G.L. Slate, *Lilies for American Gardens*, 184 (1939) as *elegans* 'Ogon'.)

× *maculatum* 'Orange' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
(Published in *LYB* 7: 143 (1938). No further details.)

× *maculatum* 'Orange Glow' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls pale orange, shading to orange-yellow; spots dark brown. Stems 0.5 m.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in G.L. Slate, *Lilies for American Gardens*, 184 (1939) as *elegans* 'Orange Glow'.)

× *maculatum* 'Orange Hirtellus' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls pure orange; spots dark mahogany.  
(Imported into USA by Kline in 1930s.)

× *maculatum* 'Orange Queen' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
AM 1900  
Fls bright orange-yellow, with dark spots. Stems 0.3 m, with 1-3 fls.  
(Published in *Wallace Cat.*, 1900.)

× *maculatum* 'Ornatum' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls apricot suffused with bronze; spots purple, profuse. Stems 0.6 m, with 4-5 fls.  
(Published in *Wallace Cat.*, 1900.)

× *maculatum* 'Othello' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls deep red, tinged with orange.  
(Published in *JRHS* 26: 365 (1901/02).)

× *maculatum* 'Painted Chief' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls red. Tepals narrow.  
(Published in *Wallace Cat.*, 1914.)

× *maculatum* 'Peach' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls salmon-orange.  
(Published in *Walter Marx Gardens Cat.*, 1953/54.)

× *maculatum* 'Peter Barr' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
S: Barr & Sons (1903), N: Barr & Sons  
AM 1903  
Fls orange-yellow, spotted brownish crimson near base. Stems 0.6 m.  
(Published in *Gard. Chron.*, ser. 3, 34: 41 (1903).)

× *maculatum* 'Prince of Orange' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls bright orange suffused with apricot; spots black. Dwarf.  
(Published in *Wallace Cat.*, 1900: 4.)

× *maculatum* 'Princess' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls rich apricot. Stems 0.25 m.  
(Published in *LYB* 7: 143 (1938).)

× *maculatum* 'Professor Henry Nehrling' I(a/-)  
Parentage: *L.* × *maculatum* 'Orange Queen' × *L.* × *maculatum* 'Early Dazzler'  
R: L. Vasseur, N: L. Vasseur  
Fls deep orange, centre yellow; outside orange-red.  
(Published in *Amer. LYB* 2: 109 (1949).)

× *maculatum* 'Purple Queen' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
S: R. Warner, N: R. Warner  
Fls purplish crimson. Aug.  
Syn.: 'Purple Splendor'. The spelling is as published in *Wada Cat.*, 1937: 38.  
(Published in G.L. Slate, *Lilies for American Gardens*, 185 (1939) as *elegans* 'Purple Queen'.)

× *maculatum* 'Quilp' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
(Published in G.L. Slate, *Lilies for American Gardens*, 174 (1939) as *elegans* 'Quilp'. No further details.)

× *maculatum* 'Radiance' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
I: Wallace (1927)  
Fls soft rich orange in centre, rosy scarlet at tepal-tips.  
(Published in *Wallace Cat.*, 1927.)

× *maculatum* 'Red Emperor' I(a/b)  
Parentage: selection from *L.* × *maculatum*  
Fls deep crimson; spots absent. Stems 0.3 m.  
(Published in *Wada Cat.*, 1935.)

× ***maculatum* ‘Red Improved’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Fls terracotta-red; spots dark mahogany.  
(Published in *Kline Cat.*, 1935. Imported from Japan by Kline in early 1930s.)

× ***maculatum* ‘Red Star’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Fls deep red.  
(Published in G.L. Slate, *Lilies for American Gardens*, 185 (1939) as *elegans* ‘Red Star’.)

× ***maculatum* ‘Sado Sukashi’ I(a/-)**

Parentage: *L. × maculatum* × *L. × maculatum* ‘Chigusa’  
R: Hort. Exp. Station (Niigata) (c. 1967), N: Hort. Exp. Station (Niigata)  
Fls red, with black spots.

× ***maculatum* ‘Sagami’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Fls bright orange. Stems 0.6 m. June to July.  
(Originated in Japan before 1962.)

× ***maculatum* ‘Sanguineum’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Fls red, spotted with black. Stems 0.3-0.4 m, with 1 fl.  
Early.  
(Published in *Bot. Reg.* 32: t.50 (1846) as *L. sanguineum*.)

× ***maculatum* ‘Sawa Yuri’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Fls orange.  
(Originated from Japan Nursery Co. Ltd before 1912.)

× ***maculatum* ‘Scarlatinum’ I(a/-)**

Parentage: selection from *L. × maculatum*  
Fls scarlet.  
(Published in *Rev. Hort.* 1971: 592.)

× ***maculatum* ‘Semipleno’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Stamens flattened, tipped white.  
(Originated from Yokohama Nursery Co., Ltd, Japan, before 1899.)

× ***maculatum* ‘Senko’ I(a/b)**

Parentage: selection from *L. × maculatum*  
S: H. Myodo (c. 1957), N: H. Myodo  
Fls deep red.

× ***maculatum* ‘Shedd Variety’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Fls dark crimson.  
(Published in *Cherry Hill Nursery Cat.*, 1955.)

× ***maculatum* ‘Shin-judai’ I(a/b)**

Parentage: selection from *L. × maculatum*  
S: T. Ueshima, N: T. Ueshima  
Fls deep red, spotted. Stems and buds hairy.

× ***maculatum* ‘Shinshu-kisukashi’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Fls orange-red, heavily spotted. Stems and buds slightly hairy.  
(Grown in Japan.)

× ***maculatum* ‘Staminosum’ I(a/b)**

Parentage: selection from *L. × maculatum*  
An abnormal red-flowered form with tepaloid stamens.  
Spots black-brown, oblong.  
Syn.: *fulgens* var. *staminosum*.  
(Published in *Illustr. Hort.* 2: t.422 (1864) as *fulgens* var. *staminosum*.)

× ***maculatum* ‘Sunset’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Fls glowing gold chamois.  
(Published in *JRHS* 26: 365 (1901/02).)

× ***maculatum* ‘Sy-yets’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Close to *L. × maculatum* ‘Aureum’.  
(Published in *Rev. Hort.*, 1871, p. 592. Selected and named in Japan before 1871. Introduced by Krelage and Groenewegen as a cv. of *thunbergianum*.)

× ***maculatum* ‘Taisho-benisukashi’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Buds hairy. Fls red, spotted. Stems hairless.  
(Selected in Japan.)

× ***maculatum* ‘Taishohsukashi’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Given as a parent of ‘Mutoh-nishiki’.  
(Grown in Japan before 1982.)

× ***maculatum* ‘The President’ I(a/b)**

Syn. of *L. × maculatum* ‘Alice Wilson’.

× ***maculatum* ‘The Sultan’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Fls dark crimson.  
Syn.: ‘Sultan’.  
(Published in *Wallace Cat.*, 1900.)

× ***maculatum* ‘Ueda-beni’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Given as a parent of ‘Mutoh-beni’.  
(Grown in Japan before 1982.)

× ***maculatum* ‘Van Houttei’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Fls very large, crimson.  
(Published in *Wallace Cat.*, 1900.)

× ***maculatum* ‘Venustum’ I(a/b)**

Parentage: selection from *L. × maculatum*  
Fls clear apricot; spots absent.  
Syn.: *venustum*; *elegans* var. *venustum*; *davuricum* var. *venustum*; *L. × maculatum* forma *kunthianum*.  
(Published in Kunth, *Enumerato plantarum.* 4: 265 (1843) as *L. venustum*.)

× *maculatum* 'Venustum Macranthum' I(a/b)

Parentage: selection from *L. × maculatum*

Fls clear orange, large.

(Published in *Wallace Cat.*, 1900.)

× *maculatum* 'Violet Niles Walker' I(a/b)

Parentage: *L. × maculatum* 'Alutaceum' × *L. × maculatum* 'Alice Wilson'

R: L. Vasseur (c. 1943), N: L. Vasseur, I: A. MacNeil (1946)

Fls persimmon-orange; spots absent.

Syn.: *L. × bollandicum* 'Violet Niles Walker'.

(Published in *Sandyloam Cat.*, 1946.)

× *maculatum* 'Wallacei' I(a/b)

Parentage: selection from *L. × maculatum*

N: A. Wallace (c. 1876), I: A. Wallace

FCC 1883

Fls apricot, with raised maroon spots in centre; pollen scarlet. Stems 0.8 m. Aug.

(Published in *The Garden*. 1 Sept. 1877. Raised in Japan.)

× *maculatum* 'Yellow Purity' I(a/b)

Parentage: selection from *L. × maculatum*

Fls bright orange-yellow; spots absent.

(Published in *Constable Cat.*, 1937.)

× *maculatum* 'Yellow Tulip' I(a/-)

Parentage: *L. × maculatum* 'Peter Barr' × *L. × maculatum* 'Alice Wilson'

R: G. Errey (c. 1926), N: G. Errey

Fls rich yellow with wide tepals.

(Published in *LYB* 11: 80 (1947).)

'Maculis' IX(b-c/d)

See *speciosum* 'Maculis'.

'Madam' I(a/c)

Parentage: ('Mont Blanc' × red-flowered seedling) × 'Connecticut Red'

R: Mak-Leek Inc. (pre 1996), N: Mak-Leek Inc., REG: ICRA (1998)

Fls very dark red inside; spots absent. Tepal-tips recurved. Stems 0.3-0.6 m. Midseason. Polyploid.

(Published in *Parkland Perennials Cat.*, 1996: 6.)

'Madame Edouard Debras' VI(-/c)

Parentage: Aurelian hybrid no. 47-2 × yellow-flowered trumpet hybrid

R: C. Yerex, N: C. Yerex

Fls greenish sulphur-yellow, deeper at base. Late July.

(Published in *Kline Wholesale Cat.*, 1958.)

'Madame Max' I(b/c)

Parentage: (*leichtlinii* var. *maximowiczii* 'Unicolor' × buff-flowered selection from ('White Pastel' × unknown)) × (*leichtlinii* var. *maximowiczii* 'Unicolor' × selection from ('White Pastel' × unknown))

R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte

Lilies (1988)

Inside pale yellowish pink (29D/27C/D), deeper in cool conditions, shading to pure white in tepal-centres, tepal-tips light to pale yellowish pink (29C/D), throat pale yellowish pink (27D) to white; outside very pale buff-orange; spots large, magenta, on basal half of each tepal; nectaries soft buff to white; pollen moderate red (180A). Tepals 70-80 × 30-40 mm, margins moderately ruffled as fl. ages, tips slightly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 1-1.5 m, dark green, with 5-12 fls. Early to mid July.

'Madame Pompadour' VII(-/b)

See *L. × parkmanii* 'Madame Pompadour'.

'Madame von Siebold' V(b/a)

See *longiflorum* 'Madame von Siebold'.

'Madara' VII(-/b)

Parentage: 'Liesma' × 'Äfricaniëte'

R: A. Balode (1990), G: A. Balode, N: A. Balode, REG: A. Balode (1996)

Inside white, midveins brilliant yellow (8A), throat strong yellow-green (145A); outside white and light yellow-green (145D); spots large, oval, deep purplish red (59B); nectaries green; pollen bright orange. Fls 200 mm wide; tepals 100 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 40 mm. Stems 0.8 m, green, with c.5 fls. Mid July.

'Madeira' I(a/b)

Parentage unknown

R: G.C. van der Salm (pre 1985), N: G.C. van der Salm (2002), REG: G.C. van der Salm (2002)

Inside vivid reddish orange (30A/33B), with dark brown markings, throat brilliant orange (29A); outside strong reddish orange (31A/B), tepal-margins vivid reddish orange (30A/32A), midribs green; spots and papillae present; pollen orange-brown; stigma red-purple. Tepal-margins smooth, tips slightly recurved. Stems brown with mid green spots and darker markings.

'Madelaine' I(a/-)

Parentage: 'White Happiness' × 'Sterling Star'

R: Gebr. N. & B. Laan & Zn (1982), G: Gebr. N. & B. Laan & Zn (1984), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985)

Inside very light yellow; outside slightly darker; spots few, deep purple; nectaries white; pollen brown. Fls 140 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 20 mm, dark green. Stems 1 m, green, with c.8 fls. July.

'Madeleine K. Albright' VII(a-b/-)

Parentage: 'Vedea' × seedling 88-131

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1998), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside yellowish white (155D), each tepal light purplish pink (73C) towards margins; outside yellowish white (155D); spots and papillae present; nectaries green; pollen

orange-brown; stigma purple. Tepal-margins strongly ruffled, tips recurved. Stems of medium height, with reddish markings. Early to midseason.

**‘Madeline Holloway’ II(-/-)**

Parentage: probably *L.* × *dalhansonii* ‘Sutton Court’ × unknown

R: R. Erskine (c. 1975), G: R. Erskine, N: R. Erskine (1996), I: R. Erskine, REG: R. Erskine (1996)

Inside yellow, blushed pink, throat pale yellow; outside pink in bud, opening with a pink stripe on each tepal; spots many, large, mostly in the centre of each tepal; nectaries pale yellow; pollen orange. Fls 70 mm wide; tepals 35 × 15 mm, margins smooth, tips slightly recurved. Lvs whorled, 160 × 35 mm, mid green. Stems over 1.2 m, brown-spotted, and c.40 fls of very heavy substance.

**‘Madison’ I(a/b)**

Parentage: ((‘Enchantment’ × ‘Connecticut King’) × (‘Enchantment’ × ‘Connecticut King’)) × ((‘Connecticut Red’ × unknown) × ‘Roter Cardinal’)

R: Mak Lelieveredeling B.V. (1986), G: Mak Lelieveredeling B.V. (1988), N: Mak-Leek Inc. (1994), REG: Mak-Leek Inc. (1997)

Inside vivid yellowish orange (30C); outside strong reddish orange (42C) over strong orange (25B); spots few, tiny, dark red (187A) on basal third of each tepal; nectaries vivid reddish orange (30B); pollen strong brown (172A); stigma dark red (187B). Fls 155 mm wide; tepals 90 × 25-40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 85 × 25 mm, moderate olive-green (137A). Stems 0.8-1.2 m, moderate olive-green (137B), with 6-15 fls. Mid to late June.

**‘Madras’ I(a/b)**

Parentage: seedling G 831 × seedling G 844

R: Vletter & Den Haan, G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1991)

Inside vivid yellow (17B), throat suffused with brilliant yellow-green (154B); outside vivid yellow (15A), outer tepals and midribs of inner tepals suffused with brilliant yellow (12B); spots absent; nectaries strong red (47B); pollen vivid orange-yellow (23A). Fls 200 mm wide; tepals 100 × 55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 13 mm, mid green. Stems 0.9-1 m, green with darker markings, and c.9 fls. July (under glass).

**‘Madrid’ VIII(a/b)**

Parentage: seedling N 40 × seedling OR 90-10

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside strong orange (25B) on a paler ground, with a dark edge on a third of each tepal; outside pale orange-yellow (23D) on a paler ground, tepal-edges strong orange/strong orange-yellow (24A/B), midribs strong yellow-green (144C), tipped strong yellow-green (143A); spots dark

greyish reddish brown (200A) on up to a third of each tepal; papillae strong orange (25B) in the throat; nectaries moderate olive-green (146A); pollen dark greyish reddish brown (200A); stigma moderate red (180A). Fls 220 mm wide; tepals 110 × 40-55 mm, margins smooth, tips strongly recurved. Lvs scattered, 120 × 20 mm, dark green. Stems 1.1 m, green, with c.4-6 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

**‘Madrigals’ I(a/b)**

Parentage: unnamed seedling × ‘Mantojums’

R: D.-V. Škimele (1990), G: D.-V. Škimele (1992), N: D.-V. Škimele (1995), REG: D.-V. Škimele (2001)

Inside purplish pink; outside purplish pink, with greenish shading, midribs green; spots small, dark red on half of each tepal; nectaries creamy; pollen vivid orange; stigma black-brown. Fls 140 mm wide; tepals 70 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 5 mm. Stems 0.6 m, green, with c.7 fls. Mid July. (Published in *Lilium Balticum Lily Register*, 1995.)

**‘Madurodam’ I(a/b)**

Syn. of ‘Hobozi’.

**‘Maelstrom’ VI(c/c)**

Parentage: (‘Black Heart White’ × unknown) ex G. Jacobs × (‘Black Heart White’ × unknown) ex C. Kroell R: C.K. Kroell (1985), G: W.T. Craig (1987), N: C.K. Kroell (1996), REG: C.K. Kroell (1997)

Inside light orange-yellow (23C) in the basal third, blending to white in the apical two-thirds; inner tepals with hairline, maroon edging in basal half; outer tepals touched with orange at the tips; outside white, outer tepals with a 3-4 mm-wide pale green band, inner tepals with a pale green midrib; moderate red (180B) spotting and ridges on basal half of each tepal; papillae present; nectaries very dark maroon; pollen vivid orange-yellow (23A); stigma light green. Fls 140-150 mm wide, very lightly scented; tepals 95 × 35 mm, margins smooth, twisted at apex and pinched at site of bend. Lvs scattered, c.130 × 23 mm, mid green. Stems 1.2 m, mid green, with 7-8 fls. Mid to late July.

**‘Maestrina’ VI(a/b-c)**

Parentage unknown

R: J. Vasarietis (pre 1999), N: J. Vasarietis

Inside pale yellow; outside with reddish flush on outer tepals, much less on inner tepals; pollen orange-brown. Tepal-margins smooth, tips slightly recurved.

**‘Maestro’ I(c/-)**

Parentage: (*pumilum* × unknown) × ‘Connecticut King’ R: C. Robinson (1971), G: C. Robinson (1976), N: C. Robinson (1982), I: C. Robinson (1982)

Fls moderate reddish orange (35A), fading to deeper orange at base outside; spots dark brown near centre of fl.; nectaries light yellow (19B); pollen dark red. Fls 130 mm wide; tepals 80 × 32 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 12 mm, mid green. Stems 0.7-1.2 m, tan to mid green, with 12-20 fls. Early to mid July.

**'Maestro' VI(b/a)**

Parentage: 'Spitniece' × seedling L-11-35

R: Ā. Zorgevics (1987), G: Ā. Zorgevics (1993), N: Ā. Zorgevics (2005), I: University of Latvia Botanical Garden (2005)

Inside brilliant yellow (9C), throat brilliant yellow-green (149B); outside with brownish shading; spots and papillae absent; nectaries whitish; pollen dark brown; stigma grey. Fls 220 mm wide, strongly scented; tepals 150 × 30 (outer) and 60 (inner) mm, margins very slightly ruffled, tips recurved. Lvs scattered, 150 × 15 mm. Stems 1.7 m, green with brown, and with c.9 fls. Bulbs purple. Late July to early Aug. (Unacceptable name, ICNCP, 2004: Art. 27.1 - name already used for another lily, so registration refused. Nomenclatural standard: colour print provided by registrant (WSY 0096418).)

**'Mafián' I(b/b)**

Parentage: (('Tetra Enchantment' × 'Tetra Tabasco') × 'Tetra Connecticut Yankee') × 'Avignon'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997), REG: B. Mičulka (1997)

Inside glowing orange-red with a brownish tint; outside paler, midribs pale brown; spots sparse, medium sized, red-black, on a third of each tepal; nectaries white-frosted; filaments orange; pollen red-brown; stigma dark scarlet-brown. Fls 145 mm wide; tepals 90 × 47 mm, margins roughly wavy, tips fairly recurved; pedicels thick, dotted dark brown. Lvs scattered, 110 × 16 mm, glossy dark green. Stems 0.85 m, thick, copiously spotted, with a medium length infl. Late June. Tetraploid.

**'Magdalena' I(a/c-d)**

Parentage unknown

R: Bischoff Tulleken Leliecultuur B.V. (pre 1983), N: Bischoff Tulleken Leliecultuur B.V.

Inside light yellow, with an apricot blush in the centre, throat pale yellow; outside paler with reddish midribs at base; spots numerous, oval, dark brown-purple, on three-quarters of each tepal; nectaries green, white-frosted; pollen apricot. Fls 125 mm wide; tepals 85 × 33 mm; pedicels brown-spotted, with secondary buds. Lvs scattered, 85 × 15 mm, glossy dark green, fairly dense. Stems 0.9 m, thick, violet-black. Early July.

**'Magento' I(a-b/b)**

Parentage: seedling RS 894 × seedling RS 84-5

R: Vletter & Den Haan (1986), G: Vletter & Den Haan (1988), N: Vletter & Den Haan (1992), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1995)

Inside moderate purplish pink (62B), tepal-tips paler, throat pink; outside strong purplish pink (63C); spots and papillae present; nectaries green changing to white; pollen orange; stigma purple. Tepals c.152 × 12 mm, margins smooth, tips slightly recurved. Lvs scattered, c.94 × 32 mm, shiny mid green. Stems 1-1.25 m, uniformly dark, with 7-9 fls. Late.

**'Maggiore' I(a/-)**

Syn. of 'Lausanne'.

**'Magiartes' I(a/-)**

Parentage: *leichtlinii* var. *maximowiczii* × 'Noris Star'

R: V. Strasser (1986), G: V. Strasser (1989), N: V. Strasser (1992), REG: V. Strasser (1992)

Fls yellow; spots purple on a third of each tepal; nectaries frosted green; pollen brown. Tepals 85 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.25 m, green, with up to 25 fls. Mid July to early Aug.

**'Magic Carpet' I(b/-)**

Parentage: ivory-flowered Pastel Group × 'Honey Bear'

R: L.D. Marshall (1975), G: J.F. McRae (1977), N: Columbia-Platte Lilies (1983), I: Columbia-Platte Lilies (1983), REG: Columbia-Platte Lilies (1984)

Inside brilliant to light greenish yellow (6C/D), tepal-tips light greenish yellow (6D), throat brilliant greenish yellow (6C); outside brilliant greenish yellow (6C) to greenish; spots tiny, magenta-black, forming a ring in the centre half of tepals; nectaries yellow; pollen moderate brown (165A). Tepals 60-80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 160-180 × 20 mm, dark green. Stems 0.4-0.6 m, green, with 3-6 fls. June.

Syn.: 'Moonstone'. (Published in *Rex Bulb Farms Cat.*, 1983 and *Borbeleta Gardens Cat.*, 1983 as 'Moonstone'.)

**'Magic Eye' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: Bischoff Tulleken Leliecultuur B.V. (1978), G: Bischoff Tulleken Leliecultuur B.V. (1981), N: Bischoff Tulleken Leliecultuur B.V. (1985), I: Bischoff Tulleken Leliecultuur B.V. (1987), REG: Bischoff Tulleken Leliecultuur B.V. (1988)

Inside strong pink (50C), tepal-tips strong yellow-green (145A), throat vivid to light yellow (17C/D); outside deep pink (51C); spots dark red (187A); pollen moderate reddish orange (173B). Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 20 mm, mid green. Stems 1 m, green with darker spots, and with 6-7 fls. June.

**'Magic Fire' VI(-c)**

Parentage: Aurelian origin

R: G.W. Darby (c. 1964), N: G.W. Darby  
Fls deep apricot.

**Magic Green Group Div. ?**

Given as a parent of 'Poltavchanka'. No further details.

**'Magic Pearl' VII(a/b)**

Parentage: 'Medusa' × 'Solaia'

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)

Inside strong purplish red (63B), tepal-margins yellowish white (155B), moderate purplish red (63A) along midveins, throat yellowish white (155B); outside with outer tepals strong purplish red (60D), margins yellowish white (155B), midribs strong yellow-green (143B) at base, up to a half light yellow-green (150D), strong yellow-green (142A) at top, inner tepals deep/strong

purplish pink (68A/B), margins yellowish white (155B), midribs strong yellow-green (142A) at base, towards top light yellow-green (150D), changing into brilliant yellow-green (150A) with some deep purplish pink (68A); spots strong purplish red (61B); papillae deep purplish red (61A) and at base yellowish white (155B); nectaries strong yellow-green (144A); pollen dark reddish orange (175C); stigma dark red (187A). Fls 240 mm wide, slightly fragrant; tepals 140 × 40-70 mm, margins slightly ruffled, tips recurved. Lvs scattered, 130-160 × 18-28 mm, dark green. Stems 0.8-1.3 m, green with some darker markings, and with 5-7 fls.

#### **Magic Pink Group VII(b/b)**

Parentage: *auratum* × *rubellum*

R: J. de Graaff (c. 1963), N: J. de Graaff

Fls soft salmon and satin-pink. Stems 1-1.2 m. June.

(Published in *ILR* (1982) as Magic Pink grex.)

#### **'Magion' VI(b/b)**

Parentage: 'Damson' × 'Brno'

R: K. Braun (1989), N: K. Braun, REG: K. Braun (1990)

Inside white and orange, tepal-tips and edges white, throat orange-yellow; outside white and pink; nectaries white; pollen yellow; stigma violet. Fls 140 mm wide; tepals 80 × 19 mm, margins wavy, tips recurved; pedicels 90 mm long, green and brown. Lvs scattered, 133 × 36 mm, green. Stems with c.5 fls. Early July.

#### **'Magma' I(a/c)**

Parentage: Peters seedling 66-24 × 'Roter Cardinal'

R: V. Baloun (1990), N: V. Baloun, REG: V. Baloun (1990)

Inside pale orange-red, tepal-tips paler; outside paler, midribs pale crimson; spots numerous, small, dark brown-red, on three-quarters of each tepal; nectaries white-frosted; pollen orange-brown. Fls 115 mm wide; tepals 85 × 40 mm, margins wavy, tips moderately recurved; pedicels 75 mm long, slender. Lvs scattered, 80 × 14 mm, glossy dark green. Stems 1 m, thick, dark red-brown, slightly hairy. Late June.

#### **'Magpie' IV(c/d)**

Parentage: complex *kelloggii* × *pardalimum* hybrid

R: J. de Graaff (c. 1965), N: J. de Graaff

Fls deepest red, centre orange-yellow.

#### **'Magritte' VIII(a/b)**

Parentage: seedling LAG 93-6 × seedling G 90-5

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG:

Vletter & Den Haan Beheer B.V. (2001)

Inside of inner tepals vivid yellow (9A), of outer tepals vivid yellow (12A), strong yellowish green from each nectary for about a third of the tepal, throat light greenish yellow (1C); outside of inner tepals brilliant yellow (7A), midrib above each nectary with a little brilliant greenish yellow (1B), edged with vivid yellow (13A); outside of outer tepals vivid yellow (12A), midribs strong yellow-green (143A); spots and papillae absent; pollen brownish orange (164A); stigma vivid yellow (9B). Fls 175 mm wide; tepals 120-125 × 50-60 mm, margins smooth, tips recurved. Lvs scattered, 130-160 × 20-35 mm. Stems 1.1-1.3 m, green, with 3-6 fls.

(*A longiflorum*/Asiatic (LA) hybrid.)

#### **'Mahalak' I(b-c/d)**

Parentage: 'Červená Karkulka' × 'Hornback's Gold'

R: J. Dudek, N: J. Dudek, I: J. Dudek (2001), REG: J. Dudek (2001)

Inside red, the centre of each tepal and the throat orange-red; outside red; spots medium sized, dense, black, on three-quarters of each tepal; nectaries red; pollen orange-brown; stigma black-red. Fls 95 mm wide; tepals 68 × 30 mm, strongly recurved; pedicels 100 mm long, brown, with secondary buds. Lvs scattered, 140 × 10 mm, glossy green. Stems 1.4 m, rigid, brown-spotted, brown at base. Mid July.

#### **Maharajah Group VII(-/c)**

Parentage: Pink Glory Group (Div. VII) × *nobilissimum*

R: Oregon Bulb Farms, Inc. (1964), G: Oregon Bulb Farms, Inc. (1966), N: Oregon Bulb Farms, Inc. (1980), I: Melridge Inc./Oregon Bulb Farms, Inc. (1981), REG: Oregon Bulb Farms, Inc. (1981)

Inside shell-pink, tepal-tips white, throat soft pink; outside deep pink; spots absent; nectaries green; pollen brown. Fls 175 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, dark green. Stems 1.6 m, green, with 4-12 fls. Aug. to Sept.

(Published in *ILR* (1982) as Maharajah grex.)

#### **Mahdi Group II(-/-)**

See *L. × dalhansonii* Mahdi Group.

#### **'Mahogany' I(a/b)**

See *L. × hollandicum* 'Mahogany'.

#### **'Mahogany' I(a/b)**

See *L. × maculatum* 'Mahogany'.

#### **'Mahogany Bells' II(-/-)**

Parentage: *tsingtauense* × *martagon* var. *cattaniae*

R: R.S. Luscher (1967), N: R.S. Luscher (1976), I: R.S. Luscher (1976), REG: R.S. Luscher (1976)

Fls mahogany-red, throat pale cream-gold; outside chestnut-brown; spots present; pollen brown. Tepals 40 mm long, thick and fleshy, margins smooth. Lvs whorled, midrib dark purple. Stems 0.9-1.2 m. July.

(Published in *Lilies and other Liliaceae*, 1976: 91.)

**‘Mahogany King’ I(a/-)**

Parentage: *L. × hollandicum* × *bulbiferum* var. *croceum*

R: A.J. van der Zwet & Sons, N: A.J. van der Zwet & Sons

AMH 1951

Fls deep carmine-red with gold sheen; midribs yellow.

**‘Mahogany Mauve’ I(c/d)**

Syn. of ‘Northern Princess’.

**‘Mahogoni-Sterne’ I(c/-)**

Parentage: selection from (‘Nutmegger’ × unknown) hybrids

S: C. Müller (pre 1984), N: C. Müller, REG: C. Müller (1988)

Fls light mahogany with an orange centre. Stems 1.2-1.4 m. Mid July.

(Published in German Lily Group sales list, 1984.)

**‘Mahony’ I(a/-)**

Syn. of *L. × maculatum* ‘Mahogany’.

**‘Mahulena’ VI(c/b)**

Parentage: cream-flowered trumpet seedling × ‘Schokolade’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1998), REG: B. Mičulka (1998)

Inside pale lemon-yellow, tepal-tips whitish; outside pale creamy yellow, midribs greenish; spots absent; nectaries yellow-green, short; pollen ochre-apricot; stigma green. Fls 150 mm wide; tepals 125 × 60 mm, margins wavy and wrinkled, tips recurved and twisted; pedicels 80 mm long, dark green. Lvs scattered, 85 × 10 mm, glossy dark green. Stems 1.15 m, stiff, dark green, with a short infl. Mid July.

**‘Maidenhair’ VI(b-c/a)**

Parentage: selection from Emerald Isle Group

S: D.F. McPherson (1975), G: D.F. McPherson (1978), N: D.F. McPherson (1980), I: D.F. McPherson (1980), REG: D.F. McPherson (1980)

Inside green, tepal-tips light yellow-green (150D), throat brilliant yellow-green (150C); outside brilliant yellow-green (149B), midribs strong yellow-green (142A); spots absent; nectaries strong yellow-green (142A); pollen moderate reddish brown (174A). Fls 150 mm wide; tepals 145 × 25-45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 7 mm, mid green. Stems 2 m, green, with c.12 fls.

**‘Maiden’s Blush’ VI(-/-)**

Parentage: Aurelian seedling

R: G.W. Darby (c. 1963), N: G.W. Darby

Fls white, suffused with pale pink. Stems 1 m. Aug.

**‘Maid Marian’ I(a/-)**

Parentage: ‘Ambassador’ × ‘Jubilation’

R: C. Robinson (1979), G: C. Robinson (1983), N: C. Robinson (1985), REG: C. Robinson (1985)

Fls deep yellowish pink (39B), throat light yellow (12C) (covering 45 per cent of tepals); spots absent; nectaries

deep yellowish pink; pollen maroon. Fls 150 mm wide; tepals 85 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 95 × 5 mm, mid green. Stems 0.84 m, dark red, with 12-14 fls. Early July.

**‘Maid of Carmel’ VII(-/c)**

Parentage: contains *auratum*, *rubellum* & *speciosum*

R: E. Mayell (c. 1960), N: E. Mayell, I: A.D. Rothman  
Fls white.

**‘Maid of Norway’ IV(-/-)**

See *L. × burbankii* ‘Maid of Norway’.

**‘Maija’ VII(-/b)**

Parentage unknown

R: K. Zeltans (c. 1965), N: K. Zeltans

Inside pink, tepal-margins white; spots dark raspberry; anthers orange. Fls up to 200 mm wide, scented. Stems 1.2 m. Late Aug.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Maja’.)

**‘Mainau’ VI(-/-)**

Parentage: ‘Aurach Gold’ × ‘Holfeld’

R: V. Strasser (1975), G: V. Strasser (1978), N: V. Strasser (1983), I: V. Strasser (1985), REG: V. Strasser (1986)

Inside brilliant yellow (12B); outside yellow-green. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.6 m, grey, with c.15 fls. Mid July.

**‘Mainstay’ I(a/-)**

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler (1977), N: B.G. Hayler (1983), I: B.G. Hayler (1983), REG: B.G. Hayler (1983)

Fls vivid red (46B), lightly spotted black; nectaries white. Tepals 60 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 8 mm, dark green. Stems 0.75 m, with c.8 fls. Dec. (Australia).

**‘Mai-pureti’ I(a/-)**

Parentage: a red-flowered Koshiji-sukashi Group × ‘Sterling Star’

R: W. Suzuki (1981), N: W. Suzuki

Fls strong pink (50C), tepal-margins light purplish pink (55C), centre pale orange-yellow (23D); spots few, pink. Fls 160 mm wide. Stems 0.7-0.9 m. Late.

Syn.: ‘My Pretty’.

**‘Maja’ I(a/-)**

Parentage: ‘Connecticut King’ × *L. × hollandicum*

R: Fa J. Dignum & Zn, G: Fa J. Dignum & Zn, N: Gebr. Van Zanten B.V. (1980), REG: Gebr. Van Zanten B.V. (1980)

Fls vivid orange-yellow (23A); spots oxblood-red; anthers brown.

(Published in *Bloembollencultuur*, June 1980.)

**‘Majáles’ I(a/b)**

Parentage: ‘Stellar Gleam’ × ‘Potstar’

R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)  
Fls apricot-yellow, centre rather richer; outside yellowish

white, midribs pink-veined at base; spots absent; nectaries white-frosted; pollen brown. Fls 100 mm wide; tepals 65 × 30 mm, not recurved, rigid, slightly twisted at tips; pedicels 90 mm long, slightly hairy. Lvs 50 × 8 mm, slightly glossy pale green. Stems 0.45 m, green. Late May.

#### 'Majaslada' I(c/d)

Parentage:  *davidii* × 'Feuer und Rauch'  
R: J. Dudek, N: J. Dudek, I: J. Dudek (2001), REG: J. Dudek (2001)

Inside red, throat orange; outside orange-red, midribs orange; spots moderately dense, large, black on half of each tepal; nectaries dark red; pollen red-brown; stigma dark red. Fls 80 mm wide; tepals 70 × 35 mm, strongly recurved; pedicels 110 mm long, brown-spotted, and with secondary buds. Lvs scattered, 140 × 6 mm. Stems 1.4 m, rigid, brown-spotted. Mid July.

#### Majestic Group VIII(-/a-b)

Parentage: Oriental trumpets ×  *henryi* hybrids  
R: R.W. Bemis (pre 1966), N: R.W. Bemis  
Fl. colour varying from white to yellow, pink or purple. Stems 1.2-1.9 m. July.  
(Orienteal (OT) lilies. Previously classified in Div. VII. Published in 'Deep-Freeze' *Lilies Cat.*, Spring 1967.)

#### Majestic Group VI(-/a)

Parentage:  *leucanthum* var.  *centifolium* ×  *sargentiae*  
R: J. de Graaff (c. 1962), N: J. de Graaff  
Fls white, with golden green throat. Fls very large. Stems 1.5 m. July.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another cv. Group. Published in  *ILR* (1969) as Majestic grex.)

#### 'Majesty' IX(b/c)

See  *auratum* 'Majesty'.

#### *majoense* Lév. IX(c/a)

Syn. of  *primulinum* var.  *ochraceum*.

#### 'Majorika' I(a/-)

Parentage: 'Herbstsonne' (of Feldmaier) × 'Sonnentiger'  
R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1981), I: V. Strasser (1984), REG: V. Strasser (1997)  
Fls golden yellow. Tepal-margins smooth, tips slightly recurved. Lvs scattered, 105 × 15 mm, dark green. Stems 1.05 m, rather dark green, with up to 20 fls. Late June.

#### 'Make-believe' I(b-c/-)

Parentage: ( *cernuum* × unknown) × unknown  
R: J. Barber, N: A.J. Porter (1974), I: A.J. Porter (1976), REG: A.J. Porter (1975)  
Bicolour; throat yellowish white (155B), tepal-tips deep purplish pink (64D); outside light purplish pink (62C); spots present; nectaries yellowish white (155B); pollen dark reddish orange (172B). Lvs moderate olive-green (146A). Stems 0.6-0.8 m. July.  
(Published in  *Lilies and other Liliaceae*, 1975: 94.)

#### 'Make Up' I(a/-)

Parentage: 'Mont Blanc' × unnamed seedling  
R: Lybelmex Hillegom B.V. (1981), G: Lybelmex Hillegom B.V. (1983), N: Lybelmex Hillegom B.V., I: Lybelmex Hillegom B.V., REG: Lybelmex Hillegom B.V. (1989)

Inside deep yellowish pink (41D), throat light orange-yellow (23C); outside moderate yellowish pink to moderate pink (37C/35D), outer tepals with deep yellowish pink (39B) margins; spots dark red (59A), surrounding the throat; pollen vivid reddish orange (30B). Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips not recurved. Lvs scattered, mid green. Stems 0.5 m, green with darker spots, and with c.8 fls.

#### 'Make Up' I(b/c)

Parentage unknown  
R: A. Weinreich (pre 1991), N: A. Weinreich  
Inside bicoloured: the apical half of each tepal clearly separated from the basal red half; lightly spotted. Tepals only slightly reflexed. Stems 1.2-1.5 m. Mid July.  
(Unacceptable name: ICNCP, 2004: Art. 17.2 - name already used for another lily. Published in German Lily Group sales list, 1991.)

#### 'Makiko' VIII(a/b)

Parentage: seedling 91.25.399 × seedling 86.65-1  
R: World Breeding B.V. (1993), G: World Breeding B.V. (1995), N: World Breeding B.V. (2001), I: World Breeding B.V. (2001), REG: World Breeding B.V. (2002)  
Inside between moderate red (180C) and deep pink (48B), becoming paler with age, base of midveins orange-pink, throat deep pink (48B); outside deep pink (51C); spots and papillae absent; pollen orange-red; stigma purple-red. Tepal-margins smooth or very slightly ruffled, tips slightly recurved. Stems with dark stripes and spots, and with c.7 fls. Early.  
(A  *longiflorum*/Asiatic (LA) hybrid.)

#### 'Makkum' I(a/-)

Parentage unknown  
REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside light orange (28C/D); outside light orange (28D); spots present; papillae absent; nectaries greenish; pollen red-brown; stigma dark red-purple. Tepal-margins slightly ruffled, tips recurved. Stems of medium height, with reddish markings. Early to midseason.

#### 'Maksi' I(a/b)

Parentage: ('Rubinovaia' × Hallmark Group) × ( *L.*  ×  *maculatum*  ×  *cernuum*)  
R: M.F. Kireeva & N.V. Ivanova (1985), N: M.F. Kireeva  
Inside very pale apricot, spots dense, deep purple; pollen absent. Fls 130-150 mm wide. Lvs 120 × 12 mm, dense. Stems 1-1.2 m, greenish brown, with 7-13 fls, and with bulbils. July.  
Syn.: 'Olga'.  
(Published in M.F. Kireeva,  *Lili*, 54 (2000).)

**‘Maksis’ I(b/c)**

Parentage: ‘Cha Cha’ × ‘Nakts Tango’

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)

Inside strong orange (25B), tepals with a vivid reddish orange (32A) centre, throat strong reddish orange (31B); outside light orange; numerous, large and small, dark red (183A) spots and marbling; nectaries brown; pollen orange. Fls 140 mm wide; tepals 70 × 33 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm, mid green. Stems 0.75 m, green, marbled dark brown, with c.7 fls. Mid July.

**‘Mak’s Sundance’ I(a/c)**

Parentage: ‘Nepal’ × ((white-flowered seedling × yellow-flowered seedling) × ‘Connecticut King’)

R: Mak-Leek Inc. (pre 1996), N: Mak-Leek Inc., REG: ICRA (1998)

Inside white, each tepal with a yellow flame. Tepal-tips recurved. Stems over 1.2 m, very sturdy. Late July. Syn.: ‘Sundance’.

(Published in *Parkland Perennials Cat.* 1996: 9 as ‘Sundance’: the epithet was later changed.)

**‘Mak’s Virgo’ VII(a-b/c-d)**

Parentage: white-flowered seedling × white-flowered seedling

R: Mak Lelieverdeling B.V. (1986), G: Mak-Leek Inc. (1990), N: Mak-Leek Inc., REG: Mak-Leek Inc. (1997)

Inside yellowish white (155D), midveins brilliant yellow (9C), throat strong yellow-green (143C); outside yellowish white (155D), suffused with pale yellow-green (4D) on and along midribs; spots moderate red (183D) at the base; papillae yellow on basal part of inner tepals; nectaries yellow-green; pollen strong orange (170A); stigma dark purple (79A). Fls 240 mm wide; tepals 130 × 55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 165 × 35 mm, mid green. Stems 0.9-1.25 m, pale green, with 5-12 fls. Late July.

**‘Malaga’ I(a/-)**

Parentage: unnamed seedling × ‘Sancerre’

R: Lybelmex Hillegom B.V. (1986), G: Lybelmex Hillegom B.V. (1988), N: Lybelmex Hillegom B.V. (1992), I: Lybelmex Hillegom B.V. (1992), REG: Lybelmex Hillegom B.V. (1993)

Inside yellowish white (155D); outside yellowish white (155D) suffused with pale red at base, midribs pale greenish yellow (1D); spots absent; nectaries dark red (187B); pollen moderate reddish orange (171A). Fls 155 mm wide; tepals 81 × 49 mm, margins smooth, tips slightly recurved. Lvs scattered, 103 × 12 mm, dark green. Stems 0.6 m, mid green, with c.4 fls.

**‘Malcolm’ I(-/-)**

Parentage: believed to be a sibling of ‘Wonga’

R: G.M. Chandler (pre 1983), N: M.K. Baldwin, I: M.K. Baldwin

Inside bright yellow; lightly spotted at centre of fl. Late Dec. (Australia).

**‘Malérečka’ I(a/b)**

Parentage: ‘Olga’ × ((‘Connecticut King’ × ‘Pink Champagne’) × ‘Dawn Star’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1998), REG: B. Mičulka (1998)

Inside yellow, with a conspicuous carmine blotch over each yellow-granulated nectary; outside with mahogany midribs; spots sparse, small, dark brown, on a third of each tepal; stigma dark carmine-brown. Fls 105 mm wide; tepals 70 × 32 mm, margins waved, tips strongly recurved; pedicels 45 mm long, heavily brown-dotted. Lvs scattered, 75 × 10 mm, dull mid green. Stems 0.75 m, rather slender, green, with a short infl. Late June.

**‘Malibu’ VIII(a-b/b)**

Parentage: seedling E 905-5 × seedling OR 2

R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)

Inside brilliant yellow (12B/13C), lighter towards tepal-tips; outside light yellow (11B); spots and papillae absent; nectaries green; pollen orange-brown; stigma green. Fls 180 mm wide; tepals 130-135 × 35-56 mm, margins slightly ruffled, tips recurved. Lvs scattered, 195-230 × 45-84 mm, dark green. Stems 1.45-1.65 m, green, with 2-12 fls. Late.

(An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096400).)

**‘Malinovka’ I(c/-)**

Parentage: ‘Rubinovaia’ × mixed pollen of *cernuum* & Harlequin Group

R: M.F. Kireeva (c. 1977), N: M.F. Kireeva

Fls straw-pink, spotted. Stems 1.3 m, with bulbils. July.

**‘Malinovi Zvon’ I(a/b)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1996)

Fls deep raspberry-red; spots deep purple. Fls 140-150 mm wide. Stems with c.18 fls. July.

(Published in M.F. Kireeva, *Lilii*, 48 (2000).)

**‘Malinowa Miss’ I(c/b-c)**

Parentage: ‘Avignon’ × ‘Zigeunerliebe’

R: A. Berner (1991), G: A. Berner (1993), N: A. Berner (1996), I: A. Berner (1996), REG: A. Berner (1996)

Inside and outside raspberry-pink; spots small, black, around the nectaries; nectaries white/pink; pollen brown. Tepals 85 × 30-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 11 mm, mid green. Stems 0.75 m, green-brown, with c.14 fls. Mid July.

**‘Mallowbelle’ VI(-/a)**

Parentage: selection from *L. × imperiale* Pink Trumpet Group

S: D. Foxwell (c. 1960), N: D. Foxwell

Fls cyclamen purple (HCC 30/2) throughout.

**‘Malmo’ IX(c/d)**

See *lancifolium* ‘Malmo’.

**'Malta' I(a/b)**

Syn. of 'Ikaria'.

**'Malta' IX(b/c)**

See *auratum* 'Malta'.

**'Maltese' I(a/b)**

Syn. of 'Ikaria'.

**'Malvaz' I(a-b/b)**

Parentage: 'Bianca' × 'Rusalka' (of Mičulka)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000),  
REG: B. Mičulka (2000)

Inside pale apricot-beige, throat yellowish beige, with a crimson pink ray above each nectary, tepal-tips paler; outside pale beige, midribs pink; spots fairly numerous, large, dark brown-purple, on two-fifths of each tepal; papillae in the throat; nectaries white-granulated; pollen bright orange-brown-red; stigma old rose. Fls 145 mm wide; tepals 80 × 37 mm, slightly recurved (outer tepals more so); pedicels 65 mm long, slender, brown-red. Lvs scattered, 80 × 9 mm, dull pale green. Stems 1.15 m, brown-red, with a short infl. Late July.

**'Mamaska' I(a/-)**

Parentage: unnamed hybrid × unnamed hybrid

R: F. Tarlton (1972), G: F. Tarlton (1975), N: F. Tarlton (1991), I: D. Dale (1991), REG: F. Tarlton (1991)

Inside deep red (53A); outside strong red (53B); spots many, black, on basal two-thirds of tepals; nectaries shading to deep yellowish pink (43C); pollen strong reddish orange (31A). Fls 90 mm wide; tepals 54 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 11 mm, mid green. Stems 1.3 m, brownish green, with 10-15 fls (including secondary buds). Late July.  
(Published in *Lilydale Lilies Cat.*, 1991.)

**'Mame' I(-/-)**

Parentage: 'Edith Cecilia' × 'Byam's Ruby'

R: R.P.H. Clas (pre 1976), N: R.P.H. Clas, REG: ICRA (1998)

Fls rosy pink, touched with bronze.

**'Mamzel' I(a/b-c)**

Parentage: 'Crete' × 'Electric'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000),  
REG: B. Mičulka (2000)

Inside rich pink, tepal-centres and throat brownish red, each tepal with a yellowish claw; outside paler, midribs green and brownish; spots fairly numerous, medium sized, black-brown, on half of each tepal; nectaries pink-granulated; pollen ochre-brown; stigma brown and dark purple. Fls 125 mm wide; tepals 80 × 47 mm, very slightly recurved (the outer more so); pedicels 120 mm long, thick, dotted dark brown. Lvs scattered, 95 × 9 mm, dull dark green. Stems 0.9 m, thick, spotted dark brown, and with a short infl. Early July.

**'Manawatu' VII(b/c)**

See *L. × parkmanii* 'Manawatu'.

**'Manchester' I(a/b)**

Parentage: seedling RS 90-21 × seedling RS 92-13

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2000), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside light purplish pink (65B), moderate purplish pink (65A) towards tepal-edges, throat pale purplish pink (62D); outside pale purplish pink (65C), tepals narrowly edged strong purplish red (63B), inner tepals a little paler; spots few, strong purplish red (63B); papillae pale purplish pink (62D); nectaries pale purplish pink (62D); pollen moderate orange (167A); stigma dark red (187B). Fls 170 mm wide; tepals 100 × 40-60 mm, margins smooth, tips recurved. Lvs scattered, 120 × 25 mm. Stems 1.25-1.3 m, green, with c.7 fls.

**'Mancilla' I(a/b)**

Parentage: ((Hallmark Group × unknown) × 'Buccaneer') × 'Windahloo'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997),  
REG: B. Mičulka (1997)

Inside deep apricot with paler tepal-tips; outside with greenish midribs; spots few, large, brown-carmine on half of each tepal; nectaries densely frosted; filaments pale apricot; pollen chocolate-brown; stigma pale orange-apricot. Fls 155 mm wide; tepals 80 × 40 mm, margins curved upwards, tips slightly recurved. Lvs scattered, 90 × 13 mm, dull dark green. Stems 0.65 m, thick, green. Mid June.

**'Mandarin' I(a/-)**

Parentage: selection from Coronado Group

S: J. de Graaff, N: J. de Graaff (c. 1947), I: J. de Graaff (c. 1947)

Fls dark red, lightly spotted. Stems 1 m. July.  
(Published in *LYB NALS* 1: 106 (1947/48).)

**'Mandarin' II(-/-)**

Parentage: *hansonii* × *tsingtauense*

R: O. Beutnagel (pre 1987), N: O. Beutnagel

Inside orange with a few spots. Stems 1.2 m. Late July. (Unacceptable name: ICNCP, 2004: Art. 17.2 - name already used for another lily. Published in German Lily Group sales list, 1987.)

**'Mandarin' IX(b/c)**

See *auratum* 'Mandarin'.

**'Mandarin' I(b/-)**

Error for 'Mandaryn'.

**'Mandarin' VI(-/c)**

Misspelling of 'Mandarins'.

**'Mandarin Blaze' VI(b/b)**

Parentage: (apricot-flowered trumpet × golden Aurelian) × apricot-flowered trumpet seedling 620911

R: T.R. Martin, G: T.R. Martin (1973), N: T.R. Martin (1976), REG: T.R. Martin (1976)

Inside strong orange (25B), throat strong orange (25A);

outside strong orange-yellow (24B); pollen golden yellow. Tepals slightly curled. Lvs wide, mid green. Stems 1.2-1.5 m. Mid to late July.  
(Published in *NALS LYB* 28: 34 (1975).)

**‘Mandarins’ VI(-/c)**

Parentage: Aurelian Group × *henryi*  
R: V.P. Orehovs (c. 1957), N: V.P. Orehovs  
Fls orange; pollen orange. Stems up to 1.8 m. July to Aug.  
(Published in *LYB* 33: 77 (1970) and included in *ILR* (1982) as ‘Mandarin’ which is a misspelling.)

**‘Mandaryn’ I(b/-)**

Parentage: ‘Cinnabar’ (Div. I) × Coronado Group  
R: K. Mynett & A. Wilkońska (1973), G: K. Mynett & A. Wilkońska (1977), N: K. Mynett & A. Wilkońska, I: Research Institute of Pomology & Floriculture  
Inside vivid orange (28A), throat strong reddish orange (31A); outside vivid orange (28B); spots dark brown, on basal half of each tepal; nectaries yellow; pollen light orange; stigma dark bronze. Fls 140 mm wide; tepals 85 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 10 mm, mid green. Stems 50 cm, light green, with c.5 fls. Mid June. June.  
(Unacceptable name: ICNCP, 2004: Art 19.25 - name too similar to ‘Mandarin’. Sent for registration in 1997 but rejected. Good for forcing. Sometimes seen incorrectly as ‘Mandarin’.)

**‘Mandela’ VII(a/-)**

Parentage unknown  
R: Gebr. Mak B.V. (pre 1990), REG: Van den Bos Flowerbulbs (2002)  
Inside strong to moderate purplish pink (68B/C), midveins strong red (53B), markings red; outside very pale purple (73D); spots and papillae present; nectaries brilliant yellow-green (149B) with yellow edges; pollen orange-brown; stigma purple with grey. Tepal-margins strongly ruffled, tips recurved. Stems with dark markings. Very late.

**‘Mandy’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: W. Ligthart (1992), G: W. Ligthart (1995), N: M. van Vlier (1999), I: W. Ligthart (2001), REG: W. Ligthart (2002)  
Inside deep yellowish pink (39B), more orange along tepal-margins, throat orange-red; outside strong red/strong yellowish pink (39A/35C); spots and papillae present; nectaries orange; pollen orange-red; stigma orange-yellow. Fls 140 mm wide; tepals c.70 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 80 × 30 mm. Stems 1.05 m, with darker markings, and with c.6 fls. Early to midseason.

**‘Mánes’ I(a/c)**

Parentage: ‘Connecticut King’ × ‘Tabasco’  
R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B. Mičulka (1984)  
Inside orange, throat apricot, each tepal with a dark red

tongue over nectary; outside paler with reddish midribs; spots very few, tiny, dark brown; nectaries white-frosted; pollen brown. Fls 150 mm wide; tepals 80 × 40 mm, slightly recurved; pedicels slightly dotted Lvs 80 × 12 mm, dark green. Stems strongly dark-spotted, with short pyramidal infl. Mid June.

**‘Mangestsu’ I(a/-)**

Parentage: possibly a selection from *L. × maculatum*  
Fls yellow.  
(Published in *Bulbs and Seeds of Japan* (Ministry of Agriculture & Forestry, Japan), 1960.)

**× *manglesii* Masters I(-/)**

Parentage: *bulbiferum* var. *croceum* × *lancifolium*  
R: J.H. Mangles (c. 1878)  
Fls orange-yellow; spots oval, reddish brown. Fls 165 mm wide; tepals more recurved than in *bulbiferum*. Lvs scattered. Stems 1.5 m, with c.40 fls.  
(Published in *Gard. Chron.*, ser. 3, 16: 152 (1881).)

**× *manglesii* ‘Danesmere’ I(-/)**

Parentage: *bulbiferum* var. *croceum* × *lancifolium* ‘Splendens’  
R: J.E.H. Stooke (1932)  
(Published in *Gard. Chron.* 112: 45 (1942).)

**× *manglesii* ‘Danesmere Variety’ I(-/)**

Parentage: *bulbiferum* var. *croceum* × *lancifolium* ‘Splendens’  
R: J.E.H. Stooke, N: J.E.H. Stooke  
Fls *lancifolium* colour.  
(Published in *JRHS* 68: 343 (1942).)

**× *manglesii* ‘Darkness’ I(-/)**

Parentage: *bulbiferum* var. *croceum* × *lancifolium*  
R: unknown  
(Published in *JRHS* 71: lix (1946). Exhibited by W.A. Constable Ltd. No further details)

**× *manglesii* ‘Stooke’s Variety’ I(c/-)**

Parentage: *bulbiferum* var. *croceum* × *lancifolium* ‘Splendens’  
R: J.E.H. Stooke (c. 1932), N: J.E.H. Stooke AM 1937  
Fls orange-scarlet, resembling *lancifolium*, with numerous deep maroon markings. Stems sometimes with bulbils.  
(Published in *Gard. Chron.*, ser.3, 102: 33 (1937).)

**× *manglesii* ‘Striped Beauty’ I(a/-)**

Parentage: *bulbiferum* var. *bulbiferum* × (*bulbiferum* var. *croceum* × *lancifolium*)  
R: Gebr. N. & B. Laan & Zn (1975), N: Gebr. N. & B. Laan & Zn (1979), I: Gebr. N. & B. Laan & Zn (1980), REG: Gebr. N. & B. Laan & Zn (1983)  
Inside light salmon-orange with purple midveins, tepal-tips light salmon, throat yellow-cream; outside light orange; spots brown, few, on basal third of each tepal; nectaries orange-brown; pollen maroon-brown. Tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 5 mm, dark green. Stems 0.9 m, mid green, with c.15 fls. Late June.  
(Published in *Bloembollencultuur* 93 (2): 32 (1982).)

**‘Manhattan’ VIII(a-b/b)**

Parentage: red-flowered Asiatic seedling × (*longiflorum* × ‘Aristo’)

R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside deep/moderate red (185A/180A), tepal-tips moderate red (180B/C), throat moderate red (180C); outside moderate red (180B/C), basal part close to deep/moderate red (185A/180A), outer tepal-edges moderate red (180A), midribs hairy and tinged with greyish brown/moderate reddish brown (166A/B) at base; spots dark red (187A); some papillae near nectaries; nectaries moderate red (180C); pollen moderate reddish brown (175A); stigma moderate red (180A). Fls 210 mm wide; tepals 120 × 45–65 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 0.9 m, dark, with 3–5 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Manila’ VII(a-b/-)**

Parentage: unnamed seedling × ‘Vedea’

R: Sande B.V., G: Sande B.V. (pre 1999), N: Sande B.V., I: Sande B.V., REG: Sande B.V. (2001)

Inside light purplish pink (65B) on a yellowish white (155D) ground, base yellowish white (155D), midveins white; outside yellowish white (155D); spots absent; some papillae present; nectaries green; pollen light brown; stigma grey, suffused with purple. Tepal-margins ruffled, tips recurved. Stems 1.1–1.2 m, green. Early to midseason.

**‘Manisa’ VIII(a-b/b)**

Syn. of ‘Manissa’.

**‘Manissa’ VIII(a-b/b)**

Parentage: seedling 95–48 × ‘Aubade’

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside strong orange-yellow/vivid yellow (17A/B), changing towards tepal-edges into pale yellow-green (4D), throat whiter than 155D; outside pale yellow-green (4D), midribs suffused with strong yellow-green (144C) and with a little reddish brown at base; spots absent; papillae on up to two-thirds of each tepal; nectaries strong yellow-green (144B); pollen strong brown (172A); stigma darker than dark red (187A). Fls 220 mm wide; tepals 140–150 × 50–75 mm, margins hardly ruffled, tips recurved. Lvs scattered, 160 × 30–50 mm. Stems 1–1.4 m, light green with darker markings, and with 2–6 fls. July.  
Syn.: ‘Manisa’.

(An *Orienpet* (OT) hybrid. Registered and included in *ILR Twentieth Supplement* as ‘Manisa’. However in 2003 European PBR were granted to this cv. under the epithet ‘Manissa’ so this latter spelling of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Manitoba Centennial’ I(c/d)**

Parentage: Preston Group × ‘Edith Cecilia’

R: E. Robinson (c. 1960), N: E. Robinson

Fls pinkish straw, centre yellow, midveins darker. Stems 1–1.2 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 22 (1978).)

**‘Mannequin’ VII(-/b)**

Parentage: unnamed seedling × unnamed seedling

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)

Inside yellowish white (155B), tepal-tips blushed with strong purplish red (60D), throat strong yellow-green (145A), outside yellowish white (155B), midribs suffused with pale yellow-green (4D); spots few, dark red (59B), on centre of each tepal; pollen strong orange (169C). Fls 200 mm wide; tepals 95 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 40 mm, mid green. Stems 1.2 m, green, with c.7 fls. May (under glass).

**‘Manon’ I(a/b)**

Parentage: ‘Connecticut Red’ × ‘Connecticut King’

R: K. Braun (1981), N: K. Braun, REG: K. Braun (1985)

Inside each tepal orange in the middle, tip yellow, margins yellow-orange, throat green-yellow; outside yellow-orange; spots very sparse, small, blackish brown, in the throat; papillae pale yellow; nectaries orange-yellow; pollen brown; stigma green. Fls 148 mm wide; tepals 79 × 35 mm, margins slightly curled, tips slightly recurved. Lvs 115 × 10 mm, dull pale green. Stems 0.85 m, with brownish tints. Early July.

**‘Man o’ War’ I(a/-)**

Parentage unknown

G: R. Erskine (1994), N: R. Erskine (1999), I: R. Erskine (1999), REG: R. Erskine (1999)

Fls burgundy-red throughout; spots absent; nectaries burgundy-red; pollen orange. Fls 310 mm wide; tepals 160 mm long, margins smooth, tips slightly recurved. Lvs scattered, 160 × 12 mm. Stems 1.25 m, black, with 15–20 fls. July or Aug.

(Grown from seed obtained from Australia.)

**‘Mantegna’ VII(b/b)**

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside yellowish white (155D); outside with outer tepals yellowish white (155D), midribs light yellow-green (145B) at base, light yellow-green (150D) at top with some light yellow-green (144D), along midribs flushed with strong purplish red (58C) which disappears with age, inner tepals similar but midribs light yellow-green (145D) at base changing into pale yellow-green (155A); spots absent; papillae yellowish white (155D); nectaries light yellow-green (144D); pollen strong orange (24A); stigma light greenish grey (190C). Fls 185 mm wide, fragrant; tepals 121 × 45–78 mm, margins smooth to

ruffled, tips recurved. Lvs scattered, 140 × 35 mm. Stems 0.85-0.9 m, green with darker markings, and with c.4 fls.

**‘Mantojums’ I(a/-)**

Raised by V.P. Orehovs before 1998 and used as a parent of ‘Cerinzars’, ‘Madrigals’ and ‘Miniatura’ by D.-V. Šķimele. No further details.

**‘Mantona’ I(a/b)**

Parentage: orange-flowered tetraploid Laan hybrid × unnamed IVT hybrid no. 85710-1  
R: Gebr. N. & B. Laan & Zn (1989), G: Gebr. N. & B. Laan & Zn (1991), N: Gebr. N. & B. Laan & Zn (1995), I: Gebr. N. & B. Laan & Zn (1996), REG: Gebr. N. & B. Laan & Zn (1996)

Inside strong orange (25B), changing towards the tepal-tips to light orange (28D), edged 25B, throat a little paler than light orange-yellow (25D); outside light orange-yellow (25D), tepal-edges strong orange (25A/B), midribs strong yellow-green (144B) at top and dark reddish orange (178B) at base; spots absent; papillae few, in the throat; nectaries with hairs a little paler than lighter orange-yellow (171B); pollen strong brown (172A); stigma brownish orange (171B). Fls 180 mm wide; tepals 100 × 35-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 145 × 20 mm, mid green. Stems 1.1-1.2 m, dark, with 5-8 fls (from 14-16 cm bulbs). June.

**‘Mantova’ I(a/-)**

Parentage: seedling G 930 × seedling OR 483  
R: Vletter & Den Haan, G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1988), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)

Inside striped vivid yellow (16A) and strong red/deep pink (47B/D) towards base, apical parts moderate red (47A), suffused with deep pink and edged vivid yellow (16A), throat strong red/deep yellowish pink (47B/C); outside deep to moderate pink (51C/D), tepal-edges strong orange (25B); spots few, black; pollen moderate orange (167A); stigma moderate yellow (162B). Fls 160 mm wide; tepals 80 × 40 mm, slightly recurved. Lvs scattered, 130 × 13 mm, dark green. Stems 1.15 m, mid green, with c.12 fls.

**‘Mantua’ I(b/-)**

Parentage: ‘John Dix’ × ‘Connecticut King’  
R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1980), I: V. Strasser (1983), REG: V. Strasser (1997)  
Fls bronze, with light papillae in the throat and soft spots over basal quarter of each tepal. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.15 m, rather dark green, with up to 38 fls. Early July.

**‘Manuella’ I(a/-)**

Parentage: ‘Ladykiller’ × *cernuum*  
R: Gebr. N. & B. Laan & Zn (pre 1975), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1975)  
Fls deep pink (51B&C), paler towards tepal-edges; spots brownish black; anthers dark brown.  
(In *Lilies and other Liliaceae 1976*, 92 this cv. was listed erroneously with the description of ‘Cream Beauty’.)

**‘Many Moons’ I(c/-)**

Parentage: *amabile* × *davidii*  
R: J. de Graaff (c. 1954), N: J. de Graaff  
Fls lemon-yellow. Stems 1-1.2 m. July.

**‘Manzano’ VII(a/-)**

Parentage unknown  
R: Peacock B.V./Imanse Lelieveredeling B.V. (pre 1995)  
Inside yellowish white (155D), midveins yellow-green at base; outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen red-brown; stigma grey-green with purple spots. Tepal-margins ruffled, tips very strongly recurved. Lvs scattered, of medium length. Stems short, green with some darker markings, and with a small number of fls.  
(Granted Dutch PBR (LEL 1303) in 1997, but not registered. The stock was destroyed by the raiser.)

**‘Manzini’ VII(a-b/-)**

Parentage: unnamed seedling × ‘Joy’  
R: Imanse Lelieveredeling B.V. (1993), N: Peacock B.V. (1998), I: Peacock B.V. (1998), REG: Peacock B.V. (2002)  
Inside strong purplish pink (73B), midveins yellow at base, throat pink/white; outside strong purplish pink (73B); spots and papillae present; nectaries yellow-green; pollen light to dark brown; stigma dark purple. Fls 180 mm wide; tepals 110 × 40 mm, margins ruffled, tips recurved. Lvs scattered, 100 × 30 mm. Stems 0.9 m, brown and green, with 2-6 fls. Early to midseason.

**Maori Boy Group I(c/d)**

Parentage: *lancifolium* ‘Splendens’ × ‘Dark Ruby’  
R: L.B. Tuffery (c. 1958), N: L.B. Tuffery  
Fls crimson, heavily spotted. Fls *lancifolium* shape.  
(Published in *JLR* (1982) as Maori Boy grex.)

**‘Maori Chief’ I(b/-)**

Parentage: ‘Sultan’ (of Tuffery) × ‘Ruby Queen’  
R: L.B. Tuffery (c. 1946), N: L.B. Tuffery  
Fls oxblood-red, throat orange. Fls 100-125 mm wide. Lvs dark metallic green. Stems 0.4 m, with up to 50 fls in a *lancifolium*-like infl.  
(Published in *JRHS* 79: 24 (1954).)

**‘Maori Maid’ I(b/-)**

Parentage: ‘Grace Marshall’ × ‘Lord Melbourne’  
R: A.C. McKillop (c. 1956), N: A.C. McKillop  
Fls deep blood-red, with a few black spots.  
(Published in *Amer. LYB* 10: 75 (1957).)

**‘Maple Cream’ I(b/c)**

Parentage: ‘Golden Coronet’ × pink-flowered seedling  
R: J. Wadekamper (1973), G: J. Wadekamper (1975), N: J. Wadekamper (1979), I: Borbeleta Gardens (1979), REG: Borbeleta Gardens (1981)  
Inside a blend of light orange-yellow (19A) to light yellow (19B), tepal-tips light orange-yellow (19A), throat ivory; outside light yellow (19B); spots few, inconspicuous, in centre; nectaries ivory; pollen rust-red. Tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs

scattered, 100 × 12 mm, mid green. Stems 0.9-1.2 m, tan-green, with 18-20 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1979.)

### 'Maple Honey' I(b/-)

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1983), G: J. Vasarietis (1986), N: J. Vasarietis (1992), I: J. Vasarietis (1989), REG: J. Vasarietis (1992)

Inside vivid yellow (15A) at the centre on opening, shading to light yellow (11B) at tepal-tips, throat greenish white, all fading with age to creamy white; outside creamy white; spots numerous, purple, on two-thirds of each tepal; nectaries white; pollen orange. Fls 130 mm wide; tepals 75 × 35 mm, margins smooth, tips very slightly recurved. Lvs scattered, 90 × 10 mm, mid green. Stems 0.85 m, green, with c.7 fls. Early July.

Syn.: 'Honeymoon'.

(Originally named and introduced as 'Honeymoon' in 1989.)

### 'Mapleton' IX(b-c/d)

See *speciosum* 'Mapleton'.

### 'Maracana' I(b/-)

Parentage: 'Schellenbaum' × 'Tetra Mountaineer'  
R: V. Strasser (1974), G: V. Strasser (1976), N: V. Strasser (1978), I: V. Strasser (1981), REG: V. Strasser (1985)  
Fls red; spots black; pollen red-brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.25 m, green-brown, with c.25 fls. July. Tetraploid.

Syn.: 'Schellmount Number 5'.

(Published in *Der Staudengarten*, 1982.)

### 'Marais' VII(-/b)

Parentage: seedling 122 × seedling 201  
R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)  
Inside strong reddish purple/deep purplish pink (70B/C), midveins brilliant to light yellow (12B/C) on basal half of fl., throat strong yellow-green (144C); outside greenish white (157D), tepal-tips strongly suffused with moderate purplish red (70A), margins lilac-purple, midribs light to pale purplish pink (62C/D); spots dark red (187C) on the whole of each tepal except tip; nectaries strong purplish red (72A); pollen moderate reddish orange/brownish orange (171A/B). Fls 240 mm wide; tepals 115 × 55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 160 × 33 mm, mid green. Stems 1 m, pale green with darker markings, and with c.8 fls.

### 'Maranello' VIII(a-b/b)

Parentage: ('Pepper' × 'Firecracker') × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside vivid red (46B), strong red (45D) towards tepal-

margins, throat pale yellowish pink (27D); outside pale purplish pink (62D), vivid reddish orange (42A) towards tepal-margins; spots and papillae present; nectaries (28C); pollen dark reddish orange (172B); stigma deep yellowish pink (41D). Fls 170 mm wide; tepals 125 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 21 mm, green. Stems 0.85 m, green, with 3-4 fls. June. (*A longiflorum*/Asiatic (LA) hybrid.)

### 'Maraschino' VII(a/b)

Parentage unknown

R: Columbia-Platte Lilies, N: Columbia-Platte Lilies, I: Columbia-Platte Lilies (1996), REG: ICRA (1998)

Inside white, with a cherry midvein in basal half of each tepal, the colour suffused into the adjacent part of the tepal and accompanied by dark spots; nectaries conspicuous, greenish; pollen brown-orange; stigma greenish. Tepal-margins ruffled, tips recurved. Stems 1-1.2 m. Aug.

(Published in *The Lily Garden Cat.*, 1996/97: 22, with colour illustration.)

### 'Maraton' I(a-b/b)

Parentage: 'Destiny' × 'Talisman'

R: V. Baloun (1982), N: V. Baloun, REG: V. Baloun (1986)

Inside pale ochre-orange, throat pale; outside beige-orange, midribs reddish; spots numerous, large, dark brown-purple; nectaries white-frosted; pollen red-brown. Fls 100 mm wide; tepals 70 × 29 mm; pedicels brownish. Lvs 80 × 7 mm, dull green. Stems 0.8 m, spotted dark brown. Early July.

### 'Marbella' I(a/-)

Parentage unknown

R: Lybelmex Hillegom B.V. (1986), G: Lybelmex Hillegom B.V. (1988), N: Lybelmex Hillegom B.V. (1993), I: Lybelmex Hillegom B.V. (1993), REG: Lybelmex Hillegom B.V. (1994)

Inside vivid yellow (9A), darker above the nectaries, throat brilliant greenish yellow (2B) with paler edges; outside vivid yellow (9B), stronger coloured at tepal-edges and base; a few papillae present, coloured as the tepals; pollen dark reddish orange (175B); stigma dark red (187C). Fls 180 mm wide; tepals 90 × 50 mm, slightly recurved. Lvs scattered, 105 × 15 mm, mid green. Stems 0.95 m, very pale green with darker markings, and with c.6 fls.

### 'Marble Queen' II(-/)

See *L. × dalhansonii* 'Marble Queen'.

### Marble Temple Group VI(b-c/a)

Parentage: selections from Temple Group

S: J.M. Shaver, N: J.M. Shaver, I: C.A. Best (1956)

Fls white, ivory and pearl tones, with yellow, bronze or purple outside and yellow or green throats. Stems 1.5 m. July.

(Published in *Greenock Farms Cat.* 1956: 20. Included in *ILR* (1982) as Marble Temple grex.)

**‘Marcanti’ VII(a/b)**

Parentage unknown

R: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V. (1999), REG: Vletter &amp; Den Haan Beheer B.V. (2003)

Inside strong purplish red (60C), each tepal strong purplish red (71C) towards margins and tip, and with a strong yellowish pink (31C) spot above nectary, throat very pale purple (69D); outside strong reddish purple (70B), midribs strong yellow-green (145A) at base, changing to very pale purple (73D), with a small strong yellow-green (143A) spot at top; spots moderate purplish red (59C); papillae brilliant yellow (11A); nectaries strong greenish yellow (151C), brilliant yellow (7A) at base; filaments greenish yellow; pollen strong reddish orange (169A); stigma light purple (78C). Fls 210 mm wide; tepals 130 × 70 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 45 mm, dark green. Stems 1.1 m, green with darker markings, with c.4 fls.

**‘Marcela’ I(a/b)**

Parentage: ‘Connecticut Queen’ × ‘Symfonieta’

R: Šlechtitelaká Stanice Heřmanův Městec, N:

Šlechtitelaká Stanice Heřmanův Městec, REG:

Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside pale apricot-yellow, with sparse spots in the throat. Fls 130-150 mm wide; tepal-margins wavy, tips slightly recurved. Lvs 85-100 × 12-17 mm, dark green. Stems 0.7 m, green, mottled red-brown at base, with 14-18 fls. Late June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1991.)

**‘Marcelka’ I(a-b/b)**

Parentage: ‘Mafián’ × white-flowered tetraploid

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004),

REG: B. Mičulka (2004)

Inside pink with salmon tinge, throat whitish, area around nectaries pale apricot; outside pink, midribs brown; nectaries white-granulated. Fls 155 mm wide; tepals thick, 95 × 47 mm, somewhat recurved.; pedicels 75 mm, very thick, heavily dotted with dark brown. Lvs scattered, 135 × 20 mm, glossy mid green. Stems 1.15 m, dark brown, very thick. Triploid.

**‘Märchenbrunnen’ VI(c/c-d)**Parentage: *henryi* × mixed pollen of *L. × kewense* ‘White Henryi’, ‘Mimosa’ & ‘Louise’

R: G. Steinbrück (1990), G: G. Steinbrück (1993), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside yellowish white (155D), each tepal with a flare of moderate orange (167A) from mid point to the throat, the flare surrounded by strong papillae of moderate orange (172D); medium-sized, soft strong purplish pink (67D) spots and lines on basal half of each tepal (mostly beside rather than in the orange zone); nectaries moderate olive-green (146A); anthers on long, moderate yellow-green (147B) filaments; pollen moderate reddish orange (171A); style long, moderate yellow-green (147B); stigma moderate brown (200D). Fls 95 mm wide; tepals 70 ×

25 mm, margins strongly ruffled, tips strongly recurved. Lvs scattered, 200 × 20 mm; lowest bracts 40 × 15 mm. Stems 1.4 m, dark green marbled red-brown, with c.14 fls. Mid July.

(Märchenbrunnen is a fountain in Berlin. Nomenclatural standard: colour print provided by registrant (WSY 0028899).)

**‘Marcia’ VI(c/-)**

Parentage: seedling of Aurelian Group × ‘Golden Clarion’

R: R.C. Crawford, G: Montana State University (1958), N: D.C. Merkely (1979), I: Borbeleta Gardens (1980), REG: Borbeleta Gardens (1981)

Fls vivid yellow (12A), throat greenish; outside with tan cast over yellow; spots absent; nectaries greenish; pollen brown. Tepal-margins smooth, tips not recurved. Lvs scattered, mid green. Stems 1.3 m, blue-green, with 12-15 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1980.)

**‘Marco Borsato’ VII(-/b)**

Parentage: ‘Casa Blanca’ × seedling 201

R: Vletter &amp; Den Haan (1983), G: Vletter &amp; Den Haan (1986), N: Vletter &amp; Den Haan (1991), I: Vletter &amp; Den Haan (1990), REG: Vletter &amp; Den Haan (1992)

Inside light purplish pink (65B), shading to moderate purplish pink (65A) at tepal-tips, midveins strong purplish red (60D), throat strong yellow-green (144B); outside pale purplish pink (65C), midribs light yellow-green (145C) suffused with pale purplish pink (65D) at base; nectaries strong purplish red (62A); pollen strong reddish orange/strong orange (169A/B). Fls 240 mm wide. Lvs scattered, 180 × 37 mm, mid green. Stems 1.2 m, green, with c.6 fls. June.

**‘Marconi’ VII(a-b/b)**

Parentage: unnamed seedling × ‘Joy’

R: Lybelmex Hillegom B.V. (1987), G: Lybelmex Hillegom B.V. (1990), N: Lybelmex Hillegom B.V. (1995), I: Lybelmex Hillegom B.V. (1995), REG: Lybelmex Hillegom B.V. (1995)

Inside moderate purplish red (58A) fading towards tepal-edges, midveins deep red (60A), tepals with a little yellowish white (155D) at the base and tips; outside moderate purplish red (58A) on a yellowish white (155D) ground, outer tepals yellowish white (155D) at base, midribs strong yellow-green (144C) from a third the way up to top; spots absent; papillae dark red (187B/C) on two-thirds of each tepal; nectaries strong yellow-green (144C); pollen strong reddish orange (169A); stigma pale yellow-green (193A/B). Fls 230 mm wide, becoming darker with age; tepals 145 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 125 × 35 mm, mid green. Stems 0.8 m, pale green with darker marking around lf-nodes, and with 6-7 fls (from 16 cm bulbs). July.

**‘Marco Polo’ I(a/-)**

Parentage: ‘Roter Cardinal’ × ‘Tetra Mountaineer’

R: V. Strasser (1974), G: V. Strasser (1976), N: V. Strasser

(1984), I: V. Strasser (1984), REG: V. Strasser (1985)  
Fls bright red throughout, 150 mm wide; tepal-margins smooth, tips not reflexed. Lvs scattered, dark green. Stems 0.9 m, dark green, with c.17 fls. June to July. Triploid. (Published in *Der Staudengarten* no. 3 (1984).)

**MARCO POLO VII(b/b)**  
Trade designation of 'Vedea'.

**'Marden Gold' I(a-b/b)**  
Parentage: sibling of 'Ethelwaite' × 'Connecticut Dream'  
R: W.D. Evans (1975), G: W.D. Evans (1979), N: W.D. Evans (1986), I: W.D. Evans (1986), REG: W.D. Evans (1986)

Fls vivid yellow (15A); spots few, deep purplish red (61A), in the throat; nectaries vivid yellow (15A); pollen brown. Fls 145 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 24 mm, dark green. Stems 1.1 m, dark brown, with c.30 fls. Midseason.

**'Mardi Gras' VI(b-c/a)**  
Parentage unknown  
R: L. Woodriff (1965), G: Bowman Creek Farm (1967), N: Bowman Creek Farm (1981), REG: Bowman Creek Farm (1981)

Fls yellow throughout; spots absent; nectaries green; pollen orange. Fls 200 mm wide; tepals 140 × 75 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 10 mm, dark green. Stems 1 m, green flecked red, with c.10 fls. Late July.

**'Maremma' I(a/-)**  
Parentage: 'Paris' × 'Parma'  
R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside brilliant yellow (7A/B); outside vivid yellow (9B) with darker vivid yellow (9A) tepal-margins, outside of inner tepals brilliant yellow (9C), midribs tinged with strong yellow-green (141D); spots absent; pollen dark reddish orange (172B). Fls 170 mm wide; tepals 85 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 160 × 15 mm, mid green. Stems 1.3 m, green with darker markings, and with c.7 fls. May.

**'Marga' I(b/-)**  
Parentage: ('Hawaiian Punch' × 'Connecticut King') × 'Schneewittchen'  
R: A. Winkler (1977), G: A. Winkler (1979), N: A. Winkler (1988), REG: A. Winkler (1991)  
Inside strong pink (49A); outside greenish white; spots absent; nectaries white; pollen strong orange (169B). Tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm, pale green. Stems 0.65 m, pale green, with c.10 fls. Late June.

**'Margaret Bowe' VI(-/a)**  
Parentage: seedling from Golden Splendor Group × seedling from Golden Splendor Group  
R: C.N. Smith (1966), N: C.N. Smith (1970), I: C.N.

Smith (1970), REG: C.N. Smith (1970)  
Fls brilliant yellow (15C); spots absent. Lvs narrow. Stems 2.2 m.

**'Margaret Fenton' I(c/d)**  
Parentage: 'Pennine Red Beacon' × 'Progenitor'  
R: A.D. Harrison (c. 1965), N: A.D. Harrison  
Fls vivid reddish orange (34A), heavily spotted. Fls large, *dauidii* type; tepals broad, half reflexed.

**'Margaret Fletcher' I(b/d)**  
Parentage: 'Blithe Spirit' × 'Lady Bowes Lyon'  
R: G.W. Darby (c. 1965), N: G.W. Darby  
Almost like *chalconicum* var. *maculatum* in colour and form.

**'Margaret Hay' I(a/b)**  
Parentage: 'Geneve' × 'Merryspring'  
R: D.J. Hay (1997), G: D.J. Hay (1999), N: D.J. Hay (2001), REG: D.J. Hay (2001)  
Inside ivory-white, with a soft butter-yellow overtone, throat ivory-white; outside white with a pink blush; spots few, small, dark, near the throat; nectaries ivory-white; pollen rust-coloured; stigma ivory/pink. Fls 142 mm wide; tepals 72 × 36 mm, margins slightly ruffled, tips not or very slightly recurved. Lvs scattered, 73 × 14 mm. Stems 0.8 m, green, with c.9 fls. Midseason. (Nomenclatural standard: colour print provided by registrant (WSY 0031598).)

**'Margaret Isobel' I(b/-)**  
Parentage unknown  
R: J.G. Smith (1977), G: J.G. Smith (1979), N: J.G. Smith (1984), I: J.G. Smith (1984), REG: J.G. Smith (1985)  
Fls red-orange throughout; spots purple on basal third of each tepal; nectaries orange; pollen brown. Tepal-margins ruffled, tips slightly recurved. Lvs scattered. Stems 1-1.7 m, green, with c.30 fls.

**'Margaret Johnson' I(a/d)**  
Parentage: *lancifolium* × yellow-flowered *L. × maculatum*  
R: F.L. Skinner (c. 1940), N: F.L. Skinner, I: F.L. Skinner (1946)  
Fls orange-red, spotted. Tepals recurved. Stems 1-1.5 m. July. (Published in *LYB* 10: 40 (1946).)

**'Margaret Rose' IX(b/c)**  
See *auratum* 'Margaret Rose'.

**'Margaret Selkirk' VII(-/-)**  
See *L. × parkmanii* 'Margaret Selkirk'.

**'Margaret Mauve' II(b/-)**  
Parentage: *L. × dalhansonii* 'Juanita' × unknown  
R: E. Robinson (1970), N: E. Robinson (1977), I: E. Robinson (1977), REG: E. Robinson (1978)  
Fls fuchsia-mauve, spotted lilac. Stems 1.1 m. (Registered with the spelling *Margeret*. Published in *Lilies and other Liliaceae*, 1978/9: 110.)

**'Margie Wysong'** I(c/-)

Parentage unknown

R: G. Keasey (c. 1972), N: G. Keasey (pre 1979), REG: G. Keasey (1983)

Fls deep orange throughout; spots on three-quarters of each tepal; nectaries orange; pollen brown. Tepals 70 × 20 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 20 mm, mid green. Stems c.1 m, green, with 18-20 fls. Late.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978).)

**'Margit'** I(a/-)

Parentage unknown

R: H. Böhm (pre 2000), N: H. Böhm

Fls orange-red, spotted. Stems 1 m.

(Published in ELG sales list, 2000.)

**'Marguerite Mary'** II(-/-)

Parentage: *martagon* × unknown

R: W.C. Horsford, N: W.C. Horsford

Described as 'orchid-flowered'.

(Published in *NALS Bull.* 12(2) (1959).)

× **'marhan Baker'** II(c/d)

Syn. of *L. × dalhansonii* 'Marhan'.

**'Marhan'** II(c/d)

See *L. × dalhansonii* 'Marhan'.

**Marhan Group** II(-/-)

Given as a parent of 'Lilit', 'Martanka' and 'Morellentsing'. No further details. No record has been found of the valid publication of this name: it would seem to be equivalent to *L. × dalhansonii*.

**'Marhanex'** II(c/d)

See *L. × dalhansonii* 'Marhanex'.

**'Maria'** I(b-c/-)

Parentage unknown

R: A. Weinreich (pre 1989), N: A. Weinreich

Fls pale cream with very broad tepals, slightly scented.

Stems 1 m. Early July.

(Unacceptable name: ICNCP, 1980; Recommendation 13 Ah - name too similar to 'Marija'.)

**'Maria'** I(b/-)

Misspelling of 'Marija'.

**'Maria Callas'** I(a/-)

Parentage: unnamed seedling × unnamed seedling

R: P. Hoff (1980), G: Hoffgaarde B.V. (1982), N: P. Hoff (1987), I: Hoffgaarde B.V. (1987), REG: Hoffgaarde B.V. (1988)

Inside light greenish yellow to pale yellow (8C/D), throat flamed coral-pink; outside pale yellow (158A) below, each tepal with a pink basal blotch as well as a pink edge and flame, midrib pale green, apical part of tepals striped and edged coral-pink; spots round, chocolate-brown, on half of each tepal; pollen orange-brown. Fls up to 150 mm

wide; tepals 90 × 40 mm. Lvs scattered, 100 × 15 mm. Stems 1.25 m, green, with c.7 fls.

**'Mariana'** IV(-/d)

Parentage: selection from complex *parryi* × *humboldtii* hybrid

R: J. de Graaff (c. 1963), N: J. de Graaff

Fls yellow.

**'Marianne'** I(a/-)

Syn. of 'Alwin'.

**'Maria Teresa'** I(a/-)

Parentage unknown

R: unknown, G: Hartle-Gilman Gardens (1990), N:

Hartle-Gilman Gardens (1996), I: Hartle-Gilman Gardens (1996), REG: Hartle-Gilman Gardens (1996)

Inside deep pink (185D), tepal-tips and edges pale orange-yellow (159C), throat deep pink (185D), with yellow-green spreading to pleat for c.25 mm; outside a blend of pink and green; spots absent; nectaries light yellow-green to strong yellow (150D/153D); pollen gold. Tepals 64 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 122 × 11 mm, moderate yellow-green (146C). Stems 1.03 m, moderate yellow-green (146D), with c.12 fls.

**'Maribel'** I(a/b)

Parentage: unnamed seedling × unnamed seedling

R: Peacock B.V. & Imanse Lelieveredeling B.V. (c. 1995),

G: Testcentrum voor Siergewassen B.V., N: Marklily C.V.

(2000), I: Marklily C.V. (2000), REG: Marklily C.V. (2000)

Inside vivid reddish orange (32A), throat strong yellowish pink (32D); outside strong reddish orange (31B), tepal-edges vivid reddish orange, midribs of outer tepals strong yellow-green (143A); spots few, dark red (187A); papillae present; nectaries light yellowish pink (29C), hairy; pollen strong reddish orange (169A); stigma vivid reddish orange (30A). Buds hairy. Fls 160 mm wide; tepals 90 × 50 mm, margins smooth, tips recurved. Lvs scattered, 190 × 15 mm. Stems 1.2 m, dark, with c.6 fls.

**'Maribor'** VI(-/a)

Parentage: (*L. × kewense* 'White Henryi' × 'African Queen') × 'Life'

R: V. Strasser (1977), G: V. Strasser (1980), N: V. Strasser (1992), REG: V. Strasser (1992)

Fls orange throughout. Tepals 115 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 13 mm, dark green. Stems 1.2 m, green.

**'Marie Jean'** Div. ?

Given as a parent of 'Mendip Morello'. No further details. Possibly an error for 'Marijean'.

**'Marie North'** I(c/d)

Parentage: (*lankongense* × 'Maxwill') × ('Cardinal' (Div. I) × (*lancifolium* var. *flaviflorum* × 'Enchantment'))

R: C. North (1973), G: SHRI (1975), N: C. North (1985), I: RHS Lily Group (1985), REG: RHS Lily Group (1986)

Inside pale mauve-pink, throat deeper; outside dark red; spots dark red mainly towards centre of tepals; nectaries reddish; pollen dark red. Fls 70 mm wide, slightly scented; tepals 76 × 24 mm, margins smooth, tips strongly recurved. Lvs scattered, 94 × 10 mm, dark green. Stems 0.7-0.75 m, dark red, with 15 or more fls, occasionally with bulbils. Midseason. Allotriploid.

**‘Marie’s Number 1’ I(a/-)**

Parentage: ‘Connecticut King’ × ‘Redbird’  
R: L. Høpfner (1990), G: L. Høpfner (1992), N: L. Høpfner (1997), REG: L. Høpfner (1997)  
Inside vivid yellow (9A) with a tinge of strong orange-yellow (17A) along midveins; outside vivid yellow (9A), midribs light green; spots absent; nectaries light green; pollen vivid orange-yellow (21A); stigma brilliant greenish yellow (5A). Fls 150 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 20 mm, mid green. Stems 0.9 m, light green, with 12 or more fls. July.

**‘Marietje’ VII(b/b)**

Parentage unknown  
REG: ICRA (1998)  
Inside white, with a pale apricot yellow ray and brownish red dusting on tepal-tips; spots dark greyish pink, on five-sixths of each tepal; nectaries green. Fls 175 mm wide; tepals 110 × 55 mm, tips recurved. Lvs scattered, 120 × 40 mm, dull green. Stems 0.6 m, green. Aug. (Raised in The Netherlands before 1991.)

**‘Marigold’ I(b/-)**

Parentage: ‘Willtigrinum’ × ‘Sunrise’  
R: F.J. Holmes, N: F.J. Holmes (1976), REG: F.J. Holmes (1976)  
Fls strong orange (25A); spots purple-brown. Tepals semi-reflexed. Lvs bronze. Stems 1-1.2 m, black. (Published in *Lilies and other Liliaceae*, 1976: 92.)

**‘Mariia’ I(b/-)**

Misspelling of ‘Marija’.

**‘Marija’ I(b/-)**

Parentage: selection from Skumstu Group  
S: V.P. Orehovs (post 1956), N: V.P. Orehovs  
Fls dark red.  
(Misspelling: ‘Mariia’. Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as ‘Maria’, which is also a misspelling.)

**‘Marijean’ I(b/-)**

Parentage unknown  
R: C.K. Kroell, N: C.K. Kroell (1970), I: J. Wadkamper (1975), REG: J. Wadkamper (1977)  
Fls red; spots absent; nectaries red; pollen brown. Stems 1-1.2 m. July.  
(Published in *Lilies and other Liliaceae*, 1977: 79.)

**‘Marika’ I(b-c/c-d)**

Parentage: (‘Sun Ray’ × ‘Connecticut Beauty’) × ‘Helenka’

R: B. Kondrot (1985), G: B. Kondrot (1986), N: B. Kondrot (1996), I: B. Kondrot (1993), REG: B. Kondrot (1996)

Inside vivid yellow (17B) with a tinge of strong orange-yellow (22A) along basal half of each midvein, throat strong yellow-green (144A); outside vivid yellow (17C) with a moderate reddish brown (175A) base, midribs light olive-brown (199B) in basal half; spots numerous, small, moderate reddish brown (175A), on the whole of each tepal; nectaries white; pollen moderate orange (167A). Fls 100 mm wide; tepals 85 × 30 mm, margins smooth, tips strongly recurved; pedicels 100-120 mm. Lvs scattered, 70 × 11 mm, pale green. Stems 1.4 m, almost black, with c.18 fls. Mid July.

**‘Marilla’ I(a/b)**

Parentage: ‘Joan Evans’ × ‘Connecticut King’  
R: B. Mičulka (pre 1984), N: B. Mičulka, REG: B. Mičulka (1985)  
Fls apricot, tinted pink, throat paler but with a dark apricot blotch above each nectary; spots fairly numerous, brown-violet, on a quarter of each tepal; nectaries white-frosted; pollen brown; stigma pale beige. Fls 150 mm wide; tepals 80 × 37 mm, spoon-shaped, tips slightly recurved. Lvs 60 × 12 mm. Stems 1.2 m, dark red-brown. Early July.

**‘Marilyn’ VI(b-c/c-d)**

Parentage: ‘Brno’ × (Golden Splendor Group × *henryi*)  
R: M. Tlach, N: M. Tlach, I: M. Tlach (1995), REG: M. Tlach (1996)  
Inside white, with a star-shaped, orange centre (the marking extending up half of each tepal); outside white, midribs brown-green; moderately numerous, large, cinnamon dashes on three-quarters of each tepal; papillae numerous; nectaries green; pollen dark cinnamon; stigma green. Fls 180 mm wide; pedicels 90 mm long. Lvs scattered, 140 × 30 mm, dark glossy green. Stems 1.2 m, thick and rigid, brown-spotted. Mid July.

**‘Marilyn Monroe’ I(a/b)**

Parentage: yellow-flowered, unspotted, Asiatic seedling × yellow-flowered, unspotted, Asiatic seedling  
R: I.D. Parsons (1973), G: I.D. Parsons (1975), N: I.D. Parsons (1982), I: I.D. Parsons (1982), REG: I.D. Parsons (1983)  
AM 1982  
Fls clear, butter-yellow; buds greenish outside; spots absent; nectaries greenish; pollen brown. Tepals 120 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm, dark green. Stems 0.6 m, dark green, with 12-20 fls, and bulbils. July.

**‘Marina’ I(a/-)**

Parentage: ‘Pirate’ × ‘Connecticut Lemonglow’  
R: Lybelmex Hillegom B.V. (1981), G: Lybelmex Hillegom B.V. (1983), N: Lybelmex Hillegom B.V., I: Lybelmex Hillegom B.V., REG: Lybelmex Hillegom B.V. (1989)  
Inside strong reddish orange (42B) flamed strong orange (24A), tepal-tips strong reddish orange (42B), throat strong orange (24A); outside greyish red (178A), tepal-margins vivid reddish orange (42A); nectaries greyish

red (184A); pollen greyish or moderate reddish brown (166A/B). Fls 160 mm wide; tepals 85 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 64 × 10 mm, mid green. Stems 0.6 m, dark, with c.7 fls.

**‘Marina Baranova’ VI(-/a)**

Parentage: Aurelian Group × mixed pollen from *regale* hybrids

R: N.A. Miroshniczenko (c. 1979), N: N.A.

Miroshniczenko

Fls pure white with pale green centre. Stems 1.7 m. July.

**‘Mariner’ VII(-/l)**

Parentage: *auratum* × unknown

R: Lilies International Ltd, N: Lilies International Ltd

No further details.

**‘Marinka’ I(a/b)**

Parentage: ‘Rubinovaia’ × ‘Vostok-2’

R: M.F. Kireeva (pre 1975), N: M.F. Kireeva

Inside bright orange-red, spotted; filaments pale orange; pollen orange-brown. Fls 90-100 mm wide. Stems 0.8-1 m, with c.30 fls, and with bulbils. Early.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Márinka’. Published in M.F. Kireeva, *Lilii*, 55 (1984).)

**‘Marinka’ I(a/-)**

Misspelling of ‘Márinka’.

**‘Márinka’ I(a/-)**

Parentage: ‘Elite’ × ‘Connecticut King’

R: V. Jošt (1974), G: V. Jošt (1977), N: V. Jošt (1984), I: Semptra Praha a.s., REG: V. Jošt (1984)

Inside strong orange (25A); outside brilliant orange-yellow (23B) fading to vivid orange-yellow (25A) along tepal-margins; spots absent; nectaries white; pollen strong orange (169B). Fls 155 mm wide; tepals 104 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 136 × 13 mm, dark green. Stems 0.8 m, mid green with a purple overlay, and with c.28 fls. July.

(Included in *ILR Third Supplement* as ‘Marinka’ which is a misspelling.)

**‘Marion’ VII(-/c)**

Parentage: *L. × parkmanii* ‘Jillian Wallace’ × unknown

R: R.M. Withers (1960), N: R.M. Withers (1970), I:

R.M. Withers (1970), REG: R.M. Withers (1970)

Inside with a green throat, fading to tepal-tips; outside white; spots strong purplish red (67A); nectaries pale green; anthers vivid reddish orange (42A). Fls 200 mm wide. Lvs *auratum* type. Stems 1.6 m.

Syn.: ‘Lavender Lady Marion’.

(Included incorrectly in *ILR* (1982) as ‘Lavender Lady Marion’.)

**‘Marion Freimann’ VI(a)**

Parentage: selection from Golden Regale Group

S: LeV. Freimann (c. 1950), N: LeV. Freimann

Fls vivid yellow (12A).

(Published in *LYB* 20: 125 (1957).)

**‘Marisa’ I(b/-)**

Parentage: ‘Northern Lights’ × white-flowered seedling

R: J.C. Ericksen (c. 1970), N: J.C. Ericksen, REG: J.C.

Ericksen (1975)

Fls frosty white, with lilac tepal-tips and some lilac lacings in the throat and on margins; pollen red-purple. Stems up to 1.1 m. July.

(Published in *Lilies and other Liliaceae*, 1975: 94, where the pollen parent is given as ‘Olsen’s White’. This epithet has not been traced.)

**‘Marissa’ I(a/-)**

Parentage unknown

R: Van der Salm (pre 1998), N: Van der Salm

Fls a blend of peach, gold and apricot. Stems 1 m.

Midseason.

(Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to ‘Marisa’.)

**‘Marita’ I(a/b)**

Parentage: (‘Tetra Goldina’ × unknown) × ‘Tetra Monaco’

R: De Jong Beheer B.V. (1992), G: De Jong Lelies

Holland B.V., N: De Jong Beheer B.V. (1998), I: De

Jong Lelies Holland B.V. (1998), REG: De Jong Lelies

Holland B.V. (1999)

Inside strong orange (25A/B); outside brilliant orange

(25C), tepals narrowly edged strong orange (25A),

midribs strong yellow-green (144B/C), tipped strong

yellow-green (144A); spots absent; papillae strong

orange (25A) in the throat; nectaries moderate olive-

green (137A) with a little light orange-yellow (25D);

stigma and pollen dark reddish orange (173A). Fls 170

mm wide; tepals 90 × 35-45 mm, margins smooth, tips

strongly recurved. Lvs scattered, 100 × 20 mm, dark

green. Stems 1.1 m, green, with c.5 fls.

***maritimum* Kellogg IX(b-c/a)**

Fls deep crimson-red or reddish orange; spots maroon,

ringed with pale orange or sometimes yellow-green;

pollen orange-brown. Tepals up to 45 × 13 mm, tips

recurved. Lvs usually scattered, sometimes with 1 whorl

near middle of stem, up to 125 × 15 mm, dark green.

Stems 0.3-0.7(-2) m, dark green, with up to 12 fls. W

USA (N California).

**‘Marji Meyers’ I(b/-)**

Parentage: ‘Pink Tiger’ (Woodriff) × (‘Pink Champagne’ × ‘Meadowlark’)

R: N.F. Bieniasz (1980), N: N.F. Bieniasz (1984), I: N.F.

Bieniasz, REG: N.F. Bieniasz (1984)

Inside strong purplish red (60B), throat moderate reddish

orange (41C); outside moderate purplish red (59C);

papillae present; nectaries moderate reddish orange

(41C); pollen strong brown (172A). Tepals recurved. Lvs

dark green. Stems 1.07 m.

**‘Marjorie Linda’ I(b-c/-)**

Error for ‘Marjory Linda’.

**'Marjory Linda' I(b-c/d)**Parentage: *dauidii* × *cernuum*

R: R. Simonet &amp; F. Fellner (1974), N: F. Fellner (1977), I: J. Wadepammer &amp; Piedmont Gardens (1978), REG: J. Wadepammer (1978)

Fls red-orange, throat light red-orange; spots absent; nectaries yellow; pollen brown. Tepals 60 × 30 mm. Lvs 80 × 10 mm, mid green. Stems 0.6-0.8 m, green, with 8-10 fls. Early to mid season.

(Published in *Lilies and other Liliaceae*, 1978/9: 110 and included in *ILR* (1982) erroneously as 'Marjorie Linda'. Fred Fellner, who named it, confirmed (*in litt.* April 1982) that the spelling should be as given here.)**'Markéta' I(b/-)**

Parentage: 'Pink Champagne' × 'Connecticut King'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1984), REG: B. Mičulka (1985)

Fls brownish orange, slightly blotched red, centre of each tepal with an apricot tongue; spots numerous, medium to large, dark red-brown, on half of each tepal; nectaries white-frosted; pollen brown; stigma violet. Fls 145 mm wide; tepals 80 × 34 mm, more-or-less recurved; pedicels dark violet. Lvs 120 × 12 mm, slightly glossy dark green. Stems 1.2 m, dark violet, with bulbils. Mid July.

**'Markomannia' I(b/-)**

Parentage: 'Roter Cardinal' × 'Tetra Mountaineer'

R: V. Strasser (1974), G: V. Strasser (1976), N: V. Strasser (1983), I: V. Strasser (1985), REG: V. Strasser (1986)

Inside blood-red, throat orange-red; outside red. Fls 160 mm wide; tepals 100 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.2 m, dark green, with c.17 fls. June. Triploid.

Syn.: 'Rokardmount Number 11'.

**'Markova' VII(-/b)**Parentage: Pink Glory Group (Div. VII) × *nobilissimum*

R: E.A. McRae (1967), G: Oregon Bulb Farms, Inc. (1970), N: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)

Fls pure white, although sometimes developing a pink flush; spots absent; nectaries apple-green; pollen moderate red (179A). Fls 180-230 mm wide; tepals 100 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 70 mm, dark green. Stems 1.2 m, light green, with 6-20 fls. Late Aug.

**'Marksova Ljuba' I(c/d)**

Parentage: Preston Group × unknown

R: J. Marks (pre 1969), N: J. Marks, REG: (1986)

Inside mid orange, throat paler; outside with apricot midribs; spots numerous, brown, on two-thirds of each tepal; nectaries white-frosted; pollen brown-orange. Fls 55 mm wide; tepals 55 × 27 mm, strongly recurved; pedicels brown-dotted. Lvs 90 × 5 mm, dull mid green. Stems 0.8 m, with some dark violet spots, hairy. Early July.

Syn.: 'Ljuba'.

**'Marksovo Zlato' I(c/d)**

Parentage: derived from Preston Group

R: J. Marks (pre 1969), G: J. Marks, N: J. Marks, I: V. Jošt (1975), REG: V. Jošt (1984)

Inside vivid yellow (14A), centre vivid yellow (9A); outside vivid yellow (9A); spots numerous, tiny, dark red (187B), on two-thirds of each tepal; nectaries yellow; pollen moderate orange (167A). Fls 60 mm wide; tepals 72 × 37 mm, tips recurved; pedicels slightly dotted dark violet. Lvs 78 × 3 mm, dark green. Stems 0.8 m, spotted dark violet, with up to 10 fls. Early July.  
Syn.: 'Zlato'.**'Mark's Pride' VI(c/a)**

Parentage: violet-flowered seedling (ex George Weiss) × pink-/yellow-/cream-flowered seedling (ex George Weiss)

R: G. Weiss (1995), G: T.R. Martin &amp; G. Brundrett (1997), N: T.R. Martin &amp; G. Brundrett (1999), I: G. Brundrett (1999), REG: G. Brundrett (1999)

Inside moderate purplish red (186B), with a light greenish yellow (8B) throat, the throat colour extending up the centre of each tepal; outside moderate purplish red (186A); spots absent; stigma deep purple; pollen purplish orange; strongly scented. Fls 125 mm wide; tepals 130 × 65 mm, margins smooth, tips not or only slightly recurved. Lvs scattered, 80-175 × 19-23 mm. Stems 1.65 m, dark green, with c.13 fls in a pyramidal infl. Mid to late July.

(Named for the registrant's son. Nomenclatural standard: colour print provided by registrant (WSY 0015435).)

**'Marksův Bronz' I(c/-)**

Parentage: derived from Preston Group

S: J. Marks (pre 1969), G: J. Marks, N: J. Marks, I: V. Jošt (1975), REG: V. Jošt (1984)

Inside brilliant yellow (11A), tepal-tips tinted strong reddish orange (34C); outside brilliant yellow (13B) tinted strong reddish orange (34C); spots few, small, dark red (187B/C), on two-thirds of each tepal; nectaries strong purplish red (67A); pollen moderate orange (167A). Fls 90 mm wide; tepals 74 × 29 mm, strongly recurved. Lvs 94 × 4 mm, dark green. Stems 0.75 m, spotted dark violet, with up to 9 fls. Late June.  
Syn.: 'Bronz'.**'Markva' I(a-b/b)**

Parentage unknown

R: J. Vasarietis (1990), G: J. Vasarietis (1993), N: J. Vasarietis (1996), I: J. Vasarietis (1996), REG: J. Vasarietis (1999)

Inside deep purplish pink (66C), each tepal with an indistinct, white blotch below the mid point; outside moderate purplish pink (66D); spots tiny, sparse, on basal quarter of each tepal; nectaries white on a pink ground; pollen orange; stigma greyish. Fls 140 mm wide; tepals 85 × 37 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm, dark green. Stems 1 m, brownish becoming dark green at top, with c.7-9 fls. Late June to early July.

(Published in *Liliju Avize*, 1999. Nomenclatural standard: colour print provided by registrant (WSY 0023036).)

**'Marlène' I(a/b)**

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1991), REG: Hoffgaarde B.V. (1994)

Inside pale yellow-green (155A), strong purplish pink (55B) in apical part, stronger coloured at tepal-tips, throat strong purplish pink (55B); outside suffused with strong purplish pink (55B) on a pale yellow-green (155A) ground, stronger coloured at tepal-edges and a little darker on outer tepals; spots dark red (187A) on a quarter of inner tepals; pollen deep orange-yellow (163A); stigma dark red (187B). Fls 220 mm wide; tepals 110 × 50 mm, margins smooth, tips recurved. Lvs scattered, 135 × 15 mm. Stems 0.95-1 m, pale green with some darker markings in the leafy part, and with c.12 fls. July.  
Syn.: 'Hobuze'.

(This lily was granted a USPP as 'Marlène' in 1994, and Dutch PBR (LEL 1110) as 'Hobuze' in 1995. The later 'Hobuze' must be regarded as a synonym.)

**'Marlies' I(b/-)**

Parentage unknown

R: H. Georgi (pre 1986), N: H. Georgi, REG: H. Georgi (1988)

Fls greenish yellow, spotted brown. Stems 0.7-0.8 m. Late June.

(Published in German Lily Group sales list, 1986.)

**'Marlin' I(c/d)**

Parentage unknown, but perhaps an F<sub>1</sub> hybrid of *lancifolium*

R: R.W. Lighty (c. 1962), N: R.W. Lighty, REG: R.W. Lighty (between 1969 and 1981)

Inside salmon (HCC 412) at base, tepal-tips orange (HCC 12/2); outside suffused with purple; spots present. Stems 1.2 m, sometimes with bulbils. July.

**'Marlyn Ross' I(a/b)**

Parentage unknown

R: D.J. Ross (c. 1947), N: D.J. Ross  
AM 1953

Fls brilliant greenish yellow (6B/C), with median orange stripe; spots evenly distributed, maroon. Stems 1-1.2 m, with 7-8 fls. July.

(Published in *ILR* (1960). Very similar to *wilsonii* var. *flavum*. R.E. Harrison in his book *Know your lilies*, p. 67 (1970) says that 'At the time it was thought to be a hybrid of *L. wilsonii* with *L. sulphureum*, but although this cross was attempted, there does not seem to be any evidence of *L. sulphureum* blood in the resultant clone'.)

**'Marmalade' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: E.E. Fox (1986), G: E.E. Fox (1988), N: E.E. Fox (1989), I: Fox Lily Ranch (1993), REG: E.E. Fox (1992)

Inside yellow, with large orange tepal-centres (the orange colour beginning at the nectaries and ending before the tip), throat yellow; outside pale yellow, midribs plum-coloured; spots very sparse, very small, confined to area near nectaries; nectaries lime-green; pollen dull gold.

Fls 160 mm wide; tepals 80 × 40 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 130 × 25 mm, mid green. Stems 0.9 m, dark green mottled dark plum, with 9-14 fls. Early July.

**'Marmed' II(c/d)**Parentage: *martagon* × *medeoloides*

R: A.S. Grove (pre 1915), N: E.H. Wilson (1925)

The original clone, using *martagon* var. *album*, had deep wine-red fls, the tepals less recurved than in *martagon*. (Published in *Gard. Chron.* 57: 13 (1915).)

**'Marmoratum Aureum' I(a/b)**Syn. of *L. × maculatum* 'Aureum'.**'Maronia' I(a/b)**

Parentage unknown

R: Vletter &amp; Den Haan Beheer B.V., G: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V. (1999), I: Vletter &amp; Den Haan Beheer B.V., REG: Vletter &amp; Den Haan Beheer B.V. (2001)

Inside vivid red (44A), throat light orange (29B); outside of inner tepals vivid reddish orange (40B), with greyish red (178A) midribs, outside of outer tepals strong red (46A); spots absent; papillae vivid orange (28A); nectaries strong red (46A); pollen strong red (46A); stigma deep red (53A). Fls 165 mm wide; tepals 100 × 40-50 mm, margins smooth, tips recurved. Lvs scattered, 135-150 × 20 mm. Stems 1.1-1.3 m, green, with c.4 fls.

**'Maroon King' II(-/-)**

Parentage unknown

R: R. Erskine, G: R. Erskine, N: R. Erskine, I: R. Erskine (c. 1970), REG: R. Erskine (1996)

Inside maroon-red, throat greenish yellow; spots self-coloured, in centre on a light pink base; outside pink; nectaries greenish; pollen orange. Fls 60 mm wide; tepals 30 × 15 mm, margins smooth, tips not recurved. Lvs whorled, 160 × 40 mm, mid green. Stems 1.4 m, mid green, with up to 60 fls. Early.

**'Maroonshine' I(b/-)**Parentage: *L. × hollandicum* × 'Edna Kean'

R: N.A. Lamb, N: N.A. Lamb

Fls dark glossy red. Stems 1 m. July.

(Published in *NALS Bull.* 12(2) (1959).)

**'Maroon Velvet' II(c/d)**See *L. × dalhansonii* 'Maroon Velvet'.**'Marquita' I(a/b)**

Syn. of 'Fireaway'.

**'Marrakech' I(a/-)**

Parentage unknown

R: P. Hoff, G: Hoffgaarde B.V., N: Hoffgaarde B.V. (1993), I: Hoffgaarde B.V. (1996), REG: Hoffgaarde B.V. (1996)

Inside pale yellow (8D), the apical part suffused with strong pink (54C), throat moderate purplish pink (54D); outside pale yellow (8D) with a variegated suffusion of

moderate purplish pink (54D); dark red (59A) spots; papillae absent; nectaries hairy, coloured as tepals; pollen strong orange (168B); stigma deep purplish red (59B). Fls 165 mm wide; tepals 85 × 30–45 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 10 mm, mid green. Stems 0.95–1.3 m, green, with 6–14 fls.  
Trade designation: HOFFRICA® MARRAKECH.

**‘Marrero’ VII(a-b/b-c)**

Parentage: unnamed seedling × unnamed seedling  
R: Peacock B.V. & Imanse Lelieveredeling B.V., G: Peacock B.V. & Imanse Lelieveredeling B.V. (1995), N: Peacock B.V. (1997), I: Marklily (2000), REG: Marklily (2002)

Inside vivid purplish red (57D), fading with age, midveins with white base, throat white; outside moderate purplish pink (66D); spots white/red; papillae present; pollen orange-brown; stigma dark purple. Fls 200 mm wide; tepals 170 × 50 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 50 mm. Stems 1 m, green, with 2–8 fls. Midseason to late.

**‘Marribelle’ I(b/c-d)**

Parentage: out-facing, pink-flowered seedling × ‘Gardenja’  
R: Mak-Leek Inc. (1992), G: Mak-Leek Inc. (1994), N: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)  
Inside strong pink (48C) changing to deep pink (48B) near tepal-tips and edges, extreme tip brilliant yellow (13B); outside red; spots absent, but inner tepals with a small light yellow flame, outer tepals with a narrow, brilliant yellow (13B) ribbon from base to middle of tepal; nectaries dark brown with some green; pollen strong reddish orange (169A); stigma moderate reddish brown (166B). Fls 140 mm wide; tepals 70 × 25–40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 15 mm, moderate olive-green (137A/B). Stems 0.8–1.2 m, moderate olive-green/moderate yellow-green (147A/B), with 6–12 fls. Late June to early July.

**‘Mars’ VII(-/c)**

See *L. × parkmanii* ‘Mars’.

**‘Mars Aglow’ I(a-b/-)**

Parentage unknown  
R: J. Wadepkamper (1978), G: J. Wadepkamper (1981), N: J. Wadepkamper (1991), I: Borbeleta Gardens (1991), REG: J. Wadepkamper (1993)  
Fls vivid reddish orange (34A), with deep brown brushmarks; nectaries orange; pollen brown. Tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 25 mm, mid green. Stems 0.8 m, brown, with 8–10 fls. Midseason.  
(Published in *Borbeleta Gardens Cat.*, 1991.)

**‘Marsala’ VII(b/b-d)**

Parentage: seedling 102 × seedling 505  
R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)  
Inside light to pale purplish pink (65B/C), throat light

yellow-green (145B), flamed yellowish white (155B); outside light purplish pink (65B) on a yellowish white (155B) ground, midribs pale yellow-green (4D) shading to brilliant yellow (9C) towards the top; spots dark red (187C) on all but tepal-tips; nectaries vivid purple (81B) on a yellowish white (156D) ground; pollen strong orange (169B). Fls 235 mm wide; tepals 110 × 60 mm, margins smooth, tips strongly recurved. Lvs scattered, 155 × 35 mm, mid green. Stems 1.1 m, pale green, with c.6 fls.

**‘Marsapoag’ I(c/-)**

Error for ‘Massapoag’.

**‘Marsbelle’ VI(-/a)**

Parentage: selection from Golden Clarion Group  
N: D. Foxwell (1960)  
Fls canary-yellow (HCC 2/3) opening from pink-tinted buds; outside with poppy-red (HCC 16/2) tones.

**‘Marseille’ I(a/b)**

Parentage: seedling RS 524 × seedling RS 543  
R: Vletter & Den Haan (1980), G: Vletter & Den Haan (1983), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside yellowish white (155D) tinged with yellowish white (158D), throat flamed moderate purplish pink (62B); outside greenish white (155C), midribs tinged with light greenish yellow (8C), outer tepals tinged with greyish red (182B); spots few, dark red, on basal quarter of each tepal; pollen brownish orange (171B); stigma purplish pink. Fls 190 mm wide; tepals 85 × 38 mm, margins smooth or very slightly wavy, tips recurved. Lvs scattered, 130 × 15 mm, mid green. Stems 1–1.3 m, green, with 6–9 fls (from 14–16 cm bulbs). May to July.

**‘Marsha’ I(a/-)**

Parentage: ‘Cherry Jubilee’ × unnamed seedling  
R: Hartle-Gilman Gardens (1981), G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1985), I: Hartle-Gilman Gardens (1990), REG: Hartle-Gilman Gardens (1990)  
Light yellowish pink (38C), tepal-tips light orange (29B), throat light orange-yellow (23C); outside deep purplish pink (66C); spots absent; nectaries pale purplish pink (62D), frosted; pollen red-brown. Tepals 73 × 26 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 14 mm, mid green. Stems 0.98 m, moderate olive-green (147A), with c.18 fls. Midseason.

**‘Marshal Brezhnev’ I(b)**

Parentage: ‘Connecticut King’ × (‘Rubinovaia’ × ‘Destiny’)  
R: B.P. Guzhavin (1984), N: B.P. Guzhavin  
Fls red; spots absent. Lvs broad. Stems 1 m. July.

**‘Marshfire’ VII(a-b/-)**

Parentage unknown  
R: J.W.A. van der Wereld B.V., G: J.W.A. van der Wereld B.V., N: J.W.A. van der Wereld B.V. (1994), REG: J.W.A. van der Wereld B.V. (2003)

Inside strong purplish pink (64C), tepals white at base and edged white, midveins yellow changing into red-purple; outside deep purplish pink (64D); spots and papillae present; nectaries green; pollen orange-brown; stigma dark purple (64D). Tepal-margins ruffled, tips recurved. Stems of medium height to tall, green with darker stripes and spots. Midseason to late.

**‘Marta’ II(c/d)**

See *L. × dalhansonii* ‘Marta’.

**‘Martaban’ I(a/-)**

Parentage: ‘Rangoon’ × ‘Pamela’

R: D.B. Fox, N: D.B. Fox (1975), REG: D.B. Fox (1975)

Fls vivid reddish orange (34A/B) stained with strong red (46A). Stems 1.2 m, with bulbils. Similar to ‘Rangoon’, but brighter in centre.

(Published in *Lilies and other Liliaceae*, 1975: 94.)

***martagon* L. IX(c/d)**

AGM 2002

Fls white, pink, dark purplish red or maroon, often spotted.; nectaries with papillate margins; anthers orange-yellow or red-purple; pollen orange-yellow; stigma green or purplish. Fls up to 50 mm wide, scented; tepals 30–45 × 6–10 mm, margins smooth. Lvs whorled, with 6–10 lvs per whorl, up to 160 × 65 mm, hairless or downy on the veins beneath. Stems 0.9–2.5 m, green or purplish, hairy or not, with up to 50 fls. Europe, Asia east to Mongolia.

***martagon* var. *albiflorum* Vukotinovic IX(c/d)**

Fls white with pink spots; stigma green. Stems purplish.

***martagon* var. *albiflorum* ‘Harzmärchen’ IX(c/d)**

Parentage: selection from wild form of *martagon* var. *albiflorum*

S: C. Wittneben (c. 1960), N: C. Wittneben

Fls pure white, spotted pink, with small red bands outside. Lvs dark green. Stems and pedicels purplish.

***martagon* var. *album* Weston IX(c/d)**

AGM 1993, FCC 1889

Fls white; spots absent. Lvs pale green. Stems pale green, hairless, with 14–40 fls.

Syn.: *martagon* ‘Album’.

***martagon* ‘Album’ IX(c/d)**

Syn. of *martagon* var. *album*.

***martagon* var. *album* ‘High and Low’ IX(c/d)**

Parentage: selection from *martagon* var. *album*

S: M.J. Fox (c. 1950), N: M.J. Fox, I: B.L. Palmer (Published in *LYB NALS* 10: fig. opp. p.78 (1957).)

***martagon* var. *album* ‘Obláček’ IX(c/d)**

Parentage: selection from *martagon* var. *album*

N: B. Mičulka, I: B. Mičuka (1998), REG: B. Mičulka (1998)

Inside white, each tepal with a narrow, pale olive tongue, throat yellowish green; outside greenish at base; spots absent; nectaries pale olive; pollen apricot; stigma yellow-

green. Fls 42 mm wide; tepals 28 × 15 mm, strongly recurved, fleshy; pedicels 45 mm long, green, slender. Lvs whorled, 90 × 13 mm, dull dark green. Stems 1.05 m, slender, green. Mid June.

***martagon* ‘Album Superbum’ IX(c/d)**

See *martagon* var. *cattaniae* ‘Album Superbum’.

***martagon* var. *alternifolium* (Wilczek) Stearn IX(c/d)**

Lvs scattered, not whorled.

(Originated in Switzerland, and is thought to be an abnormal variety rather than a fixed geographical race (see Woodcock & Stearn, *Lilies of the World*, 273 (1950)).)

***martagon* ‘Blush’ IX(c/d)**

Parentage: *martagon* var. *album* × *martagon*

R: W.G. Knox Finlay (c. 1959), N: W.G. Knox Finlay

Fls moderate purplish red (64A); buds white, turning pale pink before opening.

(Published in *LYB* 23: 138, t.7 (1960).)

***martagon* ‘Brixworth’ IX(c/d)**

Parentage: selected *martagon* seedling

S: O.E.P. Wyatt (c. 1960), N: O.E.P. Wyatt

Fls clear pink.

(Published in *JRHS* 35: 74 (1960).)

***martagon* var. *carneum* Weston IX(c/d)**

Fls flesh-coloured; spots absent.

***martagon* var. *cattaniae* Visiani IX(c/d)**

Fls shiny dark maroon; spots absent. Buds hairy. Stems up to 2 m, dark purplish, hairy.

Syn.: *martagon* var. *dalmaticum*.

***martagon* var. *cattaniae* ‘Album Superbum’ IX(c/d)**

Parentage: selection from *martagon* var. *cattaniae*

S: M. Leichtlin (pre 1903), N: M. Leichtlin

Fls white; spots absent. Buds and stems hairy.

***martagon* var. *cattaniae* ‘The Moor’ IX(b/d)**

Parentage: selection from *martagon* var. *cattaniae*

G: M.C. Foster (c. 1992), N: M.C. Foster (2002), I:

M.C. Foster (2002), REG: M.C. Foster (2002)

PC 2002

Inside blackish maroon (darker than dark red (187A)),

base moderate purplish red (186A), waxy and glossy;

outside reddish purple (darker than 187A), midribs

redder than deep reddish purple (77A); spots and papillae

absent; nectaries green; filaments more-or-less moderate

red (184B); pollen brownish orange (172C); style and

stigma dark red (187B); ovary green. Fls 35–40 mm

wide; tepals 27 × 12–15 mm, margins slightly waved, tips

strongly reflexed. Lvs whorled, 118–170 × 22–50 mm.

Stems 1–2 m, mottled and streaked brown, with 9–28 fls.

June to July.

(Grown from seed that germinated about 1986. The

epithet refers to Shakespeare’s Othello. Nomenclatural

standard: herbarium specimen supplied by registrant

(WSY 0035276).)

***martagon* var. *caucasicum* Mishchenko IX(c/d)**  
Fls lilac-pink. Stems to 2.5 m.

***martagon* var. *dalmaticum* Elwes IX(c/d)**  
Syn. of *martagon* var. *cattaniae*

***martagon* var. *daugavense* Lacis IX(c/d)**  
Variously described as having pale grey-pink fls, or fls that vary from mid purple-pink to very pale pink. Some sources say the fls have small spots and some say the fls are heavily spotted. Larvia (Daugava river valley). (This lily appears in articles and nursery catalogues under different forms of the name. Apart from *martagon* var. *daugavense* used here, it has been listed as *martagon* var. *daugava* and *martagon* forma *daugava* and it is often stated that *martagon* var. *koknese* is a synonym. However, a search of the taxonomic literature has not produced any valid publication of any of these names, nor has the authority been traced.)

***martagon* var. *flavidum* Bornm. IX(c/d)**  
Fls yellowish, without or with very few, purplish spots.

***martagon* 'Gleam' II(c/d)**  
Syn. of 'Gleam'.

***martagon* 'Glisten' II(c/d)**  
Syn. of 'Glisten'.

See *martagon* var. *albiflorum* 'Harzmärchen'.

***martagon* 'High and Low' IX(c/d)**  
See *martagon* var. *album* 'High and Low'.

***martagon* var. *hirsutum* Weston IX(c/d)**  
Fls purplish pink, spotted. Lvs downy beneath. Stems purplish, hairy.

***martagon* 'Inshriach Ivory' II(-/d)**  
See 'Inshriach Ivory'.

***martagon* 'Inshriach Rose' II(-/d)**  
See 'Inshriach Rose'.

***martagon* var. *koknese* IX(c/d)**  
See *martagon* var. *daugavense*.

***martagon* 'Lush' IX(c/d)**  
Parentage: selection from *martagon*  
S: W.G. Knox Finlay (pre 1962), N: W.G. Knox Finlay,  
REG: ICRA (1997)  
Fls very dark burgundy-red; spots absent. Tepals not as reflexed as in var. *martagon*.

***martagon* var. *martagon* IX(c/d)**  
Fls dull purplish pink, spotted. Lvs hairless or more or less so. Stems purplish, hairless.

***martagon* 'Netherhall Pink' IX(c/d)**  
Parentage: *martagon* var. *album* × *martagon* 'Plenum'  
R: T. Clark, G: T. Clark (1991), N: T. Clark, I:  
Monksilver Nursery (1992), REG: Monksilver Nursery  
(1993)

Inside pale purplish pink; outside pale purple, midveins deeper purple, base darker; spots sparse, dark, mostly at base towards tepal-edges; nectaries greenish. Fls double, 35-40 mm wide; outer tepals up to 30 × 15 mm, margins smooth, tips strongly recurved; stamens all tepaloid, the outer 3 similar to tepals and reflexed in the same way, the inner more intermediate in form and more erect; ovary present, green; style increasingly suffused with reddish towards top. Lvs whorled, up to at least 80 × 35 mm, mid green, lf-stalks deep purple. Stems up to 0.9 m, mid green, with increasingly dense purple spots towards the top, and with up to 6 or more fls. June.  
(Published in *Monksilver Nursery Cat.*, 1992.)

***martagon* 'Netherhall White' IX(c/d)**  
Parentage: *martagon* var. *album* × *martagon* 'Plenum'  
R: T. Clark, G: T. Clark (1992), N: T. Clark, I:  
Monksilver Nursery (1992), REG: Monksilver Nursery  
(1993)

Inside white, throat green; outside white suffused with green at the base and with a yellow-green mark near each tepal-tip; spots absent; nectaries green. Fls double, 35 mm wide; outer tepals up to 25 × 10 mm, margins smooth, tips strongly recurved; the stamens all tepaloid, the inner 3 less so than the outer 3, without a sharp distinction in form or habit; ovary present, green. Lvs whorled, narrow, up to at least 100 × 20 mm, twisted, pale green. Stems up to 0.9 m, green and unmarked, with up to at least 4 fls. June.  
(Published in *Monksilver Nursery Cat.*, 1992.)

***martagon* 'Obláček' IX(c/d)**  
See *martagon* var. *album* 'Obláček'.

***martagon* var. *pilosiusculum* Freyn IX(c/d)**  
Fls wine-red with sparse, dull purple spots. Bracts and buds very woolly. Lvs narrow, with hairs on margins. Stems purplish, speckled, with cobwebby hairs.

***martagon* var. *plenum* Weston IX(c/d)**  
Syn. of *martagon* 'Plenum'.

***martagon* 'Plenum' IX(c/d)**  
Parentage: sport from *martagon*  
N: R. Weston  
Fls double.  
Syn.: *martagon* var. *plenum*.  
(Published in *Univ. Bot.* 3: 455 (1752).)

***martagon* 'Purple Spire' IX(c/d)**  
Parentage: selection from *martagon*  
S: B.L. Palmer, N: B.L. Palmer (1962), I: B.L. Palmer  
(1963), REG: (1983)  
Fls plum-purple, with slightly woolly buds. Stems 1.2-1.9 m, with up to 30 or more fls.

***martagon* var. *sanguineopurpureum* G. Beck**

**IX(c/d)**

Fls dark maroon, heavily spotted. Stems purplish, hairless.

***martagon* 'Strawberry Frost' IX(-/d)**

Parentage: *martagon* (purple-flowered) × *martagon* var. *cattaniae*

R: J.C. Ericksen (pre 1984), G: D. Dale, N: D. Dale (1993), I: Parkland Perennials, REG: D. Dale (1993)  
Inside white on basal half, deep, dark purple-red at tepal-tips, throat chocolate-brown; outside deep purple-red with some white tepal-margins with spotting; numerous, tiny, maroon spots on the white part of each tepal; nectaries cream-green; pollen rust-coloured. Fls 50 mm wide; tepals 36 × 20 mm, margins smooth, tips strongly recurved. Lvs whorled, 140 × 35 mm, mid green. Stems 1.2 m, black, with 22-26 fls. Early July.

(Classified in Div. II in *ILR Twelfth Supplement*.)

***martagon* 'The Moor' IX(b/d)**

See *martagon* var. *cattaniae* 'The Moor'.

***martagon* 'Townhill Variety' IX(c/d)**

Parentage: selection from *martagon*

Fls deep wine colour.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Constable Cat.*, Autumn 1941.)

***martagon* 'Wood Nymph' II(c/d)**

Syn. of 'Wood-nymph'.

***martagon* 'Wood-nymph' II(c/d)**

See 'Wood-nymph'.

**'Mart'anka' II(-/d)**

Parentage: Marhan Group × unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1993), REG: B. Mičulka (1993)

Inside raspberry-purple, tepal-centres creamy with rose-pink shading, throat rose-pink; outside paler, midribs greyed; spots sparse, small, rose-pink with darker centres, on half of each tepal (reaching to the tip at edges); pollen ochre-brown. Fls 40 × 25 mm; tepals 40 × 25 mm; pedicels spotted dark violet, hairy. Lvs whorled, 130 × 30 mm, dull dark green. Stems 1 m, pale green, violet-dotted at base, less so above. Mid June.

**'Martha Ann' I(b/-)**

Parentage unknown

R: F.H. Payne, N: F.H. Payne (1980), I: Borbeleta Gardens (1981), REG: Borbeleta Gardens (1981)

Inside light yellow (19B), tepal-tips tannish, throat yellow-green; outside tan to buff-green; spots very small, brown, on half of each tepal; nectaries buff-white; pollen orange-red. Tepals 62 × 28 mm, margins ruffled, tips slightly recurved. Lvs scattered, 95 × 12 mm, mid green. Stems 1.2 m, dark green, with c.18 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1981.)

**'Martie' VI(-/c)**

Parentage: 'El Greco' × yellow-flowered seedling of Sunburst Group

R: W.T. Craig (1978), G: W.T. Craig (1989), N: W.T. Craig (1989), I: Ozark Mountain Lilies (1991), REG: C. Helsley (1989)

Inside strong orange (25A), tepal-tips slightly lighter (25B), throat strong orange (25A); outside orange brushed with moderate reddish orange (178C); papillae dark reddish orange (178B) on basal half of each tepal; nectaries green; pollen brown. Fls 160 mm wide; tepals 140 × 35-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 210 × 25 mm, mid green. Stems 2 m, green heavily brushed with purple, with 10-16 fls (including secondaries on lower pedicels). Early July.

**'Martigny' I(a/c)**

Parentage: 'Vivaldi' × seedling RS 92-20

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside strong and vivid purplish red (61B&C) on a paler ground; outside strong purplish red (61B) on a paler ground, tepal-edges narrow, strong purplish red (61B) that fades to tip, tipped strong yellow-green (143B); spots few, small, strong purplish red (60B), in the throat; papillae same colour as tepal, few, small, above each nectary; nectaries strong yellow-green (143B); stigma and pollen moderate reddish brown (175A). Fls 190 mm wide; tepals 200 × 35-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 20 mm, dark green. Stems 1.25 m, green, with c.5 fls.

**'Martina' I(b/c)**

Parentage unknown

R: G.R. Vletter (pre 1981)

Fls fiery orange-red; spots many, on half of each tepal. Tepals slightly recurved. Lvs broad, dense. Stems 1-1.2 m, with a short infl. Mid July.

(Published in German Lily Group sales list, 1982.)

**'Martinka' I(b/-)**

Parentage: 'Chaco' × Mercury Group

R: W. Gackstatter (1977), G: V. Strasser (1980), N: V. Strasser (1989), I: V. Strasser (1990), REG: V. Strasser (1991)

Inside and outside yellow, centre with a white-frosted star; spots red-brown, on two-thirds of each tepal; nectaries green; pollen red-brown. Tepal-margins smooth, tips slightly reflexed. Lvs scattered, 115 × 9 mm, mid green. Stems 1.4 m, dark green, with c.18 fls. Late July.

**'Martin Star' I(a/-)**

Parentage: probably a seedling of *wilsonii*

R: B.G. Hayler (1967-1968), G: B.G. Hayler (1970), N: B.G. Hayler, I: B.G. Hayler (post 1970), REG: B.G. Hayler (1978)

Fls pale orange, tepal-tips reddish; spots absent. Stems 1 m. Jan. (Australia).

(Published in *Lilies and other Liliaceae*, 1978/9: 111.)

**‘Marty Bronze’ II(c/d)**

Parentage: includes *martagon*, *hansonii* & *tsingtauense*  
 N: D.B. Fox (1988), I: D.B. Fox (1998), REG: D.B. Fox (1998)

Inside strong reddish orange/strong orange (169A/B); outside moderate orange-yellow (168D); heavily spotted dark brown; pollen orange. Fls 70 mm wide; tepals 42 × 21 mm, margins smooth, half recurved. Lvs whorled, larger lvs 105-126 × 44-50 mm, mid green with a bronze sheen. Stems c.1-1.1 m, increasingly spotted with bronze up the stem so that at the level of the highest lf-whorl the stem is completely bronze. Late June to early July. (Originated in Germany in the 1970s.)

**‘Marty Gold’ II(-/-)**

Parentage: includes *martagon*, *hansonii* & *tsingtauense*  
 N: D.B. Fox (1988), I: D.B. Fox (1988), REG: D.B. Fox (1988)

Inside with tepal-margins vivid orange-yellow (23A), paling to light yellow (18A) in centre (up to the tips); outside similar but paling to pale yellow (18C); spots or flecks deep maroon, on middle section of each tepal and on edge outside; pollen more-or-less vivid orange (28B). Tepals 45 × 14 mm, margins smooth, tips strongly recurved; pedicels up to 35 mm long. Lvs whorled, up to 170 × 34 mm, dark green. Stems up to c.1.6 m. Late June to early July. (Thought to have originated in Germany in the 1970s.)

**‘Maru’ VII(a/b)**

Parentage: unnamed seedling × ‘All Right’  
 R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2002)

Inside deep purplish red to dark red (59B/A), tepal-margins white, throat yellowish white (155D); outside moderate purplish red (64A), midribs and tepal-margins yellowish white (155D); spots dark red (187B); papillae absent; nectaries strong yellow-green (144A) changing into brilliant yellow-green (150C); pollen dark to moderate red (183A/182A); stigma dark purple (79A). Fls 160 mm wide; tepals 100 × 35 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 35 mm. Stems 0.7 m, green, with c.4 fls. July.

**‘Maruška’ I(a-b/b)**

Parentage: (((‘Tetra Enchantment’ × ‘Tetra Tabasco’) × ‘Tetra Connecticut Yankee’) × ‘Avignon’) × (‘Gran Paradiso’ × ‘Tetra Aristo’)  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005), REG: B. Mičulka (2005)

Inside bright orange-red, throat with yellow shining through; outside orange with crimson mottling, midribs brownish; spots and papillae present; nectaries white-granulated; pollen chocolate-brown; stigma dark crimson-brown. Fls 130 mm wide; tepals 85 × 47 mm, scarcely curved; pedicels 65 mm long, abundantly dotted dark brown, with secondary buds. Lvs scattered, 120 × 18 mm, dull mid green. Stems 0.85 m, very thick, dark brown. Late June. Tetraploid.

**‘Marvellous’ IX(b-c/d)**

See *speciosum* var. *rubrum* ‘Marvellous’.

**‘Mary’ I(b/-)**

Parentage: unnamed seedling × *L. × hollandicum*  
 R: V.J. Hruby, G: V.J. Hruby, I: J. Wadkamper (1978), REG: J. Wadkamper (1978)  
 Inside red-orange; outside lighter orange; spots evenly distributed; nectaries greenish; pollen brown. Tepal-margins smooth. Lvs scattered. Stems c.0.5 m. Early July. (Published in *Lilies and other Liliaceae*, 1978/9: 110. See note under ‘Mary’ (of Comber).)

**‘Mary’ VI(c/a)**

Parentage: *L. × aurelianense* × (*sulphureum* × *leucanthum* var. *centifolium*)  
 R: H.F. Comber, N: H.F. Comber, I: H.F. Comber (c. 1949) AM 1949

Inside brilliant yellow (9C) heavily suffused with vivid yellow (13A) to brilliant yellow (14C); outside pale greenish yellow flushed with moderate pink (35D). Tepal-margins ruffled, tips recurved. Stems 2-2.2 m, with c.20 fls. (Published in *JRHS* 74: 463 (1949). According to *LYB* 13: 160 (1949) the raiser was J.E.H. Stooke. Although published before ‘Mary’ of Hruby, there is no evidence that it is still extant, and Hruby’s cv., being registered, is accepted.)

**‘Mary Henry Davis’ IX(c/d)**

See *superbum* ‘Mary Henry Davis’.

**‘Maryland’ VII(a-b/b-c)**

Parentage: seedling 92-96 × seedling 92-36  
 R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals greenish white (155C), midveins light/pale yellow (10C/11C) in basal half, moderate purplish pink (186D) at top, outer tepals greenish white (155C), midveins with light yellow (10B/C) along basal half, apical half stronger moderate purplish pink (186D) than on inner tepals; outside with inner tepals greenish white (155C), light yellow-green (145B) at base, greenish white (157D) along midribs, light greenish yellow (4C) towards top, outer tepals yellowish white (155B), light yellow-green (145B) at base, light yellow-green (150D) along midribs, strong yellow-green (144C) with strong yellow-green (144A) at top, next to midribs dark purplish pink (186C); spots absent; papillae greenish white/pale greenish yellow (155C/10D); nectaries stronger yellow-green (144B); pollen moderate reddish brown (175A); stigma dark purple (79A). Fls 225 mm wide, fragrant; tepals 115-120 × 42-62 mm, margins ruffled, tips recurved. Lvs scattered, 135 × 30 mm, dark green with lighter veins. Stems 0.9-1.2 m, light green, darker in lower part, with c.9 fls.

**‘Mary Liss’ II(c/d)**

Parentage: *L. × dalhansonii* Backhouse Group × unknown  
 S: M. Liss, G: M. Liss (pre 1990), N: D. Dale (2002), I: Estate Perennials (2005), REG: M. Joslin (2005)

Inside vivid yellow (14A), overlaid with purplish pink, tepals with narrow yellow margins, tips with tiny dark red (59A) speckles, throat light yellow (15D) with dark red (59A) lines; outside white with pale purplish pink (65C) highlights; spots large, dark maroon, surrounded by yellow, mainly in central part of each tepal; nectaries light yellow (14D); pollen dark reddish orange (172B); stigma pale cream. Fls 80 mm wide, slightly scented; tepals 45 × 14 mm, margins smooth. Lvs whorled, 200 × 40 mm. Stems 1.75 m, green mottled with black, with 25-35 fls. Early July.

(Originated as a seedling in the garden of the late Mary Liss. Nomenclatural standard: colour print supplied by registrant (WSY 0096428).)

#### **MARY M VII(b/b)**

Trade designation of 'Mary Meek'.

#### **'Mary Margaret' I(a/c)**

Parentage unknown

R: F. Fellner (1988), G: B. Strohman (1990), N: B. Strohman (1994), I: B. Strohman (1994), REG: B. Strohman (1994)

Inside and outside deep purplish pink (58D), throat light orange-yellow to light orange (24C/28C); spots small, dark, on basal third of each tepal; nectaries light orange (28C); pollen strong reddish orange (31A). Fls 130 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved; pedicels long, dark. Lvs scattered, 60 × 15 mm, mid green. Stems 1.1 m, blackish, with c.14 fls. Early to late July.

#### **'Mary Meek' VII(b/b)**

Parentage unknown

R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1983), N: Gebr. Mak B.V. (1989), I: Oriental Express (1989), REG: Gebr. Mak B.V. (1989)

Inside light purplish pink (68D), midveins flushed with vivid purplish red (57C), midveins in throat vivid reddish orange (47A), throat strong yellow-green (145A) edged brilliant yellow-green (154C); outside yellowish to greenish white (155B/C), somewhat flushed with strong to moderate purplish pink (67D/70D), midribs strong purplish red (60D); papillae deep purplish red (59B), on basal half of each tepal; pollen strong orange (169C). Fls 200 mm wide; tepals 100 × 55 mm, margins slightly ruffled, outer tepals more so, tips not recurved. Lvs scattered, 110 × 40 mm, mid green. Stems 0.4 m, green with darker markings, and with c.6 fls. July.

Trade designation: MARY M.

#### **'Mary Ramsey' VI(b/b)**

Parentage: 'Golden Gleam' × *L. × maculatum* 'Alutaceum'

R: P.M. Byam (1934), G: P.M. Byam (1937), N: P.M. Byam

(Named for the raiser's mother. Published in *LYB* 8: 166 (1939).)

#### **'Mary's Magnificent' I(a/-)**

Parentage unknown

R: W. Windus (1971), G: W. Windus (1973), N: W.

Windus (1973), REG: W. Windus (1984)

Inside and outside vivid yellow (15B); midribs light green; spots dark reddish orange (178B) with a narrow maroon rim, on half of each tepal, small in the centre, larger further out; nectaries light green; pollen dark reddish orange (178B). Fls c.170 mm wide; tepals 75-90 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 20 mm, mid green. Stems 0.6-1 m, mid green, with 5-7 fls. June.

(So named because the raiser's wife, Mary, on seeing the first fl. exclaimed "That is magnificent!".)

#### **'Mary's Sister' I(b/-)**

Parentage: ('Kirschrot' × *Johannisblut* Group) × 'Connecticut Red'

R: N. Martschinke (pre 1985), N: N. Martschinke (1991), REG: ICRA (1992)

Fls dark red. Stems 1.1 m. Early July.

(Published in German Lily Group sales list, 1992. High resistance to *Botrytis*.)

#### **'Mary Swaythling' II(-/-)**

See *L. × dalhansonii* 'Mary Swaythling'.

#### **'Mary Wallace' VII(-/b)**

See *L. × parkmanii* 'Mary Wallace'.

#### **'Marzipan' I(b/b-c)**

Parentage: 'Creme Rispé' × 'King Pete'

R: N. Martschinke (1982), G: N. Martschinke (1985), N: N. Martschinke (1991), REG: N. Martschinke (1991)

Inside light orange-yellow (22B), tepal-margins strong orange-yellow (22A); outside with brilliant yellow-green (154B) stripes on a light orange-yellow (22D) ground; spots small, dark, on two-thirds of each tepal; nectaries light greenish yellow (5C); pollen strong orange (169B). Tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 12 mm, mid green. Stems 1.2 m, dark green, with c.15 fls. July.

#### **'Masai' I(a/b)**

Parentage: seedling OR 91-11 × seedling RS 90-09

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside vivid reddish orange (30B), throat moderate yellowish pink (33B); outside vivid orange (28A), with light orange (29C) along the vivid reddish orange (33A) midribs, the outer tepals tipped strong yellow-green (143B); spots and papillae absent; nectaries strong yellowish pink (33C), hairy; pollen moderate reddish brown (175A); stigma moderate red (185B). Fls 170 mm wide; tepals 120 × 55 mm, margins smooth, tips recurved. Lvs scattered, 150 × 20 mm. Stems 1.25 m, dark, with c.5 fls.

#### **'Mascotte' I(a/-)**

Parentage: seedling RS 516 × seedling RS 515

R: Vletter & Den Haan (1980), G: Vletter & Den Haan (1983), N: Vletter & Den Haan (1989), I: Vletter & Den

Haan, REG: Vletter & Den Haan (1990)  
Strong purplish pink (55B), each tepal with a small, deep purplish pink (55A) flare and pale greenish yellow (1D) tip; outside light purplish pink (68D), outer tepals edged strong purplish red (61B); spots Tyrian purple, on tepal-margins; pollen brownish orange (165B). Fls 165 mm wide; tepals 80 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 13 mm, mid green. Stems 1 m, pale green, with c.6 fls. May.

**‘Mask’ I(a/c)**

Parentage unknown  
R: J. Vasarietis (1989), G: J. Vasarietis (1992), N: J. Vasarietis (1994), I: J. Vasarietis (1994), REG: J. Vasarietis (1998)  
Inside strong orange (25B), each tepal with a brownish red brushmark; outside brilliant orange (25C); spots absent; nectaries white; pollen orange. Fls 140 mm wide; tepals 75 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 15 mm, mid green. Stems 1 m, greenish, with c.9 fls. Early July.  
(Published in *Lilium Balticum Cat.*, 1996. Nomenclatural Standard: colour print provided by registrant (WSY 0038513).)

**‘Mason’ I(a/-)**

Parentage: ‘Connecticut King’ × unnamed seedling  
R: A.V. Otroshko (1988), N: A.V. Otroshko, REG: A.V. Otroshko (1991)  
Fls yellow, heavily spotted with brown in the throat; pollen brown. Fls slightly scented; tepals 80 × 40 mm. Stems 1 m. July.

**Masquerade Group I(b/-)**

Parentage: ‘Long Island hybrid’ × ‘Connecticut Bronze’  
R: H.O. Beracha, N: H.O. Beracha  
Fls bronze with a few spots. Stems 1.2-1.5 m. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978) as Masquerade strain and included in *ILR* (1982) as Masquerade grex.)

**‘Massa’ I(a/b)**

Parentage: seedling OR 380 × ‘Gran Paradiso’  
R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1987), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)  
Inside vivid reddish orange (32A), throat orange; outside vivid reddish orange (32A); spots absent; papillae present; pollen brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems 1.2-1.5 m, green with darker markings, and with 6-8 fls (from 14-16 cm bulbs).

**‘Massapoag’ I(c/-)**

Parentage: complex of *lancifolium*, *L.* × *hollandicum*, *L.* × *maculatum* & *davidii* var. *willmottiae*  
R: A.E. Simoni (c. 1962), N: A.E. Simoni  
Fls orange spotted black. Stems 1.2 m. July.  
(Published in *LYB* 29: 177 (1966) as ‘Marsapoag’. This spelling was repeated in *ILR* (1969) and (1982) but the epithet was later confirmed as ‘Massapoag’.)

**‘Master Gardener’ I(b/c)**

Parentage unknown  
R: F. Fellner (1986), G: F. Fellner, N: Extension Divn, University of Saskatchewan (1994), I: Riverside Gardens (1994), REG: Extension Divn, University of Saskatchewan (1995)  
Inside light orange-yellow (19A) overlaid with strong orange (25A) in throat; outside with tepal-tips dark pink (182D); spots fine, dark red; nectaries green; stamens moderate red (184B); pollen orange-red. Fls 150 mm wide; tepals 60 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.25 m, red-brown, with c.12 fls. July.

**‘Masterpiece’ VI(-/a)**

Parentage: Aurelian origin  
R: J. de Graaff (c. 1960), N: J. de Graaff  
Fls mimosa-yellow, midveins darker gold. Stems 1.2-1.9 m. July.

**‘Master’s Touch’ I(a/-)**

Parentage unknown  
R: F. Fellner, G: F. Fellner, N: W.G. Ronald (1996), I: W.G. Ronald (1996), REG: W.G. Ronald (1996)  
Inside and outside white, tepal-edges purple; spots small (1 × 2 mm), purple, on basal half of each tepal; outside white; nectaries white; pollen absent. Fls 90 mm wide; tepals 50 × 22 mm. Lvs scattered, 70 × 9 mm, mid green. Stems 0.38 m, mid green, with 9-13 fls. Mid July.

**‘Matador’ I(a/b)**

Parentage: ‘Tabasco’ × ‘Red Carpet’  
R: E.A. McRae (1971), G: Oregon Bulb Farms, Inc. (1973), N: Oregon Bulb Farms, Inc. (1977), I: Oregon Bulb Farms, Inc. (1979), REG: E.A. McRae (1981)  
Inside deep red (185A), throat strong red (46A); outside moderate red (185B); spots absent; nectaries white; pollen greyish red (178A). Tepals 70-90 × 25-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-120 × 15-25 mm, dark green. Stems 0.6-0.8 m, dark green with darker overlay, with 8-10 fls. June to July.

**‘Mata Hari’ VI(-/-)**

Parentage: seedling 9/83 × ‘Glockenturm’  
R: V. Strasser (1983), G: V. Strasser (1987), N: V. Strasser (1991), REG: V. Strasser (1996)  
Inside soft rose-pink, tepal-tips white; outside greenish rose. Tepals 110 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered. Stems 1.2 m, green, with c.29 fls. Mid July.

**‘Matai Delight’ VI(b-c/b)**

Parentage: unnamed seedling × unnamed seedling  
R: M.E. Rollinson (c. 1993), G: M.E. Rollinson (1999), N: M.E. Rollinson (2001), I: M.E. Rollinson (2001), REG: M.E. Rollinson (2002)  
Inside yellowish white (155B), well blushed with moderate purplish red (58A), tepal-tips strong yellow-green (144B), throat brilliant yellow-green (150A); outside moderate purplish red (58A) with yellowish white (155B) showing through; unmarked; nectaries

brilliant yellow-green (150C); pollen strong orange-yellow (22A); stigma moderate purple (79D). Fls 185 mm wide, strongly scented; tepals 148 × 38-56 mm, margins smooth, tips slightly recurved. Lvs scattered, 175 × 16 mm. Stems 1.5-1.6 m, greyish yellow-green (191B) mottled moderate purplish red (58A), with 10-15 fls. Dec. to Jan. (New Zealand).

(Matai is the name of the road where the registrant lives in Timaru, New Zealand. Nomenclatural standard: colour print provided by registrant (WSY 0032040).)

#### **‘Matai Glow’ VI(b-c/b)**

Parentage: unnamed seedling × Copper King Group  
R: M.E. Rollinson (1991), G: M.E. Rollinson (1994), N: M.E. Rollinson (1996), I: M.E. Rollinson (2000), REG: M.E. Rollinson (2002)

Inside light orange-yellow (22D), tepal-edges blushed deep pink (48A), the pink coloration fading after 4-5 days; outside strong red (53B) with light orange-yellow (22D) streaking; nectaries light yellow-green (145D); pollen vivid orange-yellow (23A); stigma strong red (53B). Fls 160 mm wide, strongly scented; tepals 115 × 55 mm, margins smooth, tips strongly recurved. Lvs scattered, 145 × 13 mm, dark yellowish green (189A), speckled dark red (187A), with 8-12 fls. Dec. to Jan. (New Zealand).

(Matai is the name of the road where the registrant lives in Timaru, New Zealand. Nomenclatural standard: colour print provided by registrant (WSY 0032034).)

#### **‘Match’ I(a/-)**

Parentage: ‘Harvest’ × *wilsonii*

R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1986), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside vivid yellowish orange (30C) suffused with vivid reddish orange (30A) and vaguely flamed vivid orange-yellow (23A); outside brilliant orange (29A), tepal-edges suffused with vivid reddish orange (30B), midribs light orange-yellow (19A); spots dark Indian lake, on basal half of each tepal; nectaries moderate red (47A); pollen strong reddish orange (169A). Fls 100 mm wide; tepals 95 × 48 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 115 × 14 mm, mid green. Stems 0.9 m, green, with 4-6 fls. Apr. (under glass).

#### **‘Matchless’ I(a/b)**

Parentage: ‘Enchantment’ × ‘Connecticut Lemonglow’  
R: Oregon Bulb Farms, Inc. (1969), G: Oregon Bulb Farms, Inc. (1972), N: Oregon Bulb Farms, Inc. (1979), I: Oregon Bulb Farms, Inc. (1979), REG: Oregon Bulb Farms, Inc. (1980)

Inside vivid reddish orange (33B); outside vivid reddish orange (33A); spots absent; nectaries green; pollen orange-red (34A). Fls 110 mm wide; tepals 90 × 35 mm, slightly recurved. Lvs scattered, 70-100 × 15 mm, dark green. Stems 1-1.5 m, dark purple-brown, with 5-15 fls. July.

#### **‘Match Point’ VII(-/a)**

Parentage: unnamed seedling × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1993), G: Bischoff Tulleken Lelies B.V. (1995), N: Coöp. Kwekersvereniging “The Originals” U.A. (1999), I: Coöp. Kwekersvereniging “The Originals” U.A. (2000), REG: Coöp.

Kwekersvereniging “The Originals” U.A. (2001)

Inside and outside yellowish white (155B), midveins brilliant yellow (8A); spots and papillae present; nectaries green; pollen brown; stigma grey, speckled with purple. Fls 240 mm wide; tepals 120 × 60 mm, margins ruffled, tips strongly recurved. Lvs scattered, 150 × 30 mm. Stems 0.7 m, green, with c.5 fls. Midseason.

#### **‘Matchwinner’ VIII(a/b)**

Parentage unknown

R: Bottema Lelie B.V. & Mts S.E. Bottema & Zn, N: Bottema Lelie B.V. & Mts S.E. Bottema & Zn, I: Bottema Lelie B.V. & Mts S.E. Bottema & Zn, REG: Mts S.E. Bottema & Zn (1999)

Inside strong purplish red (63A), throat pale yellow (8D); outside strong purplish red (64B) on a paler ground, shading to strong purplish red and moderate purplish red (63A,64A) at margins; spots dark red (187A), on basal part of each tepal; papillae pale yellow (8D) with a little dark red (187A), in the throat; nectaries strong yellow-green (143A) and strong purplish red (63A); pollen moderate reddish brown (175A); stigma light yellow-green (145C). Fls 190 mm wide; tepals 100 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 20 mm, dark green. Stems 0.95 m, green, with c.4 fls. (*A longiflorum*/Asiatic (LA) hybrid.)

#### **‘Matera’ VII(a-b/-)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V. (pre 1988), N: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2002)

Inside strong purplish red (63B), midveins deep/moderate red (185A/B), markings dark red-purple; outside strong purplish pink (63C); spots and papillae present; pollen light brown; stigma purple with grey. Tepal-margins strongly ruffled, tips recurved. Stems with darker markings. Late to very late.

#### **‘Mater’s Pet’ VII(-/c)**

See *L. × parkmanii* ‘Mater’s Pet’.

#### **‘Mäte Terēze’ VI(c/a)**

Parentage: ‘Zeltene’ × unnamed seedling

R: I. Zilgalvis (1993), G: I. Zilgalvis (1995), N: I. Zilgalvis (1996), REG: I. Zilgalvis (2004)

Inside yellow and creamy white, throat yellow; outside light green and creamy white; spots absent; nectaries green; pollen red-brown; stigma yellow-green. Fls 180 mm wide, strongly scented; tepals 200 × 51 mm, margins smooth, tips strongly recurved. Lvs 100 × 11 mm. Stems 1.85 m, green, with c.8 fls. Mid July. (Nomenclatural standard: colour print supplied by registrant (WSY 0096372).)

**‘Matinata’ I(a/-)**

Parentage: orange-flowered seedling × raspberry-pink-flowered seedling  
 R: V. Matthé (1980), G: V. Matthé (1982), N: V. Matthé (1987), REG: V. Matthé (1988)

Inside strong yellowish pink (37B), with a deep pink (48A) centre line along each midvein, becoming strong red (53D) in throat, tepal-tips strong yellowish pink (37B), throat with a halo of deep pink (48A) powdered on the strong yellowish pink (37B) ground; spots few, tiny, black, on both sides of each nectary; nectaries frosted pink; pollen vivid reddish orange (34A). Tepals 80 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 70 × 10 mm, dark green. Stems 0.9 m, dark green, mottled purple, with 6-8 fls. July.

**‘Matisse’ VII(a/b)**

Parentage: seedling 86-323 × seedling RH 94-23  
 R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)  
 Inside very pale purple (69B), tepal-tips yellowish white (155D), throat very pale purple (69D); outside very pale purple (69A) with deep purplish pink (70C) along midribs; spots deep purplish pink (67C); papillae present; nectaries light yellow-green (145B) tipped pale greenish yellow (2D); pollen moderate reddish orange (171A); stigma dark purple (79A). Fls 230 mm wide; tepals 145 × 75 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 230 × 55 mm. Stems 0.89 m, dark, with few fls.

**‘Matrabella’ VI(-/b)**

Parentage unknown  
 R: P. Geiser (1876), G: V. Strasser (1979), N: V. Strasser (1990), REG: V. Strasser (1991)  
 Inside creamy white, tepal-tips yellow, throat vivid yellow (12A); outside white (outside of outer tepals soft rose-pink), midribs pink; nectaries green; pollen vivid orange-yellow (23A). Tepals 110 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 12 mm, dark green. Stems 1.3 m, dark green, with c.17 fls. Mid July.

**‘Matras’ I(b/-)**

Parentage: ‘Attica’ × (‘Noris Star’ × (‘Tetra Tabasco’ × ‘Tetra Enchantment’))  
 R: V. & S. Strasser (1988), G: V. & S. Strasser (1992), N: V. & S. Strasser (1995), REG: V. & S. Strasser (1998)  
 Fls red; spots elongated, purple, on two-thirds of each tepal. Tepals 110 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 14 mm, dark green. Stems 1.2 m, rather dark green, with c.11 fls, and bulbils. Mid July. Probably tetraploid.

**‘Matrix’ I(a-b/b)**

Parentage unknown  
 R: Bischoff Tulleken Lelies B.V., N: Coöp. Kwekersvereniging “The Originals” U.A. (2002), REG: Coöp. Kwekersvereniging “The Originals” U.A. (2004)  
 Inside vivid red (44A), midveins vivid yellowish pink (28A) at base; outside vivid reddish orange (34A); spots

and papillae present; nectaries red; pollen orange-brown; stigma purple-red. Fls 120 mm wide; tepals short, margins very slightly ruffled, tips slightly recurved. Lvs short to medium. Stems 0.5 m, green with darker spots and stripes.

**var. *matsuanum* IX(a/c)**

See *concolor* var. *matsuanum*.

**‘Matsu-no-hikari’ IX(-/d)**

See *cernuum* ‘Matsu-no-hikari’.

**‘Matterhorn’ I(a/-)**

Parentage unknown  
 R: unknown, I: O.L.C. (1988), REG: H. Veenstra & Zn (1989)  
 Inside light yellowish pink (159A); outside pale orange-yellow (159B) flushed with pale yellow (158A/B); spots dark red (187A); pollen strong brown (172A). Tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 0.5 m, green, with 8-10 fls.

**‘Maturant’ I(a/b-c)**

Parentage: (‘Hela’ × (‘Diblík’ × ‘Connecticut King’)) × ‘Wattle Bird’  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2001), REG: B. Mičulka (2001)  
 Inside glowing deep crimson, tepal-tips rather paler; outside paler, midribs pinkish red; spots moderately numerous, large, brown-black, on a third of each tepal; nectaries light violet, white-granulated; pollen orange-brown; stigma brown-crimson. Fls 125 mm wide; tepals 75 × 45 mm, outer tepals only slightly recurved, thick and stiff; pedicels 75 mm long, brownish. Lvs scattered, 100 × 15 mm, dull mid green. Stems 0.85 m, thick, brown. Early July.

**‘Maude’ VII(-/d)**

Syn. of *L. × parkmanii* ‘It’.

**‘Maureen’ I(b/-)**

Parentage: ‘Pirate’ × ‘Connecticut Yankee’  
 R: W.S. Summers (1975), N: W.S. Summers (1979), I: Borbeleta Gardens (1980), REG: (1980 or 1981)  
 Fls light orange-yellow (23C) with blush of brilliant orange-yellow (23B); spots large, purple, in throat; pollen dark brown. Fls 200 mm wide. Stems 1.1 m, with bulbils. Midseason to late.

**‘Maureen’ I(a/-)**

Syn. of ‘Atilla’.

**‘Mauve Duet’ I(-/-)**

Parentage unknown  
 R: J. Wadekamper (pre 1996), N: J. Wadekamper, I: Willowood (1997), REG: ICRA (1998)  
 Fls two tones of mauve, with a ‘cream face’. Stems 1.1-1.2 m.

**'Mavis' I(a/-)**

Parentage unknown

R: L. Kramer, G: C. Fuson &amp; S.R. Kaul, N: S.R. Kaul, I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)

Fls light pink blending to white. Anthers peachy pink, pollen absent. Stems 0.6 m. June to July.

**'Maxiclas' I(c/d)**Parentage: *leichtlinii* var. *maximowiczii* × (*callosum* × *amabile*)

R: R.P.H. Clas (1973), G: L.D. Marshall (1975), N: L.D. Marshall (1976), I: L.D. Marshall (1977), REG: Columbia-Platte Lilies (1980)

Inside and outside vivid reddish orange (32A), throat vivid orange (28A); spots numerous, small, red-brown, on centre of tepals; nectaries vivid orange (28A); pollen strong brown (172A). Fls 70-90 mm wide; tepals 50-60 × 15 mm, strongly recurved. Lvs 70-100 × 5-10 mm, mid green. Stems 0.9-1.2 m, mid green, with 6-20 fls. July to Aug.

(Published in *LYB NALS* 32: 113, 115 (1979).)**Maximount Group I(c/-)**Parentage: *leichtlinii* var. *maximowiczii* × 'Tetra Mountaineer'

R: V. Strasser (1977), G: V. Strasser (1979), N: V. Strasser (1984), I: V. Strasser (1984), REG: V. Strasser (1997)

Inside red-orange; outside orange-red. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1 m, rather dark green, with 10-15 fls. Mid June.

**'Maximount No. 1' I(c/-)**

Syn. of 'Barbarossa'.

***maximowiczii* Regel IX(c/d)**Syn. of *leichtlinii* var. *maximowiczii*.**var. *maximowiczii* IX(c/d)**See *leichtlinii* var. *maximowiczii*.***maximowiczii* 'Alpha' IX(c/d)**Syn. of *leichtlinii* var. *maximowiczii* 'Alpha'.***maximowiczii* 'Beta' IX(c/d)**Syn. of *leichtlinii* var. *maximowiczii* 'Beta'.***maximowiczii* 'Delta' IX(c/d)**Syn. of *leichtlinii* var. *maximowiczii* 'Delta'.***maximowiczii* 'Gamma' IX(c/d)**Syn. of *leichtlinii* var. *maximowiczii* 'Gamma'.***maximowiczii* 'Wada's Variety' IX(c/d)**Syn. of *leichtlinii* var. *maximowiczii* 'Wada's Variety'.**Maxims Group I(a/b)**Parentage: (*leichtlinii* var. *maximowiczii* 'Unicolor' × Pastel Group) × ('Enchantment' × (*pumilum* × bicoloured selection from Coronado Group))

R: Columbia-Platte Lilies (1981), G: Columbia-Platte

Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Vivid reddish orange (30A/B) to vivid orange (28A), tepal-tips vivid reddish orange (30A/B), throat vivid orange (28A); outside vivid orange (28A/B); spots large, magenta, on basal third of each tepal; nectaries soft orange; pollen moderate red (180A). Tepals 60-80 × 20-30 mm, margins lightly ruffled, tips slightly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 0.8-1.2 m, dark green, with 7-15 fls and occasional bulbils. Late June to early July.

(Published in *ILR Seventh Supplement* as Maxims grex.)**'Max Leichtlin' II(c/d)**Parentage: presumed to be a seedling of *L.* × *dalhansonii* 'Marhan'

R: C.G. van Tubergen (c. 1893), N: C.G. van Tubergen Similar to 'G.F. Wilson'.

(Published in *JRHS* 16: lxxix (1894).)**'Max und Moritz' I(a/-)**

Parentage unknown

R: H. Böhm (pre 1986), N: H. Böhm, REG: H. Böhm (1988)

Fls vivid yellow (12A), centre brown; spots black; pollen light brown. Lvs dark green. Stems 1.2-1.4 m, dark, with secondary buds. Mid July.

(Published in German Lily Group sales list, 1986.)

**'Maxwill' I(c/d)**Parentage: *leichtlinii* var. *maximowiczii* × *davidii* var. *willmottiae*

R: F.L. Skinner (1928), N: F.L. Skinner, I: F.L. Skinner (1932)

AM 1933, FCC 1955, AMH 1938, FCCH 1947

Fls vivid reddish orange (30B) with some spots. Stems to 2.2 m, with 30 or more fls. July to Aug.

(Published in *Amer. LYB* 1940: 54. There is some controversy regarding the parentage - see Woodcock & Stearn, *Lilies of the World*, 208 (1950) and P.M. Syngé, *Lilies*, 73 (1980).)**'Maya' I(a/-)**

Parentage unknown

R: P. Geiser (pre 1982), N: P. Geiser, REG: P. Geiser (1988)

Fls carmine-red. Fls 150 mm wide; tepal-tips reflexed. Stems 0.8 m. Late July.

(Published in German Lily Group sales list, 1982.)

**'Maybride' VII(b/-)**Parentage: (white-flowered Oriental seedling × 'Star Gazer') × (*L.* × *parkmanii* 'Allegra' × 'Star Gazer')

R: Lybelmex Hillegom B.V. (1984), G: Lybelmex Hillegom B.V. (1988), N: Lybelmex Hillegom B.V. (1993), I: Lybelmex Hillegom B.V., REG: Lybelmex Hillegom B.V. (1996)

Inside yellowish white (155D); outside yellowish white (155D) suffused with brilliant greenish yellow (151D) on midribs; spots absent; papillae yellowish white (155D)

on two-thirds of each tepal; nectaries brilliant greenish yellow (151D); pollen strong orange (169C); stigma moderate yellow-green (147D) edged with dark brown (200A) hairs. Fls 200 mm wide; tepals 115 × 40 mm, margins slightly ruffled, tips recurved. Lvs scattered, 110 × 35 mm, pale green. Stems 0.65 m, pale green, with c.3 fls. July to Aug.

**'Maygold'** I(a/-)

Parentage: *L. × hollandicum* × unknown  
R: De Jong Lelies Beheer B.V. (c. 1964), N: De Jong Lelies Beheer B.V., REG: De Jong Lelies Beheer B.V. (1969)  
Fls vivid yellow (17C), spotted brown at base.

**'Mazā Fadete'** I(a/c)

Parentage: 'Lastochka' × unknown  
R: D.-V. Škimele (1991), G: D.-V. Škimele (1995), N: D.-V. Škimele (1998), REG: D.-V. Škimele (2001)  
Inside vivid orange; outside vivid orange, midribs greenish yellow; spots absent; nectaries narrow, green; pollen dark reddish brown; stigma orange-red. Fls 140 mm wide; tepals 70 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 20 mm. Stems 1.7 m, green with brownish shading, and c.35 fls. Mid to late July.  
(Published in *Lilium Balticum Lily Register*, 1998.)

**'Mazurka'** I(a/c)

Parentage: unknown × 'Simonet's Rosy'  
R: J.C. Ericksen (1981), G: J.C. Ericksen (1985), N: J.C. Ericksen (1988), REG: J.C. Ericksen (1989)  
Fls deep, clear rose-pink; spots few, dark, on basal half of each tepal; nectaries pink; pollen darker pink. Tepals 75 × 40 mm. Lvs scattered, 90 × 10 mm, mid to dark green. Stems 1 m, green, with 6-10 fls. Early July. Seed sterile.

**'Meadowlark'** I(a/-)

Parentage: contains Stenographer Group, *L. × hollandicum* & *lancifolium*  
R: J.C. Taylor, N: J.C. Taylor, I: C.A. Best (1956)  
Fls yellow; spots chocolate-brown. Stems 0.8 m. June.  
(Published in *Greenock Farms Cat.*, 1956.)

**'Meadow Mist'** VI(-/-)

Parentage unknown  
R: B.G. Hayler, N: B.G. Hayler, I: (1976)  
Inside deep lime-yellow; outside and buds green. Stems 1.5 m. Jan. (Australia).  
(Published in *Golden Ray Gardens Cat.*, 1976.)

**MEDAILLON** I(a/b)

Trade designation of 'Connecticut Beauty'.

**'Medaine'** I(a/b)

Parentage: 'Zanda' × 'Ringla'  
R: D.-V. Škimele (1994), G: D.-V. Škimele (1996), N: D.-V. Škimele (1998), REG: D.-V. Škimele (2004)  
Inside vivid yellow, tepals with paler tips; outside yellow, midribs green; spots absent; brushmarks brown-red, on a third of each tepal; nectaries green; pollen dark brown; stigma light brown. Fls 160 mm; tepals 90 × 40 mm,

margins smooth, tips slightly recurved. Lvs scattered, 90 × 10 mm. Stems 0.8 m, brownish green, with c.9 fls. Mid July.  
(Published in *Lilium Balticum Lily Register*, 1998.)

**MEDALLION** I(a/b)

Misspelling of MEDAILLON (= trade designation of 'Connecticut Beauty').

**medeoloides** A. Gray IX(c/d)

Fls apricot or orange-red; spots absent or blackish; anthers purplish; pollen orange-red. Fls c.50 mm wide; tepals up to 45 × 10 mm, Lvs in 1-2 whorls half way up stem, scattered above, up to 120 × 35 mm. Stems up to 0.75 m, with up to 10 fls. NE former USSR, Korea, China, Japan.

**'Medicine Hat'** I(b/-)

Parentage: ('Sally Jo Ann' × ('Jeanne d'Arc' × 'Cheyenne')) × purple-flowered, up-facing Asiatic seedling  
R: E.E. Fox (1989), G: E.E. Fox (1991), N: E.E. Fox (1994), I: Fox Lily Ranch (1995), REG: E.E. Fox (1995)  
Inside strong reddish purple (72B), each tepal with a central, pale greenish yellow (2D) stripe; outside strong reddish purple (72C); spots fine, black, on centre third of each tepal; nectaries frosted white; pollen vivid reddish orange (41A). Fls 140 mm wide; tepals 65 × 34 mm, margins smooth, tips slightly recurved. Lvs scattered, 155 × 18 mm, mid green. Stems 1.35 m, nearly black, with 26-30 fls. Late July.

**'Medina'** I(a/-)

Parentage: 'Nutmegger' × 'Sonnentiger'  
R: V. Strasser (1981), G: V. Strasser (1984), N: V. Strasser (1992), I: V. Strasser (1992), REG: V. Strasser (1992)  
Fls yellow; spots purple, conspicuous, on half of each tepal; nectaries yellow; pollen brown. Fls 170 mm wide; tepals 95 × 39 mm, margins smooth, tips slightly reflexed. Lvs scattered, 120 × 16 mm, dark green. Stems 1.1 m, green, with up to 17 fls. Mid July to mid Aug.

**'Mediterranee'** VII(b/d)

Parentage: seedling 398 × seedling 201  
R: Vletter & Den Haan, G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1988), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1991)  
Inside strong purplish red (60C), each tepal with a short, deep red (60A) flame, and strong yellow-green (145A) edges, throat deep purplish pink (70C); outside strong purplish red (59D), yellowish white (155B) at base; spots dark red (187B) on basal half of each tepal; nectaries deep reddish purple (77A); pollen strong orange (169C). Fls 200 mm wide; tepals 100 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 30 mm, mid green. Stems 0.97 m, pale green, with c.8 fls. July (under glass).

**'Mednaia'** I(b/-)

Parentage: 'Nochka' × 'Nutmegger'  
R: B.P. Guzhavin, N: B.P. Guzhavin (1981)  
Fls copper, with cream stripes. Stems up to 1.5 m, with bulbs.  
(Included in *ILR Second Supplement* as 'Mednaja' which is an unaccepted spelling.)

**‘Mednaja’ I(b/-)**

Unaccepted spelling of ‘Mednaia’.

**‘Medoc’ VIII(a/b)**

Parentage unknown

R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1998), REG: Bischoff Tulleken Lelies B.V. (1998)

Inside deep red (185A), with a little dark red (187A) above nectaries, throat greyish red (184A); outside moderate red (179A), a little darker towards tepal-edges; spots dark greyish reddish brown/dark greyish purple (200A/202A), on basal part of each tepal; a few papillae near nectaries; pollen strong reddish orange (169A); stigma dark red (187B). Fls 130 mm wide; tepals 90 × 30–45 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 20 mm, mid green. Stems 0.95 m, with dark markings, and with 6–8 fls. June. (A *longiflorum*/Asiatic (LA) hybrid.)

**‘Medora’ I(b-c/c-d)**

Parentage unknown

R: A. Weinreich (pre 1989), N: A. Weinreich

Fls yellow with a golden sheen; dark spots on lower half of each tepal.

**‘Medulina’ I(a/c-d)**

Parentage: ‘Bělásek’ × ‘Mánes’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997), REG: B. Mičulka (1997)

Inside pale beige-apricot with a brownish tint, tepal-tips paler, throat pale apricot, a carmine flush over nectaries; outside pastel apricot, midribs pale carmine; spots sparse, small, dark carmine-brown, on a quarter of each tepal; nectaries green, white-granulated; filaments whitish; pollen orange-brown; stigma greyed pink. Fls 105 mm wide; tepals 80 × 35 mm, fairly recurved; pedicels 110 mm long, slightly spotted. Lvs scattered, 100 × 12 mm, dull mid green. Stems 0.85 m, thick, green, spotted at base, with a short infl. Late June.

**‘Medusa’ VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1993), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)

Inside strong purplish pink (68B), yellow at base; outside moderate purplish pink (65A); darker spots and papillae present; nectaries green; pollen reddish brown; stigma purple. Tepal-margins ruffled, outer more so, tips strongly recurved. Stems 1.3 m, green with dark stripes and spots, and with c.7 fls. Early to midseason.

Syn.: ‘Our Medusa’.

(The first grant of PBR was in The Netherlands in 1995, followed by seven grants in other countries, all under the epithet ‘Medusa’. However, in 2002 there was a grant of Australian PBR in the epithet ‘Our Medusa’: this epithet must be regarded as a synonym.)

**‘Medusmēnesis’ I(-/-)**

Parentage unknown

R: J. Vasarietis (pre 1999), N: J. Vasarietis

Inside pale yellow, throat greenish; spots red, on basal two-thirds of each tepal; pollen reddish brown; stigma very dark red. Tepal-margins smooth; tips not or slightly recurved.

**‘Mefisto’ I(a/c)**

Parentage: ‘Robin Hood’ × ‘Ginny of Millis’

R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)

Inside red brownish with darker tepal-tips, throat golden yellow; outside with beige midribs; spots small, fairly numerous, purple brownish grey, on a third of each tepal; nectaries pink-frosted; pollen ochre. Fls 150 mm wide; tepals 80 × 37 mm, rigid, slightly recurved; pedicels 70 mm long, spotted. Lvs 120 × 12 mm, glossy dark green. Stems 1 m, thick, slightly brown-spotted. Early July.

**‘Mega’ I(a/-)**

Parentage: ‘Brenda Watts’ × seedling of a spotted, yellow-flowered *L.* × *hollandicum*

R: S.L. Emsweller, N: S.L. Emsweller, I: USDA (1953)

Fls lemon-yellow, spotted mahogany. Fls 75–90 mm wide; tepals slightly reflexed tepals. Stems 0.6–1 m. June to July. (Published in *USDA Notice of Release and Introduction*, (1953).)

**‘Megan’s Delight’ VI(c/-)**

Parentage: Aurelian seedling × ‘Golden Clarion’

R: R.C. Crawford, G: Montana State University (1958), N: D.C. Merkely (1979), I: Borbeleta Gardens (1980), REG: Borbeleta Gardens (1981)

Inside brilliant yellow (13B), throat greenish; outside greenish over yellow; spots absent; nectaries light green; pollen dark brown. Tepals 140 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 18 mm, mid green. Stems 1.2–1.4 m, blue-green, with 12–15 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1980.)

**‘Megara’ VI(-/a)**

Parentage: yellow-flowered seedling × ‘Glockenturm’

R: V. Strasser (1983), G: V. Strasser (1987), N: V. Strasser (1996), I: V. Strasser (1995), REG: V. Strasser (1997)

Inside white, throat yellow; outside white and brownish pink; nectaries green; pollen light brown. Tepals 135 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 11 mm, dark green. Stems 1.65 m, rather dark green, with c.32 fls, with beautiful bud colours. Mid July.

**‘Mega Star’ VIII(a-b/-)**

Parentage unknown

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V., I: H.J. Bakker (1993), REG: H.J. Bakker (2001)

Inside pale purplish pink (65C), midveins pale pink; outside light purplish pink (65B); spots and papillae present; nectaries green; pollen pale green; stigma green. Fls 150–170 mm wide; tepal-margins slightly ruffled, tips

slightly recurved. Lvs scattered, 160 × 20 mm. Stems 0.9 m, green, with c.5 fls. Midseason to late.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Meggie’ I(a/-)**

Parentage: ‘Mont Blanc’ × pink-flowered seedling  
R: V. Matthé (1979), G: V. Matthé (1981), N: V. Matthé (1986), REG: V. Matthé (1986)  
Inside spinel-pink over camellia-pink, throat paler; outside spinel-pink; spots fine, dark purple, on basal third of each tepal; nectaries frosted pink with mauve at top; pollen bright orange. Fls 130 mm wide; tepals 70 × 35 mm, the inner with wavy margins, tips slightly recurved. Lvs scattered, 50 × 10 mm, dark green. Stems 0.7 m, dark green, brown at base, with 10-12 fls. Mid July.

**‘Meigetsu’ I(a/-)**

Parentage: *L. × maculatum* × ‘Destiny’  
R: S. Fujishima (pre 1982), N: S. Fujishima  
Fls yellow.

**‘Mei Ling’ VI(-/c-d)**

Parentage: selection from Aurelian Group  
S: C. Yerex (c. 1946), N: C. Yerex  
Fls creamy yellow. Stems 1.2-1.9 m. July.  
(Published in *R.B. Ware Cat.*, 1950.)

**‘Melanie’ VII(a-b/c)**

Parentage: unnamed seedling × unnamed seedling  
R: Testcentrum voor Siergewassen B.V. (1993), G: Testcentrum voor Siergewassen B.V. (1994), N: Marklily C.V. (2000), I: Marklily C.V. (2000), REG: Marklily C.V. (2000)  
Inside strong purplish red (60D), midveins deep red (186A) midveins, tepal-edges very pale purple (69B), throat greenish white (155C); outside moderate/light purplish pink (65A/B) shading to very pale purple (69B) at tepal-edges, midribs strong purplish red (63A); spots dark red (59A); papillae dark red/strong purplish red (59A/D); nectaries strong yellow-green (144B), changing to light yellow-green (154D); pollen moderate reddish brown (175A); stigma deep reddish purple (77A). Fls 250 mm wide; tepals 130-145 × 45-65 mm, margins ruffled, outer tepals more so, tips recurved. Lvs scattered, 210 × 40 mm. Stems 1.1 m, light green, with c.5 fls.

**‘Melba’ IV(-/l)**

Parentage: rose-red-flowered Bullwood Group × (red-flowered Bullwood Group × *kellooggi*)  
R: D.B. Fox (1971), G: D.B. Fox (1974), N: D.B. Fox (1986), I: D.B. Fox (1986), REG: D.B. Fox (1987)  
Inside light yellow, apical half of tepals and outside overlaid with pale pink (deepening to rose-red with age), throat green inside and out; spots fine, maroon, on basal part of tepals; anthers mid brown. Fls 75 mm wide; tepals 67 × 18 mm, margins smooth, tips partly to fully recurved. Lvs whorled, up to 175 × 30 mm, 12-22 per whorl, mid green. Stems 1.1 m, green, with c.8 fls.

**‘Melbourne’ VII(a-b/b)**

Parentage: ‘Capitol’ × seedling 88-75  
R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1995), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)  
Inside and outside yellowish white (155D); spots absent; papillae present; nectaries yellow-green; pollen orange-brown; stigma grey. Tepal-margins ruffled, outer tepals more so, tips recurved. Stems 1.5 m, green, with c.5 fls. Midseason to late.

**Melford Group**

This name has been widely used to cover all the hybrids raised by J.S. Yeates in New Zealand and is not intended to distinguish any particular Group.

**‘Melford Red’ VII(-/l)**

See *L. × parkmanii* ‘Melford Red’.

**‘Melford Yellow’ VI(-/a)**

Parentage: derived from Golden Clarion Group  
R: J.S. Yeates, N: J.S. Yeates, I: R.E. Harrison (1965)  
Fls deep golden yellow. Stems 1.9 m, with 6-12 fls.

**‘Melissa Jamie’ I(b/b-c)**

Parentage: ‘Carol Jean’ × ‘Piedmont Gold’  
R: F. Fellner, N: F. Fellner, I: Riverside Gardens (1986)  
Fls soft yellowish pink, with pink tepal-tips; spots few. Pollen orange-brown. Stems 0.5-0.75 m, with 10-15 fls. July.

**‘Melissi’ I(c/-)**

Parentage: ‘Amber Gold’ × ‘Sonnetiger’  
R: V. Strasser (1975), G: V. Strasser (1978), N: V. Strasser (1979), I: V. Strasser, REG: V. Strasser (1997)  
Fls golden yellow. Tepal-margins smooth, tips strongly recurved. Lvs scattered, mid green. Stems rather dark green, with up to 19 fls. Early July.

**‘Melkeri’ IX(-/d)**

See *henryi* ‘Melkeri’.

**‘Melkeri’ IX(-/d)**

See *henryi* ‘Melkeri’.

**‘Melodie d’Amour’ VII(-/c)**

Parentage: ‘Star Gazer’ × ‘Escort’  
R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1993)  
Inside yellowish white (155D), suffused with strong purplish red (60C) which fades from tip to base, edged yellowish white (155D), midveins strong red (53B); outside yellowish white (155D), midribs brilliant greenish yellow (151D), outer tepals stronger coloured, tipped strong yellow-green (144A); pollen vivid orange-yellow (23A); stigma moderate yellow-green (147D). Fls 190 mm wide; tepals 100 × 52 mm, margins ruffled, tips slightly recurved. Lvs scattered, 112 × 35 mm, dark green. Stems 0.48 m, mid green, with c.10 fls.

**'Melody' I(b/c)**

Parentage: ('Grace Marshall' × 'Coronation') × 'Coronation'

R: P.M. Byam (c. 1947), N: P.M. Byam

Fls aureolin-yellow; outside flushed with rust-red; spots faint, rust-coloured. Fls 100 mm wide; tepal-tips recurved. Stems to 1.1 m, with c. 23 fls. July.

(Published in *LYB NALS* 9: 98 (1956).)

**'Melone' Div. ?**

Given as a parent of 'Katowice'. No further details.

**'Melon Moon' I(a/-)**

Parentage unknown

R: P. Whipple (1978), G: Borbeleta Gardens (1980), N: Borbeleta Gardens (1980), I: Borbeleta Gardens (1983), REG: J. Wadkamper (1994)

Inside light orange (26C), tepal-tips, throat and outside strong orange (26B); spots absent; nectaries frosty white; pollen dark brown. Tepals 75 × 42 mm, very broad and flat, giving fls a rounded appearance, margins smooth, tips not recurved. Lvs scattered, 100 × 16 mm, mid green. Stems 0.9 m, mid green, with 15-18 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1983.)

**'Melon Patch' VI(-/a)**

Parentage unknown

R: E. Hickling, N: E. Hickling (1976), I: J. Wadkamper (1978), REG: J. Wadkamper (1978)

Inside greenish, throat cream; outside greenish; spots absent; nectaries cream; pollen tan. Fls very large. Stems 1.2 m. Midseason.

(Published in *Lilies and other Liliaceae*, 1978/9: 111.)

**'Melon Time' I(a/b)**

Parentage: 'Sunkissed' × 'Connecticut Lemonglow'

R: E.A. McRae (1973), G: Oregon Bulb Farms, Inc. (1976), N: Oregon Bulb Farms, Inc. (1982), I: Oregon Bulb Farms, Inc. (1983), REG: Oregon Bulb Farms, Inc. (1984)

Fls soft melon-orange on tepal-tips, deep melon-orange in throat and outside; spots absent; nectaries soft green; pollen golden yellow. Tepals 80 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm, mid green. Stems 1.5 m, light green, with 8-25(-30) fls. June to July.

**'Melpomene' IX(b-c/d)**

See *speciosum* 'Melpomene'.

**Melpomene Group VII(-/d)**

Parentage: mixture of *speciosum* seedlings

Fls carmine-crimson and crimson.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv. Published in *Oregon Bulb Farms Cat.*, 1954.)

**Melridge Group Div. ?**

Parentage unknown

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. No further details.

(Published in *ILLR* (1982) as Melridge grex.)

**'Melted Spots' IX(c/a)**

See *canadense* var. *editorum* 'Melted Spots'.

**'Melusina' I(a/-)**

Parentage: 'Appleblossom' × 'Sally Jo Ann'

R: F. Fellner (1982), G: F. Tarlton (1985), N: F. Tarlton (1990), I: Lilydale Lilies (1991), REG: F. Tarlton (1991)

Inside deep pink (52B); outside deep pink (52C); spots many, black, on half of each tepal; nectaries strong yellowish pink (37B); pollen strong reddish orange (31A). Fls 135 mm wide; tepals 70 × 41 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 12 mm, mid to dark green. Stems 1 m, mid green, with 15-20 fls (including secondary buds). Late July.

(Published in *Lilydale Lilies Cat.*, 1991.)

**'Memory' VII(-/c)**

Parentage: 'Red Jamboree' × *L. × parkmanii* Imperial Silver Group

R: M. van Egmond (1979), G: M. van Egmond (1982), N: M. van Egmond (1984), REG: van Egmond B.V. (1988)

Inside greenish white (155C), each tepal with a big, deep to strong purplish red flame (61A/B); outside greenish white (155C), midribs moderate to greyish red (182A/B); spots few, dark red (59A). Fls 225 mm wide; tepals 110 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 30 mm, mid green. Stems 0.65 m, green, with c.5 fls.

**'Memory of Kichunov' I(b/b)**

Syn. of 'Kičunova Piemiņa'.

**'Memory of Zalivsky' VI(-/a)**

Syn. of 'Zaļivska Piemiņa'.

**'Memphis' VII(-/b)**

Parentage unknown

R: Mak Lelieveredeling B.V., G: Mak-Leek Inc. (1990), N: Mak-Leek Inc. (1994), I: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside with a strong purplish red/deep purplish pink (64C/D) to strong or moderate purplish pink (68B/C) tepal-edge, shading into a broad, white area flanking a small, brilliant greenish yellow/brilliant yellow (6C/9C) ray extending from the soft greenish white nectar furrows; outside moderate to light purplish pink (66D/68D), midribs ivory-white to pale green; papillae magenta-pink, on basal half of each tepal; pollen greyish red/moderate red (178A/181A). Fls c.150 mm wide; tepals 80-100 × 40 mm, tips slightly recurved. Lvs scattered, 110 × 50 mm, mid green. Stems 0.9-1.35 m, green with darker markings, and with 8-20 fls. Aug. (Fl. colour is slightly affected by temperature and light levels.)

**'Menarda' I(a/b)**

Parentage: 'Tirreno' × 'Honey Pot'

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1998), REG: A. Balode (1998)

Inside very pale purple (69A); outside greenish and

reddish purple; spots light orange-yellow (19A); nectaries orange-brown; pollen bright orange. Fls 140 mm wide; tepals 70 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 20 mm, dark green. Stems 0.75 m, green, with c.4 fls. Mid July.

**'Mendip Morello' I(a/-)**

Parentage: 'Marie Jean' × 'Connecticut King'  
G: J.M. Adams (1985), N: J.M. Adams (1988), REG: J. Adams (1989)

Inside strong red (46A) with a narrow, strong reddish orange (31A) stripe in the throat; outside red; spots light brown, on basal third of each tepal; nectaries red; pollen orange. Tepals 75 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, c.65 × 13 mm, mid green. Stems 0.8-1 m, green, with 6-8 fls. July.

(Published in Little Creek Nursery list, 1988. Raised from seed from the RHS Lily Group seed distribution, 1983.)

**'Mendola' VI(-/c)**

Parentage: 'Lady Ann' × 'Henriette'  
R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1993), REG: V. Strasser (1997)

Inside light orange-yellow (16B), throat vivid yellow (16A); outside light orange-yellow (16C); nectaries green; pollen vivid orange-yellow (23A). Tepals 110 × 34 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 13 mm, dark green. Stems 1.3 m, rather dark green, with up to 31 fls. Late July.

**'Mēnsgaisma' I(a/c)**

Parentage: 'Magic Eye' × 'Baltais Lācis'  
R: A. Balode (1996), G: A. Balode (1998), N: A. Balode (2000), REG: A. Balode (2000)

Inside strong yellowish pink (38A), with a brilliant orange-yellow (21B) blotch on half of each tepal, throat light greyed purple; outside light red; spots dark red (59A) on half of each tepal; nectaries dark greyed purple; pollen light brown. Fls 130 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm. Stems 1 m, green with brown streaks, and with c.5 fls. Mid July.

**'Mēness Meitiņa' I(b-c/c-d)**

Syn. of 'Moon's Girl'.

**'Menorca' VIII(a/b)**

Parentage: seedling Aj 94-01 × seedling BW 95-5  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside brilliant orange/light orange-yellow (25C/D), tepals narrowly edged light orange (28C), with vivid orange-yellow (23A) on the midveins above nectary, throat more-or-less light yellow-green (150D); outside a little paler than light orange-yellow (22D), tepals narrowly edged light orange (29C), midribs strong/light yellow-green (144C/D), tipped strong yellow-green (144A); spots absent; papillae few, in the throat; nectaries

light yellowish pink (27B), hairy; stigma strong orange (25B) with dark red (187C) hairs. Fls 190 mm wide; tepals 110 × 45-60 mm, margins smooth, tips not or very slightly recurved. Lvs scattered, 185 × 25-30 mm. Stems 1.3 m, green with darker markings, and with 4-6 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

**'Menton' I(a/c)**

Parentage: 'Avignon' × seedling G 632  
R: Vletter & Den Haan, G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1988), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)

Inside striped light orange-yellow (22C) and strong orange-yellow (24B), fading towards tepal-tips, midveins strong orange (26A), throat pale orange-yellow (24D); outside light orange-yellow (25D), becoming brilliant orange (25C) towards tepal-edges, midribs moderate yellow (163C); pollen moderate reddish brown; stigma strong red/deep yellowish pink (39A/B). Fls 180 mm wide; tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 13 mm, mid green. Stems 0.65-1.1 m, mid green with darker markings, and with 8-11 fls (from 16-18 cm bulbs).

**'Mephisto' I(b/-)**

Parentage: *lancifolium* × unknown  
R: H. Böhm (pre 1992), N: H. Böhm, REG: H. Böhm (1994)

Fls ochre-yellow with a brownish red centre; spots present. Tepals not reflexed. Stems up to 1.5 m. Late July. (Published in German Lily Group sales list, 1992.)

**'Meran' I(a/-)**

Parentage: 'Aurachtiger' × 'Methana'  
R: V. Strasser (1976), G: V. Strasser (1978), N: V. Strasser (1980), I: V. Strasser (1982)

Fls strong to vivid red (46A/B); spots black on a fifth of each tepal; pollen red. Tepals 80 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 0.8 m, almost black, with 10-12 fls. July.

**'Mercato' VII(b/b)**

Parentage: unnamed seedling × seedling 201  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside greenish white (155C), midveins brilliant yellow-green (150C), throat strong yellow-green (142A); outside greenish white (155C), midribs pale yellow-green (149D) shading to brilliant yellow-green (149B) at the top; papillae brilliant yellow-green (150C) in the throat, greenish white (155C) on other parts of tepals; nectaries light yellow-green (142D); pollen strong orange (169C). Fls 240 mm wide; tepal-margins ruffled, tips slightly recurved. Lvs scattered, 200 × 38 mm, mid green. Stems 1.2 m, green, with c.6 fls.

**'Mercedes' I(a/b)**

Parentage unknown  
R: Fa P. Hoff & Zn (1977), G: Fa P. Hoff & Zn (1979),

N: Fa P. Hoff & Zn (1984), I: Hoffgaarde B.V. (1986), REG: Hoffgaarde B.V. (1986)

Inside moderate red (179A), each tepal with a red flame, throat moderate red (180A); outside moderate red (179A), with green basal blotches; spots large, dark brown; pollen reddish brown. Tepals 80 × 35 mm. Lvs scattered, 150 × 20 mm. Stems 1.1-1.3 m, green with darker markings, and with 8-14 fls.

#### **‘Mercer Girl’ IV(-/d)**

Parentage: selection from Bellingham Group

R: D. Griffiths (c. 1924), N: D. Griffiths

Fls light cadmium-yellow; spots black at each tepal-base and centre, mahogany-red towards tip; anthers dull yellow; pollen yellow-orange. Lvs both whorled and scattered, Stems 1.6-1.9 m, mottled brown, with 12-20 fls.

(Published in *USDA Circular* no. 299: 7 (1933). The parents are thought to be *parryi* and *humboldtii* var. *ocellatum*.)

#### **‘Merci’ VII(b/-)**

Parentage unknown

R: Sun Valley Bulb Farms, Inc. (1974), N: Sun Valley Bulb Farms, Inc. (1980), I: Sun Valley Bulb Farms, Inc. (1980), REG: Sun Valley Bulb Farms, Inc. (1980)

Moderate purplish pink (186D), midveins and tepal-tips strong red (46A); outside light purplish pink (68D); moderately spotted; nectaries lime-green; pollen rust-coloured. Tepals 150 mm long, margins slightly ruffled. Lvs lanceolate, moderate olive-green (147A). Stems 1 m.

#### **Mercury Group I(c/d)**

Parentage: (*cernuum* × *lancifolium*) F<sub>2</sub>

R: J. de Graaff (c. 1965), N: J. de Graaff

Fls lilac, lightly spotted. Stems up to 1.2 m. July.

(Published in *ILR* (1969) as Mercury grex.)

#### **‘Meredith Carol’ I(a/-)**

Parentage: ‘Juliana’ × dark red-flowered seedling 80-25-38

R: Hartle-Gilman Gardens (1982), G: Hartle-Gilman Gardens (c. 1984), N: Hartle-Gilman Gardens (1995), I: Hartle-Gilman Gardens (1995), REG: Hartle-Gilman Gardens (1995)

Inside moderate red with a streak of white on each tepal and with shiny tepal-tips; spots small, dark, on two-thirds of each tepal; some papillae present; nectaries deep red (185A). Fls 180 mm wide; tepals 92 × 20 mm, margins smooth but evenly turned up at edge, tips slightly recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 0.91 m, moderate olive-green (146A), with 7-9 fls.

#### **‘Meret’ Div. ?**

Given as a parent of ‘Lotte’. No further details.

#### **‘Meribel’ I(a-b/-)**

Parentage unknown

REG: Peacock B.V. (2003)

Inside strong purplish red (59D) on a pale yellow-green (155A) ground, each tepal with a spot of pale yellow-

green (155A) above the nectary, and brilliant yellow (12B) extending from the nectary to this spot; outside strong purplish red (59D) on a pale yellow-green (155A) ground, stronger-coloured towards tepal-margins; spots near to nectaries, dark red (187A); papillae near to nectaries, hairy or speckled; nectaries same colour as tepals, hairy; pollen strong reddish orange (169A); stigma light orange-yellow (22D) with dark red (187B) hair. Fls 140 mm wide; tepals 80 × 32.5 mm, margins smooth, tips scarcely recurved. Lvs 90 × 15 mm, mid green. Stems 0.85 m, mid green with some reddish markings, with c.7 fls. Midseason to late.

#### **‘Meridián’ VI(b-c/d)**

Parentage: ‘Henrieta’ × (*henryi* × Palmer seedling 56227)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1996),

REG: B. Mičulka (1996)

Inside beige-orange-apricot, tepal-tips paler; outside with green midribs at base; fairly numerous, small, brown dashes on half of each tepal; papillae numerous; nectaries dark olive-green; pollen brown; stigma green. Fls 50 × 85 mm; tepals 90 × 30 mm, strongly recurved; pedicels 120 mm long, dark green. Lvs scattered, 110 × 23 mm, dull mid green. Stems 1.2 m, black at base, rust-coloured. Mid July.

#### **‘Merinda’ VI(-/a)**

Parentage: (*regale* ‘Royal Gold’ × unknown) × (*regale* ‘Royal Gold’ × orange-flowered trumpet)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1991),

REG: B. Mičulka (1991)

Fls apricot, the outside with mahogany midribs; nectaries green; pollen ochre-apricot; stigma green. Fls 135 mm wide; tepals 130 × 52 mm, tips strongly recurved; pedicels 65 mm long, spotted brownish. Lvs scattered, 100 × 15 mm, dull dark green. Stems 1.2 m, dotted olive-brown. Mid July.

#### **‘Merino’ I(b-c/c)**

Parentage: unknown × (‘Lady Alice’ × ‘Gold Eagle’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003),

REG: B. Mičulka (2003)

Inside pale yellow; outside with greenish midribs; pale cinnamon dusting on half of each tepal; nectaries green; pollen pale brown; stigma green. Fls 125 mm wide; tepals 95 × 40 mm, margins wavy, tips moderately recurved; pedicels 115 mm long, slightly dotted. Lvs scattered, 100 × 20 mm, dull yellowish green. Stems 1.3 m, thick, densely dotted with red-brown, with a medium-length infl. Mid July.

#### **‘Merkur’ I(b-c-d)**

Parentage: Asiatic seedling × ‘Berliner Morgen’

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N:

G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G.

Steinbrück (1999)

Fls strong yellowish pink (34D) with a soft yellow suffusion towards centre and base of each tepal; spots numerous, medium sized, deep purplish red (71A), more-or-less arranged in lines on three-quarters of each tepal;

nectaries conspicuous, pale yellow-green (155A); anthers large; pollen dark red (183A); stigma strong brown (172A). Fls 130 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 16 mm. Stems 1 m, dark green to black, with c.10 fls. Late July.

**‘Merlin’ I(a/b)**

Parentage: (‘Aberfoyle’ × sibling of ‘Berwyn’) × ‘Connecticut King’

R: W.D. Evans (1975), G: W.D. Evans (1978), N: W.D. Evans (1986), I: W.D. Evans (1986), REG: W.D. Evans (1986)

Inside vivid yellow (12A), tepal-tips brilliant yellow (9C), throat vivid yellow (12A); outside brilliant yellow (12B) with strong red (53D) at base; lightly spotted deep red (53A) in the throat; nectaries vivid yellow (12A); pollen orange-brown. Fls 180 mm wide; tepals 90 × 45 mm, contracted below to a stalk-like base, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 9 mm, mid green. Stems 1.2 m, dark green with a brown overlay, with c.10 fls. Late.

**‘Mermaid’ IV(-/-)**

See *L. × burbankii* ‘Mermaid’.

**‘Mero Star’ VII(a-b/-)**

Parentage: unnamed seedling × unnamed seedling  
R: Imanse Lelieveredeling B.V., G: W. Paauw & Zn B.V. (1988), N: Imanse Lelieveredeling B.V. (1989), I: Imanse Lelieveredeling B.V. & Boeket Handelmaatschappij B.V. (1990), REG: Boeket Handelmaatschappij B.V. (1996)  
Inner tepals slightly darker than moderate purplish pink (65A), tepal-edges, tips and base yellowish white (155D), throat yellowish white (155D), distally strong purplish pink (68B); outside light purplish pink (62C), tepal-tips paler, base yellowish white (155D), the outer tepals darker; many stripes and spots present over a large area; papillae present; nectaries yellow; pollen orange-brown; stigma purple. Fls 250 mm wide; tepals 120 × 50 mm, outer tepals ruffled, tips or whole tepal recurved. Lvs scattered, 200 × 60 mm, mid green. Stems 1.1 m, pale green with darker markings, and with 2-8 fls (depending on bulb size).

**‘Merrick’ I(b/-)**

Parentage: ‘Persimmon’ × “Long Island Hybrid”  
R: H.O. Beracha, N: H.O. Beracha, I: (c. 1975)  
Fls deep salmon; spots few. Stems 1.2-1.5 m. July.  
(Published in *Grace Gardens Cat.*, 1975.)

**‘Merriment’ I(a/b-c)**

Parentage unknown

R: unknown (1987), G: Hartle-Gilman Gardens, N: Hartle-Gilman Gardens, I: Hartle-Gilman Gardens, REG: Hartle-Gilman Gardens (2000)  
Inside a blend of deep and strong red (53A & B), throat strong red (53B); outside strong red (53B); spots scattered, small, black, on two-thirds of each tepal; nectaries frosted; pollen rust-red; stigma red. Fls 144 mm wide; tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, strong yellow-

green (144A). Stems 0.9 m, strong yellow-green (144A), with up to 21 fls (including secondaries which are so positioned and open with the upper buds to give a full head of fls all at once). Midseason.

(Nomenclatural standard: colour print provided by registrant (WSY 0023034).)

**‘Merryspring’ I(a/-)**

Parentage unknown

R: Van der Salm (Holland) (1974), G: Van der Salm (Holland) (1979), N: Van der Salm Bulb Farm, Inc. (1990), I: Van der Salm Bulb Farm, Inc. (1990), REG: Van der Salm Bulb Farm, Inc. (1990)

Inside cream, tepal-tips rose-pink, centre of fl. with a rich golden yellow flush; outside soft pink; spots absent; nectaries soft lime-green; pollen copper-coloured. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.2 m, mottled. June.

**‘Messenger’ VII(-/b-)**

Parentage: seedling 199 × seedling 101

R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside strong purplish red (63B), midveins strong purplish red (63A), tepal-edges very pale purple (75D) with strong purplish red (63B) veins, throat strong yellow-green (145A) edged greenish white (157D/155C); outside very pale purple (73D) suffused with moderate to light purplish pink (62B/C), midribs light yellow-green (150D) shading to light yellow-green (145B) at top; papillae dark red (59A), in the throat; nectaries yellowish grey (156B), spotted moderate purplish red (64A); pollen moderate reddish orange (171A). Fls 240 mm wide; tepals 130 × 60 mm, margins smooth, tips strongly recurved. Lvs scattered, 200 × 40 mm, mid green. Stems 1.15 m, green, with c.7 fls.

**‘Messina’ I(a/b)**

Syn. of ‘Eleganza’.

**‘Messingsterne’ I(b/-)**

Parentage unknown

R: C. Müller (pre 1986), N: C. Müller, REG: C. Müller (1988)

Fls brass-coloured with small spots. Tepals narrow. Stems 1 m. Early July.

(Published in German Lily Group sales list, 1986.)

**‘Metafora’ VII(b/-)**

Parentage unknown

R: Vletter & Den Haan (pre 1992)

Inside yellowish white (155D), midveins brilliant yellow (10A); outside yellowish white (155D); spots yellow, many; papillae present; nectaries green; pollen orange-brown; stigma grey. Tepal-margins slightly ruffled, tips recurved. Lvs scattered, of medium length. Stems of medium height to tall, green.

(Granted Dutch PBR (LEL 1083) in 1993, but not registered - the stock was destroyed by the raiser.)

**forma *metaroseum* IX(b-c/d)**

See *speciosum* var. *clivorum* forma *metaroseum*.

**‘Metawee’ VI(-/a)**

Parentage: *L. × imperiale* Shelburne Group × *L. × aurelianense*

R: F.M. Abbey, N: F.M. Abbey (1956), I: F.M. Abbey (1956)

Fls lemon-yellow. Stems 1.2-1.5 m. July.  
(Published in *LYB NALS* 10: 83 (1957).)

**‘Metaxades’ I(a/-)**

Parentage: (‘Nutmegger’ × ‘Prawn Tiger’) × ‘Connecticut Yankee’

R: V. Strasser (1986), G: V. Strasser (1989), N: V. Strasser (1994), I: V. Strasser (1994), REG: V. Strasser (1996)

Fls red throughout. Tepals 130 × 15 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 15 mm, dark green. Stems green, with c.26 fls. July.

**‘Metel’ I(b/c-d)**

Parentage unknown

Fls white; spots dark brown.

(Published in M.F. Kireeva, *Lilii*, 72 (2000).)

**‘Metelitsa’ I(b-c/d)**

Parentage: complex hybrid

R: M.F. Kireeva (1984), N: M.F. Kireeva

Fls greenish white; spots few. Stems 1.5 m. July.  
(Published in M.F. Kireeva, *Lilii*, 72 (2000).)

**‘Metelj’ I(-/-)**

Given as a parent of ‘Karnevāls’. No further details.

**‘Meteor’ I(a/-)**

Parentage: selection from Hollywood Group

S: J. de Graaff, N: J. de Graaff

Fls cherry-red. Stems 1.2-1.9 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1952.)

**‘Meteor’ IX(b-c/d)**

Syn. of *speciosum* ‘Namazu Beauty’.

**‘Meteorits’ I(a/c)**

Parentage: ‘Edith’ × ‘Nakts Tango’

R: A. Balode (1996), G: A. Balode (1998), N: A. Balode (1999), REG: A. Balode (1999)

Inside light yellow-green (2C), throat greenish; outside yellow-green; each tepal with a large, strong purplish red (60B) blotch, accompanied by dense spots; nectaries green; pollen yellow. Fls 140 mm wide; tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 0.85 m, dark green, with c.7 fls. Early July.

**‘Meteor Shower’ VI(c/d)**

Parentage unknown

R: R.A. Prochaska (c. 1980), G: R.A. Prochaska (c. 1984), N: C. Helsley (1997), I: Ozark Mountain Lilies (1997), REG: C. Helsley (2003)

Inside strong orange (24A), each tepal with a strong

to light orange-yellow (24B/C) area in centre of apical third, and dark reddish orange (172B) pencilling on edges of centre part; outside strong orange (24A); some papillae on edges of centre part of each tepal; nectaries dark green; pollen mid brown; stigma green. Fls 100 mm wide, slightly scented; tepals 90 × 30 mm, outer a little narrower, margins smooth, tips strongly recurved. Lvs scattered, 112 × 22 mm. Stems 1.25 m, green, heavily dark red-dotted, with c.15 (and some secondary) fls. Early July.

(Published in *Ozark Mountain Lilies Cat.*, 1997.)

**‘Methana’ I(a/-)**

Parentage: ‘Pirate’ × ‘Hornback’s Gold’

R: V. Strasser (1973), G: V. Strasser (1975), N: V. Strasser (1978), I: V. Strasser (1983), REG: V. Strasser (1985)

Fls tomato-red; spots absent; pollen red-brown. Tepals 95 mm long, margins smooth, tips not recurved. Lvs scattered, dark green. Stems 1.4 m, black-brown, with c.15 fls. July.

**‘Methcal’ I(b/-)**

Parentage: selection from Preston Group

S: J.C. Ericksen (pre 1975), N: J.C. Ericksen, REG: J.C. Ericksen (1975)

Fls golden yellow with faint, dark spots in throat. Stems 1.2 m, with bulbils. July.

(Published in *Lilies and other Liliaceae*, 1976: 92.)

**‘Metro’ Div. ?**

Given as a parent of ‘Chohniy Drozd’. No further details.

**‘Mexicali Rose’ IV(-/-)**

Parentage: rose-red-flowered Bullwood Group × *bolanderi*

R: D.B. Fox (1971), G: D.B. Fox (1974/5), N: D.B. Fox, I: D.B. Fox, REG: D.B. Fox (1988)

Fls deep purplish pink (54B/55A), throat white flushed orange, green at base; finely spotted a deeper pink, with age the white area becomes pink, obscuring much of the orange and the spotting. Fls 85 mm wide; tepal-margins smooth, tips slightly recurved. Lvs whorled, mid green, narrow, long-pointed, slightly undulate, with recurved edges. Stems 1.5 m or more, mid green. July.

**Mexicali Sunset Group VI(-/c)**

Parentage: unnamed seedling × unnamed Aurelian Group seedling

R: E. Hickling, N: E. Hickling (1978), I: Borbeleta Gardens (1980), REG: Borbeleta Gardens (1981)

Inside strong orange-yellow (22A) to light orange-yellow (22B), throat green; outside light orange-yellow (22B); unspotted, but brown lines present; nectaries greenish white with reddish marks; pollen brown. Tepals 90 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 210 × 25 mm, dark green. Stems 1.2 m, green-brown, with 12-18 fls. July to Aug.  
(Published in *Borbeleta Gardens Cat.*, 1980. Included in *ILR* (1982) as Mexicali Sunset grex.)

**‘Mexicana’ V(b/a)**

Syn. of *longiflorum* ‘Shangri-la’.

**‘Mexican Joe’ I(b/-)**

Parentage: ‘Maroonshine’ × red-flowered *L. × hollandicum*  
R: N.A. Lamb (c. 1960), N: N.A. Lamb, REG: N.A. Lamb (1984)

Fls red with yellow centre. Lvs scattered, dark green.

Stems 1 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

**‘Mexico’ IV(-/-)**

Parentage: Bellingham Group × ‘Afterglow’

R: O. Beutnagel (1971), G: F. Ewald (1976), N: F. Ewald (1978), I: G. & F. Ewald (1978), REG: G. & F. Ewald (1979)

Fls rich cream and golden yellow; spots purple-black, dense; nectaries green; pollen light brown. Fls 100 mm wide; tepals slightly reflexed. Lvs whorled, 100 × 25 mm, mid green. Stems 1.6 m, green, with c.15 fls. July.

**‘Mexico 86’ I(a/-)**

Parentage unknown

R: J. Klein (1986), N: J. Klein, REG: J. Klein (1988)

Fls bright orange. Stems 1 m. Early July.

(Published in German Lily Group sales list, 1986.)

**‘Mgnovenic’ I(a/-)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1994)

Fls pale gold; spots dark brown. Fls 140-150 mm wide.

Stems 1.1-1.25 m, with 11-17 fls. July.

(Published in M.F. Kireeva, *Lilii*, 56 (2000).)

**‘Miami’ VII(a-b/b)**

Parentage unknown

R: Vletter & Den Haan, G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1992), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)

Inside moderate purplish pink/strong reddish purple (70D/B), tepal-edges yellowish white (155B), midveins deep yellowish pink to strong red (47C/B); outside variegated deep to moderate purplish pink (70C/D), tepal-edges white except in basal part where suffused strong reddish purple (70B), midribs pale yellow-green (155A), becoming brilliant yellow-green (154B) at top; spots and papillae deep purplish red (59B) on basal part of tepals; nectaries yellow; pollen dark reddish orange (175C); stigma pale yellow-green (195C). Fls 240 mm wide; tepals 120 × 60 mm, margins ruffled, outer more so, tips strongly recurved. Lvs scattered, 120 × 30 mm, dark green. Stems 0.8 m, pale green, with c.5-7 fls.

**‘Miami Beach’ I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: P. Hoff (1980), G: Hoffgaarde B.V. (1982), N: P. Hoff (1987), I: Hoffgaarde B.V. (1987), REG: Hoffgaarde B.V. (1988)

Inside and outside vivid yellow (12A), with a more greenish yellow flare and a yellow-green base; spots inconspicuous, dark brown, in a ring around the throat; pollen reddish

brown. Fls 160 mm wide; tepals 70 × 40 mm, not recurved. Lvs scattered, 100 × 20 mm, dark green. Stems 1.25 m, dark green, somewhat hairy, with c.10 fls.

Syn.: ‘New York’.

(Registered and included in *ILR Seventh Supplement* as ‘New York’. However, in 1989 it received Dutch PBR (LEL 446) under the epithet ‘Miami Beach’ and this latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Michael Darcy’ VI(c/a-d)**

Parentage: Pink Sunburst Group × ‘King’s Ransom’

R: T.R. Martin (1995), G: G. Brundrett (1998), N: G. Brundrett (2000), I: G. Brundrett (2000), REG: G. Brundrett (2000)

Inside greenish white (155C) on apical two thirds of each tepal, a vivid yellow (14B) zone around the throat with Aurelian ridges, throat brilliant to vivid orange-yellow (23B/A); outside greenish white (155C), midribs strong yellowish pink (31C) fading to pale purplish pink (56C), darkest at base; papillae in lines, greenish white (155C) and vivid to brilliant orange-yellow (23A & B); nectaries vivid orange-yellow (23A); stigma greyish reddish orange (177D). Fls 145 mm wide, strongly scented; tepals 145 × 40 mm, margins smooth, tips becoming distinctly recurved and the face of the fl. quite open. Lvs scattered, 200 × 25 mm. Stems 2 m, moderate yellow-green (146C), with up to 21 fls in a well placed, uncrowded infl. (including secondaries): buds changing from brown to pink. July to Aug.

(Michael Darcy is the registrant’s son-in-law.

Nomenclatural standard: colour print provided by registrant (WSY 0027025).)

**‘Michael Llenos’ I(a/-)**

Parentage: (‘Pink Champagne’ × ‘Meadowlark’) × deep red-flowered, up-facing Asiatic seedling

R: N.F. Bieniasz (1974), G: N.F. Bieniasz (1977), N: N.F. Bieniasz (1985), REG: N.F. Bieniasz (1985)

Inside moderate red (180B) throat vivid red (46C); outside strong reddish orange (169A); spots greyish reddish brown (200B); nectaries frosted; pollen moderate reddish orange (171A). Fls 150 wide; tepals 80 × 15 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 12 mm, mid green. Stems 0.85 m, dark, with c.12 fls. Midseason.

***michauxii* Poiret IX(c/d)**

Fls orange-red to light crimson, yellowish towards base; spots many, purple or black; anthers purple-brown; pollen orange-brown. Fls up to 100 mm wide, strongly scented; tepals up to 100 mm long. Lvs in whorls of 3-7, upper lvs usually scattered, up to 120 × 30 mm. Stems up to 1.2 m, green or slightly spotted, with 1-2(-5) fls. SE USA.

***michauxii* ‘Orange’ IX(c/d)**

Parentage: selection from *michauxii*

Fls full, rich orange. Tepals broad.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Sandyloam Cat.*, 1944.)

**'Michangelo' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
 R: P. Hoff (1982), G: Hoffgaarde B.V. (1984), N: P. Hoff (1986), I: Hoffgaarde B.V. (1986), REG: Hoffgaarde B.V. (1988)

Inside brilliant orange-yellow (23B), tepal-tips moderate reddish orange (41C); outside moderate orange (170B/C), midribs somewhat greenish; spots dark brown in the throat; pollen orange-brown. Fls 160 mm wide; tepals 80 × 35 mm. Lvs scattered, 110 × 10 mm. Stems bronze-green, with c. 13 fls.

**'Michella' I(a/-)**

Parentage: 'Sarina' × *L. × parkmanii* 'Anita'  
 R: De Jong Beheer B.V. (1984), N: De Jong Beheer B.V. (1990), I: De Jong Beheer B.V. (1990), REG: De Jong Beheer B.V. (1992)

Inside vivid yellow (9A) suffused with brilliant greenish yellow (2A) below, and strong yellow-green (145A) in the somewhat hairy throat; outside brilliant yellow (7A/B), midribs suffused with brilliant yellow-green (150B); spots dark red (187A) in the throat; nectaries brilliant greenish yellow (1B); pollen strong orange (169D). Fls 200 mm wide; tepals 95 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.4 m, with 7-9 fls.

**'Michelle' Div. ?**

Given as a parent of 'Moon Jewel'. No further details. Perhaps an error for 'Michella'.

***michiganense* Farwell IX(c/d)**

AM 1955

Fls yellow-orange or orange-red; spots deep red or purplish; pollen orange or brown. Fls 75-80 mm wide; tepals up to 70 × 18 mm. Lvs in whorls of 4-8, 90-120 mm long. Stems 0.6-1.5(-2) m, green, with 3-6(-25) fls. Eastern N America.

***michiganense* 'Almanzo' IX(c/d)**

Parentage: *michiganense* × *michiganense*  
 S: C. Helsley (1987), N: C. Helsley (1996), I: Ozark Mountain Lilies (1996), REG: C. Helsley (2003)

Inside and outside vivid reddish orange (40B), throat strong orange (24A) blending into tepal colour; spots reddish brown on basal two-thirds of each tepal; nectaries green; pollen dark brown; stigma red, tinged with brown. Fls 75 mm wide; tepals 80 × 20-27 mm, margins smooth, tips strongly recurved. Lvs whorled, 95 × 28 mm. Stems 2 m, green, with c. 8 fls. Late June.

(Published in *Ozark Mountain Lilies Cat.*, 1996. Rescued from the wild, and selected by Calvin Helsing. Probably a tetraploid.)

***michiganense* 'Arkansas Traveler' IX(c/d)**

Parentage: *michiganense* × *michiganense*  
 S: C. Helsing (1987), N: C. Helsing (2002), REG: C. Helsing (2003)

Inside and outside vivid reddish orange (30A), throat vivid yellow (15B) blending into tepal colour; spots light chocolate-brown on basal two-thirds of tepals; nectaries green; pollen orange-brown; stigma red, tinged with

brown. Fls 55 mm wide; tepals 85 × 18-20 mm, margins smooth, tips strongly recurved. Lvs whorled, 85 × 15 mm. Stems 1.25 m, green, with c. 6 fls. Late June. (Rescued from the wild, and selected by Calvin Helsing.)

**'Michurinka' I(b/-)**

Parentage: 'Fialkovaia' × *dauricum*  
 R: Z.N. Tsvetaeva (c. 1940), N: Z.N. Tsvetaeva  
 Fls pink-violet at tepal-tips, centre yellow, with some stripes. Fls slightly scented; tepals slightly recurved. (Published in *Lilies and other Liliaceae*, 1975: 28 and included in *ILR* (1982) as 'Mitschurinka' which is an unaccepted spelling. Belongs to Tsvetaevoi Group.)

**'Michurinskaia Noch' I(a/-)**

Parentage unknown  
 Fls dark cherry-red. (Published in M.F. Kireeva, *Lilii*, 38 (2000).)

**'Michurinskaia Oda' I(a/-)**

Parentage: 'Kalinka' × seedling N 37-2-7  
 R: M.F. Kireeva, V.V. Martynova & N.V. Ivanova (1982), G: M.F. Kireeva, V.V. Martynova & N.V. Ivanova, I: M.F. Kireeva, V.V. Martynova & N.V. Ivanova (1988), REG: M.F. Kireeva, V.V. Martynova & N.V. Ivanova (1992)  
 Fls bicoloured: tepal-tips pink, throat yellow. Fls 140-150 mm wide. Stems 0.9-1.15 m, with 11-17 fls. July. (Included in *ILR Eleventh Supplement* as 'Michurinskaja Oda' which is an unaccepted spelling.)

**'Michurinskaia Rozovaia' I(a/-)**

R: M.F. Kireeva & N.V. Ivanova (1988)  
 Fls dark carmine-pink; spots deep purple. Fls 130-150 mm wide. Stems 0.9-1 m, with 11-20 fls. July. (Published in M.F. Kireeva, *Lilii*, 48 (2000).)

**'Michurinskaja Oda' I(a/-)**

Unaccepted spelling of 'Michurinskaia Oda'.

**'Mickey' I(-/-)**

See 'Mikey'.

**'Mic Mac' I(b/d)**

Parentage: derived from Red Knight Group  
 R: J.C. Ericksen (c. 1960), N: J.C. Ericksen  
 Fls clear, pure red throughout, with frosty white papillae. Lvs mid green. Stems 1.2 m or more. (Published in *ILR* (1969).)

**'Midas' I(a/b)**

Parentage: (*L. × scottiae* × unknown) × 'Lord Melbourne'  
 R: G.M. Chandler, N: G.M. Chandler  
 Fls golden yellow; highly spotted in centre.

**'Midas' IX(b/c)**

See *auratum* 'Midas'.

**'Midas Touch' I(a/-)**

Parentage unknown  
 R: P. Whipple (pre 1993), N: P. Whipple, REG: ICRA (1997)

Inside rich golden yellow with a green centre; golden yellow buds. Stems 0.8 m. Midseason.  
(Published in *Borbeleta Gardens Cat.*, 1993 (but probably also much earlier).)

### **Mid-century Group I(a/b)**

Parentage: Umbtig Group (no. 8) × *L. × maculatum*  
'Alice Wilson'

R: J. de Graaff (c. 1941), G: J. de Graaff (1943), N: J. de Graaff (1949), I: Oregon Bulb Farms, Inc. (1949)

Fls reds, oranges and yellows.

(Published in *Oregon Bulb Farms Cat.*, 1949.)

### **'Midget' I(a/-)**

An error for 'Prairie Midget' in *Lilies and other Liliaceae* 1977: 80, where it is erroneously described as 'yellow'.

### **Midnight Group VI(-/a)**

Parentage: Aurelian Group × *leucanthum* var. *centifolium*

R: J. de Graaff (c. 1963), N: J. de Graaff

Fls very dark purple. Stems 1.5-1.9 m. July.

(Published in *ILR* (1982) as Midnight grex.)

### **'Midnight Star' VII(a-b/b)**

Parentage: 'Raptura' × 'Touché'

R: R.L. Strahm (1971), G: R.L. Strahm (1974), N: R.L. Strahm (1979), I: Strahm's Lilies, Inc. (1983), REG: Strahm's Lilies, Inc. (1983)

Inside white, with oxblood-red rays from throat to near white tepal-tips, throat moderate red (183C); outside with midribs chrome yellow, white to tepal-edges, moderate red (183C) at base; spots large, deep red (53A) on white parts; nectaries moderate red (183C); pollen strong orange (170A). Fls 225 mm wide; tepals c.160 × 80 mm, margins smooth, tips slightly recurved. Lvs scattered, c.190 × 50 mm, dark green. Stems 1.2-1.9 m, green, with 6-15 fls. Aug.

(Published in Strahm's colour brochure, 1983.)

### **'Midsummer' I(a/-)**

Parentage: *cernuum* × unknown

R: G. Duncan, N: F.J. Holmes (1976), REG: F.J. Holmes (1976)

Fls vivid yellow (14B); spots brown. Lvs pale green. Stems 0.8 m.

(Published in *Lilies and other Liliaceae*, 1976: 92.)

### **'Midsummer's Dream' I(a/-)**

Parentage unknown

R: H. Peters, N: H. Peters, REG: ICRA (1997)

Fls deep wine-red. Stems 1 m. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1993.)

### **'Mies Bouwman' I(a/-)**

Parentage: radiation-induced sport from 'Tabasco'

R: ITAL, Wageningen, N: Bischoff Tulleken Lelies B.V., I: Bischoff Tulleken Lelies B.V. (1977), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside and outside more-or-less strong reddish orange (31A); spots dark brown; papillae present; pollen dark brown; nectaries purple. Tepal-margins smooth, tips

slightly recurved. Lvs dark green with a dark spot at tip. Stems brown, deeper at base. Reported to be tetraploid. (Published in *Bloembollencultuur*, 17 June 1977, p.1962. Said to be no longer in cultivation.)

### **'Mika' I(a/-)**

Syn. of 'Blenda'.

### **'Mikado' IX(b/c)**

See *auratum* var. *platyphyllum* 'Mikado'.

### **'Mikey' I(-/-)**

Parentage: (*lancifolium* var. *flaviflorum* × *wilsonii* var. *flavum*) F<sub>2</sub>

R: P.M. Johnson (1976), G: P.M. Johnson (1977), N: P.M. Johnson (1979), REG: (1983)

Fls pale yellow throughout; spots absent; pollen dark brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, short and broad, mid green. Stems c.0.6 m. (Included in *ILR* (1982) as 'Mickey' which is a misspelling.)

### **'Milady' VII(-/-)**

Parentage unknown

R: F. Jury (pre 1997), N: F. Jury

Fls very pale lavender pink with a green centre, very large.

### **'Milagro' VIII(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Testcentrum voor Siergewassen B.V., G: Marklily, N: Marklily (2002), I: Marklily (2002), REG: Marklily (2002)

Inside strong orange (24A/25A); outside strong orange (25B); spots and papillae present; nectaries orange; pollen orange-brown; stigma orange. Fls 150 mm wide; tepals 100 × 50 mm, margins very slightly wavy, tips slightly recurved. Lvs scattered, 150 × 20 mm. Stems 0.85 m, green, with 3-6 fls. Early to midseason.  
(A *longiflorum*/Asiatic (LA) hybrid.)

### **'Milano' I(a/b)**

Parentage: 'Eurovision' × unnamed seedling

R: Vletter & Den Haan (1977), G: Vletter & Den Haan (1979), N: Vletter & Den Haan (1983), I: Vletter & Den Haan (1984), REG: Gebr. Vletter & J.A. Den Haan (1985)

Inside strong yellowish pink (32C), tepal-tips vivid reddish orange (34A); outside moderate reddish orange (35B) to capsicum-red; spots dark brown, in a star-shaped pattern in the throat and over tepals; nectaries oxblood-red; pollen dark red-brown. Fls 160 mm wide; tepals 75 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 220 × 20 mm. Stems 1-1.25 m, green, with 8-11 fls (from 16-18 cm bulbs). July. Triploid.

### **'Milda' I(a/-)**

Parentage: ('Zizele' × 'Baltais Stars') × ('Aelita' × 'Baltais Stars')

R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)  
Fls creamy with a salmon tint; spots few, large, dark, in

centre of fl. Fls 140 mm wide. Lvs scattered. Stems 0.9 m. (Published in *Dárzs un Drava* 7: 21 (1986).)

#### 'Milden Orange' IV(c/d)

Parentage: derived from seedlings of Bellingham Group R: H. Kühne (1989), G: H. Kühne (1995), N: H. Kühne (2001), I: H. Kühne (2001), REG: H. Kühne (2003) Inside vivid orange-yellow (23A); spots numerous, red, those in the apical third appearing more orange; otherwise similar to 'Milden Red Ball'. Fls 65 mm wide; tepal-margins smooth, tips strongly recurved. Lvs whorled. Stems 1.8 m, green, with c. 20 fls. Late June. (Published in ELG sales list, 2001. 'Milden' is derived from Burg Mildenstein, a castle in the registrant's town in Germany. Nomenclatural standard: colour print provided by registrant (WSY 0037441).)

#### 'Milden Red Ball' IV(c/d)

Parentage: derived from seedlings of Bellingham Group R: H. Kühne (1989), G: H. Kühne (1995), N: H. Kühne (2001), I: H. Kühne (2001), REG: H. Kühne (2003) Inside vivid reddish orange (42A), throat vivid orange-yellow (23A); spots large, red (187A), on the orange-yellow ground (when spots extend beyond this area they have an orange-yellow halo); nectaries moderate green (135B); pollen strong orange (25B); stigma dark red (187A). Fls 65 mm wide; tepals 95-100 × 20-25 mm, margins smooth, tips strongly recurved giving the fl. a ball-shape. Lvs whorled, 140 × 45 mm. Stems 1.8 m, strong yellow-green (145A), with some dark red (187A) spots, and up to 20 fls. Late June. (Published in ELG sales list, 2001. For epithet see 'Milden Orange'. Nomenclatural standard: colour print provided by registrant (WSY 0037445).)

#### 'Milden Red Star' IV(c/d)

Parentage: derived from seedlings of Bellingham Group R: H. Kühne (1989), G: H. Kühne (1994), N: H. Kühne (2001), I: H. Kühne (2000), REG: H. Kühne (2003) Fl. colour similar to 'Milden Red Ball'. Fls 65 mm wide, opening with strongly recurved tepals but soon changing to a more open 'sombbrero' shape; tepal-margins smooth, tips slightly recurved. Lvs whorled. Stems 2 m, green, with c. 20 fls. Late June. (Published in ELG sales list, 2002 (listed erroneously as 'Red Star' in list of G. Ewald, 2000). For epithet see 'Milden Orange'. Nomenclatural standard: colour print provided by registrant (WSY 0037442).)

#### 'Mildred' I(b/-)

Parentage: ('Red Tiger' × unknown) × 'Byam's Ruby' R: E.J. Kelley (c. 1967), N: E.J. Kelley Fls mahogany-red, non-fading. Lvs dark green. Stems 1.2-1.5 m, with or without bulbils. July. (Published in *ILR* (1969).)

#### 'Mildred's Pearl' II(c/d)

Parentage unknown  
G: D.M. Simmons (1987), N: D.M. Simmons (1997), REG: D.M. Simmons (1997)  
Inside moderate to light purplish pink (62B/C) becoming

paler, almost yellowish white towards the base, the paler colour extending some way up the tepal-margins, throat whitish, suffused with green at base; outside light purplish pink (62C), midribs moderate purplish red (186A), tepal-margins yellowish white, base tinged with green; spots small, scattered, reddish purple, on basal half of each tepal inside, a few spots also on outside; nectaries greenish with prominent ridges; pollen orange; style green, darkening towards purplish top; stigma purplish. Fls 35-45 mm wide; tepals 43-45 × 13-14 mm, margins smooth, tips strongly recurved. Bracts ciliate. Lvs whorled, up to 150 × 31 mm, dark green, narrowly elliptic, attenuate at top and base, wavy-edged. Stems 1.6 m, green with heavy darker mottling, and with c.9-12 fls in an infl. that nods at the top. Early to mid June. (Nomenclatural standard: herbarium specimen provided by registrant (WSY 0004190).)

#### 'Milena' I(a/b)

Parentage: 'July Green Giant' × 'Symfonieta'  
R: Šlechtitelaká Stanice Heřmanův Městec, N: Šlechtitelaká Stanice Heřmanův Městec, REG: Šlechtitelaká Stanice Heřmanův Městec (1994)  
Inside deep orange, tepal-edges darker; spots absent. Fls 135-160 mm wide, tepals slightly overlapping, margins slightly wavy, tips slightly recurved; pedicels 50-80 mm long. Lvs scattered, 70-100 × 11-15 mm, mid green. Stems 0.75 m, with c.10 fls. Late June. (Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1992.)

#### 'Milestone' I(a/-)

Parentage: ('Chinook' × 'Connecticut King') × up-facing, unspotted, yellow-flowered, brushmarked Asiatic seedling R: V.E. Bowen (1980), G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1990), I: Hartle-Gilman Gardens (1990), REG: Hartle-Gilman Gardens (1990)  
Inside vivid orange (28B), tepal-tips vivid orange (28A), throat vivid orange (28B); outside light orange (28D); brushmarks large, maroon/brown; nectaries light orange (28D), white-frosted; pollen strong orange (169D). Tepals 78 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 14 mm, mid green. Stems 0.87 m, dark green, with 14-16 fls. Midseason.

#### MILKA VII(a-b/b)

Trade designation of 'Zanlorlika'.

#### 'Milka' I(a/b)

Parentage: 'Wattle Bird' × 'Chinook'  
R: B. Mičulka (1986), N: B. Mičulka, REG: B. Mičulka (1987)  
Inside pale apricot-beige, tepal-tips greenish on opening, throat paler; outside whitish, midribs pale green; spots numerous, large, dark brown-purple, on two-thirds of each tepal; nectaries pale beige-granulated; pollen orange-chocolate; stigma beige. Fls 100 mm wide; tepals 80 × 37 mm, margins very wavy, tips slightly to medium recurved. Lvs 95 × 12 mm, dark slightly glossy green. Stems 1.15 m, dark below, spotted above. Early.

**'Milk and Honey' Div. ?**

Given as a parent of 'Fraboja'. No further details. Perhaps an error for Milk and Honey Group.

**Milk and Honey Group I(a/-)**

Parentage: various *lancifolium* hybrids × 'Connecticut King'  
R: D.M. Stone & F.H. Payne (c. 1967), N: D.M. Stone & F.H. Payne  
Soft, unspotted bicolors. Fls brilliant greenish yellow (6B), tepals with central stripe of brilliant orange yellow (23B) to brilliant yellow (13B); nectaries light yellow-green (154B). July.  
(Published in *ILR* (1969) as Milk and Honey grex.)

**MILKY RIVER I(a/b-c)**

Trade designation of 'Piena Cefš'.

**Milky Way Group VI(b/b)**

Parentage: derived from Aurelian Group  
R: J.M. Shaver (pre 1970), N: J.M. Shaver, I: J.M. Shaver (1970), REG: J.M. Shaver (1984)  
Fls white to ivory-white throughout; spots absent. Fls large, spidery with twisted or curly tepals; tepal-margins smooth, tips recurved. Lvs scattered. Stems 1.3-2 m. July.  
(Published in *Rex Bulb Farms Cat.*, 1973: 28. Included in *ILR* (1982) as a cv.)

**'Millennian Dawn' VIII(b-c/a)**

Parentage: 'Canterbury Belle' × 'Leslie Woodriff'  
R: A.E. Alexander (1995), G: A.E. Alexander (1998), N: A.E. Alexander, REG: A.E. Alexander (2002)  
Inside white flushed with pink, throat gold; outside pink and white; spots absent; nectaries green; pollen orange; stigma frosty grey. Fls 110 mm wide; tepals 120 × 50 mm, margins smooth, tips recurved. Lvs scattered, 150 × 15 mm. Stems 1.8 m, green, with c.14 fls in a racemose infl. Jan. (New Zealand).  
(An Orienpet (OT) lily. Nomenclatural standard: colour print provided by registrant (WSY 0032049).)

**'Millennian Miss' VIII(b/a)**

Parentage: 'Canterbury Belle' × 'Leslie Woodriff'  
R: A.E. Alexander (1995), G: A.E. Alexander (1998), N: A.E. Alexander (2001), I: A.E. Alexander (2001), REG: A.E. Alexander (2002)  
Inside and outside mid pink, tepal-tips white, throat gold; spots absent; nectaries green; pollen orange; stigma purple-black. Fls 105 mm wide; tepals 90 × 45 mm, margins smooth, tips recurved. Lvs scattered, 110 × 10 mm. Stems 1.3 m, light green overlaid with wine-coloured flecks, with c.12 fls in a racemose infl. Mid to late Jan. (New Zealand).  
(An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0032048).)

**'Millennium' VII(a/b)**

Parentage: (*L.* × *parkmanii* Everest Group × 'Star Gazer') × ('Merci' × unnamed seedling)  
R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies

B.V. (1999), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2000)  
Inside of inner tepals greenish white (155C) suffused with light purplish pink (63C), midveins light greenish yellow (5D) on the basal part, inside of outer tepals a little stronger coloured, throat greenish white (155C); outside of inner tepals greenish white (155C) suffused with very pale purple (69B) at tip, midribs dark pink (182D) with brilliant yellow-green (154C) at the top, outside of outer tepals very pale purple (69B) on a white ground, on and along midribs moderate purplish pink (62B), brilliant yellow-green (154C) towards apex, and tipped strong yellow-green (144B); spots light greenish yellow (5C); papillae greenish white (155C); nectaries strong yellow-green (144B); pollen strong/moderate reddish orange (169A/171A); stigma dark purple (79A). Fls 250 mm wide; tepals 145-155 × 50-75 mm, margins ruffled, tips recurved. Lvs scattered, 210 × 55 mm. Stems 0.9 m, dark, with c.5 fls. July.

**'Milos' I(a/-)**

Parentage: unnamed seedling × seedling (ex Feldmaier)  
R: V. Strasser (1987), G: V. Strasser (1990), N: V. Strasser (1996), I: V. Strasser (1994), REG: V. Strasser (1997)  
Inside red-orange, tepal-tips red-orange; outside red-orange; spots oval, purple, on a third of each tepal; nectaries forming a frosted 'star'; pollen dark brown. Tepals 90 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 8 mm, dark green. Stems 0.95 m, rather dark green, with c.19 fls which have a very good bud colour. Mid July.

**'Milulätis' I(b/-)**

Parentage: selection from Jautrie Bärni Group  
S: V.P. Orehovs, N: V.P. Orehovs  
Fls dark orange.  
(Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as 'Milulit' which is a misspelling.)

**'Milulit' I(b/-)**

Misspelling of 'Milulätis'.

**'Mimosa' I(b/-)**

Parentage: 'Maori Chief' × 'Sultan'  
R: L.B. Tuffery (c. 1948), N: L.B. Tuffery  
Fls mimosa-yellow, spotted.  
(Published in *LYB* 20: 71 (1957) - where incorrect parentage was given.)

**'Mimosabelle' VI(-/a)**

Parentage: selection from Golden Trumpet Group  
N: D. Foxwell (1959)  
PC 1959  
Fls brilliant yellow (9C) throughout.  
(Published in *LYB* 23: 174 (1960).)

**'Mimosafare' VI(-/a)**

Parentage: selection from Golden Clarion Group  
N: D. Foxwell (1962)  
Fls light greenish yellow (8B), with some green-brown outside.

**'Mimosa Gold' Div. ?**

Parentage unknown

(Grown in New Zealand. Used as a parent of 'Sunseeker' by G. Geering. No further details.)

**'Mimosa Star' VI(b/c)**

Parentage: selection from Aurelian Group

S: E.C. Genat (c. 1954), N: E.C. Genat

Fls primrose-yellow throughout. Tepals only slightly reflexed. Stems up to 2.4 m. Mid Jan. (Australia).

(Published in *LYB* 20: 78 (1957).)**'Minaret' I(a-b/-)**Parentage: 'Amber Gold' × mixed pollen of *L. × scottiae* 'Roter Prinz' & 'Connecticut Yankee'

R: K. Braun (1981), N: K. Braun, REG: K. Braun (1984)

Inside nasturtium-orange; outside orange; pollen orange-brown. Fls 110 mm wide. Lvs dark green. Stems 1.3 m, with up to 20 fls. Early July.

**'Minerva' VI(b/a)**

Parentage: pink-flowered Aurelian × 'Bright Star'

R: B. Mičulka (pre 1984), N: B. Mičulka, REG: B. Mičulka (1985)

Inside cream-yellow, throat pale yellow, tepal-edges pink-veined; outside pale reddish-veined, midribs pale red-brown; pollen ochre. Fls 155 mm wide. Lvs 100 × 6 mm, dull green. Stems 1.3 m, lightly violet-dotted. Mid July.

**'Minerva' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: Vletter &amp; Den Haan Beheer B.V. (1984), G: Vletter &amp; Den Haan Beheer B.V. (1986), N: Vletter &amp; Den Haan Beheer B.V. (1990), I: Vletter &amp; Den Haan Beheer B.V.

Inside light reddish purple (74C); outside strong to light reddish purple (71C-74C); spots few, small, dark red (187B) in the throat; pollen strong orange (169C). Fls 170 mm wide; tepals 85 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 11 mm, mid green. Stems 1.5 m, green with darker markings, and with c.7 fls. May (under glass).

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. However this cv. was granted Dutch PBR in 1992 and although it cannot be registered, the epithet must be accepted.)

**'Ming' Div. ?**

Given as a parent of 'Cape Cod Marvel' and 'Captain Marvel', both raised by A. Scharf. No further details.

**'Ming Joy' VI(b/c)**

Parentage: derived from Saskawin Group

S: J.C. Ericksen (c. 1963), N: J.C. Ericksen

Fls yellow, scented. Stems 0.8 m. Aug.

**'Ming Yellow' I(a/-)**

Parentage: Sutter's Gold Group × 'Connecticut Lemonglow'

R: D.M. Stone &amp; F.H. Payne, N: D.M. Stone &amp; F.H. Payne, I: Oregon Bulb Farms, Inc. (c. 1976), REG: Oregon Bulb Farms, Inc. (1977)

Fls bright yellow with few spots. Lvs broad, glossy rich green. Stems 1-1.2 m, dark, with 20-30 fls. June.

(Published in *Lilies and other Liliaceae*, 1977: 79.)**'Miniatura' I(b/c)**

Misspelling of 'Miniaturā'.

**'Miniaturā' I(b/c)**

Parentage: 'Mantojums' × 'Monte Rosa'

R: D.-V. Škimele (1994), G: D.-V. Škimele (1996), N: D.-V. Škimele (1999), REG: D.-V. Škimele (2001)

Inside soft pink, tepals with darker centres and pale pink tips, throat pink; outside light pink, midribs yellow; spots small, dark red, on basal quarter of each tepal; nectaries white; pollen yellow; stigma maroon. Fls 115 mm wide; tepals 60 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 65 × 15 mm. Stems 0.5 m, green, with c.16 fls. Early July.

(Included in *ILR Twentieth Supplement* as 'Miniatura' which is a misspelling.)**'Mini Babe' I(b/b)**

Parentage: ('Edith Cecilia' × pink-flowered seedling) × ('Fantasy' × white-flowered seedling)

R: H. Mantel (1990), G: H. Mantel (1992), N: H. Mantel (1996), I: Mt Hood Lilies Inc., REG: Mt Hood Lilies Inc. (1996)

Inside white, shading to strong/moderate purplish pink (62A/B) at tepal-tips (a flush of strong/light purplish pink (62A/C) extends for 5-10 mm above nectaries in cool weather), throat white to pale pink; outside white or pale pink; spots numerous, tiny, magenta, on basal third of each tepal; nectaries green to white; pollen strong brown to dark reddish orange (172A/B); stigma soft purple. Fls 140-180 mm wide; tepals 70-90 × 25-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-200 × 7.5 × 20 mm, dark green. Stems 0.2-0.6 m, deep green, with 6-12 fls (from 12-16 cm bulbs) including secondary buds; buds hairy. Mid to late June.

**'Miniglow' I(b-c/-)**

Parentage: 'Odysseus' × (Hallmark Group × unknown)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1984), REG: B. Mičulka (1984)

Inside golden yellow, throat yellow; outside pale yellow, midribs beige; spots tiny, sparse, red-brown in the throat; nectaries whitish; pollen dark brown. Fls 150 mm wide; tepals 80 × 40 mm, margins slightly curled, tips recurved. Lvs 90 × 6 mm, dark green. Stems 0.4 m, dotted red-brown above. Late June.

**Minijill Group VII(-/-)**Parentage: *L. × parkmanii* × unknown

R: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1974)

Fls very pale to deep pink. Mostly resembling *L. × parkmanii* 'Jillian Wallace' in colour and shape, but smaller.**'Mini White' I(a/-)**

Parentage: 'Albipayne' × 'China'

R: H. Mantel, G: H. Mantel (1989), N: H. Mantel

(1996), I: Mt Hood Lilies, Inc. (1996), REG: Mt Hood Lilies, Inc. (1996)

Inside pure white; outside white with a hint of pink along midribs; unspotted or with a few, tiny, magenta spots at base of tepals; nectaries light green; pollen absent; stigma light purple to white. Fls 140-180 mm wide, double (with several narrow, more-or-less erect tepaloids; the stigma occasionally split into 2-3 lobes); normal tepals 70-80 × 20-30 mm, margins very slightly ruffled, tips slightly recurved. Lvs scattered, 100-150 × 7.5-20 mm, dark green. Stems 0.2-0.5 m, deep green to bronze-green, with c.7-20 fls (from 12-16 cm bulb). Mid June.

### 'Minnie' VII(-/-)

Parentage unknown

R: Mak Lelieveredeling B.V. (1984), G: Mak Lelieveredeling B.V. (1987), N: Mak Lelieveredeling B.V. (1994), I: Mak-Leek Inc. (1994), REG: Mak-Leek Inc. (1994)

Inside strong purplish pink (63C), shading to moderate purplish pink (62B) at tepal-tips, and to yellowish white (155D) and very pale purple (69A) at base; outside suffused with moderate purplish pink (62B) on a yellowish white (155D) ground, the colour strongest on outer tepals, midribs moderate red (181A) tinged with strong yellow-green (144A) at top; spots deep purplish red (59B), on basal part of each tepal; pollen moderate orange (167A); stigma greyish yellow-green (148D). Fls 230 mm wide; tepals 130 × 45 mm, slightly recurved. Lvs scattered, 120 × 56 mm, mid green. Stems 0.45 m, mid green, with c.4 fls.

### 'Minor' IX(c/d)

See *pardalinum* 'Minor'.

### 'Minos' I(c/d)

Parentage: ('Redbird' × 'Citronella') × (*lancifolium* var. *flaviflorum* × 'Destiny')

R: C. North, N: C. North, I: C. North (1976), REG: C. North (1976)

Fls vivid reddish orange (43D). Stems 1-1.1 m, hairy, with 12-25 fls and many bulbils. July.

(Published in *Lilies and other Liliaceae*, 1976: 92.)

### 'Minsk' VIII(a/b)

Parentage: seedling LAW 93-1 × seedling W 92-1

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2003)

Inside yellowish white (155D), throat light yellow-green (145D); outside yellowish white (155D), midribs light yellow-green (145D) with a little deep purplish pink (58D) at top; spots and papillae absent; nectaries strong yellow-green (143B); pollen dark red (183A); stigma moderate purplish pink (70D). Fls 170 mm wide; tepals 110 × 60 mm, margins smooth, tips slightly recurved. Lvs 120 × 23 mm. Stems 1.2 m, green with darker flush, with c.6 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

### 'Minstrel' I(a/b)

Parentage: seedling RS 894 × seedling RS 84-5

R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside strong pink/moderate purplish pink (54C/D), throat with a small, vivid red (52A) blush; outside pale purplish pink (56B), tepal-edges deep pink (51B), midribs light yellow-green (145C); spots absent; nectaries dark pink (182C); pollen dark reddish orange (175B); stigma yellowish pink. Fls 160 mm wide; tepals 80 × 38 mm, margins slightly ruffled, tips recurved. Lvs scattered, 130 × 15 mm, mid green. Stems 1.15-1.4 m, green, with 6-14 fls.

### 'Mint Fudge' I(a-b/-)

Parentage unknown

R: J. Wadekamper (1979), G: J. Wadekamper (1982), N: J. Wadekamper (1991), I: Borbeleta Gardens (1991), REG: J. Wadekamper (1993)

Fls light yellow (10C), throat lime-green; spots brown, on basal part of tepals; brushmarks clear-cut, triangular, brown; nectaries frosted white; pollen dark brown. Tepals 80 × 25 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 20 mm, mid green. Stems 0.95 m, green, with c.12 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1991.)

### 'Minuet' I(c/-)

Parentage: *cernuum* × *davidii*

R: J. de Graaff (c. 1962), N: J. de Graaff

Fls soft yellow. Stems 1.2-1.5 m. June to July.

(Published in *LYB* 28: 134 (1965).)

### var. *minus* IX(b/a)

See *washingtonianum* var. *minus*.

### 'Minutka' I(a/b)

Parentage unknown

R: M.F. Kireeva & N.V. Ivanova (1988)

Fls lilac-pink, paler in centre. Fls 100-110 mm wide.

Stems 0.7-0.8 m, with 7-11 fls. July.

(Published in M.F. Kireeva, *Lilii*, 48 (2000).)

### *miquelianum* Makino IX(a/c)

Syn. of *tsingtauense*.

### 'Mirabel' I(a/b)

Parentage: 'Kantilena' × 'Dagmar'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1995), REG: B. Mičulka (1995)

Inside peach with a beige tint, each tepal with a brown flare above the nectary, tip pale, throat paler; outside whitish, midribs brownish crimson; spots numerous, medium sized, brownish, on three-fifths of each tepal; nectaries white and peach-granulated; pollen brown; stigma beige. Fls 145 mm wide; tepals 85 × 45 mm, moderately recurved; pedicels 80 mm long, with numerous spots. Lvs scattered, 115 × 15 mm, dull dark green, slightly hairy. Stems 0.85 m, slightly brown-dotted. Late June.

**'Mirabella' I(a/b)**

Parentage: ('Orange Flame' × 'Corina') × 'Bel Ami'  
 R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V., I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (1999)  
 Inside strong red (53C & D), fading towards tepal-tips; outside vivid purplish red (57D) on a paler ground, tepals narrowly edged strong red (53C), tipped strong yellow-green (144B); spots dark red (187A), above nectaries; papillae light yellow-green (150D) in the throat; nectaries strong yellow-green (143B) with a little light yellow-green (150D); pollen dark reddish orange (175B); stigma strong red (53C). Fls 170 mm wide; tepals 90 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 10 mm, dark green. Stems 0.45 m, green with dark spots, and with c.5 fls. June.

**'Miracle' VII(a-b/b)**

Syn. of 'Rascal Miracle'.

**'Mirage' I(a/b)**

Parentage unknown  
 R: W. Windus (1975), N: Borbeleta Gardens (1981), I: Borbeleta Gardens (1982), REG: W. Windus (1981)  
 Basal two-thirds of tepals strong reddish orange (42B); apical third vivid yellow (13A); spots absent. Fls 90-100 mm wide. Tepal-margins smooth. Stems 0.6-1 m. (Published in *Borbeleta Gardens Cat.*, 1982.)

**'Mirage' VII(-/c)**

See *L. × parkmanii* 'Mirage'.

**'Miranda' IV(-/d)**

Parentage: complex *parryi* × *humboldtii* hybrid  
 R: J. de Graaff, N: J. de Graaff  
 Fls yellow.

**'Mirdza' IX(-/d)**

See *henryi* 'Mirdza'.

**'Mirella' I(a/b)**

Parentage: 'Jolanda' × orange-red-flowered seedling  
 R: De Jong Lelies Holland B.V. (1979), G: De Jong Lelies Holland B.V. (1980), N: De Jong Lelies Holland B.V. (1989), I: De Jong Beheer B.V., REG: De Jong Lelies (1990)  
 Inside vivid reddish orange (30A/B); outside vivid yellowish orange (30C), midribs with slight, light yellow-green (154D) tinges; pollen strong orange (169C). Fls 180 mm wide; tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 165 × 20 mm, dark green. Stems 0.95-1.2 m, green with darker markings, and with 5-12 fls. June to July.

**'Miriam' VI(c/d)**

Parentage: "Sunburst Aurelian" × 'Black Beauty'  
 R: R. Pappo (pre 1967), G: R. Pappo (1967), N: R. Pappo  
 Fls lemon yellow; spots and numerous papillae present; nectaries dark green. Fls slightly scented. Lvs like *henryi*. Stems 1.5-1.9 m. Late Aug.

**'Misaki' VII(-/c)**

Parentage unknown  
 R: Vletter & Den Haan, N: Vletter & Den Haan, REG: Vletter & Den Haan (1994)  
 Inside suffused with light purple (80D) on a greenish white (155C) ground, tepal-edges yellowish/greenish white (155/C); outside similarly coloured, midribs yellowish white (155B) shading to strong yellow-green (144C) at top, tepal-tips strong yellow-green (144A); spots moderate purplish red (59C), on two-thirds of each tepal; papillae yellowish white (155B); pollen dark reddish orange (175C); stigma moderate purplish red (186A/B). Fls 260 mm wide; tepals 140 × 70 mm, margins ruffled, tips slightly recurved. Lvs scattered, 160 × 40 mm, mid green. Stems 1 m, pale green, with c.2 fls.

**'Miss Alice' I(a/-)**

Syn. of 'Senhora Alice'.

**'Miss Blanche' I(a/-)**

Parentage unknown  
 R: Fa P. Hoff & Zn (pre 1986), N: Fa P. Hoff & Zn, REG: Hoffgaarde B.V. (2002)  
 Inside light yellow-green/light greenish yellow (2C/3C) at base and in throat, tepal-tips paler than pale greenish yellow (2D), markings dark brown; outside of inner tepals pale greenish yellow/pale yellow-green (2D/4D), with margins at base light greenish yellow (3C/D), outside of outer tepals pale greenish yellow/light greenish yellow (2D/3C), apex light greenish yellow (3C); spots and papillae present; stigma red-purple; pollen orange-brown. Tepal-margins smooth, tepals recurved. Lvs scattered, dark green. Stems light green, with darker markings.

**'Miss Bowen' Div. ?**

Given as a parent of 'Kylie'. No further details.

**'Miss Burma' VII(b/b)**

Syn. of 'Birma'.

**'Miss France' VII(b/b-c)**

Parentage unknown  
 R: Mak-Leek Inc. (pre 1994), N: Mak-Leek Inc., REG: ICRA (1998)  
 Inside magenta-pink, tepals deeper in centre and with paler edges, throat green; pollen orange. Tepal-margins ruffled, tips recurved. Stems 0.4 m, with c.8 fls. Early.

**'Miss Greece' VII(a-b/-)**

Parentage unknown  
 R: Mak Lelieveredeling B.V. (1984), G: Mak Lelieveredeling B.V. (1987), N: Mak-Leek Inc. (1992), I: Mak-Leek Inc. (1993), REG: Mak-Leek Inc. (2001)  
 Inside pale purplish pink (56A), paler at base and tepal-tips; outside pale purplish pink (56C); spots and papillae present; nectaries yellow-green; pollen orange; stigma dark purple. Fls 140 mm wide; tepals 80 × 50 mm, margins ruffled, tips recurved. Lvs scattered, 75 × 50 mm. Stems 0.28 m, green, with c.7 fls. Very early.

**'Mission Belle' I(a/d)**

Parentage: unnamed seedling × (('Sterling Star' × 'Aristo') × unnamed seedling)

R: R.H. Bazett (1989), G: R.H. Bazett (1991), N: R.H. Bazett (1997), REG: R.H. Bazett (1997)

Inside light yellow (10B), apical third of each tepal suffused with strong purplish red (58C) over the yellow ground, tips strong purplish red (58C), throat light yellow (10B); spots small, dark red (59A), scattered on basal half of each tepal; nectaries creamy yellow; pollen strong orange (169D); stigma dark. Fls 145 mm wide; tepals 85 × 45 mm, margins smooth, tips distinctly but not strongly recurved. Lvs scattered, 153 × 20 mm, mid green. Stems 1.54 m, mid green, with c.15 fls (occasional secondary buds). Late June. Tetraploid.

**'Mission Chimes' VI(c/a)**

Parentage: orange-flowered seedling × yellow-flowered seedling

R: C. Helsley (c. 1980), G: C. Helsley (1984), N: C. Helsley (2002), REG: C. Helsley (2003)

Inside brilliant yellow (20A); outside heavily brushed moderate reddish orange to strong yellowish pink (35B/C); spots absent; nectaries green; pollen vivid orange yellow (23A); stigma reddish. Fls 120 mm wide, strongly scented; tepals 140 mm long, inner 70 mm wide, outer 30 mm wide, margins slightly ruffled, tips slightly recurved, the outer more so. Lvs scattered, 120 × 15 mm. Stems 1.5-2 m, grey-green heavily dotted with dark red, with 5-8 fls. Mid June.

**'Miss Lucy' VII(a-b/b-c)**

Parentage unknown

R: J.W. & V.M. Blay, N: Hoffgaarde B.V. (2001), REG: Hoffgaarde B.V. (2003)

Inside yellowish white (155D), strong purplish pink (73B) towards top of some tepals, ageing to white; outside yellowish white (155D); spots few, purple-red, papillae present; nectaries light green; stamens, style and stigma absent. Fls double, scented; tepal-margins strongly ruffled, tips slightly recurved. Stems tall, with reddish markings. Early to midseason.

Syn.: 'Lucy'.

(Published in *Floriculture*, March 2001: 7. Named for the raisers' granddaughter. Nomenclatural standard: colour print supplied by registrant (WSY 0096343).)

**'Miss Norway' Div. ?**

Given as a parent of 'Ruby Flash'. No further details.

**'Miss Oregon' VII(-/-)**

Parentage unknown

R: Mak-Leek Inc. (pre 1996), N: Mak-Leek Inc.

Fls bright pink. Lvs dark. Stems 0.4 m.

(Published in *Parkland Perennials Cat.* 1996: 12.)

**'Miss Rosa' I(a/b)**

Parentage unknown

R: A. Winkler (c. 1985), N: A. Winkler

Inside pale old rose, throat deeper, the centre with a yellow tongue; outside whitish rose, midribs yellowish;

spots sparse, small, on a sixth of each tepal; nectaries white-frosted; pollen ochre. Fls 115 mm wide; tepals 70 × 13 mm, moderately recurved. Lvs 90 × 12 mm, dull light green. Stems 0.75 m, light green, with a short raceme. Early July.

(Included in *ILR Nineteenth Supplement* as an unacceptable name: ICNCP, 1995: Art.17.13 - *Rosa* is the botanical name of another genus and is the final part of the epithet. However, in 2004 this ICNCP Article was amended and this name is now accepted.)

**'Miss Universe' VII(-/b)**

Parentage: *L. × parkmanii* 'Excelsior' × Sakata-raised Oriental hybrid

R: Sakata Co. (1974), N: Sakata Co., I: Sakata Co. (1980), REG: ICRA (1997)

Fls pink, tepal-margins white, with a green and red ray down centre of each tepal; nectaries yellow. Fls 260 mm wide, sweetly scented. Stems 1.8 m. Early.

**'Miss World' VII(-/-)**

See *L. × parkmanii* 'Miss World'.

**'Mistral' I(a/-)**

Parentage: 'Pirate' × unknown

R: Gebr. De Vries B.V. (1979), G: Gebr. De Vries B.V. (1981), N: Gebr. De Vries B.V. (1982), I: Gebr. De Vries B.V. (1982), REG: Gebr. Van Zanten B.V. (1983)

Inside vivid yellowish orange (30C); outside light orange (28C), tepal-edges vivid reddish orange (30B); spots small, dark brown, in the throat; nectaries orpiment-orange; pollen burnt orange. Lvs 120 × 30 mm. Stems 0.9 m, green, with 6-12 fls.

**'Misty Dawn' I(b/-)**

Parentage: Sutter's Gold Group × flat, white-flowered *lancifolium* type

R: J. Wadkamper, N: J. Wadkamper (1977), REG: J. Wadkamper (1978)

Inside light cream blending to pink-orange, tepal-tips cream, throat pink with orange blush; outside darker tan; lightly spotted; nectaries pale; pollen brown. Tepals broad and thick, margins smooth. Lvs scattered. Stems 0.8 m. (Published in *Lilies and other Liliaceae*, 1978/9: 111.)

**'Misty Eyes' I(a-b/b)**

Parentage: brushmarked seedling × yellow-flowered brushmarked seedling

R: Cebeco Lilies, Inc., N: Cebeco Lilies, Inc., REG: ICRA (1998)

Inside creamy yellow; brushmarks small, plum-coloured; nectaries green. Tepals slightly recurved. Stems 1 m. Midseason.

**'Misty Moon' I(-/c)**

Parentage: (yellow-flowered Asiatic seedling × 'Connecticut King') × (Oregon Bulb Farms white-flowered, up-facing Asiatic seedling × brushmarked seedling)

R: T. Wadkamper (1978), G: T. Wadkamper (1980), N: T. Wadkamper (1983), I: Borbeleta Gardens (1984),

REG: Borbeleta Gardens (1984)

Fls light cream, throat dark cream to yellow; spots and lines few, light brown, in centre; nectaries frosty white; pollen brown. Tepals 85 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 75 × 18 mm, mid green. Stems 0.6 m, mid green, with 12-15 fls. Late June. (Published in *Borbeleta Gardens Cat.*, 1984.)

**‘Misurina’ I(c/-)**

Parentage: ‘Amber Gold’ × ‘Sonnentiger’  
R: V. Strasser (1975), G: V. Strasser (1978), N: V. Strasser (1990), I: V. Strasser (1990), REG: V. Strasser (1991)  
Fls vivid yellow (14A), with a white-frosted star in the centre; spots purple, on two-thirds of each tepal; nectaries green; pollen brown. Tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 14 mm, dark green. Stems 1.3 m, almost black, with c.26 fls. Late July.

**‘Mitchurinka’ I(b/-)**

Unaccepted spelling of ‘Michurinka’.

**‘Mittenwald’ VI(-/a)**

Parentage: yellow-flowered Aurelian seedling × orange-flowered Aurelian seedling  
R: V. Strasser (1973), G: V. Strasser (1976), N: V. Strasser (1980), I: V. Strasser (1985), REG: V. Strasser (1997)  
Fls brilliant yellow (13B). Tepals 145 mm long, margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.75 m, rather dark green, with up to 18 fls. Mid July.

**Miura-ki-himeyuri Group IX(a/c)**

See *concolor* Miura-ki-himeyuri Group.

**‘Miuro’ I(a/-)**

Parentage: seedling W 387 × seedling RS 751  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside pale yellow-green/pale greenish yellow (155A/2D); outside pale yellow-green (155A/4D); spots absent; nectaries orange. Fls 180 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 13 mm, mid green. Stems 1.05 m, pale green with slightly darker markings, and with c.9 fls. May.

**‘Miyabi’ VIII(a-b/a-b)**

Parentage unknown  
REG: World Breeding B.V. (2003)  
Inside and outside deep purplish red (187D); spots and papillae absent; nectaries purple-red on a greenish ground; pollen orange-brown; stigma orange-yellow. Tepal-margins slightly ruffled, tips slightly recurved. Stems 0.7-1.1 m, with few fls. Midseason.

**‘Mizar’ VI(b/a)**

Parentage: ‘Kord’ × ‘Andrea’  
R: K. Braun, N: K. Braun, I: K. Braun (2001), REG: K. Braun (2002)  
Inside pastel orange with paler tepal-edges, throat green;

outside orange, green at base, midribs orange; spots absent; nectaries green; pollen chocolate-brown; stigma pale green. Tepals 130 × 43 mm, margins slightly waved; pedicels 100 mm long, pale green. Lvs scattered, 115 × 15 mm. Stems 1.25 m, brownish green, with a moderately long infl. Mid July.

**‘Mlada’ I(a/b)**

Parentage unknown  
R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1993)  
Fls apricot with spots at base of tepals. Fls 110-130 mm wide. Stems 1.1-1.3 m, with 15-20 fls. June. (Published in M.F. Kireeva, *Lilii*, 55 (2000).)

**‘Mlechnyi Put’ I(a/-)**

Parentage unknown  
R: M.F. Kireeva (1982)  
Fls pale yellow; spots many, dark brown. Fls 160-170 mm wide. Stems 0.8-0.9 m, with 7-12 fls. July. (Published in M.F. Kireeva, *Lilii*, 42 (2000).)

**‘Mocha’ Div. ?**

Given as a parent of ‘Truver’. No further details.

**‘Modena’ I(a/b)**

Parentage: seedling 84316-1 × seedling G 90-14  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)  
Inside strong orange (24A), shading to vivid orange-yellow (23A) towards tepal-tips and with a little strong orange (25A) towards edges; outside brilliant orange-yellow (23B) on a paler ground; spots absent; papillae few, strong orange (24A); nectaries moderate olive-green (137A) and pale orange-yellow (24D); pollen greyish red (178A); stigma dark red (183A). Fls 200 mm wide; tepals 100 × 35-50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 15 mm, dark green. Stems 1.15-1.3 m, green with dark spots at the base, and with 6-8 fls (from 14-16 cm bulbs).

**‘Modern’ I(b/-)**

Misspelling of ‘Modernā’.

**‘Modernā’ I(b/-)**

Parentage: selection from Skumstu Group  
S: V.P. Orehov (post 1956), N: V.P. Orehov  
Fls orange-red.  
(Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as ‘Modern’ which is a misspelling.)

**‘Modern Art’ VII(-/b)**

Parentage: (*speciosum* × ‘Star Gazer’) × (*L.* × *parkmanii* ‘Allegra’ × ‘Star Gazer’)  
R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1994)  
Inside yellowish white (155D), slightly suffused with strong reddish purple (70B) towards top; outside

yellowish white (155D) suffused with strong reddish purple (70B), tepal-edges yellowish white (155D), midribs pale yellow-green (155A) suffused with strong reddish purple (70B) and tipped strong yellow-green (144B); spots and papillae pale yellow-green (155A) on two thirds of each tepal; pollen strong orange (169C); stigma moderate yellow-green (147D). Fls 280 mm wide; tepals 140 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 50 mm, mid green. Stems 1 m, pale green, with c.4 fls.

**‘Modern Style’ VIII(a/-)**

Parentage: (‘Harmony’ × (‘Tabasco’ × ‘Connecticut Yankee’)) × (*longiflorum* × ‘Aristo’)  
R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1993), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside paler than pale orange-yellow (24D) and paling still further with age, throat strong orange (26B); outside pale orange-yellow (24D); spots and papillae present; nectaries orange; pollen red-brown; stigma purple-red. Tepal-margins smooth, tips slightly recurved. Lvs scattered, green. Stems 1.15 m, with a little darker striping and splashing, and with c.5-7 fls. Early. (A *longiflorum*/Asiatic (LA) hybrid.)

**‘Modes Dāma’ I(a/b)**

Parentage unknown  
R: J. Vasarietis (1989), G: J. Vasarietis (1992), N: J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J. Vasarietis (1999)  
Inside pale orange-yellow (23D) in centre of fl., shading to pale yellow (20C) and light/pale yellowish pink (27A/C) at tepal-tips; outside light yellowish pink (27B); spots fairly large, deep purple, on basal two-thirds of tepals; nectaries white on a green ground; filaments brownish orange; pollen orange brownish; stigma brownish. Fls 150 mm wide; tepals 82 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 8 mm, mid green. Stems 1-1.2 m, green, with c.10 fls. Early July. Trade designation: FASHION-MONGER. (Published in *Lilium Balticum Cat.*, 1996. Nomenclatural standard: colour print provided by registrant (WSY 0023025).)

**‘Modest’ I(a/-)**

Misspelling of ‘Modiste’.

**‘Modesty’ VI(c/-)**

Parentage: Aurelian Group × seedling 56-21  
R: C. Yerex (c. 1960), N: C. Yerex  
Fls saffron-yellow (HCC 7/1), blending to saffron-yellow (HCC 7/3) at tepal-tips. Tepal-tips strongly recurved.

**‘Modiste’ I(a/-)**

Parentage: *dauricum* × unknown  
R: V.P. Orehovs, N: V.P. Orehovs  
Fls apricot-pink, centre yellow; spots brown. Fls 125 mm wide. Stems up to 1 m, with 3-4 fls.

(Published in *LYB NALS* 15: 101 (1962) and included in *ILR* (1982) as ‘Modest’ which is a misspelling.)

**‘Modnitza’ I(b/-)**

Parentage: ‘Svetlana’ × (‘Redstart’ × ‘Dora Pinnow’)  
R: B.P. Guzhavin, N: B.P. Guzhavin (1981)  
Fls pale cream with a few, large spots. Stems 1.3 m, with bulbils.  
(The seed parent is probably ‘Svetlana’ of Kireeva.)

**‘Mogul’ I(a/-)**

Parentage: *dauricum* × *L. maculatum*  
R: J. de Graaff (pre 1959), N: J. de Graaff  
Fls yellow heavily spotted with maroon. Stems 1-1.2 m. Syn.: ‘Spotlight’.  
(Published in *Oregon Bulb Farms Cat.*, 1959. Previously named ‘Spotlight’.)

**‘Mohawk’ I(b/d)**

Parentage: (*dauidii* var. *willmottiae* × ‘Edna Keen’) × ‘Redbird’  
R: E.F. Palmer, N: E.F. Palmer (1963), I: Horticultural Experiment Station (1963), REG: (1983)  
Fls dark red. Stems 1-1.2 m, with up to 40 fls. July. (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

**‘Mohykán’ I(a/b)**

Parentage: ‘Chinook’ × ‘Wattle Bird’  
R: B. Mičulka (pre 1988), N: B. Mičulka, REG: B. Mičulka (1988)  
Inside pale bright orange, tepal-tips paler, throat pale apricot; outside pale orange with beige-tinted midribs; spots moderately numerous, medium sized, dark brown, on a quarter of each tepal, and an indication of a brushmark; papillae in the throat; nectaries pale salmon; pollen orange. Fls 140 mm wide; tepals 75 × 40 mm, not recurved; pedicels pale green. Lvs scattered, 70 × 10 mm, dull green. Stems 1.2 m, brown-spotted, all the fls in the large infl. open simultaneously. Mid July.

**‘Moi Koster’ I(b/c)**

Parentage: (‘Stroinaia’ × *dauidii* var. *willmottiae*) × ‘Enchantment’  
R: M.F. Kireeva (1972), N: M.F. Kireeva  
Fls bright orange-red; spots present; filaments pale orange; anthers smoky purple with brownish pollen. Fls 120-130 mm wide. Stems 1-1.2 m, with 18-39 fls. July. (Published in M.F. Kireeva, *Lilii*, 56 (1984). Included in *ILR Fourth Supplement* as ‘Moy Koster’ which is an unaccepted spelling.)

**‘Moiré’ I(a/-)**

Parentage unknown  
R: W. Windus (1969), N: W. Windus (1973), REG: W. Windus (1973)  
Fls vivid reddish orange (33B) (variable). Tepal-margins smooth. Lvs 125 × 13 mm, dark green. Stems 1 m. Late June. (Published in *Lilies and other Liliaceae*, 1973/1974: 110.)

**'Mojave' VII(a/b-c)**

Parentage: seedling 89230 × seedling LR 40  
 R: Sande B.V., REG: Sande B.V. (2003)  
 Inside strong to light purplish pink (73B/C), midveins brilliant yellow (13C) in basal third, strong red (53B/C) in apical two-thirds; outside light purplish pink/very pale purple (73C/D), outer tepals also strong red (53B) along midribs; spots and papillae present; nectaries green; pollen red-brown; stigma grey-green. Tepals medium sized, margins ruffled, tips recurved. Stems tall, with c.6 fls. Early to midseason.

**'Mokka' I(b-c/c)**

Parentage: (((('Nutmegger' × 'Connecticut Red') × 'Kytice') × unknown) × (('Potstar' × 'Stellar Gleam') × 'Majáles')  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002), REG: B. Mičuka (2002)  
 Inside reddish brown on a bronze ground, tepals with a narrow bronze rim and bronze around nectaries; outside with brownish white at centre, midribs yellowish; spots numerous, medium sized, dark red-brown, on over half of each tepal; nectaries slightly open, finely white-granulated; pollen ochre-brown; stigma brownish. Fls 100 mm wide; tepals 58 × 40 mm, slightly recurved; pedicels 60 mm long, lightly spotted. Lvs scattered, 70 × 10 mm, dark green. Stems 0.85 m, thick, green, with a moderately long infl. Mid June.

**'Molfetta' VII(a/b)**

Parentage unknown  
 R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)  
 Inside deep purplish red (59B/187D), throat greenish white (155C); outside with outer tepals deep purplish red (59C/187D), with some strong/light yellow-green (144C/145D) at base, light yellow-green (150D) along midribs, strong yellow-green (144A) at top, inner tepals moderate/strong purplish red (64A/B), at base on greenish white (155C) ground, midribs strong yellow-green (144C) at base, light yellow-green/moderate to strong purplish red (150D/64A/B) at top; spots absent; papillae greenish white (155C) and moderate/strong purplish red (59C/D); nectaries strong yellow-green (144B); pollen strong orange (25A); stigma moderate purple (79D). Fls 230 mm wide; tepals 133-145 × 34-74 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 159 × 34 mm. Stems 0.95-1.1 m, light green, with c.3 fls.  
 (The fl. colour darkens with age.)

**'Molly' I(a/b)**

Parentage unknown  
 R: E.A. McRae, I: Columbia-Platte Lilies (pre 1985), REG: ICRA (1998)  
 Inside pale orange-peach, tepal-tips paler; spots sparse, tiny, purplish black, on a fifth of each tepal; pollen orange. Fls 110 mm wide; tepals 100 × 47 mm, slightly recurved. Lvs scattered, 95 × 10 mm, yellow-green. Stems 0.75 m, slightly spotted brownish. Late June.

**'Molly Stark' I(-/-)**

Parentage: 'Grace Marshall' × unknown  
 R: W.C. Horsford, N: W.C. Horsford  
 Fls tangerine.  
 (Published in *Horsford Cat.*, 1950/51 and *LYB NALS* 4: 56 (1951).)

**'Molly Williamson' I(a/-)**

Parentage: 'Redbird' × *L. × hollandicum*  
 R: S.V. Gilkison (pre 1963), N: S.V. Gilkison  
 No further details.

**'Molodost' I(c/-)**

Parentage: selection from Tsvetaevoi Group  
 S: Z.N. Tsvetaeva (c. 1940)  
 Fls dark pink at tepal-tips, centre yellow, with many brown stripes. Fls 100-110 mm wide, more-or-less unscented. Stems 1-1.3 m, with 7-13 fls. May to June. (Published in *Lilies and other Liliaceae*, 1975: 28 and included in *ILR* (1982) as 'Molodostj' which is an unaccepted spelling.)

**'Molodostj' I(c/-)**

Unaccepted spelling of 'Molodost'.

**'Molten Gold' IX(b/c)**

See *auratum* 'Molten Gold'.

**'Mombasa' VIII(a/b)**

Parentage: seedling BG 95-71 × seedling OR 93-20  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2003)  
 Inside deep red (185A) on a moderate red (185B) ground, suffused with deep orange-yellow (163A) above nectaries for a third of each tepal, throat brilliant yellow-green (150C); outside with moderate yellow (160A) midribs flanked by deep pink (180D) and shading out to moderate red (183D) at margins; spots dark red (187B); papillae absent; nectaries moderate yellowish pink (179D); pollen strong orange (24A); stigma brilliant orange (25C). Fls 170 mm wide; tepals 130 × 50-60 mm, margins smooth, tips recurved. Lvs scattered, 150-160 × 20-25 mm, mid green. Stems 1-1.3 m, green with darker markings, with c.4 fls.  
 Syn.: 'Sonatina'.  
 (*A. longiflorum*/Asiatic (LA) hybrid. Originally registered in *ILR Twenty-first Supplement* as 'Sonatina' but, because of confusion with Mičulka's 'Sonatina', when Dutch and European PBR were granted in 2002 to the Dutch lily, the epithet was changed to 'Mombasa'.)

**'Momentum' VII(-/c)**

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × *L. × parkmanii* Little Rascal Group  
 R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1993)  
 Inside yellowish white (155B), midveins brilliant yellow

(12B) along two-thirds of length, suffused with light yellow alongside, throat vivid yellow (14A); outside yellowish white (155D) suffused with light greenish yellow/pale yellow (8C/D) along the pale yellow-green (4D) to light greenish yellow (3C) midribs, tipped strong yellow-green (143C); moderate brown (165A) spots on two-thirds of each tepal, and vivid yellow (14A) spots in the throat; pollen strong orange (169C); stigma dark purple (79B). Fls 150 mm wide; tepals 80 × 55 mm. Lvs scattered, 90 × 50 mm, dark green. Stems 0.2 m, pale green, with c.5 fs.

Trade designation: RASCAL MOMENTUM.

**‘Momentum’ VII(c/-)**

See ‘Rascal Momentum’.

**MONA I(a/b)**

Trade designation of ‘Monaco’.

**‘Monaco’ I(a/b)**

Parentage: yellow-flowered seedling × ‘Connecticut King’  
R: De Jong Beheer B.V. (1980), G: De Jong Beheer B.V.,  
N: De Jong Beheer B.V., REG: De Jong Beheer B.V. (1989)

Inside vivid yellow (9A), throat flushed with yellow-green (144B); outside vivid yellow (9B), outer tepals flushed with greyish red to dark pink (182B/C); spots absent; pollen dark reddish orange (175C). Fls 175 mm wide; tepals 90 × 50 mm, margins smooth, tips scarcely recurved. Lvs scattered, 95 × 15 mm, mid green. Stems 0.6-1 m, green with darker markings, and with 6-9 fs. June to July.

Trade designation: MONA.

***monadelphum* M. Bieb. IX(c/d)**

Inside pale to mid yellow; outside flushed with purple-brown at base; spots few, purple or maroon; filaments joined at base or not; anthers maroon or brown; pollen orange or yellow. Fls up to 100 mm wide, scented; tepals 60-100 × 10-22 mm, varying in degree of recurvature, tips blunt. Lvs scattered, 50-140 × 10-30 mm, glossy green. Stems 0.5-2 m, with 1-5 (-30) fs. June to July. NE Turkey, Caucasus.

Syn.: *szovitsianum*.

(There is a lily from the Caucasus that is sometimes grown under the epithet *kosa* or *kossii*. Neither epithet is valid, having never been published with a Latin description. The fs were said to be flushed with pink, but bulbs grown in Moscow, Riga and at RHS Garden Wisley, produced pale yellow fs like those of *monadelphum*.)

***monadelphum* var. *armenum* (Mishchenko) P.H. Davis & Hend. IX(c/d)**

Inner tepals 10-16 mm broad, with pointed tips. NE Turkey, Armenia.

Syn.: *szovitsianum* var. *armenum*.

**‘Mona Lisa’ VII(b/b-c)**

Parentage: ‘Star Gazer’ × seedling F 4431-77

R: Vletter & Den Haan, G: Vletter & Den Haan (1982),

N: Vletter & Den Haan (1988), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1991)

Inside light reddish purple (74C), tepal-edges ivory-white, blushed strong red (53C) and changing to very pale purple (69C) with a blush of light reddish purple (74C), tips strong yellow-green (143A), throat strong yellow-green (144C) edged brilliant yellow (9C); outside deep to moderate purplish pink (70C/D), tepal-edges ivory-white, changing to light to pale purplish pink (62C/D), with a lilac-purple blush; spots and papillae dark red (183A/187A), on basal part of each tepal; nectaries light greenish grey (188C), spotted dark purple (79A); pollen dark reddish orange (175B/C). Fls 185 mm wide; tepals 95 × 50 mm, margins smooth to very slightly wavy, tips not recurved. Lvs scattered, 150 × 55 mm, mid green. Stems 0.45 m, green, with c.6 fs. July (under glass).

**‘Monarch’ I(a/b)**

See *L. × hollandicum* ‘Monarch’.

**‘Mondeo’ VII(a/b-c)**

Parentage: (*speciosum* var. *rubrum* ‘Marvellous’ × ‘Star Gazer’) × ‘Casa Blanca’ × ‘Hit Parade’

R: Bischoff Tulleken Lelies B.V., G: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (1995), I: H.J.A. Rooyakkers B.V. (1997), REG: H.J.A. Rooyakkers B.V. (1997)

Inside and outside strong purplish pink (68B), paling at the base inside to almost yellowish white (155D); spots dark pink; nectaries yellow-green; pollen brown; stigma green. Tepal-margins ruffled, outer more so, tips recurved. Stems green with darker spots and stripes. Midseason.

**‘Mondino’ I(b/c-d)**

Parentage: (‘Quinella’ × unknown) × (‘Juno’ × ‘Honey Creme’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1999), REG: B. Mičulka (1999)

Inside creamy yellow, each tepal with a yellow centre, throat whitish; outside paler with brownish midribs; spots very numerous, medium sized, pink-brown, on three-quarters of each tepal; papillae present; nectaries strongly white-frosted; pollen ochre brown; stigma pale yellow. Fls semi-globular, 115 mm wide; tepals 65 × 31 mm, strongly recurved; pedicels 60 mm long, dotted, with secondary buds. Lvs scattered, 100 × 7 mm, dull dark green. Stems 0.7 m, dark green. Late June.

**‘Mondlicht’ I(a/-)**

Parentage unknown

R: J. Klein, N: J. Klein, REG: ICRA (1997)

Fls light yellow. Stems 1.2 m, with up to 25 fs, including secondary buds. Early July.

(Published in European Lily Society sales list, 1996.)

**‘Mondriaan’ VII(a/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den

Haan Beheer B.V. (1999)

Inside yellowish white (155B), tepal-edges strong purplish red (71C) on a white ground, midveins strong purplish red (60B) at top, throat with light greenish yellow (4C) along the nectaries; outside yellowish white (155B), tepal-edges vivid purplish red (57C), vivid purplish red (57C) along midribs, midribs strong yellow-green (144C) tipped strong yellow-green (143A); spots deep purplish red (71A), on up to two-thirds of each tepal; papillae yellowish white (155B) and light greenish yellow (4C), in the throat; nectaries strong yellow-green (143B); pollen strong brown (172A); stigma dark purplish pink (186C) with a moderate purplish red (186A) vein. Fls 220 mm wide; tepals 110 × 40-65 mm, margins ruffled, outer more so, tips slightly recurved. Lvs scattered, 190 × 35 mm, dark green. Stems 1.3 m, green with darker markings, and with c.3-8 fls.

#### 'Mondschein' II(-/d)

See *L. × dalhansonii* 'Mondschein'.

#### 'Mondscheinsonate' I(a/b)

Parentage: ('Medora' × 'Mont Blanc') × ('Apricot' × *L. × hollandicum*)

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), REG: G. Steinbrück (1996)

Fls pale yellow (158A), tepal-margin slightly darker; spots minute, greyish reddish brown (200B), on basal third of each tepal; nectaries light yellowish green (135D); pollen strong brown (172A); stigma dark. Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, not recurved. Lvs scattered, 70 × 12 mm, mid green. Stems 1 m, rather dark green, with c.15 fls. Late June to early July.

(It is not known whether the 'Apricot' in the pollen parent is 'Apricot' (of Rohrmeier) or *L. × hollandicum* 'Apricot'.)

#### 'Moneymaker' VIII(a/b)

Parentage: white-flowered seedling × (*longiflorum* × pink-flowered seedling)

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1994),

REG: Bischoff Tulleken Lelies B.V. (1995)

Inside light purplish pink (73C); outside moderate purplish pink (68C); spots and papillae present; nectaries green; pollen pale brown; stigma green. Tepals 124 × 36 mm, margins smooth, tips slightly recurved. Lvs scattered, 237 × 18 mm, mid green. Stems 1.1 m, with dark spots and stripes, and with 4-6 fls (from 14-16 cm bulbs). Midseason to late.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Mongol King' I(b/-)

Parentage: selected form of (*davidii* var. *willmottiae* × *davidii* var. *unicolor*) × 'Honey Queen'

R: N. Martschinke (1980), G: N. Martschinke (1984), N: N. Martschinke (1996), REG: N. Martschinke (1997)

Inside light yellowish pink (27B). Stems 1.3 m, with up to 45 fls (including up to 12 secondaries which are held

obliquely to the primary buds). Early July. (A *longiflorum*/Asiatic (LA) hybrid. Published in European Lily Society sales list, 1996.)

#### 'Mongol Queen' I(b/-)

Parentage: selected form of (*davidii* var. *willmottiae* × *davidii* var. *unicolor*) × 'Honey Queen'

R: N. Martschinke (1980), G: N. Martschinke (1984), N: N. Martschinke (1996), I: N. Martschinke (1996), REG: N. Martschinke (1997)

Inside light yellowish pink (27B). Stems 1.3 m, the fls in a broader infl. than 'Mongol King', up to 40 per stem (including secondaries which have their pedicels close to the main axis). Early July.

(Published in European Lily Society sales list, 1996.)

#### 'Monica' I(b/-)

Parentage: 'Redstart' × red-flowered Asiatics

R: M.F. Kireeva (c. 1976), N: M.F. Kireeva  
Tepals black-red, broad. Stems 0.6 m, with bulbils. July.

#### 'Monica Hales' I(a-b/-)

Parentage: 'Unique' × pink-flowered seedling

R: M.D. Holloway (1992), G: M.D. Holloway (1993), N: M.D. Holloway (1995), I: M.D. Holloway (1995),

REG: M.D. Holloway (1995)

Inside pink, blended with touches of cream, the strong, raised furrow (from nectary to tepal-tip) a deeper pink; outside rose-pink, midribs green (stronger on outer tepals); spots absent; nectaries coloured as the raised furrow; pollen light orange. Fls 190 mm wide, scented; tepals 11 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 24 mm, dark green. Stems 1.17 m, green mixed with brown, with c.11 fls. Mid July to mid Aug.

#### 'Monique' I(a/b-c)

Parentage: unnamed seedling × unnamed seedling

R: R.H. Bazett (1990), G: R.H. Bazett (1992), N: R.H. Bazett (2002), I: The Lily Nook (2002), REG: R.H. Bazett (2002)

Inside strong purplish red (63B) shading to strong purplish pink (63C), each tepal paling in the centre towards a pale yellow (11C) throat; outside deep purplish pink (64D) with some green on the midribs; spots dark purple (79A), elongated (c.2 mm long), on the basal 40 mm of each tepal; nectaries pink to pale green; pollen moderate orange (167A); stigma dark purple. Fls 180 mm wide; tepals 100 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 155 × 19 mm. Stems 1-1.4 m, dark green, with c.10 fls. June to July. Tetraploid. (Nomenclatural standard: colour print provided by registrant (WSY 0035137).)

#### 'Monolithos' I(a/-)

Parentage: 'Byam's Yellow' × 'Parabola'

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1980), I: V. Strasser (1988), REG: V. Strasser (1997)

Inside vivid yellow (14A); outside yellow; spots purple, elongated, on half of each tepal; nectaries forming a frosted central star. Tepal-margins smooth, tips slightly

recurved. Lvs scattered, dark green. Stems 1.05 m, rather dark green, with up to 10 fls. Early July.

**'Monopoli'** I(a/-)

Parentage: (red-flowered, bowl-shaped seedling of 'Tabasco' × 'Tabasco') × 'Connecticut Bronze'  
R: V. Strasser (1977), G: V. Strasser (1980), N: V. Strasser (1981), I: V. Strasser (1984), REG: V. Strasser (1997)  
Fls deep red (185A) with yellow midveins. Tepals 90 mm long, margins smooth, tips not recurved. Lvs scattered, 120 × 14 mm, dark green. Stems 1.2 m, almost black, with up to 16 fls. Early July.

**Monostrahlen Group** I(-/-)

Parentage unknown  
R: unknown (pre 1982)  
Inside yellow; spots absent. Stems 1-1.2 m. June to July.

**var. monstrosum** IX(b-c/d)

See *speciosum* var. *monstrosum*.

**'Monstrosum'** IX(b-c/d)

Syn. of *speciosum* var. *monstrosum*.

**'Monstrosum Rubrum'** IX(b-c/d)

See *speciosum* 'Monstrosum Rubrum'.

**'Monta'** I(a/c)

Parentage: 'Montreux' × 'Veronika'  
R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)  
Inside deep pink (52B) with a vivid reddish orange (33B) centre and a greenish throat; outside light red; spots large, dark brown, on half of each tepal; nectaries light green; pollen yellow-brown. Fls 160 mm wide; tepals 90 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 1.1 m, green, with c.4 fls. Early July.

**'Montana'** VII(b-c/b)

Parentage: 'Star Gazer' × *L. × parkmanii* 'Allegra'  
R: Lybelmex Hillegom B.V. (1981), G: Lybelmex Hillegom B.V. (1984), N: Lybelmex Hillegom B.V. (1987), I: Lybelmex Hillegom B.V. (1987)  
Inside greenish white (155C); outside transparent white with rosy midribs; papillae white; nectaries light yellow-green (145B); pollen reddish brown. Fls 280 mm wide; tepals 110 × 60 mm, margins smooth. Lvs scattered, 135-200 × 40-60 mm, mid green. Stems 0.65-1.4 m, pale green, with 7-11 fls (from 18-20 cm bulbs). July.  
(Under previous ICNCP rules, the name (as published in *ILR Twentieth Supplement* was unacceptable - being in Latin. However, in ICNCP, 2004, the rule changed and because 'Montana' is also a place name, this name is now acceptable (Art. 19.14).)

**'Mont Blanc'** I(a/b-c)

Parentage: Yellow Blaze Group × seedling 137  
R: Gebr. Vletter & J.A. Den Haan (c. 1978), N: Gebr. Vletter & J.A. Den Haan

Fls white, slightly spotted in centre; pollen orange. Stems 0.7-1.2 m, with 7-12 fls. June.

**'Monte Carlo'** I(b/-)

Parentage: *lancifolium* × unknown  
R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V.  
Fls clear yellow.

**'Monte Christo'** VII(a-b/b)

Parentage: seedling 637 × 'Barbaresco'  
R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1994), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)  
Inside strong purplish red (63B), each tepal paler towards the edges and with a white base, midveins yellow changing into purple; outside deep purplish pink (64D); spots and papillae present. Tepal-margins of outer tepals strongly ruffled, tips recurved. Stems 1.4 m, green with darker markings, and with c.6 fls. Early to midseason.

**'Monte Fuji'** VII(-/d)

Parentage: unnamed seedling × 'Star Gazer'  
R: Vletter & Den Haan (1981), G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)  
Inside yellowish white (155B), midveins somewhat darker yellowish white (155D), throat strong yellow-green (144B); outside yellowish white (155D), midribs pale yellow (8D); papillae ivory-white, in the throat; pollen brownish orange (171B). Tepals 115 × 52 mm, margins smooth, tips strongly recurved. Lvs scattered, 190 × 50 mm, mid green. Stems 1.1 m, green, with 7-9 fls. May to June (under glass).

**'Monte Karay'** VI(b/b)

Parentage unknown  
R: Vletter & Den Haan (1986), G: Gebr. Kapiteijn B.V., N: Vletter & Den Haan (1989), I: Gebr. Kapiteijn B.V. (1995), REG: Gebr. Kapiteijn B.V. (1997)  
Inside strong purplish red (63A) on a yellowish white (155D) ground, midveins strong purplish red (63A) fading towards the top, throat yellowish white (155D); outside strong purplish red (63B) on a yellowish white (155D) ground, midribs strong purplish red (63A), outer tepals a little darker; spots dark red (59A), on basal part of each tepal; papillae yellowish white (155D) and a few strong purplish red (63A), in the throat; nectaries strong yellow-green (144B) with a light greenish yellow (8C) edge; pollen moderate orange (167A); stigma greenish white (157D). Fls 180 mm wide; tepals 100 × 35 mm, margins slightly ruffled, tips of outer tepals strongly recurved. Lvs scattered, 180 × 45 mm, green. Stems 0.8 m, dark, with c.7 fls.

**'Monte Negro'** I(a/b)

Parentage: unnamed seedling × unnamed seedling  
R: Gebr. Vletter & J.A. Den Haan (1979), G: Gebr. Vletter & J.A. Den Haan (1981), N: Gebr. Vletter & J.A. Den Haan (1984), I: Gebr. Vletter & J.A. Den Haan (1984), REG: Gebr. Vletter & J.A. Den Haan (1985)

Inside vivid red (46B) flushed with moderate red (180A); outside with outer tepals moderate red (181A), inner tepals vivid reddish orange (44C); spots tiny, oxblood-red, in the throat; nectaries Indian lake; pollen orange. Fls 185 mm wide; tepals 90 × 45 mm, slightly recurved. Lvs scattered, 130 × 15 mm, dark green. Stems 1-1.1 m, dark green, with 7-10 fls. July.

#### **Monterey Group IV(-/-)**

Parentage: result of open pollinations of *parryi*, *pardalinum*, *pardalinum* subsp. *pitkinense*, *humboldtii* var. *ocellatum*, *maritimum*, *kelloogii*, *bolanderi* & *washingtonianum*

R: E. Mayell (pre 1964), N: E. Mayell  
Very variable in colour and height.

#### **'Monte Rosa' I(a/b-c)**

Parentage: unnamed seedling × unnamed seedling  
R: Gebr. Vletter & J.A. Den Haan (1979), G: Gebr. Vletter & J.A. Den Haan (1980), N: Gebr. Vletter & J.A. Den Haan (1984), I: Gebr. Vletter & J.A. Den Haan (1984), REG: Gebr. Vletter & J.A. Den Haan (1985)  
Inside strong pink (49A) to strong pink (48D), throat blotched nasturtium-orange; outside deep/strong pink (48A/C), midribs brown-yellow on a pale pink ground; nectaries green-yellow; pollen orpiment-orange. Fls 155 mm wide; tepals 75 × 45 mm. Lvs scattered, 155 × 22 mm, dark green. Stems 1-1.25 m, pale green, with 7-10 fls. July.

(Published in *Bloembollencultuur*, 1984.)

#### **'Montevideo' VII(b/b-d)**

Parentage unknown

G: Sande B.V. (1985), N: Sande B.V. (1987), I: Van Dijk, Sande B.V. & G. Verdegaal (1988), REG: Sande B.V. (1989)

Inside yellowish white (155D), midveins light yellow (10B), throat strong to light yellow-green (144C/D); outside yellowish to greenish white (155B/C), flushed with pale yellow (8D) along midribs; papillae small, greyish red/dark reddish orange (187A/B), at margins of inner tepals; pollen dark reddish orange (175C). Fls 235 mm wide; tepals 115 × 65 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 40 mm, mid green. Stems 1.1 m, green, with c.7 fls. Aug.

#### **'Montezuma' VII(a-b/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside dark red (59A), throat very pale purple (69D); outside deep purplish red (59B), midribs vivid purplish red (61C) with pale yellow-green (155A) base; spots deep reddish purple (77A); papillae present; nectaries brilliant yellow-green (150B); pollen strong orange (169B); stigma dark purple (79A). Fls 275 mm wide, strongly fragrant; tepals 145 × 60 mm, margins of inner tepals smooth, outer ruffled, tips recurved. Lvs 190 × 55 mm, dark green. Stems 1.2-1.3, light green with darker markings, with c.4-9 fls. July to Aug.

#### **'Mont Martre' I(b/-)**

Parentage: seedling G 941 × 'Parma'

R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside vivid yellow (9A), throat strong yellow-green (143C); outside brilliant yellow (7B), tepal-edges vivid yellow (9B), midribs suffused strong to light yellow-green (145A/B); spots absent; nectaries dark red (187A); pollen brownish orange (172C). Fls 175 mm wide; tepals 83 × 44 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.15 m.

(Registered in 1992 and included in *ILR Eleventh Supplement* as 'Montmartre'. In the same year Dutch PBR (LEL 831) were granted under the epithet 'Mont Martre', so this latter form of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

#### **'Montmartre' I(b/-)**

See 'Mont Martre'.

#### **'Montrachet' VII(a-b/-)**

Parentage: unnamed seedling × 'Alhambra'

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1993), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)

Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen reddish brown; stigma green. Tepal-margins ruffled, outer more so, tips strongly recurved. Stems 1.2 m, green, with c.6 fls. Midseason.

#### **'Montreal' VII(a-b/b)**

Parentage: 'Alhambra' × seedling 596

R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1992)

Inside yellowish white (155B), midveins broad, light greenish yellow (8B), throat strong yellow-green (144C); outside yellowish white (155D), midribs pale greenish yellow (2D); papillae vivid to brilliant yellow (9B/C) on all but tepal-tips; nectaries deep purple (83B); pollen strong reddish orange (169A). Fls 230 mm wide; tepals 110 × 60 mm, margins of inner tepals smooth, outer ruffled, tips strongly recurved. Lvs scattered, 125 × 50 mm, mid green. Stems 0.9 m, green, with c.6-10 fls.

#### **'Montreux' I(a/b-c)**

Parentage: unnamed seedling × unnamed seedling

R: Gebr. Vletter & J.A. Den Haan (1978), G: Gebr. Vletter & J.A. Den Haan (1980), N: Gebr. Vletter & J.A. Den Haan (1984), I: Gebr. Vletter & J.A. Den Haan (1984), REG: Gebr. Vletter & J.A. Den Haan (1985)

Inside moderate purplish pink (54D), midveins strong purplish red (54A), throat moderate reddish orange (41C); outside gleaming rhodonite-red to light pink (50D), each tepal with a yellow-brown flame; spots tiny, brown, in the throat; nectaries yellow-brown; pollen buff-yellow. Fls 170 mm wide; tepals 80 × 40 mm. Lvs scattered, 110 × 15 mm, mid green. Stems 1-1.1 m,

green, with 8-11 fls (from 16-18 cm bulbs). July.  
(Published in *Bloembollencultuur*, 1984.)

**'Monument' I(a/c)**

Parentage: Yellow Blaze Group × 'Connecticut King'  
R: V. Baloun (1990), N: V. Baloun, REG: V. Baloun (1990)

Inside deep yellow, each tepal with apricot centre; outside yellow, midribs greenish; spots dark red-brown on two-fifths of each tepal; nectaries yellow-green, with white frosting; pollen red-chocolate. Fls 120 mm wide; tepals 90 × 38 mm, slightly recurved; pedicels 70 mm long, pale green. Lvs scattered, 90 × 11 mm, deep slightly glossy green. Stems with secondary buds in the infl. Early July.

**'Monza' VII(-/-)**

Parentage: 'Casa Blanca' × unnamed seedling  
R: Vletter & Den Haan, G: Vletter & Den Haan (1983), N: Vletter & Den Haan (1989), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)

Inside yellowish white (155D), midveins pale yellow-green (4D); outside yellowish white (155D) with pale yellow-green (155A) midveins which are shaded brilliant greenish yellow (151D) at top, tepals suffused with moderate purplish red (59C) at the base, outer tepals tipped strong yellow-green (144B); spots dark red (187B), on two-thirds of each tepal; pollen moderate reddish orange (171A); stigma light greenish yellow (8C) and deep purplish red (187D). Fls 240 mm wide; tepals 122 × 61 mm, margins ruffled, tips strongly recurved. Lvs scattered, 180 × 38 mm, dark green. Stems 0.85 m, pale green, with c.5 fls.

**'Moomba' V(b/a)**

See *formosanum* 'Moomba'.

**'Moon Baby' I(a/b)**

Parentage: brushmarked seedling × brushmarked seedling  
R: Oregon Bulb Farms, Inc. (pre 1997), REG: Cebecco Lilies, Inc. (1998)

Inside pale orange-yellow (16D) fading to light yellow (18B), throat dark red (187A/B); outside light yellow (14D); spots dark red (187A), along nectaries; brushmarks dark red (187A/B); nectaries brilliant orange (25C) at top, pale orange-yellow (16D) at base; filaments light yellow-orange; pollen moderate reddish orange (178C), style light yellow-orange; stigma moderate red (180A). Fls 150 mm wide; tepals 85 × 41 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 8 mm. Stems 0.6 m, yellow-green with maroon blotches, and with c.5 fls from light yellow-orange buds. Midseason. (Published in *The Lily Nook Cat.*, 1997: 7.)

**'Moon Beam' VI(b/b)**

Misspelling of 'Moonbeam'.

**'Moonbeam' VI(b/b)**

Parentage: derived from *regale*, *sargentiae*, *sulphureum* & *henryi*

R: E.F. Palmer (c. 1948), N: E.F. Palmer

Fls chartreuse-yellow, opening from yellow buds; spots

absent; anthers chocolate-brown. Stems 1.5 m. July.  
(Misspelling: 'Moon Beam'. Published in *Greenock Farms Cat.*, 1957.)

**'Mooncrater' VII(-/-)**

Parentage: *auratum* × unknown

R: Lilies International Ltd, N: Lilies International Ltd

No further details.

**'Moonface' I(-/-)**

Parentage unknown

Given as a parent of 'Morning Sun'. No further details.

**'Moonfire' I(c/-)**

Parentage: 'Connecticut Lemonglow' × 'Pirate'

R: R. Chiabotta, G: R. Chiabotta, N: R. Chiabotta (1984), I: Borbeleta Gardens (1985), REG: J.

Wadekamper (1985)

Inside bright orange, throat paler; outside dull orange; spots absent. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1 m, mid brown. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1985.)

**'Moonflower' I(a/-)**

Parentage: 'Connecticut King' × unknown seedling

R: R. Couwenhoven, G: Fa P. Hoff & Zn, N: Fa P. Hoff & Zn (1979), REG: Fa P. Hoff & Zn (1980)

Fls light greenish yellow (5C), with aureolin blotch; spotted brown. Stems 0.8 m.

(Published in *Bloembollencultuur*, June 1979.)

**'Moonglo' VI(-/a)**

Parentage: *leucanthum* var. *centifolium* × (*henryi* × unknown)

R: F.L. Skinner (c. 1964), N: F.L. Skinner

Fls pale greenish yellow. Stems 0.6 m. July to Aug.

(Published in *LYB* 28: 134 (1965).)

**'Moongold' VI(-/a)**

Parentage: (*L. × aurelianense* × unknown) × Golden Clarion Group

R: Nettleton (c. 1961), N: Nettleton

Fls golden yellow.

**'Moon Jewel' I(a/b)**

Parentage: ('Michelle' (tetraploid form?) × 'Nove Cento') × 'Stella' (tetraploid form?)

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)

Inside vivid yellow (9A), throat pale greenish yellow (1D); outside light greenish yellow (7D), brilliant yellow (7A) towards tepal-margins, midribs strong yellow-green (143C) at base and top; spots absent; papillae vivid yellow (9A); nectaries strong yellow-green (143B); pollen dark reddish orange (175B); stigma brilliant yellow (12B) with narrow deep purplish red (59B) edge. Fls 170 mm wide; tepals 105 × 41-60 mm, margins smooth, tips recurved. Lvs scattered, 160 × 18 mm. Stems 1-1.1 m, brownish with green, and with 3-8 fls.

**'Moonlight' I(a/b)**

Parentage: *L.* × *hollandicum* 'Apricot' × *L.* × *maculatum* 'Aurantiacum'  
 R: L. Vasseur (c. 1940), N: L. Vasseur, I: A. MacNeil (pre 1949)

Fls deep orange-yellow, with lobster-red tepal-tips; spots purple. Stems 0.6-1 m. Mid June.

Syn.: *L.* × *hollandicum* 'Moonlight'.

(Published in *LYB NALS* 2: 108 (1949).)

**'Moonlight' VIII(-/-)**

Parentage: Aurelian trumpet × *nepalense*

R: H.E. Barry (c. 1964), N: H.E. Barry

Inside pale yellow, throat orange; spots absent; nectaries green. Tepal-margins slightly ruffled, tips recurved, irregularly curled round themselves.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**Moonlight Group VI(b/a)**

Parentage: companion strain to Golden Splendor Group

R: J. de Graaff, N: J. de Graaff

Inside chartreuse-yellow; outside green. Tepals slightly pointed. Stems 1.2-1.9 m. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv. Published in *ILR* (1969) Addenda as Moonlight grex.)

**'Moonlight Concerto' VI(-/-)**

Parentage: Golden Kiwi Group × unknown

R: D.F. McPherson, N: D.F. McPherson (1976), REG: D.F. McPherson (1977)

Buds light olive-grey (197B) to strong yellow-green (144C); outer tepals white, throat vivid yellow (13A). Lvs dark green. Stems tall.

(Published in *Lilies and other Liliaceae*, 1977: 79.)

**Moonlight Flares Group VI(-/a)**

Parentage: selections from Aurelian Group

S: C. Yerex, N: C. Yerex

Fls light yellow. Stems 1-1.2 m. July.

(Included in *ILR* (1982) as Moonlight Flares grex.)

**'Moonlight Madonna' III(-/a)**

Parentage: 'June Fragrance' × *monadelphum*

R: C. Robinson (1972), G: C. Robinson (1977), N: C. Robinson (1981), REG: C. Robinson (1981)

Fls brilliant greenish yellow (5A) throughout; spots absent; nectaries pale green; pollen yellow. Fls 120 mm wide, scented; tepals 114 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 38 mm, mid green. Stems 1.2 m, mid green, with c.14 fls. Late June.

**'Moonlight Sonata' VI(c/-)**

Parentage: selection from Aurelian Group

S: C. Yerex (1956), N: C. Yerex

Fls cream shading to lemon, large, throat golden yellow with band of same colour. Stems 1.2 m. Aug.

(Published in *LYB* 21: 47 (1958).)

**Moonlight Trumpets Group VI(-/a)**

Parentage: selections from Aurelian Group

S: C. Yerex, N: C. Yerex

Fls in pastel shades

(Published in *Kline Cat.*, 1958. Included in *ILR* (1982) as Moonlight Trumpets grex.)

**'Moon Pixie' I(a/-)**

Parentage: ('Lemon Glow' × 'Red Carpet') × ('Lemon Glow' × 'Red Carpet')

R: Rien Veenstra (1978), G: Oregon Bulb Farms, Inc.

(1980), N: Rien Veenstra (1989), I: Oregon Bulb Farms, Inc. (1989), REG: Oregon Bulb Farms, Inc. (1989)

Inside with outer tepals light greenish yellow/vivid yellow (8B/12A), inner tepals light greenish yellow/vivid yellow (8B/9B), throat pale yellow (8D), tepal-tips vivid yellow (12A); outside with outer tepals brilliant yellow (7A) and mottled with moderate red (180C), inner tepals light greenish yellow (8B); spots absent; nectaries moderate olive-green (146A); pollen vivid orange (28B). Fls 140 mm wide; tepals 90-95 × 31-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm, dark green. Stems 0.4-0.45 m, strong yellow-green (144A), with c.4 fls. Midseason.

**MOON PIXIE® I(a/b)**

Trade designation of 'Ceb Moon'.

**'Moon River' VI(b/b)**

Parentage unknown

R: L. Maroushek, G: C. Fuson, N: C. Helsley (1988), I: Ozark Mountain Lilies (1991), REG: C. Helsley (1989)

Inside pale yellow (8D), throat brilliant yellow (8A) blending out into the rest of each tepal; outside pale yellow (8D) flushed with strong yellowish pink (35C); spots absent; nectaries moderate yellow-green (146C); pollen golden yellow. Fls 140 mm wide; tepals 150 × 35-60 mm, margins smooth, tips not recurved. Lvs scattered, 190 × 10 mm, dark green. Stems 1.2 m, green, lightly flushed with purple, with 12-24 fls (including secondaries on lower pedicels). Late June.

**'Moon's Girl' I(b-c/c-d)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (1984), G: J. Vasarietis (1987), N: J. Vasarietis (1990), I: J. Vasarietis (1990), REG: J. Vasarietis (1992)

Fl. centre vivid yellow (13A) at first, remainder white, with age the whole fl. becomes white; spots few, on the basal third of tepals; nectaries white; pollen orange. Fls 110 mm wide; tepals 75 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 100 × 9 mm, mid green. Stems 0.8 m, green, with c.8 fls. Early July.

Syn.: 'Mēness Meitiņa'.

('Mēness Meitiņa' is the Latvian translation of the registered epithet.)

**'Moon Shadow' I(a/b-c)**

Parentage unknown

R: L. Woodriff (1975), G: L. Woodriff (1977), N:

Bowman Creek Farm (1981), REG: Bowman Creek Farm (1982)

Tepals ivory, blending to light orange and then reddish brown towards base; a moderate number of maroon spots on basal third of tepals; nectaries white; pollen yellow-orange. Fls 170 mm wide; tepals 95 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 15 mm, dark green. Stems 0.75 m, red-brown, with c.15 fls. June.

**‘Moon Shadow’ I(a/b)**

Syn. of ‘Purple Shadows’.

**‘Moonshine’ VIII(a/b)**

Parentage: ‘Loblanca’ × ‘Au Revoir’

R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997), REG: Bischoff Tulleken Lelies B.V. (1997)

Inside pale yellow-green (4D), each tepal with a light greenish yellow (4B) edge; outside pale yellow-green to yellowish white (155A/B), each tepal with a light greenish yellow (4B) edge; spots and papillae absent; nectaries strong yellow-green (14B); pollen brownish orange (164A); stigma strong yellow-green (145A). Fls 190 mm wide; tepals 110 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 0.95 m, with c.6 fls. July.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Moonshot’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (1984), G: J. Vasarietis (1987), N: J. Vasarietis (1990), I: J. Vasarietis (1990), REG: J. Vasarietis (1992)

Inside brilliant greenish yellow (6A); outside brilliant greenish yellow (6B); spots very few, tiny, black, on basal quarter of each tepal; nectaries white; pollen brown. Fls 160 mm wide; tepals 100 × 43 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 7 mm, mid green. Stems 0.6-0.7 m, green, with c.10 fls. Early July. (Originally named ‘Selenia’ in 1990, but registered as ‘Moonshot’.)

**Moonsong Group I(a/-)**

Parentage unknown

Inside yellow; spots absent. Stems 1-1.2 m. June to July. (Attributed to J. de Graaff in *Rex Bulb Farms Cat.*, 1982/83, but E.A. McRae (*in litt.* Aug. 1983) says it is not an Oregon Bulb Farms production.)

**‘Moonstone’ I(b/-)**

Syn. of ‘Magic Carpet’.

**Moonstone Group VI(b/b)**

Parentage unknown

R: J.M. Shaver, N: J.M. Shaver, I: J.M. Shaver, REG: J.M. Shaver (1985)

Fls white, with lemon or apricot centres; some entirely yellow or soft orange. Stems 1.2-2.1 m. Late July.

(Published in *Rex Bulb Farms Cat.*, 1966/67: 26.)

**‘Moonyeen’ II(c/b-d)**

Parentage: (*martagon* × unknown) × (*martagon* × unknown)

R: F. Tarlton (pre 1972), N: F. Tarlton (1988), I: Honeywood Lilies, REG: F. Tarlton (1988)

Inside moderate purplish pink (70D), throat and tepal-tips deep purplish pink (70C); outside very pale purple (69A); spots many, moderate purplish red (70A) on basal half of each tepal; nectaries moderate orange-yellow (164B); pollen strong orange (25A). Tepals 37 × 15 mm, margins smooth, tips moderately reflexed. Lvs whorled, 70 × 20 mm, dark green. Stems 1 m, mid to dark green, with 12 or more fls. June.

**‘Moorhexe’ I(-/-)**

Parentage unknown

R: H. Hörster, N: H. Hörster

Fls orange.

**‘Moorhexe’ I(a/-)**

Parentage unknown

R: C. Wittneben (pre 1986), N: C. Wittneben

Inside bright red. Stems 0.8 m. Late July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in German Lily Group sales list, 1986.)

**Moorpark Group VI(-/-)**

Parentage: Aurelian Group

R: W.M. Spry (c. 1965), N: W.M. Spry

Fls cream, throat deep apricot. Stems up to 2.4 m.

(Included in *ILR* (1982) as Moorpark grex.)

**Moose Range Group I(b/-)**

Parentage: includes ‘Nubian’ derivatives

R: P.H. Wright, N: P.H. Wright

Fls orange to deep red.

(Published in *Honeywood Lilies Cat.*, 1956.)

**‘Morava’ I(a/-)**

Parentage: ‘Pink Champagne’ × ‘Connecticut Yankee’

R: K. Braun (1980), N: K. Braun, REG: K. Braun (1984)

Fls ochre-yellow to orange-brown; spots on basal half of tepals; pollen orange-brown. Fls 145 mm wide. Stems 1-1.2 m, with many fls. Early July.

**‘Morava’ I(a/b)**

Syn. of ‘Moravsky Kras’.

**‘Moravanka’ I(a/b-c)**

Parentage: (‘Heureka’ × unknown) × (‘Rosita’ × unknown)

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside salmon-pink, tepals deep orange-apricot in centre and with pink tips, throat red-brown; outside pale pink and salmon-apricot, midribs greenish, brownish at base; moderately numerous, large brown-red spots on two-thirds of each tepal; nectaries rather open, white-granulated; filaments pale apricot; pollen brown-red; style brown; stigma red-brown. Fls 105 mm wide; tepals 63 ×

31 mm, boat-shaped, tips slightly recurved; pedicels 65 mm, slender, brown-dotted. Lvs 80 × 9 mm, dull deep yellowish green. Stems thick, brown-dotted. Early June.

**'Moravsky Kras' I(a/b)**

Parentage: 'Vanguard' × 'Vesnjanika'  
R: A.V. Otroshko (1991), N: A.V. Otroshko  
Inside vivid yellow; spots brown, on half of each tepal; nectaries green; pollen brown. Fls 140 mm wide; tepals 87-89 × 33-45 mm, margins smooth, tips not recurved. Stems 1.4 m, green, with a racemose infl. Mid June.  
Syn.: 'Morava' (Div. I(a/b)).

**'Morden Butterfly' I(b-c/d)**

Parentage: 'Pink Tiger' (Woodriff) × 'Black Butterfly'  
R: W.G. Ronald (1975), N: W.G. Ronald, REG: ICRA (1998)  
Inside cherry-red. Stems 1.2-1.5 m, with tall racemes of fls. Midseason.  
(Published in *The Lily Nook Cat.*, 1997: 4.)

**'Morelia' IV(c/d)**

Parentage: selection from Bellingham Group  
R: H. Eckstein (c. 1952), N: H. Eckstein  
Fls cadmium-yellow, tepal-tips Saturn red; spots dark maroon. Tepals recurved. Stems 1.5 m. July.  
(Published in *Kline Cat.*, 1958.)

**'Morellentsing' II(-/c)**

Parentage: Marhan Group × (*martagon* var. *cattaniae* × *tsingtauense*)  
R: O. Beutnagel (pre 1988), N: O. Beutnagel, REG: O. Beutnagel (1990)  
Fls dark wine-red; slightly spotted; pollen orange. Fls 80 mm wide. Lvs light green, marbled like *tsingtauense*. Stems 1.3 m. Late June.

**'Morgenfee' I(a/b)**

Parentage: 'Maria' × 'Bélásek'  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1998), REG: G. Steinbrück (1998)  
Inside creamy white (159D), tepals very narrowly edged with red-brown, yellowish white (155D) towards tips, throat yellowish white (155D); outside yellowish white (155D); spots few, small, wine-red, on basal half of each tepal; nectaries light yellow-green (145D); pollen orange; stigma vivid reddish orange (33B). Fls 139 mm wide; tepals 60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 12 mm, dark green. Stems 1 m, rather pale green, with up to 16 fls. Late June to early July.

**'Morgenlicht' I(a/-)**

Parentage: unnamed seedling × ((*Citronella* Group × *amabile* var. *luteum*) × 'Sterling Star')  
R: N. Martschinke (1981), G: N. Martschinke (1985), N: N. Martschinke (1987), REG: N. Martschinke (1991)  
Inside pale yellow (11D) flushed with strong purplish red (63A), throat yellowish white (158D); outside pale yellow (11D) and brownish orange (172C); spots numerous, small, strong purplish red (63A) on basal half of each

tepal; nectaries brilliant yellow-green (142B). Fls 100 mm wide; tepals 70 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 95 × 7 mm, dark green. Stems 0.8 m, almost black, with c.10 fls. Early to late July.

**'Morgenrot' I(a-b/-)**

Parentage unknown  
R: C. Feldmaier (pre 1980), N: C. Feldmaier  
Inside vivid red (45A); spots brown; nectaries white. Stems 0.7 m. July.

**'Morgenschönheit' I(a/c)**

Parentage: 'Ancona' × 'Rosa Hoffnung'  
R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)  
Inside light yellowish pink (159A), tepal-tips moderate purplish pink (186D), throat deep red (60A); spots numerous, tiny, dark red (187C), on basal half of each tepal; nectaries deep reddish purple (77A), hoary; stigma large, dark red (59A) on a long style; pollen deep purplish red (61A). Fls 180 mm wide; tepals 80 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 18 mm. Stems 1.2 m, black, with 15-18 fls. Late June to mid July. (Nomenclatural standard: colour print provided by registrant (WSY 0024687).)

**'Morgentau' I(a/b)**

Parentage: 'El Paso' × 'Jeanne d'Arc'  
R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2002)  
Inside and outside pale yellow-green (155A) suffused with soft orange; spots absent; nectaries greyish green; pollen dark red (187A). Fls 125 mm wide; tepals 70 × 39 mm, with a strong double rib down the centre line, margins smooth, tips not recurved. Lvs scattered, 90 × 12 mm. Stems 0.95 m, dark green, with 7-10 fls. Mid to late June. (Nomenclatural standard: colour print provided by registrant (WSY 0032258).)

**'Moria' VII(b/-)**

Parentage: unnamed seedling × unnamed seedling  
R: Peacock B.V. & Imanse Lelieveredeling B.V. (1992), G: Peacock B.V., N: Peacock B.V. & Imanse Lelieveredeling B.V. (1992), I: Peacock B.V. & Imanse Lelieveredeling B.V. (1995), REG: Peacock B.V. (1997)  
Inside deep and strong purplish pink (68A & B) on a yellowish white (155B) ground, midveins light yellow (10C) along half of each tepal, tepal-tips with a little yellowish white (155B), throat yellowish white (155B); outside deep and strong purplish pink (68A & B) on a yellowish white (155B) ground, with white (155B) at the base, midribs strong yellow-green (144C) shading apically to strong yellow-green (143B) and tipped with strong yellow-green (143A), tepals with a narrow yellowish white (155B) edge; spots deep red (60A), on a third of each tepal; papillae yellowish white (155B) and light yellow (10C), in the throat; nectaries strong yellow-green, with a light yellow (10C) rim; pollen strong brown (172A); stigma deep purplish red (187D). Fls 200 mm wide;

tepals 110 × 40-60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 125 × 35 mm, mid green. Stems 0.7 m, green, with 3-4 fls.

**'Morning Blaze' I(a/-)**

Parentage: Yellow Blaze Group × 'Sterling Star'  
R: Gebr. N. & B. Laan & Zn (1980), G: Gebr. N. & B. Laan & Zn (1982), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)

Inside cream-white, tepal-tips white, throat cream-white; outside cream-white; spots black, in throat; nectaries cream-white; pollen brown-red. Fls 140-150 mm wide; tepals 80-85 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 1 m, green, with c.9 fls. July.

**'Morning Dream' I(a/-)**

Parentage: 'Blizzard' × complex hybrid seedling involving 'Unique'

R: H. Georgi (1989), G: H. Georgi (1990), N: H. Georgi (1992), REG: H. Georgi (1993)

Bicolour: the apical half of each tepal rose-red, basal half creamy white, throat yellowish green; nectaries yellowish green; pollen pink-brown; filaments and style rose-red. Fls 140-150 mm wide; tepals 130-140 × 20-25 mm, margins smooth, not reflexed. Lvs scattered, 40-60 × 15 mm, mid green. Stems 0.8-1 m, pale green, with 4-6 fls. Late June to late July.

**'Morning Glow' I(b/-)**

Parentage: ((*lancifolium* × unknown) × (*dauricum* × unknown)) × 'Bellona'

R: Gebr. N. & B. Laan & Zn, G: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn (1979), REG: Gebr. N. & B. Laan & Zn (1980)

Fls brilliant yellow (12B), tepals edged lemon-yellow; spots brown, in centre; anthers red-brown. Stems 1 m. (Published in *Bloembollencultuur*, July 1979.)

**'Morning Kiss' I(a/-)**

Parentage: (*lankongense* × unknown) × (*cernuum* × unknown)

R: Gebr. N. & B. Laan & Zn, G: Gebr. N. & B. Laan & Zn, I: Gebr. N. & B. Laan & Zn (1979), REG: Gebr. N. & B. Laan & Zn (1980)

Fls ivory-white, spotted oxblood-red; anthers red-brown. Stems 0.5 m. (Published in *Bloembollencultuur*, July 1979.)

**'Morning Melody' II(-/d)**

Parentage: (*L. × dalhansonii* 'Brocade' × unknown) × unknown

R: E. Robinson (pre 1978), G: E. Robinson, N: E. Robinson, I: E. Robinson (c. 1985), REG: D. Dale (1993)

Inside mauve-pink, throat pink; outside totally mauve-pink; spots absent; nectaries cream; pollen golden. Fls 70 mm wide; tepals 38 × 22 mm, margins smooth, tips slightly recurved. Lvs whorled, ovate, 130 × 75 mm, dark green, mottled, unusually short and broad and somewhat

angled upwards. Stems 1.2-1.4 m, mid green with dark green mottling, and 18-26 fls. Early July.

**'Morning Mist' I(a/-)**

Parentage unknown

R: J. Wadekamper (1982), G: J. Wadekamper (1984), N: J. Wadekamper (1987), I: Borbeleta Gardens (1987), REG: Borbeleta Gardens (1988)

Inside tip and apical part of tepals creamy white, basal part canary-yellow; outside greenish white; with a few brown spots below and some reddish brown pencil-marks in a brushmark just above the spots; nectaries green; pollen tan. Tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 20 mm, mid green. Stems 0.6 m, dark green, with c.8 fls. July. (Published in *Borbeleta Gardens Cat.*, 1987; *Flower and Garden Magazine*, Jan. 1987.)

**'Morning Silhouettes' I(b-c/-)**

Parentage unknown

G: M.D. Holloway (1993), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)

Inside rosy pink at tepal-tips, the colour extending down the centre of each tepal to the nectary, golden yellow towards the margins, margins narrowly edged with dark brown, throat white-frosted; outside with the outer tepals soft salmon-pink at margins, centre green, inner tepals salmon-pink with green midribs; heavily dark-spotted on basal three-quarters of each tepal (spots smaller in throat, increasing in size above); nectaries white-frosted; filaments ivory; pollen rust-coloured; style ivory; stigma dark brown. Fls 140 mm wide, scented; tepals 70 × 47 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 25 mm, dark green. Stems 1.2 m, very dark brown, with c.13 fls (secondary buds present). Late July to mid Aug.

(Raised from seed from the North American Seed Exchange.)

**'Morning Star' I(a/b)**

Syn. of 'Polish Morning Star'.

**'Morningstar' I(a/-)**

Parentage: selection from Zelta Vainags Group  
No further details.

**'Morning Sun' I(b/-)**

Parentage: 'Moonface' × a Canadian seedling  
R: G.M. Chandler (c. 1967), G: G.M. Chandler (1970), N: G.M. Chandler, I: G.M. Chandler (1972), REG: G.M. Chandler (1973)

Fls brilliant yellow (15C); spots light brown, on basal half of each tepal. Fls 150 mm wide; tepals slightly twisted. Lvs 120 × 12 mm, dark green. Stems 0.6 m, with 3-5 fls. (Published in *Lilies and other Liliaceae*, 1973/1974: 110.)

**'Morosini' VIII(a/b)**

Parentage: seedling J 57 × seedling OR 92-15

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den

Haan Beheer B.V. (2000)  
Inside deep red (60A), throat strong purplish red (63B); outside moderate purplish red (58A) suffused with moderate orange-yellow (164B), tepal-margins deep red (60A); spots dark red (187A) on a third of each tepal; papillae absent; nectaries light purple (75A); pollen moderate reddish brown (166B); stigma moderate yellow (162B). Fls 210 mm wide; tepals 120 × 60 mm, margins smooth, tips recurved. Lvs scattered, 120 × 60 mm. Stems 1.5 m, green, with c.5 fls.  
(*A. longiflorum*/Asiatic (LA) hybrid.)

**'Morse' IX(b/c)**

See *auratum* 'Morse'.

**'Morse Code' VII(b/b)**

Parentage: ('Cymbeline' × *auratum* 'Wittei') × (unknown × (*L. × parkmanii* × unknown))  
R: G.G. & F.S. Blake (1979), G: G.G. & F.S. Blake (1983), N: G.G. & F.S. Blake (1986), I: G.G. & F.S. Blake (1986), REG: G.G. & F.S. Blake (1986)  
Inside white, flushed with light purplish pink (68D), tepal-tips light purplish pink (68D), throat light yellow (15D); outside white shading to moderate purplish pink (65A); heavily spotted with dots and dashes of strong red (53B); papillae very long, up to 20 mm; nectaries light yellow-green (144D); pollen greyish red (178A). Fls 230 mm wide; tepals 135 × 80 mm, margins ruffled, tips slightly recurved. Lvs scattered, 220 × 68 mm, mid green. Stems 1.5 m, moderate yellow-green (147D), with c.15 fls. Jan. to Feb. (Australia).

**'Morskaia Pena' I(a/b)**

Parentage: 'Novinka' × 'Connecticut King'  
R: M.F. Kireeva, V.V. Martynova & N.V. Ivanova (1983), G: M.F. Kireeva, V.V. Martynova & N.V. Ivanova, N: M.F. Kireeva, V.V. Martynova & N.V. Ivanova, I: M.F. Kireeva, V.V. Martynova & N.V. Ivanova (1988), REG: M.F. Kireeva, V.V. Martynova & N.V. Ivanova (1992)  
Fls creamy white, flushed with green. Fls 120-140 mm wide. Stems 1.1-1.3 m, with up to 25 fls. July.  
(Unaccepted spelling: 'Morskaja Pena'. Published in M.F. Kireeva, *Lilii*, 69 (2000).)

**'Morskaja Pena' I(a/b)**

Unaccepted spelling of 'Morskaia Pena'.

**'Morzine' I(a/b)**

Parentage: seedling W 91-18 × seedling W 91-15  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside yellowish white (155D), with a little strong yellow-green (144A) above nectaries, throat light yellow-green (145C); outside yellowish white (155D) suffused with strong yellow-green (144C) on midribs, outer tepals tipped strong yellow-green (143A); spots and papillae absent; pollen a little stronger than strong orange (26A); stigma light greenish yellow (5D). Fls 160 mm wide; tepals 90 × 34-47 mm, margins a little ruffled, tips

strongly recurved. Lvs scattered, 95 × 17 mm. Stems 1 m, green, with 4-5 fls.

**'Mosambik' I(a/b)**

Parentage: (('Connecticut Bronze' × 'Slunovrat') × 'Quinella') × 'Juno'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1991), REG: B. Mičulka (1991)  
Inside glossy golden yellow, tepal-tips and midvein on each tepal slightly rose-red; outside flushed with scarlet; spots numerous, medium sized, dark scarlet-brown, on two-thirds of each tepal; nectaries pale scarlet, frosted; pollen brown; stigma pale brownish scarlet. Fls 80 mm wide; tepals 80 × 40 mm, margins slightly recurved; pedicels 80 mm long, dark-spotted. Lvs scattered, 90 × 7 mm, dark dull green. Late June.

**'Moselland' I(-/-)**

Parentage unknown  
R: Dr Reichhardt, N: Dr Reichhardt  
Fls bright red.

**'Moskovskaia' VI(-/-)**

Parentage: 'Gloriosum' × *regale*  
R: V.A. Grot (c. 1959), N: V.A. Grot  
(Unaccepted spelling: 'Moskovskaja'. The 'Gloriosum' parent is of Russian origin. No further details.)

**'Moskovskaja' VI(-/-)**

Unaccepted spelling of 'Moskovskaia'.

**'Moskva' VI(-/-)**

Parentage: *leucanthum* var. *centifolium* × mixed pollen of *henryi* & *L. × imperiale* 'Estoniia'  
R: V.N. Esinovskaya (1965), N: V.N. Esinovskaya  
Fls pale pink, throat pink-violet. Stems 1.5 m, with bulbils.

**'Mosquito' I(c/-)**

Parentage: Fighter Group selection from Preston Group  
S: I. Preston, N: I. Preston (1942)  
Fls Saturn red with small, dark spots. Stems to 1.2 m or more, with 20-50 fls. June to July.

**MOTET VIII(a/b)**

Trade designation of 'Zanlatet'.

**'Mother's Choice' VII(a/b-c)**

Parentage unknown  
R: Mak 't Zand B.V., REG: Liliande B.V. (2003)  
Inside yellowish white (155D), midveins tinged with pale yellow (11D); outside yellowish white (155D), midribs pale yellow (11C), tepal-tips bright yellow (11A); spots absent; papillae yellowish white (155D); nectaries strong yellow green (144C); pollen strong reddish orange (169A); stigma moderate yellow-green (138B). Fls 210 mm wide; tepals 120 × 60 mm, margins of inner tepals smooth, outer ruffled, tips recurved. Lvs 200 × 70 mm, dark green. Stems 0.77 m, green, with c.5-7 fls.  
(European PBR were granted in 2003 as 'Mothers Choice', but under the provision of ICNCP, 2004: Art.

32.14 (2004), this spelling is corrected to 'Mother's Choice'.)

**'Mother Teresa' I(b/b-c)**

Parentage: (*cernuum* × unknown) × (*cernuum* × unknown)

R: F. Fellner (1982), G: F. Fellner (1985), N: F. Fellner (1995), I: Riverside Gardens (1995), REG: F. Fellner (1995)

Inside almost white; outside cream/green; spots few, very fine, dark, at base of each tepal; nectaries yellow/cream; pollen rich brown. Fls 100 mm wide; tepals 50 × 25 mm, very stiff, margins smooth, tips not recurved. Lvs scattered, 100 × 15 mm. Stems 0.63 m, green, with 6-8 fls. Mid July.

**'Motivs' I(b/c-d)**

Misspelling of 'Motivs'.

**'Motivs' I(b/c-d)**

Parentage: selection from Skumstu Group

S: V.P. Orehovs (1957), N: V.P. Orehovs

Fls orange-red; spots dark, towards base of tepals. Fls 130 mm wide, slightly fragrant. Lvs 150-170 × 20 mm, brownish green. Stems 1.8-2 m, brown, with c.30 fls. July.

(Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as 'Motivs' which is a misspelling. The reference in *LYB* 33 gives the fl. colour as orange-yellow.)

**'Motley' II(-/d)**

See *L. × dalhansonii* 'Motley'.

**'Motomurayuri' IX(c/d)**

See *leichtlinii* var. *maximowiczii* 'Motomurayuri'.

**'Motyliok' I(c/-)**

Parentage: red-flowered seedling × lilac-flowered seedling

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls pale rose-red with small spots. Stems 1.2 m.

**MOULIN ROUGE I(a/b)**

Trade designation of 'Flaming Giant'.

**'Mountaineer' I(a/-)**

Parentage: 'Brenda Watts' × seedling of a spotted, yellow-flowered *L. × hollandicum*

R: S.L. Emsweller, N: S.L. Emsweller, I: USDA (1953)

Fls capsicum red, spotted dark brown. Fls 75-100 mm wide, tepals slightly recurved. Stems up to 1 m. June to July.

(Published in *USDA Notice of Release and Introduction*, 1953.)

**'Mountains Favourite' I(a/-)**

Parentage: 'Connecticut King' × unnamed seedling

R: M.A. van den Berg (1980), G: M.A. van den Berg (1981), N: M.A. van den Berg (1988), I: M.A. van den Berg, REG: M.A. van den Berg (1989)

Inside vivid yellowish orange (30C); outside vivid reddish orange (30B), flushed with brilliant orange (29A); spots

few, very small, dark red (187A), in the throat; pollen moderate reddish orange to brownish orange (171A/B). Fls 180 mm wide; tepals 85 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 12 mm, mid green. Stems 1.4 m, green, with c.18 fls. May.

**'Mount Bachelor' VIII(a-b/b)**

Parentage: seedling E-49-11 × seedling PM-41

R: J.W.A. van der Wereld (1985), G: J.W.A. van der Wereld (1992), N: J.W.A. van der Wereld (2000), REG: World Flower B.V. (2001)

Inside strong orange (25A); outside brilliant orange (25C); spots present; papillae absent; nectaries orange; pollen reddish brown; stigma orange. Tepal-margins smooth to very slightly ruffled, tips recurved. Stems 1.1 m, green with dark stripes and spots, and with c.6 fls. Early.

(*A longiflorum*/Asiatic (LA) hybrid.)

**'Mount Everest' V(b/a)**

See *longiflorum* 'Mount Everest'.

**'Mount Fuji' Div. ?**

Given as a parent of 'Lemon Ice'. No further details.

**'Mount Grace' VIII(a/b)**

Parentage: 'Fidelity' × seedling 68.07.03

R: World Bulbs bvba (1994), G: World Bulbs bvba (1995), N: World Bulbs bvba (2000), REG: World Flower B.V. (2001)

Inside strong orange (25A), midveins a little stronger coloured; outside strong orange-yellow (24B) changing to strong orange (25A) at tepal-tips; spots and papillae present; pollen orange-brown; stigma purple. Tepal-margins smooth or very slightly ruffled, tips recurved. Stems 0.75 m, green. Early.

(*A longiflorum*/Asiatic (LA) hybrid.)

**'Mount Helena' VII(a/b)**

Parentage unknown

R: Mak-Leek Inc. (1989), G: Mak-Leek Inc. (1992), N: Mak-Leek Inc. (1999), I: Mak-Leek Inc. (1999), REG: Mak-Leek Inc. (2003)

Inside and outside yellowish white (155B); midribs strong yellow-green (144C) tipped with strong yellow-green (144A); spots yellowish white (155B) and vivid purplish red (57C), on whole tepal-surface; papillae same colour as tepals, in throat; nectaries strong yellow-green (143C); pollen greyish red (178A); stigma moderate red (183D). Fls 220 mm wide; tepals 110 × 40-55 mm, margins ruffled towards tip, tips slightly recurved. Lvs scattered, 125 × 50 mm. Stems 1.2 m, green, with c. 5 fls. Late.

**'Mount Hood' VIII(a-b/b)**

Parentage: seedling BH 627-154 × seedling AH 627-81

R: World Bulbs bvba (1992), G: World Bulbs bvba (1995), N: World Bulbs bvba (1999), I: World Bulbs bvba, REG: World Flower B.V. (2001)

Inside vivid reddish orange (42A) on a strong reddish orange (31B) ground, tepal-edges a little stronger coloured, throat with a little brilliant greenish yellow

(5A) alongside the nectaries; outside deep pink (51C) and strong red (53B), midribs dark greenish yellow (152D) with a little light yellow-green (2C) at base, tipped strong yellow-green (143A); spots dark red (187A), on up to a quarter of each tepal; papillae few, in the throat; nectaries strong yellowish pink (37A); pollen strong brown (172A); stigma deep yellowish pink (39B). Fls 200 mm wide; tepals 100 × 35–45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 170 × 20 mm. Stems 1.1 m, green, with 6–10 fls. Early to midseason.  
Syn.: ‘Cinnabar’.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Mount Kosciusko’ VII(b/c)**

Error for ‘Kosciusko’.

**‘Mount Loch’ VI(-/a)**

Parentage: Aurelian Group

R: M.W. Spry, N: M.W. Spry

Fls creamy yellow. Stems up to 2.2 m, with up to 23 fls.

**‘Mount Rainier’ VIII(a/b)**

Parentage: seedling AH 627-100 × seedling 5805-7

R: World Bulbs bvba (1992), G: World Bulbs bvba (1995), N: World Bulbs bvba (1999), I: World Bulbs bvba, REG: World Flower B.V. (2001)

Inside moderate red (179B/180B), tepal-tips moderate red (179A), throat moderate pink (51D), with moderate red (180A) alongside the nectaries; outside moderate red (181C), changing to moderate red (182A) towards tepal-tips, edged moderate red (179A); spots moderate red (179A), on basal part of each tepal; papillae dark red (187A), in the throat; nectaries moderate pink (49B); pollen greyish brown (166A); stigma moderate red (184B). Fls 150 mm wide; tepals 85 × 30–40 mm, margins smooth, tips slightly recurved. Lvs scattered, 135 × 15 mm. Stems 1.25–1.4 m, light green, with c.11 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

**Mount Shasta Group IV(c/d)**

Parentage: complex *kelloegii* × *pardalinum* hybrid

R: J. de Graaff (c. 1964), N: J. de Graaff

Fls in shades of lilac and rose-pink.

(Published in *ILR* (1982) as Mount Shasta grex.)

**‘Mount Tacoma’ VII(a/d)**

Parentage: unnamed seedling × unnamed seedling

R: Trior Lelie B.V. (1990), G: Trior Lelie B.V. (1992), N: Trior Lelie B.V. (1994), I: Trior Lelie B.V. (1995), REG: Trior Lelie B.V. (1995)

Fls yellowish white (155D) throughout; spots absent; papillae few; nectaries green; pollen orange-brown; style green; stigma purplish red. Fls 230 mm wide; tepal-margins ruffled, tips slightly recurved. Lvs scattered, 140 mm long, green. Stems 1.2 m, green without darker markings, and with 5–7 fls (from 16–18 cm bulbs). Late.

**‘Mourek’ VI(b/a)**

Parentage: *leucanthum* var. *centifolium* × First Love Group

R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B.

Mičulka (1984)

Inside pale yellow, with red shining through at tepal-edges and on midveins; outside red-veined, with darker red midribs; pollen apricot; stigma dark violet-purple. Fls 150 mm wide; tepals 115 × 45 mm, tips strongly recurved. Lvs 110 × 11 mm, slightly glossy. Stems 1.2 m, silvery, slightly violet-dotted at top. Mid July.

**‘Moy Koster’ I(b/c)**

Unaccepted spelling of ‘Moi Koster’.

**MOZART VIII(a/b)**

Trade designation of ‘Zanlazart’.

**‘Mr Ed’ VII(b/b-c)**

Syn. of ‘Ed’.

**‘Mrs Andrew C. Wilson’ VI(-/a)**

See *L. × imperiale* ‘Mrs Andrew C. Wilson’.

**‘Mrs A. Waterer’ VII(-/-)**

See *L. × parkmanii* ‘Mrs A. Waterer’.

**‘Mrs Dani Arifin’ VIII(a/b)**

Syn. of ‘Dani Arifin’.

**‘Mrs Dorothy Schaefer’ VI(-/-)**

Parentage: (‘Tetra White Henry’ × tetraploid white-flowered trumpet) × (tetraploid *regale* × ‘Tetra White Henry’)

R: D.B. Schaefer (1987), G: H. Georgi (1990), N: H. Georgi (1992), REG: H. Georgi (1992)

Fls cream-white with a striking red-orange centre and a central green nectary-star; spots absent; nectaries deep green; pollen deep brown. Fls 180 mm wide; tepals 140 × 55 mm, margins smooth, tips distinctly recurved (as in ‘White Henry’). Lvs scattered, 180 × 35 mm, mid green. Stems 1.8–2 m, dark green, with 8–10 fls. Mid to late July (under glass).

**‘Mrs Dwight Eisenhower’ I(b/-)**

Parentage: ‘Edna Kean’ × *dauricum* var. *wilsonii*

R: C.G. Wilson (c. 1951), N: C.G. Wilson

Fls orange. Stems 1.2 m.

(Published in *Cleveland Plain Dealer* (Newspaper), 29 June 1952 and in *LYB* 20:43 (1957).)

**‘Mrs Fox’ VII(-/-)**

Parentage: *speciosum* × unknown

R: Fox, N: Fox

No further details.

**‘Mrs J.F. Betton’ VI(c/-)**

Parentage: ‘T.A. Havemeyer’ × *henryi* var. *citrinum*

R: S.V. Gilkison, N: S.V. Gilkison

(Bulb sent to F.C. Stern, 1958. No further details.)

**‘Mrs John W. Davis’ VI(-/a)**

See *L. × imperiale* ‘Mrs John W. Davis’.

**'Mrs K' I(a/-)**

Parentage unknown

R: T.L. Bartel (pre 1978), N: T.L. Bartel

Fls yellow, centre deep gold. Stems 0.3 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)**'Mrs R.O. Backhouse' II(c/d)**See *L. × dalhansonii* 'Mrs R.O. Backhouse'.**'Mrs Robert Nixon' I(b/-)**Parentage: 'Edna Kean' × *wilsonii*

R: C.G. Wilson (c. 1951), N: C.G. Wilson

Fls red. Stems 1.2 m.

(Published in *LYB* 20: 43 (1957).)**'Mrs Wright' IX(b-c/d)**See *speciosum* 'Mrs Wright'.**'Msta' I(a/-)**

Parentage unknown

R: A.V. Otroshko (1988), N: A.V. Otroshko, REG: A.V. Otroshko (1991)

Fls deep pink, the cream centre of the fl. with tiny spots.

Stems 1.1 m. July.

**'Mt Carmel' V(b/a)**

Syn. of 'Carmel'.

**'Muarovye Zvezdy' I(a-b/b)**

Parentage unknown

Fls yellow and pink; spotted at base of tepals.

(Published in M.F. Kireeva, *Lilii*, 66 (2000).)**'Muddy Waters' I(a/-)**

Parentage unknown

R: J. Wadekamper (1981), G: J. Wadekamper (1983),

N: J. Wadekamper (1992), I: Borbeleta Gardens (1993),

REG: J. Wadekamper (1993)

Fls dark reddish orange and moderate brown (172B

&amp; 200D), each tepal with a heavy, brown brushmark;

nectaries dark brown; pollen brown. Tepals 35 × 18 mm,

margins smooth, tips not recurved. Lvs scattered, 80 × 12

mm, dark green. Stems 1 m, brown/green, with c.8 fls.

Late.

(Published in *Borbeleta Gardens Cat.*, 1993.)**'Muirgen' I(a/b)**

Parentage: 'Moiré' × unknown

R: I. Wiesner (1988), N: I. Wiesner, REG: I. Wiesner

(1989)

Inside mahogany (HCC 20), flushed orange (HCC 11)

at nectaries; outside with red-orange (HCC 12) midribs;

spots tiny, brown-red, on a quarter of each tepal;

papillae fine, white, in the throat; pollen red-brown;

stigma purple-red. Fls 135 mm wide; tepals 67 × 28

mm, margins smooth, tips slightly recurved. Lvs broad,

deep green. Stems 0.65-0.7 m., with 5-6 fls in a short

infl. Mid July.

**'Multiflorum' I(a/-)**Parentage: selection from *L. × hollandicum* ?

Fls scarlet, shading to orange. Stems 0.6 m.

(Published in *Barr & Sugden Cat.*, 1877.)**'Multiflorum' V(b/a)**See *longiflorum* 'Multiflorum'.**'Multiflorum' IX(b-c/d)**See *speciosum* 'Multiflorum'.**'Multnomah' I(a/-)**

Parentage: 'Sunstar' × 'Connecticut King'

R: E.A. McRae (1975), G: Oregon Bulb Farms, Inc.

(1978), N: Oregon Bulb Farms, Inc. (1985), I: Oregon

Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc.

(1985)

Inside vivid yellowish orange to strong orange (30C/D)

to vivid reddish orange (30A), tepal-tips, throat and

outside vivid yellowish orange to strong orange (30C/D);

spots absent; nectaries lime-yellow; pollen strong orange

(170A). Fls 150-180 mm wide; tepals 70 × 50 mm,

margins smooth, tips slightly recurved. Lvs scattered, 80

× 20 mm, mid green. Stems 1.5 m, light green, with 10-

30 fls. Late June.

**'Mum's Pride' VII(b/-)**Parentage: pink-flowered seedling of *speciosum* × (*L. × parkmanii* × unknown)

R: T.W. Baldwin (1977), G: T.W. Baldwin (1982), N:

M.K. &amp; J.A. Baldwin (1989), I: M.K. &amp; J.A. Baldwin

(1989), REG: M.K. &amp; J.A. Baldwin (1989)

Strong purplish red (60B) at centre of tepals, lightening

to strong purplish red (63B) towards edges and with

white margins on the apical half of tepals, tips white,

throat strong purplish red (60B); outside white with

inside colour showing through; spots dark red (187A)

on basal half of each tepal; nectaries strong yellow-green

(145A); pollen strong orange (24A). Fls 180 mm wide;

tepals 135 × 55 mm, margins smooth, tips slightly

recurved. Lvs scattered, 125 × 50 mm, mid green. Stems

1.2 m, strong yellow-green (144B), with c.15 fls. Feb.

(Australia).

**'Mundial' VIII(a/-)**

Parentage: seedling Lars 93-12 × seedling AM 95-13

R: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den

Haan Beheer B.V. (1999), REG: Vletter &amp; Den Haan

Beheer B.V. (2003)

Inside and outside moderate to strong purplish red

(59C/59D); spots and papillae present; nectaries green;

pollen orange-brown; stigma purple-red. Tepal-margins

slightly ruffled, tips slightly recurved. Stems 1.25 m, with

reddish markings. Early to midseason.

(A *longiflorum*/Asiatic (LA) hybrid.)**'Murano' I(a/b)**

Parentage: seedling OR 93-6 × seedling OR 90-10

R: Vletter &amp; Den Haan Beheer B.V., G: Vletter &amp; Den

Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V.,

I: Vletter &amp; Den Haan Beheer B.V., REG: Vletter &amp; Den

Haan Beheer B.V. (1999)

Inside vivid reddish orange (43A), each tepal shading to vivid reddish orange (30B/32A) towards tip and with vivid reddish orange (33A) at tip, striped vivid reddish orange (43A) at tepal-edges, throat vivid reddish orange (32A); outside strong reddish orange (42C) with a little strong orange (26A) at the base, tepal-edges vivid reddish orange (43A); spots absent; papillae strong yellowish pink (33C) along the nectaries; nectaries strong orange (26A) with a little strong yellowish pink (33C); pollen dark greyish reddish brown (200A); stigma deep red (60A). Fls 210 mm wide; tepals 110 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 1.1 m, dark green, with c.3 fls.

**'Muriel Condie' I(b-c-c-d)**

Parentage: Stenographer Group selection from Preston Group

S: I. Preston, N: I. Preston (1939)

Fls orange-chrome, with small brown spots; nectaries grey-crimson; pollen red. Fls 1400 mm wide; tepal-tips reflexed. Lvs scattered, glossy green. Stems 1.4 m, green, speckled brown. July.  
(Published in *LYB* 8: 157, fig. 26 (1939).)

**'Muriel Grace' I(a/-)**

Parentage: 'Powder Puff' × 'Pumpkin Sweet'

R: G.C. Keast (1991), G: G.C. Keast (1993), N: G.C. Keast (1996), REG: G.C. Keast (1997)

Inside peach (HCC 512/1), with darker midvein along the basal third of each tepal, throat darker peach (HCC 512), slightly suffused with yellow around top of nectaries; outside shell-pink (HCC 516/1), midribs green; papillae short, scattered in centre of fl.; nectaries green-tinged; pollen brown; stigma and style dark. Fls 160 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 1 m, black, with c.10 fls. Late Dec. to mid Jan. (New Zealand).

**'Murka' I(a/-)**

Parentage: brushmarked seedling × brushmarked seedling

R: J. Vasarietis (1984), G: J. Vasarietis (1988), N: J. Vasarietis (1991), I: J. Vasarietis (1991), REG: J. Vasarietis (1992)

Strong orange (26A) throughout; with a large, black brushmark and dark spots on each tepal, brushmark larger on the 3 broadest tepals); nectaries greenish white; pollen brownish. Fls 130 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 13 mm, mid green. Stems 0.8 m, greenish brown, with up to 5 or more fls. Early July.

**'Murmar' I(b-c/-)**

Parentage unknown

G: J.G. Smith (1978), N: J.G. Smith (1985), I: J.G. Smith (1985), REG: J.G. Smith (1985)

Fls orange-red, darker at base of tepals; spots red, in the centre; nectaries orange; pollen red. Tepals 65 × 23 mm, margins slightly ruffled, tips strongly recurved. Lvs

scattered, 120 × 10 mm, dark green. Stems 1 m, dark green, with c.32 fls.

(Grown from NALS seed.)

**'Musala' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: H. Hauwert (1988), G: H. Hauwert (1990), N: H. Hauwert (1997), I: H. Hauwert (1997), REG: H. Hauwert (1997)

Inside light and pale yellow (18A & D), midveins light yellow (18A) changing into pale yellowish pink (27D), light yellow (18A) at top; outside pale yellowish pink (27D) shading to pale yellow (18D) towards the narrow, light yellow (18B) tepal-edges, midribs strong yellow-green (144C), tipped strong yellow-green (143A); spots dark red (187A) in the throat; papillae absent; nectaries yellow-green (144B); pollen absent; stigma moderate orange-yellow (164C). Fls 120 mm wide; tepals 70 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 15 mm, mid green. Stems 1.2 m, green with much darker marking, and with 10-11 fls.

**'Muscadet' VII(a-b/b)**

Parentage unknown

R: Imanse Lelieveredeling B.V. (1988), G: W. Paauw & Zn B.V., N: Peacock B.V. (1991), I: Peacock B.V. (1995), REG: Peacock B.V. (1995)

Inside yellowish white (155D), with strong purplish red (60C) near the base, tepal-tips and margins yellowish white, throat strong purplish red (60C), the stripes changing to yellowish white; outside yellowish white (155D); spots red; papillae present; nectaries pale green, changing to cream; pollen orange; stigma deep red (60A). Tepals c.120 × 50 mm, margins of inner tepals smooth, outer ruffled, tips slightly recurved. Lvs scattered, mid green. Stems green, with c.6 fls. Midseason to late.

**'Musette' I(b/-)**

Parentage: 'Juliana' × (*pumilum* × bicoloured selection from Coronado Group)

R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Inside light purplish pink (62C), tepal-tips strong purplish red to deep purplish pink (58C/D), throat light to pale purplish pink (62C/D); outside soft pink overlaid with green; small spots on basal third of each tepal, forming 'whiskers' at the end of the nectaries; nectaries soft green; pollen greyish red (178A). Fls slightly scented; tepals 50-60 × 25-30 mm, margins ruffled, tips slightly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 0.8-1.5 m, dark green, with 5-20 fls. Early June.

(The tepals are more rounded and the infl. is more compact than in 'Diminutive'.)

**MUSIC VIII(a/b-c)**

Trade designation of 'Zanlasic'.

**'Musical' I(a/-)**

Parentage: Asiatic seedling × ('Connecticut King' × unknown)

R: Bischoff Tulleken Leliecultuur B.V. (1974), G: Bischoff Tulleken Leliecultuur B.V. (1977), N: Bischoff Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken Leliecultuur B.V. (1983), REG: Bischoff Tulleken Leliecultuur B.V. (1983)

Inside brilliant yellow (12B), each tepal with a short, orange flame, tip yellow, throat yellow-green; outside straw-yellow with green midribs; slightly spotted; nectaries yellow-green; pollen orange-brown. Fls 125 mm wide; tepals 75 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 12 mm, dark green. Stems 0.8 m, yellowish, with c.4 fls. Late June.

**'Musik der Nacht' I(a/c)**

Parentage: 'Byam's Ruby' × 'Impact'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2003), I: G. Steinbrück (2004), REG: G. Steinbrück (2004)

Inside strong red (53D), throat tinged with light yellow (17D); outside strong red to yellow-orange; oval spots and brushmarks deep purplish red (71A); nectaries violet, somewhat hoary; filaments pink; pollen orange; style long, black-red; stigma beige. Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 55 × 17 mm. Stems 0.95 m, mid green, c.12 fls. Late June.

(Sister to Steinbrück's 'Kleine Nachtmusik'.

Nomenclatural standard: colour print supplied by registrant (WSY 0096356).

**'Muskbelle' VI(-/a)**

Parentage: selection from Yellow Trumpet Group

N: D. Foxwell (1961)

Fls vivid yellow (9B), with some red-brown and slight green tinting outside.

(Published in *LYB* 25: 150 (1962).)

**'Musketier' I(a/b)**

Parentage: 'Johanna' × mixed pollen of 'Vater Zille', 'Fanal' & 'Brushstroke'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Fls vivid reddish orange (34A) throughout; spots absent; pollen strong purplish red (60B); stigma pale orange-yellow (164C). Fls 145 mm wide; tepals 72 × 33 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 14 mm. Stems 1.2 m, dark green, with c.17 fls in a pyramidal infl. Early to mid July.

**'Muskoka' I(a/-)**

Parentage: complex hybrid

R: P.M. Byam, N: RBG, Canada, I: RBG, Canada (1968)

Fls gold, tepal-tips pale reddish orange; spots small, wine-red. Stems 1.2 m. July.

(Published in *ILR* (1969).)

**'Musu Lepnum's' VI(b/a)**

Misspelling of 'Müsu Lepnum's'

**'Müsu Lepnum's' VI(b/a)**

Parentage unknown

R: V.P. Orehovs (1964)

Inside lemon-yellow; outside very pale lilac with greenish midribs; pollen orange; stigma green. Fls 100 mm wide, faintly scented. Lvs glossy dark green. Stems 0.5-0.9 m. July to Aug.

(Published in *Cvetovadstvo*, 1981. Included in *ILR Third Supplement* as 'Musu Lepnum's' which is a misspelling.)

**'Mut' I(a-b/-)**

Parentage unknown

R: J. Svoboda, N: J. Svoboda, I: J. Svoboda (1975), REG: J. Svoboda (1984)

Inside orange-red, tepal-tips orange, throat dull red; outside orange-red; spots more-or-less numerous, variable in size, black, in the throat; pollen yellow-orange. Fls 120 mm wide; tepals 70 × 35 mm, tips slightly recurved. Lvs 80 × 15 mm. Stems 0.6 m, green. Mid July.

**'Mutoh-beni' I(a/-)**

Parentage: 'Enchantment' × *L. × maculatum* 'Ueda-beni'

R: K. Mutoh (c. 1982), N: K. Mutoh

Fls vivid red (46B) with very few spots. Fls up to 140 mm wide. Stems 0.6 m. Midseason.

**'Mutoh-nishiki' I(a/-)**

Parentage: 'Enchantment' × *L. × maculatum* 'Taishohsukashi'

R: K. Mutoh (c. 1982), N: K. Mutoh

Fls strong reddish orange (42A); spots few. Fls 150 mm wide, with slightly reflexed tepals. Stems 0.8 m, with bulbils. Late.

**'My A' VI(b-c/a)**

Parentage: 'Sapņojums' × lavender-bronze-flowered seedling

R: I. Zilgalvis (1992), N: I. Zilgalvis (1996), REG: I. Zilgalvis (2004)

Inside greenish white-lavender, throat green; outside lavender-brown; spots absent; nectaries green; pollen orange; stigma yellow-green. Fls 160 mm wide; tepals 170 × 50 mm, margins smooth, tips strongly recurved. Lvs 100 × 9 mm. Stems 1.5 m, dark green, with c.8 fls. Mid July.

(Nomenclatural standard: colour print supplied by registrant (WSY 0096374).)

**'My Darling' I(c/-)**

Parentage: *dauidii* var. *willmottiae* × "*dauidii* var. *concolor*"

R: A.J. van der Zwet & Sons (c. 1951), N: A.J. van der Zwet & Sons

AMH 1951

Fls Saturn red to orange, lightly spotted. Fls small, *dauidii* type.

(The name of the pollen parent has not been traced: it is possibly an error for *dauidii* var. *unicolor*.)

**'Myddelton House' VI(-/a)**

See *L. × imperiale* 'Myddelton House'.

**'My Dear' I(a/b)**

Parentage: 'Compass' × 'Gran Paradiso'

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1996)  
 Inside vivid reddish orange (34A) shading downwards to a vivid reddish orange (32A) throat; outside vivid reddish orange (34A/B), tepal-margins vivid reddish orange (34A), midribs white-hairy; spots absent; papillae few, in the throat; nectaries coloured as throat; pollen strong brown (172A); stigma dark red (187A). Fls 200 mm wide; tepals 105 × 40-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 15 mm, mid green. Stems 1.25 m, dark, with 5-6 fls; buds hairy. June. (*The Lily Nook Cat.* 1998: 15 says it is a tetraploid.)

**'My Fair Lady' VIII(a/b)**

Parentage: (unnamed Asiatic × *longiflorum* 'Slocum's Ace') × mixed Asiatic pollen

R: E.A. McRae (1988), G: Van der Salm Bulb Farm, Inc. (1990), N: E.A. McRae (1994), I: Van der Salm Bulb Farm, Inc. (1994), REG: Van der Salm Bulb Farm, Inc. (1994)

Inside soft shell-pink, throat yellow-gold; outside shell-pink; traces of spots near nectary-furrows only; nectaries soft gold; pollen brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1 m, mid green. Late June. (*A longiflorum*/Asiatic (LA) hybrid. Published in *Wayside Gardens Cat.*, Autumn 1994.)

**'My Glee' I(b/-)**

Parentage: 'Marisa' × unnamed hybrid ex Patterson

R: J.C. Ericksen, G: J.C. Ericksen (1980), N: J.C. Ericksen (1982), REG: J.C. Ericksen (1992)

Inside lilac-pink, throat ruby-red; outside mauve-red, very woolly; spots small, purple, on basal half of each tepal; nectaries ruby-red; pollen red-yellow. Fls 125 mm wide; tepals 75 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 40 mm, dark green. Stems 0.6 m, dark, with up to 8 fls. Late June.

**'My Joe Ann' I(c/-)**

Parentage: unknown × red-flowered seedling

R: P. Whipple (1980), G: P. Whipple (1982), N: P. Whipple (1988), I: S.R. Kaul & P. Whipple (1988), REG: S.R. Kaul (1988)

Inside very light lavender-pink with a light yellow flush (the colour not fading in heat or bright light), tepal-tips darker pink, throat darker pink that fades above into a yellow flush in the centre of each tepal; outside greenish pink; spots very few, tiny, darker pink to purple; nectaries very pale yellow to pink; pollen dark rusty red/orange. Tepals 80-100 × 25-30 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 17-20 mm, dark green. Stems 1.25-1.5 m, mid green, with 12-24 fls in a long, racemose infl. June to July.

**'Mykene' VI(-/a)**

Parentage: 'Heidelburg' × 'Lednice'

R: V. Strasser (1988), G: V. Strasser (1991), N: V. Strasser (1996), REG: V. Strasser (1997)

Inside vivid yellow (15A), throat green; outside yellow, midribs green; spots absent; nectaries green; pollen orange. Tepals 115 × 35 mm, margins smooth, tips slightly reflexed. Lvs scattered, 140 × 16 mm, dark green. Stems 1.7 m, rather dark green, with c.38 fls. Late July.

**'Mykonos' I(a/-)**

Parentage: ('Aurachtiger' × 'Pirate') × 'Hornback's Gold'

R: V. Strasser (1976), G: V. Strasser (1978), N: V. Strasser (1980), I: V. Strasser (1982), REG: V. Strasser (1985)

Inside yellow-orange, tepal-tips, throat and outside red; spots absent; nectaries red; pollen orange-red. Tepals smooth, slightly recurved. Lvs scattered. Stems 1.1 m, nearly black, with up to 15 fls. Early July. (Published in *Der Staudengarten*, 1983.)

**'My Love' VI(-/a)**

Parentage: selection from Saskaleen Group

S: J.C. Ericksen (c. 1963), N: J.C. Ericksen  
 Fls lime-yellow and white.

**'My Love' I(c/d)**

Parentage unknown

R: K. Kiel (pre 1986), N: K. Kiel

Inside light lilac, with many spots. Fls small. Stems 1.1 m, with bulbils. Late June.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in German Lily Group sales list, 1986.)

**'My Pretty' I(a/-)**

Syn. of 'Mai-pureti'.

**'My Regina' VI(c/a)**

Parentage: 'Svėtdienas Rīts' × white-flowered seedling

R: I. Zilgalvis (2000), G: I. Zilgalvis (2002), N: I. Zilgalvis (2003), REG: I. Zilgalvis (2004)

Inside and outside white, throat yellow; spots absent; nectaries green; pollen dark red-brown, style and stigma green. Fls 140 mm wide; tepals 200 × 45 mm, margins smooth, tips slightly recurved. Lvs 120 × 10 mm. Stems 1.85 m, green, with c.10 fls. Late July (Nomenclatural standard: colour print supplied by registrant (WSY 0096371).)

***myriophyllum* Franch. IX(b-c/a)**

Syn. of *sulphureum*.

***myriophyllum* var. *superbum* (Baker) E.H. Wilson IX(b-c/a)**

Syn. of *sulphureum*.

**'My Romance' VII(b/d)**

Parentage: short, red-flowered Oriental seedling × 'Star Gazer'

R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1983), N: Bischoff Tulleken Lelies

B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside light to pale purplish pink (62C-D), each tepal tipped and edged yellowish white (155D), outer tepals suffused with ivory-white, inner tepals blushed moderate purplish pink (66D), throat brilliant greenish yellow (1B); outside yellowish white/pale purplish pink (155D/62D), inner tepals suffused with moderate purplish pink, midribs pale yellow (8D); papillae deep purplish red (59B); nectaries light yellow-green (150D); pollen strong orange (24A). Fls 235 mm wide; tepals 110 × 65 mm, margins smooth, tips recurved. Lvs scattered, 155 × 45 mm, mid green. Stems 0.7 m, green with dull, darker markings, and with c.5 fls. July (under glass).

#### **'My Shadow' VI(c/a)**

Parentage: pink-edged, yellow-flowered trumpet lily × deep pink-edged, yellow-flowered trumpet lily  
R: B. Arthur (1997), G: B. Arthur (2000), N: B. Arthur (2000), REG: B. Arthur (2005)  
Inside strong red (46A), with vivid greenish yellow (2A) along centre of each tepal to 35 mm from tip, throat vivid greenish yellow (2A); outside moderate red (182A); spots and papillae absent; nectaries green; pollen strong orange (168A); stigma red. Fls 190 mm wide, slightly scented; tepals 145 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 195 × 70 mm. Stems pale green (189B), with c.22 fls. Dec. to Jan. (Australia).  
(Nomenclatural standard: colour print supplied by registrant (WSY 0096426).)

#### **'Mysterious' VIII(a/b)**

Parentage: 'Swing' × unknown  
R: J. Vanheusden (1995), G: J. Vanheusden (1997), N: J. Vanheusden, I: J. Vanheusden, REG: J. Vanheusden (1998)  
Inside cream, with a peach blush over about half of each tepal towards the base, throat peach; outside very light creamy peach; spots dark red, almost black, on about half of each tepal; nectaries creamy; pollen dark orange; stigma dark red. Fls double, 130 mm wide; tepals 70 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 20 mm, mid green. Stems to 0.6 m, dark brown, almost black, with c.5-6 fls. Early July.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **'Mystery' VII(-/b)**

Parentage: unnamed seedling × (*L. × parkmanii* 'Allegra' × 'Star Gazer')  
R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1994)  
Inside yellowish white (155D), pale yellow-green (155A) above nectaries and fading towards midveins; outside yellowish white (155D), midribs pale yellow-green (155A), tinged with brilliant greenish yellow (151D) at top, those of outer tepals light greenish yellow (6D) and tipped strong yellow-green (143A); spots and papillae yellowish white (155D) on two-thirds of each tepal; pollen strong reddish orange/strong orange (169A/B);

stigma dark red (187A). Fls 225 mm wide; tepals 120 × 50 mm. Lvs scattered, 140 × 40 mm, mid green. Stems 0.8 m, pale green with darker markings, and c.5 fls.

#### **'Mystery Queen' VIII(a/b)**

Parentage: seedling 91.20.0091 × seedling A 89.041  
R: World Breeding B.V. (1993), G: World Breeding B.V. (1995), N: World Breeding B.V. (2001), I: World Breeding B.V. (2001), REG: World Breeding B.V. (2002)  
Inside yellowish white (155D), midveins green at base; outside pale yellow-green (155A); spots and papillae present; nectaries green; pollen orange-brown; stigma light purple. Tepal-margins smooth to very slightly wavy, tips slightly recurved. Stems with dark stripes and spots, and with c.6 fls. Early to midseason.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **'Mystic' VI(-/a)**

Parentage: origin unknown, but perhaps *leucanthum* var. *centifolium* × *sargentiae*  
PC 1933  
Fls white, tinged with green.  
(Published in *LYB* 2: 237 (1933). Originated in USA.)

#### **'Mystic Brilliant' VIII(a/b)**

Parentage: 'Dame Blanche' (tetraploid form?) × seedling LO 93003.2BT  
R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)  
Inside yellowish white (155D), with a vivid purplish red (61C) flush along midveins that fades with age; outside with outer tepals yellowish white (155D), midribs pale yellow-green (155A), light yellow-green (145B) at base with a vivid purplish red (61C) stripe, inner tepals similar but lacking purplish red stripe; spots absent; papillae yellowish white (155D); nectaries strong yellow-green (144C); pollen moderate reddish orange (171A); stigma moderate yellow-green (147D). Fls 235 mm wide, slightly fragrant; tepals 150 × 55-80 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 190 × 35 mm. Stems 0.9-1.1 m, green with darker markings, and with c.3 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **'Mystic Butterfly' I(b/-)**

Parentage unknown  
R: N.A. Lamb (c. 1960), N: N.A. Lamb, REG: (1984)  
Fls orange-apricot. Lvs scattered, dark green. Stems 1.2 m. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 43 (1978).)

#### **'Mystic Cherry' I(a/-)**

See *L. × hollandicum* 'Mystic Cherry'.

#### **'Mystic Fantasy' I(a/-)**

Parentage unknown  
R: N.A. Lamb (c. 1960), N: N.A. Lamb  
Fls apricot with white tepal-edges. Lvs scattered, dark green. Stems 0.9-1 m. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)

**'Mystic Giant' I(b/-)**

Parentage unknown

R: N.A. Lamb (c. 1960), N: N.A. Lamb

Fls clear rose-pink; spots medium sized. Lvs scattered, dark green. Stems 0.4-0.6 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978).)**'Mystic Glory' I(a/-)**

Parentage: yellow-flowered Asiatic × unknown

R: N.A. Lamb (c. 1960), N: N.A. Lamb

Fls light yellow. Lvs scattered, dark green. Stems 1.1 m. Early July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)**'Mystic Gold' I(b/-)**Parentage: *lancifolium* var. *flaviflorum* × yellow-flowered Asiatic

R: N.A. Lamb (c. 1960), N: N.A. Lamb

Fls yellow. Lvs scattered, dark green. Stems 1.2 m. Early July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978).)**'Mystic Leopard' I(a/-)**

Parentage: yellow-flowered Asiatic × unknown

R: N.A. Lamb (c. 1960), N: N.A. Lamb

Fls light yellow with a few spots. Stems 0.9 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)**'Mystic Moon' I(b/-)**

Parentage: yellow-flowered Asiatic × unknown

R: N.A. Lamb (c. 1960), N: N.A. Lamb

Fls deep yellow, lightly spotted. Stems 0.5 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978).)**'Mystic Pyramid' I(a/-)**

Parentage: yellow-flowered Asiatic × unknown

R: N.A. Lamb (c. 1960), N: N.A. Lamb

Fls mid yellow. Lvs scattered, dark green. Stems 1 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)**'Mystic Rose' I(a/b)**

Parentage: pink bicolor seedling A-15-85 ×

'Beaudaceous'

R: Cebeco Lilies, Inc. (pre 1998), N: Cebeco Lilies, Inc. Inside deep rose-pink with a cream throat and plum brushmarks. Tepals slightly recurved. Stems 1.1 m. Early to midseason.

(Included in *ILR Nineteenth Supplement* as an unacceptable name: ICNCP, 1995: Art. 17.13 - the common name of another genus cannot be used as the final word of the name. However, in 2004 this ICNCP Article was amended and this name is now accepted. Published in *The Lily Nook Cat.*, 1998.)**'Mystic Sentinel' I(b/-)**

Parentage unknown

R: N.A. Lamb (c. 1962), N: N.A. Lamb

Fls apricot-orange. Lvs scattered, dark green. Stems 1.1-1.2 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978).)**'Mystic Sundog' I(c/-)**

Parentage: 'Mystic Sunset' × Sunset Group

R: N.A. Lamb (c. 1960), N: N.A. Lamb

Fls yellow towards tepal-tips and pink towards throat; heavily spotted with small, purple spots. Lvs scattered, dark green. Stems 0.8 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 45 (1978). The names of the parents have not been traced. Lamb raised 'Mystic Sunrise' and it is possible that 'Mystic Sunset' is an error for this epithet.)**'Mystic Sunrise' I(a/-)**

Parentage: pink-flowered Asiatic × unknown

R: N.A. Lamb (c. 1960), N: N.A. Lamb

Fls ivory to rose-pink. Lvs scattered, dark green. Stems 1 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)**'Mystic Sunset' Div. ?**

Given as a parent of 'Mystic Sundog'. No further details.

**'Mystic Sunshine' I(b/-)**Parentage: *lancifolium* var. *flaviflorum* × various yellow-flowered hybrids

R: N.A. Lamb (c. 1960), N: N.A. Lamb

Fls mid yellow with dark spots. Lvs scattered, dark green. Stems 1 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978).)**'Mystic Virgin' VI(-/c)**Parentage: (*henryi* × unknown) × white-flowered trumpet lily

R: N.A. Lamb (c. 1960), N: N.A. Lamb

Fls chartreuse to icy white; spots absent. Lvs scattered, dark green. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 47 (1978).)**'Mystique Pearl' VII(a/b)**

Parentage: 'Abruzzo' × 'Dynasty'

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V., REG: De Jong Lelies Holland B.V. (2004)

Inside strong/light purplish pink (63D/C), light greenish yellow (3D) above nectaries, tepal-margins narrow, yellowish white (155D), throat yellowish white (155D); outside light purplish pink (62C), midveins strong yellow-green (144C) at base, changing into yellowish white (155D), strong purplish pink (62A) towards top, strong yellow-green (144C) at top; spots strong purplish red (63A); papillae yellowish white (155D); nectaries strong yellow-green (144C); pollen dark reddish orange

(172B); stigma pale yellow-green (193B). Fls 175 mm wide, fragrant; tepals 110 × 47-63 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 145 × 26 mm. Stems 0.6-0.9 m, brownish in lower third, green with darker markings in upper two-thirds, and with 3-5 fls.

**‘Nabob’ I(-/-)**

Parentage: “common orange-flowered bulbiferous lily” (almost certainly *bulbiferum*) × *L. × maculatum*  
R: H. Groom (c. 1848), N: H. Groom  
Fls deep brown. Dwarf.  
(Published in *JHS* 3: xliii (1848).)

**‘Nabucco’ I(a/-)**

Parentage: ‘Tabasco’ × ‘Cinnabar’ (Div. I)  
R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1980), I: V. Strasser (1985), REG: V. Strasser (1997)  
Inside blood-red; outside red. Tepals 80 mm long, margins smooth, tips not reflexed. Lvs scattered, dark green. Stems almost black, with up to 21 fls. Late June.

**‘Nachalo’ I(a/-)**

Parentage: derived from *bulbiferum* var. *croceum*  
R: V.G. Otroshko, N: V.G. Otroshko, REG: A.V. Otroshko (1992)  
Fls orange-red; spots absent. Stems 0.8 m, green.

**‘Nadezhda’ I(-/-)**

Parentage: (‘Stroinaia’ × *dauidii* var. *willmottiae*) × mixed pollen of Asiatic hybrids  
R: M.F. Kireeva (1972)  
Fls brick-red; filaments and style pink; anthers orange. Fls 100-110 mm wide. Stems with 15-20 fls. July.  
(Published in M.F. Kireeva, *Lilii*, 57 (1984).)

**‘Nadienka’ I(a/-)**

Parentage: ‘Svetlana’ × unknown  
R: V.A. Volkov (c. 1982), N: V.A. Volkov  
Fls clear pink, spotted. Stems 0.5 m, with bulbils. June.  
(The seed parent is probably ‘Svetlana’ of Kireeva.)

**‘Nadine’ I(a/b)**

Parentage: Panamint Group × ‘Connecticut King’  
R: G. Brown (1980), G: G. Brown (1982), N: G. Brown (1983), I: G. Brundrett (1987), REG: G. Brundrett (1990)  
Inside golden orange, tepal-margin orange-brown, fading to yellow, tips orange-brown, throat pinkish; outside light orange-brown; spots dark, oval, on basal third of each tepal, increasing in size towards tepal-tips; nectaries orange-brown; pollen golden brown. Fls 150 mm wide; tepals 90 × 42 mm, of very good substance and overlapping in basal half, margins smooth, tips not recurved. Lvs scattered, 115 × 13 mm, dark glossy green. Stems sturdy, 0.9 m, dark green with brown spots, and with 10-12 fls in a more-or-less umbellate head. Late June to mid July.

**‘Naeba-no-tsuki’ I(a/-)**

See *L. × maculatum* ‘Naeba-no-tsuki’.

**‘Nagano’ VII(a/b-c)**

Parentage: unnamed seedling × unnamed seedling  
R: Sande B.V., G: Sande B.V., N: Sande B.V. (1997), I: Sande B.V., REG: Sande B.V. (2001)  
Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen brown; stigma dark purple. Tepal-margins strongly ruffled, tips recurved. Stems 1-1.1 m, green. Early.

**‘Nagoya-benisukashi’ I(a/b)**

See *L. × maculatum* ‘Nagoya-benisukashi’.

**‘Nagrada’ I(a/c)**

Parentage unknown  
R: M.F. Kireeva (1979), N: M.F. Kireeva  
Fls dark cherry-red with black spots. Fls 90 cm wide; tepals 65-70 × 25-37 mm. Lvs glossy dark green. Stems 0.7-1 m, brown, with 5-7 fls, and with bulbils. July.  
(Published in M.V. Baranova, *Lilii*, 320 (1990).)

**‘Naina’ I(a/c)**

Parentage: ‘Stroinaia’ × mixed pollen  
R: M.F. Kireeva (1980), N: M.F. Kireeva  
Fls dark purple-red, spotted, 110-130 mm wide. Stems 1-1.5 m, with 7-11 fls. July.  
(Published in M.F. Kireeva, *Lilii*, 36 (2000).)

**‘Nairobi’ VII(a-b/-)**

Parentage: ‘Pompei’ × ‘Vedea’  
R: Sande B.V., G: Sande B.V., N: Sande B.V. (1997), I: Sande B.V., REG: Sande B.V. (2001)  
Inside and outside yellowish white (155D); spots absent; papillae present; pollen brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems 1-1.1 m, green. Early.

**‘Najva’ VI(b/a)**

Parentage unknown  
Fls creamy white with greenish midribs. Fls 100-130 × 50-80 mm. Stems 1 m. Late July.  
(Published in *Cvetovodstvo* 1981 (2): 21. Raised and named in the Baltic Republics.)

**‘Nakotne’ I(a/-)**

Misspelling of ‘Nākotne’.

**‘Nākotne’ I(b/-)**

Parentage: selection from Vasaras Prieks Group  
S: V.P. Orehovs (post 1956), N: V.P. Orehovs  
Fls light orange.  
(Published in *LYB* 33: 78 (1970) and included in *ILL* (1982) as ‘Nakotne’ which is a misspelling.)

**‘Nakts Alise’ I(a/b)**

Parentage: ‘Alisa’ × ‘Nakts Tango’  
R: A. Balode (1994), G: A. Balode (1996), N: A. Balode (1999), REG: A. Balode (1999)  
Inside yellowish white (155B), each tepal with a deep orange-yellow (163C) blotch; throat brilliant yellow-green (154B); outside white and strong purplish pink (63C); numerous, large and small, deep red (185A) spots

and marbling; nectaries dark brown; pollen dark yellow. Fls 170 mm wide; tepals 80 × 45 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 1 m, green, with c.3 fls. Early July.

**‘Nakts Karaliene’ I(-/-)**

Parentage: *dauricum* × unknown

R: V.P. Orehovs (pre 1960), N: V.P. Orehovs

Fls dark red, centre with large black spots, tepal-tips satiny velvet; anthers dark brown. Fls up to 125 mm wide. Tepal-tips slightly reflexed. Stems up to 0.8 m, with 4-6 fls.

Syn.: ‘Night Queen’.

(Included in *ILR Second Supplement* as ‘Nakts Karalina’ which is a misspelling.)

**‘Nakts Karalina’ I(-/-)**

Misspelling of ‘Nakts Karaliene’.

**‘Nakts Tango’ I(a-b/-)**

Parentage: ‘Raganīņa’ × much-spotted Asiatic seedling

R: V.P. Orehovs, G: V.P. Orehovs (1984), N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)

Inside creamy towards tepal-tips, basal three-fifths of each tepal blackish violet-red, pale star in centre of fl. (colour pattern reminiscent of *nepalense*). Fls 130 mm wide; tepals 65 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.2 m, green. (Published in *Dārzs un Drava* 7: 21 (1986).)

**‘Namazu Beauty’ IX(b-c/d)**

See *speciosum* ‘Namazu Beauty’.

**‘Nameja Gredzens’ I(a/b)**

Parentage: ‘Herta Rozentāle’ × ‘Mirage’ (Div. I)

R: D.-V. Šķimele (1994), G: D.-V. Šķimele (1997), N: D.-V. Šķimele (1999), REG: D.-V. Šķimele (2004)

Inside brownish orange-red with a golden yellow ring, throat red; outside orange-red, midribs green; spots dark brown, small, on half of each tepal, nectaries white; pollen brown; stigma red-brown. Fls 160 mm wide; tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 10 mm. Stems 0.7 m, green, with c. 6 fls. Mid July.

(Published in *Lilium Balticum Lily Register*, 2000.)

**‘Namours’ VII(a-b/b-c)**

Parentage: seedling 93-78 × seedling RH 95-17

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside yellowish white (155D), midveins brilliant yellow (10A); outside yellowish white (155D), midribs yellowish white (158D); spots and papillae vivid yellow (9B); nectaries strong yellow-green (144C) with small vivid yellow (9B) edge; pollen strong brown (172A); stigma greenish white (192D). Fls 250 mm wide; tepals 135 × 70 mm, margins slightly ruffled, tips recurved. Lvs 177 × 52 mm. Stems 1.2 m, green, with c.6 fls.

**‘Nancy’ II(c/d)**

Parentage: unnamed hybrid × unnamed hybrid

R: F. Tarlton (1988), G: M. Joslin (1995), N: F. Tarlton & M. Joslin (1999), I: M. Joslin & W. Kuyt (1999), REG: Parkland Perennials (1999)

Inside pale purplish pink (55D), throat pale yellow (161C); outside pale purplish pink (55D); spots numerous, strong red (53D), on basal half of each tepal and a few along the edges; nectaries pale yellow (161C); pollen moderate orange (170B); stigma moderate purplish red (186A). Fls 80 mm wide, slightly scented; tepals 40 × 14 mm, margins smooth, tips strongly recurved. Lvs whorled, 130 × 40 mm. Stems 1.3 m, moderate yellowish green (139B), with a pyramidal infl. of 18-20 fls. Early July.

(Nomenclatural standard: colour print supplied by F. Tarlton (WSY 0015384).)

**‘Nanda’ I(a/-)**

Parentage: ‘Prosperity’ × Citronella Group

R: De Jong Lelies Beheer B.V. (pre 1978), N: De Jong Lelies Beheer B.V., REG: De Jong Lelies Beheer B.V. (1978)

Fls vivid yellow (14B), spotted brownish in centre; anthers dark red-brown.

(Published in *Lilies and other Liliaceae*, 1978/9: 111.)

**‘Nanija’ I(b/b)**

Parentage: ‘Inčukalns’ × ‘Madrigāls’

R: D.-V. Šķimele (1992), G: D.-V. Šķimele (1994), N: D.-V. Šķimele (1997), REG: D.-V. Šķimele (2001)

Inside with centre of tepals yellowish with a pinkish tone, margins vivid pinkish orange-yellow, throat greenish yellow; outside pale orange-yellow, with orange tepal-margins and midribs; spots absent; nectaries greenish cream; pollen vivid orange; stigma orange. Fls 170 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 10 mm. Stems 1.2 m, brownish green, with c.8 fls. Mid July.

***nanum* Klotzsch IX(c/b)**

Fls pale lilac to pink, speckled with reddish or brown; nectaries on outer tepals almost circular; anthers yellow-brown. Fls fragrant; tepals 10-40 × 3-16 mm. Lvs scattered, 4-15 × 2-7 mm, Stems 0.1-0.4 m, green, with solitary fls. Himalaya, W China.

(Was included in the genus *Nomocharis* by E.H. Wilson in 1925.)

**‘Nanum’ IX(b-c/d)**

See *speciosum* ‘Nanum’.

***nanum* var. *flavidum* (Rendle) Sealy IX(c/b)**

Fls yellow; spots absent.

**‘Naomi’ VI(b/a)**

Parentage unknown

R: J. Kovář, N: J. Kovář, I: J. Kovář (2001), REG: J. Kovář (2001)

Inside deep red-brown, tepal-tips yellow-brown, throat yellow; outside darker red-brown, midribs deeper and

browner; nectaries green; pollen yellow-brown; stigma dark grey. Fls 130 mm wide; tepals 130 × 50 mm, margins smooth, tips slightly recurved, the outer more so; pedicels 65 mm long, brown-dotted. Lvs scattered, 90 × 9 mm, dull mid green. Stems 1.1 m, slender, greyed green with darker spots. Mid July.

#### 'Naomi' I(b/c-d)

Parentage: ('Appleblossom' × 'Sunrise') F<sub>1</sub> × 'Connecticut King'

R: Mak-Leek Inc. (1991), G: Mak-Leek Inc. (1993), N: Mak-Leek Inc. (1997)

Inside vivid red (45A), with a mixture of vivid/strong red (45A/46A) in centre of each tepal, and a small orange flare in basal third; outside strong red (46A) and green; spots absent; nectaries dark brown; pollen strong reddish orange (169A); stigma dark red (187A). Fls 150 mm wide; tepals 80 × 30-45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 75 × 15 mm. Stems 0.6-1 m, strong yellow-green (143A) with dark brown markings, and with 4-10 fls. Late June.

(Registration was refused when it was applied for in 1997, because the epithet had been reserved by Hoff. However, Hoff never used the epithet and because it was assumed that Mak-Leek Inc. would rename their 'Naomi', Kovár's registration was accepted. Mak-Leek have continued to use 'Naomi' but under ICNCP, 2004: Art. 27.1 the name is unacceptable.)

#### 'Napier's Variety' IV(-/d)

See *L. × burbankii* 'Napier's Variety'.

#### 'Napoleon' I(a/-)

Parentage unknown

R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V.

Inside vivid orange (28A), tepal-edges tinged with vivid reddish orange (34A), and tinged with deep red (53A) along nectaries; outside vivid reddish orange (42A), tinged with strong reddish orange (42B) at top, suffused with moderate yellow (160A) at base; spots dark red (187A); pollen strong brown (172A); stigma dark red (187B). Tepals 110 × 48 mm. Lvs scattered, 160 × 23 mm, dark green. Stems 1.04 m, green with darker markings, and with c.5 fls.

(This epithet has been accepted for Dutch PBR and is thus legitimate, however it cannot be registered because it duplicates an earlier usage (ICNCP, 2004: Art. 27.1).)

#### 'Napoléon' I?(-/-)

Parentage: probably a seedling from *L. × maculatum* Dwarf.

(Published in *Rev. Hort.*, Sept. 1844: 158-59. Exhibited in Brussels the same year.)

#### 'Napoli' I(a/b)

Parentage: 'Enchantment' × 'Connecticut King'

R: De Lijster Hillegom B.V. (1975), G: De Lijster Hillegom B.V. (1977), N: De Lijster Hillegom B.V. (1981), I: De Lijster Hillegom B.V. (1981), REG: De Lijster Hillegom B.V. (1982)

Fls orange, darker in throat; outside with light brown stripes; spots brownish black, concentrated in throat; nectaries orange; pollen orange-brown. Fls 160 mm wide; tepals 95 × 38 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 13 mm, dark green. Stems 0.9-1.1 m, dark brown, with 8-13 fls. July.

#### 'Naranja' I(a/-)

Parentage: (*bulbiferum* var. *croceum* × 'Enchantment') × 'Parabola'

R: V. Strasser (1977), G: V. Strasser (1980), N: V. Strasser (1984), I: V. Strasser (1986), REG: V. Strasser (1986) Fls orange; spots strong purple on half of each tepal; pollen orange-red. Tepals 90 × 32 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 12 mm, dark green. Stems 1.2 m, brownish green, with c.10 fls. June to July.

#### 'Narbonne' VIII(a-b/b)

Parentage: seedling J 57 × seedling RS 92-16

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside stronger than strong purplish red (63A) fading towards tepal-tips; outside moderate purplish red (64A) on a paler ground, midribs strong yellow-green (144B) towards top, slightly deeper (144A) at top; spots few, dark greyish reddish brown (200A), on a third of each tepal; papillae absent; nectaries strong yellow-green (143B) and yellowish white (155B); pollen moderate reddish brown (175A); stigma deep purplish pink (64D) with a moderate purplish red (186B) vein. Fls 200 mm wide; tepals 105 × 40-50 mm, margins smooth, tips recurved. Lvs scattered, 125 × 20 mm, dark green. Stems 1.4 m, green with dark stripes, and with 4-6 fls. (*A. longiflorum*/Asiatic (LA) hybrid.)

#### 'Nariadnaia' I(a/b)

Parentage: 'Orange Light' × ('Redstart' × 'Dora Pinnow')

R: M.F. Kireeva (1977), N: M.F. Kireeva

Fls bright orange, almost unspotted; filaments orange; anthers green-orange with bright orange pollen. Stems 0.8-1.2 m, with 9-24 fls. July.

(Published in M.F. Kireeva, *Lilii*, 56 (1984).)

#### 'Narina Group' VI(b/b)

Parentage: from various *benryi* × trumpet crosses

R: L.B. Tuffery (c. 1966), N: L.B. Tuffery

Fls deep golden apricot, up to 250 mm wide, *auratum* type; tepals very wide. Stems very tall.

#### 'Narodnaia' I(a/-)

Parentage unknown

R: M.F. Kireeva & N.V. Ivanova (1983)

Fls orange, covered with dark brown streaks and spots except at tepal-tips. Fls 130-150 mm wide; tepal-margins slightly ruffled. Stems 0.9-1 m, with 7-11 fls.

(Published in M.F. Kireeva, *Lilii*, 44 (2000).)

**'Nata' Div. ?**

Given as a parent of 'Epifanija', 'Uldis' and 'Vakarstunde' which were raised by D.-V. Šķimele. No further details.

**'Nataka' I(b-c/-)**

Parentage unknown

R: C.C. Bangs (1962), G: F. Tarlton (1965), N: F. Tarlton, I: F. Tarlton (1993), REG: F. Tarlton (1994)  
Fls brilliant orange (29A); spots c.40 on basal half of each tepal; nectaries brilliant orange (29A); pollen vivid reddish orange (32A). Fls 100 mm wide; tepals 90 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 105 × 10 mm. Stems 1 m, mid to dark green, with 12-15 fls (and many secondary buds). July.  
Syn.: 'Alexander' (Div.I).  
(First introduced, in 1993, as 'Alexander'.)

**'Natal' VII(a/b)**

Parentage: seedling 92-101 × seedling RF 94-5

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1993), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid purplish red (57B), each tepal vivid purplish red (57C) towards margin and with a light greenish yellow (1C) spot above nectaries, throat yellowish white (155D); outside light reddish purple (74C), midribs strong to moderate yellow-green (143C/143D), tip with a strong yellow-green (143A) spot; spots and papillae deep purplish red (59B); nectaries strong yellow-green (143C); pollen strong brown (172A); stigma deep purple (79C). Fls 203 mm wide, slightly fragrant; tepals 115 × 73 mm, margins smooth, tips recurved. Lvs 165 × 50 mm. Stems 1.2-1.4 m, dark reddish brown, with 3-4 fls.

**'Natalia' I(a/b-c)**

Unaccepted spelling of 'Nataliia'.

**'Natalie Meyers' I(a/-)**

Parentage: 'Connecticut King' × (('Rosabelle' × unknown) × 'Victoria Meyers')

R: N.F. Bieniasz (1979), G: N.F. Bieniasz (1984), N: N.F. Bieniasz (1985), REG: N.F. Bieniasz (1985)

Fls strong yellowish pink (31C), tepal-tips and outside strong yellowish pink (35C), throat strong orange; spots elongated, greyish brown (166A); nectaries moderate red (181C); pollen moderate reddish orange (178C). Fls 150 mm wide; tepals 80 × 35 mm, margins ruffled, tips slightly recurved. Lvs scattered, 110 × 15 mm, dark green. Stems 0.9 m, dark green, with c.30 fls. Midseason.

**'Nataliia' I(a/b-c)**

Parentage: 'Stroinaia' × 'Enchantment'

R: M.F. Kireeva (1976), N: M.F. Kireeva

Fls salmon-apricot with very small brown spots in basal half; filaments pink; anthers red-brown. Fls 120-140 mm wide; tepals broad. Stems 0.9-1.2 m, with 8-15 fls. June to July.

(Published in M.F. Kireeva, *Lilii*, 56 (1984). Included in *ILR Third Supplement* as 'Natalia' which is an unaccepted spelling, and where the parentage was given as ('Stroinaia' × *davidii* var. *willmottiae*) × Mid-century Group.)

**Naujēnu Group I(c/d)**

See note under Nauleni Group

**Nauleni Group I(c/d)**

Parentage: (*callosum* × *amabile*) F<sub>3</sub>

R: V.P. Orehovs (c. 1966), N: V.P. Orehovs

Fls dull red, 100-120 mm wide; pollen red. Stems up to 1 m, with 4-10 fls.

(Published in *LYB* 33: 81 (1970) where the name was transliterated from Russian, and appears to be incorrect. It is possible that it should be Naujēnu Group (Rukšāns, *in litt.* Dec. 2006).)

**'Naumai' VII(b/c)**

Parentage unknown

R: W.A. Christensen, N: W.A. Christensen

Fls open cream to green, later flush orchid-pink throughout. Fls *auratum* type. Stems 1-1.2 m.

**'Navajo' I(b/-)**

Parentage: 'Fire King' (Div. I) × unknown

R: E.L. Kline (c. 1954), N: E.L. Kline

Fls capsicum-red, with fire-red tepal-tips; finely spotted.

Stems 0.6-1 m. June.

(Published in *R.B. Ware Cat.*, 1954.)

**'Navarra' I(a/b-c)**

Parentage: seedling W 91-13 × seedling W 91-15

R: Vletter & Den Haan (1994), G: Vletter & Den Haan,

N: Vletter & Den Haan (1997), I: Vletter & Den Haan (1997), REG: Vletter & Den Haan (1997)

Inside yellowish white (155B), throat with a little strong yellow-green (144C); outside yellowish white (155B), with a 25 mm-wide band of strong/light yellow-green (144C/D) along the midribs; spots and papillae absent; nectaries strong yellow-green (144C), white-hairy; pollen close to brownish orange (164A); stigma light greenish yellow (8B). Fls 175 mm wide; tepals 95-100 × 40-65 mm, margins smooth, tips slightly recurved. Lvs scattered, 165 × 20-25 mm, mid green. Stems 1.25 m, green with darker markings, and with c.6 fls.

**'Navona' I(a/b)**

Parentage: seedling W 711 × seedling W 729

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1994)

Inside and outside yellowish white (155D), midribs tinged with strong yellow-green (144C) at base together with some darker coloration, at top brilliant yellow-green (154B); spots absent; pollen strong brown (172A); stigma light yellow-green (145B/C). Fls 190 mm wide; tepals 100 × 55 mm, margins smooth, tips recurved. Lvs scattered, 95 × 15 mm, mid green. Stems 0.85 m, pale green with darker markings, and with c.7 fls.

**'Nefertiti' I(b-c/d)**

Parentage: 'Orion' × ('Parfait' × 'Wattle Bird')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1994),

REG: B. Mičulka (1994)

Inside pale peach, tepal-tips tinted with reddish, centre creamy yellow; outside lilac, midribs yellowish; spots

numerous, medium sized, dark brown-purple, on half of each tepal; nectaries apricot; pollen apricot; stigma green. Fls 100 mm wide; tepals 75 × 38 mm, strongly recurved; pedicels 50 mm long. Lvs scattered, 85 × 11 mm, dark glossy green, edges slightly hairy. Stems 1.05 m, brown-dotted. July.

**‘Neibade’ I(a/c)**  
Misspelling of ‘Neibāde’.

**‘Neibāde’ I(a/c)**  
Parentage: ‘Roma’ × ‘Baltais Lācis’  
R: A. Balode (1992), G: A. Balode (1994), N: A. Balode, REG: A. Balode (1997)  
Inside pure white, throat brilliant yellow-green (142B); outside white and greenish; spots absent. Fls 140 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs 95 × 15 mm, dark green. Stems 1.1 m, dark green, with c.9 fls. (Mid July.  
(Included in *ILR Seventeenth Supplement* as ‘Neibade’ which is a misspelling.)

**neilgherrense Wight IX(b/a)**  
Syn. of *wallichianum* var. *neilgherrense*.

**var. neilgherrense IX(b/a)**  
See *wallichianum* var. *neilgherrense*.

**neilgherrense ‘Snowsprite’ V(b/a)**  
Syn. of *wallichianum* var. *neilgherrense* ‘Snowsprite’.

**‘Nellie’ I(b/b)**  
Parentage: ‘Kallista’ × ‘Nestor’  
R: G.M. Chandler (c. 1951), N: G.M. Chandler  
Fls orange.

**‘Nellie Gatehouse’ I(a,b/-)**  
Parentage: ‘Lord Melbourne’ × (*L. × hollandicum* × unknown)  
R: G. Errey (c. 1945), N: G. Errey  
Fls deep yellow, spotted.  
(Published in *Ball Cat.*, 1949.)

**‘Nellie’s Choice’ I(a/b)**  
Parentage: (‘Ikaria’ × unknown) × unknown  
R: S.T. Dunville (1989), G: S.T. Dunville (1991), N: S.T. Dunville (1998), REG: S.T. Dunville (1998)  
Inside an uneven mixture of moderate purplish pink (62B) and pale purplish pink (62D), tepal-tips moderate purplish pink (62B), throat strong purplish red (58B); outside strong purplish red (58B) at tepal-tips, lightening towards the middle, midribs yellow; a moderate number of brown spots, mostly on basal third of each tepal; nectaries green; pollen strong orange (30D); stigma greenish yellow. Except for the throat, the whole fl. fades to pale purplish pink (65C). Fls 100 mm wide; tepals 72 × 24-36 mm, margins smooth, tips recurved. Lvs scattered, 116 × 10 mm, greyish yellow-green (148D). Stems 0.85 m, mid green with brown tones, and with c.7 fls. Mid July.

**‘Nellie White’ V(b/a)**  
See *longiflorum* ‘Nellie White’.

**‘Nello’ I(a-b/b)**  
Parentage: ‘Napoli’ × ‘Gran Paradiso’  
R: Lybelmex Hillegom B.V., N: Lybelmex Hillegom B.V., REG: Lybelmex Hillegom B.V. (1995)  
Inside redder than vivid reddish orange (34A) combined with vivid reddish orange (32A) (but with more yellow as the secondary colour), throat orange; spots very few, very small; nectaries orange-pink; pollen red-brown; stigma purplish red. Tepal-margins smooth, tips slightly recurved. Lvs scattered, green. Stems 1.25 m, with darker stripes and speckles, and with 5-9 fls.

**‘Nelson Mandela’ VII(-/-)**  
See *L. × parkmanii* ‘Nelson Mandela’.

**‘Nemesis’ VI(b-c/b)**  
Parentage: ((‘Gold Eagle’ × ‘Lachsauelian’) × ‘Gelber Schnabel’) × (‘Damson’ × unknown)  
R: J. Kovář (1996), G: J. Kovář (2002), N: J. Kovář (2002), I: J. Kovář (2002), REG: J. Kovář (2004)  
Inside cream, throat ivory; outside with yellow showing though, outer tepals light pinkish; spots absent; nectaries green, narrow; filaments light yellow-green; pollen ochre-yellow; style yellow-green; stigma pinkish grey. Fls 140 mm wide; tepals 130 × 45 mm, tips not recurved; pedicels 80 mm, dotted with dark brown. Lvs 80 × 12 mm, mid green, rather shiny. Stems 1.3 m, dotted with dark violet-brown. Early July.  
Syn.: ‘Bohyně Nemesis’.

**Neoline Group I(a/-)**  
Parentage: ‘Pumpkin Sweet’ × ‘Powder Puff’  
R: G.C. Keast (1988), G: G.C. Keast (1990), N: G.C. Keast (1992), REG: G.C. Keast (1992)  
Inside and outside deep pink (51C), throat flushed with yellow; spots absent; nectaries slightly frosted; pollen brown. Fls 130 mm wide; tepals 65 × 33 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 8 mm, dark green. Stems 0.7 m, black, with c.10 fls. Late Dec. to mid Jan. (New Zealand).

**‘Neon’ I(a/b)**  
Parentage: ‘Symfonietta’ × unknown  
R: K. Braun, N: K. Braun, I: K. Braun (1996), REG: K. Braun (1997)  
Inside yellow; outside yellow, midribs green-yellow; brushmarks dark brown; nectaries white; pollen cinnamon; stigma yellow-green. Fls 142 mm wide; tepals 76 × 36 mm, only the outer tepals slightly recurved; pedicels 60 mm long, brown-dotted. Lvs scattered, 60 × 10 mm, dull mid green. Stems 0.6 m, green and brown. Bulbs white. Early July.

**‘Neon Lights’ I(a-b/b)**  
Parentage: (‘Fiery Sunset’ × ‘Halloween’) × (‘Red Carpet’ × (*pumilum* × bicoloured selection from Coronado Group))  
R: Columbia-Platte Lilies (1980), G: Columbia-Platte

Lilies (1982), N: Columbia-Platte Lilies (1986), I: Columbia-Platte Lilies (1986), REG: Columbia-Platte Lilies (1988)

Inside vivid reddish orange (33A/32A), tepal-tips vivid reddish orange (33A), throat vivid reddish orange (32A); outside vivid to strong reddish orange (32A/B), midribs green at base; spots few, tiny, inconspicuous at extreme base of tepals; nectaries soft red-orange; pollen vivid to strong reddish orange (34B/C). Tepals 60-90 × 30 mm, margins very slightly ruffled, tips very slightly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 1.2-2 m, very dark, almost black, with 8-30 fls in an elongated infl. Late June.

(Published in *Rex Lilies Cat.*, 1986.)

### 'Neozhidannost' II(-/-)

See *L. × dalhansonii* 'Neozhidannost'.

### 'Nepal' I(a/c)

Parentage: unnamed seedling × 'Mont Blanc'

R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1982), N: Gebr. Mak B.V. (1985), I: Gebr. Mak B.V. (1986), REG: Gebr. Mak B.V. (1988)

Inside pale yellow (11D); outside pale yellow-green, the 3 outer tepals with a strong pink flame, the inner tepals with a strong pink midrib; a ring of tiny, dark brown spots around the throat; pollen orange-brown. Fls 130 mm wide; tepals 65 × 40 mm, not recurved. Lvs scattered, 80 × 10 mm. Stems 0.7-1.2 m, dark, with 8-12 fls.

### *nepalense* D. Don IX(c/a)

Fls greenish white to pale greenish yellow, throat reddish, tepals outside deeply corrugated; nectaries brown or purple; anthers purplish; pollen yellow or yellow-brown. Fls sometimes rather unpleasantly scented; tepals up to 150 × 40 mm, spreading in upper two-thirds and recurved at tips. Lvs scattered, 90-150 × 20-35 mm. Stems 0.7-1.2 m, pale green, with 1-3 fls. June to July. Bhutan, Nepal, N India.

### *nepalense* var. *concolor* Cotton IX(c/a)

Fls entirely greenish yellow, lacking the reddish throat.

### 'Nepera' II(b-c/c-d)

Parentage: *L. × dalhansonii* Terrace City Group × (*tsingtauense* × unknown)

R: H.D. Cogan (pre 1970), G: H.D. Cogan (1970), N: N.E. Pfeiffer (1975), REG: H.D. Cogan (1975)

Inside strong orange (168B); outside strong orange (169B); spots numerous, small, moderate reddish orange (171A), on most of tepal area; nectaries strong orange (168B); pollen moderate reddish orange (171A). Tepals thick, relatively slightly recurved, with smooth margins. Lvs whorled, slightly mottled and ruffled. Stems 1.1 m, with 10-12 fls. June to July.

(Published in *Lilies and other Liliaceae*, 1975: 94. The fls at the base of the infl. are down-facing, in a ring around the stem; those above are carried on alternately spaced pedicels.)

### 'Nepra' I(a-b/b)

Parentage: 'White Princess' × 'Yellow Bowl'

N: J. Dudek, I: J. Dudek (2004), REG: J. Dudek (2004)

Inside creamy white, throat greenish; outside greenish, midribs brownish; spots purple, large, moderately numerous, in a third of each tepal; pollen brown-orange; stigma brown-purple. Fls 170 mm wide; tepals 85 × 32 mm, tips slightly recurved; pedicels 80 mm long, brown-dotted, with secondary buds. Lvs scattered, 85 × 13 mm, glossy deep green. Stems 1 m, thick, brown-dotted, with a moderately long infl. Early July.

(Raised from seeds from a hybrid produced by R.A. Prochaska.)

### 'Neptun' I(a/-)

Misspelling of 'Neptūns'.

### 'Neptunbrunnen' I(a/b)

Parentage: seedling LV 15 ex V. Matthé × 'Kleine Freude'  
R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside soft yellowish white (158D) suffused with soft, pale yellow (19C), throat pale yellow (19C); outside soft yellowish white (158D), midribs strong, light olive (152B); spots few, small, vivid red (45A), on basal quarter of each tepal; nectaries large, yellowish white (155D); filaments yellowish white (158D); pollen greyish red (184A); style long, slender, greyish reddish orange (176D); stigma greyish reddish orange (176D). Fls 160 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, very numerous and densely packed on the stem, 100 × 13 mm. Stems 1.4 m, pale green, with c.14 fls. Late June.  
(Neptunbrunnen is a fountain in Berlin. Nomenclatural standard: colour print provided by registrant (WSY 0028887).)

### 'Neptune' I(a/-)

Error for 'Neptūns'.

### 'Neptūns' I(a/-)

Parentage: selection from Jūras Zvaigzne Group

S: V.P. Orehovs (pre 1960), N: V.P. Orehovs

Fls red.

(Published in *LYB* 33: 80 (1970) as 'Neptun' which is a misspelling. Included in *ILR* (1982) erroneously as 'Neptune'.)

### 'Neptunsilber' I(a-b/b)

Parentage: Asiatic seedling × unnamed seedling

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1996), I: G. Steinbrück (1997), REG: G. Steinbrück (1998)

Inside and outside yellowish white (155D), throat tinged with yellow; spots absent; nectaries brilliant green (129B); pollen vivid reddish orange (34B); stigma grey-green. Fls 140 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 0.8 m, pale green, with c.8 fls. Late June to early July.

Syn.: 'Schneeflocke'.

**‘Nerone’ I(a/b)**

Parentage: seedling OR 696 × seedling OR 84-20  
 R: Vletter & Den Haan, G: Vletter & Den Haan (1987),  
 N: Vletter & Den Haan (1992), I: Vletter & Den Haan  
 (1993), REG: Vletter & Den Haan (1993)  
 Inside dark red (187B), tepal-edges dark red (187A),  
 tips moderate yellow-green (143D); outside dark red  
 (187B), tepal-edges dark red (187A), tinged with strong  
 yellow-green (144B) at base and tipped strong yellow-  
 green (143B) at apex; spots dark red (187A); filaments  
 red, whitish at base; pollen strong orange (169B); stigma  
 dark red (187A). Fls 150 mm wide; tepals 94 × 40 mm,  
 margins smooth, tips slightly recurved. Stems 1-1.8 m,  
 mid green with darker markings, and with c.7-10 fls. June  
 to July.

**‘Nestor’ I(c/d)**

Parentage unknown  
 R: G.M. Chandler (c. 1943), N: G.M. Chandler  
 Fls orange. Tepals very broad. Stems up to 1.2 m, with up  
 to 12 fls.  
 (Published in *LYB* 10: 61 (1946).)

**‘Netherhall Pink’ IX(c/d)**

See *martagon* ‘Netherhall Pink’.

**‘Netherhall White’ IX(c/d)**

See *martagon* ‘Netherhall White’.

**‘Nettuno’ VII(b/b)**

Parentage: seedling 192 × seedling 206  
 R: Vletter & Den Haan, N: Vletter & Den Haan, REG:  
 Vletter & Den Haan (1994)  
 Inside moderate purplish pink (65A) on yellowish white  
 (155D) ground; outside moderate/light purplish pink  
 (65A/B), the basal part of each tepal yellowish white  
 (155D), midveins at the base and along midvein deep  
 purplish red (59B), especially on outer tepals, which are  
 also tipped strong yellow-green (144B); spots moderate  
 purplish pink (65A), on three-quarters of each tepal;  
 papillae yellowish white (155D); pollen strong orange  
 (169C); stigma greyish yellow-green (148D) and deep  
 purplish red (71A). Fls 210 mm wide; tepals 115 × 55  
 mm, margins ruffled, tips slightly recurved. Lvs scattered,  
 155 × 50 mm, mid green. Stems 1.15 m, pale green, with  
 c.56 fls.

**‘Netty’s Pride’ I(a/b-c)**

Parentage unknown  
 R: J. Wadekamper, N: Lily Company B.V. (2004), REG:  
 Lily Company B.V. (2004)  
 Inside dark greyish reddish brown/deep reddish purple  
 (200A/77A) fading to dark red (59A), at top with broad  
 yellowish white (155D) stripe on a third of each tepal,  
 above nectaries with some yellowish white/dark red  
 (155D/59A), throat yellowish white (155D); outside  
 with outer tepals yellowish white (155D), midribs strong  
 yellow-green (144B) at base and top and some dark red  
 (59A) spots, inner tepals yellowish white (155D), margins  
 with dark red (59A) spots; papillae absent; nectaries  
 strong yellow-green (144B); pollen deep orange-yellow

(163C); stigma dark red (59A). Fls 115 mm wide;  
 tepals 60 × 16-27 mm, margins smooth, tips recurved.  
 Lvs scattered, 92 × 7 mm. Stems 0.7 m, base brownish  
 changing above into green with darker markings, and  
 with c.4 fls.

**‘Neuchatel’ VII(a/b)**

Parentage unknown  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den  
 Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V.,  
 I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den  
 Haan Beheer B.V. (1999)  
 Inside and outside yellowish white (155B); midribs  
 brilliant/light yellow-green (150B/D), tipped strong  
 yellow-green (143A); spots white, on up to two-thirds of  
 each tepal; papillae white, in the throat; nectaries strong  
 yellow-green (144B); pollen strong brown (172A); stigma  
 pale yellow-green (195D). Fls 230 mm wide; tepals 120  
 × 40-75 mm, margins ruffled, tips slightly recurved. Lvs  
 scattered, 220 × 55 mm, dark green. Stems 1.2 m, green,  
 with c.3 fls.

**‘Nevada’ I(a/-)**

Parentage: ‘Snow Princess’ × ‘Alpine’  
 R: Lybelmex Hillegom B.V. (1982), G: Lybelmex  
 Hillegom B.V. (1984), N: Lybelmex Hillegom B.V.  
 (1987), I: Lybelmex Hillegom B.V. (1987), REG:  
 Lybelmex Hillegom B.V. (1989)  
 Inside yellowish white (155D), throat tinged with pale  
 yellow (158B); outside yellowish white (155D), midribs  
 pale greenish yellow (2D); spots small, dark purple  
 (79A/B); pollen strong reddish orange (169A). Fls 140  
 mm wide; tepal-margins smooth, tips not recurved. Lvs  
 scattered, 100 × 20 mm, mid green. Stems 1 m, pale  
 green, with 5-10 fls. June.

***nevadense* Eastwood IX(c/d)**

Syn. of *pardalinum* subsp. *shastense*.

***nevadense* var. *shastense* Eastwood IX(c/d)**

Syn. of *pardalinum* subsp. *shastense*.

**‘Neve’ I(a/-)**

Parentage: ‘Mont Blanc’ × seedling W 44  
 R: Vletter & Den Haan, G: Vletter & Den Haan (1984),  
 N: Vletter & Den Haan (1988), I: Vletter & Den Haan  
 (1991), REG: Vletter & Den Haan (1991)  
 Inside yellowish white (155D), throat strong yellow-  
 green (144C); outside yellowish white (155D), midribs  
 suffused with light purplish pink (62C); spots few, dark  
 red (187A), in the throat; nectaries deep purplish red  
 (187D); pollen vivid orange-yellow (23A). Fls 150 mm  
 wide; tepals 70 × 45 mm, margins smooth, tips strongly  
 recurved. Lvs scattered, 105 × 13 mm, mid green. Stems  
 1 m, with dark markings. July (under glass).

**‘Nevesta Geroia’ VI(b/b)**

Misspelling of ‘Nevesta Geroja’.

**‘Nevesta Geroja’ VI(b/b)**

Misspelling of ‘Nevesta Geroja’.

**'Nevesta Geroja' VI(b/b)**

Parentage: *henryi* Latgales Group × Aurelian Group  
 R: V.P. Orehovs (1957), N: V.P. Orehovs  
 Fls white with orange centre; pollen orange-cinnamon.  
 Fls 140-150 mm wide, fragrant; tepals 60 mm long. Lvs  
 150-170 × 20-25 mm, dark green. Stems 1.1-1.5 m,  
 spotted dark purple, with 5-11 fls. Late July.  
 (Misspelling: 'Nevesta Geroia'. Included in *ILR Second  
 Supplement* as 'Nevesta Geroja' which is also a misspelling.)

**'New Age' VII(a-b/-)**

Parentage: unnamed seedling × ((*L.* × *parkmanii* 'Allura'  
 × 'Star Gazer') × ('Joy' × unknown))  
 R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff  
 Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies  
 B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997),  
 REG: Bischoff Tulleken Lelies B.V. (1997)  
 Inside strong purplish red (58B) on a white ground, a  
 third of each tepal with a brilliant yellow (10A) midvein,  
 throat yellowish white (155D); outside strong purplish  
 red (58B) on a white ground, a third of each tepal with  
 a brilliant yellow (10A) midrib, paler than that inside;  
 spots strong purplish red (60B/C) on inner tepals only;  
 papillae greenish white (155C) and strong purplish pink  
 (55B), only on inner tepals; nectaries strong yellow-green  
 (144B); pollen strong brown (172A); stigma moderate  
 purplish red (186A/B). Fls 240 mm wide; tepals 135-  
 140 × 40-60 mm, margins ruffled, tips recurved. Lvs  
 scattered, 175 × 50 mm, mid green. Stems 1.1 m, green,  
 with 4-5 fls. July.

**'New Age' I(a/c)**

Parentage unknown  
 Fls orange-pink, each tepal with a yellow patch in the  
 centre; pollen yellow. Fls 170 mm wide. Stems 1.4 m.  
 (Unacceptable name: ICNCP, 2004: Art 27.1 - name  
 already used for another lily. Probably raised in Canada  
 before 1994.)

**'Newcomer' VII(a/b)**

Parentage unknown  
 R: Bischoff Tulleken Lelies B.V. (pre 1987), N: Bischoff  
 Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken  
 Lelies B.V. (2002)  
 Inside yellowish white (155D), with brilliant yellow/light  
 greenish yellow (8A/B) along midveins; papillae present;  
 nectaries light green; pollen dark red-brown; stigma  
 purple; Fls strongly scented; tepal-margins ruffled, tips  
 recurved. Stems light green with darker markings.

**'New Dawn' I(a/-)**

Parentage unknown  
 R: Van der Salm (Holland) (1980), G: Van der Salm  
 (Holland) (1985), N: Van der Salm (USA) (1990), I: Van  
 der Salm (Holland) (1990), REG: Van der Salm (USA)  
 (1990)  
 Inside and outside soft cream-white, throat gold; spots  
 absent; nectaries lime-green; pollen soft gold. Tepals 80  
 × 14 mm, margins smooth, tips strongly recurved. Lvs  
 scattered, 60 × 20 mm, dark green. Stems 1.2 m, light  
 green, with 5-30 fls. Late June.

**'New Era' VI(b/b)**

Parentage: *leucanthum* var. *centifolium* × *sargentiae*  
 R: J. de Graaff (c. 1957), N: J. de Graaff  
 Fls greenish white, large. Stems 1-1.5 m. July.  
 (Published in *Oregon Bulb Farms Cat.*, 1959.)

**'New Jersey' VIII(a/-)**

Parentage: seedling Lars 93-4 × seedling RS 91-27  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den  
 Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V.,  
 I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den  
 Haan Beheer B.V. (2000)  
 Inside moderate purplish red (58A) on a white ground,  
 throat light yellow-green (150D) changing into pale  
 yellow-green (4D); outside moderate purplish red (58A)  
 on a white ground, the base light yellow-green (150D)  
 fading into midribs; spots deep red (60A) on up to a  
 third of each tepal; papillae absent; nectaries white-hairy;  
 pollen moderate orange (167A); stigma dark red (59A).  
 Fls 175 mm wide; tepals 95-100 × 35-50 mm, margins  
 smooth, tips slightly recurved. Lvs scattered, 170 × 25  
 mm. Stems 1.2 m, green, with c.3 fls.  
 (*A longiflorum*/Asiatic (LA) hybrid.)

**'New Look' I(-/-)**

Parentage: *L.* × *scottiae* 'Garden of Eden' × 'Princess  
 Juliana'  
 R: A.J. van der Zwet & Sons (c. 1950), N: A.J. van der  
 Zwet & Sons  
 AMH 1950  
 Fls deep orange, spotted.

**'New Orleans' VIII(a-b/b)**

Parentage: seedling XA 94-4 × unknown  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den  
 Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V.,  
 I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den  
 Haan Beheer B.V. (2000)  
 Inside strong purplish red (63A) on a strong purplish  
 pink (63C) ground, with strong yellow-green (142A)  
 above the nectaries along a third of each tepal; outside  
 of inner tepals strong purplish red (63A) suffused with  
 greyish reddish orange (174B) at edges, midribs greyish  
 reddish orange (174B), outer tepals deep purplish pink  
 (64D) edged strong purplish red (63A), midribs greyish  
 reddish orange (174B) and tipped brilliant yellow-green  
 (149A); spots and papillae absent; nectaries white-hairy in  
 apical part, with strong purplish red (63A) hairs in basal  
 part; pollen moderate reddish orange (171A); stigma  
 deep purplish red (187D). Fls 155 mm wide; tepals 90  
 × 50 mm, margins smooth, tips slightly recurved. Lvs  
 scattered, 160 × 25 mm. Stems 1.2 m, green with darker  
 markings, and with c.4-7 fls.  
 (*A longiflorum*/Asiatic (LA) hybrid.)

**'New Snow' I(b/d)**

Parentage: 'Snow Bunting' × white-flowered Asiatic  
 seedling  
 R: E. Robinson, N: E. Robinson, I: E. Robinson (1974),  
 REG: E. Robinson (1975)  
 Inside and outside white, tinged with slight pink; spots

lilac. Stems 1-1.2 m. July.  
(Published in *Lilies and other Liliaceae*, 1975: 94.)

**'Newton' VII(a-b/b)**

Parentage: (*L. × parkmanii* 'Journey's End' × 'Star Gazer') × (unnamed pink-flowered seedling × 'Camaro')  
R: Lybelmex Hillegom B.V. (1988), G: Lybelmex Hillegom B.V. (1991), N: Lybelmex Hillegom B.V. (1996), REG: Lybelmex Hillegom B.V. (1997)  
Inside strong purplish red (60C/D), paler towards tepal-edges in apical part, basal part of tepal deep red (60A) with a narrow, dark red (187B) edge, midveins deep red (185A) shading to strong purplish red (60C) at top, outer tepals tipped yellowish white (155D), throat yellowish white (155D); outside moderate purplish red (58A) on a yellowish white (155D) ground, base yellowish white (155D) with some reddish brown, midribs light yellow-green (150D); dark red (187A) spots on two thirds of each tepal; papillae dark red (187A & B), in the throat near the nectaries; nectaries strong yellow-green (144B), narrowly edged brilliant yellow (8A); pollen strong orange (169B); stigma close to dark purple (79A). Fls 240 mm wide; tepals 125-130 × 50-75 mm, margins ruffled, tips recurved. Lvs scattered, 225 × 65 mm, mid green. Stems 1.1 m, light green, with c.4-6 fls. July to Aug.

**'New Wave' I(a/b)**

Parentage: ((Sundrop Group × 'Connecticut King') × unnamed seedling) × 'Reinesse'  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997), REG: Bischoff Tulleken Lelies B.V. (1997)  
Inside and outside yellowish white (155B), midribs strong yellow-green (143B), strong yellow-green (143A) at top; spots few, dark red (187A), in the throat; papillae absent; nectaries strong yellow-green (144B); pollen dark reddish orange (175C); stigma moderate reddish brown (175A). Fls 180 mm wide; tepals 95 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 0.3-0.6 m, green, with c.12 fls. June to July.

**'New Year White' V(b/a)**

See *formosanum* 'New Year White'.

**'New York' I(a/-)**

Syn. of 'Miami Beach'.

**'New York Yankee' I(b/-)**

Parentage: derived from mixed *lancifolium* hybrids  
R: E. Hickling (pre 1972), N: E. Hickling (1972), REG: Niagara Highland Lily Gardens (1972)  
Fls orange with a few spots; nectaries light green; pollen red. Tepal-margins smooth. Lvs scattered. Stems 1 m, with prolific bulbils. Midseason.  
(Published in *Niagara Highland Lily Gardens Cat.*, 1972.)

**'Nezhnaia' VI(-/-)**

Parentage: 'Gloriosum' × 'Zalivskii'  
R: V.A. Grot (c. 1960), N: V.A. Grot

(The 'Gloriosum' parent is of Russian origin. Included in *ILR Second Supplement* as 'Nezhnaja' which is an unaccepted spelling. No further details.)

**'Nezhnaja' VI(-/-)**

Unaccepted spelling of 'Nezhnaia'.

**'Nez Perce' I(a/b)**

Parentage unknown  
R: W. Windus (c. 1982), G: W. Windus (1985), N: W. Windus, REG: W. Windus (1991)  
Inside and outside brilliant yellow (7A); spots very few, on the inner tepals only; nectaries greenish; pollen brown. Tepals 90 × 40 mm, overlapping below, margins smooth, tips not recurved, outer tepal-tips pointed. Lvs scattered, mid green. Stems 1-1.1 m, mid green, with 6-9 fls, without bulbils. Late June to early July.

**'Niagara' VIII(a/b)**

Parentage: seedling LBW 93-2 × seedling W 91-28  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside greenish white (155C), with strong yellow-green (143C) above nectaries along a third of each tepal, throat strong yellow-green (143C); outside greenish white (155C), midribs strong yellow-green (145A), outer tepals tipped strong yellow-green (144A); spots absent; papillae few, on about a third of each tepal; nectaries white-hairy; pollen greyish brown (166A); stigma moderate purplish red (58A). Fls 155 mm wide; tepals 120 × 45 mm, margins smooth, tips recurved. Lvs scattered, 170 × 20 mm. Stems 1 m, green with a little darker marking, and with c.3 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**Niagara Highland Henryi Group VI(-/c)**

Parentage: *henryi* × unknown  
R: T.R. Martin (pre 1967), N: T.R. Martin  
Fls apricot-orange. Stems up to 2.2 m. Aug.

**Niagara Highland Henryi Hybrids VI(c/d)**

See Tower Group.

**'Nice' I(a-b/b)**

Parentage: seedling RS 207 × 'Mont Blanc'  
R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1985), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)  
Inside more-or-less moderate purplish pink (54D), tepals with an orange-yellow suffusion at base, throat pink; outside more-or-less moderate purplish pink (54D); spots dark purple; papillae present; pollen dark brown; stigma purple. Tepal-margins smooth, tips slightly recurved. Stems 0.9-1 m, light green, with 9-13 fls (from 14-16 cm bulbs).

**'Nicolette' I(a-b/-)**

Parentage unknown  
REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid yellow (14B), midveins yellow at base; outside vivid yellow (14B); spots absent; papillae present; nectaries green; pollen brown; stigma purple-red. Tepal-margins slightly ruffled, tips recurved. Stems of medium height. Midseason.

**‘Niederheide-lilac’ I(a/-)**

Parentage: ‘Connecticut Red’ × unnamed seedling  
R: H. Georgi (1987), G: H. Georgi (1989), N: H. Georgi (1992), REG: H. Georgi (1993)

Inside dark lilac-red, with paler tinges and slightly darker veins, throat more violet; outside dark red with darker midribs; basal third of each tepal with small blackish spots, each set in an orange halo; nectaries almost absent; pollen violet-red; filaments and style dark violet; stigma violet. Fls 140 mm wide; tepals 120-140 × 15-30 mm, margins smooth, tips not recurved. Lvs scattered, 100-110 × 5-15 mm, mid green. Stems 1.5-1.7 m, dark green, with 12-16 fls. Late June to late July.

**‘Niederheide-star’ I(a/b)**

Parentage: ‘Windahloo’ × (‘Eminence’ × ‘Connecticut King’)

R: H. Georgi (1984), G: H. Georgi (1986), N: H. Georgi (1987), I: W. Seineke (1988), REG: H. Georgi (1989)

Inside mid yellow, throat with a greenish white star; outside yellow tinged with red; tepals with red-brown brushmarks (strongest on outer tepals) and some associated spots and streaks; nectaries yellow; pollen dark red-brown. Fls 140-160 mm wide; tepals 80-85 × 25-35 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 70-80 × 15-25 mm, mid green. Stems 0.6-0.8 m, mid green, with 6-10 fls. Late June to mid July.

**‘Niederheide-white’ I(a/-)**

Parentage: (‘Valentina’ × ‘Montreux’) × ‘Blizzard’  
R: H. Georgi (1989), G: H. Georgi (1990), N: H. Georgi (1992), REG: H. Georgi (1993)

Inside pure white, throat tinged with pale cream; outside white, midribs greenish white; spots absent; nectaries greenish white and pale yellow; filaments cream; pollen dark brown; stigma cream. Fls 150-160 mm wide; tepals 140-150 × 15-30 mm, margins narrowly ruffled, tips slightly recurved. Lvs scattered, 120-130 × 12-15 mm, mid green. Stems 0.8-1 m, dark green, with 8-10 fls. Late June to mid July.

**‘Niederheide-white-brush’ I(a/-)**

Parentage: ((‘Blizzard’ × ‘Cabaret’) × ‘Blizzard’) F<sub>2</sub> seedling × cream-flowered, brushmarked, Asiatic seedling  
R: H. Georgi (1988), G: H. Georgi (1990), N: H. Georgi (1992), REG: H. Georgi (1993)

Inside ice-white, throat yellowish/greenish/cream; outside creamy white, brushmarks conspicuous, red, on basal half of each tepal, central part of brushmark more-or-less continuous, breaking into lines laterally and apically and into spots below and at basal margins, some of these spots blackish; nectaries greenish; pollen pale red-brown. Fls 140-150 mm wide; tepals 130-140 × 15-20 mm, margins smooth, tips not recurved. Lvs scattered, mid green. Stems 1-1.15 m, dark green. Early to mid July.

**‘Night Flyer’ I(b-c/b-c)**

Parentage: ‘Condamine’ × ‘Summer Night’

R: A.J. Burnett (1989), G: A.J. Burnett (1992), N: A.J. Burnett (1995), I: A.J. Burnett (1995), REG: A.J. Burnett (1995)

Fls black-scarlet throughout (blacker than dark purple (79A), dark red (187A) or dark greyish reddish brown (220A)); outside with a reddish tinge; papillae many, black; nectaries black-scarlet; pollen moderate red (179A); buds equally dark. Fls 160 mm wide; tepals 83 × 34 mm, margins smooth, tips recurved. Lvs scattered, 140 × 10 mm, mid green. Stems c.1.2 m, mottled dark red (187A) on green at base, mottled light olive-grey (197A) on green at top, with 15-25 fls. July.

**‘Nightingale’ IV(c/d)**

Parentage: complex *kelloggii* × *pardalinum* hybrid

R: J. de Graaff (c. 1965), N: J. de Graaff

Fls old rose, tepals orange and white towards base. Spots dark. July.

**‘Night Queen’ I(-/-)**

Syn. of ‘Nakts Karaliene’.

**‘Nigromaculatum’ I(a/b)**

See *L. × maculatum* ‘Nigromaculatum’.

**‘Nihon-ki-himeyuri’ IX(a/c)**

See *concolor* var. *coridion* ‘Nihon-ki-himeyuri’.

**‘Niigata’ VII(-/b)**

Parentage: seedling 647 × seedling 404

R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside deep to moderate purplish pink (66C/D), midveins strong purplish red (60B) to strong red (53D); throat strong yellow-green (144B); outside strong purplish pink (63C), midribs light yellow-green (145C); papillae deep red (53A); nectaries light yellow-green (145D); pollen strong orange (169B). Tepal-margins slightly ruffled. Lvs scattered, mid green. Stems 1.1 m.

**‘Nikita’ I(a/b)**

Parentage: (‘Mont Blanc’ × ‘Pascal’) × (‘Connecticut Red’ × ‘Connecticut King’) × ((‘Showboat’ × ‘Sterling Star’) × (‘Sunrise’ × ‘Connecticut King’))

R: Mak-Leek Inc. (pre 1997), N: Mak-Leek Inc., REG: ICRA (1998)

Inside purplish red with darker red tepal-edges; spots absent. Lvs short, dark. Stems 0.6-1 m, dark. Mid July. (Published in *The Lily Nook Cat.*, 1997: 7.)

**‘Nikki’ VI(c/d)**

Parentage: hybrid involving *henryi* var. *citrinum* (‘Beaverton’ clone)

R: D.H. Brown (c. 1981), G: D.H. Brown (c. 1983), N: D.H. Brown (1998), REG: D.H. Brown (1998)

Inside white, each tepal with a 12 mm-wide, vivid yellow (16A) flare extending over the basal third; outside white, outer tepals with an 8 mm-wide band of strong yellow-

green (145A), inner tepals with a strong yellow-green (145A) midrib; raised spots or ridges deep red, extending over about two-thirds of each tepal; papillae to 5 mm long, deep red (185A) at tip, abundant on about the basal quarter of each tepal; nectaries mid to dark green; pollen brownish orange (171B); stigma yellowish grey (194C). Fls 75-80 mm wide; tepals 90 × 32 mm, wavy-edged, tips strongly recurved. Lvs scattered, up to 155-160 × 22 mm. Stems 1.24 m or more, mid green with dark flecks, and with c.18 fls. Late July to early Aug. (Named for the raiser's granddaughter.)

**'Nikola Bushman' I(-/-)**

Parentage unknown

S: N. Bushman

Fls dark cherry-red, with fine spots. Fls 140 mm wide.

Lvs dark green. Stems 0.8-0.9 m, green with brown streaks, with c.12 fls. July,

(Published in M.V. Baranova, *Lilii*, 320 (1990).)

**'Nikoleta' I(a/b)**

Parentage: 'Tavello' × 'Lidka'

R: J. Rezek (2002), N: J. Rezek (2005), I: J. Rezek

(2005), REG: J. Rezek (2005)

Inside salmon-apricot, centre slightly deeper; outside pale apricot, midribs green, felty; spots dark brown-violet, medium-large, numerous, on a fifth of each tepal; nectaries white-granulated; pollen rusty brown; stigma dark violet-brown. Fls 170 mm wide; tepals 95 × 50 mm, margins smooth, tips slightly recurved; pedicels 115 mm, green, slightly hairy. Lvs scattered, glossy dark green. Stems 1 m, thick, green, slightly hairy. Late June.

**'Nimbus' I(a/-)**

Parentage: 'Connecticut King' × 'Red Carpet'

R: E.A. McRae (1969), G: Oregon Bulb Farms, Inc. (1973), N: Oregon Bulb Farms, Inc. (1981), I: Oregon Bulb Farms, Inc. (1982), REG: Oregon Bulb Farms, Inc. (1983)

Fls vivid orange-yellow (21A) throughout; spots absent; nectaries green; pollen gold. Fls 120 mm wide; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 1-1.5 m, light green, with 6-25 fls. Mid to late June.

**'Nimrod' VIII(a/c)**

Parentage: seedling PG 95-57 × seedling RH 97-07 R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2001), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals light yellow (10B), brilliant yellow (9C) along midveins, outer tepals light yellow (10C), brilliant greenish yellow (6B) along midveins with some yellowish white (155B) streaks, throat pale yellow-green (4D); outside pale yellow-green (4D), margins brilliant greenish yellow (4A), midribs strong yellow-green (143C) at base, changing into light yellow-green (145B), light greenish yellow (3C) with strong yellow-green (143C) at top, inner tepals pale yellow-green (4D), margins brilliant greenish yellow (4A), pale yellow-green (155A) along midribs, midribs strong yellow-green

(143C) at base, changing into pale yellow-green (4D); spots absent; papillae many, vivid yellow (9B); nectaries strong yellow-green (143C); pollen deep orange-yellow (163A); stigma light olive-grey (197B). Fls 300 mm wide, fragrant; tepals 160 × 57-98 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 172 × 44 mm. Stems 0.8-1.3 m, green, with 1 fl. (An Oriempet (OT) lily.)

**'Nina' I(b/-)**

Misspelling of 'Nina'.

**'Nina' I(b/-)**

Parentage: selection from Jautrie Bérni Group

S: V.P. Orehovs, N: V.P. Orehovs

Fls orange.

(Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as 'Nina' which is a misspelling.)

**'Niobe' I(a/-)**

Parentage unknown

R: A. Weinreich, N: A. Weinreich, REG: A. Weinreich (1997)

Fls yellow, suffused with reddish. Stems 1 m. Mid July. (Published in European Lily Society sales list, 1996.)

**'Nippon' VII(b/b-c)**

Parentage: seedling 506 × seedling 201

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside yellowish white (155B), midveins broad, vivid to brilliant yellow (9B/C) on basal half of each tepal, throat strong yellow-green (143C); outside greenish to yellowish white (155C/D), midribs light yellow-green (150D), tepal-margins moderate purplish red (70A) at maturity; papillae few, vivid reddish orange (34B), in the throat; nectaries very pale green (192B); filaments green; pollen strong brown (172A). Fls 310 mm wide; tepals 145 × 75 mm, margins ruffled, tips strongly recurved. Lvs scattered, 185 × 33 mm, mid green. Stems 1.05 m, pale green with darker markings, and with c.5-6 fls.

**'Nirvana' VI(b/b)**

Parentage: (Palmer 56221 × *henryi*) × 'Stardust' (probably of de Graaff)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)

Inside white, each tepal with pale apricot extending from the throat to halfway up; outside white with pale crimson-dotted midribs; nectaries olive-green; pollen dark brown. Fls 65 × 145 mm; tepals 105 × 40 mm, moderately recurved, rigid; pedicels 100 mm long, moderately spotted. Lvs scattered, 85 × 17 mm, yellowish green, glossy, held horizontally. Stems 1 m, thick, spotted dark violet. Mid July.

**'Nishiki-ori' IX(a/b)**

See *dauricum* 'Nishiki-ori'.

**'Nishimura Teppo'** V(-/-)

Parentage: *formosanum* × *longiflorum* var. *nobile* 'Erabu'  
R: S. Nishimura (c. 1951), N: S. Nishimura  
Fls white.

**'Nisku'** I(a/c)

Parentage: white-flowered Asiatic seedling × yellow-flowered, red-brushmarked seedling  
R: E.E. Fox (1988), G: E.E. Fox (1991), N: E.E. Fox (2001) (1994), I: Fox Lily Ranch (2002), REG: E.E. Fox (2001)  
Inside white, with two moderate red (185B) pencil strokes (c.20 mm long) extending towards top of nectary-furrow on each tepal, throat light yellow-green (2C); outside light yellow-green (2C), midribs brilliant orange-yellow (23B); spots large, dark red (183A), on basal half of each tepal; nectaries moderate red (179A); pollen moderate reddish orange (173B); stigma moderate red (179A). Fls 130 mm wide; tepals 65 × 37 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 15 mm. Stems 0.85 m, pale green, with 12-16 fls. Late July. (Nisku is a village 20 miles from Fox Lily Ranch and means 'Goose' in the Cree language.)

**'Nisqualli'** IV(-/-)

Parentage: selection from Bellingham Group  
S: D. Griffiths, N: D. Griffiths  
(Published in *LYB NALS* 6: 44 (1953). No further details.)

**'Nissouri Blush'** I(c/c)

Parentage: 'Sonic Whirlaway' × 'Pink Moire'  
R: E. Horner (1994), G: E. Horner (1996), N: E. Horner (2003), I: Horner Lilies (2004), REG: E. Horner (2004)  
Inside cream overlaid with strong red (53C), tepal-tips deep pink (51C), throat strong orange (25B); outside deep pink (51C), midribs strong orange (25B); spots dark red (183A), small, some elongated, on basal third of each tepal; nectaries light orange-yellow (24C); pollen moderate reddish orange (171A); stigma blue (115). Fls 115 mm wide; tepals 72 × 33 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 20 mm, dark green. Stems 1.6 m, brown, with c. 21 fls plus secondaries. Mid July.  
(Nomenclatural standard: colour print supplied by registrant (WSY 0096381).)

**'Nissouri Daydream'** I(a/c)

Parentage: 'Daydream' × 'Snow Lark'  
R: E. Horner (1992), G: E. Horner (1994), N: E. Horner (2005), I: Horner Lilies (2005), REG: E. Horner (2005)  
Inside light purplish pink (55C), tepal-margins strong purplish pink (55B), throat light yellowish pink (19B) with green deep in the base; outside strong purplish pink (55B), each tepal with a brilliant yellow (20A) central stripe, outer tepals with light brown tip; spots tiny, maroon, in throat; nectaries deep red (55A); pollen brown; stigma rusty brown. Fls 150 mm wide; tepals 75 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 125 × 20 mm, shiny blue-green. Stems 1 m, dark brown, with c.15 fls. July.  
(Nomenclatural standard: colour print provided by registrant (WSY 0096424).)

**'Nitaure'** IX(-/d)

See *henryi* 'Nitaure'.

**'Nitaure'** IX(-/d)

See *henryi* 'Nitaure'.

**'Nittany Heritage'** I(b/-)

Parentage: (yellow-flowered *davidii* var. *willmottiae* hybrid × ('Edith Cecilia' × 'Nubian')) × seedling of Preston Group  
R: L. Lutz, N: L. Lutz, I: L. Lutz (1969)  
Tepal-tips vivid reddish orange (34A), shading to strong red (46A) at centre; spots absent. Stems 0.6 m. Late June. (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 15 (1978).)

**'Nittaya'** VI(b/b)

Parentage: (*L. × sulphurgale* F<sub>2</sub> × *leucanthum* var. *centifolium*) × *henryi* 'Viļāny'  
R: I. Wiesner (pre 1984), N: I. Wiesner, REG: I. Wiesner (1984)  
Inside apricot; outside with greenish mahogany ribs; nectaries green; pollen cinnamon. Fls 120 mm wide, slightly scented; tepals 22 mm broad, strongly recurved. Lvs 110 × 16 mm, dark green. Stems brownish. Bulbs with purple tips. Late July.

**'Nivea'** I(a/-)

Parentage: (Panamint Group × 'Sterling Star') × 'Sterling Star'  
R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1987), I: Bischoff Tulleken Lelies B.V. (1987)  
Inside greenish white (157D), throat suffused with pale greenish yellow (1D); outside of outer tepals pale greenish yellow (1D), of inner tepals yellowish white (155B), midribs light greenish yellow (1C); spots purple; pollen moderate orange (172D). Fls 150 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, 200 × 30 mm. Stems 1 m, green, with 5-7 fls (from 12-14 cm bulbs). July.  
(Unacceptable name: ICNCP, 2004: Art. 19.13 - after 1959, name must be in a modern language (not Latin).)

**var. *nobile*** IX(-/a)

See *longiflorum* var. *nobile*.

***nobilissimum* (Makino) Makino** IX(a-b/a)

Fls white, often flushed with green at base. Tepals up to 170 × 45 mm; pollen yellow-brown or red-brown. Lvs scattered, with short stalks. Stems 0.6-1.7 m, with 1-5 fls, and with bulbils. S Japan.  
Syn.: *alexandrae*.

**Nobility Group** VII(-/b)

See *L. × parkmanii* Nobility Group.

**'Noblesse'** VII(a/b)

Parentage: (yellow-flowered seedling × 'Star Gazer') × white-flowered seedling  
R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff

Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1989), I: J. Rooyakkers (1990), REG: Bischoff Tulleken Lelies B.V. (1989)

Inside yellowish to greenish white (155B/C), midveins brilliant yellow (8A) changing to strong purplish pink (63C) with a yellowish white blush, throat strong yellow-green (143C); outside yellowish white to pale yellow (155D/8D), changing to yellowish white with strong to light purplish pink (63C/D) tepal-edges; papillae distributed over almost the whole of each tepal, at first dark red (187A), becoming yellowish white and pale yellow, most conspicuous when plants are grown under glass; pollen moderate reddish orange/brownish orange (171A/B). Fls 280 mm wide; tepals 135-140 × 70-80 mm, margins ruffled, tips strongly recurved. Lvs scattered, 125 × 25 mm, mid green. Stems 0.65 m, green with darker markings, and with c.4-5 fls. July.

#### **'Nobody' I(a/-)**

Parentage unknown.

S: F. Ewald (c. 1976), G: F. Ewald (1979), N: G. & F. Ewald (1981), I: G. & F. Ewald (1986), REG: G. & F. Ewald (1988)

Inside and outside vivid reddish orange (33B), throat vivid yellowish orange (30C); spots dark red (187B). Tepals 70 × 35 mm, margins ruffled, tips slightly recurved. Lvs scattered, 60 × 30 mm, mid green. Stems 0.8 m, mid green, with up to 30 fls (including secondary buds). July.

(Published in Gesellschaft der Staudenfreunde, bulb list, 1986. Grown from a plant found in a bed of seedlings.)

#### **'Nochka' I(b-c/b)**

Parentage: 'Redstart' × mixed red/black-flowered seedlings

R: M.F. Kireeva (1976), N: M.F. Kireeva

Fls dark cherry-red; spots numerous, dark, on half of each tepal; filaments and style red; pollen ochre-orange. Fls 110-120 mm wide; tepal-tips recurved. Lvs 120-140 × 13 mm, glossy dark green. Stems up to 1.7 m, brown, with 7-18 fls in a short, pyramidal infl., bulbils present. July. (Published in M.V. Baranova, *Lilii*, 329 (1990). Included in *ILR Third Supplement* as 'Nočka' ('Noczka') - both are unaccepted spellings.)

#### **'Nochnoe Tango' I(a/b)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1993)

Fls dark red-violet; spots tiny, deep purple on basal half to two-thirds of each tepal. Fls 100-110 mm wide. Stems up to 1.5 m, with 12-15 fls. July.

(Published in M.F. Kireeva, *Lilii*, 36 (2000).)

#### **'Nočka' I(b/b)**

Unaccepted spelling of 'Nochka'.

#### **'Noczka' I(b/b)**

Unaccepted spelling of 'Nochka'.

#### **'Noel' I(a/-)**

Parentage unknown

R: Sun Valley Bulb Farms, Inc. (1977), N: Sun Valley Bulb Farms, Inc. (1980), I: Sun Valley Bulb Farms, Inc. (1980), REG: Sun Valley Bulb Farms, Inc. (1980)

Inside strong yellowish pink (34D), tepal-tips vivid reddish orange (34B), throat strong orange (25A); outside brilliant orange (25C); spots black, prominent; nectaries strong orange (26B); pollen strong brown (172A). Tepals c.80 mm long, margins smooth. Lvs moderate olive-green (137A). Stems 0.3-0.4 m.

#### **Noeline Group I(a/-)**

Parentage: 'Pumpkin Sweet' × 'Powder Puff'

R: G.C. Keast (1988), G: G.C. Keast (1990), N: G.C.

Keast (1992), REG: G.C. Keast (1992)

Inside deep pink (51C), throat flushed with yellow; outside deep pink (51C); spots absent; nectaries slightly frosted; pollen brown. Fls 130 mm wide; tepals 65 × 33 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 8 mm, dark green. Stems 0.7 m, black, with c.10 fls. Late Dec. to Jan. (New Zealand.)

#### **'Nofretete' VII(a-b/a)**

Parentage: seedling of Little Fairies Group × seedling of Little Fairies Group

R: W. Daunicht (1967), G: W. Daunicht (1971), N: W. Daunicht (1980), REG: W. Daunicht (1983)

Inside pink, with a short, red ray along each midvein; outside darker pink; spots numerous, dark pink; nectaries green with a white fringe; pollen orange. Tepals 60-80 × 35 mm, margins ruffled, tips slightly recurved. Lvs scattered, 120 × 40 mm, dark green. Stems 1.2 m, green, with 5-7 fls. July.

(Published in Gesellschaft der Staudenfreunde, bulb list, 1981.)

#### **'Nokomis' VI(b/b)**

Parentage: Aurelian Group × seedling 56-21

R: C. Yerex (c. 1960), N: C. Yerex

Fls light greenish yellow (6D) blending to vivid yellow (9B) at centre. Tepal-tips recurved.

#### **'No Limit' VIII(a/b)**

Parentage: (Asiatic seedling × *longiflorum*) × (*longiflorum* × 'Sterling Star')

R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (1997), I: Bischoff Tulleken Lelies B.V. (1998), REG: Bischoff Tulleken Lelies B.V. (2000)

Inside light yellow-green (150D) becoming pale yellow-green (155A) towards tepal-tips, throat pale yellow-green (155A); outside pale yellow-green (155A), midribs strong yellow-green (143C) at the base; spots dark red (187A) on up to a third of each tepal; papillae light yellow-green (150D) in the throat; nectaries pale yellow-green (155A) with a narrow, strong yellow-green (144C) rim; pollen brownish orange (164A); stigma strong yellow-green (144C). Fls 200 mm wide; tepals 110 × 30-45 mm, margins smooth, tips strongly recurved. Lvs scattered, 210 × 25 mm. Stems 1.25 m, green with darker markings, and with c.7 fls. July.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Nomade’ VIII(a-b/b)**

Parentage: ‘Unique’ × (*longiflorum* × ‘Aristo’)  
 R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997), REG: Bischoff Tulleken Lelies B.V. (1997)  
 Inside deep pink (51B), slightly stronger coloured at tepal-tips and tinged with light yellow (17D) above nectaries, throat deep pink (51C); outside deep pink (51B) on a light pink ground, tepal-edges stronger coloured, with a little strong yellow-green (145B) at tip and base; spots dark red (187B) on a third of each tepal; papillae in the throat; nectaries deep pink (51B), white-hairy; pollen moderate reddish brown (175A); stigma light orange-yellow (24C). Fls 220 mm wide; tepals 120-130 × 45-60 mm, margins slightly wavy, tips somewhat recurved. Lvs scattered, 185 × 20 mm, mid green. Stems 1 m, green, with 3-5 fls; buds hairy. June.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**‘Nonna’ I(a/-)**

Parentage unknown  
 R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1990)  
 Fls pale yellow with darker streaks and spots; pollen orange-red. Fls 140-150 mm wide; tepal-margins smooth. Stems 1.1-1.2 m, with 9-12 fls. July.

**‘Nopeln’ I(b/-)**

Misspelling of ‘Nopelns’.

**‘Nopelns’ I(b/-)**

Parentage: selection from Skumstu Group  
 S: V.P. Orehovs (1957), N: V.P. Orehovs  
 Fls orange, shaded with red and violet; pollen bright orange; stigma violet. Fls 150 mm wide; tepals narrow, margins slightly wavy. Lvs 100-150 × 15-20 mm, green, dense. Stems 1 m, with 6-8 fls. July.  
 (Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as ‘Nopeln’ which is a misspelling.)

**‘Nora Darby’ I(c/d)**

Parentage: ‘John Izzard’ × ‘Titania’  
 R: G.W. Darby (c. 1965), N: G.W. Darby  
 Fls light apricot-orange, spotted.

**‘Nordmilch’ I(c/d)**

Parentage unknown  
 R: N. Martschinke (1976), G: N. Martschinke (1979), N: N. Martschinke (1982), REG: N. Martschinke (1988)  
 Inside pale yellow-green (4D), throat brilliant to light greenish yellow; outside moderate to light yellow (160A/B), very dark purple at base; spots dark red (187A) on the mid part of each tepal; nectaries vivid yellow-green (154A); pollen moderate orange (167A); stigma moderate red (185B). Fls 80 mm wide; tepals 70 × 27 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 90 × 8 mm, dark green. Stems 1.1 m, hairy, dark green, with c.11 fls. Mid July to mid Aug.  
 (Published in German Lily Group sales list, 1985.)

**‘Norgart’s Darling’ I(b/b)**

Parentage: ‘Snow Lark’ × ‘Chios’  
 R: N. Martschinke (1982), G: N. Martschinke (1985), N: N. Martschinke (1986), REG: N. Martschinke (1991)  
 Inside light yellowish pink (27A) blending to pale yellowish pink (27D), throat strong yellow-green (143B); outside a mixture of deep red (185A), strong yellow-green (144A) and light yellow (162C), striped light yellowish pink (27A); spots numerous, small, dark red (187A), on basal half of each tepal; nectaries light orange-yellow (22B); pollen strong reddish orange (169A). Tepals 70 × 30 mm, margins smooth, tips scarcely recurved. Lvs scattered, 90 × 10 mm, mid green. Stems 0.9 m, dark green, with c.9 fls. July.

**‘Norik’ I(a/c)**

Parentage: ‘Snowstar’ × (‘Dekora’ × unknown)  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
 Inside cream, centre of each tepal apricot-tinted; outside slightly rosy, midribs pale green at top; brushmarks very light brown-violet; spots very numerous, large oval, dark brown-violet, on three-fifths of each tepal; nectaries white-granulated, edged with yellow-green; pollen yellow; stigma dark brown. Fls 125 mm wide; tepals 90 × 42 mm, thick, margins cupped in parts, tips scarcely recurved; pedicels 65 mm long, green. Lvs scattered, 85 × 12 mm, mid green, dull. Stems 0.75 m, thick, green, with a short infl. Early June.

**‘Noris Bronze’ I(b-c/-)**

Parentage: ‘Falkonera’ × ‘Connecticut Bronze’  
 R: V. Strasser (1977), G: V. Strasser (1979), N: V. Strasser (1989), REG: V. Strasser (1990)  
 Fls bronze throughout. Tepals 75 × 25 mm. Lvs 150 × 15 mm. Stems 1.3 m, almost black, with 19-20 fls. Mid July.

**‘Noris Fire’ I(b/-)**

Parentage: ‘Fire King’ (Div. I) × ‘Tetra Mountaineer’  
 R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1980), I: V. Strasser (1982), REG: V. Strasser (1985)  
 Fls fire-red; spots orange-red, on a third of each tepal; nectaries orange; pollen orange-red. Tepal-margins smooth, tips slightly recurved. Lvs scattered. Stems dark green, with c.18 fls. Late June. Tetraploid.  
 Syn.: ‘Firemount Number 1’.

**‘Noris Gelb’ I(a/-)**

Parentage: ‘Herbstsonne’ (of Feldmaier) × ‘Sonnentiger’  
 R: V. Strasser (1976), G: V. Strasser (1978), N: V. Strasser (1984), I: V. Strasser (1985), REG: V. Strasser (1986)  
 Inside citron-yellow, throat green; outside yellow; spots elongated, brown, on a third of each tepal; nectaries green; pollen light brown. Tepal-margins smooth. Lvs scattered, 90 × 15 mm, dark green. Stems 1.12 m, almost black, with c.28 fls. June to July.

**‘Noris Gold’ I(a/-)**

Syn. of ‘Noris Queen’.

**'Noris King' I(a/-)**

Parentage: 'Uncle Sam' × 'Sonnetiger'

R: V. Strasser (1976), G: V. Strasser (1978), N: V. Strasser (1983), I: V. Strasser (1984), REG: V. Strasser (1985)

Fls vivid yellow (9A) throughout; spots purple; nectaries green; pollen orange-red. Fls 170 mm wide; tepals 95 × 15 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 20 mm, dark green. Stems 1.25 m, black, with 17-20 fls. Mid July.

**'Noris Pink' I(a/-)**Parentage: 'Renaissance' × *L. × scottiae* 'Schuetzenlis'

R: H. Urbanczik (1977), G: V. Strasser (1980), N: V. Strasser (1982), I: V. Strasser (1983), REG: V. Strasser (1991)

Inside and outside soft pink, except for yellow throat and purple spots on half of each tepal; nectaries white; pollen red. Fls 140 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, 180 × 20 mm, mid green. Stems 1.7 m, dark green. Stems 1 m, dark green, with c.12 fls. Early July.

**'Noris Queen' I(a/-)**

Parentage: orange-flowered, up-facing Asiatic seedling × orange-flowered, up-facing Asiatic seedling

R: V. Strasser (1977), G: V. Strasser (1980), N: V. Strasser (1997), REG: V. Strasser (1998)

Inside vivid orange (28A), tepal-tips red, throat brown-green; outside orange; a third of each tepal with elongated purple spots; nectaries frosted; pollen brown. Tepals 70 × 28 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 8 mm, dark green. Stems 0.95 m, rather dark green, with c.19 fls. Late June.

Syn.: 'Noris Gold'.

(First introduced as 'Noris Gold').

**'Noris Red' I(a/-)**

Parentage: 'Roter Cardinal' × 'Tetra Mountaineer'

R: V. Strasser (1974), G: V. Strasser (1977), N: V. Strasser (1983), I: V. Strasser (1984), REG: V. Strasser (1985)

Fls red with black spots; pollen red. Tepals 80 mm long, margins smooth, tips not recurved. Lvs scattered. Stems 1 m, dark green, with c.17 fls. Mid June. Triploid.

Syn.: 'Rokardmount Number 8'.

**'Noris Riese' VI(c/c)**

Parentage: 'Heidelberg' × 'Lednice'

R: V. Strasser (1988), G: V. Strasser (1991), N: V. Strasser (1994), REG: V. Strasser (1997)

Inside white, throat greenish yellow; outside white; nectaries green; pollen pale brown. Tepals 120 × 35 mm, margins smooth, tips slightly reflexed. Lvs scattered, 150 × 20 mm, dark green. Stems 2 m, rather dark green, with up to 58 fls. Mid July.

**'Noris Star' I(c/-)**Parentage: *lancifolium* 'Splendens' × 'Tetra Mountaineer'

R: V. Strasser (1976), G: V. Strasser (1978), N: V. Strasser (1980), I: V. Strasser (1981), REG: V. Strasser (1985)

Fls blood-red with black spots; pollen brown. Tepal-margins smooth, tips strongly recurved. Lvs scattered,

dark green. Stems 1 m, dark green, with c.18 fls. Mid July. Tetraploid.

Syn.: 'Tigrimount Number 2'.

**'Normandiya-neman' VI(-/a)**Parentage: 'African Queen' × *henryi*

R: V.P. Eremin (c. 1965), N: V.P. Eremin

Inside apricot-yellow; outside flushed with greenish brown; scented. Stems up to 1.5 m, with up to 10 fls. Aug.

(Published in *LYB* 33: 78 (1978).)**'Norman Henry' IX(c/d)**See *superbum* 'Norman Henry'.**'North Crossing' VI(-/a)**

Parentage: 'Crème de la Crème' × Midnight Group

R: R. Kaul (1990), G: S.R. Kaul (1994), N: S.R. Kaul (1995), REG: S.R. Kaul (1997)

Inside dusty pinkish lavender, throat yellow shading to green at centre; outside deep lavender-purple, midribs deeper lavender; spots absent; nectaries light yellow, fading outwards to white; pollen dark yellowish brown; stigma black. Fls c.110 mm wide; tepals 120-140 × 30-35 mm, margins smooth, tips strongly recurved. Lvs scattered, 150 × 10 mm, mid green. Stems 1.5-1.8 m, mid green, with 15-20 fls. Mid to late season.

**'Northern Beauty' VIII(c/d)**Parentage: 'Black Beauty' × *L. × kewense* 'White Henry'

R: W.G. Ronald (1978), G: W.G. Ronald (1979), N: L.M. Collicutt (1992), I: L.M. Collicutt (1992), REG: L.M. Collicutt (1993)

Inside dark red (187B) and deep purplish red (59B), tepal-tips and margins yellowish white (155D), throat strong yellow-green (144A/143B) edged brilliant to pale greenish yellow (9C/D); outside deep to moderate purplish pink (70C/D), the colour showing through from inside; spots absent; papillae dark red (187A/B), on basal half of each tepal; pollen dark reddish orange (175B); stigma light greenish grey (202D). Fls slightly fragrant; tepals 102 × 33 mm, margins smooth, tips strongly recurved. Lvs scattered, 123 × 35 mm, moderate olive-green (146A). Stems 0.8-1.5 m, strong yellow-green (143B) spotted with dark red (187A), with 1-6 fls. July. (An Oriempet (OT) lily. Stem height given incorrectly in *ILR Twelfth Supplement*.)**'Northern Carillon' VIII(b-c/a)**

Parentage: 'Starburst Sensation' × Moonlight Group

R: L.M. Collicutt &amp; W.G. Ronald (1982), G: L.M. Collicutt (1984), N: Morden Research Center (1996), I: Morden Research Center (1996), REG: Morden Research Center (1997)

Inside strong purplish red (67A) in basal two-thirds, white in apical third, throat strong purplish red (67A); outside strong purplish red (67A), shading to white at tepal-edges and tips; buds also 67A; spots absent; nectaries making a magenta-purple and green 'star' in centre of fl.; filaments light green; style strong orange (168B) shading darker at stigma. Fls 110mm wide,

strongly fragrant; tepals 100 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 20 mm, dark green. Stems 1.5 m, dark mottled green, with 10-15 fls. Late July to Aug. Triploid.  
(An Orienpet (OT) lily.)

**‘Northern Dancer’ I(b/-)**

Parentage unknown

R: J.C. Ericksen, G: R. Erskine (1990), N: R. Erskine (1990), I: R. Erskine, REG: R. Erskine (1995)

Inside bright yellow, throat yellow; outside bright yellow with pink stripes; spots many, dark brown; nectaries pale yellow; pollen orange. Fls 180 mm wide; tepals 100 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 100 × 20 mm, mid green. Stems green mottled brown, with 10 or more fls. Late.

**‘Northern Explorer’ II(c/d)**

Parentage: unnamed seedling × unnamed seedling

R: F. Tarlton (pre 1985), G: F. Tarlton, N: F. Tarlton (2003), I: Estate Perennials (2004), REG: E.E. Fox (2004)

Inside moderate purplish pink (66D), throat white, each tepal with narrow white rim with tiny deep purplish red (71A) spots; outside moderate purplish pink (66D), midribs very pale purple (73D); spots deep purplish red (71A) with a white halo, on basal two-thirds of each tepal; nectaries pale orange-yellow (19D); pollen moderate red (179B); stigma dark red (187C). Fls 76 mm wide; tepals 38 × 14 mm, margins smooth, tips slightly recurved. Lvs whorled, 140 × 35 mm. Stems 1.45 m, mid green, with c.18 fls. Early July.  
(Named in honour of Canadian explorers. Nomenclatural standard: colour print supplied by registrant (WSY 0096370).)

**‘Northern Lights’ I(b/-)**

Parentage: Preston Group × ‘White Gold’

R: E. Robinson (c. 1961), N: E. Robinson

Fls straw, with reddish centre and lavender tepal-tips.

Stems 1 m. July.

(Published in *ILR* (1969).)

**‘Northern Princess’ I(c/d)**

Parentage: complex hybrid

R: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1970)

Fls with basal half carrot-red (HCC 612/3), apical half rose-madder (HCC 23/3); spots numerous, maroon (HCC 1030/3), on basal half of each tepal; nectaries with slight greening; pollen dark orange. Stems 0.4-0.6 m. Syn.: ‘Mahogany Mauve’.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 23 (1978). Has been sold under the epithet ‘Mahogany Mauve’.)

**‘Northern Sensation’ VIII(b-c/a-b)**

Parentage: ‘Starburst Sensation’ × Moonlight Group

R: L.M. Collicutt & W.G. Ronald (1982), G: L.M.

Collicutt (1984), N: Morden Research Center (1996), I:

Morden Research Center (1996), REG: Morden Research

Center (1997)

Inside strong purplish red (67A), deeper in tepal-centres and feathering out to white edges and a white apical third, throat strong purplish red (67A); outside deep purplish red (187D), shading to white tepal-edges; spots absent; nectaries light green; pollen brown. Fls 170 mm wide, scented; tepals 135 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 155 × 15 mm, dark green. Stems 1.4 m, dark green, with 9-15 fls. Mid July to Aug.

(An Orienpet (OT) lily.)

**‘Northern Splendor’ I(b/-)**

Parentage: complex *dauidii* var. *willmottiae* × *cernuum* hybrid

R: C.F. Patterson (pre 1961), I: Dept. of Horticulture, University of Saskatchewan (1969)

Fls geranium lake (HCC 20/3), with a blush of saffron yellow (HCC 7/3); spots beetroot purple (HCC 830) on basal two-thirds of each tepal. Tepals reflexed for a quarter. Stems short.

**‘Northern Sun’ IX(a/b)**

See *philadelphicum* ‘Northern Sun’.

**‘Northland’ I(a/-)**

Parentage unknown

R: P. Whipple, G: P. Whipple, N: P. Whipple, I: P.

Whipple & S.R. Kaul (1988), REG: S.R. Kaul (1988)

Inside very light buff-white, tepal-edges darker; outside buff yellow; each tepal with a very pale green centre and numerous, large, dark maroon spots on basal half; tepal-edges in basal half also maroon; nectaries very pale green; pollen light rusty orange; stigma green. Tepals 70-90 × 20-30 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 10 mm, mid green. Stems up to 1.5 m, mid green, with up to 16 fls which do not fade in sun, and with bulbils. June to July.

**‘North Palmira’ VI(-/-)**

Syn. of ‘Severnaia Palmira’.

**‘North Star’ VI(-/a)**

See *L. × kewense* ‘North Star’.

**‘Noslepums’ I(c/-)**

Misspelling of ‘Noslêpums’.

**‘Noslêpums’ I(c/-)**

Parentage: selection from Sapņotāja Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls orange-red.

(Published in *ILR* 33: 79 (1970) and included in *ILR* (1982) as ‘Noslepums’ which is a misspelling.)

**‘Nostalgia’ VII(a/b)**

Parentage unknown

R: Mak ’t Zand B.V., N: Mak ’t Zand B.V. (2001), REG:

Liliande B.V. (2003)

Inside and outside strong purplish pink (68B) on a yellowish white (155D) ground; outside with strong

yellow-green (145A) midveins; spots absent; papillae white; nectaries strong yellow-green (144B); pollen strong brown (172A); stigma pale yellow-green (193A). Fls 230 mm wide; tepals 145 × 70 mm, margins ruffled, tips recurved. Lvs 210 × 60 mm, dark green. Stems 0.85 m, green with darker markings, and with 4-6 fls.

#### **‘Notre Dame’ I(a/b)**

Parentage: ‘Connecticut Bronze’ × mixed pollen of ‘Butterscotch’ & ‘Wattle Bird’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)

Inside and outside glossy moderate reddish orange (35A); spots red, around the fl. centre; nectaries with greenish white (155C) hairs; pollen strong brown (172A). Fls 150 mm wide; tepals 80 × 28 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 12 mm, mid green. Stems 1 m, almost black, with c.15 fls. July.

#### **‘Nottingham’ VII(a/b-c)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside pale yellow-green (155A); outside pale yellow-green (155A), midribs pale yellow-green (4D); spots pale yellow-green (155A); papillae present; nectaries light yellow-green (145C); pollen strong orange (169C); stigma greyish yellow-green (148D) with small moderate purplish pink (66D) streaks. Fls 290 mm wide; tepals 140 × 80 mm, margins ruffled, tips recurved. Lvs 200 × 60 mm. Stems 1.1 m, light green, with c.3 fls.

#### **‘Nova’ I(a/-)**

Parentage: ‘Uncle Sam’ × ‘Mega’

R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1973), REG: Oregon Bulb Farms, Inc. (1973)

Fls bright, deep yellow, quite heavily spotted. Stems 1.1 m. June.

(Published in *Lilies and other Liliaceae*, 1973/1974: 113.)

#### **‘Novakars’ I(b/b)**

Parentage unknown

R: D.-V. Škimele (1994), G: D.-V. Škimele (1996), N: D.-V. Škimele (1999), REG: D.-V. Škimele (2004)

Inside dark purplish red, each tepal with a little white ray, paler at tip, throat dark red; outside dark purplish red, midribs brownish; spots black, medium sized, few, on half of each tepal; nectaries violet; pollen black; stigma violet. Fls 95 mm wide; tepals 50 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 5 mm. Stems 1.5 m, brown tinged with greenish, with c.12 fls. Mid July.

(Published in *Lilium Balticum Lily Register*, 2000.)

#### **‘Nova Lux’ I(a/b)**

Parentage unknown

R: Gebr. Vletter & Den Haan (pre 1987), N: Gebr. Vletter & Den Haan

Inside pale greenish yellow (2D) and strong orange (24A), markings dark purple, throat light yellow/green; spots and papillae present; stigma yellow; pollen light brown. Tepal-margins ruffled, tips recurved. Stems mid green with darker markings.

(Unacceptable name: ICNCP, 2004: Art. 19.13 - after 1959 a name must be in any language other than Latin. However Dutch PBR were granted to this epithet in 1988, and it must therefore be accepted, although it cannot be registered. The entry published under this epithet in *ILR Twentieth Supplement* was in error and represents the plant registered as ‘High Style’.)

#### **‘Nova Lux’ I(-/-)**

Syn. of ‘High Style’.

#### **‘Nova Praha’ I(a-b/b-c)**

Parentage unknown

R: R.A. Prochaska, G: R.A. Prochaska, N: D. Prochaska (1997), I: Hartle-Gilman Gardens (1997), REG: Hartle-Gilman Gardens (1997)

Inside brilliant orange (29A), tepal-tips strong yellowish pink (37A); outside strong/moderate yellowish pink (37B/C); spots absent; nectaries white-frosted; pollen vivid reddish orange (30A); stigma pale. Fls 130 mm wide; tepals 70 × 34 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 11 mm. Stems c.1 m, yellow-green with black flecks, and with up to 12 fls. Midseason.

#### **‘Novara’ VI(-/-)**

Parentage: ‘Bamberg’ × ‘Glockenturm’

R: V. Strasser (1983), G: V. Strasser (1986), N: V. Strasser (1992), REG: V. Strasser (1996)

Inside white, yellow and pink, tepal-tips and outside pink. Tepals 120 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 13 mm, dark green. Stems 1.9 m, green, with c.23 fls. Early July.

#### **‘Nova Scotia’ VIII(a-b/b)**

Parentage unknown

R: Testcentrum voor Siergewassen B.V., N: Marklily C.V. (2005), REG: Marklily C.V. (2005)

Inside yellowish white (155D), inner tepals edged with dark red (59A) in basal third; outside with outer tepals yellowish white (155D), midribs strong yellow-green (143C) at base, light yellow-green (154D) at top, inner tepals similar but lacking light yellow-green at top, and with dark red (59A) edge in basal third; spots and papillae dark red (59A); nectaries strong yellow-green (143B); pollen brownish orange (164A); stigma light greenish yellow (1C). Fls 195 mm wide; tepals 125 × 52-62 mm, margins slightly ruffled, tips recurved. Lvs scattered, 170 × 30 mm. Stems 1.1 m, green with some darker markings, and with c.4 fls. Early to midseason. (A *longiflorum*/Asiatic (LA) hybrid.)

#### **‘Nova Zembla’ VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1995), G: Bischoff Tulleken Lelies B.V. (1997), N: Coöp. Kwekersvereniging

“The Originals” U.A. (1999), I: Coöp. Kwekersvereniging  
“The Originals” U.A. (2000), REG: Coöp. Kwekersvereniging  
“The Originals” U.A. (2001)  
Inside yellowish white (155D), tepal-tips suffused with pale purple; outside white, midribs yellow at top; spots absent; some papillae present; nectaries light green; pollen brown; stigma purple. Fls 400 mm wide; tepals 200 × 70 mm, margins ruffled, outer more so, tips recurved. Lvs scattered, 200 × 50 mm. Stems 0.75-0.9 m, green with darker markings, and with c.5-8 enormous fls. Midseason to late.

**‘Nove Cento’ I(a/b)**

Parentage: ‘Avignon’ × seedling G 825  
R: Vletter & Den Haan, G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)  
Inside vivid yellow (9A), throat light greenish yellow (3C); outside brilliant yellow (7B), shading to vivid yellow (9A) at tepal-margins, suffused with brilliant yellow-green (154C) at base, midribs strong yellow-green (144B), outer tepal-tips strong yellow-green (144A); spots few, dark red (187A); filaments yellow; pollen strong orange (24A); stigma brilliant greenish yellow (5A). Fls 155 mm wide; tepals 95 × 52 mm, margins smooth, tips recurved. Lvs scattered, 135 × 18 mm, dark green. Stems 0.84 m, mid green, with c.6-9 fls.

**‘Novinka’ I(a/b-c)**

Parentage: complex hybrid including ‘Redstart’, ‘Rubinovaia’, ‘Destiny’, *L. × maculatum* & *cernuum*  
R: M.F. Kireeva (1981), N: M.F. Kireeva  
Fls white, flushed with pale apricot; spots on basal half of each tepal; filaments creamy white; anthers orange-red. Fls 130-140 mm wide. Stems 0.6-0.8 m, with 5-7 fls, and with bulbils. July.  
(Published in M.F. Kireeva, *Lilii*, 57 (1984).)

**‘Novired’ I(a/b)**

Parentage: ‘Escapade’ × combination of ‘Connecticut King’, ‘Pirate’ & ‘Kismet’  
R: Mak-Leek Inc. (1989), G: Mak-Leek Inc. (1991), N: Euro Lelie B.V. (1998), I: Euro Lelie B.V. (1998), REG: Euro Lelie B.V. (1998)  
Inside moderate red (47A), tepal-tips a little paler, with some brilliant yellow (7A) above the pale greenish yellow (2D) nectaries; outside dark red (59A), tepal-edges deep red (185A); spots dark red (187A), in the throat; papillae absent; pollen moderate orange (167A); stigma dark red (187B). Fls 160 mm wide; tepals 80 × 25-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 15 mm, mid green. Stems 0.9 m, green with a little darker marking, and with c.13 fls. July.

**‘Nubian’ I(c/d)**

Parentage: ‘Edna Kean’ × unknown  
R: P.H. Wright, N: P.H. Wright  
Fls blackish red, 70-80 mm wide. Stems 0.9-1 m, with 7-18 fls. July.  
(Published in *Amer. LYB* 4: 122 (1950).)

**‘Nuera’ I(b/-)**

Parentage: *lancifolium* ‘Splendens’ × *wilsonii*  
R: L.B. Tuffery (c. 1951), N: L.B. Tuffery  
Fls deep apricot, tinged with orange. Stems 0.6-1 m.  
(Published in *Dunhampton Lily Fields Cat.*, 1952.)

**‘Nugget’ I(a/-)**

Parentage: selection from mixed seed of *L. × maculatum* & *dauricum*  
S: D.M. Stone & F.H. Payne (c. 1964), N: D.M. Stone & F.H. Payne  
Fls cadmium-orange; spots absent.  
(Published in *Honeywood Lilies Cat.*, 1956.)

**‘Number Ten’ IX(b-c/d)**

See *speciosum* var. *rubrum* ‘Number Ten’.

**‘Numusa’ I(b/-)**

Parentage unknown  
R: A. Weinreich, N: A. Weinreich, REG: A. Weinreich (1997)  
Fls yellow. Stems 1 m. Mid July.  
(Published in European Lily Society sales list, 1996.)

**‘Nutmegger’ I(c/d)**

Parentage: *lancifolium* var. *flaviflorum* × ‘Gold Urn’  
R: D.M. Stone (c. 1957)  
Fls vivid yellow (9B); spots dark brown. Stems 1 m or more, with bulbils. July.

**‘Oasis’ VI(-c)**

Parentage: white-flowered *henryi* × (“Niagara Highlands Apricot Bowl” × selection from Vineland Golden Aurelians Group)  
R: T.R. Martin (1971), N: T.R. Martin (1976), I: T.R. Martin (1976), REG: T.R. Martin (1976)  
Inside very pale chrome-yellow (HCC 605/3), tepal-tips ivory-white, throat lemon-yellow (HCC 4) to Scheele’s green (HCC 860/1); outside white with green midribs; spots absent; nectaries Scheele’s green (HCC 860/1); pollen mid brown. Tepal-margins smooth. Lvs wide, dark green. Stems 1.2-1.5 m. Mid to late July.  
(Published in *Lilies and other Liliaceae*, 1976: 92.)

**‘Obed’ VII(-/-)**

Parentage: Oriental hybrid × *auratum*  
R: J. Bakker (1976), G: J. Bakker (1978), N: J. Bakker (1984), I: H.J. Bakker (1984), REG: H.J. Bakker (1985)  
Inside white, midveins short, brilliant yellow (8A); outside ivory-white, with pale yellow midribs and salmon blotches at the base; spots yellow and white; nectaries light grey; pollen moderate orange (168C). Fls 280 mm wide; tepals 135 × 60 mm, strongly recurved. Lvs scattered, 170 × 45 mm, dark green. Stems 0.6-0.8 m, pale green, with c.5-7 fls.

**‘Obelisk’ VII(-/-)**

Parentage unknown  
R: H.J. Bakker (pre 1984), I: Licomba (1988), REG: Licomba (1988)  
Inside strong purplish pink (62A), midveins strong

purplish red (58B), tepal-edges and tips white, short yellow-green basal veins and white blotches at base; outside strong reddish purple (72C), midribs yellowish, tepal-tips white; spots moderate red (185B); pollen light red-brown. Tepals 110 × 51 mm, strongly recurved. Lvs scattered, 180 × 70 mm, pale green. Stems 1 m, pale green.

**‘Oberhof’ VIII(b-c/-)**

Parentage: *dauidii* × (*dauidii* × *regale*)

R: Saatzucht Zierpflanzen Erfurt (c. 1984), N: Saatzucht Zierpflanzen Erfurt, REG: ICRA (1997)

Inside apricot; outside with brown midribs; with fine orange spots in centre of fl.; pollen brown. Fls slightly scented. Lvs bluish green. Stems 1 m. Early July.

**‘Oberhofer Glanz’ I(a/c-d)**

Parentage: ‘Mohykán’ × ‘Connecticut Melon’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside strong yellowish pink (34D), tepal-tips paler, throat strong yellowish pink (34D); outside strong yellowish pink (34D), midribs yellow-green; spots few, medium sized, deep red (53A), on basal quarter of each tepal; nectaries greyish white with a violet tinge; pollen strong brown (172A); stigma strong purplish red (60B). Fls 130 mm wide; tepals 60 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm. Stems 0.9 m, green, with c.9 fls, thickly leafy. Mid to late. (Oberhof is a town in the German province of Thuringia, where the registrant used to live. Nomenclatural standard: colour print provided by registrant (WSY 0028896).)

**‘Oberhofer Gold’ I(a/c)**

Parentage: Asiatic seedling × brushmarked seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (1998), REG: G. Steinbrück (1998)

Inside and outside light orange-yellow (16B), tepal-tips rather paler; each tepal with a large, strong purplish red (72A) brushmark and a few, similarly coloured small spots below the brushmark; nectaries yellowish grey (156C); pollen strong purplish red (72A); stigma moderate reddish orange (35B). Fls 130 mm wide; tepals 65 × 30 mm, margins smooth, tips very slightly recurved. Lvs scattered, 60 × 8 mm, mid green. Stems 0.9 m, rather dark green, with up to 20 fls. Mid July.

**‘Oberon’ IV(-/d)**

Parentage: selection from complex *parryi* × *humboldtii* hybrid

S: J. de Graaff (c. 1965), N: J. de Graaff  
Fls yellow.

**‘Oberon’ IX(b-c/d)**

See *speciosum* ‘Oberon’.

**‘Obilnaia’ I(c/d)**

Parentage: (‘Stroinaia’ × *dauidii* var. *willmottiae*) × ‘Gloriosum’

R: V.A. Grot (1957), N: V.A. Grot  
Fls bright orange, spotted. Stems 2 m.  
(Unaccepted spelling ‘Obilnaja’. The pollen parent (‘Gloriosum’) is of Russian origin.)

**‘Obilnaja’ I(c/-)**

Unaccepted spelling of ‘Obilnaia’.

**‘Obláček’ IX(c/d)**

See *martagon* var. *album* ‘Obláček’.

**‘Obrišt’ I(a/c)**

Parentage: red-flowered, bowl-shaped Asiatic hybrid × (*lancifolium* × unknown)

R: C. Feldmaier, N: C. Feldmaier (1972), I: C. Feldmaier (1978), REG: C. Feldmaier (1978)

Fls strong reddish orange (31A); spots brown towards base; nectaries strong reddish orange (31A); pollen dark brown. Tepals 90 mm long, margins smooth, slightly recurved. Lvs dark green. Stems 1.4 m, green, darkly suffused, with up to 12 fls.

(Published in *Lilies and other Liliaceae*, 1978/9: 111.)

**‘Occasion’ I(a/-)**

Parentage: Yellow Blaze Group × ‘Connecticut King’

R: Bischoff Tulleken Leliecultuur B.V. (1975), G: Bischoff Tulleken Leliecultuur B.V. (1978), N: Bischoff Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken Leliecultuur B.V. (1983), REG: Bischoff Tulleken Leliecultuur B.V. (1983)

Inside brilliant greenish yellow (7C), each tepal with a brilliant orange-yellow (23B) flame, tepal-tips yellow, throat green at base; outside brilliant greenish yellow (6B), midribs green; spots few; nectaries brick-red; pollen orpiment-orange. Fls 130 mm wide; tepals 125 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 10 mm, dark green. Stems 0.9 m, green, with c.6 fls. Mid July.

***occidentale* Purdy IX(c/d)**

Fls crimson with green or yellow throat, or orange-red with orange throat; spots purplish brown; nectaries green; anthers purple to red-brown; pollen orange-red. Fls up to 80 mm wide; tepals 35-63 × 10-13 mm. Lvs in whorls, scattered towards top of stem, up to 125 × 13 mm, dark green. Stems 0.7-2(-2.75) m, green or tinged with purple, with 1-5(-20) fls. W USA (S Oregon, N California).

**Ocean Group VI(-/a)**

Parentage unknown

R: J. Bakker (1978), G: J. Bakker (1981), N: J. Bakker (1985), I: Licomba (1988), REG: Licomba (1988)

Inside greenish to yellowish white (155C/D), with strong yellow-green (144C) veins in the throat; outside yellowish white (155D); pollen brownish orange (171B). Fls 180 mm wide; tepals 160 × 45 mm, margins smooth, tips not recurved. Lvs scattered, mid green. Stems 1 m, pale green, with c.9 fls.

(Published in *ILR Eighth Supplement* as a clone.)

**var. *ocellatum* IX(c/d)**  
See *humboldtii* var. *ocellatum*.

**‘Ocelot’ IX(b/c)**  
See *auratum* ‘Ocelot’.

**var. *ochraceum* IX(c/a)**  
See *primulinum* var. *ochraceum*.

**‘Ockerkrone’ I(a/-)**  
Parentage unknown  
R: C. Feldmaier, N: C. Feldmaier, I: G. & F. Ewald (1985), REG: G. & F. Ewald (1988)  
Inside moderate red (180A), tepal-tips vivid reddish orange (34A), throat brilliant yellow (7A); outside vivid reddish orange (34A) to moderate red (180C); spots very few, small; nectaries green; pollen strong orange (169C). Fls 130 mm wide; tepals 80 × 32 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 17 mm, dark green. Stems 0.9 m, dark green, with c.12 fls. July.  
(Published in Gesellschaft der Staudenfreunde bulb list, 1985.)

**‘Odagiri Kisukashi’ I(a/-)**  
Parentage: (‘Joan Evans’ × *L. × maculatum*) × (‘Joan Evans’ × *regale* ‘Gold Cup’)  
R: Y. Odagiri (c. 1976), N: Y. Odagiri  
Fls yellow, with scattered brown spots in basal half; tinged with green outside in bud. Fls c.150 mm wide; tepal-tips slightly recurved.

**‘Oda Solntsu’ I(b/-)**  
Parentage: ‘Connecticut King’ × unknown  
R: V.A. Volkov (c. 1981), N: V.A. Volkov  
Fls bright yellow with an orange centre; spots present; pollen brown. Stems 0.5 m. June.

**‘Odd Ball’ I(b/-)**  
Parentage: ‘Connecticut Yankee’ × (‘Snow Bunting’ × unknown)  
R: F.H. Payne (1969), G: F.H. Payne (1971), N: L.D. Marshall (1971), I: Piedmont Gardens, REG: Piedmont Gardens (1980)  
Inside vivid reddish orange (34A), light yellowish pink (36B) from tepal-tips to near throat, tip-margins vivid reddish orange (34B), throat-margins vivid reddish orange (34A); outside vivid reddish orange (34A-B); spots absent; nectaries moderate bluish green (126C); pollen absent. Fls 90 mm wide; tepals c.35 × 20 mm, not recurved, tips incurved, some remaining partially fused. Lvs scattered, 100 × 12 mm, mid green. Stems 1.2 m, mid green, with c.22 fls. July. A monstrous form.

**Odeon Group VI(-/a)**  
Parentage unknown  
R: J. Bakker (1978), G: J. Bakker (1981), N: J. Bakker (1985), I: Licomba (1988), REG: Licomba (1988)  
Inside greenish to yellowish white (155C/D), throat light yellow-green (145B); outside greenish white (155C), midribs pale greenish yellow (2D); spots absent; pollen dark reddish orange to brownish orange (172B/C). Fls

320 mm wide; tepals 160 × 70 mm, margins smooth, tips not recurved. Lvs scattered, 160 × 30 mm, mid green. Stems 1 m, pale green, with 7-10 fls.

**‘Odessa’ VII(-/-)**  
Parentage: Oriental hybrid × *auratum*  
R: J. Bakker (1976), G: J. Bakker (1978), N: J. Bakker (1984), I: H.J. Bakker (1984), REG: H.J. Bakker (1985)  
Inside transparent white, midveins cream; outside white, midribs primrose-yellow; spots and papillae white; nectaries purple; pollen majolica-yellow. Fls 270 mm wide; tepals 125 × 65 mm. Lvs scattered, 160 × 40 mm, mid green. Stems 1.2 m, pale green, with 6-9 fls.

**‘Odessa’ VII(a-b/-)**  
Parentage unknown  
R: unknown  
Inside deep red/strong purplish red (60A/B/C), tepal-tips lighter, margins almost white, midveins yellow at base changing into strong red (46A); outside moderate purplish pink (66D); spots dark purple-red; papillae present; nectaries green; pollen orange-brown; stigma grey-green. Tepals medium sized, margins ruffled, tips recurved. Lvs scattered. Stems 1.3 m, green.  
(In 2004 J.A. & J. Moerman applied for registration of this epithet, but this was refused because the epithet duplicates an earlier usage by Bakker (ICNCP, 2004: Art. 27.1). However, Dutch PBR (LEL 2130) were granted to Moerman’s ‘Odessa’ in 2004 and under ICNCP, 2004: Art. 24.4 the use of ‘Odessa’ for this cv. must be accepted, although it is not eligible for registration.)

**‘Odetta’ I(b-c/b-c)**  
Parentage: complex hybrid including Hallmark Group & *cernuum*  
R: M.F. Kireeva (1985), N: M.F. Kireeva  
Fls greenish white; spots sparse, brownish; pollen orange. Fls 110-120 mm wide, scented. Stems 0.8-1 m, with 9-18 fls. July.

**‘Odillie’ I(a/-)**  
Parentage: ‘Liudmila’ (of Kireeva) × ‘Alfa’  
R: M.F. Kireeva (1984), N: M.F. Kireeva  
Fls pink, with spots. Stems 1.3 m. July.

**‘Odra’ I(c/d)**  
Parentage: ‘Pomeranč’ × ‘Connecticut King’  
R: Šlechtitelaká Stanice Heřmanův Městec, N: Šlechtitelaká Stanice Heřmanův Městec, REG: Šlechtitelaká Stanice Heřmanův Městec (1994)  
Inside deep orange, with sparse, tiny spots in the throat. Fls 75-85 mm wide, with overlapping tepals; pedicels 40-80 mm long. Lvs 80-110 × 10-13 mm, dark green. Stems 0.95 m, with dense, red-brown shading at base, and with c.25 fls. Mid June.  
(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1992.)

**‘Odysseus’ I(b/-)**  
Parentage: (*lancifolium* var. *flaviflorum* × ‘Destiny’) × Golden Chalice Group

R: C. North, N: C. North, I: C. North (1976), REG: C. North (1976)

Fls strong orange (24A). Stems of medium height, with c.10 fls and a few bulbils. June to July.  
(Published in *Lilies and other Liliaceae*, 1976: 92.)

**‘Ofeliia’ I(a/b)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1995)  
Fls light pink; spots dark purple. Fls c.140 mm wide;  
tepal-margins slightly ruffled. Stems 0.9-1 m, with 10-12 fls. July.

(Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to ‘Ophelia’. Published in M.F. Kireeva, *Lilii*, 49 (2000).)

**‘Ognennaia’ I(b/-)**

Parentage: ‘Stroinaia’ ×  *davidii* var.  *willmottiae*

R: V.A. Grot, N: V.A. Grot

No further details.

(Unaccepted spelling: ‘Ognennaja’.)

**‘Ognennaja’ I(b/-)**

Unaccepted spelling of ‘Ognennaia’.

**‘Ogon’ I(a/b)**

See *L. × maculatum* ‘Ogon’.

**‘Ohime’ IX(a/c)**

See *concolor* ‘Ohime’.

**‘Ohnivák’ I(a/b)**

Parentage: ‘Red Echo’ × ‘Mánes’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990),

REG: B. Mičulka (1990)

Inside fiery red-orange, throat purple-tinted, tepal-edges changing to apricot; outside apricot, midribs red-brown; spots absent; nectaries violet-feathered; pollen dark brown. Fls 160 mm wide; pedicels 90 mm long, with inconspicuous, dark violet spots. Lvs scattered, 105 × 13 mm, glossy dark green, held slightly slanting, dense. Stems 0.85 m, deep green, thick, with fls in a short infl. Late June.

**‘Ohnivý Fénix’ I(a-b/b)**

Parentage: (‘Noris Star’ × unknown) × tetraploid lily pollen

R: J. Kovář, N: J. Kovář, I: J. Kovář (1998), REG: J. Kovář (1998)

Inside orange-red, with a red centre and an orange throat, tepal-tips and edges pale red; outside orange-red; spots numerous, large, black, on half of each tepal; nectaries apricot, white-felted; pollen brown-orange; stigma carmine-red. Fls 165 mm wide; tepals 93 × 48 mm, slightly recurved, outer tepals with slightly wavy margins; pedicels 120 mm long, thick, moderately brown-spotted, with secondary buds. Lvs scattered, 150 × 18 mm, glossy dark green. Stems 1.25 m, brown-dotted, brown at base, with fairly numerous large, dark brown bulbils. Early July. Polyploid.

**‘Okani’ I(a/-)**

Parentage:  *lancifolium* var.  *flaviflorum* × ‘Destiny’

R: H. Myodo (pre 1982), N: H. Myodo

Fls pure yellow with a few spots at base of tepals. Stems 1.2 m, blackish, with bulbils.

**‘Okapi’ VII(-/-)**

Parentage: Oriental hybrid ×  *auratum*

R: J. Bakker (1976), G: J. Bakker (1978), N: J. Bakker (1984), I: H.J. Bakker (1984), REG: H.J. Bakker (1985)

Inside transparent white, midveins short, broad, light yellow (12C); outside cream, midribs yellow-white, base pink; spots tiny, yellow, on half of each tepal; nectaries willow-green; pollen tangerine orange. Fls 290 mm wide; tepals 135 × 60 mm, strongly recurved. Lvs scattered, 175 × 45 mm, mid green. Stems 0.8 m, pale green, with c.5-7 fls.

**‘Okesa-ki-sukashi’ I(a/-)**

Parentage: (*L. × maculatum* × unknown) × ‘Hikari’

R: S. Ito et al. (1979), N: S. Ito et al.

Fls orange, tinted vivid to brilliant orange-yellow (23A/B). Fls 150 mm wide. Stems 0.8-0.9 m. Early.

**‘Okihime’ IX(a/c)**

See *concolor* ‘Okihime’.

**‘Okino-kaori’ V(-/a)**

See *longiflorum* ‘Okino-kaori’.

**‘Okino-komachi’ V(-/a)**

See *longiflorum* ‘Okino-komachi’.

**‘Oksana’ VI(-/c)**

Parentage: complex hybrid involving Aurelians &  *regale* hybrids

R: N.A. Miroshniczenko (c. 1979), N: N.A.

Miroshniczenko

Fls ivory-white with a bright yellow throat. Stems 1.8 m. July.

**‘Oktavánka’ I(a-b/b)**

Parentage: ‘Amos’ × ‘Silver Bunny’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004),

REG: B. Mičulka (2004)

Inside deep pink, tepal-tips of outer tepals paler, yellow shining through area around nectaries; outside of tepals with paler centres, midribs brownish; spots present; pollen orange-brown; stigma beige. Fls 120 mm wide; tepals 85 × 43 mm, thick and rigid, slightly recurved; pedicels 85 mm, green. Lvs scattered, 70 × 12 mm, dull pale green, sparse. Stems 0.75 m. Late June.

**‘Old Colony Queen’ I(a/-)**

Parentage: sibling of ‘Jolly Green Giant’

R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens

Inside bright yellow, tinged with green; spots tiny, deep red. Aug. to Sept.

**Oldenfelder Group VI(b/b)**Parentage: *regale* × Pink Perfection Group

R: O. Tanck (pre 1981), N: O. Tanck, REG: O. Tanck (1988)

Fls light pink. Stems 1.6-1.9 m, with up to 20 fls.  
(Published in German Lily Group sales list, 1982.)**'Old Glory' I(-/-)**

Parentage: seedling from Stenographer Group

R: P.H. Wright, G: P.H. Wright, N: P.H. Wright, REG: P.H. Wright (1985)

Fls rich red. Stems 1.2 m, with many fls. July.  
(Published in *Greenock Farms Cat.*, 1956.)**'Old Gold' I(b/-)**

Parentage: 'Cromottiae' × unknown

R: W.A. Constable Ltd (pre 1950), N: W.A. Constable Ltd

Fls dull golden yellow, tepal-tips flushed with pink. Stems 0.6-1 m.

(Unacceptable name: ICNCP, 2004: Art.27.1 - name already used for another lily. Published in *JRHS* 75: xcvi (1950).)**'Old Gold' IX(b/c)**See *auratum* 'Old Gold'.**Old Gold Group I(b/-)**

Parentage: selection from Green Bush Group

S: W.C. Horsford (c. 1952), N: W.C. Horsford

Fls old gold shades.

(Unacceptable name: ICNCP, 2004: Art.27.1 - name already used for a cv. Published in *LYB* 19: 54 (1956).  
Included in *ILR* (1982) as Old Gold grex.)**'Old Hollandicum' I(-/-)**Parentage: *bulbiferum* × ? *dauricum*

Fls red. Tepals broad. Early.

(Raised before 1880.)

**Old Rose Royal Group VI(-/a)**

See Old Rose Royal Trumpets Group.

**Old Rose Royal Trumpets Group VI(-/a)**

Parentage: selections from Royal Group

S: R.W. Bemis, N: R.W. Bemis

No further details.

(Published in *ILR* (1982) as Old Rose Royal grex.)**'Old Silk' I(c/a-d)**Parentage: 'Mimosa' × *cernuum*

R: L.B. Tuffery (c. 1967), N: L.B. Tuffery

Resembles *L. × testaceum*, but deeper in colour.**'Olga' I(a/-)**

Parentage: Pastel Group × 'Connecticut King'

R: V. Jošt (1971), G: V. Jošt (1974), N: V. Jošt (1984), I: V. Jošt (1984), REG: V. Jošt (1984)

Inside light yellow (10C), throat brilliant yellow (10A) with a small strong orange (169C) halo; outside pale yellow (11D); spots few, dark red (187A) in the throat;

nectaries frosty white; pollen moderate orange (167A). Fls 110-130 mm wide; tepals 74 × 35 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 110 × 8 mm, dark green. Stems 0.8-0.95 m, mid green, with c.10 fls. June

**'Olga' I(a/b)**

Syn. of 'Maksi'.

**'Olgert' I(-/-)**

Misspelling of 'Olgerts'.

**'Olgerts' I(-/-)**

Parentage unknown

R: V.P. Orehovs (pre 1981), N: V.P. Orehovs

Fls bright yellow, large; nectaries green.

(Included in *ILR Third Supplement* as 'Olgert' which is a misspelling.)**'Olinka' I(a-b/b-d)**

Parentage: 'Kain' × 'Blizzard'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002), REG: B. Mičulka (2002)

Inside white, tinged with pale beige, the centre light beige; outside with greenish and slightly pinkish midribs, with a hint of a brown-red, line-like brushmark on the midvein inside; spots very few; nectaries green, white-granulated; pollen brown; stigma pale green. Fls 125 mm wide; tepals 85 × 45 mm, margins slightly ruffled, tips slightly recurved (outer tepals more so); pedicels 75 mm long, glossy brown. Lvs scattered, 80 × 17 mm, yellowish green. Stems 1.05 m, slightly brown-spotted and with a moderately long infl. Mid July.

Syn.: 'Vlad'ka'

(Published as 'Vlad'ka' in *ILR Twenty-first Supplement*. Mičulka then discovered that the epithet 'Vlad'ka' had already been used for a lily that had been raised in 1994, and requested that *his* 'Vlad'ka' should be re-named 'Olinka'.)**'Olive Christine' VI(-/a)**

Parentage unknown

R: H.E. Barry (pre 1968), N: H.E. Barry

Fls deep apricot.

**'Olive Isabel' III(-/-)**See *L. × testaceum* 'Olive Isabel'.**'Oliver Wyatt' IV(-/-)**Parentage: *parryi* × unknown

R: O.E.P. Wyatt (c. 1955), N: O.E.P. Wyatt, I: H.E. Barr (1964)

AM 1965

Fls vivid orange-yellow (23A), lightly spotted with maroon. Fls sweetly scented; tepals slightly reflexed.  
(Published in *LYB* 28: 134 (1965).)**'Olivia' I(a/-)**

Parentage unknown

R: L. Woodriff (1975), G: L. Woodriff, N: Ont

Wikkeling Lelie Cultuur B.V. (1983), I: Ont Wikkeling

Lelie Cultuur B.V. (1983), REG: Ont Wikkeling Lelie Cultuur B.V. (1983)  
Inside deep to moderate red (185A/179A); outside moderate red (179A/B); spots absent; nectaries violet; pollen orange. Stems light green.  
Syn.: 'Red Matador'.

**'Olivia' I(b/-)**

Parentage unknown  
R: A. Weinreich (pre 1989), N: A. Weinreich  
Inside brass-coloured, with yellow centre and heavy spotting; pollen yellow; stigma dark red. Fls 150 mm wide; tepals slightly reflexed. Stems 1.2-1.5 m, brown. Mid July.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in German Lily Group sales list, 1989.)

**'Olivia' VII(b/c)**

Parentage unknown  
R: H.J. Bakker, N: H.J. Bakker, I: De Jager (UK) (1987)  
Fls white; papillae slender, white; nectaries green; pollen orange-red. Tepals broad, ruffled and twisted. Stems c.0.5 m. Aug.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Olšava' I(b/b)**

Parentage: 'Kněžna Libuše' × 'Amor'  
R: M. Tlach, N: M. Tlach, I: M. Tlach (1995), REG: M. Tlach (1996)  
Inside dark pink, shading to the ochre yellow centre of fl.; outside pale pink, midribs beige; spots absent; nectaries pinkish; pollen pale yellow; stigma pale pink. Fls 130 mm wide; tepals 80 × 30 mm, moderately recurved; pedicels 80 mm long. Lvs scattered, 110 × 10 mm, pale green, dull above. Stems 0.85 m, rigid, brown at base, with small sparse bulbils. Early July.

**'Olsen's White' Div. ?**

See note under 'Liloot' and 'Marisa'.

**'Olympiáda' I(a-b/b-c)**

Parentage: ('Plavovláška' × 'Endeavor') × ('Plavovláška' × 'Dekora')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)  
Inside creamy, centre yellowish, throat whitish, area over nectaries pale violet; outside yellowish at tepal-edges, midribs pink; spots fairly numerous, dark pink-brown, large, on three-fifths of each tepal; nectaries green, white-granulated; stigma brown-crimson. Fls 130 mm wide; tepals 87 × 37 mm, slightly recurved; pedicels 80 mm, dark brown. Lvs scattered, 75 × 12 mm, dull mid green. Stems 0.95 m, densely dotted with black-brown. Mid June.

**Olympic Group VI(-/a)**

Parentage: derived from *sargentiae*, *leucanthum* var. *centifolium*, *brownii* & *sulphureum*  
R: J. de Graaff, N: J. de Graaff  
Fls white, ivory-cream, cream, green, yellow or pink;

throat usually yellowish; outside marked with pink and purplish. Stems up to 1.9 m.  
(Published in *LYB NALS*: 6 (1946). Until 1955 listed as *Centifolium* Hybrids. Included in *ILR* (1982) as Olympic Hybrids grex.)

**'Olympic Flame' VII(a-b/b)**

Parentage: (*L.* × *parkmanii* Little Rascal Group × 'Star Gazer') × (unnamed seedling × 'Star Gazer')  
R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside moderate purplish red (58A), midveins dark red (59A), tinged with brilliant greenish yellow (6A), tepal-edges and tips yellowish white (155B); outside moderate purplish red/strong reddish purple (70A/B) shading paler towards the narrow, yellowish white (155B) tepal-edges, midribs yellowish white (155B), tinged with light greenish yellow (1C) in apical part, and strong yellow-green (144B) at tip, the base tinged with strong yellow-green (143B); spots dark red (187A) on basal part of each tepal; papillae similarly coloured in the throat; nectaries strong yellow-green (143B); pollen strong orange (169B/C); stigma moderate purplish red (64A). Fls 230 mm wide; tepals 120 × 30 mm, margins slightly ruffled, outer tepal-tips strongly recurved. Lvs scattered, 130 × 35 mm, mid green. Stems 0.5 m, mid green, with c.5 fls.

**Olympic Pink Group VI(-/a)**

Parentage: selections from Olympic Group  
S: J. de Graaff, N: J. de Graaff  
Fls fuchsia-pink.  
(Published in *Oregon Bulb Farms Cat.*, 1955. Included in *ILR* (1982) as Olympic Pink Selections.)

**Olympic Special Group VI(-/a)**

Parentage: selections from Olympic Group  
S: J. de Graaff, N: J. de Graaff  
Inside white; outside white or pink.  
(Published in *Oregon Bulb Farms Cat.*, 1955. Included in *ILR* (1982) as Olympic Special Select grex.)

**'Olympic Star' VII(b/b)**

Syn. of 'Olympische Ster'.

**Olympic White Group VI(-/a)**

Parentage: selections from Olympic Group  
S: J. de Graaff, N: J. de Graaff  
Fls white, most with some green outside.  
(Published in *Oregon Bulb Farms Cat.*, 1955. Included in *ILR* (1982) as Olympic White Selections grex.)

**'Olympische Ster' VII(b/b)**

Parentage unknown  
R: Fa J. Dignum & Zn (1980), G: Fa J. Dignum & Zn (1981), N: G. Bottema (1986), I: G. Bottema (1986), REG: G. Bottema (1988)  
Inside deep purplish pink (68A), midveins broad, vivid red (52A), tepal-edges primrose-yellow at base, throat blotched pink; outside strong purplish red to deep

purplish pink (64C/D), tepals edged white and with a green-white base; spots red, on basal two-thirds of each tepal; nectaries star-yellow/green; pollen light red-brown. Fls 230 mm wide; tepals 120 × 60 mm, margins scarcely ruffled, tips recurved. Lvs scattered, 140 × 50 mm. Stems 1 m, pale green, with c.6 fls. Early Sept.  
Syn.: 'Olympic Star'.

(Registered as 'Olympic Star' and included as such in *ILR Seventh Supplement*, but in 1989 Dutch PBR (LEL 402) were granted to this cv. under the epithet 'Olympische Ster'. Under ICNCP, 2004: Art. 24.4, the PBR name must be accepted.)

#### 'Olympus' VII(b/-)

Parentage unknown

R: Peacock B.V./Imanse Lelieveredeling B.V. (pre 1995)  
Inside yellowish white (155D), midveins white at base changing above to white with a light purplish pink (73C) flush; outside yellowish white (155D); spots many; papillae present; nectaries green; pollen orange-brown; stigma purple. Tepal-margins ruffled, tips strongly recurved. Lvs scattered, of medium length. Stems of medium height, green, with a small number of fls. (Granted Dutch PBR (LEL 1305) in 1997, but not registered - the stock was destroyed by the raiser.)

#### 'Omega' VII(-/-)

Parentage: (*L. × parkmanii* × *L. × parkmanii* 'Pink Delight') × Red Band Group

R: J. Bakker (1974), G: J. Bakker (1976), N: J. Bakker (1982), I: H.J. Bakker (1984), REG: H.J. Bakker (1985)  
Inside Neyron-rose, midveins salmon, tepal-edges white, throat primrose-yellow; outside light pink; rhodonite-red spots on two-thirds of each tepal; nectaries pale green; pollen pale green. Fls 180 mm wide; tepals 90 × 50 mm, slightly recurved. Lvs scattered, 160 × 40 mm, mid green. Stems 0.8 m, pale green, with c.5-6 fls.

#### 'Ondine' VII(-/-)

Parentage: Oriental hybrid × *auratum*

R: J. Bakker (1976), G: J. Bakker (1978), N: J. Bakker (1984), I: H.J. Bakker (1984), REG: H.J. Bakker (1985)  
Inside transparent white; outside with ivory midribs; spots white over whole inside; nectaries methyl-violet; pollen strong orange (170A). Fls 240 mm wide; tepals 110 × 60 mm, slightly recurved. Lvs scattered, 180 × 40 mm, mid green. Stems 1 m, mid green, with c.6-7 fls.

#### 'Onega' I(b/-)

Parentage: 'Odetta' × 'Ambra-gamma'

R: A.V. Otroshko (1990), N: A.V. Otroshko, REG: A.V. Otroshko (1994)

Inside dark to deep red, throat cream, spots black, on a third of each tepal; nectaries pale yellow; pollen brown. Fls 120 mm wide; tepals 78-82 × 28-37 mm, margins slightly ruffled, tips recurved. Stems 0.7 m, greenish brown, with c.8 fls and secondary buds. Early July.

#### 'Oneida' VI(-/a)

Parentage: derived from *regale*, *sulphureum*, *henryi* & *sargentiae*

R: E.F. Palmer (c. 1960), N: E.F. Palmer, I: Horticultural Research Institute of Ontario (1967)

Inside rich yellow; outside reddish. Stems 1.1 m. July.

#### 'On Fire' VII(a/b)

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × red-flowered Oriental seedling

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside light reddish purple/moderate purplish pink (74C/D), tepal-edges yellowish white (155D), throat yellowish white (155D); outside light reddish purple/moderate purplish pink (74C/D) on a yellowish white (155D) ground, midribs yellowish white (155D), pale greenish yellow (2D) towards top, but strong yellow-green (144C) at base and strong yellow-green (144A) at tip; spots dark red (59A), on two-thirds of each tepal; papillae yellowish white (155D) and moderate purplish red (59C), in the throat; nectaries yellowish white (155D); pollen moderate reddish brown (175A); stigma dark purple (79A). Fls 240 mm wide; tepals 130 × 50-75 mm, margins ruffled, tepals and tips recurved. Lvs scattered, 150 × 65 mm, dark green. Stems 0.8 m, green with a little darker marking, and c.4 fls. July.

#### ON WISCONSIN I(b/c)

Trade designation of 'Winnipeggy'.

#### 'Opal' IX(b-c/d)

See *speciosum* 'Opal'.

#### Opal Group VII(b/b)

See *L. × parkmanii* Opal Group.

#### Opal Fire Group VII(-/-)

See *L. × parkmanii* Opal Fire Group.

#### 'Opaline' VII(-/c)

Parentage: seedling of *L. × parkmanii* Opal Group × seedling of *L. × parkmanii* Lavender Lady Group

R: G.M. Chandler, G: G.M. Chandler (1956), N: G.M. Chandler, I: G.M. Chandler (1964)

Inside parchment-white; spots on just over half of each tepal. Fls 200 mm wide; tepals narrow, 28-45 mm broad. Lvs to 177 mm long. Stems 1.7 m.

#### 'Opera' VIII(a/b)

Parentage: seedling LBRS 93-12 × seedling RS 92-18

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside strong purplish red (63A), throat light purplish pink; outside with inner tepals moderate purplish pink (186D), edged moderate purplish pink (186B), midribs light yellow-green (150D), outer tepals with brilliant yellow-green (149B) midribs, tipped brilliant yellow-green (149A); spots few, dark red (187A), on a third of each tepal; papillae absent; nectaries white-hairy; pollen

brownish orange (164A); stigma strong purplish red (63A). Fls 190 mm wide; tepals 105 × 55 mm, margins smooth, tips recurved. Lvs scattered, 140 × 15 mm. Stems 0.95 m, green with a little darker marking, and with c.4 fls.

(*A longiflorum*/Asiatic (LA) hybrid.)

### 'Opera House' VII(-/c)

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler (1970), I: B.G. Hayler (1976), REG: B.G. Hayler (1978)

Fls double, white; spots lavender. Tepals flattish, *auratum* var. *platyphyllum* type, slightly recurved. Stems 1-1.2 m, with up to 12 fls. Late Jan. (Australia).

(Published in *Lilies and other Liliaceae*, 1978/9: 111.

Hayler raised it from Woodriff seed.)

### 'Ophelia' I(a/b-c)

Parentage unknown

R: A. Weinreich (pre 1992), N: A. Weinreich

Inside pale yellow, tinged with orange at base; spots dark, at base. Tepal-tips reflexed.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

### 'Ophelia' II(-/d)

See *L. × dalhansonii* 'Ophelia'.

### 'Ophir' VI(-/a)

Parentage: mixed trumpet origin

R: E.C. Genat, G: E.C. Genat, REG: E.C. Genat (1960)

Inside brilliant greenish yellow (6B); outside light greenish yellow (6D); nectaries green. Fls 100 mm long, 115 mm wide; tepal tips reflexed. Stems 1.2 m.

### OPIMUM VII(a/b)

Trade designation of 'Zanloropium'.

### 'Optimist' VII(-/d)

Parentage unknown

R: H.J. Bakker (1977), G: H.J. Bakker (1980), N: H.J. Bakker (1980), I: H.J. Bakker (1983), REG: Licomba (1985)

Inside Neyron-rose, feathered, midveins strong red (47B), tepal-tips white; outside moderate purplish pink (65A), tepal-edges white; spots cardinal-red; nectaries ruby-red; pollen dark reddish brown. Fls 205 mm wide; tepals 100 × 50 mm. Lvs scattered, 170 × 45 mm, mid green. Stems 0.75 m, mid green, with 5-8 fls.

### 'Opus One' VII(a-b/c)

Parentage: 'Casa Blanca' × 'Star Gazer'

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1994)

Inside yellowish white (155B), midveins yellowish white (155D); outside yellowish white (155D), tepal-edges yellowish white (155B), tips moderate brown (165A), tinged strong yellow-green (144B) at base, midribs pale yellow-green (155A); spots yellowish white (155B), on

two-thirds of each tepal; papillae in throat, coloured as tepals; pollen strong brown (172A); stigma moderate purplish red (58A). Fls 270 mm wide; tepals 135 × 70 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 45 mm, mid green. Stems 0.75 m, pale green, with c.3-6 fls.

### 'Opuss Divi' VII(b/b)

Parentage unknown

R: Ē. Ieviņa (1994), G: R. Krūmiņš (1997), N: R. Krūmiņš (2001), REG: Liliūm Balticum Association (2004)

Inside light reddish brown, midveins darker, tepals with narrow white margins; outside light reddish brown, midribs greenish brown; papillae reddish brown, on three-quarters of each tepal; nectaries light green; pollen light green; stigma grey-green. Fls 220 mm wide; tepals 130 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 190 × 45 mm. Stems 1 m, green, with c.8 fls. Late July.

### 'Orakel von Delphi' I(b/d)

Parentage: 'Inkagold' × 'Artistic'

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2001)

Inside vivid reddish orange (34B); outside strong yellowish pink (34D); each tepal with a large, deep purple (83A) brushmark across the whole width at mid-point, with a deeper shade within the mark and associated spotting below; nectaries large, yellowish white (155B); filaments greyed orange; pollen strong reddish orange (169A); style strong orange-yellow (163B); stigma strong purplish red (61B). Fls 150 mm wide; tepals 70 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 10 mm. Stems 0.9 m, dark green, with 8-10 fls. Late June. (Nomenclatural standard: colour print provided by registrant (WSY 0028877).)

### 'Orandiso' I(a/-)

Parentage: sport from 'Gran Paradiso'

S: G. Bottema (1989), N: G. Bottema (1990), I: G. Bottema (1991), REG: G. Bottema (1992)

Inside vivid reddish orange/vivid yellowish orange (30B/C); outside vivid reddish orange (30B) suffused with brownish orange (165B) at the base; spots absent; nectaries dark red (187B); pollen dark reddish orange (175B). Fls 170 mm wide; tepals 85 × 45 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 200 × 14 mm, mid green. Stems 1.34 m, green with darker markings, and with c.11 fls.

### 'Orangade' VI(b-c/a)

Parentage: orange-flowered seedling × orange-flowered seedling

R: I. Zilgalvis (1993), G: I. Zilgalvis (1995), N: I. Zilgalvis (1996), REG: I. Zilgalvis (2004)

Inside deep orange; outside orange-green; spots absent; nectaries green; pollen dark red-brown; stigma green. Fls 140 mm wide, slightly scented; tepals 160 × 45 mm, margins smooth, tips slightly recurved. Lvs 120 × 9 mm.

Stems 1.7 m (under glass), green, with c.9 fls. Late July. (Nomenclatural standard: colour print supplied by registrant (WSY 0096375).)

**'Orange' I(a/b)**

See *L. × maculatum* 'Orange'.

**'Orange' IX(c/d)**

See *Michauxii* 'Orange'.

**'Orangeade' I(a/-)**

Parentage: Payne seedling C-1 × 'Persimmon'  
R: R.C. Haring, N: R.C. Haring (1977), REG: J. Wadekamper (1978)

Fls orange; spots absent; nectaries yellow-orange; pollen brown. Tepal-margins slightly ruffled. Lvs dark green. Stems 1 m.

(Entire stock sold to Dutch Bulb Growers. Published in *Lilies and other Liliaceae*, 1978/9: 111. This cv. and 'Orangeade' of Beracha were published in the same year, but this one is registered and is here selected as the accepted epithet (ICNCP, 2004: Art. 26.3).)

**'Orangeade' I(c/-)**

Parentage: *Davidii* × (*Davidii* × "Connecticut seedling")

R: H.O. Beracha, N: H.O. Beracha

Fls orange; spots absent. Stems 1.1-1.5 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 45 (1978).)

**'Orange Aristo' I(a/b)**

Syn. of 'Aristo'.

**'Orange Beard' VI(-/-)**

See *L. × kewense* 'Orange Beard'.

**'Orange Beauty' I(a/b)**

Parentage: ('Sterling Star' × 'Connecticut King') × 'Gran Paradiso'

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1997)

Inside vivid reddish orange (34A/B), each tepal with a vivid orange (28A) splash, throat vivid reddish orange (32A); outside vivid reddish orange (34A), tepal-tips strong red (46A), midribs light orange-yellow (24C); spots and papillae absent; nectaries brilliant orange (29A); pollen strong brown (172A); stigma dark red (187C). Fls 190 mm wide; tepals 90 × 25-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 0.9 m, green with a little darker marking, and with 4-8 fls. June.

**'Orange Bedder' I(a/-)**

Parentage: (*L. × hollandicum* × unknown) × unknown  
R: E. Robinson (1962), N: E. Robinson (1978), REG: E. Robinson (1980)

Inside light orange, throat darker; outside paler; spots few, near centre. Tepals slightly recurved. Lvs scattered. Stems 0.3-0.4 m, with c.5 fls.

**'Orange Best' VI(c/a)**

Parentage: Aurelian seedling × Aurelian seedling  
R: V. Strasser (1978), G: V. Strasser (1981), N: V. Strasser (1983), I: V. Strasser, REG: V. Strasser (1997)

Inside deep orange; outside with outer tepals flushed with red-orange, midribs red-orange; pollen red-orange; style and stigma dark red-orange. Tepals 115 mm long, margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.3 m, rather dark green, with up to 15 fls. Mid July.

**'Orange Bowl' I(a-b/-)**

Parentage unknown

REG: De Lijster Export B.V. (2003)

Inside and outside vivid reddish orange (30B); spots few; papillae absent; nectaries orange; pollen red-brown; stigma dark purple. Tepal-margins slightly ruffled, tips recurved. Stems of medium height to tall, with reddish markings. Midseason.

**'Orange Bright' I(a/-)**

Parentage unknown

N: D. Dale (1994), I: Parkland Perennials (1995), REG: D. Dale (1994)

Fls clear orange; spots absent; nectaries orange; pollen absent. Fls 90 mm wide; tepals 40 × 20-25 mm, margins smooth, tips not recurved. Lvs scattered, 50 × 8 mm, mid green. Stems 1.3 m, mid green, with c.14 fls. Early July. (Purchased as a seedling from E.H. Doerr in 1987.)

**'Orange Brilliant' I(a/b)**

See *L. × hollandicum* 'Orange Brilliant'.

**'Orange Brummer' I(a/-)**

Parentage unknown

R: J. Klein (pre 1984), N: J. Klein, REG: J. Klein (1988)

Fls orange with few spots. Stems 0.8 m. Early July. (Published in German Lily Group sales list, 1984.)

**'Orange Delight' Div. ?(b/-)**

Parentage unknown

Fls orange, borne on long pedicels. Mid July.

(Published in *Lily Buyer's Guide*, NALS Newsl. 4 (Oct.5, 1950).)

**'Orange Electric' I(a/b)**

Parentage unknown

R: Laan Lelie B.V., REG: Lily Company B.V. (2004)

Inside with inner tepals greenish white (155C), along midveins strong orange (25A) in basal half, towards tepal-margins and top changing into little stripes, outer tepals more orange in apical half, throat strong orange (25A) with greenish white (155C) edges; outside with outer tepals strong orange/strong orange-yellow (24A/B) on light orange-yellow (24C) ground, margins greenish white (155C), at top with little strong yellow-green (144B) stripe, inner tepals with broader greenish white margins; spots dark red (187A); papillae strong orange (25A); nectaries moderate yellowish pink (179D); pollen strong orange (25A); stigma strong orange (25A). Fls 110-150 mm wide; tepals 87-93 × 29 mm, margins

smooth, tips not recurved. Lvs scattered, 87 × 13 mm, dark green. Stems 0.6-0.8 m, green, light green towards top, with c.9 fls in an infl. that is half total stem-length.

**‘Orange Fackel’ I(a/-)**

Parentage unknown

R: H. Böhm (pre 1984), N: H. Böhm, REG: ICRA (1996)

Fls orange. Stems 1.4 m. Mid July.

(Published in European Lily Group sales list, 1994.)

**‘Orange Favourite’ I(-/-)**

Parentage unknown

R: A. Schoon (1978), G: A. Schoon, N: A. Schoon (1984), I: A. Schoon (1984), REG: A. Schoon (1985)

Inside light orange (28C), midveins strong orange (30D); outside light orange (28D), tepal-edges carrot-red; spots chocolate-brown, in the throat; nectaries burnt brown-red; pollen reddish brown. Fls 180 mm wide; tepals 85 × 37 mm. Lvs scattered, 95 × 20 mm, mid green. Stems 1 m, pale green, with c.9 fls. July.

(Published in *Bloembollencultuur*, 1984.)

**‘Orangefeuer’ I(b/-)**

Parentage unknown

R: VEG(S), Erfurt (1976), N: VEG(S), Erfurt

Fls orange; spots on basal third of each tepal. Stems 0.75 m. June.

**‘Orange Flame’ I(a/-)**

Parentage unknown

R: P. Whipple (1965), G: P. Whipple (1976), N: P. Whipple (1977), I: Borbeleta Gardens (1978), REG: Bischoff Tulleken Lelies B.V. (1983)

Inside vivid reddish orange (33A), tepal-tips and throat orange-red; outside brick-red with brown-red tepal-edges; spots few; nectaries brick-red; pollen reddish brown. Fls 140 mm wide; tepals 100 × 30 mm, slightly recurved. Lvs scattered, 100 × 14 mm, mid green. Stems 1 m, green, with c.6 fls. June.

**‘Orange Flare’ I(a/-)**

Parentage: ‘Coronation’ × unknown

R: E. Robinson (1953), N: E. Robinson (1956), REG: E. Robinson (1984)

Fls bright orange, glossy, faintly spotted over most of fl. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1 m, mid green with c.20 fls. July.

**‘Orange Garden’ I(a/b)**

Parentage: ‘Chinook’ × ‘Red King’ (Div. I)

R: J. Bodalski (1981), G: J. Bodalski (1983), N: J. Bodalski (1987), I: J. Bodalski (1987), REG: J. Bodalski (1987)

Fls orange, tepal-tips and throat strong orange (25A); outside light orange (28C); spots few, small, dark, in centre of fl.; pollen dark reddish orange (172B). Tepals 75 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 13 mm, mid green. Stems 1 m, mid green, with c.16 fls. July.

**‘Orange Giant’ I(b-c/c)**

Parentage unknown

R: K. Kiel (1978), G: K. Kiel (1981), N: K. Kiel (1986), REG: N. Martschinke (1991)

Inside and outside strong orange (169C), tepal-tips strong orange (169D); spots greyish red (178A) on basal two-thirds of each tepal; nectaries moderate orange (168C); pollen dark reddish orange (175B). Fls 120 mm wide; tepals 90 × 27 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 20 mm, mid green. Stems 1.7 m, dark green, with 16 fls and many bulbils. Mid to late July.

**Orange Glocke Group VI(-/-)**

Parentage unknown

R: V. Strasser (pre 1982), N: V. Strasser

Fls golden yellow to orange, midribs red-brown. Stems to 1.4 m.

**‘Orange Glory’ I(a-b/b)**

Parentage: seedling of Preston Group × unknown

R: G.M. Chandler, G: G.M. Chandler (1958), N: G.M. Chandler, I: G.M. Chandler (1964)

Inside vivid reddish orange (40A) to vivid reddish orange (33B); almost unspotted. Fls 100 mm wide; tepal-tips reflexed. Lvs long, numerous. Stems 0.75 m, with 30-50 fls.

**‘Orange Glow’ VI(-/-)**

Parentage: Aurelian

R: O.S. Blumhardt (pre 1958), N: O.S. Blumhardt

Fls soft salmon, throat deep orange.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Orange Glow’ I(a/b)**

See *L. × maculatum* ‘Orange Glow’.

**‘Orange Glow’ IX(c/d)**

See *pardalinum* ‘Orange Glow’.

**‘Orangetlow’ I(b/-)**

Parentage: ‘Enchantment’ × ‘Connecticut Lemonglow’

R: E.A. McRae (1968), G: Oregon Bulb Farms, Inc. (1972), N: Oregon Bulb Farms, Inc. (1978), I: Oregon Bulb Farms, Inc. (1978)

Fls vivid orange; spots absent; nectaries green; pollen brown. Tepals 80 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 20 mm, dark green. Stems 0.6-1 m, green, with 5-30 fls. Midseason.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Orange Glow’.)

**‘Orange Harvest’ I(a/-)**

Parentage: (Tesca seedling 6 × ‘Sunrise’) × yellow-flowered brushmarked seedling

R: J. Wadepammer, N: J. Wadepammer, I: Borbeleta Gardens (1994), REG: ICRA (1997)

Fls light orange. Stems 1 m. Late.

(Published in *Borbeleta Gardens Cat.*, 1994.)

**‘Orange Hirtellus’ I(a/b)**  
See *L. × maculatum* ‘Orange Hirtellus’.

**‘Orange Ice’ I(a/b-c-)**  
Parentage unknown  
R: W. Windus (1975), N: W. Windus (1981), REG: W. Windus (1981)  
Fls vivid orange (28B); spots medium sized, in a ring in the throat, and fewer, scattered, larger spots; pollen vivid reddish orange (33B). Fls 150 mm wide. Lvs 75 × 12 mm, slightly curled at tip. Stems 1-1.1 m, with up to 20 fls.

**‘Orange Idyll’ I(a-b/c-d)**  
Parentage: seedling NNC7.44 × ‘Rusalka’  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)  
Inside strong reddish orange (169A), becoming red towards the base; outside similarly coloured; spots few, small, dark red (187C), at base of each tepal; nectaries light purplish pink (63D); pollen strong brown (172A) in thick anthers; stigma greyish red (178A) on a short style. Fls 160 mm wide; tepals 78 × 28 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 15 mm. Stems 1.1 m, dark green, with c.8-10 fls. Mid July.  
(It is not known whether the pollen parent is the ‘Rusalka’ of Mičulka or Weinreich. Nomenclatural standard: colour print provided by registrant (WSY 0032259).)

**‘Orange Kandelaber’ I(-/-)**  
Parentage unknown  
R: H. Böhm, N: H. Böhm  
Fls red.

**‘Orange King’ I(-/-)**  
Parentage: *bulbiferum* var. *croceum* × ( *davidii* var. *willmottiae* × ‘Cromottiae’)  
R: J.E.H. Stooke (c. 1935), N: J.E.H. Stooke  
AM 1937  
Fls lustrous orange with dark spots. Tepals slightly reflexed.  
(Published in *Gard. Chron.*, ser. 3, 102: 33 (1937).)

**‘Orange King’ I(a/b)**  
See *L. × hollandicum* ‘Orange King’.

**‘Orange Light’ I(a/b)**  
Parentage: ‘Flame’ × *L. × hollandicum* ‘Christmas Red’  
R: A.J. Porter (c. 1964), N: A.J. Porter  
Fls vivid orange, almost unspotted. Lvs dark green. Stems 0.6-1 m. June to July.  
(Published in *ILR* (1969).)

**‘Orange Love’ I(b/-)**  
Parentage: ‘Pumpkin Sweet’ × ‘Ambrosia’  
R: G.C. Keast (1986), G: G.C. Keast (1988), N: G.C. Keast (1990), I: G.C. Keast, REG: G.C. Keast (1991)  
Fls orange (HCC 12); spots absent; nectaries frosted; pollen brown. Fls 140 mm wide; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 70

× 15 mm, mid green. Stems 0.69 m, green, with c.8 fls. Mid Dec. to mid Jan. (New Zealand).

**‘Orange Magic’ I(c/-)**  
Parentage: ‘August Gold’ × unknown  
R: unknown (c. 1980), G: Hartle-Gilman Gardens (1982), N: Hartle-Gilman Gardens, I: Hartle-Gilman Gardens, REG: Hartle-Gilman Gardens (1997)  
Inside vivid orange (28A) throughout; outside a blend of vivid orange (28A & B), midribs green; spots maroon, on centre half of each tepal (small towards base, larger towards tip); nectaries barely frosted; pollen rust-red. Fls 118 mm wide; tepals 76 × 42 mm, tips strongly recurved. Lvs scattered, 100 × 12 mm, strong yellow-green (146A). Stems 1.8 m, brown, with 36 fls (including tertiary buds on a mature plant). Late.  
(Derived from NALS seed exchange.)

**‘Orange Marmalade’ II(b/c-d)**  
Parentage: *L. × dalhansonii* × *tsingtauense*  
R: E. Robinson (pre 1972), G: E. Robinson, N: E.E. Fox (1994), I: E. Robinson (1972), REG: D. Dale (1994)  
Inside dull orange; outside brownish orange; spots absent; nectaries orange; anthers white, lacking pollen. Fls 180 mm wide; tepals 42 × 12 mm, margins smooth, tips slightly recurved. Lvs whorled, 180 × 32 mm, mid green. Stems 1.2-1.5 m, black with some green mottling, and with c.24-32 fls. Early July.  
Syn.: ‘Tsinson’.  
(Introduced by E. Robinson as ‘Tsinson’ in 1972: ‘Tsinson’ (being formed from *tsingtauense* and *dalhansonii*) is not acceptable under ICNCP, 2004: Art. 19.13 - after 1959 a name must be in any language other than Latin. It was renamed ‘Orange Marmalade’ by Eugene Fox in 1994.)

**‘Orange Melody’ I(a/-)**  
Syn. of ‘Orangewood’.

**‘Orange Monarch’ I(a-b/-)**  
Parentage: ‘August Gold’ × unknown  
R: W. Craig, G: W. Craig, N: W. Craig (1983), I: Borbeleta Gardens (1984), REG: Borbeleta Gardens (1984)  
Inside vivid orange (28A); outside light orange (28C); a few spots in the centre; nectaries orange; pollen light brown. Tepals 100 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 15 mm, dark green. Stems 1.1 m, dark green, with 12-15 fls. July.  
(Published in *Borbeleta Gardens Cat.*, 1984. The raiser may be W.T. Craig but this has not been confirmed.)

**‘Orange Mountain’ I(a/b)**  
Parentage: ‘Connecticut King’ × ‘Chinook’  
R: M.A. van den Berg (1979), G: M.A. van den Berg (1981), N: M.A. van den Berg (1986), I: M.A. van den Berg (1986), REG: M.A. van den Berg (1986)  
Inside vivid orange (28B) fading to vivid reddish orange (30B) at tepal-edges; outside strong orange (30D), midribs yellow-green; spots brown; nectaries greyish red; pollen strong reddish orange (169A). Fls 120 mm wide;

tepals 70 × 30 mm, slightly recurved. Lvs scattered, 80 × 15 mm. Stems 1.1-1.5 m, green, with 10-14 fls.

**‘Orangenleuchte’ I(a/-)**

Syn. of ‘Frankenleuchte’.

**‘Orangenpyramide’ VIII(-/-)**

Parentage: *sargentiae* × *davidii*

R: Saatzucht Zierpflanzen Erfurt (1981), G: Saatzucht Zierpflanzen Erfurt (1984), N: Saatzucht Zierpflanzen Erfurt, REG: Institut für Gemüse- und Zierpflanzenbau Grossbeeren Erfurt (1994)

Inside pale orange-yellow (24D) shaded vivid yellowish orange (30C), tepal-tips vivid yellowish orange (30C), throat vivid yellowish orange (30C); outside with dark red (187C) stripes; fine papillae on inner tepals; nectaries strong brown (172A); pollen red-brown (infertile).

Tepals 65-75 × 20-28 mm, margins smooth, tips slightly recurved. Lvs scattered, 92-130 × 6 mm, mid green. Stems 1.2 m, dark green, with c.35 fls. June to July.

**‘Orange Pastel’ I(c/-)**

Parentage: *pumilum* hybrid (no. 265) × seedling 1166

R: C. Robinson (1971), N: C. Robinson (1982), I: C. Robinson (1983), REG: C. Robinson (1982)

Fls brilliant yellow (21C); spots absent; nectaries and pollen orange. Tepals 62 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 112 × 10 mm, mid green. Stems 0.75 m, mid green, brown at base, with c.16 fls. Early to mid July.

**‘Orange Perfection’ I(a/-)**

Parentage: ‘Enchantment’ × ‘Campfire’

R: J. de Graaff (c. 1956), N: J. de Graaff

Fls vivid orange-red. Stems 1 m. June.

(Published in *Walter Marx Gardens Cat.*, 1956/57.)

**‘Orange Pixie’ I(a/b)**

Parentage: (‘Harmony’ × ‘Sunspot’) × ‘Charisma’

R: E.A. McRae (1973), N: Oregon Bulb Farms, Inc. (1980), REG: E.A. McRae (1981)

Inside vivid reddish orange (30A), throat strong orange (26A/B) along midveins; outside vivid yellowish orange (30C); papillae tiny, purple-brown, on basal third of tepals; nectaries light orange; pollen strong reddish orange (169A) to strong brown (172A). Tepals 70-90 × 35-45 mm, margins smooth, tips recurved. Lvs scattered, 80-90 × 15 mm, dark green. Stems 0.3-0.4 m, dark green, with 3-7 fls. June to July.

**‘Orange Princess’ I(a/-)**

Parentage: *L.* × *hollandicum* × *L.* × *maculatum*

I: F.L. Skinner (1948)

Fls clear apricot-orange, 150-175 mm wide. Stems 0.3-0.4 m.

(Published in *LYB NALS* 2: 114 (1949). Raised in Japan.)

**‘Orange Queen’ I(a/b)**

See *L.* × *maculatum* ‘Orange Queen’.

**‘Orange Ray’ I(a/-)**

Parentage: brushmarked seedling of ‘Connecticut King’ × Oregon Bulb Farms orange-flowered, brushmarked seedling

R: J. Wadekamper (1976), N: J. Wadekamper (1979), I: Borbeleta Gardens (1979), REG: J. Wadekamper (1983) Fls brilliant orange, tepals with brown rays in throat, each tepal with a very light brown brushmark; nectaries tan; pollen brown. Tepals 75 × 25 mm, margins smooth, tips not recurved. Lvs scattered, mid green. Stems 1.1 m, dark green, with 12-14 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1979.)

**‘Orange Red’ IX(c/d)**

See *leichtlinii* ‘Orange Red’.

**‘Orange Resistenz’ I(a/-)**

Parentage unknown

R: J. Klein (pre 1987), N: J. Klein, REG: J. Klein (1988)

Fls orange. Stems 1 m. Late July.

(Published in German Lily Group sales list, 1987.)

**‘Orangerie’ I(a/-)**

Parentage: ‘Judith’ × ‘Aloha’

R: Lybelmex Hillegom B.V. (1980), G: Lybelmex Hillegom B.V. (1982), N: Lybelmex Hillegom B.V. (1986), I: Lybelmex Hillegom B.V., REG: Lybelmex Hillegom B.V. (1986)

Inside vivid orange (28B), midveins short, red, throat with grey hairy veins; outside brownish red below and orange with brighter orange tepal-edges above; spots tiny, dark brown, on half of each tepal; nectaries light brown; pollen chocolate-brown. Fls 180-200 mm wide; tepals 95 × 45 mm. Lvs scattered, 95 × 45 mm. Stems 1.2 m, dark green, with 10-16 fls. June to July.

**‘Orange Schale’ I(a/-)**

Parentage unknown

R: J. Petruske, G: J. Petruske (1974), N: J. Petruske (1981), I: J. Petruske (1981), REG: J. Petruske (1984)

Inside vivid orange (28B) flushed with strong orange (24A) along midveins; outside light orange (28C); spots medium sized, dark red (187A), on two-thirds of each tepal; nectaries frosty white; pollen strong reddish orange (169A). Fls 130 mm wide; tepals 80 × 31 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 90 × 10 mm, mid green. Stems 0.6 m, green. July.

**‘Orange Sherbert’ I(c/-)**

Parentage unknown

R: T.L. Bartel, N: T.L. Bartel

Fls rose-pink. Stems 1.1 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 45 (1978).)

**‘Orange Sherbert’ I(a/-)**

Syn. of ‘Orange Shurbert’.

**‘Orange Shurbert’ I(a/-)**

Parentage: (‘Enchantment’ × ‘Connecticut King’) × (‘Joan Evans’ × ‘Connecticut King’)

R: E.A. McRae (1977), G: Oregon Bulb Farms, Inc. (1980), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1985)

Inside vivid orange, with a white flush on each tepal and white tepal-tips; outside vivid orange; spots absent; nectaries green; pollen soft brown. Fls 110-130 mm wide; tepals 60 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 70-80 × 15 mm. Stems 1.2 m, light green, with 8-25 fls. Mid to late June.

Syn.: 'Orange Sherbert' Div. I(a/-).

(Published in *Oregon Bulb Farms Cat.* as 'Orange Sherbert'. 1985. This name was unacceptable; ICNCP, 2004: Art.27.1 - name already used for another lily, and registration was refused. It has since been sold as 'Orange Shubert', but this name is also unacceptable because it is too similar to 'Orange Sherbert' (ICNCP, 1980: Recommendation 13 Ah).

#### 'Orange Sombrero' IV(c/d)

Parentage: 'Lake Tulare' × an American hybrid with flat fls

R: N. Martschinke (1986), G: N. Martschinke (1992), N: N. Martschinke (1999), I: N. Martschinke (1999), REG: N. Martschinke (2000)

Inside vivid reddish orange (32A & 42A), throat light orange-yellow (22B) and strong orange (25B); outside light yellow (20B); spots dark red (59A), mostly on yellow centre of fl.; nectaries deep yellowish green (141B); pollen strong orange (169C); stigma light yellowish pink (27B), edged dark red (59B). Fls 70-90 mm wide; tepals 80 × 20 mm, margins smooth, tips strongly recurved. Lvs whorled, 90 × 18 mm, mid green. Stems 1.5 m, green, with c.12 fls. Mid June.

(Published in Ewald bulb list, 1999. Epithet derived from the association of the fl. shape with a Spanish sombrero. Nomenclatural standard: colour print provided by registrant (WSY 0022849).)

#### 'Orange Splendor' I(a/-)

Parentage: 'Connecticut Yankee' × brushmarked seedling  
R: R. Chiabotta, G: R. Chiabotta, N: R. Chiabotta (1982), I: Borbeleta Gardens (1983), REG: J. Wadekamper (1983)

Fls vivid orange (28A) throughout; spots large, brown, on half of each tepal; nectaries frosty orange; pollen brown. Tepals 90 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 12 mm, mid green. Stems 1.2 m, dark green, with 16-20 fls. Late.

(Published in *Borbeleta Gardens Cat.*, 1983.)

#### 'Orange Star' VI(-/)

Parentage: 'Bright Star' × unknown

R: H. Böhm (pre 1990), N: H. Böhm

Fls orange, on long pedicels. Lvs mid green. Stems 1.5 m. Late June.

(Published in German Lily Group sales list, 1994.)

#### 'Orange Stern' I(a/-)

Parentage unknown

R: J. Klein, N: J. Klein

Fls orange; spots absent. Stems 0.6 m, with up to 15 fls.

Mid July.

(Published in German Lily Group sales list, 1996.

Included in *ILR Twentieth Supplement* as an unacceptable name. However, the rules have now been modified, and so this name is now acceptable.)

#### 'Orange Success' I(-/)

Parentage: *davidii* var. *wilmottiae* × *bulbiferum* var. *croceum*

R: A.J. van der Zwet & Sons (c. 1950), N: A.J. van der Zwet & Sons

AMH 1950, FCCH 1951

Fls deep Indian yellow, spotted.

#### 'Orange Sunburst' Div. ?

Given as a parent of 'Zoia'. No further details. Perhaps an error for Orange Sunburst Group.

#### Orange Sunburst Group VI(-/c)

Parentage: Aurelian Sunburst-type hybrids

R: J. de Graaff (c. 1957), N: J. de Graaff

Fls apricot. Stems 1.9 m. July.

(Published in *ILR* (1969) as Orange Sunburst grex.)

#### 'Orange Sunset' I(a/b)

Parentage: *bulbiferum* × 'Odysseus'

R: J.G. Smith (1979), G: J.G. Smith (1981), N: J.G. Smith (1985), I: J.G. Smith (1985), REG: J.G. Smith (1985)

Inside yellow-orange, tepal-tips orange, throat yellow; outside orange, spots red, scattered; nectaries yellow; pollen red. Tepals 75 × 34 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 19 mm, mid green. Stems 0.4 m, green, with c.6 fls. Very early.

#### 'Orange Surprise' I(c/-)

Parentage: *davidii* var. *wilmottiae* × unknown  
AMH 1949

Fls Japanese yellow.

#### 'Orange Sweety' VI(-/c)

Parentage: *henryi* × a trumpet hybrid

R: L. Woodriff, N: L. Woodriff (c. 1971), REG: L. Woodriff (1983)

Inside mid orange; outside light orange; spots absent; nectaries green; pollen brown. Fls 100 mm wide, scented; tepals 90 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 25 mm, mid green. Stems 1.5 m, green, with c.20 fls. Late July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 47 (1978).)

#### 'Orange Triumph' I(a/-)

Parentage: unknown, possibly *bulbiferum* var. *croceum* × *L.* × *hollandicum*

N: F. Rijnveld & Sons, I: F. Rijnveld & Sons

AMH 1939, FCCH 1941

Fls orange spotted dark purple. Lvs dark green. Stems 1.2 m, with up to c.12 fls.

(Published in *LYB* 8: 172, fig. 29 (1939).)

**‘Orange Twinkle’ I(b-c/b)**

Parentage unknown

R: Laan Lelie B.V., N: Lily Company B.V. (2000), REG: Lily Company B.V. (2004)

Inside vivid yellowish pink (28A), throat light orange (28D); outside of outer tepals strong reddish orange (31A), outside of inner tepals vivid orange (28B), midribs moderate red (181A) at base, strong yellow-green/dark red (144B/187A) at top; spots dark red (187A); papillae vivid orange (28B); nectaries pale yellowish pink (29B); pollen dark red (183A); stigma dark red (187A). Fls 90-125 mm wide; tepals 80 × 35-45 mm, margins smooth, tips recurved. Lvs 80 × 10 mm, light green. Stems 0.8 m, with some dark markings, with c.9 fls.

**‘Orange Tycoon’ VIII(a/b)**

Parentage unknown

R: Testcentrum voor Siergewassen B.V. (1998), G: (2000), N: Marklily C.V. (2002), I: Marklily C.V. (2002), REG: Marklily C.V. (2003)

Inside strong orange-yellow (24B), throat light orange-yellow (25D), midveins and tepal-margins strong orange (25A); outside light orange-yellow (24C), midribs flushed with light yellow-green (144D), tepal-margins strong orange (25A); spots dark red (59A); papillae strong orange-yellow (24B); nectaries vivid orange (28B); pollen greyish red (176A); stigma vivid yellowish pink (28A). Fls 205 mm wide; tepals 130 × 70 mm, margins smooth, tips recurved. Lvs 155 × 17 mm. Stems 1.1 m, green, with c.3 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Orange Wattle’ I(c/-)**

Parentage: ‘Wattle Bird’ × unknown

R: D.B. Fox (c. 1979), G: D.B. Fox (1982), N: D.B. Fox (1983), I: D.B. Fox (1983), REG: D.B. Fox (1983)

Inside vivid yellowish orange (30C); outside strong orange (30D); spots absent; pollen orange-brown. Fls 100 mm wide; tepals 80 × 27-33 mm, margins smooth, tips strongly recurved. Lvs scattered, 92 × 16 mm, mid green. Stems 1.1 m, mid green, with at least 6-7 fls. July.

**‘Orange Wonder’ I(-/-)**

See *L. × scottiae* ‘Orange Wonder’.

**‘Orangewood’ I(a/-)**

Parentage: ‘Connecticut King’ × ‘Red Carpet’

R: E.A. McRae (1969), N: Oregon Bulb Farms, Inc. (1980), I: Oregon Bulb Farms, Inc. (1980), REG: Oregon Bulb Farms, Inc. (1983)

Inside vivid reddish orange (32A) shading to a vivid orange-yellow (23A) stripe on midveins, throat gold; outside vivid reddish orange (32A); spots absent; nectaries green, white-hairy; pollen gold. Fls 150-180 mm wide; tepals 70 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-150 × 20 mm, mid green. Stems 1.2 m, dark reddish black, with 8-20 fls. Late June. Syn.: ‘Orange Melody’.

**‘Orangiste’ IX(a/b)**

See *bulbiferum* ‘Orangiste’.

**‘Orania’ VIII(b/b)**

Parentage: seedling 93-50-108-L × seedling 87-319-1

R: World Breeding B.V., G: World Breeding B.V., N: World Breeding B.V., I: World Breeding B.V., REG: World Breeding B.V. (2001)

Inside strong orange (24A), tepal-tips light yellow (20B), throat light yellow (18A); outside strong orange-yellow (24B), midribs strong purplish red (61B); spots almost absent; papillae absent; nectaries strong yellow-green (143C); pollen dark reddish orange (175C); stigma dark purple (83A). Fls 200 mm wide, sometimes semi-double, scented; tepals 140 × 60 mm, margins smooth, tips recurved. Lvs scattered, 190 × 35 mm. Stems 0.9-1.25 m, green with some darker markings, and with 7-10 fls. July to Aug.

(An Orienpet (OT) hybrid.)

**‘Oranje’ I(a/-)**

Parentage unknown

R: J. Klein (pre 1985), N: J. Klein

Inside vivid orange (like ‘Alexis’), with a few spots. Fls 140 mm wide. Stems 0.8 m. Early July.

(Published in German Lily Group sales list, 1985.)

**‘Oranje Zon’ I(a/-)**

Parentage: ‘Tabasco’ × unknown

Inside vivid orange (28B); outside strong orange (25A). Stems bright green with a little darker spotting at the base.

(Raised in The Netherlands before 1977.)

**‘Oranžina’ I(a-b/-)**

Parentage: ‘Connecticut King’ × ‘Tabasco’

R: B. Mičulka (c. 1982), N: B. Mičulka, REG: B. Mičulka (1984)

Fls bright orange, throat pale yellow; spots numerous, large, dark purple-brown, on half of the fl.; nectaries frosted white; pollen orange-brown. Fls 110 mm wide. Lvs 60 × 10 mm, dark green. Stems 0.7 m, dark. Late June.

**‘Orast’ I(a/-)**

Parentage unknown

R: A. Rech (pre 1982), N: A. Rech, REG: A. Rech (1988)

Fls orange, large. Stems 0.6 m. Mid June.

(Published in German Lily Group sales list, 1982.)

**‘Ora Tiger’ I(c/-)**

Parentage unknown

R: J. Klein, N: J. Klein

Fls orange-red. Stems 1 m, with up to 15 fls. Early July.

(Published in German Lily Group sales list, 1996.)

**‘Orava’ VI(b-c/b-c)**

Parentage: (‘Lady Alice’ × ‘Carnival Queen’) × (((henryi × unknown) × ‘Lady Alice’) × ((henryi × unknown) × ‘Gold Eagle’))

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside apricot-beige fading into beige-yellow; outside with greenish midribs; nectaries yellow-green; pollen

apricot-brown; stigma green. Fls 150 mm wide; tepals 120 × 46 mm, thick, tips slightly recurved; pedicels 100 mm long, thick, spotted. Lvs scattered, 120 × 60 mm, mid green, slightly shiny. Stems 1.35 m, pale brown; infl. medium sized, with secondary buds. Mid July.

**'Orbita' VIII(-/-)**

Parentage: 'Damsen' ×  *davidii*

R: Saatzucht Zierpflanzen Erfurt (1983), G: Saatzucht Zierpflanzen Erfurt (1986), N: Saatzucht Zierpflanzen Erfurt, REG: Institut für Gemüse- und Zierpflanzenbau Grossbeeren Erfurt (1994)

Inside vivid yellowish orange (30C), shaded pale orange-yellow (24D), tepal-tips, throat and outside all pale orange-yellow (24D), the outside also with moderate red (183C) midribs; papillae lilac; nectaries brownish orange (165B); pollen dark orange to dark brown. Fls 150 mm wide; tepals 73-80 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 68-75 × 7-10 mm, dark green. Stems 1.1 m, almost black, with c.25 fls. Early to mid July.

**'Orchid' II(-/d)**

See *L. × dalhansonii* 'Orchid'.

**'Orchid Blush' VII(-/-)**

See *L. × parkmanii* 'Orchid Blush'.

**'Orchidea' I(b/-)**

Parentage: 'Lemon Queen' (Div. I) × mixed pollen of 'Sonata' & 'Nutmegger'

R: V.A. Volkov (c. 1978), N: V.A. Volkov

Fls orange-pink with brown spots. Stems 0.8 m, with bulbils. July.

**'Orchidflare' VI(-/a)**

Parentage: selection from Golden Trumpet Group

N: D. Foxwell (1962)

Fls light greenish yellow (5C), each tepal with an open flare of orchid-green.

**'Orchid Gem' II(-/l)**

Parentage: *L. × dalhansonii* 'Juanita' × *L. × dalhansonii* 'Brocade'

R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)

Fls mauve-pink with darker spots. Fls large; tepals moderately reflexed. June.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 26 (1978).)

**'Orchid Lady' II(-/l)**

Parentage: *L. × dalhansonii* 'Mrs R.O. Backhouse' × (*L. × dalhansonii* 'Marhan' × unknown)

I: E.L. Kline (c. 1959)

Fls pearl-white, tepal-tips light purplish pink (65B); spots dark purple. Stems 1-1.2 m.

**'Orchid Maiden' I(b/-)**

Parentage unknown, but probably involving *pumilum*

R: W.D. Evans, N: W.D. Evans (1982), I: Borbeleta Gardens (1983), REG: Borbeleta Gardens (1983)

Inside light yellowish pink (36C), tepal-tips light yellowish pink (36A), throat pink; outside vivid reddish orange (30A); maroon spots on inner half of tepals; nectaries white; pollen dark brown. Tepals 75 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 7 mm, dark green. Stems 1 m, brown, with 17-23 fls. Late.

(Published in *Borbeleta Gardens Cat.*, 1983.)

**'Orchid Mist' VI(c/a)**

Parentage unknown

R: W.T. Craig (1973), G: W.T. Craig (1977), N: W.T.

Craig (1984), I: B & D Lilies (1988/89), REG: W.T.

Craig (1986)

Fls yellowish white (155D) throughout, overlaid with translucent light purple (84B), strongest on midribs externally; spots absent; nectaries brilliant to light greenish yellow (5B/D); pollen moderate orange (167B). Tepals 130 × 30-60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 35 mm, dark green. Stems 1.8 m, green, with 14 or more fls. Mid July.

**'Orchid Queen' I(b/-)**

Parentage: *davidii* 'Lady Byng' × (*davidii* var. *willmottiae* × *cernuum*)

R: C.F. Patterson (c. 1957), I: Dept. of Horticulture, University of Saskatchewan

Fls straw-yellow with dawn-pink and shell-pink tepal-tips, merging into one another. Fls up to 130 mm wide.

Stems 1 m, with up to 20 fls. July.

(Published in *ILR* (1960).)

**'Oreglow' I(a/-)**

Parentage: 'Connecticut King' × 'Croesus'

R: E.A. McRae (1975), G: Oregon Bulb Farms, Inc.

(1978), N: Oregon Bulb Farms, Inc. (1984), I: Oregon Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc. (1985)

Inside brilliant orange-yellow (23B), tepals with a deeper flush of vivid orange-yellow (23A) extending from nectaries, tips vivid orange-yellow (23A), throat vivid orange-yellow (23A); outside brilliant orange-yellow (21B); spots absent; nectaries lime-yellow; pollen strong brown (172A). Fls 150-180 mm wide; tepals 70 × 50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 1.4 m, light green, with 8-30 fls. Mid June.

**'Oregold' VI(-/c)**

Parentage: 'Wahlula' × seedling 47-2

R: C. Yerex (c. 1956), N: C. Yerex

Fls vivid yellow (13A), blending to brilliant yellow (14C) at tepal-tips. Stems 1-1.2 m. July.

(Published in *Rex Bulb Farms Cat.*, 1966.)

**'Oregon' I(a/-)**

Syn. of 'Peachblush'.

**'Oregon Candlelight' I(a/-)**

Parentage: 'Connecticut King' × 'Joan Evans'

R: E.A. McRae (1966), G: Oregon Bulb Farms, Inc.

(1968), N: Oregon Bulb Farms, Inc. (1973), I: Oregon Bulb Farms, Inc. (1979), REG: Oregon Bulb Farms, Inc. (1983)

Fls vivid yellow (12A) throughout; spots absent; nectaries green; pollen soft gold. Fls 150-200 mm wide; tepals 100 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 20 mm, mid green. Stems 1.9 m, light green, with 8-30 fls. June.

Syn.: 'Candlelight'.

(Published in *Rex Bulb Cat.*, 1982/83.)

#### 'Oregon Giant' IX(b-c/d)

See *speciosum* var. *rubrum* 'Oregon Giant'.

#### 'Oregon Glory' V(-/a)

See *longiflorum* 'Oregon Glory'.

#### 'Oregon Hybrid' IX(-/-)

See *candidum* 'Oregon Hybrid'.

#### Oregon Trail Trumpets Group VI(-/a)

Parentage: derived in part from pink-flowered strains raised in Oregon

R: N. Copsy

Fls white, tepals with margins and midveins shell-pink or rose-pink, to deep rose-purple and damson.

(Published in *ILR* (1982) as Oregon Trail Trumpets grex.)

#### 'Orehova Brīnumš' I(b/b)

Parentage: selection from Vasaras Priekšs Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls red, centre reddish orange, with dark spots. Fls 140-150 mm wide, scentless; tepal-margins slightly ruffled, tips slightly reflexed. Stems 1.5-1.8 m, with 25-30 fls. June to July.

Syn.: 'Orekhov's Fascination'.

(Published in *LYB* 33: 78 (1970) and included in *ILR* (1982) as 'Orehova Brīnumš' which is a misspelling.)

#### 'Orekhova Brīnumš' I(b/b)

Misspelling of 'Orekova Brīnumš'.

#### 'Orekhov's Fascination' I(b/b)

Syn. of 'Orehova Brīnumš'.

#### 'Oresa' VIII(-/-)

Parentage: 'Damson' × *dauidii*

R: Saatzucht Zierpflanzen Erfurt (1983), G: Saatzucht Zierpflanzen Erfurt (1986), N: Saatzucht Zierpflanzen Erfurt, REG: Institut für Gemüse- und Zierpflanzenbau Grossbeeren Erfurt (1994)

Inside light orange-yellow (25D) suffused with vivid yellowish orange (30C), throat vivid yellowish orange (30C); outside light orange-yellow (25D), with greyish red (184A) midribs on outer tepals; nectaries moderate reddish brown (166B); pollen dark orange-brown. Fls 140 mm wide; tepals 70-75 × 22-32 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-120 × 10-11 mm, dark green. Stems 1.1 m, almost black, with c.20 fls. Early to mid July.

#### 'Orestes' I(b/d)

Parentage: 'Cardinal' (Div. I) × (*lancifolium* var.

*flaviflorum* × 'Enchantment')

R: C. North, N: C. North, I: C. North (1976), REG: C. North (1976)

Fls vivid reddish orange (30B). Stems with 12-20 fls and many bulbils. July to Aug.

(Published in *Lilies and other Liliaceae*, 1976: 92.)

#### 'Orfejs' I(b/c)

Parentage: 'Rozovaia Dymka' × 'Virineia'

R: A. Balode (1988), G: A. Balode (1991), N: A. Balode (2000), REG: A. Balode (2000)

Inside moderate purplish pink (66D), centre of fl. deep purplish red (59B), with a light yellow (10C) blotch; outside red-purple and greenish; spots many, large, dark red (187B) on two-thirds of each tepal; nectaries dark greyed purple; pollen brown-orange. Fls 90 mm wide; tepals 60 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 10 mm. Stems 1 m, green, with c.7 fls. Mid July.

#### 'Organdy' VIII(-/-)

Parentage: 'Damson' × *dauidii*

R: Saatzucht Zierpflanzen Erfurt (1983), G: Saatzucht Zierpflanzen Erfurt (1986), N: Saatzucht Zierpflanzen Erfurt, REG: Institut für Gemüse- und Zierpflanzenbau Grossbeeren Erfurt (1994)

Inside pale yellowish pink (27C), tepal-tips and throat strong reddish orange (31B); outside pale yellowish pink (27C); nectaries moderate olive-brown (199A); pollen dark orange-brown. Fls 140 mm wide; tepals 70-72 × 20-30 mm, tips slightly reflexed. Lvs scattered, 70-120 × 5-7 mm, mid green. Stems 0.95 m, dark green, with c.15 fls. Late June to early July.

#### 'Oriol' I(a/-)

Parentage unknown

R: A. Rech (pre 1985), N: A. Rech

Fls orange. Stems 0.9 m. Mid July.

(Published in German Lily Group sales list, 1985.)

#### 'Orient' IX(b/c)

See *L. × parkmanii* Oriental Group.

#### 'Oriental Charm' VIII(-/c)

Parentage: *speciosum* var. *rubrum* × *nepalense*

R: L. Woodriff (1962), G: L. Woodriff (1965), N: L. Woodriff (1967), I: L. Woodriff (1967), REG: L. Woodriff (1984)

Inside rosy pink overlaying a white ground; outside white; spots pink; nectaries green; anthers light brown, lacking pollen. Fls 125 mm wide, scented as in *nepalense*; tepals 90 × 25 mm, tips strongly recurved. Lvs scattered, 125 × 30 mm, mid green. Stems 1.5 m, green, with c.20 fls. Aug.

(Published in *Fairyland Lily Garden Cat.*, 1967.)

**ORIENTAL SUNSET I(a/-)**

Trade designation of 'Roter Cardinal'.

**'Orillia' I(a/-)**

Parentage: complex hybrid

R: P.M. Byam (c. 1960), N: RBG, Canada (1968), I: RBG, Canada (1968)

Fls light yellow (10C), appearing almost white, tepal-tips light pink (39D), throat pale greenish yellow (10D); finely spotted wine. Stems 1.1 m.

(Published in *ILR* (1969).)

**'Orinoco' I(a/-)**

Parentage: seedling RS 516 × seedling RS 498

R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside moderate purplish red/deep pink (185C/D), throat strong purplish red (60B); outside moderate purplish red (185C), tepal-edges and outer tepals strong purplish red (60C); spots absent; nectaries yellowish white (158D); pollen strong reddish orange (169A). Fls 150 mm wide; tepal-margins smooth, tips slightly recurved. Stems 1.2 m.

**'Oriole' I(c/d)**

Parentage:  *davidii*  × unknown

R: I. Preston (c. 1935), N: I. Preston  
AM 1937

Fls pale apricot-orange, with reddish flush outside; spots small, dark purple, on basal half of each tepal. Lvs dark green, narrow. Stems 1 m, deep green. July.

Syn.:  *davidii*  'Oriole'.

(Published in *LYB* 5: 108 (1936).)

**'Orion' I(b/-)**

Parentage: Panamint Group × 'Redstart'

R: K. Braun (1980), N: K. Braun, REG: K. Braun (1984)

Fls the colour of milk and coffee, throat greenish cream; spots large, purple on two-thirds of each tepal; nectaries white; pollen purple. Fls 120 mm wide; tepal-tips strongly recurved. Lvs 86 × 33 mm, dark green. Stems 0.8-1 m, with bulbils. Early July.

**'Oristano' I(a/b)**

Parentage: seedling G 930 × 'Sans Pareil'

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1988), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)

Inside vivid yellow (14A), tepal-tips strong reddish orange (31A), basal part of midveins vivid red (45A); outside similarly coloured; spots few, dark purple; some papillae present; pollen dark brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems 1.3 m, brown speckled with green. Early.

**'Orlando' I(a-b/b)**

Parentage: seedling OR 87-4 × seedling G 90-10

R: Vletter & Den Haan, G: Vletter & Den Haan, I: Vletter & Den Haan, I: Vletter & Den Haan (1995), REG: Vletter & Den Haan (1997)

Inside vivid orange-yellow (23A), tepal-edges strong orange (25A), paler at tip and base; outside vivid orange-yellow (23A), with light orange-yellow (22D) along midribs; spots absent; some papillae present; nectaries orange; pollen reddish brown; stigma purple. Tepal-margins ruffled, tips strongly recurved. Lvs scattered, narrow, mid green. Stems 1 m, green with darker markings, and with 4-6 fls (from 14-16 cm bulbs). Midseason.

**'Orleans' VI(-/a)**

Parentage unknown

R: J. Bakker (1978), G: J. Bakker (1981), N: J. Bakker (1985), I: Licomba (1988), REG: Licomba (1988)

Inside strong purplish pink (63C), strong purplish red (63A) in the centre of each tepal; outside greenish to yellowish white (155C/D) tinged with strong purplish red (63B); spots dark red to deep purplish red on the whole surface of each tepal; pollen strong orange (168B). Fls 220 mm wide; tepals 130 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 35 mm, mid green. Stems 1.25 m, pale green, with 8-9 fls.

**'Orlik' VI(c/d)**

Parentage: 'Lady Alice' × ( *henryi*  × Palmer seedling 56227)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1996), REG: B. Mičulka (1996)

Inside reddish orange, tepal-edges fading to white; outside with paler centres to tepals and greenish midribs; spots absent; papillae numerous; nectaries dark olive-green; pollen chocolate-brown; stigma pale green. Fls 50 × 120 mm; tepals 100 × 25 mm, margins wavy, tips strongly recurved; pedicels 100 mm long, slightly spotted. Lvs scattered, 120 × 20 mm, dark green. Stems 1.2 m, dotted red-brown, black at base. Early July.

**'Orlito' I(a/-)**

Parentage: 'Connecticut King' × 'Pirate'

R: J.M. van Tuyl (1980), G: J.M. van Tuyl (1982), N: J.M. van Tuyl (1985), I: IVT (1985), REG: C.H. Adrichem (1989)

Inside vivid yellowish orange (30C), throat light orange (28C); outside vivid reddish orange/vivid yellowish orange (30B/C); spots few small, dark red (187A), on inner tepals above the throat; pollen dark reddish orange (175B). Fls 165 mm wide; tepals 85 × 28 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 0.8 m, green with darker markings, and with c. 10 fls. June.

**'Orly' VIII(a/-)**

Parentage: rose-pink-flowered seedling × 'Montreux'

R: W. Paauw & Zn B.V., G: W. Paauw & Zn B.V., N: Fa Veldboer (1994), I: Fa Veldboer (1994), REG: Fa Veldboer (1995)

Inside moderate purplish pink (54D), with a scattered, strong red (53D) suffusion which is stronger in the throat; outside pale purplish pink (62D) with a pale suffusion of strong purplish red (59D), moderate purplish red (59C) at the base with a little strong yellow-green (144D); very

few, dark red (187B) spots and a few papillae near the hairy nectaries which is coloured as the tepals; pollen strong brown (172A); stigma brilliant orange (25C). Fls 160 mm wide; tepals 90 × 32 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 12 mm, pale green. Stems 0.75 m, mid green, with c.10 fls.  
(Probably a *longiflorum*/Asiatic (LA) hybrid.)

#### ‘Ormegger’ I(b/d)

Parentage unknown

R: B. Mičulka (1983), N: B. Mičulka, REG: B. Mičulka (1987)

Inside red-orange, fading at tepal-tips; outside with reddish midribs; spots numerous, large, violet-brown, on three-fifths of each tepal; pollen orange. Fls 75 mm wide; tepals 80 × 27 mm; pedicels 115 mm long, spotted. Lvs 120 × 10 mm, dull green. Stems 1.6 m, thick, dark violet-brown, with numerous bulbils. Late July.

#### ‘Ornatum’ I(a/b)

See *L. × maculatum* ‘Ornatum’.

#### ‘Oro Gold’ I(b/b-c)

Parentage: ‘Carol Jean’ × ‘White Picture’

R: C.W. Caldwell (1984), G: C.W. Caldwell (1987), N: C.W. Caldwell (1996), I: W.D. Evans (1996), REG: C.W. Caldwell (1996)

Inside light yellow (17D), throat vivid yellow (17B); outside pale orange-yellow (16D); spots vivid red (45A), scattered in the throat; nectaries white; pollen brown. Fls 120 mm wide; tepals 70 × 42 mm, margins slightly ruffled, tips recurved. Lvs scattered, 70 × 7 mm, mid green. Stems 1 m, mid green, with c.15 fls. Late June.

#### ‘Orono’ I(a/b)

Parentage: sibling of ‘Pastel Princess’ × ‘Halloween’  
R: W.D. Evans (1981), G: W.D. Evans (1985), N: W.D. Evans (1990), I: W.D. Evans (1991), REG: W.D. Evans (1991)

Inside vivid yellow (13A); outside moderate orange (167C); spots numerous, medium sized, dark red (183A), on the basal half of each tepal; nectaries green; pollen orange-brown. Fls 125 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 0.6 m, mid green, with up to 10 fls. Midseason.

#### ‘Oro Raspberry’ I(a/b-c)

Parentage: ‘Connecticut Queen’ × ‘Connecticut Glow’  
R: C.W. Caldwell (1981), G: C.W. Caldwell, N: C.W. Caldwell (1996), I: W.D. Evans (1996), REG: C.W. Caldwell (1996)

Fls vivid reddish orange (34A) throughout; unspotted; pollen brown. Fls 150 mm wide; tepals 75 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 56 × 12 mm, light green. Stems 0.65 m, dark brown, with c.12 fls. Midseason.

#### ‘Oro Torch’ I(a/-)

Parentage: ‘Cinnabar’ (Div. I) × ‘Byam’s Ruby’

R: C.W. Caldwell (1980), G: C.W. Caldwell (1983),

N: C.W. Caldwell (1996), I: W.D. Evans (1996), REG: C.W. Caldwell (1996)

Inside vivid red (46B), throat strong reddish orange (42B); spots deep red (185A) on all but the tepal-tips; nectaries pale; pollen red-brown. Fls 140 mm wide; tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 10 mm, mid green. Stems 0.4 m, green, heavily mottled deep red (185A), with c.7 fls. June.

#### ‘Orpheus’ VII(-/-)

Parentage unknown

R: H.J. Bakker (1980), REG: Licomba (1988)

Inside moderate purplish pink (66D), tepals with broad, strong red (53C) flamed midveins and white edges, throat with a green star-shaped centre; outside the tepals flamed deep to moderate purplish pink (66C/D), with a red base and white edges; spots dark red, on the whole of each tepal; pollen reddish brown. Fls 190 mm wide; tepals 105 × 35 mm, strongly recurved. Lvs scattered, 100 × 40 mm. Stems 0.5 m, dark, with c.4 fls.

#### ‘Orpiment’ I(a/c)

Parentage unknown

R: W. Windus (c. 1974), G: W. Windus (1975), N: W. Windus (1983), REG: W. Windus (1983)

Fls strong orange (25A) throughout, with a central circle of small spots and occasional scattered spots; pollen strong orange (169B). Fls 125-150 mm wide; tepals broad and overlapping, margins smooth, tips not or slightly recurved. Lvs scattered, mid green. Stems 1-1.2 m, mid green, with 9-12 fls. Late June.

#### ‘Ortija’ I(a/b/b)

Parentage: unnamed seedling × unnamed seedling

R: D.-V. Škimele (1993), G: D.-V. Škimele (1996), N: D.-V. Škimele (1999), REG: D.-V. Škimele (2004)

Inside creamy yellow, each tepal yellow and green at base, paler at tip, throat cream; outside cream, midribs brownish green; spots and stripes dark brown, few, medium sized, on half of each tepal; nectaries greenish white; pollen dark brown; stigma light brown. Fls 140 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 10 mm. Stems 1.5 m, dark brown, with c.12 fls. Early July.

(Published in *Lilium Balticum Lily Register*, 2001.)

#### ‘Osaka’ VII(-/-)

Parentage: an Oriental hybrid × *auratum*

R: J. Bakker (1976), G: J. Bakker (1978), N: J. Bakker (1984), I: H.J. Bakker (1984), REG: H.J. Bakker (1985)

Inside white, midveins faint, yellow-white; outside white, midribs ivory; spots few, tiny; nectaries purple; pollen strong orange (170A). Fls 220 mm wide; tepals 120 × 50 mm, slightly recurved. Lvs scattered, 170 × 35 mm, mid green. Stems 1.2 m, mid green, with c.5-7 fls.

#### ‘Oscar’ I(a/-)

Parentage: red-orange-flowered seedling × ‘Connecticut King’

R: J. Wadkamper, G: J. Wadkamper, N: Ont Wikkeling Lelie Cultuur B.V. (1981), I: Ont Wikkeling Lelie

Cultuur B.V., REG: Ont Wikkeling Lelie Cultuur B.V. (1983)

Inside fire-red, flushed with brown-red; outside vivid/strong reddish orange (34B/C); spots fine, dark brown, in the throat; nectaries violet-red; pollen reddish brown. Stems dark.

**OSCAR I(a/-)**

Trade designation of 'Sierra'.

**'Osenniaia Pesnia' I(a-b/b)**

Parentage: derived from *henryi*, 'Dora Pinnow' & mixed pollen from Asiatic hybrids.

R: M.F. Kireeva (1974), N: M.F. Kireeva

Fls yellow, tepal-tips paler at tips; spots dark brown, numerous, on half of each tepal; filaments and style pale yellow; anthers orange-brown. Fls 150 mm wide; tepal-tips recurved. Stems 1.1-1.2 m, with 7-12 fls in a pyramidal infl. with secondary fls. July. (Published in M.F. Kireeva, *Lilii*, 59 (1984). Included in *ILR Third Supplement* as 'Osennjaja Pesnja' which is an unaccepted spelling.)

**'Osennjaja Pesnja' I(a/b)**

Unaccepted spelling of 'Osenniaia Pesnia'.

**'Osiris' VII(a-b/b)**

Parentage unknown

R: J.A. Mak, N: J.A. Mak, REG: Fa J. Dignum & Zn (1994)

Inside yellowish white (155B), very slightly suffused with strong reddish purple (70B), stronger coloured towards tepal-tips, midveins yellowish white (155B), fading to top; outside yellowish white (155B), suffused with moderate purplish pink (70D) beside the midribs, fading to tepal-edges, tinged with strong yellow-green (144A) at base, midribs pale yellow (8D), tipped strong yellow-green (143C); spots deep to moderate purplish pink (70C/D) and dark red (187C) on two thirds of each tepal; papillae yellowish white (155B) in the throat; pollen strong brown (172A); stigma moderate yellow (160A). Fls 240 mm wide; tepals 140 × 50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 170 × 55 mm, mid green. Stems 0.8 m, mostly dark with a little pale green, and with c.2 fls.

**'Osnat' V(-/a)**

See *longiflorum* 'Osnat'.

**'Osorno' VII(a/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside yellowish white (155D); outside yellowish white (155D), with a pale yellow (8D) stripe along midribs; spots and papillae present; nectaries light yellow-green (145B); pollen strong orange (168A/B); stigma deep reddish purple (77A). Fls 210 mm wide, slightly scented; tepals 145 × 50 mm, margins slightly ruffled, tips

recurved. Lvs scattered, 240 × 65 mm. Stems 1.15 m, light green, with c.3 fls.

**'Ostia' VIII(a-b/-)**

Parentage: seedling BG 95-20 × seedling G 92-10

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid yellow (9A); outside vivid yellow (9A/B); spots and papillae absent; nectaries green; pollen dark brown; stigma yellow. Tepal-margins slightly ruffled, tips slightly recurved. Stems 1.2 m. Early. (*A longiflorum*/Asiatic (LA) hybrid.)

**'Ostoya' I(a/-)**

Parentage: unnamed seedling × 'Connecticut Red'

R: J. Białobłocka (1980), G: J. Białobłocka (1982), N: J. Białobłocka (1984), I: W. Peryt (1990), REG: J. Białobłocka (1990)

Inside vivid reddish orange (34A), throat vivid reddish orange (33B); outside vivid reddish orange (34B); spots few, dark, at base of tepals; nectaries frosted; pollen brown. Fls 160 mm wide; tepals 75 × 35 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 70 × 8 mm, dark green. Stems 1.1 m, dark green, with c.12 fls. Mid June.

(Published in *Dziatkowiec* ("Little Gardener") no.1, 1988.

The seed parent was a seedling from the Botanic Garden, Charkhov, former USSR.)

**'Otava' I(c/d)**

Parentage: 'Pomeranč' × 'Connecticut King'

R: Šlechtitelaká Stanice Heřmanův Městec, N:

Šlechtitelaká Stanice Heřmanův Městec, REG: Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside deep orange; spots conspicuous, on half of each tepal. Fls 85-95 mm wide. Lvs scattered, 60-80 × 10-15 mm, dark green. Stems 0.9-1.1 m, mottled red-brown, darker at base, with 21-28 fls in an open infl. Early July. (Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1991.)

**'Othello' I(a/b)**

See *L. × maculatum* 'Othello'.

**'Otrada' I(-/-)**

Parentage unknown

Fls pearly pink; spots fine, dark purple. Fls 150-160 mm wide; tepal-margins smooth, tips recurved. Lvs dark green. Stems 0.8-0.9 m, with 10-12 fls. July.

(Published in M.F. Kireeva, *Lilii*, 63 (2000).)

**Ottawa Group I(c/-)**

Syn. of *davidii* Davimottiae Group.

**'Ottawa Gem' VI?**

Parentage unknown

R: Central Experimental Farm, N: E. Robinson, I: E.

Robinson (1978)

Fls creamy white, throat orange.

**‘Ottilia’ VIII(b/-)**

Parentage: ‘Damson’ ×  *davidii*

R: Saatzucht Zierpflanzen Erfurt (c. 1983), N: Saatzucht Zierpflanzen Erfurt, REG: ICRA (1997)

Inside apricot, with an orange centre which is finely spotted; outside with brown midribs; pollen brown. Fls wide-open, slightly scented. Stems 1 m. Early July. (An Asiatic/Aurelian derivative. Published in European Lily Society sales list, 1996.)

**‘Our Medusa’ VII(a-b/b)**

Syn. of ‘Medusa’.

**‘Overture’ I(c/-)**

Parentage: (*cernuum* ×  *lancifolium*) F2

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls cream and salmon. Stems 1.2-1.5 m. July.

**‘Oxford’ VII(-/d)**

Parentage: ‘Star Gazer’ × seedling L 451

R: Vletter & Den Haan (1981), G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Light to moderate purplish pink (62C/70D), tepal-edges yellowish white (155B) at top, midveins strong red (47B) in the basal half, throat light yellow-green (145B); outside light purplish pink (65B), midribs light greenish yellow (5D); spots deep red (185A), on basal half of each tepal; pollen strong orange (169B). Fls 210 mm wide; tepals 110 × 60 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 43 mm, mid green. Stems 1 m, green, with c.7 fls. May to June.

***oxypetalum* (Royle) Baker IX(b-c/b)**

Fls yellow, with or without purplish crimson spots towards base; nectaries on inner tepals fringed; pollen pale orange. Tepals 35-55 mm long. Lvs scattered, often whorled at top of stem, up to 70 × 12 mm. Stems 0.2-0.5 m, sometimes more, bright green, with solitary fls. NW Himalaya.

(First described as a *Fritillaria* in 1840 and later (1925) as a *Nomocharis*.)

***oxypetalum* var. *insigne* Sealy IX(b-c/b)**

Fls purple.

**‘Ozelot’ II(-/-)**

Parentage unknown

R: H. Fuchs (pre 1992), N: H. Fuchs

Fls light violet, with many dark violet spots. Stems 1.5 m, with numerous fls. Late June.

(Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to *auratum* ‘Ocelot’. Published in German Lily Group sales list, 1992.)

**Pacific Group VII(b/c)**

Syn. of Devon Dawn Group.

**Pacific Group VII(b/b)**

See *L. × parkmanii* Pacific Group.

**‘Pacifica’ V(b/a)**

See *longiflorum* ‘Pacifica’.

**‘Pacific Pearl’ VII(a/b)**

Parentage: ‘Abruzzo’ × ‘Barbaresco’

R: De Jong Lelies Holland B.V. (1995), G: De Jong Lelies Holland B.V. (1997), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2003)

Inside vivid purplish red (57C), throat yellowish white (155D), light greenish yellow (4C) above nectaries and along midveins; outside of outer tepals vivid purplish red (57C), strong yellow-green (144C) at base, midribs yellowish white (155D) for half way, outside of inner tepals vivid purplish red (57C), midribs vivid purplish red (57B), spots and papillae moderate purplish red (58A); nectaries strong yellow-green (144C); pollen moderate reddish orange (171A); stigma pale yellow-green (157C). Fls 240 mm wide, slightly fragrant; tepals 155 × 69 mm, margins slightly ruffled, tips recurved. Lvs 180 × 33 mm. Stems 1.1 m, green with darker markings, with c.4 fls.

**‘Pacific Prize’ VIII(b/b-d)**

Parentage: (*henryi* × unnamed trumpet lily) × ‘Canterbury Belle’

R: A.E. Alexander (1997), G: A.E. Alexander, N: A.E. Alexander, I: A.E. Alexander, REG: A.E. Alexander (2002)

Inside white, throat strong apricot; outside white flushed with pink and green; unmarked; nectaries green; pollen orange; stigma creamy beige. Fls 150 mm wide; tepals 100 × 40 mm, margins smooth, tips quite strongly recurved. Lvs scattered, 150 × 20 mm. Stems 1.3 m, green flecked with dark purple, and with 6-9 fls in a racemose infl. Late Dec. to mid Jan. (New Zealand). (An Orienpet (OT) lily. Nomenclatural standard: colour print provided by registrant (WSY 0032052). The raiser says it is one of the Ryrirube Group.)

**‘Pacific Queen’ VI(-/a)**

Parentage: a trumpet hybrid

R: L.B. Tuffery (c. 1966), N: L.B. Tuffery

Fls intense yellow. Lvs dark green. Stems tall. Late flowering.

**‘Pac Sun’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Cebeco Lilies, Inc. (1984), G: Cebeco Lilies, Inc. (1985), N: Bloembollenbureau Cebeco (1998), I: Bloembollenbureau Cebeco (1998), REG: Bloembollenbureau Cebeco (2001)

Inside vivid yellow (9A), throat light greenish yellow (3C); outside brilliant yellow/pale greenish yellow (9C/D), shading to vivid yellow (9A/B) towards edges and tip of each tepal, midribs strong yellow-green (144C); spots and papillae absent; nectaries light greenish yellow (3D); pollen strong orange (24A); stigma light greenish yellow (5C) with a little moderate reddish brown (166B). Fls 190 mm wide; tepals 100-105 × 35-50 mm, margins smooth, tips strongly recurved. Lvs scattered, 135 × 12.5 mm. Stems 0.6 m, light green, with c.2 fls.

Trade designation: SUN PIXIE.

**'Padua' I(c/-)**

Parentage: 'Amber Gold' × 'Sonnentiger'

R: V. Strasser (1975), G: V. Strasser (1978), N: V. Strasser (1979), I: V. Strasser (1985), REG: V. Strasser (1990)  
Fls vivid yellow (14A) throughout; spots purple, on three-quarters of each tepal; nectaries green; pollen brown.  
Tepals 75 × 33 mm, margins smooth, tips strongly recurved. Lvs scattered, 140 × 13 mm, mid green. Stems 1.4 m, nearly black, with 20-25 fls. Mid July.

**'Pageant' I(a/-)**

Parentage: *L. × hollandicum* × *lancifolium*

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls light yellow.

(Published in *ILR* (1969). Mid-century type.)

**'Pagoda' I(a/-)**

Parentage: selection from Mid-century Group

S: J. de Graaff (1941), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1949)

Fls vivid yellowish orange (30C); spots brown. Tepal-tips slightly recurved. Stems 1 m. July.

**Pagoda Bells Group VI(c/a)**

Parentage: Aurelian Group

R: C. Yerex (c. 1959), N: C. Yerex

Fls white, with tones of pink and apricot. Tepals semi-recurved. Stems 1.5-1.9 m. July.

(Published in *Walter Marx Gardens Cat.*, 1962. Included in *ILR* (1982) as Pagoda Bells grex.)

**'Paija' VII(a/c)**

Parentage unknown

R: K. Zeltans (c. 1965), N: K. Zeltans, REG: ICRA (1991)

Fls pale pink, centre darker, tepal-margins white; spots lilac; anthers cinnamon. Fls up to 200 mm wide. Stems 1.2 m. Mid Aug.

(Published in *Cvetovodstvo* 3: 34 (1989). Included in *ILR Fourth Supplement* as 'Paya' which is a misspelling.)

Parentage unknown

R: Fa Jaap Boon (1975), G: Fa Jaap Boon (1977), N: Fa Jaap Boon (1985), I: Fa Jaap Boon (1985), REG: Fa Jaap Boon (1986)

Inside strong pink (48C), tepal-tips strong red (47B), centre strong red (47B), throat with oxblood-red spots and brilliant yellow (10A) blotches; outside moderate red (180B) to deep pink (180D) with a grey-red flush; nectaries violet-red; pollen moderate orange (168C). Fls 125 mm wide; tepals 85 × 35 mm. Lvs scattered, 110 × 10 mm, mid green. Stems 0.5 m, pale green, with c.10 fls.

(Published in *Bloembollencultuur*, 1984.)

**'Palace Guard' VI(-/a)**

Parentage: (miniature Aurelian × Pink Perfection Group) seedling, ex Kaul × white "starburst" Aurelian seedling, ex Hoepner

R: S.R. Kaul (1990), G: S.R. Kaul (1994), N: R. Kaul (1997), REG: S.R. Kaul (1997)

Inside white, with a very slight pink tinge, each tepal tinged with yellow to greenish yellow at the base; outside of inner tepals rosy lavender, midribs deeper rosy lavender, blending out to white within 7 mm of margin, outside of outer tepals deep rosy lavender throughout; spots absent; nectaries greenish yellow; pollen bright yellow; style deep lavender shading to pale green at base; stigma black. Fls 130 mm wide; tepals 120 × 30-50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 220 × 15 mm, dark green. Stems 2 m, dark green to deep brown at base, with c.15 fls. Midseason to late.

**'Palanga' I(b/-)**

Parentage: selection from Willtigrinum Group

S: V.P. Orehovs (post 1959), N: V.P. Orehovs

Fls orange-red.

(Published in *LYB* 33: 81 (1970) and included in *ILR* (1982) as 'Parangs' which is a misspelling.)

**'Pálava' I(a/b)**

Parentage: 'Red Tiger' × mixed pollen of 'Connecticut Red' & 'Connecticut Yankee'

R: K. Braun (1978), N: K. Braun, REG: K. Braun (1985)

Fls orange throughout; spots sparse, medium sized, red-brown, on a third of each tepal; nectaries pale orange; pollen brown. Fls 140 mm wide; tepals 91 × 28 mm, recurved. Lvs 126 × 19 mm, glossy dark green. Stems 1.2 m, green-brown. Mid July.

**'Pale Emperor' IX(b/c)**

See *auratum* 'Pale Emperor'.

**'Pale Face' I(b/b)**

Parentage: unnamed seedling × unnamed seedling

R: R.H. Bazett (1984), G: R.H. Bazett (1986), N: R.H. Bazett (1998), I: Ambrosia Gardens (1999), REG: R.H. Bazett (1998)

Inside white, throat yellowish white (158C); outside yellowish white (158D), midribs yellow-green; spots numerous, small, evenly scattered, moderate violet (86A), on basal two-thirds of each tepal; nectaries mid green;

pollen deep orange-yellow (163A); stigma colourless. Fls 135 mm wide; tepals 78 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 1.2 m, mid green, with c.20 fls in a racemose infl. (c.40 cm long). June to July.

#### 'Pale Moon' VI(c/-)

Parentage: Aurelian Group

R: L.B. Tuffery (c. 1967), N: L.B. Tuffery

Fls pale yellow, large. Lvs very dark. Stems up to 2 m.

#### 'Palermo' I(c/-)

Parentage: *lancifolium* 'Splendens' × 'Tetra Mountaineer'

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1997), I: V. Strasser, REG: V. Strasser (1997)

Inside blood-red, throat dark red throat; outside red; spots black, on half of each tepal; nectaries frosted; pollen dark brown. Tepals 90 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 12 mm, dark green. Stems 1.1 m, rather dark green, with c.16 fls, and bulbils. Late July to mid Aug. Tetraploid.  
Syn.: 'Tigrimount Number 3'.

#### 'Palermo' VIII(a/b)

Parentage: seedling N 72 × Geiser seedling 91-1

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V. (pre 1999), N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V.

Inside and outside strong red (53D) on a paler ground, each tepal tipped strong yellow-green (144C) outside; spots dark red (187A), few, on a third of each tepal; papillae absent; nectaries strong yellow-green (144A) with a little strong pink (54C); pollen moderate reddish orange (171A); stigma brilliant yellow-green (154C). Buds hairy. Fls 180 mm wide; tepals 90 × 35-45 mm, margins smooth or slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 25 mm, dark green, with hairy edges. Stems 1.5 m, green, with c.5 fls. Early to midseason. (A *longiflorum*/Asiatic (LA) hybrid. Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. However this lily was granted Dutch PBR in 2000 and so the epithet must be accepted (under ICNCP, 2004: Art. 24.4), but not registered. Production ceased in 2000.)

#### 'Palestinka' I(a/-)

Parentage: unnamed seedling × mixed Asiatic pollen

R: V.A. Volkov (c. 1982), N: V.A. Volkov

Fls orange-pink, shaded pink; spots large, purple. Stems 0.8-1.5 m. Late.

#### 'Paleta' I(a-b/b-c)

Parentage: 'Alkestios' × unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1998),

REG: B. Mičulka (1998)

Inside bronze-red on an apricot ground, tepal-edges apricot, throat deeper carmine with a paler base; outside carmine, midribs brownish; spots fairly numerous, large, black, on a third of each tepal; nectaries white-granulated; pollen ochre-brown; stigma carmine-pink. Fls 120 mm wide; tepals 85 × 38 mm, slightly recurved and twisted;

pedicels 65 mm long, slightly dotted. Lvs scattered, 95 × 13 mm, mid green, slightly glossy. Stems 0.85 m, thick, rigid, slightly dotted brown, with a medium length infl. Early July.

#### 'Palette' I(a)

Parentage: Asiatic seedling × Asiatic seedling

R: Sens V.o.f. (1978), G: Sens V.o.f. (1980), N: Mabo

Lelie B.V. (1982), I: Mabo Lelie B.V. (1982), REG:

Mabo Lelie B.V. (1983)

Fls strong pink/moderate purplish pink (54C/D); lightly spotted in throat; pollen reddish brown. Tepals 70-80 × 40-50 mm, margins smooth, tips not recurved. Lvs scattered, 80-100 × 8 mm, dark green. Stems 0.75-1 m, green, with 8-10 fls. June to July.

#### 'Paliano' VII(a-b/-)

Parentage unknown

R: Vletter & Den Haan (pre 1994), N: Vletter & Den

Haan, REG: Vletter & Den Haan (1997)

Inside deep purplish pink (between 64D & 70C); outside deep purplish pink (70C); big spots and purplish red papillae present; nectaries green to yellow; pollen orange-brown; stigma green. Tepal-margins ruffled, tips slightly recurved. Stems green, with dark stripes and spots. (Stock destroyed by raiser in 1996.)

#### 'Palisade Peach' I(a/-)

Parentage: (*L. × hollandicum* × 'Croesus') × (('Edith Cecilia' × unknown) × 'Sunrise')

R: J. Wadkamper (1976), G: J. Wadkamper (1978),

N: J. Wadkamper (1991), I: Borbeleta Gardens (1991),

REG: J. Wadkamper (1993)

Inside pale yellow (18C) on the central part of each tepal, tips and base light yellow (18A); outside greenish buff; spots few, fine, in centre; nectaries white; pollen mid brown. Tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 25 mm, mid green. Stems 0.8 m, green, with 8-10 fls. Midseason. (Published in *Borbeleta Gardens Cat.*, 1991.)

#### 'Palitra' I(-/-)

Parentage: 'Vostok-2' × Golden Chalice Group

R: N.G. Korshikova (1974), I: Vsesoiuznyi Naucno-Issle

Dovatel'skii, Institut Sadovodstva (1982), REG: (1989)

Fls yellow, with spots; anthers cinnamon. Fls 140-160

mm wide. Stems 0.7-1 m. Late June to July.

(Published in *Cvetovodstvo*, 1988 (3): 13-14.)

#### 'Pallas' I(a/-)

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N:

Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG:

Hoffgaarde B.V. (1994)

Inside pale yellow-green (155A) in the basal part, shading into stripes of light purplish pink (2C) in the apical part, midveins pale purplish pink (62D) at levels of nectaries, shading to strong purplish pink (62A) at the top, throat also strong purplish pink (62A); outside suffused light to pale purplish pink (62C/D) on a yellowish white (155B) ground, midribs tinged with strong yellow-green (144C)

towards the top and tipped dark red (59A); spots dark red (187A), on a third of each tepal; papillae in the throat, coloured as tepals; nectaries moderate reddish brown (166B); pollen dark reddish orange (175C). Fls 190 mm wide; tepals 95 × 45 mm. Lvs scattered, 100 × 15 mm. Stems 0.6 m, pale green with darker markings, and with c.5 fls.

**‘Palma’ I(a/-)**

Parentage: ‘Umbria’ × seedling W 91022  
R: Vletter & Den Haan (1993), G: Vletter & Den Haan, N: Vletter & Den Haan (1997), I: Vletter & Den Haan (1997), REG: Vletter & Den Haan (1997)  
Inside yellowish white (155D), throat light yellow-green (145B/C); outside yellowish white (155D), midribs brilliant yellow-green (150C); spots and papillae absent; nectaries strong yellow-green (144A), white-hairy; pollen brownish orange (164A); stigma brilliant yellow-green (154C). Fls 230 mm wide; tepals 115-125 × 40-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 1.2 m, green with darker markings, and with 6-7 fls.

**‘Pal Mel’ I(c/d)**

Parentage: (‘Nutmegger’ × unknown) × unknown  
R: H.E. Hoepner (1966), G: H.E. Hoepner (1972), N: H.E. Hoepner (1990), I: H.E. Hoepner (1991), REG: H.E. Hoepner (1991)  
Fls creamy white; with a light green to creamy white centre and a few, very small vermilion-red spots towards the base of each tepal; outside pale creamy white, midribs pink; nectaries pale yellow-green; pollen dark bronze-brown. Tepals 120 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 160 × 15 mm, dark green. Stems 1.8 m, hairy, strong mid green, with up to 30 fls (including secondary and tertiary buds). Mid to late season.

**‘Palmerstone’ VI(-/c-d)**

Parentage: seedling 49352 × ‘Moonbeam’  
R: E.F. Palmer, G: E.F. Palmer (c. 1960), N: B. Mičulka (1985), I: B. Mičulka (1985), REG: B. Mičulka (1985)  
Inside orange-apricot with fading tepal-tips; outside paler, midribs yellowish; spots like tiny dashes, orange; nectaries green; pollen brown-orange; stigma green. Fls 150 mm wide; tepals 105 × 35 mm, tips slightly recurved. Lvs 140 × 27 mm, dull mid green. Stems 0.9 m, with brown-violet dots. Late July.

**‘Paloma’ I(a/-)**

Parentage: ‘Mont Blanc’ × unnamed seedling  
R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1982), N: J. van den Bos & Zn B.V. (1987), I: J. van den Bos & Zn B.V. (1988), REG: J. van den Bos & Zn B.V. (1989)  
Inside yellowish white (155B) flushed with pale yellow (11D); outside similarly coloured but with dark pink (182D) on midribs at base; spots dark red (187A) on basal part of each tepal; pollen moderate orange (167A). Fls 150 mm wide; tepals 70 × 27 mm, margins ruffled, tips strongly recurved. Lvs scattered, 140 × 8 mm, mid green. Stems 1 m, green, with c.9-10 fls. May.

**‘Pal o’ Mine’ I(a/b)**

Parentage unknown  
R: B.G. Hayler (1982), G: B.G. Hayler (1983), N: B.G. Hayler, I: E.J.D. Ogdan (1987)  
Inside vivid reddish orange (30B), throat strong orange (24A); spots absent; nectaries greyed orange; pollen orange-brown. Tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 25 mm, dark green. Stems 0.75 m, green, with 10-12 fls. Dec. (Australia). (Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Palomino’.)

**‘Palomino’ I(c/-)**

Parentage: ‘Enchantment’ × ‘Fireflame’  
R: J. de Graaff (c. 1949), N: J. de Graaff  
Fls buff and ivory; spots absent. Stems 1.2-1.5 m, with bulbils. July.  
(Published in *Oregon Bulb Farms Cat.*, 1954.)

**‘Palomino Queen’ I(b-c/-)**

Parentage: ‘Grace Marshall’ × either ‘White Gold’ or ‘White Princess’  
R: R. Erskine (pre 1990), G: R. Erskine, N: R. Erskine, REG: R. Erskine (1995)  
Inside and outside pale yellow; spots numerous, small, purple; nectaries deeper yellow; pollen yellow. Fls 120 mm wide; tepals 70 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 10 mm, dark green. Stems 0.6 m, dark green, with 8-10 fls. Early.

**‘Palta Pilsita’ IX(-/d)**

See *henryi* ‘Baltā Pilsēta’.

**‘Pamela’ I(b/d)**

Parentage: *lancifolium* var. *flaviflorum* × unknown  
R: D.B. Fox (c. 1967), N: D.B. Fox  
Fls strong orange-yellow (24B) ageing to strong orange (25B), tepal-tips with a hint of green; spots on three-quarters of each tepal. Tepals recurved. Stems mainly green.

**‘Pamela’s Joy’ Div. ?**

Given as a parent of ‘Quiet Times’. No further details.

**‘Pamiat Druga’ VI(-/a)**

Parentage: *henryi* ‘Kupava’ × ‘Solntse Rossii’  
R: V.A. Volkov (1984), N: V.A. Volkov  
Fls bright yellow-orange, with pink tepal-tips. Stems 1.5 m. Aug.

**‘Pamiati Matrosova’ I(c/-)**

Parentage: Sestroretskaia Group × *amabile*  
R: I.L. Zalivski (1957), N: I.L. Zalivski  
Fls dark red. Stems 1.2 m.  
(Included in *ILR Second Supplement* as ‘Pamjati Matrosova’ which is an unaccepted spelling.)

**‘Pamiati Michurina’ I(b-c/b)**

Parentage: selection from Tsvetaevoi Group  
S: Z.N. Tsvetaeva (c. 1940)  
Fls orange-red with yellow tepal-centres, tepal-tips shaded

pinkish violet. Fls 100-110 mm wide; tepals broad, slightly recurved. Stems 1-1.3 m, with 7-13 fls. May to June. (Unaccepted spelling: 'Pamjati Michurina'; 'Pamyat Mitchurina'. Published in *Lilies and other Liliaceae*, 1975: 28. Included in *ILR* (1982) as 'Pamyat Mitchurina'.)

**'Pamiati Vadima Grot'** VI(-/c)

Parentage: selection from Aurelian seedlings  
S: B.P. Guzhavin, N: B.P. Guzhavin (1983)  
Fls ivory-white, with a yellow-orange centre. Stems up to 1.7 m.

Syn.: 'Vadim Grot's Memory'.  
(Included in *ILR Third Supplement* as 'Pamjati Vadima Grot' which is an unaccepted spelling.)

**'Pamiati Zalivskogo'** VI(-/a)

Syn. of 'Zalivska Piemiņa'.

**'Pamiat Kichunove'** I(b/b)

Syn. of 'Kičunova Piemiņa'.

**'Pamjati Matrosova'** I(c/-)

Unaccepted spelling of 'Pamiati Matrosova'.

**'Pamjati Michurina'** I(b/b)

Unaccepted spelling of 'Pamiati Michurina'.

**'Pamjati Vadima Grot'** VI(-/c)

Unaccepted spelling of 'Pamiati Vadima Grot'.

**'Pamyat Mitchurina'** I(b/-)

Unaccepted spelling of 'Pamiati Michurina'.

**'Pan'** I(c/-)

Parentage: (*lankongense* × *davidii*) × complex hybrid involving 'Enchantment', *wilsonii* & *lancifolium* var. *flaviflorum*

R: C. North (c. 1976), N: C. North, I: Lingarden Ltd, REG: C. North (1978)  
Fls whitish, scented; pollen absent. Stems medium height, with 20-30 fls. July. Sterile triploid.

Syn.: 'Pegasus'.

(Originally published ( in *Lilies and other Liliaceae*, 1977: 80) and registered as 'Pegasus' but this epithet was rejected for PBR, so it was changed to 'Pan'. Published in *Lilies and other Liliaceae*, 1978/9: 112 as 'Pan'.)

**'Panache'** I(a/b)

Parentage: ((*davidii* var. *unicolor* × 'Lillian Cummings') × 'Edith Cecilia') × sibling of seed parent  
R: W.D. Evans (1973), G: W.D. Evans (1976), N: W.D. Evans (1986), I: W.D. Evans (1986), REG: W.D. Evans (1986)

Fls deep purplish pink (54B) throughout; outside with light yellow (160B) midribs; spots numerous, deep purplish red (61A); papillae in the throat; nectaries strong pink (54C); pollen orange-red. Fls 120 mm wide; tepals 70 × 33 mm, margins smooth, tepals recurved in apical half. Lvs scattered, 60 × 20 mm, dark green. Stems 1 m, green overlaid with dark brown, with c.23 fls (plus secondaries). Midseason.

**'Panama'** IV(-/-)

Parentage: (Bellingham Group × 'Oliver Wyatt') × (Bellingham Group × 'Oliver Wyatt')  
R: F. Ewald (1974), G: G. & F. Ewald (1978), N: G. & F. Ewald (1978), I: G. & F. Ewald (1979), REG: G. & F. Ewald (1979)

Inside vivid reddish orange (33A), centre vivid yellow (15A); outside yellow; spots tiny, brown; pollen light brown. Tepal-tips slightly recurved. Lvs whorled, 90 × 20 mm, pale green. Stems 1.6 m, pale green, with c.20 fls. July.

**Panamint Group** I(c/d)

Parentage: (*lancifolium* var. *flaviflorum* × ('Harmony' × *leichtlinii* var. *maximowiczii*) × ('Lemon Queen' (Div. I) × unknown) × 'Edith Cecilia') F<sub>2</sub> cream-flowered selection.

R: J. de Graaff (c. 1964), N: J. de Graaff

Fls creamy and ivory; spots red. July.  
(Published in *ILR* (1969) as Panamint grex.)

**'Pandion'** VI(-/a)

Parentage unknown

R: Gebr. N. & B. Laan & Zn (pre 1971), N: Gebr. N. & B. Laan & Zn  
Fls pink-lilac; pollen bright orange. Stems 1.5-1.8 m. July.

**'Pandora'** I(a/-)

Parentage: ('Redbird' × 'Earlibird') × (*lancifolium* var. *flaviflorum* × ('Destiny' × Golden Chalice Group))

R: C. North (pre 1976), N: C. North, I: Lingarden Ltd, REG: C. North (1977)

Fls orange. Stems short with c.18-20 fls. Early June.  
(Published in *Lilies and other Liliaceae*, 1977: 80. Suitable for forcing.)

**'Pandora'** VII(a-b/b-c)

Parentage: unnamed seedling × unnamed seedling  
R: Trior Lelie B.V. (1986), G: Trior Lelie B.V., N: Trior Lelie B.V. (1988), I: Trior Lelie B.V.

Inside moderate purplish pink (65A), a little paler at the base, midveins yellow; outside light purplish pink (65B); spots and papillae present; nectaries yellow-green; pollen reddish brown; stigma green. Tepal-margins ruffled, tips strongly recurved. Stems 0.8 m, green with darker markings, and with 4-7 fls (from 14 cm bulbs). Midseason.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. However, PBR in various countries were granted to this cv. and under ICNCP, 2004: Art. 24.4 the use of 'Pandora' for this cv. must be accepted, although it is not eligible for registration.)

**'Panflute'** I(b/-)

Parentage: Panamint Group × 'Connecticut King'  
R: C. Biddle (1978), G: M.K. Baldwin (1981), N: M.K. & J.A. Baldwin (1989), I: M.K. & J.A. Baldwin (1989), REG: M.K. & J.A. Baldwin (1989)

Inside brilliant yellow (12B) darkening to vivid yellow (13A) towards the throat, tepal-tips light greenish yellow

(8C), throat light greenish yellow (8C); outside brilliant yellow (11A) darkening to brilliant yellow (13B) on midribs; spots very sparse, deep purplish red (71A); nectaries vivid yellowish green (140A); pollen strong orange-yellow (17A). Fls 115 mm wide; tepals 90 × 48 mm, margins smooth, tips strongly reflexed. Lvs scattered, 115 × 30 mm, mid green. Stems 1 m, very stiff and erect, strong yellow-green (143A), with c.25 fls. Dec. to Jan. (Australia).

#### **'Pankefest' I(a/b)**

Parentage: 'Domschatz' × 'Robin Hood'  
R: G. Steinbrück (1990), G: G. Steinbrück (1993), N: G. Steinbrück (1993), I: G. Steinbrück (1998), REG: G. Steinbrück (1998)

Inside and outside brownish orange (171B); spots numerous, small, dark red (59A) on three-quarters of each tepal; pollen strong brown (172A); stigma deep purplish red (187D). Fls 120 mm wide; tepals 60 × 30 mm, margins smooth, tips not reflexed. Lvs scattered, 80 × 12 mm, dark green. Stems 1.2 m, almost black, with up to 15 fls. Mid July.

#### **'Panking 1' I(c/-)**

Parentage unknown  
R: A. Rech (pre 1983), N: A. Rech  
Fls yellow, each tepal with an orange blotch. Lvs and stems dark green. Stems 0.8 m. Early July.  
(Published in German Lily Group sales list, 1983.)

#### **'Panking 2' I(c/-)**

Parentage unknown  
R: A. Rech (pre 1983), N: A. Rech  
Like 'Panking 1' but fls somewhat larger, with a narrow, black stripe on the tepal-edges.  
(Published in German Lily Group sales list, 1983.)

#### **'Pankower Eleganz' I(b/c-d)**

Parentage: 'Aelita' × 'Zitronenmädchen'  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1997), REG: G. Steinbrück (1998)

Fls yellowish white (158D) throughout except for a green suffusion in the throat; spots many, large, very conspicuous, dark red (59A) on all but the tips of each tepal; nectaries very pale green (130D); pollen deep red (185A); stigma deep purplish red (187D). Fls 140 mm wide; tepals 65 × 27 mm, margins smooth, tips distinctly recurved. Lvs scattered, 65 × 10 mm, mid green. Stems 0.7 m, rather dark green, with up to 8 fls. Mid July.  
(For epithet, see 'Pankower Revue'.)

#### **'Pankower Erhabenheit' I(a/b-c)**

Parentage: 'King Pete' × 'Berliner Morgen'  
R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Inside light yellow (160B), tepal-tips pale yellow (160D); outside light yellow (160B), midribs strong, moderate yellow-green (139C); small spots and some brushmark lines of deep red (60A) in centre of fl.; nectaries yellowish

white (158C); pollen dark reddish orange (178B); stigma moderate orange-yellow (168D). Fls 150 mm wide; tepals 85 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 50 × 30 mm. Stems 1.3 m, black, with 12-15 fls. Mid July.

(For epithet, see 'Pankower Revue'. Nomenclatural standard: colour print provided by registrant (WSY 0024697).)

#### **'Pankower Humor' I(b/-)**

Parentage unknown  
R: G. Steinbrück (pre 1994), N: G. Steinbrück, REG: G. Steinbrück (1997)

Fls salmon-red, with bronze tepal-tips. Stems 1 m, with up to 15 fls. Mid July.

(For epithet, see 'Pankower Revue'. Published in European Lily Society sales list, 1996.)

#### **'Pankower Liebreiz' I(a-b/c-d)**

Parentage: yellow/white-flowered Asiatic hybrid × mixed pollen of 'Brushstroke' & yellow/brown-flowered, brushmarked seedling  
R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1993), I: G. Steinbrück (1994), REG: G. Steinbrück (1995)

Inside pale greenish yellow (10D), tepal-tips and throat yellowish white (155D); outside pale greenish yellow (10D); spots moderate red (180A) on two-thirds of each tepal; nectaries light yellow-green (145D); stigma and pollen moderate red (180A). Fls 160 mm wide; tepals 60 × 30 mm, margins smooth, tepals recurved from halfway. Lvs scattered, 45 × 11 mm, pale green. Stems 0.7 m, pale green, with up to 20-25 fls. Early July.  
(For epithet, see 'Pankower Revue'.)

#### **'Pankower Revue' I(a/b-d)**

Parentage: 'Heidi III' × 'Berliner Morgen'  
R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Fls strong orange (168A) throughout except for moderate orange (172D) tepal-tips and numerous, tiny, moderate reddish brown (175A) spots on basal three-quarters of each tepal; nectaries green, frosted white; pollen dark red (183A); stigma moderate olive-brown (199A). Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips moderately recurved. Lvs scattered, 130 × 20 mm. Stems 1.3 m, dark green. Mid July.

(Pankow is a district of Berlin in which the registrant has a garden. Nomenclatural standard: colour print provided by registrant (WSY 0024679).)

#### **'Pankower Schöne' I(a/-)**

Parentage: 'Dawn Star' × wine-red-flowered Asiatic hybrid

R: G. Steinbrück (1988), G: G. Steinbrück (1992), N: G. Steinbrück (1994), I: G. Steinbrück (1994), REG: G. Steinbrück (1995)

Inside and outside light orange (29B); spots large, well-spaced, moderate reddish brown (175A), on basal two-thirds of each tepal; nectaries yellowish grey (198C);

pollen greyish reddish brown (200B). Fls 140 mm wide; tepals 60 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 15 mm, dark green. Stems 0.8 m, dark green, with up to 20 fls. Early July. (For epithet, see 'Pankower Revue'.)

#### 'Panna' I(a/-)

Parentage: Hallmark Group × mixed pollen of 'Red Fortune' & 'Mountaineer'  
R: K. Braun (1980), N: K. Braun, REG: K. Braun (1984)  
Fls cream-yellow, touched with salmon; spots purple, medium sized, oval; pollen orange-brown. Lvs short, pale green. Stems up to 1 m. Early July.

#### 'Panned Gold' I(b/-)

Parentage: *L. × scottiae* 'Apricot Glow' × Preston Group  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)  
Fls yellow, with red, frosted centre; outside mottled with red. Stems 1.2 m. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 15 (1978).)

#### 'Panorama' I(a/b)

Parentage: seedling RS 86-10 × seedling RS 91/-15  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside vivid purplish red (57D) on a yellowish white (155D) ground, outer tepals edged vivid purplish red (57D), throat yellowish white (155D); outside similarly coloured; spots few, dark red (187A) on inner tepals; papillae absent; nectaries yellowish white (155D); pollen strong orange (24A); stigma moderate red (184B). Fls 170 mm wide; tepals 100 × 40 mm, margins smooth, tips recurved. Lvs scattered, 200 × 25 mm. Stems 1.36 m, green with a little darker marking, and with c.6 fls.

#### 'Pantheon' VII(-/d)

Parentage: seedling 404 × seedling 677  
R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)  
Inside pale purplish pink (62D), midveins suffused with light purplish pink (62C), throat strong yellow-green (144B); outside yellowish white (155D), tepal-edges suffused with light to pale purplish pink (62C/D), midribs light greenish yellow (4C); spots many, deep purplish red (71A), on basal half of each tepal; nectaries yellowish white (196D); pollen strong reddish orange (169A). Fls 225 mm wide; tepals 110 × 58 mm, margins smooth, tips strongly recurved. Lvs scattered, 135 × 33 mm, mid green. Stems 0.9 m, pale green, with c.6 fls.

#### 'Panther' I(b/b)

Parentage: 'Sonnentiger' × 'Connecticut Glow'  
R: K. Braun (1988), N: K. Braun, REG: K. Braun (1990)  
Fls red, throat orange, centre of tepals red-orange, tips red and green; spots sparse, medium sized, black, on half of each tepal; papillae orange; nectaries pale red; pollen brown-red. Fls 100 mm wide; tepals 75 × 32 mm,

margins wavy, tips recurved and twisted. Lvs scattered, 140 × 22 mm, pale glossy green. Stems 1 m, green and brown, with c.12 fls. Early July.

#### 'Panther' II(-/-)

Parentage: *martagon* × unknown  
R: H. Fuchs (pre 1997), N: H. Fuchs  
Fls lilac; the strong and very dark pattern makes it look almost black. Stems 1.2 m. June.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in German Lily Group sales list, 1997.)

#### 'Pantomima' I(a/b)

Parentage unknown  
R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1999)  
Fls creamy white, yellow at base; spots dark brownish; pollen orange-red. Fls 110-120 mm wide. Stems 1-1.1 m, with 10-15 fls. June.  
(Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to 'Pantomine'. Published in M.F. Kireeva, *Lilii*, 70 (2000).)

#### 'Pantomime' VII(-/b)

Parentage: Pink Glory Group (Div. VII) × *nobilissimum*  
R: E.A. McRae (1967), G: Oregon Bulb Farms, Inc. (1970), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)  
Inside moderate purplish pink (65A) shading to deep purplish pink (64D), midveins strong purplish red (64B/C), tepal-tips light purplish pink (65B), throat moderate purplish pink (65A); outside pale purplish pink (65C/D), midribs soft green; spots absent; nectaries apple-green; pollen moderate red (179A). Fls 180-230 mm wide; tepals 100 × 50 mm wide, margins smooth, tips slightly recurved. Lvs scattered, 120 × 70 mm, dark green. Stems 1.1 m, light green, with 5-20 fls. Late Aug.

#### 'Pantrillis' II(b/-)

Parentage: *L. × dalhansonii* 'Sunset Glow' × unknown  
R: J.C. Ericksen (pre 1975), N: J.C. Ericksen, REG: J.C. Ericksen (1975)  
Fls soft mauve with purple markings in throat. Fls 50 mm wide. Stems up to 1.5 m.  
(Published in *Lilies and other Liliaceae*, 1976: 92.)

#### 'Paola' I(a-b/b-c)

Parentage: unnamed seedling × 'Vivaldi'  
R: De Jong Lelies Holland B.V., N: De Jong Lelies Holland B.V. (1998), REG: De Jong Lelies Holland B.V. (2003)  
Inside between strong purplish pink (54A) and moderate purplish red (184D), lighter towards top of each tepal; outside moderate purplish red (184D); spots and papillae present; nectaries green; pollen light orange-red; stigma light purple. Tepal-margins slightly ruffled, tips slightly recurved. Stems 0.85-1.3 m, with c.8 fls. Early to midseason.

**'Papagena' I(a/b)**

Parentage unknown

R: G. Steinbrück (pre 1992), N: G. Steinbrück

Fls creamy yellow with many spots.

**'Paper Doll' I(a/b-c)**

Parentage unknown

R: G.M. Chandler (1976), G: G.M. Chandler (1978), N:

K.L. Watkins (1984), I: K.L. Watkins (1984), REG: K.L.

Watkins (1985)

Inside light orange-yellow (22B), tepal-tips pale yellow (20D), throat vivid yellow-orange (23C); outside light orange-yellow (24C) lightening into the centre, midribs deepening to maroon at base; spots even, dark red (59A), on inner half of each tepal; nectaries strong orange (26A) fading to grey; pollen strong reddish orange (169A). Fls 120 mm wide; tepals 70 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 70 mm, dark green. Stems 0.9 m, dark red (187A), lightening to mottled green above, with 10-20 fls. Late Dec. (Australia).

**'Paper Moon' I(a/c-d)**

Parentage unknown

R: G.M. Chandler (1976), G: G.M. Chandler (1978), N:

K.L. Watkins (1984), I: K.L. Watkins (1984), REG: K.L.

Watkins (1985)

Inside brilliant yellow (20A), tepal-tips pale yellow (18C), throat brilliant orange-yellow (21B); outside with outer tepals pale yellow (20C) with deeper edges, inner tepal midribs deepening to maroon at the base; spots dark red (59A) on two-thirds of each tepal; nectaries strong orange (25B) fading to grey; pollen strong reddish orange (169A). Fls 125 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 8 mm, dark green. Stems 0.9 m, dark red (187A), lightly mottled green, with 10-20 fls. Late Dec. (Australia).

***papilliferum* Franch. IX(c/d)**

Inside very deep crimson-maroon, paler towards base; outside very deep crimson-maroon, tinged with green; spots absent; papillae maroon, towards base of each tepal; anthers brown; pollen orange. Fls up to 75 mm wide, fragrant; tepals 40-50 × 10-13 mm. Lvs scattered, up to 100 × 8 mm. Stems 0.7-0.9 m, green heavily mottled with pink-purple, densely papillate except near base, with 1-3 (sometimes more) fls. W China.

**'Papillon' I(a/-)**Parentage: (*cernuum* × unknown) × (*L.* × *hollandicum* × unknown)

R: Gebr. N. &amp; B. Laan &amp; Zn (pre 1979), N: Gebr. N.

&amp; B. Laan &amp; Zn (1980), I: Gebr. N. &amp; B. Laan &amp; Zn

(1981), REG: Gebr. N. &amp; B. Laan &amp; Zn (1982)

Fls light pink (49C), throat light yellow (15D) to pale orange-yellow (16D); spots few, in centre of fl.; nectaries greenish yellow; pollen orange-brown. Tepals 90 × 30-40 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 15 mm, pale green. Stems 0.9 m, reddish purple-green, with c.22 fls. Early July.

Syn.: 'Rosy'.

(Published in *Bloembollencultuur*, 1984.)**'Paprika' I(b/c)**

Parentage: 'Fireflame' × red-flowered Mid-century Group

R: J. de Graaff, N: J. de Graaff, I: Oregon Bulb Farms, Inc.

Fls dark red with dark spots on basal two-thirds of each tepal. Fls 100-120 mm wide; tepal-tips not or very slightly recurved. Stems 0.6-1 m. July.

(Published in *LYB* 21: 63 (1958).)**'Paquita' VII(-/b)**

Parentage unknown

R: W.M. Gardiner, G: W.M. Gardiner, N: E.L. Gardiner (1983), REG: E.L. Gardiner (1989)

Inside very pale purple (75D), tepal-tips white, throat strong yellow-green (144C), with a ray and flush on each tepal of strong yellowish pink (37B) overlying deep purplish pink (73A); outside very pale purple (69D); spots scattered, strong purplish red (54A), on basal half of each tepal; nectaries light yellow-green (144D); pollen greyish red (176A). Fls 150 mm wide; tepals 105 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 120 × 35 mm, mid green. Stems 1.7 m, moderate yellowish green (138A), with c.7 fls. Jan. to Feb. (Australia).

**'Parabola' I(a/-)**

Parentage: ('Edith Cecilia' × unknown) × ('Edith Cecilia' × unknown)

R: V. Strasser (1973), G: V. Strasser (1976), N: V. Strasser (1981), REG: V. Strasser (1992)

Fls yellow throughout, with green nectaries. Tepal-margins smooth, tips not recurved. Lvs mid green. Stems 0.9 m, green, with up to 20 fls. Early to late July.

(Published in *Der Staudengarten*, 1981.)**'Parade' I(b/-)**

Parentage: selection from Mid-century Group

S: J. de Graaff (1941), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1949)

AM 1958

Fls brilliant orange-yellow (23B) to pale orange-yellow (23D); spots brown. Tepal-tips slightly recurved. Stems 1-1.2 m. June to July.

(Published in *Oregon Bulb Farms Cat.*, 1949.)**'Paradise' I(b/-)**

Parentage: 'Mikey' × 'Hawaiian Punch'

R: P.M. Johnson, N: P.M. Johnson, I: Borbeleta Gardens (1981), REG: J. Wadkamper (1981)

Inside strong red (53C), throat greenish; outside greenish brown to pink; spots brown; nectaries frosted pink; pollen rust-coloured. Tepals 85 × 37 mm, margins smooth, tips slightly recurved. Lvs scattered, 145 × 13 mm, mid green. Stems 0.9 m, mid green. July.

(Published in *Borbeleta Gardens Cat.*, 1981.)**'Paradou' IX(b/a)**See *regale* 'Paradou'.***paradoxum* Stearn IX(a/b)**

Fls dark maroon or purplish red, darker at base; spots

absent; nectaries smooth. Fls up to 70 mm wide.; tepals 25-35 × 10-15 mm. Lvs in 2-4 whorls, sometimes with scattered lvs also, 45-55 × 18-20 mm. Stems up to 0.5 m, with solitary fls. W China (SE Xizang).

**‘Paramount’ VII(a-b/b)**

Parentage unknown

R: Van der Salm Bulb Farm, Inc. (1996), REG: J.A. Van der Salm (2003)

Inside strong red (53B) changing to deep purplish pink (64D); outside deep purplish pink (64D) with yellow midribs; spots and papillae present; nectaries green; pollen light to dark brown; stigma dark purple. Tepal-margins ruffled, tips recurved. Stems 0.9 m, green with some darker markings, and with c.6 fls. Early.

**PARAMOUR I(a/b)**

Trade designation of ‘Acuraugs’.

**‘Parana’ I(a-b/-)**

Parentage: unnamed seedling × unnamed seedling

R: Vletter & Den Haan (1987), G: Vletter & Den Haan, N: Vletter & Den Haan (1993), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)

Inside vivid reddish orange (30B/32A), lighter at the base; outside strong orange (30D); a few small spots and some papillae present; nectaries orange; pollen reddish brown; stigma purple. Tepal-margins ruffled, tips strongly recurved. Stems 1 m, green with darker markings. Midseason.

**‘Parangs’ I(b/-)**

Misspelling of ‘Palanga’.

**‘Parasta’ I(b/-)**

Misspelling of ‘Parastā’.

**‘Parastā’ I(b/-)**

Parentage: selection from Willtigrinum Group

S: V.P. Orehovs (post 1959), N: V.P. Orehovs

Fls dark red.

(Published in *LYB* 33: 81 (1970) and included in *ILR* (1982) as ‘Parasta’ which is a misspelling.)

**× *pardaloidii* hort. ex Woodcock & Coutts**

**IV(-/d)**

Parentage: *humboldtii* × *pardalinum*

AMH 1914

Fls orange-red; spots crimson. Tepal-tips recurved. Lvs whorled. Stems 1.2-1.5 m, with c.12 fls. July. (First raised in the USA by Luther Burbank. Later, about 1907, van Tubergen raised and introduced the same hybrid into European gardens.)

**× *pardaloidii* ‘Dimsdale’s Variety’ IV(-/d)**

Parentage: selection from *L.* × *pardaloidii*

S: R. Dimsdale, N: R. Dimsdale

No further details.

***pardalinum* Kellogg IX(c/d)**

AGM 2002

Fls crimson-red in apical half, orange to orange-red in basal half; spots maroon, some ringed with deep yellow; nectaries green; anthers reddish or brown; pollen orange. Fls fragrant; tepals 50-90 × 12-18 mm Lvs in whorls of 8-19, with a few scattered above and below, up to 200 × 55 mm. Stems 2-3 m, green, with up to 10 fls. July. W USA (S Oregon, N California).

Syn.: *harrisianum*; *roezlii* Regel; *pardalinum* var. *angustifolium*.

***pardalinum* var. *angustifolium* Kellogg IX(c/d)**

Syn. of *pardalinum*.

***pardalinum* ‘Bourgaei’ IX(c/d)**

Parentage: selection from *pardalinum*

Similar to *pardalinum* ‘Californicum’ but fls much darker.

Stems 2 m.

(Published in *Wallace Cat.*, 1900.)

***pardalinum* ‘Californicum’ IX(c/d)**

Parentage: selection from *pardalinum*

Fls deep orange, tepal-tips scarlet; spots maroon. Stems 1-1.2 m.

(Published in *Wallace Cat.*, 1900.)

***pardalinum* ‘Dimsdale’s Yellow’ IX(c/d)**

Parentage: yellow-flowered form of *pardalinum*

R: R. Dimsdale, N: R. Dimsdale

AM 1937

Fls yellow, with a few, small spots.

(Published in *JRHS* 62: 510 (1937).)

***pardalinum* ‘Dwarf Orange’ IX(c/d)**

Parentage: selection from *pardalinum*

(Published in *Sandyloam Cat.*, 1941/42. No further details.)

***pardalinum* var. *fragrans* Purdy IX(c/d)**

Fls yellow suffused with red, scented like *parryi*.

***pardalinum* var. *giganteum* Woodcock & Coutts**

**IX(c/d)**

Fls crimson and golden yellow; spots purple-black, occasionally ringed. Stems up to 2.5 m, with up to 30 fls.

Syn.: *pardalinum* ‘Red Giant’; *pardalinum* ‘Red Sunset’.

***pardalinum* ‘Golden Glow’ IX(c/d)**

Parentage: selection from wild *pardalinum* from Santa Barbara County, California, USA

N: C. Purdy, I: C. Purdy

(Published in *LYB* 8: 111 (1939). No further details.)

***pardalinum* ‘Imra’ IV(a/b)**

Parentage: *pardalinum* subsp. *pardalinum* × *pardalinum* subsp. *pitkinense*

R: H. Fuchs (pre 1983), N: H. Fuchs, REG: H. Fuchs (1988)

Outside yellowish pink; throat orange with reddish spots. Fls 150 mm wide. Stems 2 m, with up to 15 fls. Mid July. (Published in German Lily Group sales list, 1984.)

***pardalinum* 'Johnsonii'** IX(c/d)  
Parentage: selection from wild *pardalinum* from British Columbia, Canada.  
Tall growing; fine spotted and coloured fls.  
(Published in *Wallace Cat.*, 1900.)

***pardalinum* var. *luteum* hort. Ware ex JRHS**  
IX(c/d)  
FCC 1889  
Fls yellow; spots brownish purple.

***pardalinum* 'Minor'** IX(c/d)  
Parentage: selection from *pardalinum*  
Fls orange, tepal-tips sometimes stained with crimson; spots black. Early.  
(Published in *Wallace Cat.*, 1900.)

***pardalinum* 'Orange Glow'** IX(c/d)  
Parentage: selection from wild-collected *pardalinum*  
N: C. Purdy, I: C. Purdy  
Fls soft orange, tepal-tips red; spots maroon (spotting irregular, some faint, some large). Fls large; tepals recurved.  
(Published in *LYB* 6: 21 (1937).)

***pardalinum* subsp. *pitkinense* (Beane & Vollmer)**  
M.W. Skinner IX(c/d)  
Fls orange-red, yellow towards base; spots tiny, maroon, towards base of each tepal; anthers brown-purple; pollen red-brown or orange-brown. Lvs in 1-5 whorls, with the others scattered, narrow. W USA (California).  
Syn.: *pinkinense*.

***pardalinum* 'Red Giant'** IX(c/d)  
S: (pre 1933)  
Syn. of *pardalinum* var. *giganteum*.

***pardalinum* 'Red Sunset'** IX(c/d)  
Syn. of *pardalinum* var. *giganteum*.

***pardalinum* subsp. *shastense* (Eastwood) M.W. Skinner** IX(c/d)  
Fls orange or orange-yellow in basal half, deeper orange to red-orange or red in apical half; anthers orange, orange-pink or magenta; pollen yellow to orange, rarely red-orange. Tepals 37-75 × 9-22 mm. Lvs whorled (often scattered in young plants), 50-200 × 6-37 mm. Stems up to 2.1 m, with 1-25(-35) fls. W USA (Oregon, California).  
Syn.: *shastense*; *nevadense*; *nevadense* var. *shastense*.

***pardalinum* 'Sunset'** IX(c/d)  
Parentage: collected in the wild  
N: Hocker Edge Gardens, I: Hocker Edge Gardens  
Fls reddish carmine, throat orange-yellow; spots black. Stems 1.5-1.9 m, with 4-16 fls.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Collected in Oregon in 1931. Included here as a *pardalinum* cv., but perhaps belonging to *pardalinum* subsp. *vollmeri*.)

***pardalinum* subsp. *vollmeri* (Eastwood) M.W. Skinner** IX(c/d)  
Fls deep orange, each tepal tinged with red towards tip at margin; spots blackish maroon, on basal half of each tepal. Lvs scattered or with a few in whorls, up to 190 × 8-15 mm. Stems up to 1 m, with 1-5 fls W USA (S Oregon, N California).  
Syn.: *vollmeri*; *roezlii* Purdy.

***pardalinum* var. *warei* hort. Ware ex The Garden**  
IX(c/d)  
C 1883  
Fls rich yellow, very fragrant; spots absent.

***pardalinum* subsp. *wigginsii* (Beane & Vollmer) M.W. Skinner** IX(c/d)  
Fls deep yellow to orange; spots purple; pollen orange or yellow. Tepals 30-70 × 9-20 mm. Lvs whorled, (scattered in small plants). Stems up to 0.9 m. W USA (S Oregon, N California).  
Syn.: *wigginsii*.

***pardalinum* 'Yuba'** IX(c/d)  
Parentage: selection from wild *pardalinum* from Yuba County, California, USA  
N: C. Purdy, I: C. Purdy  
Fls light orange-scarlet, centre yellow; spots maroon.

**× *pardal-parryi* hort. Perry ex Gard. Chron.**  
IV(b/d)  
Syn. of *L. × burbankii*.

**'Pardal-parryi'** IV(b/d)  
AM 1921  
Syn. of *L. × burbankii*.

**'Pardalviga'** VI(-/c)  
Misspelling of 'Pärgalviga'.

**'Pärdomas'** I(a/b)  
Parentage: 'Erlina' × 'Blinklicht'  
R: D.-V. Şkimele (1993), G: D.-V. Şkimele (1996), N: D.-V. Şkimele (1998), REG: D.-V. Şkimele (2004)  
Inside smoky red with a brownish tint, each tepal with a paler tip and a short yellow mark, throat dark red; outside brownish red, midribs green; spots absent; nectaries white; pollen orange; stigma greenish brown. Fls 200 mm wide; tepals 110 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 20 mm. Stems 1.2 m, green, with c.11 fls. Late July.  
(Published in *Lilium Balticum Register*, 2000.)

**'Parfait'** I(b/-)  
Parentage: (Harlequin Group × 'Cinnabar' (Div. I)) × ('Golden Wonder' × Hallmark Group)  
R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc. (1978)  
Fls peach to pink, with a soft yellow flare towards base of each tepal, throat reddish pink; spots dark. Fls up to 150 mm wide. Stems 0.6-1 m.

**'Pargalviga' VI(-/c)**

Parentage: *L. × aurelianense* Golden Sunburst Group × *auratum*

R: V.P. Orehovs (between 1970 and 1983), N: V.P. Orehovs

Inside deep yellow, each tepal with a short dark stripe down the centre; outside paler. Stems 0.7 m. Aug. (Included in *ILR Third Supplement* as 'Pardalviga' which is a misspelling.)

**'Paris' I(a/b)**

Parentage: seedling F 6378 × 'Gold Lode'

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (c. 1988), I: Vletter & Den Haan, REG: Vletter & Den Haan (1997)

Inside vivid yellow (12A), vivid yellow (17B) in the centre; outside vivid yellow (12A); spots few, dark purple; some papillae present; pollen dark brown; stigma brown. Tepal-margins ruffled, tips strongly recurved. Stems 1.1 m, light green with darker markings.

**'Parisienne' I(a/b)**

Parentage: Sundrop Group × pink-flowered seedling

R: Bischoff Tulleken Leliecultuur B.V. (1976), G: Bischoff Tulleken Leliecultuur B.V. (1979), N: Bischoff Tulleken Leliecultuur B.V. (1983), I: Bischoff Tulleken Leliecultuur B.V. (1985), REG: Bischoff Tulleken Leliecultuur B.V. (1985)

Inside deep yellowish pink (41D), tepal-tips claret-rose, throat pale orange-yellow (24D) with tangerine blotches; outside strong yellowish pink (38A), midribs broad, pale green; pollen red-brown. Fls 150 mm wide; tepals 85 × 40 mm, slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 0.9-1 m, green, with 9-12 fls (from 16-18 cm bulbs). Late June.

(Published in *Bloembollencultuur*, 1984.)

**'Parkdale Beauty' I(a/c)**

Parentage: 'White Prince' × 'Connecticut King'

R: J. Wadepkamper (1990), G: J. Wadepkamper (1992), N: J. Wadepkamper (1999), I: Willowwood (2000), REG: J. Wadepkamper (1999)

Inside light ivory-white to light yellow in the centre, throat ivory-white; outside ivory-white, midribs pink; nectaries ivory-white; pollen brown. Fls 165 mm wide; tepals 85 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 12 mm, mid green. Stems 1.2 m, tan, with c.18 fls. Midseason.

**'Parkdale Lemon-lime' I(a/c)**

Parentage: unnamed seedling ex Wadepkamper × 'Connecticut King'

R: J. Wadepkamper (1991), G: J. Wadepkamper (1994), N: J. Wadepkamper (1999), I: Willowwood (2000), REG: J. Wadepkamper (1999)

Inside chartreuse-green blending to cream at tepal-edges; outside light ivory-white, midribs green; spots large, brown, on basal half of each tepal; nectaries green; pollen orange. Fls 160 mm wide; tepals 85 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 145 × 18 mm, pale green. Stems 1.1 m, light tan, with c.26 fls. Late.

**'Parkdale Peach' I(a/c)**

Parentage: 'Peach Delight' × 'White Prince'

R: J. Wadepkamper (1991), G: J. Wadepkamper (1993), N: J. Wadepkamper (1999), I: Willowwood (2000), REG: J. Wadepkamper (1999)

Inside buff-peach, throat salmon; outside light peach blended with pink; spots few, brown, in centre of fl.; nectaries peach; pollen brown. Fls 170 mm wide; tepals 95 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 165 × 12 mm, mid green. Stems 1.5 m, tan, with c.22 fls. Late.

**'Parkland Orange' I(a/b-c)**

Parentage: ('Carol Jean' × upright red-flowered Asiatic) × ('Elenore Edna' × 'Connecticut Dream')

R: F. Fellner (1983), G: F. Fellner (1986), N: F. Fellner (1991), I: F. Fellner (1991), REG: F. Fellner (1991)

Inside clear orange; outside paler; spots few, very fine; nectaries whitish; pollen orange to brown. Fls 150 mm wide; tepals 70 × 35 mm. Lvs scattered, 150 × 10 mm. Stems 1 m, light green, with 20-30 fls. July.

**× *parkmanii* Sargent ex T. Moore VII(-/b)**

Parentage: *speciosum* × *auratum*

R: F. Parkman (c. 1869), N: T. Moore, I: A. Waterer FCC 1885

Fls crimson, with white tepal-edges; spots and papillae deep crimson; pollen deep chocolate-brown; style green; stigma purple. Fls 240-340 mm wide, scented; tepal-tips recurved. Lvs scattered, dark green.

(Published in *Gard. Chron.*, n.s., 4: 237, 366, 494, fig.106 (1875). There is an error in this publication, which gives the name as *L. × packmanni*, saying that it was raised by Francis Packman. On p.526 of the same volume, an apology appeared, explaining that the name should be *L. × parkmanni*, named after the raiser Mr Parkman, an "author on early American history". Not only should the ending of the name be corrected to *ii* in accordance with modern nomenclature, but the name must drop an 'n' and be spelt *parkmanii*, because the raiser was Parkman, not Parkmann.)

**× *parkmanii* 'Advance' VII(-/c)**

Parentage: ((*auratum* × *speciosum* var. *rubrum*) × *speciosum* var. *rubrum*) × *speciosum* var. *rubrum*

R: S.L. Emsweller (c. 1956), N: S.L. Emsweller, I: USDA (1960)

Tepals white; papillae bright crimson; pollen chocolate-brown. Fls 200-225 mm wide. Stems 1.5-1.9 m, with 20-25 fls. July to Aug.

(Published in *USDA Notice of Release and Introduction*, 1960.)

**× *parkmanii* 'Adventure' VII(-/c)**

Parentage: selection from *L. × parkmanii* Imperial Crimson Group

S: J. de Graaff (c. 1963), N: J. de Graaff

Fls large, deep crimson. Stems 1.5 m. Aug.

Syn.: 'Invincible'.

× ***parkmanii* 'Akarana'** VII(-/d)

Parentage: *speciosum* var. *magnificum* × *L.* × *parkmanii* 'Manawatu'

R: W.A. Christensen (c. 1957), N: W.A. Christensen  
Tepals deep carmine-rose, with white margins and deeper carmine spots. Fls 200 mm wide, *speciosum* type. Stems 1.9 m.

(Published in *New Zealand Herald* February 7, 1958.)

× ***parkmanii* 'Albion'** VII(b/b)

Parentage: *speciosum* var. *rubrum* 'Uchida' × *L.* × *parkmanii* 'Cover Girl'

R: K. Braun (1988), N: K. Braun, REG: K. Braun (1990)  
Fls white; spots sparse, moderate-sized, pale violet, on three-quarters of each tepal; papillae white; nectaries green; pollen brown. Fls 184 mm wide, scented; tepals 102 × 53 mm, recurved, twisted, margins wavy; pedicels 130 mm long, green. Lvs scattered, 170 × 40 mm, dark green. Stems 1 m, green, with c.5 fls. Early Aug.

× ***parkmanii* 'Allegra'** VII(b-c/d)

Parentage: ((*auratum* × *speciosum* var. *rubrum*) × *speciosum* var. *album*) × *speciosum* var. *album*

R: S.L. Emsweller (c. 1955), N: S.L. Emsweller, I: USDA (1960)

Tepals white, with sparse pink papillae on one or more tepals; pollen chocolate-brown. Fls 190-215 mm wide; tepal-margins smooth, tips recurved. Stems 1.5 m, with up to 25 fls. Aug.

(Published in *USDA Notice of Release and Introduction*, 1960.)

× ***parkmanii* 'Allegro Group'** VII(-/d)

Parentage: *auratum* var. *virginale* × *L.* × *parkmanii* 'Allegra'

Fls white, with a few pink spots. Tepal-margins ruffled. Stems 1.2-1.5 m, with up to 20 fls. Aug.

(Listed by Blackthorne Gardens in 1982.)

× ***parkmanii* 'Allura'** VII(-/d)

Parentage: *speciosum* × *auratum*

R: H.J. Strahm (1961), N: R.L. Strahm (1970), I: R.L. Strahm (1970)

Inside pale pink deepening to light magenta, throat and tepal-tips white to light magenta; outside white to magenta, midribs burgundy; spots small, dark pink, around centre; nectaries green; pollen orange. Tepal-margins slightly ruffled. Stems 1-1.2 m. July.  
(Published in *Rex Bulb Farms Cat.*, July 1970.)

× ***parkmanii* 'American Eagle'** VII(-/b)

Parentage: selection from *L.* × *parkmanii* Imperial Silver Group

S: J. de Graaff (c. 1963), N: J. de Graaff

Fls large, pure white with maroon spots. Stems 1.5 m. Aug.

× ***parkmanii* 'Angel Wings'** VII(-/c)

Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'

R: W.F. Doreen (1961), G: Lilies International Ltd (1965), N: Lilies International Ltd, I: Lilies International

Ltd (1970)

Inside white tinged with pink, midveins strong pink (54C), tepal-tips yellowish white (155B), throat light yellow-green (145A); outside white and dark reddish orange (178B); spots deep pink (50B); nectaries strong yellow-green (145A); pollen brownish orange (171B). Tepals 95 × 40 mm, slightly recurved. Lvs 120 × 45 mm, mid green. Stems 1 m, moderate olive-green (146A), with c.6 fls. Jan. to Feb. (New Zealand).

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cultivar Group.)

× ***parkmanii* 'Angel Wings Group'** VII(-/c)

Parentage: *auratum* × *speciosum*

R: J. de Graaff (c. 1960), N: J. de Graaff

Tepals pure white, each with a gold ray.

(Included in *ILR* (1969) as Angel Wings grex.)

× ***parkmanii* 'Anita'** VII(-/c)

Parentage: *L.* × *parkmanii* 'Akarana' × *L.* × *parkmanii* 'Lavender Princess'

R: S.F.E. Foster (c. 1966), N: S.F.E. Foster

Fls white flushed with light pink; spots few, pink. Fls 250 mm wide. Stems 1.1 m.

× ***parkmanii* 'Anna'** VII(-/b)

Parentage: *speciosum* × *auratum*

R: J.S. Dijt (pre 1972), N: J.S. Dijt, REG: J.S. Dijt (1973)

Tepals fuchsia-purple, suffused with chrysanthemum-crimson, edged white; spots ruby-red.

(Published in *Lilies and other Liliaceae*, 1973/1974: 109.)

× ***parkmanii* 'Anne Spry'** VII(-/b)

Parentage: *L.* × *parkmanii*

R: O. Ronalds (1960s), N: O. Ronalds

Fls pure white with lavender spots. Tepal-tips reflexed.

× ***parkmanii* 'Annette Gaye'** VII(-/b)

Parentage: *L.* × *parkmanii*

R: B.G. Hayler, N: B.G. Hayler, I: (1970)

Tepals pink at tips, each with a deep gold ray; spots few, large, crimson, on the white margin. Stems 1.5-1.9 m. Feb. (Australia).

(Published in *ILR* (1982) as 'Annette Gay'.)

× ***parkmanii* 'Arawa'** VII(-/d)

Parentage: *L.* × *parkmanii*

R: W.A. Christensen, N: W.A. Christensen

Fls bright carmine. Stems 1.9 m.

× ***parkmanii* 'Ariki'** VII(b/c)

Parentage: *L.* × *parkmanii*

R: W.A. Christensen, N: W.A. Christensen

Fls deep crimson. Stems 1.2-1.9 m.

× ***parkmanii* 'Aroha'** VII(-/l)

Parentage: *L.* × *parkmanii* Lavender Lady Group × *L.* × *parkmanii* 'Manawatu'

R: W.A. Christensen, N: W.A. Christensen

Fls white with lavender spots. Stems 1.2 m.

× ***parkmanii* 'Ashu'** VII(-/)

Parentage: *auratum* × *speciosum*

Used as a parent of *L. × parkmanii* 'Pink Chandelier' and *L. × parkmanii* 'Summer Dress' by Sakata Co. (Grown in Japan before 1971.)

× ***parkmanii* 'Audacious'** VII(-/c)

Parentage: *L. × parkmanii* 'Jillian Wallace' × golden-rayed *auratum*

R: A. Overton (c. 1956), N: A. Overton

Tepals white, freely spotted with purple. Fls *auratum* type.

(Published in *LYB* 20: 77 (1957).)

× ***parkmanii* 'Augment'** VII(-/c)

Parentage: *L. × parkmanii* 'Jillian Wallace' × golden-rayed *auratum*

R: A. Overton (c. 1957), N: A. Overton

Tepals white, each with a salmon-pink ray; spotted pink all over. Fls *auratum* type.

(Published in *LYB* 20: 77 (1957).)

× ***parkmanii* 'Aurora'** VII(-/c)

Parentage: (*auratum* × *speciosum* var. *rubrum*) × *speciosum* var. *rubrum*

R: S.L. Emsweller (c. 1955), N: S.L. Emsweller, I: USDA (1960)

Tepals white suffused with pink, fading to white at tips; papillae tips dark red; pollen chocolate-brown. Fls 150-175 mm wide. Stems 1.5-1.9 m, with 18-25 fls. July to Aug.

(Published in *USDA Notice of Release and Introduction*, 1960.)

× ***parkmanii* 'Auspicious'** VII(-/c)

Parentage: *L. × parkmanii* 'Jillian Wallace' × *auratum*

R: A. Overton (c. 1956), N: A. Overton

Tepals light salmon; spots deeper. Fls large, *auratum* type. (Published in *LYB* 20: 77 (1957).)

× ***parkmanii* Autumn Prelude Group** VII(-/)

Parentage: *auratum*/*speciosum* selections

R: A.D. Reid, I: Laurie's Garden (1970)

Fls white, pink or red. July to Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 37 (1978) erroneously as a cv. Published in *ILR* (1982) as Autumn Prelude grex.)

× ***parkmanii* 'Ballet'** VII(-/d)

Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'

R: W.F. Doreen (1961), G: Lilies International Ltd (1965), N: Lilies International Ltd (1970), I: Lilies International Ltd (1970)

Fls yellowish white (155B), rose-tinted just below tepal-tips; heavily spotted deep red (60A); nectaries strong yellow-green (145A); pollen moderate reddish orange (171A). Tepals 100 × 50 mm, margins smooth, tips slightly recurved. Lvs whorled, 100 × 35 mm, mid green. Stems 1 m, moderate olive-green (147A), with c.6 fls. Jan. to Feb. (New Zealand).

(Published in *Lilies International Ltd Cat.*, 1972.)

× ***parkmanii* 'Beecheri'** VII(-/b)

Syn. of *L. × parkmanii* 'Beecher's Variety'.

× ***parkmanii* 'Beecher's Variety'** VII(-/b)

Parentage: *auratum* var. *platyphyllum* × dark-flowered *speciosum*

R: A. Beecher, N: A. Beecher, I: A. Beecher (1930s)

Fls deep crimson, shading to pink at tepal-edges which have a white margin; spots purple-crimson. Stems up to 1.9 m, with small, *auratum*-like fls.

Syn.: *L. × parkmanii* 'Beecheri'; 'Beecheri'.

(Published in *W.A. Constable Ltd Cat.*, 1949: 10.)

× ***parkmanii* 'Betty'** VII(-/b)

Parentage: selection from *L. × parkmanii* Lavender Lady Group

S: J.S. Yeates (c. 1956), N: J.S. Yeates

Fls white, flecked with erythrite-red (HCC 0027/2); papillae white; nectaries green; pollen orange-red. Fls 125-150 mm wide, *auratum* type. Stems 1.2 m.

(Published in *Harrison Cat.*, 1957.)

× ***parkmanii* 'Black Knight'** VII(b/c)

Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'

R: W.F. Doreen (1961), G: Lilies International Ltd

(1965), N: Lilies International Ltd (1970), I: Lilies International Ltd (1970), REG: Lilies International Ltd (1980)

Inside red with narrow white tepal-margins, tips deep purplish red (187D), edged white, throat dark red (187C); outside deep purplish red (187D), tepal-tips greenish white (155C); spots few, dark red (187A); nectaries strong yellow-green (145A); pollen moderate reddish orange (171A). Fls 130 mm wide; tepals 85 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 45 mm, dark green. Stems 0.45 m, moderate olive-green (146A), with c.10 fls. Jan. to Feb. (New Zealand).

(Published in *Lilies International Ltd Cat.*, 1971.)

× ***parkmanii* 'Black Queen'** VII(-/b)

Parentage: dark red-flowered *auratum* × dark red-flowered *speciosum*

R: L.B. Tuffery (c. 1954), N: L.B. Tuffery

Fls very dark red, *auratum* type.

× ***parkmanii* Blaze Group** VII(-/d)

Parentage: selections from *L. × parkmanii* Jamboree Group

S: J. de Graaff (c. 1966), N: J. de Graaff

Fls in shades of crimson-red, large. Stems 1.5 m. Aug. (Included in *ILR* (1982) as Blaze grex.)

× ***parkmanii* 'Blood Auratum'** VII(-/a)

Parentage: (*speciosum* var. *rubrum* × *auratum*) × *auratum*

R: L. Woodriff (1965), N: L. Woodriff (1968)

Inside dark blood-red, tepals with narrow white border, tips blood-red, throat black; outside slightly paler; spots darker than tepals; nectaries black; pollen brown. Tepals 175 × at least 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 25-40 mm, dark

green. Stems up to 1.2 m, green, with 5-6 fls. Aug. (Unacceptable name: ICNCP, 2004: Art. 19.13 - after 1959 a name must be in any language other than Latin. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 48 (1978).)

× ***parkmanii* 'Bonanza Red'** VII(-/c)

Parentage: *speciosum* × *auratum*  
R: H.J. Strahm, N: R.L. Strahm, I: R.L. Strahm (1970), REG: R.L. Strahm (between 1970 and 1982)  
Inside cardinal-red, tepal-edges, tips and throat white; outside deep pink and white; spots dark crimson on edges of outer tepals; nectaries green; pollen orange. Tepal-margins very slightly ruffled. Stems 1.2-1.5 m. Sept. (Published in *Rex Bulb Farms Cat.*, July 1970.)

× ***parkmanii* 'Bonfire'** VII(b/b)

Parentage: *L. × parkmanii* 'Empress of China' × *L. × parkmanii* 'Empress of India'  
R: J. de Graaff (c. 1962), N: J. de Graaff  
Inside deep crimson, tepal-edges silvery white; outside silvery white, suffused with shell-pink; spots crimson. Tepal-tips recurved. Stems 1.2-1.5 m. Aug. (Published in *LYB* 28: 132 (1965).)

× ***parkmanii* 'Boo'** VII(b-c/b-c)

Parentage: *L. × parkmanii* 'Journey's End' × *auratum* 'Archangel'  
R: D.K. Kölli (1984), G: D.K. Kölli (1987), N: D.K. Kölli (1989), REG: D.K. Kölli (1994)  
Inside white, each tepal with a crimson-rose ray, the colour suffusing onto the rest of the tepal leaving broad, white borders and tips, throat pink; outside white; deeper pink spots on three-quarters of each tepal; nectaries pale, icy green; pollen orange. Fls 215-227 mm wide; tepals 122 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 148 × 55 mm, mid green (smaller than in many large-flowered Orientals). Stems 1.5 m, light apple-green with purple flecks or mottling, and with up to 10 fls. Aug.

× ***parkmanii* 'Brucedale'** VII(-/c)

Parentage: *auratum* var. *platyphyllum* × *speciosum* var. *rubrum*  
R: H.W.D. Bruce (c. 1966), N: H.W.D. Bruce  
Fls white, spotted pink; anthers brown. Fls 200 mm wide. Stems 1.4 m, with c.20 fls.

× ***parkmanii* 'Caesar's Robe'** VII(b/c)

Parentage: *L. × parkmanii*  
N: Springfields, I: Springfields  
Fls red, with white tepal-margins; spots black. Stems 1-1.2 m, with 20-33 fls. (Published in *ILR* (1982) incorrectly as Div. VI.)

× ***parkmanii* 'Candy Bar'** VII(-/c)

Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'  
R: W.F. Doreen (1961), G: Lilies International Ltd (1965), N: Lilies International Ltd (1971), I: Lilies International Ltd (1971), REG: Lilies International Ltd (1980)

Inside white, each tepal with a deep red ray, throat dark red (59A); outside greenish white (155C) with impression of red band; heavily spotted dark red (59A) near midribs; nectaries dark red (187B); pollen moderate reddish orange (171A). Fls 220 mm wide; tepals 120 × 70 mm, slightly recurved. Lvs dark green. Stems 1 m, yellow-green, with c.12 fls. Jan. to Feb. (New Zealand). (Published in *Lilies International Ltd Cat.*, 1972.)

× ***parkmanii* 'Candy Floss'** VII(-/b)

Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'  
R: W.F. Doreen (1961), G: Lilies International Ltd (1965), N: Lilies International Ltd (1971), I: Lilies International Ltd (1971), REG: Lilies International Ltd (1980)  
Inside with the tepal-tips greenish white (155C), throat pale purplish pink (62D); outside pale purplish pink (62D); lightly spotted with strong purplish red (63A); nectaries strong yellow-green (144B); pollen moderate reddish orange (171A). Fls 240 mm wide; tepals 125 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs 160 × 40 mm, dark green. Stems 1.5 m, dark green (132A), with 14-25 fls. Jan. to Feb. (New Zealand). (Published in *Lilies International Ltd Cat.*, 1972.)

× ***parkmanii* 'Carbine'** VII(-/j)

Parentage: selection from *L. × parkmanii*  
S: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1973)  
Fls brilliant red, *auratum*-type, very large. Stems 1.9 m. Mid Feb. (Australia). (Published in *Golden Ray Gardens Cat.*, 1973.)

× ***parkmanii* 'Carmen'** VII(-/c)

Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'  
R: W.F. Doreen (1961), G: Lilies International Ltd (1965), N: Lilies International Ltd (1971), I: Lilies International Ltd (1971)  
Inside moderate purplish red (59C), tepal-tips moderate purplish pink (66D); outside strong purplish red (59D); heavily spotted to outside edge; nectaries strong yellow-green (145A); pollen moderate reddish orange (171A). Fls 170 mm wide; tepals 100 × 55 mm, slightly recurved. Lvs 100 × 55 mm, mid green. Stems 1 m, moderate yellow-green (146B), with c.12 fls. Jan. to Feb. (New Zealand). (Published in *Lilies International Ltd Cat.*, 1972.)

× ***parkmanii* 'Chameleon Gem'** VII(-/b)

Parentage: *L. × parkmanii* × *L. × parkmanii* 'Jillian Wallace'  
R: H.J. Strahm (1961), N: R.L. Strahm (1970), REG: Strahm's Lilies, Inc. (1985)  
Inside light pink, deepening to all over red, then purple, tepal-edges white, tips white to red-purple, throat white to deep rose-pink; outside light pink changing to dark pink; spots dark red; nectaries green; pollen orange. Tepal-margins ruffled. Lvs 110 × 50 mm. Stems 0.8-1.2 m. Aug. (Published in *Rex Bulb Farms Cat.*, July 1970.)

× ***parkmanii* ‘Chief Red Cloud’ VII(b-c/b)**

Parentage: *auratum* var. *platyphyllum* × *speciosum*  
R: J.D. Stewart (c. 1950), N: J.D. Stewart  
Fls with purple-crimson centre, fading to white, with gold central star; dots light purple; pollen chocolate-brown. Fls 200-230 mm wide; tepal-tips recurved. Stems 1.2-1.5 m. July to Aug.  
(Published in *LYB NALS* 5: 74 (1952).)

× ***parkmanii* Chinook Group VII(-/b)**

Parentage: (*speciosum* × *auratum*) × *auratum*  
R: unknown  
Fls salmon-pink, large.  
(Published in *ILR* (1969), 53 as Chinook grex. Never introduced and the stock was destroyed.)

× ***parkmanii* ‘Christabel’ VII(-/c)**

Parentage: (*auratum* × *speciosum*) × (*auratum* × *speciosum*)  
R: E.C. Genat (1955), G: E.C. Genat (1958), N: E.C. Genat, I: E.C. Genat (1963)  
Inside white, faintly overlaid with moderate purplish pink (186D) at top of each nectary, tepal-margins white; outside with moderate purplish pink (186) midribs; spots moderate purplish pink (186D); papillae large, white at tepal base to moderate purplish pink (186D) at tips. Fls 150-177 mm wide; only outer tepals with ruffled margins, tips reflexed. Lvs scattered, 125-215 × 38 mm, bright green. Stems up to 2.2 m, flushed with purple, with up to 20 or more fls.

× ***parkmanii* ‘Cilla’ VII(-/b)**

Parentage: *auratum* × *L. × parkmanii* type  
R: A.E. Kershaw, N: A.E. Kershaw, I: A.E. Kershaw (1962)  
Fls white, each tepal with carmine ray, throat green; strongly spotted deep pink (52B); nectaries yellow; pollen rust-coloured. Fls c.280 mm wide; tepal-tips reflexed. Stems 1.5 m.

× ***parkmanii* ‘Cover Girl’ VII(-/c)**

Parentage: *L. × parkmanii* Potomac Group × *L. × parkmanii* ‘Jillian Wallace’  
R: J. de Graaff, N: J. de Graaff, I: J. de Graaff (1970), REG: Oregon Bulb Farms, Inc. (1969)  
Fls very large, strong purplish pink (55B) or rose-pink; spots deep pink. Stems 1.2-1.9 m. Aug.  
(Published in *LYB* 33: 254 (1970).)

× ***parkmanii* ‘Crimson Pennant’ VII(-/l)**

Parentage: *speciosum* ‘Brunette’ × *L. × parkmanii* ‘Jillian Wallace’  
R: G. Errey (c. 1956), N: G. Errey  
Fls extra rich red, with narrow tepals.  
(Published in *LYB* 20: 79 (1957).)

× ***parkmanii* ‘Crimson Picture’ VII(-/l)**

Parentage: *auratum* × *speciosum*  
R: R.K. Gray, N: R.K. Gray  
(Published in *LYB* 20: 71 (1957), without description.)

× ***parkmanii* ‘Crimson Royal’ VII(-/b)**

Parentage: from mixed *L. × parkmanii* seed  
R: B.G. Hayler, N: B.G. Hayler (1970), REG: B.G. Hayler (between 1970 and 1981)  
Throat purple, tepal-tips fading purple; outside white with heavy, dark red (59A) midribs; spots dark red (59A); nectaries green; anthers vivid reddish orange (32A). Fls 200 mm wide, *auratum* type. Lvs *auratum* var. *platyphyllum* type. Stems 1.2 m.

× ***parkmanii* ‘Crimson Tiara’ VII(-/b)**

Parentage: *L. × parkmanii* Imperial Crimson Group × *L. × parkmanii* Jamboree Group  
R: Fairdale Nursery (1992), N: Fairdale Nursery, REG: Van der Salm Bulb Farm, Inc. (1992)  
Tepals rich vivid crimson with narrow white margins; unspotted.

× ***parkmanii* ‘Delmonden Beauty’ VII(-/b)**

Parentage: selection from *L. × parkmanii*  
No further details.

× ***parkmanii* ‘Delmonden Ruby’ VII(-/d)**

Parentage: *speciosum* var. *punctatum* × *auratum*  
R: E.B. Anderson, N: M. Amsler (c. 1939)  
Fls red. Fls 220 mm wide, similar to *speciosum* var. *rubrum*.  
(Published in *Gard. Illustr.* 79: 101 (1952).)

× ***parkmanii* ‘Dorothy’ VII(-/l)**

Parentage: *L. × parkmanii*  
Fls *speciosum* type, flushed and heavily spotted with crimson.  
(Raised in New Zealand.)

× ***parkmanii* ‘Dorothy Krist’ VII(b/d)**

Parentage: *auratum* var. *platyphyllum* × *L. × parkmanii* ‘Frosty Morn’  
R: J. Hoell (1975), G: J. Hoell (1979), N: J. Hoell (1988), REG: J. Hoell (1988)  
Inside deep pink (50B), tepal-tips white, throat light pink (50D); outside pale yellow-green (155A); spots dark red, on basal three-quarters of each tepal; nectaries green; pollen red. Fls 200 mm wide; scented; tepals 110 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 53 mm, dark green. Stems 1.5 m, dark green, with 12-15 fls. Midseason.

× ***parkmanii* ‘Elaine’ VII(-/c)**

Parentage: *auratum* var. *platyphyllum* × *L. × parkmanii* ‘Jillian Wallace’  
R: J.S. Yeates, N: J.S. Yeates (1952)  
Fls chrysanthemum-crimson (HCC 824) at centre, fading towards tepal-margins; spots heavy, same colour. Fls *auratum* type. Stems 1.5 m. Feb. (Australia).  
(Published in *Harrison Cat.*, 1958.)

× ***parkmanii* ‘Elizabeth’ VII(-/b)**

Parentage: *auratum* var. *platyphyllum* × *L. × parkmanii* ‘Jillian Wallace’  
R: J.S. Yeates (c. 1952), N: J.S. Yeates

Fls deep yellowish pink (47C), fading to white at tepal-margins; spots present. Fls *auratum* type. Stems 1.9-2.2 m. Feb. (Australia).

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Auckland Weekly News*, 1956.)

× ***parkmanii* 'Elvie Coltman' VII(b/c)**

Parentage: *L. × parkmanii* 'Jillian Wallace' × *auratum*  
R: G.M. Chandler (1950), G: G.M. Chandler (1955), N: G.M. Chandler, REG: G.M. Chandler (1961)  
Inside with cherry-red (HCC 722/1) rays, changing to Tyrian purple (HCC 727/1), tepal-centres yellow, tepal-margins broad, white; spots present; nectaries yellow-edged. Fls 200-250 mm wide. Stems 1.1-1.5 m, dark, with up to 12 fls.

× ***parkmanii* 'Empress of China' VI(-/b)**

Parentage: *L. × parkmanii* 'Jillian Wallace' × 'Crimson Queen'  
R: J. de Graaff (c. 1954), N: J. de Graaff  
Fls white; spots lavender or maroon-purple. Stems 1.2-1.9 m. Aug.  
(Published in *Oregon Bulb Farms Cat.*, 1957. Virus-tolerant.)

× ***parkmanii* 'Empress of India' VII(b/b)**

Parentage: *L. × parkmanii* 'Jillian Wallace' × 'Crimson Queen'  
R: J. de Graaff (c. 1953), N: J. de Graaff  
AM 1962  
Fls deep rich crimson-red, with narrow white tepal-edges. Spots dark. Fls *auratum* type. Stems 1.2-1.5 m. Aug.  
(Published in *Oregon Bulb Farms Cat.*, 1957.)

× ***parkmanii* 'Empress of Japan' VII(-/b)**

Parentage: *L. × parkmanii* × *L. × parkmanii* 'Jillian Wallace'  
R: J. de Graaff (c. 1953), N: J. de Graaff  
Fls pure white, each tepal with a gold ray; spots deep maroon. Tepal-margins ruffled, tips recurved. Stems 1.5 m. Aug.

× ***parkmanii* 'Enterprise' VII(-/d)**

Parentage: selection from *L. × parkmanii* Jamboree Group  
S: J. de Graaff (c. 1963), N: J. de Graaff  
Fls crimson, tepal-edges silver. Tepals recurved. Stems 1.5 m. Aug.

× ***parkmanii* 'Erebus' VII(-/b)**

Parentage: *auratum* var. *platyphyllum* × *L. × parkmanii* 'Jillian Wallace'  
R: J.S. Yeates (c. 1956), N: J.S. Yeates  
Inside moderate purplish red (58A) to strong purplish red (58B), tepal-margins and tips white, throat dark red; heavily spotted dark red (59A); nectaries prominent, green. Stems 1.5-1.9 m. Aug.

× ***parkmanii* 'Ethel May Glasson' VII(b/b)**

Parentage: *speciosum* 'Melpomene' × 'Crimson Queen'  
R: E.J. Fallu (c. 1952), N: E.J. Fallu

Richer colour than *speciosum* 'Gilrey'. Fls *auratum* type. (Published in *LYB* 16: 148 (1953).)

× ***parkmanii* 'Evening' VII(-/d)**

Parentage: (*speciosum* × *auratum*) × *speciosum*  
R: J. de Graaff (c. 1963), N: J. de Graaff  
Fls pure white, large, scented. Stems 1.5 m. July to Aug.

× ***parkmanii* Everest Group VII(-/c)**

Parentage: (*speciosum* × *auratum*) × *speciosum*  
R: J. de Graaff (c. 1962), N: J. de Graaff  
Fls pure white; spots light maroon. Stems 1.5 m, with 14 or more fls. July to Aug.  
(Published as Everest grex in *ILR* (1982) where it was classified as Div. VII(d): this was corrected to VII(c) in the *Third Supplement*. It was also stated that it is a synonym of *L. × parkmanii* White Jamboree Group, but this cannot be so because the parentages are different. However, the situation is confused: in his book *Lilies*, p. 248, E.A. McRae says that Everest Group has white, unspotted fls with reflexed tepals, and that the seed parent was *L. × parkmanii* 'Allegra'. This description could possibly fit with *L. × parkmanii* White Jamboree Group except for the reflexed tepals.)

× ***parkmanii* 'Excelsior' VII(b/b)**

Parentage: *auratum* var. *platyphyllum* × *L. × parkmanii* 'Jillian Wallace'  
R: J.S. Yeates (c. 1952), N: J.S. Yeates  
PC 1958  
Fls China rose (HCC 024/1), tepals with narrow, white margins and tips; spots rather faint. Fls *auratum* type. Stems to 2 m.  
(Published in *Harrison Cat.*, 1956.)

× ***parkmanii* 'Fairy' VII(-/b)**

Parentage: (*speciosum* var. *rubrum* × *auratum*) × (*speciosum* var. *rubrum* × *auratum*, plus mixed *auratum* pollen)  
R: W. Suzuki (1983), N: W. Suzuki  
Inside yellowish white (155D), base strong yellow-green (144B), strong red (53D) from midrib to near base; dark red (187B) spots conspicuous in basal half of each tepal. Fls 160 mm wide, strongly scented. Stems 1 m. Midseason. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

× ***parkmanii* 'Fancy Lady' VII(-/b)**

Parentage: selection from *L. × parkmanii* Lavender Lady Group  
S: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1979)  
Fls pure white, later flushed with deep pink; spots lavender. Stems up to 1 m.

× ***parkmanii* 'Fire Chief' VII(b/b)**

Parentage: *L. × parkmanii* 'Jillian Wallace' × *auratum* var. *platyphyllum*  
R: J. Hoell (1982), G: J. Hoell (1986), N: J. Hoell (1988), REG: J. Hoell (1988)  
Inside deep red (53A), the colour strongest in a broad ray down each tepal, tips and edges white, throat deep purplish

pink (66C); outside greenish red; spots deep red, on all but tepal-tips and margins. Fls 225 mm wide, strongly scented; tepals 120 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 165 × 45 mm, mid green. Stems 1.8 m, green with 14-15 fls. Jan. (Tasmania).

× ***parkmanii* 'Flying Cloud Group' VII(-/-)**

Parentage: *auratum* × *speciosum*

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls pure white. Stems 1.5 m. Aug.

(Published in *ILR* (1982) as *Flying Cloud* grex.)

× ***parkmanii* 'Francina' VII(-/b)**

Parentage: *speciosum* × *auratum*

R: J.S. Dijt (pre 1972), N: J.S. Dijt, REG: J.S. Dijt

(1973)

Fls vivid purplish red (57C), veined and spotted deep red (53A), tepal-edges white.

(Published in *Lilies and other Liliaceae*, 1973/1974: 109.)

× ***parkmanii* 'Frosty Morn' VII(b/b)**

Parentage: *auratum* var. *platyphyllum* × *L. × parkmanii* 'Jillian Wallace'

R: J. Hoell (1974), G: J. Hoell (1978), N: J. Hoell (1988), REG: J. Hoell (1988)

Inside and outside white, tepal-tips pale yellow (158B), throat pale yellow (158A); spots strong purplish red (71B), on basal half to two-thirds of each tepal; nectaries green; pollen vivid reddish orange (43A). Fls 190 mm wide, heavily scented; tepals 110 × 55 mm, margins slightly wavy, tips slightly recurved. Lvs scattered, 230 × 50 mm, dark green. Stems 1.8 m, mid green, with c.15 fls. Jan. (Tasmania).

× ***parkmanii* 'George Woodriff' VII(-/c)**

Parentage: *speciosum* var. *rubrum* × *auratum*

R: L. Woodriff (c. 1950), G: L. Woodriff (1954), N: L. Woodriff, REG: L. Woodriff (1983)

Fls rose-red.

(Named for the raiser's elder son. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 49 (1978).)

× ***parkmanii* 'Gloaming' VII(-/-)**

Parentage: *L. × parkmanii* Spectre Group × *L. × parkmanii* 'Beecher's Variety'

R: G.M. Chandler (1952), G: G.M. Chandler (1955), N: G.M. Chandler, I: G.M. Chandler (1961)

Inside pale pink; slightly spotted; nectaries yellow-green. Fls 175 mm wide; tepals slightly reflexed. Lvs *speciosum* type. Stems 1-1.2 m.

× ***parkmanii* 'Gold Lady' VII(-/b)**

Parentage: *L. × parkmanii*

Fls white, with lavender spots and gold banding and flushing. Fls large, scented.

(Perhaps raised in Australia.)

× ***parkmanii* 'Grace Rees' VII(-/c)**

Parentage: *speciosum* 'Melpomene' × *auratum*

R: L.B. Tuffery (c. 1952), N: L.B. Tuffery

Fls carmine-pink.

× ***parkmanii* 'Green Emerald' VII(-/b)**

Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'

R: W.F. Doreen (1961), G: Lilies International Ltd

(1965), N: Lilies International Ltd (1970), I: Lilies

International Ltd (1970)

Fls pale yellow-green (155A), throat strong yellow-green (145A) extending up as a very narrow midvein line; papillae white; nectaries strong yellow-green (145A); pollen brownish orange (171B). Fls 220 mm wide; tepals 110 × 50 mm, slightly recurved. Lvs 80 × 35 mm, mid green. Stems 1 m, moderate yellow-green (146C), with c.14 fls. Jan. to Feb. (New Zealand).

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Lilies International Ltd Cat.*, 1971.)

× ***parkmanii* 'Haywardii' VII(-/b)**

Parentage: *auratum* var. *platyphyllum* × *speciosum* var. *magnificum*

R: P.S. Hayward (c. 1918), N: P.S. Hayward

AM 1918

Tepals deep pink, with white margins and bright crimson spots.

(Published in *Gard. Chron.*, ser. 3, 62: 86, fig. 31 (1917).)

× ***parkmanii* 'Helenilla' VII(-/b)**

Parentage: *auratum* var. *pictum* × *L. × parkmanii* 'Jillian Wallace'

R: A.E. Kershaw, N: A.E. Kershaw

Inside red, tepal-tips white; outside darker; spots black; nectaries yellow. Fls *auratum* type.

× ***parkmanii* 'Highdown' VII(-/b)**

Parentage: *L. × parkmanii* 'Jillian Wallace' × *L. × parkmanii* 'Beecher's Variety'

R: F.C. Stern (c. 1953), N: F.C. Stern

Tepals crimson, with white edges. Similar to the original clone of *L. × parkmanii*.

(Published in *JRHS* 78: 78 (1953).)

× ***parkmanii* 'Hovey's Variety' VII(-/b)**

Parentage: *auratum* × *speciosum* 'Melpomene'

R: C.M. Hovey (c. 1864), N: C.M. Hovey

Similar to the original clone of *L. × parkmanii*, but with broader, less ruffled tepals. Fls up to 350 mm wide, with less green in centre. Stems to 1.9 m, with up to 25 fls.

(Published in *The Garden* 17: 84 (1880).)

× ***parkmanii* 'Ikaros' VII(-/l)**

Parentage: selection from *L. × parkmanii* Little Rascal Group × *L. × parkmanii* 'Allegra'

R: J.M. van Tuyl (1978), G: J.M. van Tuyl (1981), N:

J.M. van Tuyl (1985), I: IVT (1985)

Inside ivory-white, midveins cream-white, greenish stripe at base; outside cream-white, midribs primrose-yellow; spots and papillae cream-white, in the centre; pollen dark reddish brown. Fls 220 mm wide; tepals 110 × 50 mm. Lvs scattered, 190 × 40 mm, mid green. Stems 1.25 m, mid green, with c.9-10 fls.

× ***parkmanii* Imperial Group VII(-/c)**

Parentage: (*speciosum* × *auratum*) × *auratum*

R: J. de Graaff (c. 1964), N: J. de Graaff

Fls in mixed colours, large.

(Published in *ILR* (1982) as Imperial grex.)

× ***parkmanii* Imperial Crimson Group VII(-/c)**

Parentage: (*speciosum* × *auratum*) × *auratum*

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls deep crimson-red, tepals with white margins. Stems 1.2-1.5 m. Aug.

(Published in *ILR* (1982) as Imperial Crimson grex.)

× ***parkmanii* Imperial Gold Group VII(-/c)**

Parentage: (*speciosum* × *auratum*) × *auratum*

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls ivory-white, each tepal with a distinct yellow ray; spots numerous. Fls large. Stems 1.9 m. Aug.

(Published in *ILR* (1982) as Imperial Gold grex.)

× ***parkmanii* Imperial Salmon Group VII(-/c)**

Parentage: (*speciosum* × *auratum*) × *auratum*

R: J. de Graaff (c. 1964), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1970)

Fls in salmon tones, large. July to Aug.

(Published in *ILR* (1982) as Imperial Salmon grex.)

× ***parkmanii* Imperial Silver Group VII(b/c)**

Parentage: (*speciosum* × *auratum*) × *auratum*

R: J. de Graaff, N: J. de Graaff

Fls pure white with many, small, maroon spots. Fls up to 250 mm wide; tepal tips recurved. Stems 1.5 m. Aug.

(Published in *ILR* (1982) as Imperial Silver grex.)

× ***parkmanii* 'Isobel Lindsay' VII(-/c)**

Parentage: *L.* × *parkmanii* 'Akarana' × *L.* × *parkmanii* 'Lavender Princess'

R: S.F.E. Foster (c. 1966), N: S.F.E. Foster

Fls white flushed with light pink; spots pink. Fls 250 mm wide. Stems 1.2 m.

× ***parkmanii* 'It' VII(-/d)**

Parentage: F<sub>2</sub> selection from *L.* × *parkmanii*

R: W.A. Christensen, N: M.A. Manning, I: M.A. Manning

Fls *speciosum* type, with broad tepals.

Syn.: 'Maude'.

× ***parkmanii* 'Jamboree' VII(b/c-d)**

Parentage: (*speciosum* × *auratum*) × *speciosum*

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls crimson-red with darker spots, tepal-margins narrow, white. Fls large. Stems 1-1.9 m. Aug.

× ***parkmanii* Jamboree Group VII(b/c-d)**

Parentage: *L.* × *parkmanii* Potomac Group × *L.* ×

*parkmanii* 'Jillian Wallace' & *L.* × *parkmanii* 'Empress of India'

R: J. de Graaff (1960s)

Fls red or pink, spotted. Tepal-tips recurved.

(Published in *ILR* (1982) as Jamboree grex. In his book

*Lilies*, p. 248, E.A. McRae says that a population of intense red-flowered seedlings derived from *speciosum* 'Shooting Star' × 'Star Gazer' were also sold under this epithet.)

× ***parkmanii* 'Jiliana' VII(-/c)**

Parentage: *L.* × *parkmanii* 'Jillian Wallace' × golden-rayed *auratum*

R: A. Overton (c. 1957), N: A. Overton

A smaller 'Jillian Wallace'.

× ***parkmanii* 'Jilliant' VII(-/c)**

Parentage: *L.* × *parkmanii* 'Jillian Wallace' × golden-rayed *auratum*

R: A. Overton (c. 1957), N: A. Overton

A larger 'Jillian Wallace'.

× ***parkmanii* 'Jillian Wallace' VII(b/c)**

Parentage: *speciosum* 'Gilrey' × 'Crimson Queen'

R: R.M. Wallace (c. 1938), N: R.M. Wallace

AM 1951

Fls Tyrian rose (HCC 24), paling to HCC 24/3, tepal-margins white; spots deep crimson. Fls *auratum* type.

Stems 1.2 m, with up to 10 fls.

(Published in *LYB* 9: 79, fig. 20 (1940). Named after the raiser's first grandchild.)

× ***parkmanii* 'Jill's Sister' VII(-/c)**

Parentage: *speciosum* 'Gilrey' × 'Crimson Queen'

R: R.M. Wallace (c. 1938), N: R.M. Wallace

Sister seedling of *L.* × *parkmanii* 'Jillian Wallace'.

(Published in *LYB* 11: 79 (1947).)

× ***parkmanii* 'Joan Payne' VII(-/l)**

Parentage: *speciosum* var. *kraetzleri* × *auratum* var. *pictum*

R: G.O. Payne, N: G.O. Payne, I: G.O. Payne (1954)

Fls white flushed with shell-pink, deep pink on midveins; spots crimson.

(Published in *LYB NALS* 10: 48 (1957).)

× ***parkmanii* 'John Bull' VII(-/l)**

Parentage: selection from *L.* × *parkmanii*

S: J.S. Yeates, N: J.S. Yeates

Fls red.

× ***parkmanii* 'John Lea' VII(-/b)**

Parentage: red-flowered *L.* × *parkmanii* × red-flowered *L.* × *parkmanii*

R: J.S. Yeates (1960), N: J.S. Yeates (1963), I: J.S. Yeates, REG: J.S. Yeates (1980)

Inside strong red (53D), tepal-tips white; outside moderate purplish pink (186D); spots deep red (53A) on all but tepal-tips; nectaries light yellow (160B); pollen strong orange (25A). Tepals 160 × 50-85 mm, slightly recurved. Lvs scattered, 180 × 55 mm, dark green to bronze. Stems 1.75 m, moderate brown (200C), with 8-10 fls. Late Feb. (New Zealand).

× ***parkmanii* 'Journey's End' VII(b/c)**

Parentage: 'Phillipa' × *speciosum* 'Gilrey'

R: J.S. Yeates (c. 1957), N: J.S. Yeates

Fls deep purplish pink (61D), fading to white at tepal-tips and margins, darkening to vivid purplish red (57C) and vivid purplish red (57B) at middle of tepal; spots numerous, maroon; nectaries very dark reddish; pollen brown-orange. Fls 125-130 mm wide; tepals slightly reflexed. Stems 1.3-1.9 m, with 5-8 fls (from 16-18 cm bulbs). Aug.  
(Published in *Bull. NZ Lily Soc.*, 12 July 1964.)

× *parkmanii* 'Judas' VII(-/b)

Parentage: *auratum* × *speciosum*  
R: J.S. Yeates (c. 1958), N: J.S. Yeates  
Fls yellow.  
(Published in *LYB* 23: 165 (1960).)

× *parkmanii* 'Kathleen Stewart' VII(-/b)

Parentage: *L. × parkmanii* 'Jillian Wallace' × 'Crimson Queen'  
R: A.V. Stewart (c. 1954), N: A.V. Stewart  
Fls red.  
(Published in *LYB* 20: 71 (1957).)

× *parkmanii* 'Kimbolton Pink' VII(b/c)

Parentage: pink-flowered *L. × parkmanii* × pink-flowered *L. × parkmanii*  
R: J.S. Yeates (1963), G: J.S. Yeates (1966), N: J.S. Yeates, I: J.S. Yeates, REG: J.S. Yeates (1980)  
Inside deep purplish pink (55A), tepal-tips white, throat deep yellowish pink (46D); outside light purplish pink (55C); spots strong red (53C) on basal part of tepals; nectaries light yellowish green (136D); pollen vivid red (46C). Fls 220 mm wide; tepals 140 × 40-80 mm, tips slightly recurved, outer tepals with ruffled margins. Lvs scattered, 200 × 50 mm, mid green. Stems 2 m, light olive-brown (199B), with 12-13 fls. Feb. (New Zealand).

× *parkmanii* 'Kimbolton Red' VII(-/d)

Parentage: pink-flowered *L. × parkmanii* × pink-flowered *L. × parkmanii*  
R: J.S. Yeates (1963), G: J.S. Yeates (1966), N: J.S. Yeates, I: J.S. Yeates (1976), REG: J.S. Yeates (1980)  
Inside strong red (53C), tepal-tips white, throat strong red (53D); outside strong purplish pink (55B); spots deep red (53A) on basal part of tepals; nectaries deep red (53A); pollen strong reddish orange (42C). Fls 150 mm wide; tepals 120 × 35-55 mm. Lvs scattered, 180 × 45 mm, mid green. Stems 1.75 m, greyish reddish orange (177C), with 7-8 fls. Feb. (New Zealand).

× *parkmanii* 'Kronos' VII(c/c)

Parentage: *speciosum* × selection from *L. × parkmanii* Imperial Crimson Group  
R: J.M. van Tuyl (1977), G: J.M. van Tuyl (1980), N: J.M. van Tuyl (1985), I: IVT (1985), REG: IVT (1985)  
Inside white with a green ray towards the base; outside white, midribs empire rose to cream-white; spots currant-red on basal two-thirds of each tepal; pollen moderate reddish orange. Fls 230 mm wide; tepals 110 × 45 mm, tips recurved. Lvs scattered, 170 × 70 mm, mid green. Stems 1.6 m, mid green, with 8-12 fls.

× *parkmanii* 'La Petite' VII(-/b)

Parentage: *L. × parkmanii* form × *L. × parkmanii* form  
R: M.G. Gardiner (1967), G: M.G. Gardiner (1971), I: R.J. Sinclair (1976), REG: R.J. Sinclair (1976)  
Fls white, 150 mm wide; spots small, pale lavender, on basal third of each tepal; pollen orange. Stems 0.5 m.  
(Published in *Lilies and other Liliaceae*, 1976: 91.)

× *parkmanii* Lavender Lady Group VII(-/b)

Parentage: *auratum* var. *platyphyllum* × *L. × parkmanii* 'Jillian Wallace'  
R: J.S. Yeates, N: J.S. Yeates  
Fls pure white, flushed with lavender near tepal-tips and lavender-flecked. Stems 1-1.5 m. Aug.  
(Published in *New Zealand Gardener* 1954: 528. Included in *ILR* (1982) as Lavender Lady grex.)

× *parkmanii* 'Lavender Princess' VII(b/c)

Parentage: selection from *L. × parkmanii* Lavender Lady Group  
S: J.S. Yeates (c. 1958), N: J.S. Yeates  
Fls white, with rhodonite-red (HCC 0022/3) streak 10-15 mm wide on half length of each tepal; moderately spotted erythrite-red (HCC 0027/2). Stems 1.5 m. Aug. (Feb. in Australia)  
Syn.: 'Princess'.

× *parkmanii* 'L.B. Tuffery' VII(-/c)

Parentage: *auratum* var. *pictum* × *speciosum*  
R: L.B. Tuffery (c. 1954), N: L.B. Tuffery  
Fls oxblood-red, with gold star in centre.

× *parkmanii* 'Little Jane' VII(-/b)

Parentage: *L. × parkmanii*  
R: J.S. Yeates  
Fls pure white. Dwarf.

× *parkmanii* 'Little Lavender' VII(-/b)

Parentage: *L. × parkmanii* 'Excelsior' × dwarf *auratum*  
R: J.S. Yeates (c. 1961), N: J.S. Yeates  
Fls white; spots strong purplish red (64B); nectaries green. Stems 0.4 m. Dwarf *auratum* type.

× *parkmanii* Little Rascal Group VII(b/b)

Parentage: *L. × parkmanii* Imperial Silver Group × *auratum* 'Tom Thumb'  
R: J. de Graaff (c. 1966), N: J. de Graaff, REG: Oregon Bulb Farms, Inc. (1969)  
Fls pure white, spotted maroon. Stems 0.6-1 m. July.  
(Published in *LYB* 33: 255 (1970).)

× *parkmanii* 'Little Robin' VII(-/b)

Parentage: *L. × parkmanii* 'Excelsior' × dwarf *auratum*  
R: J.S. Yeates (c. 1962), N: J.S. Yeates  
Fls light pink (49C), tepals with wide white margins and tips; spots deep red; nectaries green. Tepal-margins ruffled. Stems 0.6-1 m, strong red (53B).

× *parkmanii* 'Lorraine Laten' VII(b-c/d)

Parentage: *speciosum* var. *rubrum* × *L. × parkmanii* 'Candy Floss'

R: S.F.E. Foster (1977), G: S.F.E. Foster (1980), N: S.F.E. Foster (1985), REG: S.F.E. Foster (1983)  
Inside rhodamine-pink (HCC 527/2-527), tepal-tips and throat white; outside pink; spots bright red; nectaries light green; pollen mid brown. Fls 216 mm wide; tepals 120 × 48 mm, margins ruffled, tips strongly recurved. Lvs scattered, 144 × 48 mm, dark green. Stems 1.75 m, dark green, with 12-14 fls. Early Feb. (New Zealand).

× ***parkmanii* 'Madame Pompadour'** VII(-/b)

Parentage: *L. × parkmanii* 'Excelsior' × *L. × parkmanii* 'Red Bud'

R: W.M. Gardiner (1971), G: W.M. Gardiner (1974), N: W.M. Gardiner (1979), I: K.L. Watkins (c. 1979), REG: E.L. Gardiner (1979)

Inside strong purplish pink (61B), tips pale purplish pink (65D), throat strong yellow-green (144B); outside moderate purplish pink (65A); spots deep purplish red (61A) on basal third of each tepal; nectaries light yellow-green (145C); pollen moderate reddish brown (174A). Fls 180 mm wide; tepals 110 × 55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 160 × 65 mm, dark green. Stems 1.5-1.7 m, moderate yellow-green (137C), with c.8 fls. Jan. to Feb. (Australia).

× ***parkmanii* 'Manawatu'** VII(b/c)

Parentage: *auratum* var. *platyphyllum* × *speciosum* var. *magnificum*

R: B.S. Doak, N: B.S. Doak, I: B.S. Doak

Fls white with strong crimson flush; spots large, crimson; nectaries green. Tepal-margins ruffled. Stems 1.2 m. (Published in *LYB* 20: 72 (1957).)

× ***parkmanii* 'Margaret Selkirk'** VII(-/l)

Parentage: *speciosum* × *L. × parkmanii* 'Jillian Wallace'

R: G. Errey, N: G. Errey

No further details.

× ***parkmanii* 'Mars'** VII(-/c)

Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'

R: W.F. Doreen (1961), G: Lilies International Ltd (1965), N: Lilies International Ltd (1971), I: Lilies International Ltd (1971)

Inside strong purplish red (61B), tepal-tips and apical margins greenish white (155C), throat deep purplish red (59B); outside deep purplish pink (66C), midribs darker; spots dark red (59A); nectaries strong yellow-green (142A); pollen moderate reddish orange (171A). Fls 190 mm wide; tepals 120 × 110 mm, slightly recurved. Lvs 115 × 35 mm, mid green. Stems 0.5 m, deep yellowish green (141B), with 14-20 fls. Jan. to Feb. (New Zealand). (Published in *Lilies International Ltd Cat.*, 1972.)

× ***parkmanii* 'Mary Wallace'** VII(-/b)

Parentage: *L. × parkmanii* 'Jillian Wallace' × 'Crimson Queen'

R: R.M. Wallace (c. 1944), N: R.M. Wallace

Fls faintly opalescent, becoming pure white; spots crimson, on basal two-thirds of each tepal. (Published in *LYB* 13, figs 24, 25 (1949).)

× ***parkmanii* 'Mater's Pet'** VII(-/c)

Parentage: *speciosum* var. *rubrum* × *auratum*

R: S. Crozier (1961), G: S. Crozier (1965), N: F.S. Blake (1987), I: F.S. Blake (1987), REG: F.S. Blake (1987)

Inside vivid purplish red (57D), each tepal shading to vivid purplish red (57B) in the centre and to white on the margin, throat white; outside vivid purplish red (57D), midribs shading to deep purplish pink (66C); spots medium sized, moderate purplish red (58A); nectaries brilliant yellow-green (150A); pollen brownish orange (165B). Fls 130 mm wide; tepals 75 × 35 mm, margins ruffled, tips slightly recurved. Lvs scattered, 180 × 45 mm, mid green. Stems 1.5 m, greyish yellow-green (148C), with c.16 fls. Feb. to Mar. (Australia).

× ***parkmanii* 'Melford Red'** VII(-/l)

Parentage: red-flowered *L. × parkmanii* × red-flowered *L. × parkmanii*

R: J.S. Yeates (1963), N: J.S. Yeates (1976), I: J.S. Yeates (1976), REG: J.S. Yeates (1980)

Inside deep red (53A), tepal-tips deep red (53A), throat strong red (46A); outside moderate red (180A); spots few, darker red; nectaries moderate reddish brown (177A); pollen vivid orange (28B). Fls 170 mm wide; tepals 160 × 40-80 mm, slightly recurved. Lvs scattered, 150 × 40 mm, mid green. Stems 1.75 m, greyish reddish orange (177C), with 7-8 fls. Feb. (New Zealand).

Syn.: 'Red King'.

× ***parkmanii* 'Mirage'** VII(-/c)

Parentage: (*speciosum* × *auratum*) × *speciosum* 'Album Novum'

R: A.N. Ungerman (c. 1978), N: A.N. Ungerman

Inside white; slightly spotted pink in centre of fl. Fls up to 180 mm wide. Stems 1 m. Aug.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

× ***parkmanii* 'Miss World'** VII(-/l)

Parentage: *L. × parkmanii* Pacific Group × *auratum* var. *rubrovittatum*

R: Sakata Co. (1974), N: Sakata Co., I: Sakata Co.

(1980), REG: ICRA (1997)

Fls pink, tepals with white margins and maroon-red rays; nectaries sepia. Fls 260 mm wide, sweetly scented. Stems 1.8 m. Early.

× ***parkmanii* 'Mrs A. Waterer'** VII(-/l)

Parentage: *speciosum* var. *rubrum* × *auratum*

R: G. Thompson (pre 1870), N: G. Thompson

FCC 1870

Fls white; spots crimson.

Syn.: 'Purity'.

(Published in *Gard. Chron.*: 1060-61 (1870). Originally called 'Purity', but this epithet was changed when Thompson parted with stock to Mrs A. Waterer. 'Purity' was given the 1870 award.)

× ***parkmanii* 'Nelson Mandela'** VII(-/l)

Parentage: *auratum* × *speciosum* var. *rubrum* 'Uchida'

R: Fa P.L.A. Pouw & Zn (1980), G: Fa P.L.A. Pouw &

Zn (1982), N: Fa P.L.A. Pouw & Zn (1988), I: Fa P.L.A. Pouw & Zn (1988), REG: Fa P.L.A. Pouw & Zn (1988)  
Inside strong purplish red to strong purplish pink (63B/C), tepal-margins greenish white, midveins strong red (50A); outside strong purplish pink (63C), tepal-margins greenish white (155C); spots dark red (187B), over entire surface of each tepal; pollen strong brown (172A). Fls 250 mm wide; tepals 125 × 55 mm, margins smooth, tips not recurved. Lvs scattered, 200 × 55 mm, mid green. Stems 0.95 m, green with slight darker spots, and with 4-6 fls. July.

× ***parkmanii* Nobility Group VII(-/b)**

Parentage: *speciosum* × *auratum*  
R: J. de Graaff (c. 1962), N: J. de Graaff  
Fls very dark crimson-red, tepals edged white. Stems 1.2 m. Aug.  
(Published in *LYB* 28: 134 (1965). Included in *ILLR* (1982) as Nobility grex.)

× ***parkmanii* Opal Group VII(b/b)**

Parentage: *speciosum* × *L.* × *parkmanii* 'Beecher's Variety'  
R: G.M. Chandler (c. 1953), N: G.M. Chandler  
Fls white, spotted lilac. Stems up to 1.2 m.  
(Published in *LYB* 18: 139 (1955).)

× ***parkmanii* Opal Fire Group VII(-/l)**

Parentage: *speciosum* × *auratum*  
R: R.W. Bemis, N: R.W. Bemis, I: R.W. Bemis, REG: R.W. Bemis (1985)  
Fls pure white with a green star in the throat; anthers yellow. Fls 200-250 mm wide; tepal-margins ruffled, tips recurved.  
(Published in *Blackthorne Gardens Cat.*, 1966/67.)

× ***parkmanii* 'Orchid Blush' VII(-/l)**

Parentage: selection from *L.* × *parkmanii* Lavender Lady Group  
Inside white with a lavender flush and lavender spots.  
(Raised before 1970. Possibly of Australian origin.)

× ***parkmanii* Oriental Group VII(-/b)**

Parentage: *auratum* var. *pictum* × *speciosum*  
R: L.B. Tuffery (c. 1954), N: L.B. Tuffery  
Fls scarlet and Turkish reds.  
(Published in *Dunhampton Lily Fields Cat.*, 1954.)

× ***parkmanii* Pacific Group VII(b/b)**

Parentage: (*speciosum* × *auratum*) × *auratum*  
R: S. Abe & G. Kawata (1971), N: S. Abe & G. Kawata  
Fls a mixture of pure white, ivory white with yellow rays, deep pink with salmon rays and many maroon spots, and deep pink with red rays and maroon spots. Fls up to 250 mm wide. Stems 1.5 m. Late.

× ***parkmanii* 'Pauline Tuffery' VII(c/b)**

Parentage: *auratum* var. *platyphyllum* × *speciosum*  
R: L.B. Tuffery (pre 1948), N: L.B. Tuffery  
PC 1951  
Fls scarlet-crimson.  
(Published in *Dunhampton Lily Fields Cat.*, 1948.)

× ***parkmanii* 'Peace' VII(-/d)**

Parentage: *L.* × *parkmanii*  
R: O. Ronalds, N: O. Ronalds  
Fls white spotted with pale lavender. Fls *speciosum* type.  
Stems up to 1.5 m, with 12-20 fls.

× ***parkmanii* 'Peggy' VII(-/c)**

Parentage: *auratum* var. *platyphyllum* × *L.* × *parkmanii* 'Jillian Wallace'  
R: J.S. Yeates (c. 1952), N: J.S. Yeates  
Fls white, each tepal with a strong red (53B) ray, fading towards margin; heavily spotted with same colour. Fls 225 mm wide. Stems 1.5 m.  
(Published in *LYB* 23: 163 (1960).)

× ***parkmanii* 'Peterilla' VII(-/c)**

Parentage: *L.* × *parkmanii* 'Beecher's Variety' × *auratum* var. *pictum*  
R: A.E. Kershaw (1954), G: A.E. Kershaw (1959), N: A.E. Kershaw, REG: A.E. Kershaw (1961)  
Fls phlox-pink (HCC 625/1) above nectaries, spreading to a paler flush over white tepals. Fls open *auratum* type, 215 mm wide. Lvs *auratum* var. *platyphyllum* type. Stems 1.2 m.

× ***parkmanii* 'Peter Kershaw' VII(-/b)**

Parentage: *L.* × *parkmanii*  
R: B.G. Hayler (c. 1966), N: B.G. Hayler  
Fls deep pink. Fls large, with broad tepals. Stems 1.2 m. Feb. (Australia).

× ***parkmanii* 'Picaninny' VII(-/c)**

Parentage: *speciosum* 'Brunette' × *L.* × *parkmanii* 'Beecher's Variety'  
R: E.C. Genat (c. 1954), N: E.C. Genat  
Fls dark red with darker maroon spots; tepal-tips reflexed.

× ***parkmanii* 'Pink Beauty' VII(-/c)**

Parentage: *auratum* var. *platyphyllum* × *L.* × *parkmanii* 'Jillian Wallace'  
R: J.S. Yeates (c. 1952), N: J.S. Yeates  
Fls deep purplish pink (58D), fading to tepal-margins; spots dark. Fls up to c.265 mm wide. Stems 1.5-1.9 m. Aug.  
(Published in *Harrison Cat.*, 1956.)

× ***parkmanii* 'Pink Chandelier' VII(-/d)**

Parentage: *L.* × *parkmanii* 'Shinkanoko' × (*L.* × *parkmanii* 'Ashu' × *auratum* var. *rubrovittatum*)  
R: Sakata Co. (1971), I: Sakata Co. (1981)  
Fls light pink, 220 mm wide, sweetly scented. Stems 1-1.2 m. Late.  
(Published in *Sakata Cat.*, 1981.)

× ***parkmanii* 'Pink Delight' VII(-/b)**

Parentage: *auratum* var. *platyphyllum* × *L.* × *parkmanii* 'Jillian Wallace'  
R: J.S. Yeates (c. 1952), N: J.S. Yeates  
Fls deep yellowish pink (47C) fading to white at tepal-edges; spots present; nectaries green. Fls *auratum* type. Stems 1.2-1.9 m. Aug.  
(Published in *Harrison Cat.*, 1956.)

× ***parkmanii* 'Pink Journey'** VII(b/c)

Parentage: *L. × parkmanii* 'Journey's End' × white-flowered *L. × parkmanii* hybrid

R: J.S. Yeates, N: J.S. Yeates

Fls white, flushed with deep purplish pink (55A); spots strong purplish red (63A). An *auratum* var. *platyphyllum* type. Stems 1.5-1.9 m.

× ***parkmanii* 'Pink Opal'** VII(-/b)

Parentage: selection from *L. × parkmanii* Opal Group

S: G.M. Chandler (c. 1953), N: G.M. Chandler

Fls pink in bud, opening white, each tepal with a stripe down outside; spots pink. Stems 1-1.2 m. Feb. (Australia).

(Published in *LYB* 18: 139 (1955).)

× ***parkmanii* 'Pink Princess'** VII(b/b)

Parentage: (*auratum × speciosum*) × *speciosum* var. *rubrum* 'Uchida'

R: De Jong Lelies Beheer B.V. (pre 1974), N: De Jong Lelies Beheer B.V., REG: De Jong Lelies Beheer B.V. (1974)

Fls strong purplish red (63B), tepal-edges pink, with somewhat darker veins; spots reddish purple; anthers dark reddish orange (175B).

(Published in *Lilies and other Liliaceae*, 1975: 94.)

× ***parkmanii* 'Pink Sensation'** VII(-/b)

Parentage: *auratum* var. *platyphyllum* × *L. × parkmanii* 'Jillian Wallace'

R: J.S. Yeates (c. 1952), N: J.S. Yeates

Fls rose-opal (HCC 022), fading to white at tepal-edges; spots darker rose-pink. Tepal-margins slightly ruffled. (Published in *Harrison Cat.*, 1956.)

× ***parkmanii* 'Pink Spire'** VII(b/c)

Parentage: *auratum* × *speciosum*

R: R.E. Harrison (pre 1970), N: R.E. Harrison, I: R.E. Harrison

Fls soft rose-pink, up to 200 mm wide. Stems 1.9-2.5 m.

× ***parkmanii* Potomac Group** VII(-/d)

Parentage: (*speciosum × auratum*) × *speciosum*

R: S.L. Emsweller, N: S.L. Emsweller, I: Strawberry Hill Nursery (1952)

Fls white; papillae red-tipped, surrounded by reddish background. Fls 200-225 mm wide. Stems 1.5-1.9 m. July.

Syn.: Beltsville Group.

(Published in *Strawberry Hill Cat.*, 1952 as Beltsville Hybrids; name changed in *USDA Notice of Release and Introduction*, 1953.)

× ***parkmanii* 'Red Ace'** VII(-/c)

Parentage: *auratum* var. *platyphyllum* × *L. × parkmanii* 'Jillian Wallace'

R: J.S. Yeates (c. 1952), N: J.S. Yeates

Fls chrysanthemum-crimson (HCC 824), *auratum* type, tepals with a very narrow white margin; spots deeper crimson; nectaries white. Stems 1-1.2 m. Feb. (Australia).

× ***parkmanii* 'Red Baron'** VII(-/b)

Parentage: *L. × parkmanii* Potomac Group × (*auratum × speciosum*)

R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1973), REG: Oregon Bulb Farms, Inc. (1973)

Fls vibrant red. July to Aug.

(Published in *Lilies and other Liliaceae*, 1973/1974: 113.)

× ***parkmanii* 'Red Bud'** VII(-/b)

Parentage: (*auratum × speciosum*) × (*auratum* var. *rubrovittatum × speciosum*)

R: E.C. Genat (1954), G: E.C. Genat (1957), N: E.C. Genat, I: E.C. Genat (1963)

Inside white, centre of each tepal flushed with strong purplish red to strong to light purplish pink (63A/D) (Spiraea red HCC 025-025/3), margins narrow, white; outside of inner tepals white, midribs strong purplish red (64B) (Magenta rose HCC 027), outside of outer tepals strong purplish red (64B) (Magenta rose HCC 027) to Garnet lake (HCC 028). Fls 177-200 mm wide. Lvs to 165 × 45 mm. Stems 1.8 m, green.

× ***parkmanii* 'Red Cloud'** VII(-/l)

Parentage: *auratum* var. *platyphyllum* × *speciosum*

No further details.

× ***parkmanii* 'Red Dragon'** VII(-/b)

Parentage: *speciosum* × *auratum*

R: H.J. Strahm (1961), N: J.M. Shaver (1969), REG: (between 1969 and 1981)

Inside deep crimson-red, tepal-tips pale pink, throat white; outside wine and pale pink, tepal-margins white, wavy; spots many, crimson; nectaries yellow-green; pollen bright orange. Lvs 220 × 55 mm. Stems 1 m. Aug.

(Published in *Rex Bulb Farms Cat.*, 1969/70.)

× ***parkmanii* 'Red Fire'** VII(-/l)

Parentage: selected sport from *L. × parkmanii* 'Bonfire'

S: A. Moolenaar & Son, N: A. Moolenaar & Son, I: A. Moolenaar & Son, REG: A. Moolenaar & Son (1988)

Strong purplish pink (63C), midveins broad, strong purplish red (58B), fl-centre with broad, yellow-green, star-shaped markings; outside strong purplish pink (63C), midribs moderate red (179B); spots red on two-thirds of each tepal; papillae white, in centre of fl. Fls c.220 mm wide; outer tepals 100 × 25 mm, inner tepals 50 mm wide. Lvs scattered, 130 × 50 mm, pale green. Stems 1 m, dark, with c.7 fls.

× ***parkmanii* 'Red Fury'** VII(-/l)

Parentage: derived from *L. × parkmanii*

R: E.C. Genat, N: E. Rowe

Fls dark red; intermediate in size between *auratum* and *speciosum*.

× ***parkmanii* 'Red Gem'** VII(-/b)

Parentage: red-flowered *L. × parkmanii* × red-flowered *L. × parkmanii*

R: J.S. Yeates (c. 1965), N: J.S. Yeates

Fls strong red (53C) with white tepal-tips; heavily spotted strong red (46A). Fls *auratum* type. Stems 1.9 m.

× *parkmanii* 'Red King' VII(-/-)

Syn. of *L. × parkmanii* 'Melford Red'.

× *parkmanii* 'Red Sun' VII(-/-)

Parentage: derived from *L. × parkmanii*

R: B. Tonkin, N: B. Tonkin

Fls deep cherry-red, with white tepal-edges; anthers brown. Outer tepals twisted. Stems 1.5 m.

× *parkmanii* 'Red Trump' VII(b/c)

Parentage: pink-flowered *L. × parkmanii* × pink-flowered *L. × parkmanii*

R: J.S. Yeates (1963), N: J.S. Yeates (1976), I: J.S. Yeates (1976), REG: J.S. Yeates (1980)

Inside vivid red (46B), tepal-tips white, throat vivid red (46A); outside strong pink (48C); spots moderate red (180A) on all but tepal-tips; nectaries light yellow-green (138D); pollen strong reddish-orange (42C). Fls 170 mm wide; tepals 225 × 40-65 mm, margins slightly ruffled, tips strongly recurved. Stems 1.5 m, greyish reddish orange (177C), with 7-8 fls. Feb. (New Zealand).

× *parkmanii* 'Ringatira' VII(-/b)

Parentage: selection from *L. × parkmanii* Lavender Lady Group

S: J.S. Yeates, N: J.S. Yeates

Fls white, without rays, but spotted pale lavender.

× *parkmanii* 'Rising Star' VII(-/b)

Parentage: *auratum* var. *platyphyllum* × *L. × parkmanii* 'Jillian Wallace'

R: J.S. Yeates (c. 1952), N: J.S. Yeates

Fls strong red (51A), fading towards tepal-margins. Fls 230 mm wide, turning upwards as they open; tepals narrow. Stems 1-1.9 m.  
(The fls fade as they age.)

× *parkmanii* 'Rosovoye Utro' VII(-/b)

Parentage: (*speciosum* × *auratum*) × (*speciosum* × *auratum*)

R: A.N. Ungerman (c. 1978), N: A.N. Ungerman

Fls light pink; each tepal with a carmine ray and spots. Fls up to 240 mm wide. Stems 1.5 m. Sept.

× *parkmanii* 'Rosy' VII(-/c)

Parentage: *speciosum* × *auratum*

R: L. Woodriff (c. 1955), N: L. Woodriff

Stems 1.2 m. Late Aug.

(Published in *Woodriff Cat.*, 1958.)

× *parkmanii* 'Rosy Dimple' VII(a/b)

Parentage: white-flowered *L. × parkmanii* Little Rascal Group × pink-flowered *L. × parkmanii* Little Rascal Group

R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2004)

Inside with inner tepals yellowish white (155D), dark purplish pink (186C) along apical two-thirds of

midveins, basal third light greenish yellow (6D), outer tepals with basal half yellowish white (155D), apical half deep purplish pink (70C), yellowish white (155D) towards margins, up to a third along midveins (6C), throat yellowish white (155D); outside with outer tepals yellowish white (155D), along apical two-thirds of midribs moderate purplish pink (186D), base and top of midribs strong yellow-green (144C), in between light greenish yellow (1C), inner tepals similar but less purplish pink; spots strong purplish red (61B); papillae yellowish white (155D) and light greenish yellow (6D); nectaries strong yellow-green (144C); pollen strong orange (169C); stigma pale green (189C). Fls 100-140 × 33-44 mm, margins ruffled, tips recurved. Lvs scattered, 110 × 32 mm. Stems 0.4-0.65 m, green, with 13-15 fls.

× *parkmanii* 'Rosy Morn' VII(-/c)

Parentage: derived from *L. × parkmanii*

Fls rose-red, paling to tepal-edges; nectaries green. Fls 250 mm wide. Stems 1.9 m, with up to 30 fls.  
(Raised in New Zealand.)

× *parkmanii* Rosy Treasures Group VII(-/b)

Parentage: *auratum* × *speciosum*

R: Strahm Bulb Farm (pre 1982), N: Strahm Bulb Farm

Fls in various shades of pink. July to Aug.

× *parkmanii* 'Royal Salute' VII(-/-)

Parentage: *auratum* var. *pictum* × *speciosum*

R: L.B. Tuffery (c. 1952), N: L.B. Tuffery

Fls carmine lake; nectaries green, edged with gold. Tepals broad.

× *parkmanii* 'Ruud' VII(b/b-c)

Parentage: *L. × parkmanii* Little Rascal Group × *L. × parkmanii* Little Rascal Group

R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1982), N: Gebr. Mak B.V. (1988), I: Gebr. Mak B.V. (1988), REG: Gebr. Mak B.V. (1989)

Fls yellowish to greenish white (155B/C), midveins vivid to brilliant yellow (9C/D), throat strong yellow-green (143C); outside yellowish white (155B), midribs flushed with brilliant greenish yellow (1B); spots moderate to greyish red (182A/B), on basal half of outer tepals; pollen strong reddish orange (169C). Fls 180 mm wide; tepals 90 × 55 mm, margins of inner tepal smooth, of outer tepals slightly wavy, tips not recurved. Lvs scattered, 85 × 30 mm, mid green. Stems 0.3 m, green, with c.5-7 fls. Aug.

× *parkmanii* 'Saku Akaka' VII(-/-)

Parentage: *auratum* var. *platyphyllum* × *speciosum*

R: H. Myodo (pre 1977), N: H. Myodo

Fls red on a white ground.

× *parkmanii* 'Salmon Jewels' VII(-/c)

Parentage: *speciosum* × *auratum*

R: H.J. Strahm (1961), N: H.J. Strahm (1967), REG: Strahm's Lilies, Inc. (between 1970 and 1981)

Inside salmon and pink, throat chartreuse and white; outside old rose and white, midribs darker; spots very

small, vermilion, around fl. centre; nectaries green; pollen orange. Tepal-margins slightly ruffled. Lvs 250 × 60 mm. Stems 1.2-1.5 m. Aug.

Syn.: 'Pink Gold'.

(Published in *Rex Bulb Farms Cat.*, July 1969.)

× ***parkmanii* 'Sam'** VII(b/c)

Parentage: *L. × parkmanii* Little Rascal Group × *L. × parkmanii* Little Rascal Group

R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1982), N: Gebr. Mak B.V. (1988), I: Gebr. Mak B.V. (1988), REG: Gebr. Mak B.V. (1989)

AGM 2002

Inside strong purplish red (59D), tepals edged yellowish white (155D) and flamed strong red (53B), throat strong yellow-green (145A), edged brilliant yellow to light greenish yellow (8A/B); outside yellowish white, midribs light greenish yellow to pale yellow (8C/D); spots big, strong purplish red (59D), on all except tip of tepals; papillae few, dark red (187A); pollen light yellowish pink (27A/B). Fls 175 mm wide; tepals 80 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 50 mm, mid green. Stems 0.29 m, green, with 2-5 fls. Aug.

× ***parkmanii* 'Sanguine'** VII(b-c/b)

Parentage: *auratum* × *speciosum*

R: G.M. Chandler (1950s), N: G.M. Chandler

Fls uniform dark red apart from distinct white tepal-edges; spots on basal three-quarters of each tepal. Fls 200 mm wide; tepal-margins very ruffled, tips strongly recurved. Stems 1.2 m.

× ***parkmanii* 'Sarmite'** VII(-c)

Parentage: derived from repeated crossings between *auratum* & *speciosum*

R: K. Zeltans (pre 1983), N: K. Zeltans

Inside Bengal Rose (HCC 25/2), tepals deeper in middle with wide white margins; outside pale pink; spots carmine; nectaries pale green; pollen brown. Fls 200 mm wide. Lvs 130 × 45 mm. Stems 1-1.5 m, pale green. Late Aug. to Sept.

× ***parkmanii* 'Scarlet Pimpernel'** VII(-c)

Parentage: *L. × parkmanii*

N: Springfields, I: Springfields

Fls dark pink-red, tepal-tips and narrow margins white; spots present. Stems 1-1.2 m, with 6-8 fls.

× ***parkmanii* 'Seaspray'** VII(-/-)

Parentage: selection from *L. × parkmanii*

R: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1976)

Fls *auratum* type, pure white with a few lavender spots. Stems 0.75 m. Feb. (Australia).

× ***parkmanii* 'Sharon Lee'** VII(b/b)

Parentage: derived from *L. × parkmanii*

R: B.G. Hayler (c. 1965), N: B.G. Hayler

Tepals white flushed with light pink, each with a broad red ray; spots dark, on basal two-thirds of each tepal. Tepal-margins smooth, tips recurved. Stems 1.4 m. An *auratum* type.

× ***parkmanii* 'Sheba'** VI(b/b)

Parentage: *L. × parkmanii* 'Jillian Wallace' × 'Crimson Queen'

R: R.J. Platt (c. 1955), N: R.J. Platt

PC 1955

(Published in *LYB* 19: 147 (1956), without description. Grown from seed ex C.E. Smith, 1955. No further details.)

× ***parkmanii* 'Shinkanoko'** VII(-/-)

Parentage: *speciosum* × *auratum* var. *platyphyllum*

(Grown in Japan pre 1971.)

× ***parkmanii* 'Silver Elf'** VII(-/b)

Parentage: *L. × parkmanii* Little Rascal Group × *L. × parkmanii* Little Rascal Group

R: Fairdale Nursery, N: Fairdale Nursery (1991), REG: Van der Salm Bulb Farm, Inc. (1992)

Inside pure white with a lime-green throat; outside pure white suffused with green; spots absent. Stems short.

× ***parkmanii* 'Simanohikari'** VII(b/c)

Parentage: *auratum* var. *platyphyllum* × an early flowering form of *speciosum*

R: H. Ikeda (1962), G: H. Ikeda (1968), N: H. Ikeda (1986), REG: H. Ikeda (1986)

Inside light purplish pink (62C), tepal-tips and apical edges white, throat moderate purplish pink (62B); outside moderate purplish pink (62B); spots numerous, strong purplish red (60D) on the coloured part of each tepal; nectaries green; pollen reddish brown. Fls 200 mm wide; tepals 120-170 × 30-79 mm, margins ruffled, tips recurved. Lvs scattered, 160-200 × 30-39 mm, dark green. Stems 0.75-0.99 m, green (dark green above and below), with an average of 4.3 fls.

× ***parkmanii* 'Snowdrift'** VII(-/c)

Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'

R: W.F. Doreen (1961), G: Lilies International Ltd (1965), N: Lilies International Ltd (1971), I: Lilies International Ltd (1971)

Fls greenish white (155C) throughout, slightly purple on midribs at base; spots absent; nectaries strong yellow-green (145A); pollen moderate reddish orange (171A). Fls 250 mm wide; tepals 120 × 60 mm, slightly recurved. Lvs 140 × 50 mm, dark green. Stems 1 m, moderate olive-green (146A), with c.14 fls. Jan. to Feb. (New Zealand).

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Lilies International Ltd Cat.*, 1971.)

× ***parkmanii* 'Snowflakes'** VII(b-c/b)

Parentage: selection from *L. × parkmanii* Lavender Lady Group

S: J.S. Yeates (c. 1958), N: J.S. Yeates

Fls white, slightly flecked with erythrite-red (HCC 0027/2); papillae white; nectaries greenish; pollen dark red. Fls 200 mm wide.

× *parkmanii* 'Snowy' VII(-/c)

Parentage: *auratum* var. *platyphyllum* × *L. × parkmanii*  
R: J.S. Yeates (1963), N: J.S. Yeates, I: J.S. Yeates, REG: J.S. Yeates (between 1963 and 1969)  
Inside and outside yellowish white (155D); midribs light yellow-green (145C); spots absent; papillae yellowish white; nectaries light green (142A); pollen vivid reddish orange (33B). Fls 180 mm wide; tepals 120 mm long, margins slightly ruffled, tips slightly recurved. Lvs 110 × 30-50 mm, mid green. Stems 1 m, greyish reddish orange (177C), with 5-6 fls. Feb. (New Zealand).

× *parkmanii* 'Solar Eclipse' VII(-/b)

Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'  
R: W.F. Doreen (1961), G: Lilies International Ltd (1965), N: Lilies International Ltd (1970), I: Lilies International Ltd (1970), REG: Lilies International Ltd (1980)  
Inside greenish white (155C), with pale red flush spreading from midribs, throat light greenish yellow (8B); outside greenish white (155C); spots strong red (53C); nectaries strong yellow-green (145A); pollen moderate reddish orange (171A). Fls 200 mm wide; tepals 100 × 70 mm, slightly recurved. Lvs 100 × 30 mm, mid green. Stems 1 m, moderate olive-green (147A), with c.12 fls. Jan. to Feb. (New Zealand).  
(Published in *Lilies International Ltd Cat.*, 1971.)

× *parkmanii* Southern Lights Group VII(b-c/c-d)

Parentage: *speciosum* × *auratum*  
R: E.C. Genat, N: E.C. Genat  
Fls in pinks and whites; spots lavender; *speciosum* type. Stems c. 1.8 m.  
(Published in *ILR* (1982) as Southern Lights grex.)

× *parkmanii* 'Spectatious' VII(-/b)

Parentage: derived from *L. × parkmanii*  
R: E.B. Hamilton, N: E.B. Hamilton  
Fls *speciosum* type.

× *parkmanii* 'Spectre Beauty' VII(-/c)

Parentage: *speciosum* 'Clio' × *L. × parkmanii* 'Beecher's Variety'  
R: G.M. Chandler, N: G.M. Chandler  
Fls crimson, shading to pink. Tepals slightly reflexed.  
(Published in *LYB* 18: 139 (1955).)

× *parkmanii* Spectre Group VII(-/c)

Parentage: *speciosum* varieties × *L. × parkmanii* 'Beecher's Variety'  
R: G.M. Chandler (c. 1953), N: G.M. Chandler  
Fls pale to deep pink. Stems 1.2 m.  
(Published in *LYB* 18: 139 (1955). Included in *ILR* (1982) as Spectre grex.)

× *parkmanii* 'Spectre Hy-lite' VII(-/c)

Parentage: selection from *L. × parkmanii* Spectre Group  
S: G.M. Chandler (1953-1958), N: G.M. Chandler  
No further details.

× *parkmanii* 'Sprite' VII(-/d)

Parentage: selection from *L. × parkmanii* Jamboree Group  
S: J. de Graaff (c. 1963), N: J. de Graaff  
Each tepal with currant-red (HCC 821/3) centre, margins china-rose (HCC 024/2), edges chalk-white; outside dawn-pink (HCC 523/3).

× *parkmanii* 'Star of Bethlehem' VII(-/)

Parentage: *L. × parkmanii*  
R: O. Ronalds (c. 1940s), N: O. Ronalds  
Fls white, spots pink. Stems 1.5 m.

× *parkmanii* 'Stowport Candy' VII(b/b)

Parentage: (*L. × parkmanii* 'Red Sun' × *auratum*) × (*L. × parkmanii* 'Wildfire' × *auratum* 'Valley Opal')  
G: L.C. Bligh (2000), N: L.C. Bligh (2004), REG: L.C. Bligh (2004)  
Inside at first pale purplish pink (65C), darkening to deep purplish pink (70C), each tepal with a strong purplish pink (63A) ray; outside pale purplish pink (65C); papillae red; nectaries green; pollen golden brown. Fls 215 mm wide, slightly scented; tepals 120 × 57 mm, margins smooth, tips slightly recurved. Lvs scattered, 154 × 55 mm. Stems 1.46 m, brown/green, with c.10 fls. Early Feb. (Tasmania).

× *parkmanii* 'Summer Dress' VII(-/d)

Parentage: selection from *speciosum* × (*L. × parkmanii* 'Ashu' × *auratum* var. *rubrovittatum*)  
R: Sakata Co. (1971), I: Sakata Co. (1977)  
Fls pink, each tepal with white margins and a rosy red ray. Fls 200 mm wide, strongly scented. Stems 1.8-2 m. Late.  
(Published in *Sakata Cat.*, 1977.)

× *parkmanii* 'Sunday Best' VII(-/c)

Parentage: (*speciosum* × *auratum*) × *auratum*  
R: J. de Graaff (c. 1962), N: J. de Graaff  
Fls large, white, each tepal with a wide crimson ray. Nectaries golden yellow. Stems 1.5-1.9 m. Aug.

× *parkmanii* 'Suzanne Summerville' VII(-/)

Parentage: *auratum* × *speciosum* var. *kraetzerei*  
R: G.O. Payne (c. 1954), N: G.O. Payne  
Fls white with pale shell-pink spots and small lavender blotches.

× *parkmanii* 'Sylvia Holloway' VII(-/c)

Parentage: *L. × parkmanii* 'White Opal' × 'Crimson Queen'  
R: R.P. Holloway (1956), G: R.P. Holloway (1958), REG: R.P. Holloway (1960)  
Inside white with a faint lavender flush; heavily spotted with lavender. Fls 250 mm wide; tepals broad, tips reflexed. Lvs *auratum* type. Stems 1.2 m.

× *parkmanii* 'Tainui' VII(-/c-d)

Parentage: *L. × parkmanii*  
R: W.A. Christensen, N: W.A. Christensen  
Fls deep crimson, tepal-tips and margins white. Fls *speciosum* type. Stems 1.5 m.

× ***parkmanii* 'Temptation Group' VII(-/d)**  
Parentage: *L. × parkmanii* Potomac Group × (*auratum × speciosum*)  
R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1971), REG: Oregon Bulb Farms, Inc. (1969)  
Fls very light purple (75C). Stems 1.5 m. Aug.  
(Published in *LYB* 33: 257 (1970). Included in *ILR* (1982) as Temptation grex.)

× ***parkmanii* 'Tera' VII(b/c-d)**  
Parentage: *speciosum* 'Rose Mist' × *L. × parkmanii* 'Beecher's Variety'  
R: E.C. Genat, N: E.C. Genat (1959), I: E.C. Genat (1959)  
Inside white; outside ridged with purple; spots maroon, in centre. Fls 115-125 mm wide, *speciosum* type. Stems 0.8 m.

× ***parkmanii* 'Terlos' VII(b/c-d)**  
Parentage: *speciosum* 'Rose Mist' × *L. × parkmanii* 'Beecher's Variety'  
R: E.C. Genat, N: E.C. Genat (1959), I: E.C. Genat (1959)  
Inside rose-pink on white, tepal-tips white, centre with maroon spots. Fls 115-125 mm wide, *speciosum* type. Stems 0.6-0.8 m.

× ***parkmanii* 'Tetra Journey' VII(b/c)**  
Parentage: 'Phillipa' × *speciosum* 'Gilrey'  
R: J.S. Yeates (1971), N: J.S. Yeates, I: J.S. Yeates, REG: J.S. Yeates (1980)  
Tepals strong purplish red (58B), tips pale purplish pink (62D); spots moderate purplish red (58A) but less heavily than in *L. × parkmanii* 'Journey's End'; nectaries dark red (59A); pollen strong reddish orange (42C). Fls 230 mm wide; tepals 140 × 30-60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 55 mm, mid green. Stems 2 m, dark greyish reddish brown (200A), with 7-8 fls. Feb. (New Zealand).  
Syn.: 'Tetra Journey's End'.  
(Colchicine-treated *L. × parkmanii* 'Journey's End', 1971. The seed parent (given as 'Darkie' in *ILR* (1982)) was corrected by the raiser.)

× ***parkmanii* 'Texel' VII(-/b)**  
Parentage: *speciosum* × *auratum*  
R: J.S. Dijt (pre 1972), N: J.S. Dijt, REG: J.S. Dijt (1972)  
Fls moderate purplish pink (66D), veined with chrysanthemum-red, tepals edged white; spotted with rusty brown.  
(Published in *Lilies and other Liliaceae*, 1973/1974: 112.)

× ***parkmanii* 'Tiger Face' VII(-/c)**  
Parentage: selection from *L. × parkmanii* Lavender Lady Group  
S: J.S. Yeates (c. 1957), N: J.S. Yeates  
Fls white, heavily flecked with erythrite-red (HCC 0027/1); nectaries green. Fls up to 250 mm wide, *auratum* type, with broad tepals.

× ***parkmanii* 'Tiki' VII(-/c)**  
Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'  
R: W.F. Doreen (1961), G: Lilies International Ltd (1965), N: Lilies International Ltd (1971), I: Lilies International Ltd (1971), REG: Lilies International Ltd (1980)  
Inside deep purplish red (187D), tepal-tips greenish white (155C), throat dark red (187C); outside moderate purplish red (185C) fading slightly towards margin; lightly spotted dark red (187B); nectaries dark red (187A); pollen moderate reddish orange (171A). Fls 170 mm wide; tepals 120 × 70 mm, slightly recurved. Lvs 140 × 40 mm, dark green. Stems 1 m, dark yellowish green (136B), with c.14 fls. Jan. to Feb. (New Zealand).  
(Published in *Lilies International Ltd Cat.*, 1972.)

× ***parkmanii* 'Tin Hinan' VII(b/c)**  
Parentage: white-flowered *auratum* × white-flowered *speciosum*  
R: I. Wiesner (1989), N: I. Wiesner, REG: I. Wiesner (1989)  
Inside snow-white; outside with dark purple midribs on a greenish ground; spots crimson, medium sized, on a third of each tepal; papillae numerous, in the throat; nectaries green; pollen red-brown; stigma dark purple. Fls 150-160 mm wide; tepals 88 × 32 mm, edges slightly waved, tips slightly recurved and twisted; pedicels 90 mm long. Lvs broad. Stems 0.7-0.8 m, brownish at base, with 4-5 fls. Bulbs white with purple stripes. Early Sept.

× ***parkmanii* 'Trixie' VII(-/c)**  
Parentage: selection from *L. × parkmanii* Lavender Lady Group  
S: J.S. Yeates (c. 1956), N: J.S. Yeates  
Fls white, flecked with erythrite-red (HCC 0027/1); nectaries green. Fls *auratum* type, up to 200 mm wide, with broad tepals. Stems up to 1 m.  
(Published in *Harrison Cat.*, 1956.)

Parentage: *L. × parkmanii* 'Wildfire' × *auratum* var. *platyphyllum*  
R: J. Hoell (1978), G: J. Hoell (1982), N: J. Hoell (1988), REG: J. Hoell (1988)  
Inside strong red (53B) with more-or-less yellowish white (155D) tepal-tips and edges; outside strong red (53C); spots vivid purplish red (66A) on all but the tip of each tepal; nectaries green-yellow; pollen orange. Fls 220 mm wide, scented; tepals 120 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 230 × 40 mm, mid green. Stems 1.8 m, dark green, with 15-16 fls. Jan. (Australia).

× ***parkmanii* 'Valley Sundust' VII(b-c/b)**

Parentage: *L. × parkmanii* 'Jillian Wallace' × *auratum* var. *platyphyllum*

R: J. Hoell (1971), G: J. Hoell (1975), N: J. Hoell (1988), REG: J. Hoell (1988)

Inside pinkish, tepal-tips white, throat vivid reddish orange (32A); outside pale yellow-green (157A); spots strong red (53B) in the throat; nectaries green; pollen vivid reddish orange (34A). Fls 160 mm wide, slightly scented; tepals 100 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 240 × 35 mm, mid green. Stems 1.8 m, green streaked with bronze, with 18-20 fls. Jan. (Australia).

× ***parkmanii* 'Venus' VII(-/b)**

Parentage: *auratum* var. *platyphyllum* × *speciosum* 'Gilrey'

R: W.F. Doreen (1961), G: Lilies International Ltd (1965), N: Lilies International Ltd (1971), I: Lilies International Ltd (1971), REG: Lilies International Ltd (1980)

Inside dark maroon, tepal-tips and margins yellowish white (155B), throat deep purplish red (59B); outside greenish white (155C); spots dark red (59A) only on outer edges of dark part of tepals; nectaries brilliant yellowish green (140B); pollen moderate reddish orange (171A). Fls 180 mm wide; tepals 110 × 55 mm, margins slightly ruffled, tips slightly recurved. Lvs 120 × 40 mm, mid green. Stems 0.5 m, deep yellowish green (141A), with 14-20 fls. Jan. to Feb. (New Zealand).

(Published in *Lilies International Ltd Cat.*, 1972.)

× ***parkmanii* 'Volga' VII(-/c)**

Parentage: *speciosum* × *auratum*

R: A.N. Ungerman (c. 1978), N: A.N. Ungerman

Tepals white, with wide, diffused yellow rays. Fls up to 240 mm wide. Stems 1 m. Aug.

× ***parkmanii* 'Warrior' VII(-/l)**

Parentage: *speciosum* × *auratum*

R: R.H. Ashcroft, N: R.H. Ashcroft

Fls white flushed with crimson, each tepal with a broad, deep crimson ray; spots deeper crimson.

(Published in *LYB* 11: 117 (1947).)

× ***parkmanii* 'Wedding Dress' VII(-/c)**

Parentage: *L. × parkmanii* 'Excelsior' × *L. × parkmanii* Pacific Group

R: Sakata Co. (1972), I: Sakata Co. (1981)

Fls pure white; spots absent. Fls 250 mm wide, sweetly scented. Stems 1.5 m. Midseason.

(Published in *Sakata Cat.*, 1981.)

× ***parkmanii* 'Wedding March' VII(b/b-c)**

Parentage: *L. × parkmanii* 'Journey's End' × *auratum*

R: Sakata Co. (1967), G: Sakata Co., N: Sakata Co. (1985), I: Sakata Co., REG: ICRA (1998)

Tepals white, each with an apricot ray which is itself banded with red; spots red, numerous, large, on a white ground; nectaries green; pollen orange-red; stigma pale purple. Fls 230 mm wide; tepal-margins slightly waved, tips strongly recurved. Stems 1.2 m, with 6-10 fls (from 23 cm bulbs).

× ***parkmanii* 'White Jamboree' VII(-/c)**

Parentage: selection from *L. × parkmanii* Jamboree Group  
R: J. de Graaff, N: J. de Graaff

Fls white, unspotted. Stems 1.5-1.9 m. Aug.

(The entry in *ILR* (1982) mentions that 'White Jamboree' may be a synonym of 'Everest' (as these lilies were then known). No cv. named 'Everest' is known, and the parentage of *L. × parkmanii* 'White Jamboree' precludes it from being synonymous with *L. × parkmanii* Everest Group. Indeed, its selection from pink- and red-flowered *L. × parkmanii* Jamboree Group (Div. VII(-/d) also seems unlikely unless it is an unexpected albino. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 49 (1978).)

× ***parkmanii* 'White Jamboree Group' VII(-/c)**

Parentage: *L. × parkmanii* 'Allegra' × *L. × parkmanii* 'Evening'

R: Oregon Bulb Farms, Inc. (1958), N: Oregon Bulb Farms, Inc. (1961), I: Oregon Bulb Farms, Inc. (1961), REG: North American Lily Society (1984)

Inside white, throat lime-green; some with purplish coloration outside; some with raised lavender spots; nectaries green; pollen brown. Tepals 120 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 110 × 40 mm, dark green. Stems 1.5-1.9 m, green, with 5-30 fls. Aug.

(Inadvertently omitted from *ILR Supplements*.)

× ***parkmanii* 'White Opal' VII(-/c)**

Parentage: selection from *L. × parkmanii* Opal Group

S: G.M. Chandler (c. 1953), N: G.M. Chandler

Fls white; spots pale lilac. Fls 100 mm wide. Stems with up to 30 fls.

(Published in *LYB* 18: 139 (1955).)

× ***parkmanii* 'White Star' VII(-/c)**

Parentage: pink-flowered *L. × parkmanii* × pink-flowered *L. × parkmanii*

R: J.S. Yeates (1963), N: J.S. Yeates, I: J.S. Yeates, REG: J.S. Yeates (1980)

Inside yellowish white (155D), throat moderate yellow-green (145D); outside yellowish white (155D), midribs brilliant yellow-green (154C); papillae few, white; nectaries strong yellow-green (142A); pollen vivid yellowish orange (30C). Fls 230 mm wide; tepals 150 × 35-55 mm, margins slightly ruffled, tips slightly reflexed. Lvs 130 × 50 mm, mid green. Stems 2 m, brownish orange (165B), with 6-7 fls. Feb. (New Zealand).

(There are two cvs with the epithet 'White Star', but this later one has been selected by the ICRA as accepted (ICNCP, 2004: Art. 26.3).)

× ***parkmanii* 'Wildfire' VII(b-c/c)**

Parentage: *L. × parkmanii* 'Beecher's Variety' × *auratum* var. *rubrovittatum*

R: E.C. Genat (1953), G: E.C. Genat (1956), N: E.C. Genat, REG: E.C. Genat (1961)

Inside white, each tepal with deep purplish red (59B) ray and purplish red spots. Fls 140 mm wide; tepals sharply reflexed in apical third. Stems 1.5-1.9 m, with up to 20 fls.

× ***parkmanii*** ‘Will’ VII(b/c)

Parentage: *L.* × *parkmanii* ‘Journey’s End’ × *L.* ×

*parkmanii* Imperial Silver Group

R: D.K. Kölli (1984), G: D.K. Kölli (1988), N: D.K.

Kölli (1993), REG: D.K. Kölli (1994)

Inside deep rose-pink, the colour suffusing almost to the tepal-edges, leaving a white margin in the apical half of each tepal and white tips, a very narrow, darker pink margin in the basal half of each tepal and a deeper pink ray, throat white or very light pink, surrounding an icy green nectary-star; strongly and coarsely spotted with dark maroon-red, spots coalescing into short lines; pollen rust-red. Fls 202 mm wide, with a *speciosum*-like scent; tepals 126 × 50 mm, margins slightly ruffled, 2 basal tepals more-or-less spreading, the apical 4 reflexed; pedicels long. Lvs scattered, up to 172 × 41 mm, pale to mid green. Stems 1.25 m, pale grey-green, with c.15 fls (including secondaries). Early to late Aug.

‘**Parma**’ I(a/-)

Parentage: ‘Amsterdam’ × seedling OR 568

R: Vletter & Den Haan, G: Vletter & Den Haan (1983),

N: Vletter & Den Haan (1988), I: Vletter & Den Haan

(1991), REG: Vletter & Den Haan (1991)

Inside brilliant greenish yellow (6B), throat strong yellow-green (143C), somewhat hairy; outside brilliant greenish yellow (6C), the outer tepals suffused with brilliant to light yellow (11A/B), midribs strong yellow-green (144C); spots absent; nectaries spotted moderate purplish red (58A); pollen dark reddish orange (175C). Fls 170 mm wide; tepals 80 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 0.75 m, green with darker markings, and with c.6 fls. June to July (under glass).

‘**Paros**’ I(b/-)

Parentage: ‘Kirschstern’ × ‘Tihowa’

R: V. Strasser (1974), G: V. Strasser (1976), N: V. Strasser

(1978), I: V. Strasser (1981), REG: V. Strasser (1986)

Fls red, throat orange; spots purple, on three-quarters of each tepal; nectaries orange-red; pollen orange. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.3 m, brownish green, with up to 40 fls. June to July.

‘**Parranda**’ VII(a-b/-)

Parentage: unnamed seedling × unnamed seedling

R: Peacock B.V. & Imanse Lelieveredeling B.V.

(1993), G: Peacock B.V., N: Peacock B.V. & Imanse

Lelieveredeling B.V. (1996), I: Peacock B.V. & Imanse

Lelieveredeling B.V. (1996), REG: Peacock B.V. (1997)

Inside strong purplish red (60D) on a yellowish white (155D) ground, throat yellowish white (155D); outside yellowish white (155D), midribs light yellow-green (143A) towards top, with a little strong yellow-green (144B) at base; spots yellowish white (155B), papillae yellowish white (155B) in the throat; nectaries strong yellow-green (144B); pollen dark reddish orange (175C); stigma yellowish grey (156B). Fls 210 mm wide; tepals 110 × 40-60 mm, margins ruffled, tips strongly recurved.

Lvs scattered, 160 × 40 mm, mid green. Stems 1 m, green, with c.8 fls. Midseason.

***parryi*** S. Watson IX(b-c/a)

Fls yellow, sometimes with deep red or brown spots; pollen brownish orange. Fls fragrant; tepals 70-100 × 8-12 mm, narrowed to claw at base, tips recurved. Lvs mostly scattered, sometimes with 1 or more whorls towards base of stem, 80-150 × 5-23 mm, pale green. Stems to 2 m, with c.12(-50) fls. SW USA (S California, S Arizona).

***parryi*** var. ***kessleri*** Davidson IX(b-c/a)

Differs from *parryi* itself in having broader lvs, shorter anthers and longer style. The fls are a more open trumpet. (M.W. Skinner in *Flora of North America* 26: 191 (2002) considers that this variety is synonymous with *parryi*.)

var. ***partheneion*** IX(a/c)

See *concolor* var. *partheneion*.

‘**Parthenon**’ VI(-/a)

Parentage unknown

R: C. Feldmaier (c. 1966), N: C. Feldmaier

Inside white; outside greenish.

‘**Partner**’ I(a/b)

Parentage: (‘Cinnabar’ (Div. I) × ‘Charisma’) × ((‘Connecticut King’ × ‘Red Carpet’) × (‘Pirate’ × Sundrop Group))

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside moderate red/vivid reddish orange (179A/42A), tepal-edges paler, throat close to strong reddish orange (42C); outside close to vivid reddish orange (34A/B); spots dark greyish reddish brown (200A), on basal part of each tepal; papillae few, in the throat (coloured as tepals); nectaries close to strong reddish orange (42C); pollen greyish red (178A); stigma dark red (187A). Fls 160 mm wide; tepals 75 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 12.5 mm, green. Stems 0.55-0.75 m, pale green with darker markings, and with c.8-10 fls. Early.

‘**Partnerka**’ I(a/b)

Parentage: (‘Moon Shadow’ × (‘Koral’ × (‘Mirabel’ × unknown))) × (‘Koral’ × ((‘Mirabel’ × unknown) × ((‘Mohykán’ × unknown) × (‘Rusalka’ (of Mičulka) × unknown))))

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside whitish with beige tint, centre of tepals apricot, throat whitish; outside with greenish and brownish midribs; brushmarks red-brown, not prominent; spots dark brown, on a quarter of each tepal; papillae many, in the throat; nectaries green, white-granulated; filaments whitish; pollen apricot-brown; style brown; stigma dark violet-brown. Fls 95 mm wide; tepals 70 × 31 mm, parts of margins rolled back, tips slightly recurved; pedicels 70

mm, with small brown dots. Lvs scattered, 70 × 13 mm, dull yellowish green. Stems 0.75 m, thick, with small brown dots. Late May.

**‘Party Diamond’ VIII(a/b)**

Parentage: mixed Asiatics × mixed Asiatic pollen  
R: De Jong Lelies Holland B.V. (1997), G: De Jong Lelies Holland B.V. (1999), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2003), REG: De Jong Lelies Holland B.V. (2003)

Inside light purple (75B), ageing to very pale purple (69D), each tepal with white spot at base, throat brilliant yellow-green (142B); outside very pale purple (69B), midribs moderate yellow-green (147D); spots deep purplish red (71A), few; papillae absent; nectaries strong yellow-green (143C); pollen strong orange (25A); stigma light yellow-green (154D). Fls 195 mm, slightly fragrant; tepals 125 × 65 mm, margins smooth, tips slightly recurved. Lvs 165 × 19 mm. Stems 0.9-1.3 m, green with darker markings, with c.8 fls. Late June to July. (A *longiflorum*/Asiatic (LA) hybrid.)

**‘Party Dress’ I(c/d)**

Parentage: yellow-flowered *dauidii* var. *willmottiae* × (‘Edith Cecilia’ × ‘Nubian’)

R: L. Lutz (c. 1965), N: L. Lutz

Fls white, tepal-edges lemon-white; lightly spotted with grey. Stems 1 m. June.

**‘Party Time’ VIII(a-b/b)**

Parentage: white-flowered Asiatic seedling × (*longiflorum* × ‘Aristo’)

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1996), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside each tepal with basal part pale yellow (20C), paling towards tip, throat light greenish yellow (4C) along nectaries; outside pale yellow (20C), midribs strong yellow-green (143C) shading upwards, but 143C towards top and tipped moderate reddish brown (175A); the basal part with dark red (187A) spots and with pale yellow (20C) papillae in the throat; nectaries pale yellow (20C); pollen strong brown (172A); stigma moderate orange-yellow (165C). Fls 210 mm wide; tepals 110 × 40-50 mm, margins smooth or slightly wavy, tips recurved. Lvs scattered, 180 × 15 mm, mid green. Stems 0.9 m, pale green, with c.4 fls. June.

(A *longiflorum*/Asiatic (LA) hybrid.)

***parvum* Kellogg IX(a-b/a)**

Fls golden yellow, through orange to red or crimson, usually heavily spotted with dark red or purple towards base; pollen yellowish to orange. Fls c.40 mm wide; tepal-tips slightly recurved. Lvs in whorls of 7-10, sometimes scattered, 50-125 × 5-30 mm. Stems to 2 m or more, with up to 30 fls. June to July. W USA (SE Oregon to California).

(Variants with pink or cerise fls have been given the name var. *hallidayi*, but neither the authority for this name nor the legitimate publication has been traced.)

***parvum* var. *crocatum* Stearn IX(a-b/a)**

AM 1932

Fls orange-yellow with fine, crimson spots in throat.

Syn.: *parvum* var. *luteum*.

(M.W. Skinner in *Flora of North America* 26: 188 (2002) considers that this variety is synonymous with *parvum*.)

***parvum* var. *luteum* hort. ex Purdy IX(a-b/a)**

Syn. of *parvum* var. *crocatum*.

**‘Pasa Dena’ I(a/-)**

Parentage: seedling OR 933 × ‘Avignon’

R: Vletter & Den Haan, N: Vletter & Den Haan, REG: Vletter & Den Haan (1994)

Inside vivid reddish orange/vivid orange (30A/28A), throat light orange (29B); outside strong reddish orange (31A/B), shading to vivid reddish orange (32A) at tepal-edges; spots few, dark red (187A), in the throat; pollen strong reddish orange (169A); stigma dark red (187B). Fls 175 mm wide; tepals 95 × 50 mm. Lvs scattered, 105 × 15 mm, pale green. Stems 1 m, pale green with much darker marking, and with c.6 fls.

(Registered as ‘Pasadena’, but in 1991 was granted Dutch PBR (LEL 694) as ‘Pasa Dena’ so this latter form of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Pasadena’ I(a/-)**

See ‘Pasa Dena’.

**‘Pasa Doble’ VII(b/b)**

Syn. of ‘Paso Doble’.

**‘Pascal’ I(a/-)**

Parentage: ‘Sterling Star’ × ‘Sunrise’

R: Gebr. Mak B.V. (1978), G: Gebr. Mak B.V. (1980), N: Gebr. Mak B.V. (1982), I: Gebr. Mak B.V. (1984), REG: Gebr. Mak B.V. (1988)

Inside strong pink (52D), blotched brilliant yellow (11A) with a pink flush, tepal-tips pink, throat yellow/pink; outside flamed deep pink (51C) on an orange-buff ground; pink blotches around the centre of the fl.; pollen orange-brown. Fls 120 mm wide; tepals 70 × 35 mm, slightly recurved. Lvs scattered, 100 × 15 mm, pale green. Stems 0.7 m, with some reddish markings, and c.13 fls.

**‘Pash’ VII(b/b)**

Parentage: (*L. × parkmanii* ‘Salmon Jewels’ × unknown) × *auratum* ‘Archangel’

R: D.K. Kölli (1986), G: D.K. Kölli (1990), N: D.K. Kölli (1991), REG: D.K. Kölli (1994)

Inside light pink with a blush of light pink/orange/yellow along the basal half of the central ray on each tepal; outside pink; spots dark rose-red on basal three-quarters of each tepal, spots sometimes coalescing; nectaries yellowish green; pollen dark rust/orange. Fls 203 mm wide; buds very bulbous before opening; tepals 122 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, up to 205 × 58 mm, mid to dark green. Stems 1.6 m, pale grey-green, with up to 11 fls which may vary in colour on the same stem according to temperature and weather conditions. Late July to late Aug.

**'Paso Doble' VII(b/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)

Inside yellowish white (155B), the basal part of each tepal with a short, deep purplish red (59B) blotch, blending into a small, brilliant flame in the strong yellow-green (143C) throat; outside yellowish white (155B), midribs light greenish yellow (6D); spots few, dark red (187C), in the throat; pollen strong orange (169C/D). Fls 220 mm wide; tepals 115 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 210 × 35 mm, mid green. Stems 1.45 m, green, with 4-7 fls. May to June (under glass). Syn.: 'Pasa Doble'.

(Registered as 'Pasa Doble' and included in *ILR Tenth Supplement*, but the same year Dutch PBR (LEL 704) were granted under the epithet 'Paso Doble'. The latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Passage' VII(b/c)**

Parentage: white-flowered seedling × 'Star Gazer'  
 R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1982), N: H.J.A. Rooyakkers (1989), I: H.J.A. Rooyakkers (1990), REG: Bischoff Tulleken Lelies B.V. (1993)

Inside suffused with deep purplish pink (64D) on a yellowish white (155D) ground, tepal-edges yellowish white (155D), midveins strong red (53B) fading to the light greenish yellow (8C) top; outside suffused with deep purplish pink (64D) on a yellowish white (155D) ground, midribs pale yellow-green (155A), suffused with brilliant greenish yellow (151D) and becoming strong yellow-green (144B) at the top; pollen strong orange (169B); stigma moderate purple (79D). Fls 230 mm wide; tepal-margins ruffled, outer more so, tips strongly recurved. Lvs scattered, 145 × 41 mm, dark green. Stems 0.65 m, pale green with darker markings, and with c.5-6 fls.

**'Passat' I(a/-)**

Parentage: 'Prune' × 'Papillon'

R: Gebr. N. & B. Laan & Zn (1975), G: Gebr. N. & B. Laan & Zn (1978), N: Gebr. N. & B. Laan & Zn (1983), I: Gebr. N. & B. Laan & Zn (1983), REG: Gebr. N. & B. Laan & Zn (1985)

Inside deep purplish pink (73A), tepal-tips strong reddish purple (72B), throat pale purplish pink (56A/B); outside vivid reddish purple (74A); spots big, maroon; nectaries greenish; pollen brown. Fls 160 mm wide; tepals 80 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 1 m, dark green, with c.15 fls. Early June.

**'Passe Partout' VII(-/b-d)**

Parentage: seedling 201 × unknown seedling  
 R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside deep purplish pink (70C), tepal-edges narrow, yellowish white (155B) near the tip and moderate

purplish red (70A) towards the base, midveins brilliant yellow (14C) on the basal half of each tepal, throat strong yellow-green (144C) suffused with light greenish yellow (8B); outside deep to moderate purplish pink (70C/D), tepals with a narrow, white edge at the tip, midribs pale yellow-green (4D) at top shading to brilliant greenish yellow (6C) at the base which is spotted moderate red (180C); spots dark red (187C), on the basal half of each tepal; nectaries strong purplish red (72A); pollen moderate reddish orange (171A). Fls 250 mm wide; tepals 120 × 60 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 180 × 28 mm, mid green. Stems 1.05 m, green with darker markings, and with c.7 fls.

**'Passion' IX(b/c)**

See *auratum* 'Passion'.

**'Passoa' I(b/c)**

Parentage: unnamed seedling × unnamed seedling  
 R: De Jong Lelies Holland B.V. (1992), G: De Jong Lelies Holland B.V. (1994), N: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2001)

Inside vivid orange (28A) on a vivid yellow (15A) ground, tepal-edges vivid yellow (15A), outer tepals with a midvein more vivid yellow (15A), throat moderate orange (167C); outside of inner tepals strong reddish orange (31B) on a brilliant orange-yellow (23B) ground, tepal-edges vivid yellow (14A), outside of outer tepals strong reddish orange (169A) on a brilliant orange-yellow (23B) ground, tepal-edges vivid orange-yellow (23A); spots dark red (187A); a few papillae present; pollen moderate reddish orange (173B); stigma deep red (185A). Fls 180 mm wide; tepals 100 × 40-50 mm, margins smooth, tips recurved. Lvs scattered, 70-100 × 15-30 mm. Stems 1.3 m, green, with c.7 fls. June.

**'Password' VII(a-b/b)**

Parentage: 'Allure' × 'Star Gazer'

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2002)

Inside yellowish white (155D) in basal third of each tepal, moderate purplish pink (62B) in apical two-thirds, midveins light greenish yellow in basal third; outside yellowish white in basal third of each tepal, light purplish pink (62C) in apical two-thirds; spots strong purplish red (63B); papillae yellowish white (155D); nectaries light green; pollen strong reddish orange to brownish orange (169A/171B); stigma pale yellow-green (4D). Fls 225 mm wide; tepals 125 × 63 mm, margins smooth, tips slightly recurved. Lvs scattered, 145 × 50 mm, light green. Stems 0.93 m, light green with some darker markings, with c.5 fls. July.

**'Pastalnieki' I(c/d)**

Parentage unknown

R: J. Vasarietis (1988), G: J. Vasarietis (1991), N: J. Vasarietis (1993), I: J. Vasarietis (1993), REG: J. Vasarietis (1998)

Inside and outside strong orange (25A); spots absent;

nectaries white with an orange flush; pollen brown. Fls 80 mm wide; tepals 80 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 150 × 4 mm, dark green. Stems over 1 m, green, with 19-24 fls (including secondary buds). Early July.  
(Published in *Lilium Balticum Cat.*, 1996.)

#### **Pastel Group I(b/-)**

Parentage: (('Lemon Queen' (Div. I) × 'Mega') × 'Edith Cecilia') × (*dauricum* × ('Mega' × 'Lemon Queen' (Div. I)))

R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1972), REG: Oregon Bulb Farms, Inc. (1972)

Fls with a wide range of pastel colours. Stems 0.6 m. June to July.

(Published in *Lilies and other Liliaceae*, 1973/1974: 113.)

#### **'Pastel Beauty' I(a/b)**

Parentage: *L. × maculatum* 'Yellow Tulip' × 'Fantasy'

R: G.M. Chandler (1948), G: G.M. Chandler (1951), N: G.M. Chandler, REG: G.M. Chandler (1961)

Inside orpiment-orange (HCC 10/1), basal half of each tepal fading to lemon-yellow at centre, then changing to azalea pink (HCC 618) in apical third; more-or-less unspotted. Fls 125 mm wide; tepal-tips rounded. Stems 0.3 m.

#### **Pastel Corona Aurelians Group VI(c/-)**

Parentage: selected colour strains of Corona Aurelians

R: C. Yerex, N: C. Yerex

Tepals partly reflexed.

(Published in *Greenock Farms Cat.*, 1958. Included in *ILR* (1982) as Pastel Corona Aurelians grex. The name Corona Aurelians (parentage) has not been traced: it is perhaps Aurelian Group.)

#### **'Pastel Jasper' I(b/-)**

Parentage: *L. × scottiae* 'Apricot Glow' × Preston Group

R: E. Robinson (c. 1960), N: E. Robinson

Fls pale jasper, centre straw-orange. Fls large; tepals with reflexed tips. Stems 1 m. July.

(Included in *ILR* (1969).)

#### **'Pastel Princess' I(b/-)**

Parentage unknown, but involves *pumilum*

R: W.D. Evans, G: W.D. Evans, N: W.D. Evans (1982), I:

Borbeleta Gardens (1983), REG: J. Wadekemper (1983)

Fls pale yellowish pink (36D) throughout; spots absent; nectaries pale yellowish pink (36D); pollen red-brown.

Tepals 54 × 14 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 50 mm, pale green. Stems 0.6 m, light green, with 12-15 fls. Late.

(Published in *Borbeleta Gardens Cat.*, 1983.)

#### **Pastel Trumpets Group VI(-/a)**

Parentage: selection from Aurelian Group

S: C. Yerex, N: C. Yerex, I: C.A. Best (1956)

Fls in cream and yellow shades. Stems 1.5-1.9 m.

(Published in *Greenock Farms Cat.*, 1956. Included in *ILR* (1982) as Pastel Trumpets grex.)

#### **'Pasteur' I(a/-)**

Parentage: ('Sancerre' × 'Make Up' (of Lybelmex)) × ('Blizzard' × 'Dream')

R: Lybelmex Hillegom B.V. (1989), G: Lybelmex

Hillegom B.V. (1991), N: Lybelmex Hillegom B.V.

(1996), I: Lybelmex Hillegom B.V. (1996), REG:

Lybelmex Hillegom B.V. (1996)

Inside strong purplish red (59D) on a yellowish white

(155D) ground, base yellowish white (155D) shading

into tepal colour, with a little pale orange-yellow (23D)

above nectaries, throat deep/moderate purplish red

(59B/C); outside strong purplish red (59D) with the

basal part deep/moderate purplish red (59B/C), all on

a yellowish white (155D) ground; spots few, dark red

(187A); papillae few, in the throat; nectaries strong

yellow-green (143A), white-hairy; pollen strong orange

(24A); stigma close to light greenish yellow (5D) with

dark red (187C) hairs. Fls 185 mm wide; tepals 105 ×

35-55 mm, margins smooth, tips recurved. Lvs scattered,

125 × 25 mm, mid green. Stems brown, darker towards

top, with c.4 fls. June to July.

#### **'Pastorale' I(c/-)**

Parentage: (*cernuum* × *lancifolium*) F<sub>2</sub>

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls pastel pink. Stems 1.2-1.5 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 23 (1978).)

#### **'Pathfinder' I(b/-)**

Parentage: 'Edith Cecilia' × 'Harmony'

R: J. de Graaff (pre 1969), N: J. de Graaff, I: J. de Graaff

(1971), REG: Oregon Bulb Farms, Inc. (1969)

Fls brilliant yellow (20A) at base, tepal-tips light yellow

(21D). Fls large, non-fading. Stems 1.2 m. June to July.

(Published in *LYB* 33: 255 (1970).)

#### **'Pathos' VII(a/b)**

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den

Haan (2003), REG: Vletter & Den Haan Beheer B.V.

(2004)

Inside greenish white (155C); outside with outer tepals

greenish white (155C), midribs strong yellow-green

(144C) at base, changing into pale yellow-green (4D),

towards top light greenish yellow (4C) with some strong

yellow-green (144B), inner tepals similar but lacking

strong yellow-green at top; spots absent; papillae greenish

white (155C); nectaries strong yellow-green (144B/C);

pollen strong reddish orange/strong brown (169A/172A);

stigma pale yellow-green (192A). Fls 240 mm wide; tepals

140 × 40-74 mm, margins slightly ruffled, tips slightly

recurved. Lvs scattered, 185 × 37 mm. Stems 0.95-1.1 m,

light green with darker markings, and with c.4 fls.

#### **'Patina' I(a/b)**

Parentage: 'Wattle Bird' × 'Bronzine'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1992),

REG: B. Mičulka (1992)

Inside orange-ochre with fine orange veining, tepal-tips

more ochre, centre red-orange, tepal-bases green-yellow,

throat red-orange; spots small, sparse, on a sixth of each tepal; nectaries yellow, white and bronze-frosted; pollen ochre; stigma brownish. Fls 150 mm wide; tepals 85 × 42 mm, not recurved; pedicels 120 mm long, pale green. Lvs scattered, 110 × 15 mm, pale green. Stems 1 m, pale green, base pale brown. Early July.

**‘Patras’ I(a/-)**

Parentage unknown

R: H. Hauwert (1990), G: H. Hauwert (1992), N: H. Hauwert (1997), I: H. Hauwert (1997), REG: H. Hauwert (1997)

Inside strong purplish red (59D) on a light pink ground, tepal-tips paler, throat yellowish white (155B); outside strong purplish red (59D) on a light pink ground, tepal-edges strong purplish red (60D), tips with a little light greenish yellow (3C); spots dark red (187A); papillae absent; nectaries strong yellow-green (143B); pollen brownish orange (164A); stigma dark reddish orange (175B). Fls 160 mm wide; tepals 80 × 30–40 mm, margins smooth, tips strongly recurved. Lvs scattered, 95 × 15 mm, mid green. Stems 0.8 m, green, with 8-9 fls.

**‘Patrician’ VI(-/a)**

Parentage: selection from Golden Splendor Group

S: J. de Graaff (c. 1960), N: J. de Graaff

Inside rich yellow; outside reddish brown. Stems 1-1.5 m. July.

**‘Patricija’ I(a/b)**

Parentage unknown

R: A. Balode (pre 1995), N: A. Balode

Inside light pink, with a violet and yellow centre and some dark brown spots; pollen yellow. Fls 115 mm wide. Stems 0.7 m.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Patrizia’.)

**‘Patriot’ I(a/-)**

Syn. of ‘Yellowstone’.

**‘Patrizia’ I(a/-)**

Parentage: ‘Graz’ × white-flowered seedling

R: V. Strasser (1982), G: V. Strasser (1984), N: V. Strasser (1985), I: V. Strasser (1987), REG: V. Strasser (1990)

Pastel white inside, throat green; outside white; spots elongated, purple, on a third of each tepal; nectaries frosted green; pollen orange-red. Fls 160 mm wide; tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 12 mm, dark green. Stems 0.8 m, green-brown, with c.10 fls. Late July.

**‘Pauillac’ VII(a/-)**

Parentage: seedling 87-112 × ‘Barbaresco’

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1996), I: Vletter & Den Haan, REG: Vletter & Den Haan (1999)

Inside strong purplish red (60C), a little paler at the base, midveins yellow changing into purple; outside strong purplish red (60D); a few small spots and some papillae present; nectaries green; pollen reddish brown; stigma

green. Tepal-margins ruffled, tips slightly recurved. Stems 1.15 m, green. Early to midseason.

**‘Paula Edgington’ V(b/a)**

Parentage: unnamed seedling × unnamed seedling

R: Van den Bos Breeding B.V. (1989), G: Van den Bos Breeding B.V. (1991), N: Van den Bos Breeding B.V. (1998), REG: Van den Bos Breeding B.V. (2003)

Inside yellowish white (155D), midveins with green base fading into cream; outside yellowish white (155D); spots and papillae absent; nectaries green; pollen orange-yellow; stigma green. Tepal-margins smooth to very slightly ruffled, tips recurved. Lvs glossy green. Stems 1.1 m, green, with 1-5 fls. Midseason to late.

**‘Paula Sarma’ I(a/b)**

Parentage: ‘Venta’ (Div. I) × ‘Dove of Peace’

R: D.-V. Škimele (1996), G: D.-V. Škimele (1999), N: D.-V. Škimele (2001), REG: D.-V. Škimele (2004)

Inside white with slight pink flush, throat greenish white; outside white, midribs yellowish pink; spots tiny, dark brownish red, on a third of each tepal; nectaries greenish white; pollen brownish orange; stigma green. Fls 140 mm wide; tepals 75 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 10 mm. Stems 0.75 m, dark green, with c.11 fls. Mid July.

(Published in *Lilium Balticum Register*, 2002.)

**‘Paul Bunyan’ I(b/-)**

Parentage: (‘Edith Cecilia’ × ‘Rosabelle’) × Lamb seedling from ‘Red Tiger’

R: M.C. Eisel & L. Koehler (post 1968), N: M.C. Eisel & L. Koehler (1971), I: J. Wadekamper (1974), REG: (between 1974 and 1978)

Fls deep mahogany red, throat paler, tepal-tips darker; slightly spotted; pollen brown. Lvs broad. Stems 1.1-1.2 m. Midseason.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 16 (1978).)

**‘Pauline Kline’ VI(c/-)**

Parentage: ‘T.A. Havemeyer’ × unknown

R: T. Barry (c. 1941), N: T. Barry, I: E.L. Kline

Inside majolica-yellow shading to saffron and flecked with oxblood-red at base; outside lettuce-green. Fls 140-200 mm wide. Stems 1.5-1.9 m.

(Published in *Florists’ Exchange and Hort. Trade World*, 11 (19 February 1944).)

**‘Pauline Tuffery’ VII(c/b)**

See *L. × parkmanii* ‘Pauline Tuffery’.

**‘Paul Köpke’ I(b/-)**

Parentage unknown

R: H. Dierssen, N: H. Dierssen, REG: H. Dierssen (1997)

Fls shining orange. Stems 0.8 m. Mid July.

(Published in European Lily Society sales list, 1996.)

**‘Paulo da Costa’ VII(-/b)**

Parentage: (*L. × parkmanii* Everest Group × ‘Star Gazer’) × ‘Furore’

R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1994)  
Inside yellowish white (155D) with a patchy suffusion of deep purplish pink (72D), tepal-edges yellowish white (155D), tips yellowish white (155D); outside yellowish white (155D), with a patchy suffusion of deep purplish pink (72D), tepals with slight white edge and tinged with strong yellow-green (143C) at base, midribs yellowish white (155D) with a slight suffusion of deep purplish pink (72D) in the apical part and tipped strong yellow-green (143C); spots deep purplish red (59B), on two-thirds of each tepal; papillae yellowish white (155D) in the throat; pollen strong orange (169B); stigma dark red (187A). Fls 230 mm wide; tepals 110 × 55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 35 mm, mid green. Stems 0.9 m, pale green, with c.4 fls.

#### 'Paulus Potter' I(a/-)

Parentage unknown

R: Gebr. Mak B.V. (1982), G: Gebr. Mak B.V. (1984), N: Gebr. Mak B.V. (1989), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1989)

Inside pale yellow-green (157A/B), inner tepals pale yellow-green (157B/C); outside vivid to brilliant yellowish green (140A/B) shading to pale yellow-green (157A), inner tepals pale yellow-green (157B); spots dark red (187A) at base of tepals; pollen strong reddish orange (169A). Fls 130 mm wide; tepals 80 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 10 mm, mid green. Stems 0.7 m, green with darker markings, and with 6-8 fls. Apr. to May (under glass).

#### 'Pausini' V(b/a)

Parentage unknown

R: Gebr. N. & B. Laan & Zn (1986), G: Gebr. N. & B. Laan & Zn (1988), N: Gebr. N. & B. Laan & Zn (1994), I: Gebr. N. & B. Laan & Zn (1995), REG: Gebr. N. & B. Laan & Zn (1996)

Inside and outside yellowish white (155D); spots and papillae absent; nectaries green; pollen orange-yellow; stigma white. Fls 220 mm wide; tepal-margins slightly ruffled, tips recurved. Lvs scattered, mid green. Stems 1.45 m, dark, with 2-4 fls. Midseason to late.

#### 'Pavia' VIII(a/b)

Parentage: seedling BG 95-53 × seedling AG 95-11

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside vivid yellow (12A), throat pale greenish yellow (1D); outside brilliant yellow (12B) changing to vivid yellow (13A) near tepal-edges, midribs of outer tepals brilliant yellow-green (149A); spots and papillae absent; pollen moderate reddish brown (166B); stigma brilliant yellow (20A) and strong orange-yellow (22A). Fls 200 mm wide; tepals 130 × 50-60 mm, margins smooth, tips recurved. Lvs scattered, 90-120 × 20-30 mm. Stems 1.3-

1.4 m, green with darker markings, and with c.10 fls. (*A. longiflorum*/Asiatic (LA) hybrid.)

#### 'Pavlina' I(a/b)

Parentage: 'Connecticut King' × 'Dazzler'

R: Šlechtitelaká Stanice Heřmanův Městec, N:

Šlechtitelaká Stanice Heřmanův Městec, REG:

Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside orange, tepal-edges slightly darker, centre of tepals with an apricot ground; spots large, sparse, on a third of each tepal. Fls 125-155 mm wide; tepals overlapping, margins wavy, tips slightly recurved; pedicels 55-65 mm long. Lvs scattered, 62-105 × 12-18 mm, glossy mid green. Stems 0.75-1.05 m, green, shaded red-brown at base, with c.15 fls. Late June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1993.)

#### 'Pavlova' VII(-/-)

Parentage: (*speciosum* × unknown) × unknown

R: G.M. Chandler (c. 1949), G: G.M. Chandler (1952),

REG: G.M. Chandler (1960)

Inside white flushed with pale pink; lightly spotted pink.

Fls 100-115 mm wide. Stems 1.2 m.

Syn.: *speciosum* 'Pavlova'.

(Published in *Amer. Lily Soc. Bull.* 4: 7. Classified in Div. IX in *ILR* (1982).)

#### 'Pawnee' I(a/b)

Parentage unknown

R: W. Windus (c. 1982), G: W. Windus (c. 1985), N: W. Windus, REG: W. Windus (1991)

Fls light yellow (18A) suffused with vivid orange-yellow

(21A) towards centre of fl.; spots sparse, brown, below the flushed area; nectaries greenish; pollen mid brown.

Tepals 75-80 × 22-35 mm, overlapping in the basal third.

margins smooth, tips not recurved. Lvs scattered, 110 × 13 mm, mid green. Stems 1.25 m, mid green, with 5-7 fls

(including occasional 1-2 secondaries) and bulbils. Late June to early July.

#### 'Pax' I(a/b)

Parentage: 'Sterling Star' × 'Golden Coronet'

R: Bischoff Tulleken Leliecultuur B.V. (1977), G:

Bischoff Tulleken Leliecultuur B.V. (1980), N: Bischoff

Tulleken Leliecultuur B.V. (1984), I: Bischoff Tulleken

Leliecultuur B.V. (1985), REG: Bischoff Tulleken

Leliecultuur B.V. (1988)

Inside pale yellow-green to pale yellow (4D/8D), throat light greenish yellow (7D); outside light greenish yellow

(8C), tepal-margins pale yellow-green (4D); spots dark red (187A); pollen moderate orange (170B). Fls 155

mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 10 mm, mid green. Stems

0.65-1 m, green with darker spots, and with 12-14 fls (from 16-18 cm bulbils). June.

#### 'Paya' VII(a/c)

Misspelling of 'Paija'.

**'Peace' IX(b/c)**

See *auratum* 'Peace'.

**'Peace' VII(-/-)**

See *L. × parkmanii* 'Peace'.

**'Peaceful' I(a/-)**

Parentage: 'Hawaiian Punch' × 'Connecticut Beauty'  
R: P.M. Johnson, N: P.M. Johnson (1981), I: Borbeleta Gardens (1981), REG: Borbeleta Gardens (1981)

Inside white; outside pink; spots brown, on basal third of each tepal; nectaries white; pollen brown. Tepals 80 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 10 mm, mid green. Stems 1 m, mid green. July.

(Published in *Borbeleta Gardens Cat.*, 1981.)

**'Peach' I(a/b)**

See *L. × maculatum* 'Peach'.

**'Peach Angel' I(a/-)**

Parentage: 'Indian Queen' × 'Connecticut King'  
R: Hartle-Gilman Gardens (1981), G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1989), I: Hartle-Gilman Gardens (1989), REG: Hartle-Gilman Gardens (1990)

Inside a blend of strong orange (24A) and pale orange-yellow (24D), tepal-tips and throat pale orange-yellow (24D); outside orange and green; nectaries slightly white-frosted; pollen dark red/orange. Tepals 76 × 44 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 126 × 10 mm. Stems 1.22 m, dark green, with 24-26 fls. Midseason.

**'Peach Blossom' Div. ?**

Given as a parent of 'Denia' and 'Indepandant'. No further details.

**'Peachblush' I(a/-)**

Parentage: 'Cinnabar' (Div. I) × (('Lemon Queen' (Div. I) × 'Destiny') × 'Edith Cecilia') F<sub>2</sub> × (Hallmark Group × *dauricum*)

I: Oregon Bulb Farms, Inc. (c. 1976), REG: Oregon Bulb Farms, Inc. (1977)

Fls deep peach with pink tepal-tips, slightly spotted. Fls large. Stems 0.8-1 m.

Syn.: 'Oregon'.

(Published in *Lilies and other Liliaceae*, 1977: 80, and registered and included in *ILR* (1982) as 'Peachblush'. A USPP was granted under this epithet in 1978. In 1979 this cv. was granted Dutch PBR (LEL 33) under the epithet 'Oregon', but being later, this epithet must be regarded as a synonym.)

**'Peach Bouquet' VI(c/c)**

Parentage unknown

R: J.S. Yeates, I: Dunhampton Lily Fields (1988), REG: Dunhampton Lily Fields (1989)

Fls the colour of peach fruit flesh; pollen brown. Fls small, sweetly scented; tepals 40 × 25 mm, margins slightly fluted, tips slightly recurved. Lvs scattered, 40

× 9 mm, dark green. Stems 1 m, green, with c.3 fls. Midseason.

**'Peach Butterflies' I(c/d)**

Parentage unknown

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)

Fls peach-apricot; pollen and style reddish. Tepal-margins not or very slightly ruffled, tips distinctly recurved. Lvs glossy deep green. Stems 1-1.2 m. Mid June to July. (Published in *The Lily Garden Cat.*, 1996/97: 8.)

**'Peach Delight' I(b/-)**

Parentage unknown

R: J. Wadekamper (1982), G: J. Wadekamper (1984), N: J. Wadekamper (1987), I: Borbeleta Gardens (1987), REG: J. Borbeleta Gardens (1988)

Fls apricot-salmon throughout, throat slightly darker; spots absent; nectaries light green; pollen brown. Tepals 100 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 30 mm, dark green. Stems 1.5 m, dark green, with c.12 fls. Mid July.

(Published in *Borbeleta Gardens Cat.*, 1987.)

**'Peach Dwarf' I(a/b-c)**

Parentage: ('Albipayne' × 'Charisma') × ('Albipayne' × ('Connecticut King' × 'Honey Bear'))

R: H. Mantel (1988), G: H. Mantel (1990), N: H. Mantel (1995), I: Mt Hood Lilies Inc. (1996), REG: Mt Hood Lilies Inc. (1996)

Inside light orange/pale yellowish pink (29B/C) to light yellowish pink (27A/B), throat 29B/D; outside brilliant orange/light yellowish pink (29A/D) to vivid yellowish pink (30C); spots absent; nectaries soft peach to white; pollen strong brown/dark reddish orange (172A/B); stigma soft purple. Fls 140-180 mm wide; tepals 70-90 mm long, margins smooth, tips slightly recurved. Lvs scattered, 100-200 × 7.5-15 mm, dark green. Stems 0.2-0.5 m, deep green, with 6-8 fls (from 12-16 cm bulbs). Mid to late June.

**'Peacherino' I(b/-)**

Parentage: 'Talisman' × unknown

R: L. Koehler (1960), N: L. Koehler (1966), REG: (1983)

Fls coral blending to peach tepal-tips; spots dark maroon, on almost whole tepal-area. Lvs scattered. Stems 0.8 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978).)

**'Peaches and Pepper' IX(c/a)**

See *canadense* var. *editorum* 'Peaches and Pepper'.

**'Peach Garden' I(a/-)**

Parentage: Wadekamper seedling 78-50-4 × Wadekamper white-flowered seedling

R: J. Wadekamper (1982), G: J. Wadekamper (1984), N: J. Wadekamper (1992), I: Borbeleta Gardens (1992), REG: J. Wadekamper (1993)

Inside light orange (28C) to buff, tepal-tips paler; outside

darker, throat green; spots bold, brown, on basal half of each tepal; nectaries white; pollen brown. Tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 12 mm, mid green. Stems 0.95 m, mid green, with 12-14 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1992.)

#### **'Peach Glory' I(b/b-c)**

Parentage: ('Liudmila' × mixed "Connecticut" cvs) × ('Attilla' × 'Blizzard')

R: L. Høpfner (1992), G: L. Høpfner (1994), N: L. Høpfner (1997), I: L. Høpfner (1997), REG: L. Høpfner (1997)

Inside light orange/light yellowish pink (28C/27A), throat vivid orange (28B); outside pale yellow (19C); spots few, dark red (59A), on the basal quarter of each tepal; nectaries green; stigma light orange (28C); pollen vivid reddish orange (30A). Fls 160 mm wide; tepals 80 × 42 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 16 mm, mid green. Stems 1 m, moderate yellow-green (137C), with 10 or more fls. June/July.

(The 'Liudmila' in the seed parent may be 'Liudmila' (of Kireeva) or 'Ludmila' (of Orehovs).)

#### **'Peach Glow' I(a/-)**

Parentage: 'Pink Tiger' (Laan) × 'Prune'

R: Gebr. N. & B. Laan & Zn (1980), G: Gebr. N. & B. Laan & Zn (1982), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)

Inside pink, tepal-tips lighter, throat deeper pink; outside light pink; spots few, deep purple, scattered on all but tepal-tips; nectaries pink; pollen dark red. Fls 140 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 1 m, green, with c.10 fls. June.

#### **'Peach Martini' I(a/-)**

Parentage: unnamed seedling × 'Flirt'

R: E.E. Fox (1988), G: E.E. Fox (1989), N: E.E. Fox (1991), I: Fox Lily Ranch (1994), REG: E.E. Fox (1994)

Inside light orange (lighter than 28D), throat white; outside light orange (28D), midribs buff; spots dark red (59A) on half of each tepal; nectaries white, frosted; pollen vivid orange (28A). Fls 150 mm wide; tepals 82 × 42 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 25 mm, mid green. Stems 0.55 m, green, mottled brown, with 18-22 fls in a racemose infl. (including some secondary buds). Mid July.

#### **'Peach Melba' I(b/-)**

Parentage: ('Pink Champagne' × unknown) × 'Old Hollandicum'

R: C. Feldmaier (1972), G: E. Leichter (1975), N: C. Feldmaier (1975), I: Piedmont Gardens (1979), REG: Piedmont Gardens (1980)

Inside strong yellowish pink (37A), tepal-tips deep yellowish pink (39B), throat pale yellow (20C); outside deep yellowish pink (39B); spots dark brown, scattered in throat; nectaries deep yellowish pink (39B); pollen

moderate orange (167A). Tepals 160 × 30 mm, apical slightly recurved at tips. Lvs scattered, 175 × 17 mm, dark green. Stems 1 m, greyish yellow-green (191A), with c.20 fls. Mid July.

#### **'Peach Pie' I(a/-)**

Parentage: (*L. × hollandicum* × 'Croesus') × (('Edith Cecilia' × unknown) × Oregon Bulb Farms seedling UC-38)

R: J. Wadekamper (1976), G: J. Wadekamper (1979), N: J. Wadekamper (1992), I: Borbeleta Gardens (1993), REG: J. Wadekamper (1993)

Fls brilliant orange-yellow (23B), throat white; spots few, brown; nectaries white; pollen brown. Tepals 85 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 12 mm, mid green. Stems 0.8 m, green, with c.12 fls. Late.

(Published in *Borbeleta Gardens Cat.*, 1993.)

#### **'Peach Pixie' I(a/b)**

Parentage: Pastel Group clone OH 6 × ('Connecticut Lemonglow' × 'Red Carpet')

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)

Fls peach-pink suffused with soft orange, tepals with a gold flush in the centre, throat reddish brown; spots absent; nectaries green; pollen soft chocolate-brown. Tepals 85 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 20 mm, mid green. Stems 0.25-0.3 m, mottled brown, with 7-30 fls. June.

#### **'Peach Pride' I(a/-)**

Parentage: *L. × maculatum* type × unknown

R: E. Robinson (1975), N: E. Robinson (1981), I: Gaybird Nursery (1981), REG: Gaybird Nursery (1983)

Fls peach-yellow throughout; unspotted; nectaries paler peach; pollen brown. Tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 10 mm, mid green. Stems 0.8 m, brownish green, with c.3 fls.

#### **'Peach Sparklers' I(a/b)**

Parentage: 'Tamara' × buff-flowered, brushmarked seedling A-105-82

R: Cebeco Lilies, Inc., N: Cebeco Lilies, Inc., REG: ICRA (1998)

Inside pink, blending to a yellow centre and with a black, pencil brushmark. Tepals slightly recurved. Stems 0.8 m. Midseason.

(It is not known whether the seed parent is 'Tamara' of De Jong or 'Tamāra' of Orehovs. 'Tamara' of Miroshniczenko is unlikely because it is in Div. VI.)

#### **'Peachwood' IV(-/-)**

Parentage: selection from Bullwood Group

S: D.B. Fox, N: D.B. Fox (1960), REG: D.B. Fox (1969)

Fls peach, spotted. Tepals recurved. Lvs whorled. Stems 2.4 m.

(Published in *LYB* 33: 255 (1970).)

**'Peachy Jeanne' I(b/b-d)**

Parentage unknown

R: W. Lindsay, N: J. &amp; D. Lindsay (2002), REG: J. &amp; D. Lindsay (2002)

Inside opening pale peach with a gold underlay, the gold fading with age, throat frosty green; outside peach, midribs mid gold; spots numerous, medium sized, maroon to brownish, on basal half of each tepal; nectaries frosted pale green; pollen rusty red; stigma orange. Fls 110-140 mm wide; tepals 50-70 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 6 mm. Stems 0.9-1 m, dark green, with many fls. Mid to late July. (Named for the hybridizer's wife, Jeanne Lindsay. Nomenclatural standard: colour print provided by registrant (WSY 0034925).)

**Peacock Group VI(-/a)**

Parentage: selections from Pink Perfection Group

S: J. de Graaff (c. 1965), N: J. de Graaff, REG: Oregon Bulb Farms, Inc. (1969)

True orchid purple (HCC 31/3) to pansy violet (HCC 33/3). Stems 1-1.2 m. July.

(Published in *LYB* 33: 256 (1970). Included in *ILR* (1982) as Peacock grex.)**'Peacock Creation' I(a/-)**

Parentage unknown

R: Peacock B.V. (1984), G: Peacock B.V. (1985), N: Peacock B.V. (1989), I: Peacock B.V., REG: Peacock B.V. (1990)

Inside light yellowish pink (36C) flushed with pale yellow (162D); outside light yellowish pink (36B), midveins light yellow-green (145C); spots dark purplish red around centre of fl.; pollen strong orange (168B). Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 15 mm, mid green. Stems 1.2 m, green, with c.5 fls. May (under glass).

**'Peak's Radiance' IX(b-c/d)**See *speciosum* 'Peak's Radiance'.**'Peak Time' VIII(b/b)**Parentage: (('Pepper' × 'Firecracker') × ('Judith' × 'Red Carpet')) × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2000)

Inside vivid red (44A), tepal-edges strong red (41B), throat strong yellowish pink (38A); outside of inner tepals moderate red (179B), midribs moderate yellow (160A); outside of outer tepals moderate red (180C), edged moderate red (179A), midribs moderate yellow (160A) and tipped strong yellow-green (144B); spots dark red (187A) on basal part of each tepal; papillae absent; nectaries vivid orange (28A) hairy; pollen dark red (183A); stigma vivid reddish orange (34A). Fls 160 mm wide; tepals 105 × 50 mm, margins smooth, tips recurved. Lvs scattered, 155 × 20 mm. Stems 1.05 m, green, with c.5 fls. June.

(A *longiflorum*/Asiatic (LA) hybrid.)**'Peanuts' I(b)**

Parentage unknown

R: R.A. Prochaska, G: R.A. Prochaska, N: C. Helsley (1988), I: Ozark Mountain Lilies, REG: C. Helsley (1989)

Inside pale orange-yellow (24D); outside with a light green blush; spots small, moderate reddish brown (175A) on basal half of each tepal; nectaries green; anthers sterile. Fls 60 mm wide; tepals 35 × 17 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 8 mm, mid green. Stems 0.5 m, green, brushed purple, with c.12 fls. Late June.

**'Pearl' IX(b-c/d)**See *speciosum* 'Pearl'.**'Pearl Cup' I(a/b)**

Parentage unknown

R: Cebeco Lilies, Inc., N: Cebeco Lilies, Inc., REG: ICRA (1998)

Inside pearl-pink at centre, with pinkish tepal-tips. Tepals slightly recurved. Stems 0.6 m. Midseason. (Published in *The Lily Nook Cat.*, 1998.)

**Pearl Temple Group VI(-/a)**

Parentage: selections from Temple Group

S: J.M. Shaver, N: J.M. Shaver, REG: J.M. Shaver (1984) Fls white, many with yellow throat; spots absent. Stems 1.2-2 m. July to Aug.

(Published in *Rex Bulb Farms Cat.*, 1971: 24. Included in *ILR* (1982) as Pearl Temple grex: noted as registered in *ILR Third Supplement*.)**'Pseudouce' Div. ?**

Parentage unknown

REG: Gebr. Kapiteijn B.V. (1997)

Inside moderate purplish red (70D) on a yellowish white (155D) ground, tepal-edges yellowish white (155D), midveins pale yellow (8D), throat yellowish white (155D); outside yellowish white (155B) shaded moderate purplish red (70D) to the tepal-edges, midribs pale yellow-green (4D) tinged with strong yellow-green (144B) at base, and strong yellow-green (144B/C) at top; spots moderate purplish red (58A) on basal part of each tepal; nectaries strong yellow-green (144B); pollen strong brown (172A); stigma dark purple (79A). Fls 150 mm wide; tepals 100 × 40-50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 30 × 20-30 mm, green. Stems 1.1 m, pale green, tinged with dark red (183A) at lf-bases, and with 6-7 fls.

**'Pechjora' I(c/-)**Parentage: hybrid involving *lankongense*

R: A.V. Otroshko (1988), N: A.V. Otroshko, REG: A.V. Otroshko (1991)

Fls soft old rose with large spots. Fls scented; pedicels long, arching. Stems 1.2 m. July.

**'Peek-a-boo Eyes' I(b/-)**

Parentage unknown

R: J. Wadkamper, N: J. Wadkamper, I: Borbeleta

Gardens (1994), REG: ICRA (1997)  
Inside soft ivory-cream, with purple brushmarks which are more heavily accented on outer tepals. Stems c.0.7 m. Midseason.  
(Published in *Borbeleta Gardens Cat.*, 1994.)

**'Peerless'** V(-/a)  
See *longiflorum* 'Peerless'.

**Pee-wee Group** I(a/-)  
Parentage: 'Ambrosia' × 'Pumpkin Sweet'  
R: G.C. Keast (1987), G: G.C. Keast (1989), N: G.C. Keast (1992), REG: G.C. Keast (1992)  
Inside strong reddish orange (31A), throat slightly frosted; spots very few, tiny, maroon, on basal half of each tepal; pollen light brown. Fls 100 mm wide; tepals 45 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 11 mm, dark green. Stems 0.6 m, green, with c.5 fls. Late Dec. to early Jan. (New Zealand)

**'Pegas'** I(c/d)  
Parentage: ('Discovery' × 'Pinegos Ares') × 'Tetra Nutmegger'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000), REG: B. Mičulka (2000)  
Inside dark red, throat shaded orange; outside dark red; spots numerous, large, raised, black-brown, on three-quarters of each tepal; pollen red-brown; stigma dark red-brown. Fls 120 mm wide; tepals 95 × 44 mm, margins coarsely waved, tips strongly reflexed; pedicels 100 mm long, thick, strongly brown-dotted, with secondary buds. Lvs scattered, 110 × 15 mm, dull pale green. Stems 1.15 m, thick, stiff, strongly brown-dotted. Early July. Triploid.

**'Pegasus'** I(c/-)  
Syn. of 'Pan'.

**'Peggy'** VII(-/c)  
See *L. × parkmanii* 'Peggy'.

**'Peggy Hunter'** I(c/-)  
Parentage unknown  
R: L. Meece (1985), G: L. Meece (1988), N: L. Meece (1993), REG: L. Meece (1993)  
Inside strong orange (26B), tepal-tips light yellowish pink (26D); outside vivid reddish orange (34B) at base, fading to moderate yellow (160A) at tepal-tips; spots very few, dark reddish orange (175C), towards the light yellowish pink (27B) nectaries; pollen dark reddish orange (175B). Fls 80 mm wide; tepals 65 mm long, margins smooth, tips strongly recurved (with 3 large and 3 small tepals). Lvs scattered, 80 × 6 mm, mid green. Stems 1.25 m, brown and green, with c.24 fls in a long infl. Mid July to mid Aug.

**'Peggy North'** I(c/d)  
Parentage: (*lankongense* × 'Maxwill') × 'Enchantment'  
R: C. North (1973), G: SHRI (1975), N: C. North (1985), I: RHS Lily Group (1985), REG: RHS Lily Group (1986)  
Fls orange; spots numerous, brownish, along tepal-

margins and in centre of tepals; nectaries brownish; pollen brown. Fls slightly scented; tepals 83 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 123 × 11 mm, mid green. Stems with numerous fls. Midseason. Allotriploid.

**'Pegija'** VIII(b/c)  
Parentage: 'New Age' (Div. I) × a tetraploid *longiflorum*/Asiatic derivative  
R: A. Balode (1996), G: A. Balode (1998), N: A. Balode (1999), REG: A. Balode (1999)  
Inside vivid reddish orange (33B), tepal-tips vivid reddish orange (43B), centre of each tepal with a large vivid orange-yellow (23A) blotch and a few small, black spots, throat greenish; outside green, midribs pink; nectaries light orange; pollen dark brown. Fls 210 mm wide, slightly scented; tepals 100 × 55 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 170 × 20 mm. Stems 1.5 m, dark green, with c.9 fls. Early July. (Nomenclatural standard: colour print provided by registrant (WSY 0022986).)

**'Peking'** I(a/-)  
Parentage unknown  
R: Fa S.N.S. (1975), G: Fa S.N.S. (1977), N: Gebr. Van Zanten B.V. (1986), I: Gebr. Van Zanten B.V., REG: Gebr. Van Zanten B.V. (1986)  
Fls yellow; spots big, brown, near base of tepals; nectaries purple; pollen brown. Fls 140 mm wide; tepals 70-75 × 40-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 120-130 × 20-25 mm, mid green. Stems 1.15 m, green, with 6-8 fls (from 12-14 cm bulbs).  
Syn.: 'Anna'.  
(Published in *Bloembollencultuur*, 1985.)

**'Pelerinka'** I(a/b)  
Parentage unknown  
R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1990)  
Fls rather pale pearl-pink, each tepal with a blotch. Fls 130-140 mm wide. Stems 1-1.2 m, with 15-28 fls. June. (Published in M.F. Kireeva, *Lilii*, 63 (2000).)

**'Pelican'** VI(-/a)  
Parentage: Trumpet hybrid × Green Magic Group  
R: V. Negrobov (c. 1964), N: V. Negrobov  
Inside white; outside dark purple, midribs brown. Fls up to 250 mm wide, scented, reminiscent of a pelican's beak. Stems 1 m. July.  
(Published in *LYB* 33: 76 (1970).)

**'Pella'** VII(a/b)  
Parentage unknown  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)  
Inside yellowish white (155D), each tepal with a large light greenish yellow (6D) patch along and above nectaries, brilliant greenish yellow (6B) along midveins in basal two-thirds; outside with outer tepals yellowish white (155D), midribs strong yellow-green (143C) at base and top, in between light yellow-green (154D), inner tepals

similar but lacking strong yellow-green top; spots absent; papillae brilliant greenish yellow (6B); nectaries strong yellow-green (144C) with brilliant greenish yellow (6B) edge; pollen dark reddish orange (175B); stigma pale yellow-green (193C). Fls 230 mm wide, fragrant; tepals 146 × 50-80 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 180 × 39 mm. Stems 1-1.2 m, green, with c.5 fls.

**‘Pelnruschkite’ I(a/-)**  
Misspelling of ‘Pelnruškite’.

**‘Pelnrushkite’ I(a/-)**  
Misspelling of ‘Pelnruškite’.

**‘Pelnruškite’ I(a/-)**  
Parentage: selection from Zelta Vainags Group  
S: V.P. Orehovs (post 1959), N: V.P. Orehovs  
Fls orange-yellow.  
(Misspelling ‘Pelnrushkite’. Published in *LYB* 33: 80 (1970) and included in *ILR* (1982) as ‘Pelnruschkite’ which is also a misspelling.)

**‘Pencil Sketch’ VI(-/c)**  
Parentage: *L. × kewense* ‘White Henryi’ × (*L. × kewense* ‘White Henryi’ × unknown)  
R: C. Helsley (1979), G: C. Helsley (1985), N: C. Helsley (1988), I: Ozark Mountain Lilies, REG: C. Helsley (1989)  
Inside white, throat vivid yellow (17B); outside white, midribs tinged with green; papillae dark reddish orange (178B) forming spots and short lines on basal half of each tepal; nectaries green; pollen golden brown. Fls 120 mm wide; tepals 100 × 25-40 mm, margins smooth, tips strongly recurved. Lvs scattered, 110 × 15 mm, dark green. Stems 0.75-1 m, green with purple spotting, and with c.8 fls (including secondaries on lower pedicels). Early July.

**‘Penelope’ VI(b/a)**  
Parentage: selection from Sun Temple Group  
S: J.S. Yeates (c. 1963), N: J.S. Yeates  
Inside yellow, throat and tepal-tips vivid yellow (12A); outside brilliant yellow (12B); pollen orange. Lvs Aurelian type. Stems 1.9 m.

**Penetang Group VI(-/a)**  
Parentage: contains *L. × sulphurgale* & *L. × imperiale*  
R: E.O. Clement (c. 1945), N: E.O. Clement  
(Published in *Inglewood Lily Gardens Cat.*, 1946. No further details.)

**‘Pennine Goldie’ I(a/-)**  
Parentage: (*dauidii × dauricum*) × *wilsonii* var. *flavum*  
R: A.D. Harrison (c. 1963), N: A.D. Harrison  
Fls bright, clear yellow with large maroon spots. Fls 125 mm wide; tepals broad.

**‘Pennine Orange Beacon’ I(c/-)**  
Parentage: *dauidii* intercrosses, from repeated crossings of *dauidii* cvs

R: A.D. Harrison (c. 1963), N: A.D. Harrison  
Fls clear apricot-orange, lightly spotted in centre. Tepals reflexed in apical three-quarters; pedicels long. Lvs pale green.

**‘Pennine Ortan’ I(a/-)**  
Parentage: (*dauidii × dauricum*) × *wilsonii* var. *flavum*  
R: A.D. Harrison (c. 1963), N: A.D. Harrison  
Fls bright, clear apricot-orange with large maroon spots. Fls 125 mm wide; tepals broad.

**‘Pennine Red Beacon’ I(c/-)**  
Parentage: *dauidii* intercrosses, from repeated crossings of *dauidii* cvs  
R: A.D. Harrison (c. 1963), N: A.D. Harrison  
Fls deep tomato-red, lightly spotted in centre. Fls 100-125 mm wide; tepals reflexed in apical half; pedicels long. Lvs dark green.

**‘Pennine Red Ranger’ I(a/b)**  
Parentage: (*dauidii × dauricum*) × *wilsonii* var. *flavum*  
R: A.D. Harrison (c. 1964), N: A.D. Harrison  
Fls brilliant red with dark spots. Tepals broad. Stems 1.5 m.

**‘Pennine Yellow Beacon’ I(-/d)**  
Parentage: complex *dauidii × lancifolium* hybrid × *cernuum*  
R: A.D. Harrison (c. 1963), N: A.D. Harrison  
Fls clear lemon-yellow; spotted. Fls slightly scented. Stems 1.2 m. July.

**‘Penny Lane’ I(a/-)**  
Parentage: unnamed seedling × unnamed seedling  
R: P. Hoff (1982), G: Hoffgaard B.V. (1983), N: P. Hoff (1987), I: Hoffgaard B.V. (1987), REG: Hoffgaard B.V. (1988)  
Inside pale purplish pink (56D), throat with green midveins; outside pale purplish pink, midribs rosy, green at top; red spots in and around the throat. Fls 190 mm wide; tepals 105 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 20 mm. Stems 0.75 m, dark green, with c.10 fls.

**‘Pennyworth’ I(c/d)**  
Parentage: ‘Noris Star’ × ‘Apricot Supreme’  
R: E.E. Fox (1990), G: E.E. Fox (1993), N: E.E. Fox (2000), I: Fox Lily Ranch (2003), REG: E.E. Fox (2002)  
Fls vivid reddish orange throughout (34B); spots medium sized, blackish, on basal third of each tepal; pollen dark reddish orange (175C); stigma dark red (59A). Fls 180 mm wide; tepals 90 × 42 mm, margins smooth, tips strongly recurved. Lvs scattered, 180 × 26 mm. Stems 0.92 m, green mottled with plum, with 14-18 fls. Late July to early Aug.  
(Named for a comic book character, Humphrey Pennyworth.)

**Pensive Group I(b-c/d)**  
Syn. of Skumstu Group.

**pensylvanicum** Ker Gawl. IX(a/b)  
Syn. of *dauricum*.

**PEOPLE'S FRONT** I(a-b/c)  
Trade designation of 'Tautas Fronte'.

**'Pepita'** I(a/b)  
Parentage unknown  
R: B.G. Hayler, G: B.G. Hayler (1980), N: B.G. Hayler, I: B.G. Hayler, REG: B.G. Hayler (1985)  
Fls orange and pink, tepal-tips strong purplish pink (55B), throat light yellow (20B) suffused upwards on half of each tepal; spots few, fine, pink, on the centre third of each tepal; nectaries greenish; pollen brown. Fls 100 mm wide; tepals 60 × 25 mm, margins smooth, tips pointed, not recurved. Lvs scattered, 90 × 10 mm, dark green. Stems 0.75 m, purple, with c.8 fls. Dec. (Australia). (Published in *Golden Ray Gardens Cat.*, 1985.)

**'Pepka'** VI(c/c)  
Parentage: (((*henryi* × unknown) × 'Gold Eagle') × Palmer seedling 56227) × (((Palmer seedling 582812) × 'Gold Eagle') × 'Mimosa Star') F<sub>2</sub>  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside lemon-yellow, tepal-edges paler; outside greenish at base; nectaries green; pollen chocolate-brown; stigma dark crimson. Fls 115 mm wide; tepals 105 × 37 mm, slightly twisted, margins very wavy, tips moderately recurved; pedicels 65 mm long, brown-dotted. Lvs scattered, 150 × 20 mm, dull mid green. Stems 1.15 m, thick, very densely dotted brown-red, with a medium-sized infl. Late July.

**'Pepper'** I(a/b)  
Parentage: ('Paprika' × ('Edith Cecilia' × 'Mega')) F<sub>2</sub>  
R: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1970), REG: Oregon Bulb Farms, Inc. (1969)  
Fls vivid reddish orange (43A), non-fading; spots dark. Stems 1 m. June to July.  
(Published in *LYB* 33: 256 (1970).)

**'Peppone'** I(a/b)  
Parentage unknown  
R: Fa P. Hoff & Zn (pre 1985), N: Fa P. Hoff & Zn, REG: Hoffgaard B.V. (2002)  
Inside strong reddish orange (169A), tepal-tips and margins moderate red (179A), markings dark brown, throat moderate red (181B); outside moderate red (179A/180A), dark red/moderate red (183B/18A) towards tepal-margins; spots and papillae present; pollen dark brown; stigma orange, with a few purple-red glandular hairs. Tepal-margins slightly ruffled, tips recurved. Stems brown with mid green spots and darker markings.

**'Peppy'** I(a/b)  
Parentage: seedling A-80-78 × seedling A-34-84  
R: Cebeco Lilies, Inc., N: Cebeco Lilies, Inc., REG: ICRA (1998)  
Inside soft orange. Pollen absent. Tepals slightly recurved. Stems 1 m. Midseason.

**'Pep Talk'** VII(a-b/b)  
Parentage: unnamed seedling × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1994), G: Bischoff Tulleken Lelies B.V. (1996), N: Coöp. Kwekersvereniging "The Originals" U.A. (1999), I: Coöp. Kwekersvereniging "The Originals" U.A. (2000), REG: Coöp. Kwekersvereniging "The Originals" U.A. (2001)  
Inside deep red/dark red (60A/187C), paler towards tepal-edges, midveins yellow changing to red-purple; outside strong purplish red (60C); spots and papillae present; nectaries yellow-green; pollen orange-brown; stigma purple. Fls 240 mm wide; tepals 120 × 50 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 30 mm. Stems 0.7 m, green, with c.5-7 fls. Midseason.

**'Percy H. Wright'** I(c/-)  
Syn. of 'Percy Wright'.

**'Percy Wright'** I(c/-)  
Parentage: 'Honeybunch' × 'Royal Star'  
R: R. Erskine, G: R. Erskine (pre 1985), N: R. Erskine (1986), I: R. Erskine, REG: R. Erskine (1995)  
Inside purple-pink with gold markings, throat purple, fading with age; outside purple-pink; spots dark purple, in the throat; nectaries yellow; pollen orange. Fls 110-120 mm wide; tepals 55-60 × 25-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80-90 × 8-10 mm, mid green. Stems 1 m, green, with 20-30 or more fls. Aug.  
Syn.: 'Percy H. Wright'.  
(Distributed earlier under the then unacceptable epithet 'Percy H. Wright'.)

**'Peregrine'** IV(-/-)  
Parentage: 'Shuksan' × *L. × burbankii*  
R: O.E.P. Wyatt, N: O.E.P. Wyatt  
(Published in *JRHS* 74: xcvi (1949). No further details.)

**'Perestrojka'** I(a/-)  
Parentage: 'Orlito' × 'Montreux'  
R: C.H. Adrichem (1986), G: C.H. Adrichem (1989), N: C.H. Adrichem (1992), I: C.H. Adrichem (1993), REG: C.H. Adrichem (1994)  
Inside moderate reddish orange (35A/B), shading to strong yellowish pink (35C) at tepal-tips and with darker veins, throat paler; outside paler than moderate pink (35D), tepal-edges strong yellowish pink (35C), midribs of outer tepals suffused with pale green and tinged with strong yellow-green (143A) at top; spots dark red (187A), on a third of each tepal; pollen moderate reddish orange (171A); stigma dark red (187B). Fls 160 mm wide; tepals 85 × 40 mm. Lvs scattered, 100 × 15 mm, pale green. Stems 0.9 m, pale green, with c.20 fls.

**'Perfection'** IX(b/c)  
See *auratum* 'Perfection'.

**Perfection Group** Div. ?  
Given as a parent of Great Smoky Group. No further details.

**‘Perigord’ I(a/-)**

Parentage: seedling G 940 × seedling G 844  
 R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
 Inside light greenish yellow (5C), tepal-tips greyish reddish brown (200B), throat brilliant greenish yellow (1B); outside light greenish yellow/pale yellow (8C/D), midribs tinged with strong yellow-green (144C); spots absent; pollen moderate reddish brown (166B). Fls 180 mm wide; tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 10 mm, mid green. Stems 1.2 m, green with darker markings, and with c.3 fls. May (under glass).

**‘Perla’ I(a/b)**

Parentage: ‘Connecticut Queen’ × ‘Panna’  
 R: K. Braun (1979), N: K. Braun, REG: K. Braun (1984)  
 Inside salmon, throat salmon-orange; outside salmon; spots sparse, medium sized, brown, on a quarter of each tepal; nectaries salmon; pollen orange-brown. Fls 130 mm wide; tepals 75 × 17 mm, margins slightly curled, tips recurved. Lvs 109 × 10 mm, dull green. Stems 0.5 m, green. Early July.

**‘Perlamutrovaya’ I(b/-)**

Parentage: hybrid including *lancifolium* & *cernuum*  
 R: V.F. Potapov (1983), N: V.F. Potapov  
 Fls rose-lavender with violet spots. Stems 1.2 m, with bulbils. July.

**‘Perle der Karibik’ I(c/b-d)**

Parentage: Feldmaier seedling Fe4 × seedling NNC7.44  
 R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)  
 Inside yellowish white (155D) suffused with palest pink; outside similarly coloured, midribs greenish yellow; spots numerous, small, round to elongated, deep purplish red (61A), on basal half of each tepal; nectaries grey-white; pollen deep purplish red (61A); stigma deep purplish red (61A). Fls 100 mm wide; tepals 60 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 15 mm. Stems 0.75 m, dark green, with 7-10 fls. Late June. (Nomenclatural standard: colour print provided by registrant (WSY 0032261).)

**‘Perlenrosa’ VI(-/-)**

Parentage unknown  
 R: VEG(S), Erfurt (1976), N: VEG(S), Erfurt  
 Fls pink. Stems 0.95 m. July.

**‘Perry’ IV(b/a)**

Parentage: (*washingtonianum* × *roezlii*) × ? *pardalinum*  
 R: A. Perry (c. 1920), N: A. Perry  
 (Published in *JRHS* 46: xl (1921). No further details. Named by Perry after himself. No longer extant. It is not known whether the second seed parent was *roezlii* Purdy (= *pardalinum* subsp. *vollmeri*) or *roezlii* Regel. (= *pardalinum*).)

**‘Persei’ I(a/-)**

Syn. of ‘Persianka’.

**‘Perseida’ I(b-c/c)**

Parentage: ((‘Juno’ × (Hallmark Group × ‘Odysseus’)) × (((‘Brandywine’ × ‘Connecticut Lemonglow’) × (Hallmark Group × unknown)) × ‘Juno’)) × (((unknown × ‘Hawaiian Punch’) × (Hallmark Group × ‘Nutmegger’ × ‘Abendglühen’)) × (‘Connecticut Red’ × ‘Connecticut Yankee’)) × ‘Blizzard’  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
 Inside very pale yellow, centre of each tepal tinted with apricot; outside pale green-yellow, midribs green and brownish; spots sparse, small, dark brown-pink on a third of each tepal; nectaries green, finely granulated; pollen brown; stigma brown. Fls 115 mm wide; tepals 75 × 40 mm, thick, margins slightly wavy, tips moderately recurved; pedicels 105 mm long, slightly dotted. Lvs scattered, 125 × 12 mm, dark green, slightly shiny. Stems 0.9 m, densely dotted with black-brown, with a medium-length infl. Mid June.

**‘Persephone’ III(b/a-d)**

See *L.* × *testaceum* ‘Persephone’.

**‘Perses Zieds’ VI(-/a)**

Misspelling of ‘Perses Zieds’.

**‘Pērses Zieds’ VI(-/a)**

Parentage unknown  
 R: V.P. Orehovs (pre 1973), N: V.P. Orehovs  
 Fls creamy white; pollen gold-orange. Tepals recurved. (Included in *ILR Second Supplement* as ‘Perses Zieds’ which is a misspelling.)

**‘Perseus’ I(c/-)**

Parentage: ‘Karmen’ (of Jošt) × ‘Ariadne’  
 R: V. Jošt (1976), G: V. Jošt (1979), N: V. Jošt (1985), I: V. Jošt (1985)  
 Inside dark red (59A), tepal-tips and outside strong purplish red (59D); small spots of dark red (187A/C) on two-thirds of each tepal; nectaries frosty white-purple; pollen moderate reddish orange (171A). Fls 65 mm wide, scented; tepals 74 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 96 × 14 mm, dark green. Stems 0.95 m, green, with c.13 fls. Late June.

**‘Persianka’ I(a/-)**

Parentage: ‘Rozovaia Prima’ × ‘Connecticut King’  
 R: A.V. Otroshko (1987), N: A.V. Otroshko, REG: A.V. Otroshko (1994)  
 Fls soft pink with a cream centre and a few tiny spots; pollen brown. Stems 1 m. July.  
 Syn.: ‘Persei’.  
 (Originally named ‘Persei’. Epithet changed to ‘Persianka’.)

**‘Persian Queen’ VII(-/b)**

Parentage: selection from Zealandia Group  
 S: L.B. Tuffery (c. 1966), N: L.B. Tuffery  
 Fls deep lavender-red, very large. Stems medium height.

**‘Persimmon’ I(b/-)**

Parentage: (*lancifolium* var. *flaviflorum* × unknown) × ‘Connecticut Morn’

R: D.M. Stone & F.H. Payne (1964), N: D.M. Stone & F.H. Payne (1970), I: D.M. Stone & F.H. Payne (1970), REG: (between 1970 and 1981)

Inside vivid orange (28B), throat strong orange (25A); outside strong orange (25B); spots light brown; nectaries strong orange (25A). Margins of outer tepals ruffled. Lvs *lancifolium* type. Stems up to 1.7 m.

(Published in *NALS Bull.*, Sept. 1970.)

**‘Personality’ I(a/-)**

Parentage: (*bulbiferum* var. *croceum* × *L.* × *hollandicum*) × (*L.* × *hollandicum* × *lancifolium*)

R: Gebr. N. & B. Laan & Zn (c. 1966), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1969)

Fls strong orange (25B) striped orange and spotted purple.

(Published in *LYB* 33: 256 (1970).)

**‘Peru’ VII(a-b/b)**

Parentage: seedling 88-78 × seedling 93-13

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2003)

Inside strong purplish red (60D) on a paler ground, midveins a little stronger coloured, throat yellowish white (155D); outside moderate purplish pink (66D) on a white ground, midribs brilliant greenish yellow (151D), strong yellow-green (143A) at top and almost white at base; spots dark red/deep purplish red (187C/D) on a third of each tepal; papillae in the throat; nectaries strong yellow-green (144B); pollen strong reddish orange/strong orange (169A/B); stigma more-or-less yellowish grey (156B). Fls 200 mm wide; tepals 135 × 50-75 mm, margins ruffled towards tip, tips slightly recurved. Lvs scattered, 145 × 37 mm. Stems 1.1 m, green with slight, darker spotting, and with c.3 fls. Late.

Trade designation: SAKURA.

(Registered in 2000 as ‘Sakura’ and included in *ILR Nineteenth Supplement*. Registered again in error by the same registrant in 2003 as ‘Peru’ and included in *ILR Twenty-second Supplement*. Usually the later epithet would be a synonym, but European PBR were granted in 2001 under the epithet ‘Peru’ so this epithet must be accepted (ICNCP, 2004: Art. 24.4). This cv. has been sold as Sakura and so this epithet is regarded as a trade designation, rather than a synonym.)

**‘Perugia’ VII(-/d)**

Parentage: ‘Casa Blanca’ × unnamed seedling

R: Vletter & Den Haan (1980), G: Vletter & Den Haan (1983), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside yellowish white (155B), midveins pale yellow (8D), throat strong yellow-green (144B); outside greenish white (155C), midribs strong yellow-green (144C); spots dark red to deep purplish red (187C/D), on the whole of each tepal; pollen strong reddish orange (169A). Fls 240

mm wide; tepals 120 × 55 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 170 × 33 mm, mid green. Stems 1.2 m, green. May to June (under glass).

**‘Perun’ I(b-c/d)**

Parentage: ‘Pinegos Orange’ × ‘Bold Knight’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1993), REG: B. Mičulka (1993)

Inside deep orange-red, throat paler; outside with dark scarlet midribs; spots numerous, large, red-brown, on four-fifths of each tepal; nectaries orange, frosted red; pollen orange-brown; stigma purple-red. Fls 130 mm wide; tepals 90 × 45 mm, margins slightly waved and recurved, tips recurved, slightly twisted; pedicels 110 mm long, spotted dark red. Lvs scattered, 155 × 17 mm, dull dark green. Stems 1.05 m, red-black. Late June. Tetraploid.

**‘Pervoklassnitsa’ VI(-/d)**

Parentage: *henryi* × double-flowered ‘Louise’

R: B.P. Guzhavin (1984), N: B.P. Guzhavin

Fls white with a yellow star in the throat. Fls *henryi* type.

Stems 1.5 m. Aug.

**‘Pésaro’ VII(b/b)**

Syn. of ‘Pisaro’.

**‘Pesniary’ I(a/-)**

Parentage: ‘Connecticut Queen’ × ‘Connecticut King’

R: B.P. Guzhavin (1983), N: B.P. Guzhavin

Fls lemon-yellow with a green centre; spots absent. Stems up to 0.9 m. July.

**‘Pet’ I(a/b)**

Parentage: *L.* × *hollandicum* × (*pumilum* × *L.* × *hollandicum*)

R: Columbia-Platte Lilies (1979), G: Columbia-Platte Lilies (1981), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Bicolour: inside apical half of each tepal vivid reddish orange (33A/B), basal half brilliant orange-yellow (23B); outside vivid reddish orange to strong yellowish pink (33B/C), deeper along midribs; spots very tiny, inconspicuous, on basal third of each tepal; nectaries soft red, white-downy; pollen brownish orange (171B). Fls slightly scented; tepals 50-55 × 30-40 mm, margins smooth, tips very slightly recurved, blunt. Lvs scattered, 100 × 20-25 mm, dark green. Stems 0.8-1.2 m, dark green, with 8-20 fls. Early June to late May. (The fl. colour is more gold/bronze than red/gold in bright light or at high temperatures.)

**‘Peter Barr’ I(a/b)**

See *L.* × *maculatum* ‘Peter Barr’.

**‘Peterilla’ VII(-/c)**

See *L.* × *parkmanii* ‘Peterilla’.

**‘Peter Kershaw’ VII(-/b)**

See *L.* × *parkmanii* ‘Peter Kershaw’.

**'Peter Puget' IV(-/d)**

See *L. × burbankii* 'Peter Puget'.

**'Peter the Great' VIII(b-c/b)**

Parentage: gold-flowered Aurelian × 'Star Gazer'

R: P. Geiser (pre 1996), N: Columbia-Platte Lilies, I: Columbia-Platte Lilies, REG: ICRA (1998)

Inside deep smoky red, shading to golden yellow at tepal-margins, some darker flecking on the basal half of tepals; colour intensifies in cool weather, the red wash extending almost to tepal-edges; anthers reddish; style greenish. Fls sweetly scented; tepal-margins not or very slightly ruffled, tips not or very slightly recurved. Stems 1-1.5 m. Late July to early Aug.

(An Orienpet (OT) lily.)

**'Petit' I(a/b)**

Syn. of 'Petite'.

**PETIT®**

For information: PETIT® is a registered trademark of Hoffgaarde B.V.

**PETIT® PINK I(a/b)**

Trade designation of 'Hobozi'.

**PETIT® SAIGON I(a/b-c)**

Trade designation of 'Saigon'.

**'Petite' I(a/b)**

Parentage unknown

R: Mak-Leek Inc. (pre 1997), N: Mak-Leek Inc., REG: ICRA (1998)

Fls dark pink; pollen absent. Tepal-tips recurved. Stems 0.6-1 m, very dark. Midseason.

Syn.: 'Petit'.

(Published in *The Lily Nook Cat.*, 1997: 8.)

**Petits Fours Group I(a-b/-)**

Parentage: 'Peachblush' × pink-flowered, up-facing Asiatic seedling

R: Columbia-Platte Lilies (1979), G: Columbia-Platte Lilies (1981), N: Columbia-Platte Lilies (1983), I: Columbia-Platte Lilies (1983), REG: Columbia-Platte Lilies (1984)

Inside peach, pink and white, tepal-tips peach, coral or pink, throat paler cream or white; outside pink; some fls unspotted, most with a few spots on the central third of each tepal; nectaries green; pollen moderate red (179A), anthers not opening or only slightly.

(Published in *Rex Lilies Cat.*, 1983. Included in *ILR Third Supplement* as Petits Fours grex.)

**'Petit Urk' I(a/b)**

Parentage unknown

R: Gebr. Mak B.V. (1982)

Inside brilliant/vivid yellow (13B/14B), area around throat flushed with (169B/171B) and often with spots of the same colour; outside strong yellowish pink/moderate orange (34D/167C) with some vivid/brilliant yellow (12A/13A/B); spots few, dark red (187A), only on inner

tepals; papillae present; nectaries green-yellow; pollen deep orange-yellow (163A); stigma dark purple (79A). Fls 160-190 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 140-150 × 20 mm. Stems 0.9 m, light green, with 9-13 fls.

('Petit Urk' was granted Dutch PBR (LEL 438) in 1989, but has not been registered.)

**'Pet Pink' I(b/-)**

Parentage: 'Orchid Queen' × unknown

R: R.P.H. Clas, G: Oregon Bulb Farms, Inc., N: F.G. Mooney, I: Borbeleta Gardens (1979), REG: Borbeleta Gardens (1981)

Inside shell-pink with straw-yellow centre; outside tan-pink; spots brown at base of tepals; nectaries creamy white; pollen brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, 60 × 10 mm, mid green. Stems 0.6 m, mid green. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1979.)

**'Petra' I(-/-)**

Parentage: 'Edna Kean' × *wilsonii*

R: G.W. Darby (c. 1954), N: G.W. Darby

Fls red.

(Published in *JRHS* 79: 23 (1954).)

**'Petrov' I(a/b-c)**

Parentage: 'Novinka' × 'Windahloo'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005),

REG: B. Mičulka (2005)

Inside yellow; outside paler yellow, midribs green; spots few, small, mahogany, on a third of each tepal, brushmarks mahogany; nectaries slightly open, green, yellow-granulated; pollen brown; stigma yellow. Fls 130 mm wide; tepals 80 × 33 mm, slightly recurved; pedicels 60 mm long, green. Lvs scattered, 80 × 14 mm, dull mid green. Stems 0.95 m, thick, green. Early July.

**Pfeiffer Group VII(-/-)**

Parentage: (*auratum × japonicum*) × (*auratum × rubellum*)

R: N.E. Pfeiffer, N: N.E. Pfeiffer

Fls white to pink; almost unspotted.

(Published in *Strawberry Hill Cat.*, 1955.)

**'Pharao' I(a-b/-)**

Parentage: unnamed seedling × 'Inkafürst'

R: V. Matthé (1980), G: V. Matthé (1982), N: V. Matthé (1986), REG: V. Matthé (1986)

Inside golden brown to majolica-yellow, tepal-tips slightly darker, throat golden brown; outside bronze; spots maroon, on basal half of each tepal; nectaries golden brown; pollen light brown; stigma creamy yellow. Fls 160 mm wide; tepals 80 × 45 mm, margins smooth, tips not recurved. Lvs scattered, dark green. Stems 0.8-0.9 m, purplish brown, with 15-20 fls. July.

**'Philada' VIII(a/-)**

See *L. × phildaureicum* 'Philada'.

***philadelphicum* L. IX(a/b)**

Fls deep yellow to orange-crimson, usually yellow towards base with purple or maroon spots; pollen red. Tepals 40-75 × c.20 mm, narrowed into claw at base, Lvs whorled (often with a few scattered between whorls), 50-120 × 12-15 mm. Stems to 1.3 m, pale green, with 1-2(-5) fls. Eastern N America.

***philadelphicum* var. *andinum* (Nuttall) Ker Gawl.**

**IX(a/b)**

Fls deep crimson to orange, occasionally citron-yellow, throat yellow; spots deep purple. Lvs mostly scattered, narrower (2-5 mm broad). It has a more westerly distribution than the species.

(M. W. Skinner in *Flora of North America* 26: 179 (2002) considers that this variety is synonymous with *philadelphicum*.)

***philadelphicum* ‘Black Diamond’ IX(a/b)**

Parentage: selection from wild *philadelphicum*

N: M.G. Henry, I: A. MacNeil (1946)

Fls deep blood-red, heavily blotched with black. (Published in *Sandyloam Cat.*, 1946.)

***philadelphicum* ‘Brown Berry’ IX(a/b)**

Parentage: selection from wild *philadelphicum*

N: M.G. Henry, I: A. MacNeil (1946)

Fls light brown; spots darker brown. (Published in *Sandyloam Cat.*, 1946.)

***philadelphicum* ‘Flawless’ IX(a/b)**

Parentage: selection from wild *philadelphicum*

N: M.G. Henry, I: A. MacNeil (1946)

Fls pure orange; spots absent. (Published in *Sandyloam Cat.*, 1946.)

***philadelphicum* ‘Northern Sun’ IX(a/b)**

Parentage: selection from wild *philadelphicum*

N: M.G. Henry

Fls pale yellow with small, dark spots. (Published in *LYB* 18: 17 (1955).)

***philadelphicum* ‘Spotlight’ IX(a/b)**

Parentage: selection from wild *philadelphicum*

N: M.G. Henry

Fls red. (Published in *LYB* 18: 17 (1955).)

***philadelphicum* ‘Sunlight’ IX(a/b)**

Parentage: selection from wild *philadelphicum*

N: M.G. Henry, I: A. MacNeil (1946)

Fls golden yellow, shaded deep yellow towards centre. (Published in *Sandyloam Cat.*, 1946.)

***philadelphicum* ‘Wyatt’ IX(a/b)**

Parentage: selection from wild *philadelphicum*

N: M.G. Henry, I: A. MacNeil (1944)

Fls yellow with rich, red spots. (Published in *Sandyloam Cat.*, 1944.)

**× *phildauricum* hort. Skinner ex Gard. Chron.**

**VIII(a/b)**

Parentage: *philadelphicum* × *dauricum*

R: F.L. Skinner, I: G.S.F. Napier (1931)

AM 1932

Original clone red, suffused with gold, splashed with purple. Similar to *philadelphicum*.

(Published in *Gard. Chron.*, ser. 3, 91: 483 (1932).)

**× *phildauricum* ‘Azalia’ VIII(a/-)**

Parentage: (*dauricum* × *philadelphicum*) × *philadelphicum*

R: F.L. Skinner, N: F.L. Skinner, I: F.L. Skinner (1934)

Tepals bright apricot. Stems 0.4-0.6 m, with 18-26 fls. July. (Published in *Constable Cat.* 1938: 18. Classified in Div. I in *ILR* (1982).)

**× *phildauricum* ‘Flambeau’ VIII(b/b)**

Parentage: (*dauricum* × *philadelphicum*) F<sub>2</sub>

R: F.L. Skinner (pre 1938), N: F.L. Skinner

Fls flaming orange-red, heavily spotted. (Published in *Constable Cat.*, 1938.)

**× *phildauricum* ‘Glow’ VIII(a/-)**

Parentage: *dauricum* × *philadelphicum*

R: F.L. Skinner, N: F.L. Skinner, I: F.L. Skinner (1934)

Fls reddish orange with a soft glow. Stems 0.6 m. June to July.

(Published in *Constable Cat.* 1938: 18. Classified in Div. I in *ILR* (1982).)

**× *phildauricum* ‘Philada’ VIII(a/-)**

Parentage: *philadelphicum* × *dauricum*

R: F.L. Skinner, N: F.L. Skinner, I: G.S.F. Napier (1931)

Fls bright red.

(Published in *LYB* 10: 39 (1946). Classified in Div. I in *ILR* (1982).)

**× *phildauricum* ‘Russett’ VIII(-/)**

Parentage: (*dauricum* × *philadelphicum*) F<sub>2</sub>

R: F.L. Skinner (pre 1938), N: F.L. Skinner

Fls burnt orange.

(Published in *Constable Cat.*, 1938. Classified in Div. I in *ILR* (1982).)

**× *phildauricum* ‘Skinner’s Orange’ VIII(a/b)**

Parentage: (*dauricum* × *philadelphicum*) F<sub>2</sub>

R: F.L. Skinner, N: G.S.F. Napier (1933), I: G.S.F. Napier (1933)

AM 1933

Fls glowing orange; spots on basal half of each tepal.

Stems 0.4-1 m, with c.12 fls.

(Published in *LYB* Conference Number: 232, fig.56 (1933). Classified in Div. I in *ILR* (1982).)

***philippinense* Baker IX(a-b/a)**

Fls white, slightly flushed with green; outside with purple streaks towards base; nectaries with downy margins; pollen yellow. Fls fragrant; tepals 180-250 × 40-50 mm, tips spreading. Lvs scattered, up to 150 × 5 mm. Stems 0.3-0.45(-1) m, green, sometimes marked with purple towards base, and with 1-2(-6) fls. Philippine Islands.

**'philippinense' 'White Triumphator' V(a-b/a)**

Parentage: selection from *philippinense*

S: Messrs van Tubergen (pre 1937), N: Messrs van Tubergen

AMH 1937

Fls greenish white with green midribs.

(Published in *Amer. Lily Soc. Newsl.* 4(2) (1950).)

**'Phillipa' VII(-/b)**

Parentage: selection from 'Crimson Queen'

S: J.S. Yeates (c. 1950), N: J.S. Yeates

Fls white, each tepal with a chrysanthemum-crimson (HCC 824/3) ray; spots chrysanthemum-crimson (HCC 824/3). Fls *auratum* type. Stems 1-1.2 m. Aug.

(Published in *LYB* 17: 49 (1954). Included in *ILR* (1982) erroneously as 'Phillipo'.)

**'Phillipo' VII(-/b)**

Error for 'Phillipa'.

**'Philos' I(a/-)**

Parentage: 'Pascal' × 'Appleblossom'

R: Mak-Leek Inc. (pre 1997), N: Mak-Leek Inc., REG: ICRA (1998)

Fls apricot-gold with a cream centre, diffusing out to peach-pink tepal-edges; unspotted. Tepal-margins smooth, tips slightly recurved. Stems c 1.1 m. Mid July. (Published in *The Lily Nook Cat.*, 1997: 8.)

**'Phoebus' I(a/-)**

Parentage: 'Connecticut Lass' × 'Destiny'

R: C. North (c. 1976), N: C. North, I: Lingarden Ltd & Grampian Growers Ltd, REG: C. North (1977)

Fls brilliant yellow (7A); spots absent. Stems medium height, with c.11 fls, and with a few bulbils. July. (Published in *Lilies and other Liliaceae*, 1977: 80.)

**'Phoenix' VII(-/l)**

Parentage unknown

G: Sande B.V. (1985), N: Sande B.V. (1987), I: Sande B.V. & F. Lek (1989), REG: Sande B.V. (1989)

Inside yellowish white (155B), midveins light greenish yellow (8B), throat strong yellow-green (143C); outside yellowish white, midribs brilliant yellow-green (150C), flushed with light greenish yellow (8C); papillae ivory-white and yellow-green on the whole of each tepal; pollen strong orange (169B). Fls 275 mm wide; tepals 135 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 35 mm, mid green. Stems 0.85 m, green, with c.5 fls. June (under glass).

**'Phonarik' I(b/-)**

Parentage: 'Traku Pilis' × 'Connecticut King'

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls bright red with small spots. Tepals broad. Stems up to 1 m.

**'Phyllis' IX(b/c)**

See *auratum* 'Phyllis'.

**'Phyllis Cox' I(c/-)**

Parentage: Stenographer Group selection from Preston Group

S: I. Preston, N: I. Preston

AM 1945

Fls vivid reddish orange (32A), shading outwards to vivid reddish orange (40A); spots scattered, small, dark. Stems 1-1.9 m. July.

(Published in *USDA Yearbook*, 1937.)

**'Phyllis Irene' I(a/c)**

Parentage unknown

R: unknown, G: P. Pierrepoint, N: D. Putland (1998),

I: Hillcrest Harmony Flowers (1998), REG: Hillcrest Harmony Flowers (1998)

Inside brilliant greenish yellow (5B), throat light yellow-green (145B); outside pale greenish yellow (160C); spots elongated, dark red (59A), evenly distributed on basal third of each tepal accompanied by a small, deep purplish red (59B) brushstroke; nectaries frosted light yellow-green (14B); pollen orange-brown (172); stigma light green, tipped greyed orange. Fls 160 mm wide; tepals 105 × 45 mm, margins smooth, tips very slightly recurved. Lvs scattered, 112 × 13 mm, mid green. Stems 1.1 m, moderate yellowish green (138A) above, the basal two-thirds moderate brown (200D), with c.10 fls. Mid July to Aug.

**'Phyllis T' I(b/-)**

Parentage unknown

R: E. Tesca (1965), N: H.R. Cocker (1977), I: H.R. & R. Cocker (1977), REG: H.R. & R. Cocker (1978)

Inside brilliant yellow (9C), shading to light greenish yellow (8C) at tips and throat; outside pale yellow (8D); spots dark maroon; nectaries dark purplish pink (186C); pollen orange-brown. Lvs narrow. Stems 0.6-0.8 m. Midseason.

(Published in *Lilies and other Liliaceae*, 1978/9: 112.)

**'Piacenza' VIII(a/-)**

Parentage: seedling 85.744-1 × 'Pollyanna'

R: World Flower B.V. (1991), G: World Flower B.V. (1994), N: World Flower B.V. (1999), I: World Flower B.V., REG: World Flower B.V. (2001)

Inside brilliant yellow (7B), paler at base; outside light greenish yellow (8B); spots absent; some papillae present; nectaries green; pollen light brown; stigma yellow. Tepal-margins ruffled, tips strongly recurved. Stems 1 m, green with darker markings, and with 8-10 fls (from 16-18 cm bulb). Early.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Picaninny' VII(-/c)**

See *L. × parkmanii* 'Picaninny'.

**'Picardy' I(a/-)**

Parentage: 'Bora' × 'Crimsonia'

R: Gebr. N. & B. Laan & Zn (1981), G: Gebr. N. & B. Laan & Zn (1983), N: Gebr. N. & B. Laan & Zn

(1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)

Inside salmon-pink, throat pink; outside pink; spots deep purple, all over fl. except at tepal-tips; nectaries light pink; pollen orange. Fls 145 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 22 mm, dark green. Stems 1.4 m, green, with c.14 fls. June.

**‘Picasso’ I(a/b-c)**

Parentage: ‘Enchantment’ × ‘Connecticut King’  
R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc. (c. 1978)

Fls bright orange with oxblood-red blotches; spots absent. Stems 0.6-1.2 m. June to July.

**‘Piccadilly’ VII(b/c)**

Parentage: (*L. × parkmanii* ‘Allura’ × ‘Star Gazer’) × (‘Pink Virtuoso’ × ‘Star Gazer’)

R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside pale yellow-green (155A) flushed with strong purplish red (59D) towards tepal-edges, tepal-tips pale yellow-green (155A), midveins light greenish yellow (3C) fading towards edges, throat yellowish white (155D); outside yellowish white (155B), midribs light yellow-green (2C), shaded strong yellow-green (144B) towards top, flushed with pale greenish yellow (2D) along midribs, tepal-edges strong purplish red (59D); spots moderate purplish red (59C), on two-thirds of each tepal; papillae yellowish white (155B), and a few yellow, in the throat; nectaries strong yellow-green (144B); pollen greyish yellow-green/yellowish white (196A/D); stigma moderate red (183D). Fls 200 mm wide; tepals 110 × 40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 170 × 40 mm, mid green. Stems 0.7 m, mid green, with c.5 fls.

**‘Pico Bello’ I(a/b)**

Parentage unknown  
R: J. Boon (pre 1987), N: J. Boon (2002), REG: J. Boon (2002)

Inside pale yellow (8D) on a moderate red (181C) ground, throat dark pink, markings dark purple; spots and papillae present; pollen dark brown; stigma purple. Tepal-margins wavy, tips slightly recurved. Stems light green with darker markings.

**‘Picotee’ VI(-/a)**

See *L. × imperiale* ‘Picotee’.

**var. *pictum* IX(b/c)**

See *auratum* var. *pictum*.

**‘Pictum’ VII(-/b)**

Syn. of Surprise Ending Group.

**Pictum Group VII(-/b)**

R: R.L. Strahm, N: R.L. Strahm

Syn. of Surprise Ending Group. Pictum Group was an illegitimate name which has now been replaced by the name Surprise Ending Group (q.v.).

**‘Picture’ VII(-/d)**

Parentage: (*L. × parkmanii* Little Rascal Group × ‘Star Gazer’) × ‘Star Gazer’

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside strong purplish red/deep purplish pink (64C/D), tepal-edges narrow, greenish white (155C), tips yellowish white (155B), suffused with moderate red (47A) along midveins, throat strong yellow-green (145A) edged light greenish yellow (3C); outside yellowish white (155B) suffused with strong purplish red (59D), midribs pale greenish yellow (2D); papillae deep red (53A) on basal half of each tepal; nectaries moderate yellow-green (139D); pollen brownish orange (171B). Fls 240 mm wide; tepals 130 × 70 mm, margins smooth, tips strongly recurved. Lvs scattered, 150 × 55 mm, mid green. Stems 0.45 m, pale green, with c.3 fls. July (under glass).

**‘Picturesque’ I(a/-)**

Parentage: (‘Halloween’ × (‘Enchantment’ × ‘Connecticut King’)) × unnamed clone no. 28-79

R: Rien Veenstra (1979), G: Oregon Bulb Farms, Inc. (1981), N: Rien Veenstra (1989), I: Oregon Bulb Farms, Inc. (1989), REG: Oregon Bulb Farms, Inc. (1989)

Inside vivid yellow (14A/15A), throat strong yellow-green (143B); outside brilliant to vivid yellow (13B/14A); spots few, small, elongated, deep red (185A), on each side of nectaries; each tepal with a deep red (185A) brushmark, c.15 mm wide, extending from top of nectary to halfway up tepal; nectaries strong yellow-green (143B); anthers not dehiscent. Fls 155 mm wide; tepals 80 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 17.5 mm, dark green. Stems 1.2 m, moderate olive-green (145A), with c.5 fls. Midseason.

**‘Piedmont Gold’ I(b/-)**

Parentage: ‘Connecticut Lass’ × ‘Keystone’

R: Piedmont Gardens, N: Piedmont Gardens (1976), I: Piedmont Gardens (1976), REG: Piedmont Gardens (1978)

Fls brilliant greenish yellow (6A); spots tiny; nectaries brilliant yellow-green (154B); pollen strong orange (26A). Tepals slightly ruffled. Lvs narrow. Stems 0.4 m. Late July. Syn.: ‘Piedmont Yellow’.  
(Published in *Piedmont Gardens Cat.*, 1976.)

**‘Piedmont Red’ I(b/-)**

Parentage: (‘Valiant’ × unknown) × ‘Connecticut Glow’  
R: D.M. Stone & F.H. Payne (1975), N: Piedmont Gardens (1976), I: Piedmont Gardens (1979), REG: Piedmont Gardens (1978)

Inside strong red (46A), throat and outside vivid red (46B); spots very indistinct; nectaries vivid red (46C); pollen red. Fls 75 mm wide; tepals slightly recurved. Lvs scattered, 185 × 35 mm, mid green. Stems 1.1 m, pale green, with c.18 fls. July.  
Syn.: ‘Red Trillium’.

(Published in *Lilies and other Liliaceae*, 1978/9: 112 as

'Piedmont Red'; in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978) as 'Red Trillium'.

**'Piedmont Yellow' I(b/-)**

Syn. of 'Piedmont Gold'.

**'Piemonte' VII(a/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside moderate purplish pink (62B) changing to yellowish white (155D) towards margins and base of each tepal, midveins white changing to deep red (60A); outside moderate purplish pink; spots and papillae present; nectaries green; pollen orange-brown; stigma purple-red. Tepal-margins strongly ruffled, tips recurved. Stems medium to tall, with reddish markings. Midseason. (Production ceased in 1997.)

**'Piena Ceļš' I(a/b-c)**

Parentage unknown

R: J. Vasarietis (1989), G: J. Vasarietis (1992), N: J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J. Vasarietis (2000)

Inside pale yellow (11D), soon fading to white, tepal-bases greenish, soon fading to pale yellow (11D); outside pale yellow (11D); spots dark purple, on basal half of each tepal (many spots in the centre/upper part of spotted area are elongated); pale papillae either side of each nectary; nectaries bright white with a very short (1 mm) green mark above top; pollen bright orange; stigma greyish violet. Fls 190 mm wide; tepals 95 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 105 × 10 mm, dark green. Stems 0.8-0.9 m, green, with c.8 fs. Early July.

Trade designation: MILKY RIVER.

(Published in *Lilium Balticum Cat.*, 1996. Nomenclatural standard: colour print provided by registrant (WSY 0022982).)

**'Pierette' I(a/-)**

Parentage: 'Hurricane' × *dauricum*

R: H. Eckstein (c. 1951), N: H. Eckstein

Fls cadmium-yellow, tepal-tips blood-red; spots mahogany. Stems 1 m. June.

(Published in *Kline Cat.*, 1958.)

**'Pigalle' I(a/-)**

Parentage: seedling RS 815 × seedling RS 89-2

R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside yellowish white (155D) with a deep pink (51B) blush, throat light yellow (14D); outside yellowish white (155D), tepal-edges moderate pink (51D), outer tepals suffused with deep pink (51C), midribs light yellow (160B); spots dark red (187A), on the basal half of each tepal; nectaries dark red (187B); pollen moderate reddish orange (171A). Fls 166 mm wide; tepals 80 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 145 × 15 mm, mid green. Stems 1.24 m, pale green with darker markings, and with c.12 fs.

**'Pigeon's Milk' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (c. 1984), G: J. Vasarietis (1989), N: J. Vasarietis (1989), REG: J. Vasarietis (1993)

Inside pale greenish yellow (2D) fading to white, throat light yellow-green (2C); outside pale greenish yellow (2D), midribs greenish; spots very small, purple-black, on a third of each tepal; nectaries greenish white; pollen orange. Fls 120 mm wide; tepals 65 × 37 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 11 mm, dark green. Stems 0.7 m, green, with 5-7 fs. Late June.

**'Pigmy Pictum' IX(b/c)**

? Syn. of *auratum* var. *platyphyllum* 'Little Gem'.

**'Pikador' I(a-b/b)**

Parentage: unknown × 'Velehrad'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000), REG: B. Mičulka (2000)

Inside dark red, tepal-tips paler; outside with brownish midribs; spots very sparse; nectaries apricot-ochre, pink-granulated; pollen orange-brown; stigma violet. Fls 120 mm wide; tepals 85 × 43 mm, very slightly recurved (the outer more so), thick; pedicels 80 mm long, heavily dotted dark brown. Lvs scattered, 115 × 14 mm, yellowish green, slightly shiny. Stems 0.95 m, thick, stiff, strongly dotted red-brown, and with a short infl. Early July.

**'Pikantā' I(a/c)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis, G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)

Inside near to strong reddish orange (31A), tepal-tips vivid red (45A), throat vivid yellow (17C); outside vivid yellow (17C), tepal-margins reddish orange; spots very small, reddish, on half of each tepal; nectaries yellowish; pollen brown. Fls 130 mm wide; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 8 mm, dark green. Stems 0.65 m, green, with c.7 fs. Late June.

Syn.: 'Piquante'.

(Published in *Latvian Lily Register*, 1993. Included in *ILR Thirteenth Supplement* as 'Piquante', but the epithet has now been corrected to 'Pikantā')

**Pilgrims Hope Group I(a/-)**

Parentage: complex origin from hybrids of *dauricum* var. *luteum* & 'Connecticut King'

R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens

Inside yellow overlaid with gold in centre of fl. May to July.

**var. *pilosiusculum* IX(c/d)**

See *martagon* var. *pilosiusculum*.

**'Pilot' I(b-c/c-d)**

Parentage: 'Plavovláška' × 'Mokka'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)

Inside lemon-yellow, throat paler; outside paler yellow,

midribs brownish at base; spots numerous, pink-brown, oval, fairly large, on two-thirds of each tepal; nectaries white-granulated; pollen brown; stigma pinkish brown. Buds slightly hairy. Fls 130 mm wide; tepals 72 × 35 mm, twisted, margins slightly wavy, tips slightly recurved; pedicels 65 mm, green, slightly hairy. Lvs scattered, 105 × 18 mm, dull pale green. Stems 0.75 m, green, slightly hairy. Early June.

#### **‘Pimento’ VII(a/b)**

Parentage: red-flowered dwarf seedling × ‘All Right’  
R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2004)

Inside strong/vivid purplish red (61B/C), tepal-margins yellowish white (155D), midveins strong red (46A), throat yellowish white (155D); outside with outer tepals moderate purplish red (186B), base and margins yellowish white (155D), midribs (144D) at base, changing into yellowish white (155D), towards top strong yellow-green (144C), at top strong yellow-green (144A), inner tepals moderate/dark purplish red (186B/C), base and margins yellowish white (155D), midribs light yellow-green (144D) at base, changing into yellowish white (155D), towards top strong yellow-green (144C); spots absent; papillae deep purplish red (59B); nectaries strong yellow-green (143C) with narrow light greenish yellow (1C) edge; pollen deep orange-yellow (163A); stigma moderate purplish red (186B). Fls 130-195 mm wide, fragrant; tepals 110 × 37-53 mm, margins ruffled, tips recurved. Lvs scattered, 130 × 34 mm, dark green. Stems 0.45-0.6 m, green, with c.4 fls.

#### **‘Pimpernel’ I(a/-)**

Parentage: ‘Amsterdam’ × seedling OR 829  
R: Vletter & Den Haan (1981), G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside dark to deep red (187B/53A); outside dark red (187A/B), the inner tepals tinged with vivid reddish orange (34A); spots absent. Fls 170 mm wide; tepals 85 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 20 mm, mid green. Stems 0.95 m, green with darker markings, and with 3-6 fls. May (under glass).

#### **‘Pinar del Rio’ I(a/b-d)**

Parentage: ‘Aelita’ × ‘Rubinstern’  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)  
Inside moderate red (181B), each tepal with a narrow, longitudinal, pale orange-yellow (159C) stripe in the centre; outside paler salmon-pink, midribs strong green-yellow; spots numerous, medium sized, round, greyish reddish brown (200B) on three-quarters of each tepal; nectaries white, tinged with light violet at end; filaments long, pink; pollen greyish red (178A); style 60 mm long, beige; stigma greyish reddish orange (174B). Fls 140 mm wide; tepals 70 × 25 mm, margins smooth, almost the whole tepal distinctly curved. Lvs scattered, 110 × 18 mm. Stems 1.1 m, black-green, with c.6-8 fls, and

bulbils. Late July.

(Nomenclatural standard: colour print provided by registrant (WSY 0032262).)

#### **‘Pineapple’ I(a/-)**

Parentage unknown  
R: E.H. Doerr, N: E.H. Doerr, I: Borbeleta Gardens (1974), REG: Borbeleta Gardens (1981)  
Inside bright orange, throat paler; outside tan-orange; spots few, small, brown; nectaries orange; pollen light brown. Tepals 60 × 12 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 8 mm, mid green. Stems 0.3 m, green, with 6-8 fls. June.

#### **Pinegos Group I(a,b,c/-)**

Parentage unknown  
REG: D.E. Schmitzer (1985)  
A range of triploid and tetraploid Asiatic lilies with varied characteristics, at least one parent being tetraploid. (Published in *ILR Fifth Supplement* as Pinegos grex.)

#### **‘Pinegos Ares’ I(b/-)**

Parentage: ‘Schellenbaum’ × ‘Tetra Mountaineer’  
R: D.E. Schmitzer (1975), G: D.E. Schmitzer (1978), N: D.E. Schmitzer (1986), REG: D.E. Schmitzer (1986)  
Fls vivid reddish orange (42A) with small, vivid orange (28A) stripes in the throat; spots small, on the basal half of each tepal; nectaries frosted reddish; pollen moderate red (180B). Fls c.100 mm wide; tepals 60 × 30 mm, slightly recurved, tips rounded. Lvs scattered, 130 × 15 mm, mid green. Stems 0.8-1 m, mid green, with 8-12 fls. Late June. Fertile tetraploid (2n = 48).

#### **‘Pinegos Bronze’ I(b-c/c)**

Parentage: ‘Compass’ × (‘Tetra Nutmegger’ × ‘Maracana’)  
R: D.E. Schmitzer (1991), G: C.K. Kroell (1994), N: D.E. Schmitzer (1998), REG: D.E. Schmitzer (1998)  
Inside brilliant orange-yellow (21B) with a reddish overlay resulting in a bronze sheen close to deep orange-yellow (163A), fading to strong orange-yellow (163B), throat vivid yellow (14B); outside close to moderate orange (168C); spots small, brown, on the basal half of each tepal; nectaries greenish; pollen light brown; stigma greyed orange. Fls 140 mm wide; tepals 75 × 27-36 mm, margins smooth, tips very slightly recurved; pedicels rather long, those of the secondary fls held vertically, with the fls opening almost up-facing. Lvs scattered, 110 × 12 mm. Stems 1.1 m, mid green, with c.12 fls. Late June to mid July. Tetraploid.

#### **‘Pinegos Cora’ I(b/b)**

Parentage: ((‘Tetra Enchantment’ × ‘Tetra Tabasco’) × ‘Tetra Connecticut Yankee’ [= van Tuyl seedling IVT82294]) × (‘Pinegos Fire’ × ‘Tetra Connecticut King’)  
R: D.E. Schmitzer (1988), G: D.E. Schmitzer (1991), N: D.E. Schmitzer (1997), REG: D.E. Schmitzer (1997)  
Inside orange-red (30C), midveins lighter orange-yellow; outside strong orange (30D); spots small, dark purple, on the basal quarter of each tepal; nectaries strong orange (30D); pollen vivid reddish orange (33B); stigma dark

purple. Fls c.150 mm wide; tepals 95 × 50 mm, margins smooth, outer tepals distinctly recurved at the tips, inner only slightly. Lvs scattered, 130 × 18 mm, mid green. Stems 1 m, almost black, with 8-12 fls. Early to mid July. Tetraploid.

#### **'Pinegos Fire' I(b/d)**

Parentage: *lanceifolium* (triploid) × 'Tetra Mountaineer'  
R: D.E. Schmitzer (1979), G: D.E. Schmitzer (1982), N: D.E. Schmitzer (1985), I: D.E. Schmitzer (1986), REG: D.E. Schmitzer (1985)

Inside vivid reddish orange (44B), tepal-tips strong reddish orange (42B), throat vivid reddish orange (33B); outside strong reddish orange (42B); spots dark red (darker than 187A) on about half of each tepal; nectaries slightly frosted; pollen dark brown. Fls 100 mm wide; tepals 65 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 1 m, dark green, with c.15 fls and numerous bulbils. Mid to late July. Fertile tetraploid.

#### **'Pinegos Orange' I(b-c/d)**

Parentage: *lanceifolium* (triploid) × 'Tetra Mountaineer'  
R: D.E. Schmitzer (1979), G: D.E. Schmitzer (1982), N: D.E. Schmitzer (1985), I: D.E. Schmitzer (1986), REG: D.E. Schmitzer (1985)

Fls vivid yellowish orange (30C); spots medium sized, dark red (187A) on half of each tepal; nectaries slightly frosted orange; pollen dark brown. Fls 90 mm wide; tepals 70 × 22 mm, margins smooth, tips strongly recurved. Lvs scattered, 180 × 23 mm, mid green. Stems 1.2 m, almost black, with c.15 fls and numerous bulbils. Mid to late July. Fertile tetraploid.

#### **'Pinguin' I(a/-)**

Parentage unknown  
R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1994)

Inside close to pale yellow-green (155A); outside pale yellow-green (155A), midribs with a little red-brown at the base; spots dark red (187A) on basal part of each tepal; pollen deep orange-yellow (163A); stigma brilliant greenish yellow (6C) and dark red (187A). Fls 200 mm wide; tepals 105 × 50 mm. Lvs scattered, 120 × 25 mm. Stems 1.1 m, pale green, with c.5 fls.

#### **'Pink Alabaster' I(a/c)**

Parentage: unnamed seedling × 'Honey Queen'  
R: N. Martschinke (1981), G: N. Martschinke (1985), N: N. Martschinke (1988), REG: N. Martschinke (1991)  
Inside brilliant yellow (20A), tepal-tips pale yellow (20C), throat deep pink (52B); outside deep pink (52C), showing through to inside; spots few, dark, in centre of fl.; nectaries vivid red (52A); pollen vivid reddish orange (34A). Tepals 65 × 32 mm, margins smooth, tips not reflexed. Lvs scattered, 110 × 10 mm, mid green. Stems 1.5 m, pale green, with c.8 fls. July.

#### **'Pink Attraction' II(c/c-d)**

Parentage: (*L. × dalhansonii* × unknown) × unknown

R: E. Robinson (1965), N: E. Robinson (1978), I: E. Robinson (1978), REG: E. Robinson (1980)

Inside dark pink, with some cream coloration towards base; outside paler; spots large, reddish, over basal half of tepals. Tepals slightly recurved. Lvs whorled, mid green. Stems 1 m, with c.12 fls.  
(Published in *Gaybird Nursery Cat.*, 1978.)

#### **'Pink Auratum Group VII(-/)**

Parentage: *auratum* × unknown  
R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens  
Inside soft pink with darker spots. Stems 1.2 m. Aug.

#### **'Pink Beauty' VII(-/c)**

See *L. × parkmanii* 'Pink Beauty'.

#### **'Pink Beauty' I(b/-)**

Syn. of 'Pink Change'. Published in *ILR* (1982) as 'Pink Beauty' but name now changed to 'Pink Change'.

#### **'Pink Bells' IV(-/)**

Parentage: *canadense* × *michiganense*  
R: A.M. Showalter (pre 1966), N: A.M. Showalter, REG: (1985)

Fls peach-pink. Lvs whorled. Stems 1.5-1.9 m. July.  
(Published in *'Deep-Freeze' Lilies Cat.*, 1966/67: 8. Fls are brighter when plant is grown in full sun.)

#### **'Pink Big Ben' I(b-c/d)**

Parentage: *davidii* var. *wilmottiae* × "Saskat-hybrid"  
R: N Martschinke, N: N. Martschinke (1976), I: N. Martschinke (1976), REG: N. Martschinke (1978)  
Inside strong to deep purplish red (54A/B), tepal-margins deep red (185A), throat brilliant yellow-green (154C); outside strong purplish pink (54A) with stripes of strong yellow-green (144A); spots dark red (187B); nectaries dark red (187B); pollen moderate orange (167A). Lvs dark green. Stems 1.5 m.  
(Published in *Lilies and other Liliaceae*, 1978/9: 112.)

#### **'Pink Blaze' I(a/-)**

Parentage: (*cernuum* × unknown) × Yellow Blaze Group  
R: Gebr. N. & B. Laan & Zn (1980), G: Gebr. N. & B. Laan & Zn (1982), N: . Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)  
Fls pale pink, throat pink; outside very pale pink; spots deep purple, only in the centre; nectaries white; pollen brown. Fls 140 mm wide; tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 25 mm, dark green. Stems 0.8 m, green, with c.8 fls. June to July.

#### **'Pink Bounty' VIII(c/b)**

Parentage: white-flowered Aurelian seedling × ('Starburst Sensation' × (*L. × kewense* 'White Henryi' × 'Dominique'))  
R: R.H. Bazett (1997), G: R.H. Bazett (1999), N: R.H. Bazett (2001), I: B & D Lilies (2001), REG: R.H. Bazett (2001)  
Inside strong to light purplish pink (63C/D), the

colour progressively more intense from the margins to centre of tepals, throat yellow to green-yellow towards the nectaries; outside pale yellow (158A), blending to yellowish white (158D), the colour at margins similar to that inside, midribs pale creamy pink with a hint of green; spots absent; nectaries green; pollen moderate orange (167B); stigma pale grey-green, dark purple at edges. Fls 160 mm wide, strongly scented; tepals 145 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 240 × 30 mm. Stems to 1.9 m, dark green, strong, with up to 34 fls (including tertiaries). Early July. (An Orienpet (OT) lily. Nomenclatural standard: colour print provided by registrant (WSY 0030916).)

#### 'Pink Bouquet' VII(b/c)

Parentage unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1961), N: R.L. Strahm, I: H.J. & R.L. Strahm (1969), REG: Strahm's Lilies, Inc. (1981)

Inside deep pink (52B), tepal-tips moderate purplish red (58A), throat moderate yellowish green (138A); outside light purplish pink (55C); spots numerous, vivid red (52A); nectaries moderate yellowish green (138A); pollen moderate reddish orange (171A). Fls 175-200 mm wide; tepals 100 × 50 mm, margins ruffled, tips slightly recurved. Lvs scattered, mid green. Stems 1.2 m, green below, reddish above, with c.8 fls. July to Aug. (Published in *Rex Bulb Farms Cat.*, 1969.)

#### 'Pink Brilliant' VIII(a-b/b-c)

Parentage: 'Sorbonne' × seedling LO 93003-2AT

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)

Inside vivid purplish red (57C), vivid purplish red (57D) towards tepal-margins, margins yellowish white (155B) in apical half, along midveins strong purplish red (63A), throat yellowish white (155B); outside with outer tepals yellowish white (155B), towards margins yellowish white (155B) on a vivid purplish red (67B) ground, margins yellowish white (155B) in apical half, midribs strong yellow-green (143B) at base, brilliant yellow-green (150C) at top, with a small brilliant yellow-green (150A) spot, inner tepals yellowish white (155B) with small vivid purplish red (67B) streaks, midribs strong yellow-green (143B) at base; spots absent; papillae strong purplish red (63A); nectaries strong yellow-green (144B); pollen strong orange-yellow (163B); stigma light yellow-green (145D). Fls 260 mm wide; tepals 150 × 60-70 mm, margins ruffled, tips recurved. Lvs scattered, 170-210 × 30-70 mm, dark green. Stems 0.9-1.1 m, green, with 2-6 fls. (A *longiflorum*/Oriental (LO) hybrid.)

#### 'Pink Brushmarks' I(a/b-c)

Parentage unknown

G: M.D. Holloway (1974), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)

Inside pink, throat slightly paler; outside rosy pink, paler towards centre, midribs light green, raised; spots very few, dark wine-coloured, around the nectaries; brushmarks red; nectaries frosted green; pollen golden. Fls 187 mm wide, scented; tepals 150 × 48 mm, margins smooth, tips

not recurved. Lvs scattered, 142 × 15 mm, mid green. Stems 0.86 m, brown, with c.5 fls. Late July to mid Aug. (Holds its fl. colour well. Original seed from the NALS seed exchange, 1993.)

#### 'Pink Cameo Group' VII(-/b)

Parentage: *auratum* var. *platyphyllum* × *japonicum*

R: E.L. Kline (c. 1954), N: E.L. Kline

Fls pink with a few pink spots; anthers red. Fls large.

Stems 1 m. June to July.

(Published in *Kline Cat.*, 1957. Included in *ILR* (1982) as Pink Cameo grex.)

#### 'Pink Captivation' VII(-/b)

Parentage: (*speciosum* × *auratum*) × ((*speciosum* × *auratum*) × *rubellum*)

R: H.J. Strahm (1961), N: R.L. Strahm (1965), I: Strahm's Lilies, Inc. (1970), REG: Strahm's Lilies, Inc. (between 1970 and 1981)

Fls shell-pink, each tepal with a deep rose-pink ray and lavender-rose margins, throat and tepal-tips pale pink; outside deep rose-pink and pale pink; spots deep rose-pink; nectaries green; pollen orange. Tepal-margins ruffled, tips slightly recurved. Lvs scattered, 140 × 50 mm. Stems 1 m. Aug.

(Published in *Rex Bulb Farms Cat.*, July 1970.)

#### 'Pink Carmen' VII(a-b/-)

Parentage: unnamed seedling × unnamed seedling

R: Sun Valley Bulb Farms, Inc. (1980), G: Sun Valley Bulb Farms, Inc. (1983), N: Sun Valley Bulb Farms, Inc. (1984), I: Gebr. Mak B.V., REG: Mak 't Zand B.V. (1995)

Inside light purplish pink (65B), midveins and throat brilliant yellow (13B); outside pale purplish pink (62D); dark pink spots present; papillae present; nectaries vivid yellow (15B); pollen pale brown to orange-brown; stigma green. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 'short to medium', green with darker markings at base. Late.

#### 'Pink Champagne' I(b/d)

Parentage: derived from Umbtig Group

R: A.J. Porter, N: A.J. Porter

Pink overcast on tepals, fading to yellow, sometimes pinkish and yellow fls out together; spots dark, on basal two-thirds of each tepal. Stems 1-1.2 m, with bulbils. July to Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 16 (1978).)

#### 'Pink Chandelier' VII(-/d)

See *L. × parkmanii* 'Pink Chandelier'

#### 'Pink Change' I(b/-)

Parentage: pink-flowered seedling × unknown

R: E. Robinson, N: E. Robinson, I: E. Robinson (1978)

Inside dark pink, turning to light pink, centre frosted red-pink; outside darker pink; pollen orange. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green.

Stems 0.6-1 m, dark green, with few fls. July.

Syn.: 'Pink Beauty' (Div. I).  
(This is the correct epithet for the plant previously listed in *ILR* (1982) as Div. I(b) 'Pink Beauty'.)

**'Pink Charm' I(b-c/-)**

Parentage: *lanceifolium* × (*davidii* var. *willmottiae* × seedling L. 37-538-1)  
R: C.F. Patterson (c. 1945), N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1951)  
Fls predominantly pink with creamy centre. Fls 75-100 mm wide. Stems 1 m. July.  
(Published in *LYB NALS* 5: 67 (1952).)

**'Pink Chartreuse' I(b-c/-)**

Parentage: (*cernuum* × unknown) × (*cernuum* × unknown)  
R: A.J. Porter (1969), N: A.J. Porter (1974), REG: A.J. Porter (1975)  
Inside brilliant greenish yellow (6C), tepal-tips deep pink (51C), throat brilliant greenish yellow (6C); outside brilliant yellow-green (154C); spots present; nectaries brilliant greenish yellow (6C); pollen moderate orange (167A). Lvs glossy, moderate olive-green (137A). Stems 0.6 m. July.  
(Published in *Lilies and other Liliaceae*, 1975: 94.)

**'Pink Cheer' I(b/-)**

Parentage: 'Palomino Queen' × 'Pink Charm'  
R: R. Erskine (c. 1973), G: R. Erskine (c. 1977), N: R. Erskine (c. 1978), REG: R. Erskine (1990)  
Inside and outside pink, throat white; spots scattered, dark red; nectaries pale yellow; pollen brown. Fls 125-150 mm wide; tepals 75 × 20 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 17 mm, dark green. Stems 1 m, dark green, with 10-12 fls.

**'Pink Chique' I(a/-)**

Parentage unknown  
R: P. Hoff (1992), G: Hoffgaarde B.V., N: Hoffgaarde B.V. (1995), I: Hoffgaarde B.V. (1996), REG: Hoffgaarde B.V. (1997)  
Inside pale yellow-green (155A) in the basal two-thirds, the apical third moderate purplish pink (66D), tepal-tips strong purplish red (67A), throat strong red (53C); outside pale yellow-green (155A); spots and papillae absent; nectaries strong yellow-green (143B); pollen moderate orange (167A); stigma dark red (187A). Fls 160 mm wide; tepals 85 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10-15 mm, mid green. Stems 1.15 m, green, with 7-8 fls.

**Pink Cloud Group VII(-/-)**

Parentage: *japonicum* × *auratum* var. *tricolor*  
R: J. de Graaff (c. 1960), N: J. de Graaff  
Fls satin-pink. Stems 0.6-1 m. Aug.  
(Published in *LYB* 28: 135 (1965). Included in *ILR* (1982) as Pink Cloud grex.)

**'Pink Comet' VII(-/-b)**

Parentage unknown  
R: L. Woodriff (1958), G: H.J. & R.L. Strahm (1962),

N: R.L. Strahm (1973), I: H.J. & R.L. Strahm (1973), REG: H.J. & R.L. Strahm (1984)  
Fls carmine-pink, each tepal with a red ray and white edges; spots turkey-red; nectaries green. Tepals 100 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered. Stems 1.2-1.9 m, with 8-10 fls. Aug.  
(Published in *Rex Bulb Farms Cat.*, 1973.)

**'Pink Coral Belle' II(-/-)**

Parentage unknown  
R: E. Robinson (pre 1978), G: E. Robinson (c. 1984), N: E. Robinson (c. 1985), I: E. Robinson (1985), REG: D. Dale (1993)  
Inside light lilac-pink, throat lime-green; outside light lilac-pink, midribs dark purple; spots maroon, sparse, very tiny, each framed in white; nectaries lime-green; pollen very dark brown. Fls 45 mm wide; tepals 28 × 12 mm, margins smooth, tips strongly recurved. Lvs whorled, 120 × 40 mm, pale green. Stems 1.2-1.4 m, black, mottled with green, with 16-24 fls. Early July.

**'Pink Cymbal' VII(-/-c)**

Parentage unknown  
R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1961), N: R.L. Strahm (1972), I: H.J. & R.L. Strahm (1972), REG: Strahm's Lilies, Inc. (1981)  
Inside deep yellowish pink (47C), tepal-tips white, throat moderate yellow-green (139C); outside pink; spots deep purplish red (59B); pollen moderate orange (167). Fls 300-350 mm wide; tepals 150 × 50 mm, margins ruffled, tips slightly recurved. Stems 1.2 m, dark red, with 7 or more fls. Late Aug.  
(Published in Strahm's sales list, 1972.)

**'Pink Dandy' VII(-/-b)**

Parentage: (*speciosum* × *auratum*) × seedling involving *speciosum*, *auratum* & *rubellum*  
R: H.J. Strahm (1961), N: R.L. Strahm (1970), REG: Strahm's Lilies, Inc. (between 1970 and 1981)  
Inside dark pink, tepal-edges lighter, tips white, throat pink; outside deep pink and white; spots dark crimson; nectaries green; pollen orange. Lvs 140 × 60 mm. Stems 0.8-1 m. July to Aug.  
(Published in *Rex Bulb Farms Cat.*, July 1970.)

**'Pink Dawn' VII(-/-d)**

Parentage: *speciosum* × unknown  
R: R.W. Bemis, N: R.W. Bemis, I: R.W. Bemis, REG: (1985)  
Fls soft pink. Tepals slightly recurved. Lvs scattered, broad, dark green. Stems 0.5 m. July to Aug.  
(Published in *Blackthorne Gardens Cat.*, 1966/67.)

**'Pink Dawn' VII(-/-)**

Parentage unknown  
R: H.J. Strahm (pre 1981), N: H.J. Strahm  
Inside rhodonite-pink, each tepal with white edges; spots fuchsia-purple. Fls 250 mm wide; tepals broad, overlapping, wavy-edged. Stems 1.2-1.9 m. Aug.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Pink Delight' VII(-/b)**

See *L. × parkmanii* 'Pink Delight'.

**Pink Diamond Group VII(-/b)**

Parentage: *auratum* var. *platyphyllum* × (*japonicum* × *auratum*)

R: J. de Graaff (1955), N: J. de Graaff

Fls salmon or shell-pink; spots present. Stems 1.2-1.5 m. Aug.

(Published in *Oregon Bulb Farms Cat.*, 1960. Included in *ILR* (1982) as Pink Diamond grex.)

**Pink Dream Group VII(-/)**

Parentage unknown

R: Blackthorne Gardens (pre 1983), N: Blackthorne Gardens

Fls soft pink. Stems 1 m. Aug.

**'Pink Drink' I(a/b)**

Parentage: unnamed tetraploid seedling × mixed tetraploid pollen

R: D. Herbergs (1995), G: D. Herbergs (1998), N: D. Herbergs (1999), I: D. Herbergs (2000), REG: D. Herbergs (2004)

Inside strong red (41B) changing to moderate yellowish pink (33D) at tepal-tips; outside light yellowish pink (38C); spots very dark, large, on centre of each tepal; nectaries greenish with orange-yellow blush above; pollen dark orange; stigma violet-brown. Fls 160 mm wide; tepals 90 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, glossy, 140 × 20 mm. Stems 1.1 m, green, with c.12 fls and secondary buds. July. (*Lilium Balticum Lily Register*, 2000.)

**'Pink Dwarf' I(a-b/b)**

Parentage: 'China' × dwarf seedling with peach-salmon, often semi-double fls

R: J.F. McRae (1984), G: J.F. McRae (1988), N: J.F. McRae (1993), I: Mt Hood Lilies Inc. (1994), REG: Mt Hood Lilies Inc. (1996)

Inside light/pale purplish pink (55C/D) to strong/light purplish pink (62A/C); outside light/pale purplish pink (62C/D); spots dark, very few, on the basal third of each tepal; anthers soft pink to ivory-white, not opening; stigma dark purplish pink (186C). Fls double (with up to at least 7 extra spreading 'tepals' - each three-quarters or more as long as the normal tepals), 140-180 mm wide; tepal-margins smooth, tips not or very slightly recurved. Lvs scattered, 100-150 × 7.5-20 mm, mid to dark green. Stems 0.2-0.45 m, mid green, with up to 10 fls (from 12-16 cm bulbs).

**'Pink Eden' VII(-/d)**

Parentage: unnamed seedling × unnamed seedling

R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1983), N: Gebr. Mak B.V. (1984), I: Oriental Express (1987), REG: Oriental Express (1989)

Inside strong purplish pink (63C), tepal-tips and margins ivory-white; outside pale yellow-green (155A), midribs deep pink (185D); papillae few, deep red (53A); nectaries brilliant yellow-green (150B); pollen moderate reddish

orange (171A). Fls 245 mm wide; tepals 120 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 40 mm, mid green. Stems 0.75 m, dark, with c.4 fls. Syn.: 'Second Paradise'.

(Registered and included in *ILR Eighth Supplement* as 'Second Paradise'. However, in 1991 Dutch PBR (LEL 571) were granted to this cv. under the epithet 'Pink Eden', and this latter epithet must be accepted (ICNCP, 2004: Art. 24.4.)

**'Pink Fare' VII(-/c)**

Parentage unknown

R: L. Woodriff (1958), G: H.J. & R.L. Strahm (1962), N: R.L. Strahm (1970), I: H.J. & R.L. Strahm (1973), REG: H.J. & R.L. Strahm (1984)

Fls empire-rose, tepal-tips light pink to white; spots deep pink. Fls 200 mm wide; tepals 95 × 45 mm, not recurved. Lvs scattered. Stems 1 m. Aug. to Sept. (Published in *Rex Bulb Farms Cat.*, 1973.)

**'Pinkflamme' I(c/d)**

Parentage: 'Herta' × Asiatic seedling NN C7.44

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside light purple (75B), midveins greenish yellow, throat light purple (75B); outside rather stronger pink; nectaries pale green; filaments coloured as the tepals; pollen dark red (187A); stigma dark brown, on a long style coloured as the tepals. Fls 100 mm wide; tepals 60 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 110 × 15 mm. Stems 1.2 m, dark green, with c.12 fls. Late June.

(Nomenclatural standard: colour print provided by registrant (WSY 0028894).)

**'Pink Floss' I(b/d)**

Parentage: 'Edith Cecilia' × Preston Group

R: E. Robinson, N: E. Robinson, I: E. Robinson (1973) Inside straw-yellow, tepal-tips pink; outside pink. Stems 1 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 16 (1978).)

**'Pink Floyd' I(a/-)**

Parentage unknown

R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V., REG: Hoff Quality First (1993)

Inside tinged with moderate purplish red (59C) on a light yellowish pink (27B) ground (the colour stronger towards the base), midveins moderate purplish red (59C); outside light yellowish pink (27B), midribs pale greenish yellow (9D); spots dark red (187A); pollen moderate orange (167A); stigma brilliant yellow-green (150B). Fls 150 mm wide; tepals 90 × 37 mm. Lvs scattered, 105 × 18 mm, dark green. Stems 0.79 m, green with darker markings, and c.10 fls.

**'Pink Flush' I(c/d)**

Parentage: 'Marie North' × mixed pollen

R: A.W.A. Baker (c. 1984), G: A.W.A. Baker (1986), N: A.W.A. Baker (2000), I: A.W.A. Baker (2000), REG: A.W.A. Baker (2000)

Inside cream with a faint pink flush on the middle of each tepal, throat cream; outside cream with a darker pink flush on the middle of each tepal; spots maroon, near centre of fl.; nectaries green; pollen yellow to brown; stigma cream to green. Fls 75 mm wide; tepals 80 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 75 × 7 mm, dark green. Stems 0.6 m, maroon, with c.4 fls and with bulbils.

(Nomenclatural standard: colour print provided by registrant (WSY 0025353).)

#### 'Pink Frills' VI(-/a)

Parentage: pink-flowered trumpet lily × Aurelian Group  
R: C. Yerex (c. 1946), N: C. Yerex

Inside rose-pink, blending to white centre; outside carmine. Tepal-margins ruffled. Stems 1.5 m. July. (Published in *Kline Cat.*, 1965.)

#### Pink Gem Group VII(-/b)

Parentage: (*japonicum* × *auratum* var. *platyphyllum*) F<sub>2</sub>

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls soft salmon-pink, shell-pink, satin-pink to dawn-pink, with slight crimson and gold spots.

(Published in *ILR* (1982) as Pink Gem grex.)

#### 'Pink Giant' I(c/-)

Parentage: 'Pink Tiger' (Laan) × (*lancifolium* × unknown)  
R: Gebr. N. & B. Laan & Zn, G: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn (1979), REG: Gebr. N. & B. Laan & Zn (1980)

Inside light yellowish pink (36A), veined carmine-pink, centre strong orange (26A); outside pale salmon, with greenish yellow vein; spotted dark brown; anthers red-brown. Stems 1 m.

(Published in *Bloembollencultuur*, July 1979.)

#### Pink Glory Group VII(b/b)

Parentage: *speciosum* × (*auratum* × *japonicum*)

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls shell-pink to salmon-pink, with slight gold spotting; nectaries green. Tepals wide. Stems 1.9 m. June to July.

(Published in *ILR* (1969) as Pink Glory grex.)

#### Pink Glory Group I(-/)

Parentage: selections from Futura Group

S: Blackthorne Gardens, N: Blackthorne Gardens, I: Blackthorne Gardens (1982)

Fls pink.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another Group.)

#### 'Pink Gold' VII(-/c)

Syn. of 'Salmon Jewels'.

#### Pink Ice Group VI(-/a)

Parentage: selections from Aurelian Group

S: J. de Graaff (pre 1958), N: J. de Graaff, I: C.A. Best (1958)

Fls pink, with gold centres. July to Aug. (Published in *Greenock Farms Cat.*, 1958. Included in *ILR* (1960) as Pink Ice grex.)

#### 'Pink Icicles' VII(-/b)

Parentage unknown

R: J.C. Smit, G: J.C. Smit, N: Van der Salm (USA) (1987), I: Van der Salm (USA) (1987), REG: G. Van der Salm (1989)

Inside light purplish pink (68D), tepal-tips moderate purplish pink (68C), throat cream suffused with pink; outside moderate purplish pink (68C); spots numerous, purple-red, raised; nectaries lime-green; pollen copper to red. Tepals 90 × 28 mm, margins ruffled, tips slightly recurved. Lvs scattered, 110 × 50 mm, dark green. Stems 1.4 m, mottled green, with 7-20 fls. July to Aug.

#### 'Pink Illusion' VI(-/a)

Parentage: unnamed seedling × (*leucanthum* var. *centifolium* 'Black Dragon' × unknown)

R: L. Lutz, N: L. Lutz (1970), REG: L. Lutz (1969)

Inside white, throat light greenish yellow (3C); outside moderate red (183D). Lvs dark green. Stems 1.5 m. July. (Published in *LYB* 33: 256 (1970).)

#### 'Pink Jazz' VIII(c/a-b)

Parentage: 'Heads Up' × ('Starburst Sensation' × (*L.* × *kewense* 'White Henryi' × 'Dominique'))

R: R.H. Bazett (1997), G: R.H. Bazett (1999), N: R.H. Bazett (2001), I: B & D Lilies, REG: R.H. Bazett (2001)

Inside light to pale purplish pink (55C/D), deeper coloured towards the centre of tepals, throat strong red (53D) blending to yellow near nectaries; outside light purplish pink (65B), outer tepals deeper pink with a green cast over midribs, inner tepals paler pink with distinct deep pink midribs; spots absent; nectaries pale green; pollen vivid orange (28B); stigma pale green.

Fls 150 mm wide, strongly scented; tepals 150 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 200 × 20 mm. Stems 1.63 m, dark green, with c.11 fls in a racemose infl. Mid July.

(An Orienpet (OT) lily. Nomenclatural standard: colour print provided by registrant (WSY 0030919).)

#### 'Pink Jewel' VII(-/a)

Parentage: derived from Oriental hybrids

R: L.G. Farina, N: L.G. Farina, I: L.G. Farina (1972), REG: L.G. Farina (1973)

Fls pink, with white tepal-tips and green nectary-star in centre. Stems 1 m.

(Published in *Lilies and other Liliaceae*, 1973/1974: 112. See note under Pink Jewel Group.)

#### Pink Jewel Group VII(b/c)

Parentage unknown

R: R.W. Bemis (pre 1966), N: R.W. Bemis, I: Blackthorne Gardens

Inside rich pink, each tepal edged with silver; resembling a large *speciosum*, but tepals less reflexed and fls tending to face outwards; candy-like scent. Lvs scattered. Stems 1.2 m. Late.

(Unacceptable name: ICNCP. 2004: Art. 27.1 - name already used for a cv. Although Pink Jewel Group is an earlier epithet (published in *'Deep-Freeze' Lilies Cat.*, 1966/67: 5), than 'Pink Jewel' (published in 1973/74), it was not known to the ICRA until 2001 (it was included in *ILR Twenty-first Supplement* but has not been registered). 'Pink Jewel' was registered in 1973 and appeared in *ILR* (1982). Under ICNCP, 2004: Art. 26.3, 'Pink Jewel' has been selected by the ICRA as the accepted epithet.)

**'Pink Journey' VII(b/c)**

See *L. × parkmanii* 'Pink Journey'.

**'Pink Joy' I(a/b-c)**

Parentage unknown

R: unknown (pre 1986)

Inside pale rose-pink, centre paler, throat green at base; outside pale rose, midribs pale green; spots sparse, tiny, dark pink, on a sixth of each tepal; pollen apricot. Fls 120 mm wide; tepals 75 × 35 mm, tips moderately recurved. Lvs scattered, 70 × 8 mm. Stems 0.8 m, green, tinged brownish at base. Early July.

**'Pink Lace' VII(-/-)**

Parentage: selection from Atomic Group

S: B.G. Hayler (pre 1988), N: B.G. Hayler

Fls pink.

**'Pink Lady' I(b/c)**

Parentage: 'Edith Cecilia' × Preston Group

R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)

Fls deep mauve-pink, 100 mm wide. Stems 0.6-1 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 16 (1978).)

**'Pink Legend' VIII(a/b)**

Parentage: unnamed seedling × (*longiflorum* × 'Snowstar')

R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff

Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies

B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002),

REG: Bischoff Tulleken Lelies B.V. (2003)

Inside light purplish pink (62C), throat yellowish white (155D); outside very light purple (75C), at base moderate yellow-green (143D); spots dark red (59A); papillae yellowish white (155D); nectaries strong yellow-green (143C); pollen brownish orange (164A); stigma green. Fls 180 mm, slightly fragrant; tepals 122 × 60 mm, margins smooth, tips recurved. Lvs scattered, 170 × 25 mm, green. Stems 1.1 m, green, with 10 fls. June.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Pink Lights' I(b/-)**

Parentage: 'Northern Lights' × unknown

R: E. Robinson, N: E. Robinson (1976), I: Gaybird

Nursery (1976), REG: E. Robinson (1977)

Fls straw-pink, with large lilac spots and a lilac line on each tepal. Stems 0.8 m.

(Published in *Gaybird Nursery Cat.*, 1976.)

**'Pink Matador' VII(-/b)**

Parentage unknown

R: Mak Lelieveredeling B.V., N: Mak Lelieveredeling

B.V., REG: Levenslust B.V. (1994)

Inside yellowish white (155D) suffused with moderate purplish pink (62B), fading towards tepal-edges, midveins strong red (53B) above nectaries, strong purplish pink (62A) towards tepal-tips, throat yellowish white (155D); outside variegated with moderate purplish pink (62B) on a yellowish white (155D) ground, inner tepals slightly stronger coloured, outer tepal with some strong yellow-green (144A) at the base and apex, midribs yellowish white (158C); spots deep purplish red (59B) on two-thirds of each tepal; pollen strong orange (169B); stigma greyish yellow-green (194B). Fls 240 mm wide; tepals 120 × 55 mm. Lvs scattered, 130 × 25 mm. Stems 0.7 m, pale green with much darker marking, and c.3 fls.

**'Pink Moire' I(b/-)**

Parentage unknown

R: R.A. Prochaska (1984), G: R.A. Prochaska (1986),

N: Hartle-Gilman Gardens (1990), I: Hartle-Gilman

Gardens (1990), REG: Hartle-Gilman Gardens (1990)

Inside moderate red (181C), tepal-tips and throat light pink (49C); outside light pink (49C) on tepal-edges, darker towards centre of tepals; spots small, purple, on the central third of each tepal; nectaries orange-red; pollen red. Tepals 95 × 42 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 1.1 m, mid green, with 10-12 fls. Late.

**'Pink Mystery' VII(a-b/b)**

Parentage unknown

R: Bischoff Tulleken Lelies B.V., REG: Salmon Classic Group (2003)

Inside moderate purplish pink (66D), each tepal with a brilliant yellow (8A) centre and base; outside moderate purplish pink (66D); spots yellow and brown; papillae present; nectaries green; pollen orange-brown; stigma yellow-green. Fls 240 mm wide; tepal-margins slightly ruffled, tips recurved. Stems 1-1.1 m, with reddish markings. Midseason.

**'Pink Oasis' VII(a-b-c/b)**

Parentage: pink/yellow-flowered seedling × white-flowered seedling

R: Mak Lelieveredeling B.V. (1987), G: Mak-Leek Inc. (1990), N: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside very pale purple (69A), with very pale purple (73D) at tepal-edges and a brilliant yellow/light greenish yellow (8A/B) flame from nectaries to the centre of each tepal; outside mostly soft pink, midribs soft green; spotted all over each tepal, the spots yellow in the yellow parts, orange/pink in the pink parts; nectaries soft green/yellow; pollen strong orange (168A); stigma light yellowish green (136D). Fls 230 mm wide; tepals 120 × 45-70 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 200 × 65 mm, moderate olive-green

(137A). Stems 1-1.3 m, strong yellow-green (143C), with 4-10 fls. Mid Aug.

(Most fls are down- or out-facing, but some may be up-facing after bulbs have been more than 1 year in the ground.)

**'Pink Opal' VII(-/b)**

See *L. × parkmanii* 'Pink Opal'.

**'Pink Pagoda' I(a/b)**

Parentage: 'Tamara' × 'Beaudacious'

R: Oregon Bulb Farms, Inc. (1987), G: Oregon Bulb Farms, Inc. (1989), N: Cebeco Lilies, Inc. (1996), I: Cebeco Lilies, Inc., REG: Cebeco Lilies, Inc. (1998)

Inside strikingly patterned/multicoloured, strong orange (25B) at tepal-tips, shading to strong-moderate yellowish pink (37B/C) and to deep red (60A), with dark red (59A/187A) brushmarks on inner tepals which form bands either side of midvein for c.20 mm, throat pale orange-yellow (23D) at top of nectaries; outside deep purplish red (59B), with moderate pink (51D) midribs and tips; dark red spots on the basal third of each tepal; nectaries pale orange-yellow (23D); pollen vivid reddish orange (30B); stigma dark red (187A). Fls 140 mm wide; tepals 73 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 16 mm. Stems 0.62 m, strong yellow-green (144A), with c.8 fls (from 16 cm bulbs). Early.

(It is not known whether the seed parent is 'Tamara' of De Jong or 'Tamara' of Orehovs. 'Tamara' of Miroshniczenko is unlikely because it is in Div. VI.)

**Pink Pagoda Bells Group VI(-/a)**

Parentage: selections from Pagoda Bells Group

S: C. Yerex, N: C. Yerex, I: Blackthorne Gardens (1967)  
Fls pink, some with orange centres.

(Published in *ILR* (1969) as Pink Pagoda Bells grex.)

**'Pink Paradise' VII(a-b/b-c)**

Parentage: ('Star Gazer' × *L. × parkmanii* 'Allegra') × seedling 525

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1985), N: Lilium International Investment Ltd (1995), I: Lilium International Investment Ltd (1995), REG: Lilium International Investment Ltd (1995)

Inside moderate purplish pink (62B), tips of the inner tepals edged pale yellow-green (155A), midveins suffused with pale yellow (18C), throat strong yellow-green (143C); outside moderate to light purplish pink (62B/65B), ivory-white at base, midribs light greenish yellow (1C); papillae light yellow (12C) on the basal half of each tepal; nectaries light greenish grey (190D); pollen strong orange (169C). Fls 240 mm wide; tepals 120 × 50 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 185 × 40 mm, mid green. Stems 0.95 m, pale green, with c.5 fls. July (under glass).

Syn.: 'Flamingo Star'.

(Registered as 'Flamingo Star' but before this registration was published, Dutch PBR (LEL 728) were granted under the epithet 'Pink Paradise' and the latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Pink Paramount' VII(a/b)**

Parentage unknown

REG: ICRA (1998)

Inside luminous pink; spots and papillae numerous, dark, on the basal half of each tepal; nectaries conspicuous, greenish; pollen orange-brown; stigma dark. Tepal-margins ruffled (at least the outer), tips recurved. Stems 1-1.2 m. Aug.

(Published in *The Lily Garden Cat.*, 1996/97: 22, with colour illustration.)

**'Pink Pastel' I(-/)**

Parentage: selection from Pastel Group

S: B.G. Hayler (pre 1982), N: B.G. Hayler  
Fls pink. Stems 1 m.

**'Pink Peach' I(a/b)**

Parentage: 'Carol Jean' × 'Connecticut Lemonglow'  
R: F. Fellner (1979), G: F. Fellner (1982), N: F. Fellner (1991), I: F. Fellner (1991), REG: F. Fellner (1991)

Inside flesh-pink; outside green to pink; spots absent; pollen brown. Fls 125 mm wide; tepals 65 × 30 mm. Lvs scattered, 150 × 12 mm. Stems 0.6-0.8 m, green, with 10-15 fls. Late July.

**'Pink Pearl' VII(-/)**

Parentage: seedling derived from *rubellum*, *auratum* & *speciosum* × unknown

R: Sun Valley Bulb Farms, Inc. (1972), G: Sun Valley Bulb Farms, Inc. (1975), N: Rien Veenstra Orchid (1982), I: Rien Veenstra Orchid

Inside of inner tepals very light purple (75C), midveins carmine, inside of outer tepals deep purplish pink (70C) with carmine vein and white edge; outside moderate purplish pink (66D) fading to moderate purplish pink (65A), tepals with a transparent white edge (inner tepals paler); spots currant-red, in the throat; nectaries yellow-green; pollen tangerine-orange. Stems 0.5 m.

**'Pink Pearl' IX(-/)**

See *speciosum* 'Pink Pearl'.

**Pink Pearl Group Div. ?**

Given as a parent of Mabel Violet Group. No further details.

**Pink Pearl Trumpets Group VI(-/a)**

Parentage: selections from Aurelian Group

S: C. Yerex, N: C. Yerex

Inside light blush pink; outside deep rose-pink or reddish purple. Stems 1.5 m. July to Aug.

(Published in *Kline Cat.*, 1958. Included in *ILR* (1982) as Pink Pearl Trumpets grex.)

**'Pink Perfection' Div. ?**

Given as a parent of 'Dreaming Bells' and Blackdown Pink Group. No further details. Perhaps an error for Pink Perfection Group.

**Pink Perfection Group VI(b/a)**

Parentage: selections from seedlings of *leucanthum* var.

*centifolium* × *sargentiae*

S: J. de Graaff (c. 1950), N: J. de Graaff

AGM 1993

Fls orchid-purple (HCC 31/3) to pansy-violet (HCC 033/3), splashed with white along tepal-centres; pollen orange. Stems 1.9 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1960. Included in *ILR* (1982) as Pink Perfection grex.)

### 'Pink Picotee' VI(b/a)

Parentage unknown

N: Cebeco Lilies, Inc. (1998), I: Cebeco Lilies, Inc. (1998), REG: Cebeco Lilies, Inc. (1998)

Inside moderate purplish red to dark purplish pink (186B/C) at tepal-edges, shading inwards to pale yellow-green (155A) and to brilliant greenish yellow (6A/C) in the throat (the bottom third of each tepal); outside dark purplish pink (186C) at tepal-edges, with paler centres and a light greenish yellow (4C) base; spots absent; pollen light orange-yellow (23C); stigma light brownish grey (201A). Fls 135 mm wide, strongly scented; tepals 120 × 59 mm, margins smooth, tips strongly recurved. Lvs scattered, 102 × 12 mm. Stems 0.75 m or more, moderate yellow-green, lightly mottled, and with 3 or more fls; buds moderate purplish red to dark purplish pink (186B-C). Late.

(Published in *The Lily Nook Cat.*, 1998: 17.)

### 'Pink Pixie' I(a/b)

Parentage: 'Peachblush' × ('Prince Charming' (Div. 1) × 'Harmony')

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)

Inside cream to buff, tepal-tips clear pink; outside cream, suffused with pink; copiously spotted in the centre; nectaries green; pollen soft golden yellow. Tepal-margins smooth, tips not recurved. Lvs scattered, 110 × 20 mm, mid green. Stems 0.4 m, light green, with 6-20 fls. June.

### 'Pink Podium' I(b/-)

Parentage: 'Lillass' × 'Marisa'

R: J.C. Ericksen (late 1970s), G: J.C. Ericksen (1985), N: J.C. Ericksen (1991), REG: J.C. Ericksen (1991)

Inside mauve-pink, throat deeper; outside at first grey-white, later mauve; spots few, ruby-red; nectaries greenish white; pollen reddish yellow. Tepals c.55 mm long, margins smooth, tips slightly recurved. Lvs scattered, c.100-150 × 20 mm, mid to dark green. Stems c.1.2 m, green, strong and rigid, with 15-20 fls. Mid to late July.

### 'Pink Princess' VII(b/b)

See *L. × parkmanii* 'Pink Princess'.

### 'Pink Promise' VIII(a-b/a)

Parentage: (*longiflorum* × unknown) × Oriental seedling

R: Takii & Co. Ltd (c. 1990), G: Takii & Co. Ltd (c. 1992), N: De Jong Lelies Holland B.V. (1998), I: De Jong Lelies Holland B.V. (2000), REG: De Jong Lelies Holland B.V. (2001)

Inside strong purplish pink (73B) paling towards base and tepal-margins, midveins with yellow-green base changing to purple-red; outside very pale purple (73D) to white; spots and papillae absent; nectaries green; pollen red-brown; stigma grey-green. Fls 180 mm wide; tepals 115 × 45 mm, margins ruffled, tips spreading. Lvs scattered, 140 × 17 mm. Stems 1.2 m, green, with c.5 fls (from 16-18 cm bulbs). Midseason. (*A longiflorum*/Oriental hybrid.)

### 'Pink Queen' VII(c)

Parentage: *L. × parkmanii* 'Excelsior' × Sakata-raised Oriental hybrid

R: Sakata Co. (1973), I: Sakata Co. (1983)

Fls white, each tepal with a broad, rosy red ray and numerous deep pink spots. Fls 250 mm wide, sweetly scented. Stems 1.5-1.8 m. Midseason.

(Published in *Sakata Cat.*, 1983.)

### 'Pink Radiance' IX(-/-)

See *speciosum* 'Pink Radiance'.

### 'Pink Rhapsody' VII(b/b)

Parentage: (*speciosum* × *auratum*) × seedling derived from *speciosum*, *auratum* & *rubellum*

R: H.R. Strahm (1961), N: R.L. Strahm, REG: Strahm's Lilies, Inc. (between 1970 and 1981)

Inside deep shell-pink, throat and tepal-tips white; outside deep pink; slightly spotted deep rose-pink; nectaries apple-green; pollen yellow. Tepal-margins ruffled. Lvs 125 × 50 mm. Stems 1-1.2 m. Aug.

(Published in *Rex Bulb Farms Cat.*, July 1969.)

### 'Pink Ribbons' VII(-/b)

Parentage unknown

R: L. Woodriff (1958), G: H.J. Strahm (1962), N: J.M. Shaver, I: H.J. & R.L. Strahm (1972), REG: Strahm's Lilies, Inc. (1983)

Strong pink (49A) throughout, each tepal with a vivid red (46D) ray, throat green; spots strong purplish red (67A), well distributed; pollen orange. Tepals 100 × 50 mm, margins smooth, tips recurved. Fls 200 mm wide. Lvs scattered, 225 × 40 mm, mid green. Stems 1.5 m, green, with 8-20 fls. Late July to Aug.

### 'Pink Ribbons Group' VIII(-/d)

Parentage: *rubellum* × *L. × parkmanii* 'Manawatu'

S: L. Woodriff & J.M. Shaver, I: Rex Bulb Farms (1966) Fls light pink to rose-pink, each tepal with a darker pink ray. Tepals recurved. Stems 1.2-1.8 m. Aug.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv. Published in *Rex Bulb Farms Cat.*, 1966/67: 43.)

### 'Pink Richard' I(b/-)

Parentage: Hallmark Group × 'Rosabelle'

R: R.A. Prochaska (1979), G: R.A. Prochaska (1980), N: D. Flatterud (1982), I: Hartle-Gilman Lilies (1985), REG: R.A. Prochaska (1985)

Inside rose-pink, throat light pink; outside green, shaded pink; lightly spotted purple; pollen greyed red. Tepals 75

× 30 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.4 m, green, with 16-18 fls. Midseason.

**‘Pink Rosetta’ VII(b/b-d)**

Parentage: ‘Gretine’ × unnamed seedling  
R: Gebr. Mak B.V. (1984), G: Gebr. Mak B.V. (1987),  
N: Gebr. Mak B.V. (1990), I: Gebr. Mak B.V. (1989),  
REG: Gebr. Mak B.V. (1991)  
Inside yellowish to greenish white (155B/C), suffused with light to pale purplish pink (62C/D) on outer tepals and tips of inner tepals, midveins on the basal half of tepals light greenish yellow (8B), throat strong yellow-green (144B); outside yellowish to greenish white (155B/C), outer tepals and midribs of inner tepals suffused with moderate purplish red to dark purplish pink (186B/C); papillae few, white and mimosa-yellow, in the throat; nectaries dark red (187B); pollen moderate reddish orange to brownish orange (171A/B). Fls 300 mm wide; tepals 160 × 70 mm, margins very slightly ruffled, tips strongly recurved. Lvs scattered, 250 × 50 mm, mid green. Stems 1.15 m, green, with c.5 fls. May.

**Pink Royal Bowls Group VI(b/b)**

Parentage: selections from Royal Group  
S: R.W. Bemis, N: R.W. Bemis, I: R.W. Bemis (1966),  
REG: R.W. Bemis (1985)  
Fls soft pink with mother-of-pearl overtones, to deep, rich old rose, with soft green throats. Stems 1.2-1.5 m. (Published in *Blackthorne Gardens Cat.*, 1966/67. Included in *ILR Fourth Supplement* as Pink Royal Bowls grex.)

**‘Pink Royal Corona’ Div. ?**

Given as a parent of ‘Blackberry Ice’. No further details. Probably an error for Pink Royal Coronas Group.

**Pink Royal Coronas Group VI(-/c)**

Parentage: selections from Royal Group  
S: R.W. Bemis, N: R.W. Bemis, I: R.W. Bemis (1966),  
REG: R.W. Bemis (1985)  
Fls soft pink with silver-yellow-green (mother-of-pearl) overtones. Stems 1.4-1.9 m. (Published in *Blackthorne Gardens Cat.*, 1966/67: 4. Included in *ILR Fourth Supplement* as Pink Royal Coronas grex.)

**‘Pink Satellite’ VII(-/b)**

Parentage: (*speciosum* × *auratum*) × seedling from *speciosum*, *auratum* & *rubellum*  
R: H.J. Strahm (1961), N: R.L. Strahm (1970), REG: Strahm’s Lilies, Inc. (between 1970 and 1981)  
Fls deep rose-pink, each tepal with a laurel-pink ray, deepening to nearly purple; throat and outside laurel-pink, tepal-tips pink; spots crimson-rose; nectaries green; pollen orange. Tepal-margins smooth, tips slightly recurved. Stems 1 m. (Published in *Rex Bulb Farms Cat.*, July 1969.)

**‘Pink Sensation’ VII(-/b)**

See *L. × parkmanii* ‘Pink Sensation’.

**‘Pink Sensation’ VII(-/)**

Syn. of ‘Tracy’.

**Pink Shelburne Group VI(-/a)**

See *L. × imperiale* Pink Shelburne Group.

**Pink Shelburne Seedlings VI(-/a)**

See *L. × imperiale* Pink Shelburne Group.

**‘Pink Shell’ I(b/-)**

Parentage: Preston seedling 0-25 × unknown  
R: E. Robinson (pre 1969), N: E. Robinson  
Fls pink, with circle of pale yellow in throat which soon fades; spots absent. Fls large. Lvs narrow. Stems 0.8-1 m. July. (Published in *ILR* (1969) Addenda.)

**‘Pink Show’ II(-/)**

Parentage: (*L. × dalhansonii* ‘Brocade’ × unknown) × unknown  
R: E. Robinson (1975), G: E. Robinson (1980), N: E. Robinson (1985), I: E. Robinson (1984), REG: ICRA (1997)  
Inside pink, throat spotted with mauve; outside lighter pink; pollen orange-yellow. Tepal-margins smooth, tips slightly recurved. Lvs whorled, dark green. Stems 1.2 m, green, with c.30 fls in a long, closely packed infl. Early July.

**‘Pink Shower’ I(a/-)**

Parentage: unnamed hybrid × ‘Lavender Dream’  
R: Gebr. N. & B. Laan & Zn (1981), G: Gebr. N. & B. Laan & Zn (1983), N: Gebr. N. & B. Laan & Zn (1986), I: Gebr. N. & B. Laan & Zn (1988), REG: Gebr. N. & B. Laan & Zn (1989)  
Inside pale orange-yellow (24D), throat deep red (60A); outside pale yellowish pink (29D), tepal-margins light yellowish pink (29C); spots dark red (187A); pollen strong orange (169B). Fls 195 mm wide; tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 0.95 m, green with darker markings, and with c.12 fls.

**‘Pink Silk’ I(a/-)**

Parentage: ‘Indian Queen’ × ‘White Pastel’  
R: Hartle-Gilman Gardens (1982), G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1990), I: Hartle-Gilman Gardens (1990), REG: Hartle-Gilman Gardens (1990)  
Inside light purplish pink (62C), tepal-tips light purplish pink (62C), throat deep pink (52C); outside slightly darker; spots absent; nectaries deep pink; pollen red. Tepals 70 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 10 mm, mid green. Stems 0.75 m, with 8-12 fls. Midseason.

**‘Pink Sky’ VII(-/c)**

Parentage unknown  
R: L. Woodriff (1975), G: L. Woodriff (1978), N: L. Woodriff (1980), I: L. Woodriff, REG: L. Woodriff (1984)

Fls clear, light pink throughout; spots absent; nectaries green; pollen brown. Fls 200 mm wide; tepals 125 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 125 × 30 mm, mid green. Stems 2.4 m, green, with c.15 fls. Aug.

**‘Pink Skyline’ I(b/-)**

Parentage: Preston Group × ‘Edith Cecilia’  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1971), REG: E. Robinson (1971)  
Fls straw-pink, with lilac spots and line. Stems 1 m. Early July.  
(Published in *Lilies and other Liliaceae*, 1973: 113.)

**‘Pink Solace’ VII(-/c)**

Parentage unknown  
R: L. Woodriff (1958), G: H.J. & R.L. Strahm (1963), N: R.L. Strahm (1969), I: H.J. & R.L. Strahm (1972), REG: Strahm’s Lilies, Inc. (1981)  
Fls opening nearly white, becoming pale purplish pink (56A), throat greenish yellow (153C); outside moderate reddish orange (179C); spots small, strong purplish red (54A), on half of each tepal; nectaries strong greenish yellow (153C); pollen dark reddish orange (175B). Fls 200 mm wide, slightly scented; tepal-margins smooth, tips strongly recurved. Lvs scattered, c.170 × 25 mm, dark green. Stems 1 m, green, striped dark red, with 5-8 fls. Aug.  
(Published in Strahm’s sales list, 1972.)

**‘Pink Spice’ I(c/d)**

Parentage: (*cernuum* × *davidii*) × (*cernuum* × *davidii*)  
R: E.C. Genat (1956), N: E.C. Genat (1959), I: E.C. Genat (1963)  
Inside cream, pink-flushed; heavily spotted with purple on basal third of each tepal; nectaries bright green; anthers purplish with red-brown pollen; stigma purple. Fls c. 65 mm wide; pedicels 170-200 mm. Stems up to 1.2 m.

**‘Pink Spire’ I(a/-)**

Parentage: ‘Orchid Queen’ × unknown  
R: H. Jacobi, I: E. Robinson (1974), REG: E. Robinson (1975)  
Fls pale pink, centre a shade of pale yellow. Stems 1 m. July.  
(Published in *Lilies and other Liliaceae*, 1975: 95.)

**‘Pink Spire’ VII(b/c)**

See *L. × parkmanii* ‘Pink Spire’.

**‘Pink Spreckles’ I(a/c)**

Parentage unknown  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Inside soft pink, with paler tepal-tips and midribs; with intense, fine, darker flecking on the basal half of each tepal, which extends up the margins; dark stigma and pollen. Tepal-margins smooth, tips slightly recurved. Stems 1 m. Early June.  
(Published in *The Lily Garden Cat.*, 1996/97: 4.)

**‘Pink Starfish’ II(-/-)**

Parentage: ‘Ellen Willmott’ × ? pink-flowered *martagon*  
R: O.E.P. Wyatt, N: O.E.P. Wyatt  
AM 1960  
Fls magenta-rose (HCC 027/2-3) with a few darker spots. Tepals slightly reflexed. Stems 1 m.  
(Published in *LYB* 24: 109 (1961).)

**‘Pink Star Light’ I(a/-)**

Parentage unknown  
R: E.H. Doerr, G: E.H. Doerr, N: Hartle-Gilman Gardens (1994), I: Hartle-Gilman Gardens (1994), REG: Hartle-Gilman Gardens (1994)  
Inside opening deep purplish pink (55A) faintly blended with moderate pink (35D), soon changing to pale purplish pink (55D), tepal-tips pale yellowish pink (27C), throat light yellow (14D); outside deep to light purplish pink (55A/C); spots small, maroon, on the basal half of each tepal; nectaries green, frosted; pollen rusty gold. Tepals 80 × 38 mm, margins slightly ruffled, tips very slightly recurved. Lvs scattered, 111 × 10 mm, dark green. Stems 1.2 m, dark green, with 15 or more fls. Midseason.  
(Published in Hartle-Gilman Gardens list, 1994.)

**‘Pinkstern’ I(-/-)**

Parentage unknown  
R: J. Klein (pre 1989), N: J. Klein  
Fls salmon-pink, with darker nectaries and large spots. Stems 0.8 m. Late June.  
(Published in German Lily Group sales list, 1989.)

**‘Pink Stony’ II(-/-)**

Parentage unknown  
R: J.C. Ericksen, G: D. Dale (1991), N: D. Dale (1994), I: Parkland Perennials (1995), REG: D. Dale (1994)  
Inside mauve-pink, throat green; outside pink with deeper pink midribs and centre; fine mahogany spots on the centre half of each tepal; nectaries green; pollen brown-orange. Fls 40 mm wide; tepals 25 × 8 mm, margins smooth, tips strongly recurved. Lvs whorled, mid green. Stems 1-1.2 m, green, with 20-30 fls. Early July.

**Pink Sunburst Group VI(b-c/c)**

Parentage: derived from hybrids of Sunburst Group type  
R: J. de Graaff, N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1957)  
Fls white with pink overtones. Stems 1.2-1.9 m. July.  
(Published in *ILR* (1969) as Pink Sunburst grex.)

**‘Pink Superior’ I(a/b)**

Parentage: ((‘Sterling Star’ × ‘Aristo’) × ‘Gran Paradiso’) × (‘Mont Blanc’ × (Sundrop Group × ‘Sterling Star’))  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V., REG: Bischoff Tulleken Lelies B.V. (2001)  
Inside moderate purplish red (184D) on a light orange-yellow (22D) ground and with a 22D spot at the tepal-bases, throat brilliant yellow (20A) and a little moderate purplish red (184D); outside deep pink (51B/C) on a

light orange-yellow (22D) ground, tips strong yellow-green (144D), moderate pink (51D) along the midribs which have a light green flush; spots absent; papillae few in the throat and towards base; pollen moderate orange (167A); stigma dark red (187A). Fls 180 mm wide; tepals 105 × 35-50 mm, margins slightly ruffled, tips recurved. Lvs scattered, 230 × 20 mm. Stems 0.95 m, green, with c.3-6 fls. June.

**'Pink Supreme' I(a/-)**

Parentage: 'Toscane' × seedling RS 84-16  
R: Vletter & Den Haan, G: Vletter & Den Haan (1987),  
N: Vletter & Den Haan (1990), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1991)

Inside pale purplish pink (56D), tepal-edges strong to light purplish pink (55B-C), throat slightly suffused with pale orange-yellow (19D); outside yellowish white/pale purplish pink (155D/56D), with strong purplish pink (55B) tepal-edges, midribs of outer tepals suffused with pale yellow-green (4D); spots few, small, moderate purplish red (58A), in the throat; nectaries light yellowish pink (26D); pollen vivid reddish orange (32A). Fls 180 mm wide; tepals 95 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 160 × 13 mm, mid green. Stems 0.85 m, with darker markings and c.5 fls. July (under glass).

**'Pink Surprise' I(a/-)**

Parentage unknown  
R: H. Beentjes (1982), G: H. Beentjes, N: H. Beentjes, I: H. Beentjes, REG: H. Beentjes (1989)

Inside strong red (53C), midveins pale yellow (162D) in the basal half of each tepal, throat moderate purplish pink (59C); outside moderate red (185B), flushed with moderate to light purplish pink (62B/C) on the inner tepals; spots dark red (187A) on the basal half of each tepal; pollen strong reddish orange (169A). Fls 165 mm wide; tepals 85 × 45 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 105 × 15 mm, mid green with dark tips. Stems 0.7 m, green with darker markings, and with c.9 fls. July.

**'Pink Taurade' II(a-b/c-d)**

Parentage: *L. × dalhansonii* 'Brocade' × *tsingtauense*  
R: E. Robinson (1967), N: E. Robinson (1981), I: E. Robinson (1981), REG: Gaybird Nursery (1988)

Inside pink, tinged with yellow, tepal-tips white, throat pink; outside light pink; spots lilac on yellow surrounded by yellow; nectaries reddish; pollen brown. Tepals 60 × 30 mm, margins smooth, tips not recurved. Lvs whorled, 150 × 40 mm, dark green. Stems c.1.6 m, dark green, with c.24 fls.

**'Pink Tiger' (Laan) I(b/c-d)**

Parentage: (*lancifolium* × unknown) × 'Discovery'  
R: Gebr. N. & B. Laan & Zn (pre 1976), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1976)  
Fls poppy-red, with a violet flush; spots brownish red on basal half of each tepal; anthers greyish purple with dark orange pollen.  
(Published in *Lilies and other Liliaceae*, 1976: 92.

Unfortunately, two cvs with the epithet 'Pink Tiger' have been registered. To distinguish them, the name of the raiser is appended to each one and should be thus cited when the names are used (ICNCP, 2004: Art. 27.5.)

**'Pink Tiger' (Woodriff) I(b/c)**

Parentage: (*regale* × unknown) × diploid *lancifolium*  
R: L. Woodriff (pre 1950), N: L. Woodriff (1954), REG: L. Woodriff (1988)

Inside creamy pink, tepal-tips pink, centre orange; outside darker pink; spots present; nectaries green; pollen brown. Fls 125 mm wide, scented; tepals 75 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 25 mm, mid green. Stems 1.2 m, speckled green, with c.6 fls and with bulbils. July.  
(Published in *Fairyland Begonia & Lily Cat.*, c.1960. See note under 'Pink Tiger' (Laan).)

**'Pink Tower' IV(-/-)**

Parentage: selection from Del Norte Group  
N: A.D. Reid (1973), I: A.D. Reid (1974), REG: A.D. Reid (between 1974 and 1981)

Fls light pink, throat white with yellow overlay; spots present. Lvs dark green. Stems 1.9 m, dark purple-green, with c.25 fls.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 28 (1978).)

**'Pink Triangle' I(b/c)**

Parentage: 'Edith Cecilia' × Preston Group  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1971), REG: E. Robinson (1971)

Fls pale pinkish mauve, blotched with fuchsia. Fls large. Stems 0.8-1 m.  
(Published in *Lilies and other Liliaceae*, 1973: 113.)

**'Pink Trophy' I(a/c)**

Parentage: ('Mont Blanc' × pink-flowered seedling) × ('Cote d'Azur' × 'Nepal')  
R: Mak-Leek Inc. (pre 1996), N: Mak-Leek Inc., REG: ICRA (1998)

Inside clear soft pink, with a lighter centre; buds bright pink. Tepal-tips recurved. Stems 1-1.2 m, with numerous fls. Midseason.  
(Published in *Parkland Perennials Cat.*, 1996: 7.)

**Pink Trumpet Group VI(-/a)**

See *L. × imperiale* Pink Trumpet Group.

**Pink Trumpets Group VI(-/a)**

Parentage: Aurelian Group × pink-flowered *regale*  
R: C. Yerex, N: C. Yerex, I: C.A. Best (1956)

Fls pink. Late July to Aug.  
(Published in *Greenock Farms Cat.*, 1956. Included in *ILR Fifth Supplement* as Pink Trumpets grex.)

**'Pink Virtuosa' VII(-/b)**

Misspelling of 'Pink Virtuoso'.

**'Pink Virtuoso' VII(-/b)**

Parentage unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1961), N: R.L. Strahm (1973), I: H.J. & R.L. Strahm (1973), REG: Strahm's Lilies, Inc. (1981)

Inside strong purplish red (54A), tepal-tips and edges white, throat green; outside white, midribs pink; spots profuse, strong purplish red (54A); nectaries chartreuse-green; pollen greyish reddish orange (174). Fls 200 mm wide; tepals 95 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 160 × 30 mm, dark green. Stems 1.9 m, red and green, with 8-12 (or more) fls. Aug.

(Misspelling: 'Pink Virtuosa'. Published in Strahm's sales list, 1973.)

#### 'Pink Wachae' I(b/-)

Error for 'Pink Wachea'.

#### 'Pink Wachea' I(b/-)

Parentage: 'Edith Cecilia' × Preston Group  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1970)  
Fls pink-lavender, flushed with straw-yellow. Stems 1.2-1.5 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 16 (1978) erroneously as 'Pink Wachae'.)

#### 'Pinky' I(b/-)

Parentage: *L.* × *hollandicum* × unknown  
R: L.B. Tuffery (c. 1937), N: L.B. Tuffery  
Fls pink.

#### 'Pinot Noir' I(c/-)

Parentage: ('Edith Cecilia' × unknown) × unknown  
R: J. Petruske, G: J. Petruske, N: J. Petruske (1969), I: J. Petruske (1969), REG: J. Petruske (1985)

Inside deep red (53A), tepal-tips strong red (47B), throat deep red (53A); outside strong red (53B), tepal-edges deep red (53A); black spots in the centre half of each tepal; nectaries red-frosted; pollen strong reddish orange (169A). Fls 90 mm wide; tepals 68 × 36 mm, margins smooth, tips strongly recurved. Lvs scattered, 93 × 9 mm, dark green. Stems 0.8 m, with c.6 fls. July.

#### 'Pinto Blush' I(a/-)

Parentage: unnamed seedling × unnamed seedling  
R: E.E. Fox (1986), G: E.E. Fox (1988), N: E.E. Fox (1992), I: Fox Lily Ranch (1993), REG: E.E. Fox (1992)  
Inside opening deep pink with a cream centre, tepal-margins cream, 2 mm wide, throat raspberry-coloured; outside deep pink, midribs tan; spots medium sized, maroon, sparsely distributed on basal half of each tepal; nectaries pink, frosted; pollen cinnamon. Fls 180 mm wide; tepals 90 × 38 mm, margins strongly ruffled, tips slightly recurved. Lvs scattered, 150 × 17 mm, mid green. Stems 0.82 m, green, with 12-16 fls. Mid to late July.

#### 'Pioneer' VI(-/a)

Parentage: Aurelian selection  
R: J. de Graaff (c. 1959), N: J. de Graaff  
Fls deep yellow. Stems 1.2-1.9 m. July.

#### 'Pipestone Giant' I(a/b)

Parentage: selection from Flamboyant Group  
S: S. Johnson (1968), N: S. Johnson (1970), I: S. Johnson (1973), REG: S. Johnson (1973)

Fls deep yellow with large brown spots in throat. Stems 1.2 m. July.  
(Published in *North Star Lily Society Newsl.*, 1970.)

#### 'Piquante' I(a/c)

Syn. of 'Pikanta'.

#### 'Pyramidalnaia' I(a/-)

Parentage: 'Vostok' × 'Enchantment'  
R: M.F. Kireeva (1978), N: M.F. Kireeva  
Fls yellow-orange; spots present; pollen absent. Fls 110-130 mm wide. Stems 0.5-0.7 m, with 15-28 fls. Early July.

(Published in M.F. Kireeva, *Lilii*, 60 (1984). Included in *ILR Fourth Supplement* as 'Pyramidalnoya' which is an unaccepted spelling.)

#### 'Pirate' I(a/b)

Parentage: 'Paprika' × (('Lemon Queen' (Div. I) × 'Mega') × 'Edith Cecilia') F<sub>2</sub>  
R: J. de Graaff, N: J. de Graaff, I: J. de Graaff (1971), REG: Oregon Bulb Farms, Inc. (1969)  
Fls vivid reddish orange (30A) in centre, tepal-tips vivid reddish orange (32A), spots dark on basal half of each tepal. Stems 1.2 m. Late June.  
(Published in *LYB* 33: 256 (1970).)

#### 'Pirate Fire' Div. ?

Given as a parent of 'Black-out'. No further details.

#### 'Piraten-Jenny' I(a/-)

Parentage: 'Pirate' × 'Connecticut King'  
R: F. Ewald (1973), N: F. Ewald (1978), I: G. & F. Ewald (1978), REG: G. & F. Ewald (1979)  
Inside vivid reddish orange (30C); outside orange; spots few, light brown. Tepals 80 × 50 mm, strongly recurved. Lvs scattered, 100 × 10 mm. Stems 0.8 m, green, with c.10 fls. July.

#### 'Piratenkönig' I(a/-)

Parentage: 'Pirate' × 'Connecticut King'  
R: F. Ewald, N: F. Ewald (1978), I: G. & F. Ewald (1978), REG: G. & F. Ewald (1979)  
Inside vivid reddish orange (33A), tepal-centre vivid yellow (15A); outside red; spots brown on fl. centre; pollen brown. Tepals 75 × 50 mm, slightly recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 1.2 m, brownish, with c.15 fls. July.

#### 'Piratstern' I(a/-)

Parentage: 'Pirate' × unknown  
R: J. Klein (pre 1987), N: J. Klein, REG: J. Klein (1988)  
Fls orange-red, 100 mm wide. Stems 0.9 m. Early July.  
(Published in German Lily Group sales list, 1987.)

**‘Pirmklasniece’ I(a/c)**

Parentage unknown

R: J. Vasarietis (1988), G: J. Vasarietis (1991), N: J. Vasarietis (1993), I: J. Vasarietis (1993), REG: J. Vasarietis (1998)

Inside pale greenish yellow (9D) on opening, fading to white, each tepal with light greenish yellow (5D) just above the nectary, throat pale greenish yellow (9D); outside pale yellow-green (4D); spots small, purple, on the basal third of each tepal; nectaries white; pollen orange. Fls 170 mm wide; tepals 95 × 46 mm, margins smooth, tips slightly recurved; pedicels dark. Lvs scattered, 125 × 13 mm, mid green. Stems 0.8 m, greenish brown, with c.10 fls. Mid July.

Trade designation: FIRST-YEAR GIRL.

(Published in *Lilium Balticum Cat.*, 1996.)**‘Pirol’ I(a/-)**

Parentage unknown

R: W. Daunicht (pre 2001), N: W. Daunicht

Fls yellow, spotted; pollen brown. Stems 0.6 m, infl. with secondary buds. Mid June.

(Published in ELG sales list, 2001.)

**‘Piroschka’ I(c/-)**

Parentage unknown

R: J. Petruske, G: J. Petruske, N: J. Petruske (1974), I: J. Petruske

Inside dark red, each tepal with a vivid orange-yellow (21A) stripe, tepal-tips vivid reddish orange (42A), throat deep purplish pink (55A); outside moderate pink (49B), tepals edged strong red (46A); heavily spotted with tiny, dark red (187A/C) spots on half of each tepal; nectaries red-frosted; pollen strong reddish orange (169A). Fls scattered, 95 × 6 mm, dark green. Stems 1.2 m, dark green overlaid with purple, with c.11 fls. July.

**‘Piroschka’ I(a/-)**

Parentage unknown

R: J. Klein (pre 1986), N: J. Klein

Fls orange-red, tepal-tips darker; spots small, light brown. Fls 150 mm wide. Lvs light green. Stems 0.7 m, dark, with secondary buds. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in German Lily Group sales list, 1986.)

**‘Pisa’ I(a/b)**

Parentage: seedling G 85-12 × seedling G 86-2

R: Vletter &amp; Den Haan, G: Vletter &amp; Den Haan, N: Vletter &amp; Den Haan (1995), I: Vletter &amp; Den Haan, REG: Vletter &amp; Den Haan (1999)

Inside vivid yellow (12A), vivid orange-yellow (23A) at base; spots absent but some papillae present; nectaries green; pollen orange-brown; stigma brown. Tepal-margins smooth, tips recurved. Stems 1.15 m, green, with c.8 fls.

**‘Pisaro’ VII(b/b)**

Parentage: seedling L 263 × seedling L 440

R: Vletter &amp; Den Haan (1981), G: Vletter &amp; Den Haan (1984), N: Vletter &amp; Den Haan (1989), I: Vletter &amp; Den

Haan, REG: Vletter &amp; Den Haan (1990)

Inside deep purplish pink (58D), tepal-tips and throat paler, midveins strong purplish red (54A); outside strong to light purplish pink (63C/D), midribs vivid yellow-green (154A) tinged with strong purplish red (61B); dark pink-red spots on basal half of each tepal; papillae present; nectaries green, edged white; anthers purple; pollen brown to dark orange-brown; stigma purple. Fls 210-230 mm wide, faintly scented; tepals 110 × 65 mm, margins ruffled, tips recurved. Lvs scattered, 140-150 × 40-47 mm, mid green. Stems 1.2-1.3 m, pale green with darker markings, and c.8 fls. Bulbs purplish brown. June. Syn.: ‘Pésaro’.

(Registered as ‘Pésaro’ in 1990, but the same year Dutch PBR (LEL 611) were granted under the epithet ‘Pisaro’, so this latter spelling must be accepted (ICNCP, 2004: Art. 24.4).

**‘Pisky Group’ I(a/-)**Parentage: (*lancifolium* × unknown) × unknown

R: Rosewarne EHS (1967), N: Rosewarne EHS (1974), I: Rosewarne EHS (1978), REG: Rosewarne EHS (1979)

Fls yellow or orange, spotted. Lvs broad, sword-shaped. Stems 0.4 m.

(Published in *ILR* (1982) as Pisky grex.)**‘Pitapat’ IX(b/c)**See *auratum* ‘Pitapat’.***pitkinense* Beane & Vollmer IX(c/d)**Syn. of *pardalinum* subsp. *pitkinense*.**‘Pittoresco’ I(a-b/b-c)**

Parentage: (‘Quinella’ × unknown) × (‘Juno’ × ‘Honey Creme’) × (‘Diblík’ × unknown)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1996), REG: B. Mičulka (1996)

Inside pale pinkish at tepal-tips, centre deep violet-pink; outside whitish pink, midribs brownish; spots numerous, large, dark pink on three-fifths of each tepal; nectaries white- and pink-granulated; pollen ochre; stigma pale yellow. Fls 120 mm wide; tepals 70 × 33 mm, slightly recurved (the outer more so); pedicels 65 mm long, green. Lvs scattered, 100 × 14 mm, dark green. Stems 0.75 m, dark brown at base, slightly dotted above. Early July.

**‘Pixie’ I(a/-)**

Parentage: ‘White Princess’ × unknown

R: L. Koehler (1970), N: J. Wadekamper (1974), I: J. Wadekamper (1976), REG: L. Koehler &amp; J. Wadekamper (1976)

Inside off-white, tepal-tips white, throat pale green; outside darker; spots present; nectaries green; pollen brown. Lvs dark green. Stems 0.3 m. June to July.

(Published in *Lilies and other Liliaceae*, 1976: 92. Included in E. Fisher, *Named Lily Hybrids and their Origins*, 8 (1978) where fl. is described as ‘tan’ (in the American sense).)

**PIXIE®**

For information: PIXIE® is a registered trademark of Cebeco Lilies, Inc. in USA.

**‘Pixie Flame’ I(a/-)**

Parentage: ‘Sunkissed’ × ‘Red Carpet’

R: E.A. McRae (1971), G: Oregon Bulb Farms, Inc. (1976), N: Oregon Bulb Farms, Inc. (1983), I: Oregon Bulb Farms, Inc. (1984), REG: Oregon Bulb Farms, Inc. (1984)

Inside with tepal-tips orange-red, throat golden yellow; outside orange-red; copious spots in centre of fl.; nectaries mottled green; pollen soft orange. Tepals 70 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 20 mm, mid green. Stems 0.35 m, light green, with 5-20 fls. June.

**‘Pixie Star’ VII(-/b)**

Parentage unknown

R: L. Woodriff (1974), G: L. Woodriff (1976), N: Bowman Creek Farm (1981), REG: Bowman Creek Farm (1981)

Inside pinkish white, each tepal with a longitudinal pale orange stripe, tepal-tips and throat white; outside white; spots raspberry-pink on basal half of each tepal; nectaries green; pollen yellow-orange. Fls 160 mm wide; tepals 85 × 45 mm, margins slightly ruffled, tips slightly reflexed. Lvs scattered, 100 × 45 mm, dark green. Stems 0.5 m, green, with c.6 fls. Late June.

**‘Pizzicato’ IX(b/c)**

See *auratum* ‘Pizzicato’.

**‘Plamen’ I(a/b)**

Parentage: ‘Connecticut King’ × (‘Connecticut Yankee’ × ‘Connecticut Glow’)

R: K. Braun (c. 1984), N: K. Braun, REG: K. Braun (1986)

Fls orange-red; spots absent; papillae creamy, in the throat; nectaries orange-red; pollen brown. Fls 160 mm wide; tepals 80 × 30 mm, margins curled, tips slightly recurved; pedicels 90 mm long, brown and green. Lvs 90 × 10 mm, glossy green. Stems 0.85 m, brown. Mid July.

**‘Plamennaia’ I(a/b)**

Parentage: complex hybrid

R: V.A. Grot (1958), N: V.A. Grot

Fls purple-red with a cream centre. Stems 1.5 m. Early. (Included in *ILR Second Supplement* as ‘Plamennaja’, which is an unaccepted spelling.)

**‘Plamennaia’ I(a/b)**

Parentage unknown

R: M.F. Kireeva (1980)

Fls fiery red. Tepals 90 × 25-35 mm. Lvs scattered, 90 × 20 mm, pale green. Stems 0.8-1 m, pale green. July. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in M.V. Baranova, *Lilii*, 321 (1990).)

**‘Plamennaja’ I(a/-)**

Unaccepted spelling of ‘Plamennaia’ (of Grot).

**‘Planeta’ VI(c/b)**

Parentage: ‘Goldturm’ × ‘Andrea’

R: K. Braun (1988), N: K. Braun, REG: K. Braun (1990)

Inside white and violet, tepal-tips white, throat yellow; outside white and violet; nectaries green; pollen brown. Fls 90 × 160 mm, bell-shaped; tepals 132 × 41 mm, recurved; pedicels 70 mm long, green. Lvs scattered, 99 × 24 mm, green. Stems 1.1 m, green and brown, with c.7 fls. Bulbs red-violet. Mid July.

**‘Planeta Mars’ VI(-/c)**

Parentage: unnamed seedling × ‘Zolotko’

R: V.A. Volkov (1984), N: V.A. Volkov

Fls cream, with a reddish orange star in the throat; pollen brown. Stems up to 1 m. Aug.

**‘Planeta Zemlia’ VI(-/c)**

Parentage: unnamed seedling × ‘Zolotko’

R: V.A. Volkov (1984), N: V.A. Volkov

Fls cream, with a green centre; pollen brown. Stems 1.2 m. Aug

(Included in *ILR Fourth Supplement* as ‘Planeta Zemlja’ which is an unaccepted spelling.)

**‘Planeta Zemlja’ VI(-/c)**

Unaccepted spelling of ‘Planeta Zemlia’.

**‘Planet Jewel’ I(a/b)**

Parentage: (seedling 2504-OJ × seedling 3443.rs) × ‘Stella’ (tetraploid form?)

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)

Inside vivid yellow (12A); outside with outer tepals brilliant yellow (13B), with a light yellow-green (144D) stripe along midveins, strong yellow-green (143B) at top, inner tepals brilliant yellow (12B), margins vivid yellow (14B), strong yellow-green (145A) along midribs; spots absent; papillae brilliant yellow (13B); nectaries strong yellow-green (143B); pollen greyish red (178A); stigma brilliant yellow brilliant yellow (13B). Fls 200 mm wide; tepals 105 × 40-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 145 × 20 mm. Stems 0.95-1 m, green with darker markings, and with 2-9 fls.

**‘Plata’ I(a/-)**

Parentage: (*bulbiferum* var. *croceum* × *L.* × *hollandicum*) × (*L.* × *hollandicum* × *lancifolium*)

R: Gebr. N. & B. Laan & Zn (c. 1966), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1969)

Fls strong orange (25B); spots purplish black. (Published in *LYB* 33: 256 (1970).)

**var. *platyphyllum* IX(b/c)**

See *auratum* var. *platyphyllum*.

**var. *platyphyllum* IX(b/a)**

See *japonicum* var. *platyphyllum*.

**'Plavka' I(a/b)**

Parentage: ('Dawn Star' × 'Sally') × (('Edith Cecilia' × 'Rosabelle') × Hallmark Group)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1995), REG: B. Mičulka (1995)

Inside pale greenish yellow, throat paler, tepal-edges yellow; outside whitish with yellow tepal-edges, midribs pale green; spots fairly numerous, medium sized, ovate, dark pink, on half of each tepal; nectaries green, white-granulated; pollen ochre; stigma old rose. Fls 140 mm wide; tepals 90 × 40 mm, margins slightly ruffled, tips moderately recurved; pedicels 50 mm long, green. Lvs scattered, 90 × 10 mm, dull yellowish green. Stems 0.7 m, pale green, with the fls in a very short infl. Late June.

**'Plavoláaska' I(b-c/b-c)**

Parentage: 'Kytice' × 'Odysseus'

R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)

Inside pale apricot-yellow, throat paler, each tepal with a pale apricot flare over nectary; outside pale yellow, midribs olive-yellow; spots numerous, large, dark brown-purple, on two-thirds of each tepal; nectaries white-frosted; pollen brown-orange. Fls 125 mm wide; tepals 85 × 43 mm, rigid, moderately recurved. Lvs 110 × 12 mm, glossy green. Stems 1.1 m, spotted brown. Late June.

**'Playa Blanca' VIII(a-b/B)**

Parentage: unnamed seedling × (*longiflorum* × 'Sterling Star')

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (1999), I: Bischoff Tulleken Lelies B.V. (2000), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside greenish white (155C), throat greenish white (155C) and strong/light yellow-green (144C/D), tepals edged with a dark purple (79B) stripe; outside greenish white (155C) with a little strong yellow-green (144B) at the base, midribs of outer tepals greyish red/dark pink (182B/C), tipped strong yellow-green (144B); spots and papillae absent; pollen moderate reddish orange/brownish orange (171A/B); stigma brilliant yellow-green (150C). Fls 210 mm wide; tepals 115-125 × 45-55 mm, margins smooth, tips somewhat recurved. Lvs scattered, 175 × 25 mm. Stems 1-1.1 m, dark green, with c.4 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

**'Plejáda' VI(b-c/a)**

Parentage: (Royal Gold Group × Golden Splendor Group) × (('Black Dragon' × unknown) × unknown)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)

Inside velvety apricot-yellow, throat deeper; outside pale apricot, midribs greenish; spots absent; nectaries green; pollen apricot; stigma yellow-green. Fls 130 mm wide; tepals 125 × 50 mm, margins somewhat wavy, tips strongly recurved; pedicels 60 mm, slightly brown-dotted. Lvs scattered, 95 × 11 mm, dull dark green. Stems 1.05 m, green. Early July.

**var. *plenum* IX(b/a)**

See *candidum* var. *plenum*.

**'Plenum' IX(b/a)**

See *candidum* var. *plenum*.

**'Plenum' IX(c/d)**

See *martagon* 'Plenum'.

**'Plumblossom' I(a/b)**

Parentage unknown

R: F. Fellner (1987), G: B. Strohman (1990), N: B. Strohman (1993), I: B. Strohman (1994), REG: B. Strohman (1994)

Inside and outside pale purplish pink (65D), fading slightly with age; spots absent; nectaries grey-pink; pollen vivid orange-yellow (23A). Fls 140 mm wide; tepals 75 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 15 mm, mid green. Stems 0.73 m, blackish green, with 6-8 fls in a sub-umbellate infl. Early to late July.

**'Plum Crazy' I(a/b)**

Parentage: seedling 2-79 × seedling 10-78

R: Oregon Bulb Farms, Inc. (pre 1997), REG: Cebeco Lilies, Inc. (1998)

Inside pale yellow (18C) in the apical half, basal half deep pink (51C), throat pale yellow (18D); outside pale orange-yellow (19D), with a light pink blush near each tepal-base and on midribs; spots c.40, oval, maroon, beside nectaries; pollen moderate red (179A); stigma moderate orange-yellow (168D). Fls 160 mm wide; tepals 92 × 46 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 12 mm. Stems 1 m, dark red (187A), with c.4 fls; buds dark. Midseason.

(Published in *The Lily Nook Cat.*, 1997: 8.)

**'Plumosum' IX(b/a)**

See *candidum* var. *plenum*.

**'Plum Tree' I(a/-)**

Parentage unknown

R: J. Wadkamper, N: J. Wadkamper, I: Borbeleta Gardens (1994), REG: ICRA (1996)

Bicolour: base of tepals canary-yellow, apical parts deep pink; the yellow centre is evenly spotted with brown. Stems c.1 m. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1994.)

**'Pluto' I(a/-)**

Parentage: Harlequin Group × Hallmark Group

R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (1980), REG: Bischoff Tulleken Lelies B.V. (1981)

Fls pale yellow-green (4D) with darker veins and brown spots; anthers moderate orange (167A). Stems 0.7 m.

(Published in *Bloembollencultuur*, Sept. 1980.)

**'Pocahontas' I(a/d)**

Parentage: *davidii* var. *wilmottiae* × unknown

R: C.C. Bangs (c. 1967), N: C.C. Bangs

Inside vivid yellowish orange (30C), tepals strong olive (30D) at base; outside rose-pink.

(Published in *The Marlin* 31: 6 (1968).)

**'Pochoden'** I(b/-)

Parentage: 'Connecticut King' × 'Willtigrinum'  
 R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B. Mičulka (1984)

Inside glowing orange, throat pale orange; outside brownish at base; spots very few, tiny, on a quarter of each tepal; nectaries orange-frosted; pollen brown-orange. Fls 115 mm wide; tepal-tips recurved. Lvs 100 × 10 mm, slightly glossy. Stems 1.4 m, dark red-brown. Early July.

**'Podarok'** VI(-/a)

Parentage unknown  
 R: V.P. Orehovs (pre 1976), N: V.P. Orehovs  
 No further details.

**'Poeticheskaja'** VI(-/-)

Parentage: 'Gloriosum' × ('Gloriosum' × *henryi*)  
 R: V.A. Grot (c. 1959), N: V.A. Grot  
 (The 'Gloriosum' parent is of Russian origin. No further details. Included in *ILR Second Supplement* as 'Poeticheskaja' which is an unaccepted spelling.)

**'Poeticheskaja'** VI(-/-)

Unaccepted spelling of 'Poeticheskaja'.

**'Pohádka'** I(a/b)

Parentage: 'Manuella' × Symfonieta Group  
 R: K. Braun (1989), N: K. Braun, REG: K. Braun (1990)  
 Yellow and rose-pink bicolour, throat and tepal-tips rose-pink, centre of tepals yellow; outside rose-pink; spots sparse, medium sized, violet, on half of each tepal; papillae violet; nectaries violet; pollen orange. Fls 160 mm wide; tepals 82 × 41 mm, tips recurved; pedicels 80 mm long, pale green. Lvs scattered, 90 × 18 mm, pale glossy green. Stems 0.9 m, with c.6 fls and secondary buds. Early July.

**'Pohls Weinrote'** Div. ?

Given as a parent of 'Seidenschimmer' and 'Thüringer Nachtigall', both raised by G. Steinbrück. No further details.

**'Poise'** VII(-/b)

Parentage unknown  
 R: Strahm Bulb Farm (pre 1978), N: Strahm Bulb Farm  
 Inside deep pink, each tepal with a deeper pink ray, white tips and red spots; nectaries green, edged gold. Stems 0.6-1.2 m. Aug.  
 (Published in Strahm's sales list, 1983.)

**'Poklad'** VI(b-c/b-d)

Parentage: (Palmer seedling 582812 × 'Gold Eagle') × 'Mimosa Star'  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka, REG: B. Mičulka (2002)  
 Inside yellow; outside with green midribs and brownish at the base; fine yellow spots in lines on two-thirds of each tepal; pollen brown; stigma green. Fls 140 mm wide; tepals 85 × 35 mm, margins roughly wavy and sometimes twisted, tips slightly recurved (outer tepals more so); pedicels 100 mm long, dark-spotted. Lvs

scattered, 90 × 12 mm, dark green. Stems 1.4 m, pale green, slightly brown-spotted, with a moderately long infl. Late July.

**'Polar Bear'** I(a/-)

Parentage: (*lancifolium* × *L.* × *hollandicum*) × (*dauidii* × *cernuum*)  
 R: E.H. Doerr (c. 1966), N: E.H. Doerr, I: Red Stone Nursery (1970)  
 Fls opening cream, turning white; spots purple, on basal half of each tepal; pollen orange. Fls 130 mm wide. Stems 0.8 m. July.  
 (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 8 (1978).)

**'Polar Glow'** VII(-/-)

Parentage unknown  
 R: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1979)  
 Fls snow-white, with no rays or spots. Fls *auratum* type. Stems 1.9 m. Jan. to Feb. (Australia).

**'Polaris'** VI(b/b)

Parentage: derived from seed of mixed trumpets  
 R: M.E. Jackson (1965), N: R.S. Barber (1972), I: R.S. Barber (1972), REG: R.S. Barber (1972)  
 Inside creamy white, throat yellow; outside creamy white with white tepal-tips; spots absent. Tepal-margins ruffled. Lvs 170 × 13 mm, dark green. Stems 1.7 m. July.  
 (Published in *Lilies and other Liliaceae*, 1973/1974: 112.)

**'Polaris'** I(a/-)

Parentage: 'Cinnabar' (Div. I) × Coronado Group  
 R: K. Mynett & A. Wilkońska (1973), G: K. Mynett & A. Wilkońska (1977), N: K. Mynett & A. Wilkońska, I: Research Institute of Pomology & Floriculture  
 Inside strong orange (25A), throat vivid reddish orange (30A); outside strong reddish orange (34C); spots dark bronze, on basal half of each tepal; nectaries yellow; pollen dark bronze; stigma dark bronze. Fls 128 mm wide; tepals 70 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 65 × 9 mm, pale to mid green. Stems 0.68 m, light green, with c.6 fls. Early June.  
 (Registered with the Polish Research Centre for Cultivars and plant patented there under no. 032. Not registered with the ICRA and included here for information only: the name is already used for another lily.)

**'Polárka'** I(a/c)

Parentage: Hallmark Group × ('Nutmegger' × 'Abendglühen')  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1984), REG: B. Mičulka (1984)  
 Inside pale yellow, centre of tepals whitish with a yellow tint over nectaries; outside with beige midribs; spots numerous, medium to large, violet, on two-thirds of each tepal; nectaries white-frosted; pollen brown. Fls 110 mm wide; tepals 60 × 30 mm, slightly recurved; pedicels brown-dotted. Lvs 80 × 10 mm, yellow-green. Stems 1 m, dark brown at base. Late June.

**'Polarstern' I(b/c)**

Parentage: 'Silbersee' × seedling NNC 7.44

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1998), REG: G. Steinbrück (2000)

Inside pale yellow-green (155A), throat light yellow-green (145C); outside vivid white with moderate yellow-green (146B) midribs; spots absent; nectaries light yellow-green (145C); pollen dark red (187B); stigma deep purplish red (187D). Fls 150 mm wide; tepals 80 × 37 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 17 mm. Stems 1.1 m, black, with 15-20 fls. Early to mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0024683).)

**'Polarzvaigzne' I(b/c)**

Parentage: 'Herold' × 'Baltais Lācis'

R: A. Balode (1996), G: A. Balode (1998), N: A. Balode (2000), REG: A. Balode (2000)

Inside pale greenish yellow (1D) fading to white, midveins brilliant greenish yellow (2B), throat light green; outside light green; a few, irregular spots present; nectaries dark greyed purple; pollen light brown-orange. Fls 140 mm wide; tepals slightly recurved. Lvs scattered, 170 × 16 mm. Stems 1.3 m, green, with c.11 fls. Mid July. (Reported to be strongly disease- and weather-resistant.)

**'Polednice' I(a-b/b-c)**

Parentage: 'Connecticut King' × 'Odysseus'

R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)

Inside apricot, with deeper flush over nectaries; outside paler, midribs greenish yellow; spots medium sized, moderately numerous, cinnabar, on a third of each tepal; nectaries white-frosted; pollen brownish orange. Fls 115 mm wide. Lvs 80 × 13 mm, glossy dark green. Stems 0.8 m, very thick, dark violet, hairy. Early July.

**'Polianka' I(a/b)**

Parentage: 'Rubinovaia' × mixed pollen from 'Destiny' & Golden Chalice Group

R: M.F. Kireeva (c. 1976), N: M.R. Kireeva

Fls canary-yellow with many large dark brown spots; filaments and style pale yellow; anthers brown. Fls 100-120 mm wide. Lvs dark green. Stems 1-1.2 m, brown, with 6-11 fls. June to July.

(Published in M.F. Kireeva, *Lilii*, 60 (1984).)

**'Poliarnaia Zvezda' I(a/b)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1994)

Fls white, lemon-yellow at base; spots few, brownish, on basal part of tepals; pollen orange. Fls 140-150 mm wide. Stems 1.1-1.2 m, with 9-13 fls. July.

(Published in M.F. Kireeva, *Lilii*, 70 (2000).)

**'Polimja' Div. ?**

Given as a parent of 'Herta Rozentāle'. No further details.

**'Polina' I(a/-)**

Parentage: seedling N 7-2 × 'Byam's Ruby'

R: N.G. Korshikova (1975), G: N.G. Korshikova, N:

N.G. Korshikova, I: N.G. Korshikova (1984), REG:

N.G. Korshikova (1992)

Fls ruby-red, 140-150 mm wide. Stems 0.7-0.75 m. June to July.

**'Polish Morning Star' I(a/b)**

Parentage: 'Kaja Danczowska' × 'Ikaria'

R: W. Kuligowski (1990), G: W. Kuligowski (1993), N:

W. Kuligowski (1997), I: W. Kuligowski (1997), REG:

W. Kuligowski (1998)

Inside pink, throat a little darker; outside pink; slightly streaked on both sides; spots absent; nectaries frosted pale pink; pollen dark bronze; stigma pale pink. Fls 175 mm wide; tepals 100 × 48 mm, margins smooth, tips very slightly recurved. Lvs scattered, 80 × 13 mm, mid green. Stems 1.05 m, brown-green, with 5-7 fls. Early to mid July.

Syn.: 'Morning Star'.

**'Poliushko' I(a/b-c)**

Parentage unknown

R: M.F. Kireeva & N.V. Ivanova (1986)

Fls deep orange with dark brownish spots. Fls 140-160 mm wide; tepal-margins smooth. Stems 0.9-1.1 m, with 7-11 fls. June.

(Published in M.F. Kireeva, *Lilii*, 44 (2000).)

**'Polka Dot' I(a/-)**

Parentage: 'Peachblush' × ('Enchantment' × 'Gypsy')

R: E.A. McRae (1975), G: Oregon Bulb Farms, Inc.

(1979), N: Oregon Bulb Farms, Inc. (1986), I: Oregon

Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)

Inside strong purplish red (59B/C), overlying light greenish yellow (8B/C) in the throat, a softer flush of strong purplish red (58C) over nectaries; outside soft pink with a flush of green around midribs; spots copious, medium sized, dark magenta; nectaries cream- to white-downy; pollen dark red (183A) to moderate red (180A). Fls 130-150 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 8 mm, mid green. Stems 1 m, light green, with 8-40 fls. Mid June.

**'Polka Dot Bikini' I(a/b-c)**

Parentage unknown

R: H.E. Hoepner (1986), G: H.E. Hoepner (1988), N:

H.E. Hoepner (1992), I: H.E. Hoepner (1992), REG:

H.E. Hoepner (1992)

Inside yellow, throat slightly paler; outside yellow, midribs slightly paler; spots numerous, large, vermilion, on all but tepal-tips, with spots just showing through to outside; nectaries paler yellow; anthers lacking pollen. Tepals 77 × 37 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 15 mm (upper leaves much shorter and wider), mid green. Stems c.1.4 m, mid green, with 5-10 fls. Midseason to late.

**'Pollyanna' I(a/b)**

Parentage: *wilsonii* var. *flavum* × 'Connecticut King'

R: Oregon Bulb Farms, Inc. (1973), N: Oregon Bulb

Farms, Inc. (1981), I: Oregon Bulb Farms, Inc. (1981), REG: Oregon Bulb Farms, Inc. (1981)  
Fls bright yellow with a deep gold flush in centre of each tepal, throat gold; spots brown near centre; nectaries green; pollen brown. Fls 175 mm wide; tepal-margins smooth, tips recurved. Lvs scattered, dark green. Stems 1.3-1.4 m, green, with 8-30 fls. June to July.  
Syn.: 'Polyanna'.  
(Registered in 1981 as 'Polyanna' and included as such in *ILR* (1982). However, in 1982 Dutch PBR were granted under the epithet 'Pollyanna' and so this latter spelling must be accepted (ICNCP, 2004: Art. 24.4).)

**'Polonez' I(a/-)**

Parentage: complex hybrid including 'Redstart', 'Rubinovaia', 'Destiny', *L. × maculatum & cernuum*  
R: M.F. Kireeva (1981), N: M.F. Kireeva  
Fls pale pink, spotted. Stems 0.7-0.9 m, with bulbils. June.

**'Poloneza' I(b-c/c-d)**

Parentage: 'Pomeranč' × 'Connecticut King'  
R: Šlechtitelaká Stanice Heřmanův Městec (pre 1992), N: Šlechtitelaká Stanice Heřmanův Městec  
Inside rich yellow, centre of tepals apricot; small to medium-sized spots on half of each tepal. Fls semi-Turk's cap in form, with overlapping tepals; pedicels 70-100 mm long. Lvs 70-90 × 7-10 mm, dark green. Stems 1.05 m, dark red-brown, with c.20 fls. Mid June.  
(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1992.)

**'Polstar' I(a/-)**

An erroneous name for 'Potstar', included in *ILR* (1982) as 'Polstar' unclassified.

**'Poltavchanka' VI(-/a)**

Parentage: Trumpet hybrid × Magic Green Group  
R: V. Negrobov (c. 1974), N: V. Negrobov  
Fls white, green in throat; pollen orange. Fls up to 200 × 180 mm, strongly scented. Stems 1.2 m, with up to 10 fls. July.  
(Published in *LYB* 33: 76 (1970).)

**'Polyanna' I(a/-)**

Syn. of 'Pollyanna'.

**'Polydor' VI(c/b)**

Parentage: 'Tetra White Henry' × (tetraploid *regale* × 'Tetra White Henry')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside creamy white, basal two-thirds of each tepal apricot; outside with faintly rosy-veined midribs; slight cinnamon dusting on two-fifths of each tepal; nectaries green; pollen chocolate-brown; stigma dark green. Fls 150 mm wide; tepals 140 × 46 mm, margins slightly wavy, tips moderately recurved; pedicels 80 mm, thick, slightly dotted. Lvs scattered, 120 × 16 mm, dull mid green. Stems 1.15 m, thick, dotted very dark brown, with a short infl. Late July. Tetraploid.

**'Polyglot' VI(b-c/a)**

Parentage: white-flowered tetraploid trumpet lily × deep yellow-flowered tetraploid trumpet lily  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)  
Inside creamy white, throat apricot-yellow with deep yellow rays; outside with yellow shining through, midribs green with a few red-brown spots; spots absent; pollen apricot-brown; stigma greyish. Fls 160 mm wide; tepals 150 × 52 mm, slightly twisted, margins slightly wavy, tips somewhat recurved; pedicels 80 mm, very thick, brown-dotted, with secondary buds. Lvs scattered, 105 × 12 mm, dull dark green. Stems 1.25 m, dotted with red-brown. Early July. Tetraploid.

**'Polyhymnia' IX(b-c/d)**

See *speciosum* 'Polyhymnia'.

**'Polymia' I(a/b)**

Parentage unknown  
R: N.I. Rutski (1971)  
Fls orange-red, darker on tepal-centres and margins; outside downy; spots present. Fls 140-150 mm wide; tepal-tips recurved. Stems 0.8-1 m, dark brown, with bulbils. July.  
(Published in M.V. Baranova, *Lilii*, 321 (1990).)

**'Polypet' VI(b-c/a-b)**

Parentage: 'Tetra White Henry' × (tetraploid *regale* × 'Tetra White Henry')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside creamy white, throat finely grooved with apricot rays; outside with the apricot shining through, midribs green with weak rosy veining; papillae sparse, in throat; nectaries green; pollen brown; stigma green. Fls 165 mm wide, broadly trumpet-shaped; tepals 150 × 57 mm, margins slightly wavy, tips moderately recurved; pedicels 90 mm long, thick, spotted. Lvs scattered, 100 × 15 mm, dark green, dull. Stems 1.15 m, moderately thick, strongly brown-spotted, with a short infl. Mid July. Tetraploid.

***polyphyllum* D. Don IX(c/d)**

Inside creamy white with green or pale purplish dots and streaks; outside greenish white; anthers yellow with orange pollen. Fls up to 110 mm wide, fragrant; tepals reflexed in upper half. Lvs mostly scattered, but the lowermost sometimes in whorls, 50-120 × 3-20 mm. Stems 0.4-1.2 (2.5) m, green, with 1-10(-40) fls. July. W Himalaya.

**'Polyram' VI(c/b)**

Parentage: (tetraploid *regale* × 'Tetra White Henry') × ('Tetra White Henry' × tetraploid trumpet lily)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside creamy white, throat apricot, the colour extending over basal half of each tepal; outside with green midribs and rosy marbling; faint cinnamon dusting on one-fifth of each tepal; nectaries green; pollen brown; stigma dark

green. Fls 130 mm wide tepals 130 × 53 mm, thick, tips slightly recurved; pedicels 60 mm long, very thick, brown-spotted. Lvs scattered, 130 × 20 mm, dull dark green. Stems 1.05 m, thick, finely spotted red-brown, with a short infl. Mid July. Tetraploid.

#### **'Polyvetta' I(a/b)**

Parentage: tetraploid seedling × 'Tetra Connecticut Yankee'

R: J.M. van Tuyl (1984), G: J.M. van Tuyl (1989), N: J.M. van Tuyl (1989), I: IVT (1987), REG: IVT (1989) Inside strong orange (25A) to vivid orange (28B), throat shaded Saturn red; outside brilliant orange (25C), tepal-edges darker, midribs pale green; scattered brown spots in the throat; nectaries burnt brown-red; pollen dark reddish brown. Tepals 90 × 45 mm, margins not or slightly ruffled, tips reflexed. Lvs scattered, 160 × 20 mm. Stems 1.2 m, dark green, with 6-7 fls. Tetraploid.

#### **'Pomegranate' IX(b/c)**

See *auratum* 'Pomegranate'.

#### **'Pomeranč' I(c/-)**

Parentage: derived from Preston Group

R: J. Marks (pre 1969), G: J. Marks, N: J. Marks, I: V. Jošt (1975), REG: V. Jošt (1984)

Inside brilliant orange (29A); outside vivid yellowish orange (30C); spots numerous, small, red-brown, scattered over half the fl.; nectaries orange, white-frosted; pollen vivid yellowish orange (30C). Fls 55 mm wide; tepal-tips strongly recurved; pedicels dark-dotted. Lvs 80 × 4 mm, dark green. Stems 1.3 m, with some dark spots above, black at base, with up to 34 fls. Early July.

#### **'Pomerančový Favorit' VI(b/a)**

Parentage: ('Gold Eagle' × dark salmon-flowered

Aurelian trumpet ("Lachsaurélian")) F<sub>3</sub>

R: J. Hloušek, N: J. Hloušek, I: J. Hloušek (1990), REG: J. Hloušek (1994)

Inside glowing orange; outside red-orange; nectaries green; pollen yellow-orange; stigma green. Fls 60 × 130 mm; tepals 130 × 60 mm, margins slightly waved, tips recurved; pedicels 100 mm long, brownish. Lvs scattered, 120 × 8 mm, dull dark green. Stems 1.2 m, thick, dark-shaded. Bulbs yellow-brown. Early July.

#### **'Pomerania' I(b-c/d)**

Parentage: 'Merrick' × 'Unique'

R: W. Kuligowski (1990), G: W. Kuligowski (1993), N: W. Kuligowski (1997), I: W. Kuligowski (1997), REG: W. Kuligowski (1998)

Inside pale pink, throat cream yellow; outside pink; spots dark brown on up to two-thirds from the base of each tepal; nectaries pale pink; pollen yellow bronze; stigma light yellow. Fls 110 mm wide; tepals 115 × 48 mm, margins not or slightly wavy, tips strongly recurved. Lvs scattered, 115 × 10 mm, mid green. Stems 1.55 m, dark brown, with 10-12 fls. Early to mid July.

(Published in Kuligowski's sales list, Spring 1998.)

#### **'Pomona' I(a/-)**

Parentage: 'Rebecca' × *L. × parkmanii* 'Anita'

R: De Jong Beheer B.V. (1984), N: De Jong Beheer B.V. (1990), I: De Jong Beheer B.V. (1990), REG: De Jong Beheer B.V. (1992)

Inside brilliant greenish yellow (6A) flushed with vivid orange-yellow (23A); outside brilliant to light greenish yellow (6C/D), tepal-edges brilliant greenish yellow (6B), midribs suffused with brilliant greenish yellow (1B) on the apical part; spots dark red (187A), on basal part of each tepal; nectaries strong red (53B); pollen strong orange (25A). Fls 183 mm wide; tepals 88 × 47 mm, margins smooth, tips not recurved. Lvs scattered, mid green. Stems 1.45 m, with 7-9 fls.

#### **'Pompei' VII(b/b-d)**

Parentage: (*auratum* × 'Star Gazer') × seedling OP 322

R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1984), N: Lilium International Investment Ltd (1990), I: Lilium International Investment Ltd (1991), REG: Lilium International Investment Ltd (1991)

Inside yellowish white to greenish white (155B/C), each tepal with a long, narrow, light yellow (12C) flame, midveins brilliant to light yellow (12B/C), throat strong yellow-green (144C); outside yellowish white to greenish white (155B/C), outer tepals slightly suffused with pale yellow (8D), midribs brilliant yellow-green (154C); papillae dark reddish orange (178B) on all but the tip of each tepal; nectaries moderate purple (79D); pollen strong orange (169D). Fls 245 mm wide; tepals 120 × 62 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 115 × 30 mm, mid green. Stems 0.65 m, pale green, with c.3-6 fls. July (under glass).

#### **'Pompidou' VII(a-b/b)**

Parentage: seedling 92-36 × Seedling RW 95-15

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside very light purple (75C), tepal-edges strong purplish red (64C), throat greenish white (155C); outside very light purple (75C), each tepal strong purplish red (64C) towards margin and on midrib; spots greenish white (155C); papillae present; nectaries strong yellow-green (141D); pollen strong brown (172A); stigma light yellow-green (142C). Fls 255 mm wide; tepals 125 × 75 mm, margins slightly ruffled, tips slightly recurved. Lvs 245 × 65 mm. Stems 1.3 m, light green, with c.3 fls.

#### ***pomponium* L. IX(c/d)**

Fls bright red with purplish or black spots and lines; outside purple-green at base; papillae purplish; nectaries green; pollen orange-red. Fls to 50 mm wide, unpleasantly scented. Lvs scattered, 90-150 × 2-5 mm, margin ciliate. Stems 0.2-1 m, green with purple spots in lower part, and with 1-6(-10) fls. Maritime Alps of France & Italy.

**'Ponkapaog' I(b/-)**

Parentage: (*lancifolium* × *L. × hollandicum*) × (*L. × maculatum* × *dauidii* var. *willmottiae*)

R: A.E. Simoni, N: A.E. Simoni (1962), I: A.E. Simoni (1962), REG: A.E. Simoni (1981)

Fls red throughout, spotted; nectaries red; pollen red. Tepal-margins smooth. Lvs scattered, dark green. Stems 1-1.2 m, dark green, with 5-7 fls. July.

***ponticum* C. Koch IX(c/d)**

Syn. of *pyrenaicum* subsp. *ponticum* var. *ponticum*.

***ponticum* var. *artvinense* (Mishchenko) P.H. Davis & Hend. IX(c/d)**

Syn. of *pyrenaicum* subsp. *ponticum* var. *artvinense*.

**'Pontorma' VIII(a/b)**

Parentage: seedling BG 94-7 × seedling G 92-10  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside light yellow-green (2C); outside pale greenish yellow (1D), tepals edged light greenish yellow (4C); spots and papillae absent; nectaries pale greenish yellow (2D) surrounded by a little strong yellow-green (144B); pollen strong orange (25A); stigma light orange-yellow (16B). Fls 195 mm wide; tepals 120-125 × 45-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 155 × 20 mm. Stems 1.3 m, green with darker markings, and with c.5 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Pooka' I(a/b)**

Parentage: 'Avalon' × (*pumilum* × bicoloured selection from Coronado Group)

R: Columbia-Platte Lilies (1980), G: Columbia-Platte Lilies (1982), N: Columbia-Platte Lilies (1986), I: Columbia-Platte Lilies (1986), REG: Columbia-Platte Lilies (1988)

Pale yellowish pink (27C/D), on the second day or in warm conditions fading to pure white, tepal-tips pale yellowish pink (27D), throat white; outside soft buff to white, midribs with a slight plum overlay; spots numerous, small, light magenta on two-thirds of each tepal; nectaries green, white-downy; pollen moderate red (180A). Fls slightly scented; tepals 60-90 × 20-30 mm, margins ruffled in older fls, tips slightly recurved. Lvs scattered, 100-150 × 20 mm, mid green. Stems 1-1.3 m, light to mid green, with 5-12 fls. Mid June.

(Published in *Rex Lilies Cat.*, 1986.)

**'Poor Knights' VI(b/a)**

Parentage: ('Penelope' × 'Tundra') × (Silver Sunburst Group × 'Honeydew')

R: P.L. Greenfield (1981), G: P.L. Greenfield (1983), N: P.L. Greenfield (1983), I: Huntingdon Lily Farm, REG: Hightae Plant Nursery (1986)

Inside greenish yellow, throat and outside darker; spots absent; nectaries green; pollen mid brown. Tepals 120 × 45 mm, margins smooth, tips slightly recurved. Lvs

scattered, 160 × 15 mm, mid green. Stems 1.8 m, greyish green speckled with brown, with c.16 fls. Dec.

Syn.: 'Spruce'.

(This lily was listed in New Zealand Lily Soc. seed list, 1984 as 'Spruce' which at that time was an unacceptable name (ICNCP, 1995: Art. 17.13).)

**'Popelka' I(b/c)**

Parentage: 'Tigrimount' × white-flowered tetraploid seedling

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside beige-old rose, tepal-tips and throat paler; outside rosy, midribs deeper-coloured; spots numerous, large, oval, brown-black, on three-fifths of each tepal; nectaries white-felted; pollen brown; stigma crimson-red. Fls 115 mm wide; tepals 95 × 43 mm, margins smooth, tips strongly recurved; pedicels 90 mm long, densely brown-spotted. Lvs scattered, 135 × 12 mm, dark green, dull. Stems 1.05 m, thick, dotted with brown-black, with a medium-sized infl. Early July. Triploid.

**'Port Alberini Tiger' I(c/-)**

Error for 'Port Alberni Tiger'.

**'Port Alberni Tiger' I(c/-)**

Parentage unknown

N: F. Fellner (pre 1997), I: F. Fellner

Similar to *lancifolium* but larger and taller. Stems to 1.9 (-2.9) m. Late July to Aug.(-Sept.).

(Published in *The Lily Nook Cat.*, 1997: 8. Included in *ILR Thirteenth Supplement* as 'Port Alberini Tiger' - an erroneous epithet. Found in Port Alberni, British Columbia, Canada.)

**'Porter's Sunbright' I(c/d)**

Parentage: seedling from Stenographer Group

R: A.J. Porter (pre 1962), N: A.J. Porter

Fls chrome-yellow. Stems 0.8-1 m, with up to 20 fls in a symmetrical infl. July.

Syn.: 'Sunshine' (Div. I); 'Sunbright' (Div. I).

(There has been considerable confusion over the epithet of this lily. It appeared in *ILR* (1969) as 'Sunshinebright' (formerly named 'Sunshine'). *ILR* (1982) included it as 'Sunshinebright' (syn. 'Sunshine') and also included 'Sunbright' (of Porter) as a separate entry. In the *Honeywood Catalogs* the lily first appeared as 'Sunshine' in 1962, but in 1966 the epithet was changed to 'Sunbright' because 'Sunshine' (of Porter) was predated by de Graaff's 'Sunshine'. It was listed as 'Sunbright' from 1966 to 1984, when the epithet was again changed (because of the earlier 'Sunbright' of de Graaff), this time to 'Porter's Sunbright'. The origin of the epithet 'Sunshinebright' is unknown: it does not appear in any of the *Honeywood Lilies Catalogs* (e-mail Nov. 2006 from Judy Harley, Manager of Honeywood Heritage Nursery). It thus seems likely that 'Sunshinebright' is an erroneous epithet for 'Sunbright', and it should be abandoned.)

**'Port Henry' IX(c/d)**

See *superbum* 'Port Henry'.

**'Portlandia' I(a/-)**

Parentage: 'Tribute' × unnamed clone A.86.82

R: Rien Veenstra (1983), G: Oregon Bulb Farms, Inc. (1985), N: Rien Veenstra (1989), I: Oregon Bulb Farms, Inc. (1989), REG: Oregon Bulb Farms, Inc. (1989)

Inside vivid reddish orange (32A) on outer tepals, shading to vivid reddish orange (30A) on inner tepals, tepal-tips vivid reddish orange (30A/32A), throat strong reddish orange (32B); outside vivid reddish orange to vivid yellowish orange (30B/C); spots small, oblong, deep red (60A) on the basal third of each tepal; nectaries strong reddish orange (32B); pollen vivid reddish orange (33A). Fls 135 mm wide; tepals 70 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 98 × 11 mm, dark green. Stems 1 m, moderate olive-green (146A), with c.21 fls. Midseason.

**'Portofino' I(a/b)**

Parentage: 'Blizzard' × 'Menton'

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1987), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1997)

Inside brilliant orange/light orange-yellow (25C/D), tepals darker coloured at base, edges with thin salmon stripes, throat salmon/orange; outside light orange-yellow (25D), brilliant orange (25C) at base; spots few, dark red; some papillae present; pollen dark brown; stigma orange, edged purple. Tepal-margins ruffled, tips slightly recurved. Stems 1.1 m, blackish and brown with green speckling. Early to midseason.

**'Port of Spain' I(a/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside and outside yellowish white (155D); spots and papillae absent; nectaries green; pollen light brown; stigma dark purple. Tepal-margins slightly ruffled, tips slightly recurved. Stems of medium height, with some reddish markings. Early.

**'Portrait' I(a/b)**

Parentage: (Tescra seedling × an Oregon Bulb Farms white-flowered, up-facing Asiatic seedling) × 'Willow Wood'

R: J. Wadkamper (1978), N: J. Wadkamper (1983), I: Borbeleta Gardens (1984), REG: Borbeleta Gardens (1984)

Inside brilliant and light greenish yellow (6A & 6D), tepal-tips, edges and centre light greenish yellow (6D), throat brilliant greenish yellow (6A); outside brilliant and light greenish yellow (6A & 6D); red-brown spots and a heavy brushmark on the basal half of each tepal; nectaries cream on ivory; pollen mid brown. Tepals 70 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 12 mm, dark green. Stems 0.8 m, dark green, with 12-15 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1984.)

**'Port Royal' VIII(a/b)**

Parentage: seedling LAW 93-14 × seedling RS 93-16

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside strong orange (26B) on a light yellowish pink (27B) ground, tepals with a dark red (187A), narrow edge from the base to about halfway, throat light yellow pink (27B); outside of inner tepals pale yellowish pink (27C), midribs light greenish yellow (4C) with a little moderate red (183C) at base; outside of outer tepals moderate red (183C) on a pale yellowish pink (27C) ground, towards the edges becoming light orange (28D), midribs light greenish yellow (4C), vivid orange (28A) at top; spots dark red (187A) mainly on inner tepals; papillae absent; nectaries light yellowish pink (27A), rimmed light orange (28D); pollen dark red (183B); stigma deep purplish pink (54B). Fls 160 mm wide; tepals 100-110 × 45-60 mm, margins smooth, tips recurved. Lvs scattered, 150 × 25 mm. Stems 1.2-1.3 m, green with darker markings, and with c.4 fls.

(*A longiflorum*/Asiatic (LA) hybrid.)

**'Port Said' VII(a/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside yellowish white (155D), midveins light greenish yellow (8B); outside yellowish white (155D), midribs strong yellow-green (141D), towards top changing from brilliant yellow-green (150C) to strong greenish yellow (151A); spots light greenish yellow (8B); papillae yellowish white (155D) and light greenish yellow (8B); nectaries strong yellow-green (143C); pollen strong reddish orange (169A); stigma light grey (188D) on a long style. Fls 230 mm wide, fragrant; tepals 150 × 75 mm, margins ruffled, tips strongly recurved. Lvs 185 × 47 mm, dark green. Stems 1 m, green, with c.5 fls.

**Port Sunlight Group II(-/-)**

Parentage: *martagon* var. *album* × *amabile*

R: D.S. Marriott (1977), N: D.S. Marriott (1984), REG: D.S. Marriott (1984)

Lvs 40-60 × 8-10 mm. No further details.

**'Portugal' I(a/-)**

Parentage: seedling OR 87-24 × seedling OR 92-12

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside dark red (187A/B); outside deep red (53A), shading to dark red (187A) at tepal-edges; spots dark red (187A); papillae few, dark red (187A); nectaries dark red (187C); pollen strong brown (172A); stigma dark red (187A). Fls 170 mm wide; tepals 90 × 32-45 mm, margins smooth, uppermost tepal recurved. Lvs scattered, 140 × 20 mm, mid green. Stems 1.4 m, with c.6 fls.

**'Port Wine' II(c/d)**

Parentage: *martagon* var. *album* × unnamed seedling

R: C.L. Shride, N: C.L. Shride, REG: H.R. Cocker (1980)  
Fls moderate purplish red (64A). Lvs whorled. Stems 1-1.2 m. June.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 45 (1978).)

**‘Poruka Piemīņa’ Div. ?**

Given as a parent of ‘Lielais’. No further details.

**‘Poseidon’ I(a/-)**

Parentage unknown  
R: S. Ziepke, N: S. Ziepke, I: S. Ziepke (pre 1972), REG: S. Ziepke (1985)  
Inside vivid yellowish orange (30C); outside strong orange (30D); spots medium sized, purple on half of each tepal; nectaries white; pollen moderate reddish orange (178C). Fls 125 mm wide; tepals 70 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 0.75 m, mid green, with c.12 fls.  
(Published in *Liliārskā ročenka*, 1983.)

**‘Positano’ I(a/b)**

Parentage: ‘Amsterdam’ × seedling OR 159  
R: Vletter & Den Haan Beheer B.V. (1982), G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (c. 1988), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1997)  
Inside a little darker than vivid reddish orange (30B), throat orange-yellow; outside a little darker than vivid reddish orange (30B); spots black, red-edged; some papillae present; pollen dark brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems 1.2 m, brown speckled with green. Early.

**‘Positron’ I(a/b-c)**

Parentage: ((‘Ginny of Millis’ × ‘Connecticut King’) × (‘Chinook’ × ‘Wattle Bird’)) × ((‘Rusalka’ (of Mičulka) × unknown) × unknown)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside pale orange-red, throat whitish; outside pale orange, midribs pale pink; brushmarks brown-crimson, small, linear, spots dark brown-red, few, small, on a quarter of each tepal; nectaries dark olive-green, partly open; pollen orange; stigma brown-red. Fls 145 mm wide; tepals 80 × 40 mm, margins slightly waved, tips scarcely recurved; pedicels 60 mm long, profusely brown-dotted. Lvs scattered, 70 × 12 mm, dull pale green. Stems 0.85 m, slightly brown-dotted, thick. Early July.

**‘Postilión’ I(b/c)**

Parentage: (‘Baltais Stars’ × unknown) × (First Impression Group × ‘Windahloo’)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside light orange, tepal-tips paler, throat pale orange; outside paler in centre of each tepal, midribs green; spots numerous, large, oval, deep rosy brown on half of each tepal; nectaries white-granulated; pollen orange-brown; stigma red-brown. Fls 145 mm wide, irregular; tepals

85 × 45 mm, margins downcurved, tips of outer tepals slightly recurved; pedicels 75 mm long. Lvs scattered, 100 × 14 mm, dark green. Stems 0.9 m, green, very thick, with a short infl. Early June.

**‘Pot of Gold’ I(a/c)**

Parentage: yellow-flowered seedling × unknown  
R: M.D. Holloway (1992), G: M.D. Holloway (1993), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)  
Inside golden yellow; outside yellow with a slight brown line along outer tepals; lightly spotted on the basal half of each tepal; nectaries greenish yellow; pollen absent. Fls 160 mm wide; tepals 80 × 42 mm, margins smooth, tips slightly recurved; pedicels long. Lvs scattered, 180 × 17 mm, mid green. Stems 0.97 m, mid green, with c.10 fls. Early July to mid Aug.  
(Fl. colour does not fade.)

**Potomac Group VII(-/d)**

See *L. × parkmanii* Potomac Group.

**‘Potpourri’ VI(b/b)**

Parentage: ‘Sundance’ × ‘Dark Pink Flamboyant’  
R: T.R. Martin (1972), N: T.R. Martin (1976), I: T.R. Martin (1976), REG: T.R. Martin (1976)  
Inside pale yellow (158B), throat shading to vivid yellow (9A); outside and tepal-tips flushed with dark pink (182D); nectaries green; pollen dark brown. Tepals slightly curled. Lvs wide, dark green. Stems 1.5-1.9 m. Mid to late July.  
(Published in *Lilies and other Liliaceae*, 1976: 93.)

**‘Potstar’ I(a/-)**

Parentage unknown  
R: Gebr. N. & B. Laan & Zn (pre 1982), N: Gebr. N. & B. Laan & Zn  
Fls pale orange, tepal-tips overlaid with red; spots purple, small; nectaries white; pollen greyed orange. Fls 130 mm wide; tepals 70 × 37 mm, margins smooth, tips not recurved. Lvs 92 × 11 mm, dark green. Stems 0.5 m. June.  
(Included erroneously as ‘Polstar’, unclassified in *ILR* (1982).)

**‘Powder Puff’ I(a/-)**

Parentage unknown  
R: W. Windus (c. 1974), N: W. Windus (1981), REG: W. Windus (1981)  
Fls light greenish yellow (4C); spots medium sized on half of each tepal; pollen moderate orange (167B). Fls 160-175 mm wide. Lvs 50 × 20 mm. Stems 1 m, with c.20 fls.

**‘Praecox’ IX(b/c)**

See *auratum* ‘Praecox’.

**‘Praecox’ IX(a/b)**

See *dauricum* ‘Praecox’.

**‘Praecox’ IX(c/d)**

See *leichtlinii* var. *maximowiczii* ‘Praecox’.

**‘Praha’ VII(a-b/b-c)**

Parentage unknown

R: Trior Lelie B.V. (1988), G: Trior Lelie B.V. (1990), N: Trior Lelie B.V. (1993), I: Trior Lelie B.V. (1993), REG: Trior Lelie B.V. (1995)

Inside strong purplish red (63B), paling at tepal-tips and margins to yellowish white (155D), throat yellow, changing to deep red (53A); outside light purplish pink, spotted; spots large, many; papillae present; nectaries green; pollen red-brown; stigma grey. Tepal-margins smooth, tips slightly recurved. Lvs scattered, green. Stems 1.3 m, with darker splashes and stripes, and with c.5-7 fls (from 16 cm bulbs). Midseason.

**Prairie Group VIII(a/b)**Parentage: contains *philadelphicum* × (*dauricum* & *L. × hollandicum*)

R: A.R. Brown, N: A.R. Brown

Fls red, yellow and apricot shades. June.

(Published in *Greenock Farms Cat.*, 1958.)**‘Prairie Beauty’ I(a/-)**

Parentage: ‘Northern Lights’ × unknown

R: E. Robinson, N: E. Robinson (1977), I: E. Robinson (1977), REG: E. Robinson (1978)

Inside pale yellow, tepal-tips light pink, throat cream; outside pinkish; well spotted. Stems 0.6-1 m.

(Published in *Lilies and other Liliaceae*, 1978/9: 112.)**‘Prairie Fawn’ I(b/d)**

Parentage: ‘Edith Cecilia’ × Preston Group

R: E. Robinson (c. 1962), N: E. Robinson (1966)

Inside straw-fawn; outside with green midribs. July.

(Published in *ILR* (1969).)**‘Prairie Fire’ I(a/-)**

Parentage: (‘Enchantment’ × unknown) × unknown

R: E. Robinson, N: E. Robinson (1976), I: E. Robinson (1976), REG: E. Robinson (between 1976 and 1981)

Fls brilliant red-orange; spots absent. Stems 0.8 m.

(Published in *Gaybird Nursery Cat.*, 1976.)**‘Prairie Fragrance’ I(b/-)**

Parentage: ‘Edith Cecilia’ × Preston Group

R: E. Robinson (c. 1962), N: E. Robinson (1966)

Inside fawn, slightly spotted; outside light green. Fls scented. Stems 1-1.2 m. July.

(Published in *ILR* (1969).)**‘Prairie Gem’ II(a/-)**Parentage: (*L. × dalhansonii* ‘Brocade’ × unknown) × unknown

R: E. Robinson (1975), N: E. Robinson (1983), I: E. Robinson (1983), REG: Gaybird Nursery (1983)

Inside pale yellow, throat reddish-orange; outside cream; a few spots near centre; pollen orange. Tepal-margins smooth, tips slightly recurved. Lvs whorled, mid green. Stems 0.8-1 m, green, with c.4-5 fls. July.

**‘Prairie Gold’ I(b/-)**

Parentage: ‘Edith Cecilia’ × ‘Radiant Glow’

R: E. Robinson (c. 1962), N: E. Robinson (1967)

Fls lavender-straw, with straw-yellow face and darker lavender tepal-tips. Stems 1.5 m. July.

Syn.: ‘Prairie Sunset’.

(Published in *ILR* (1969). Originally known as ‘Prairie Sunset’.)**‘Prairie Harlequin’ I(c/-)**Parentage: (*davidii* var. *willmottiae* × unknown) × (*davidii* var. *willmottiae* × unknown)

R: F.L. Skinner (c. 1954), N: F.L. Skinner

Fls in a mixture of red and yellow; spots brown.

(Published in *Skinner’s Nursery Cat.*, 1954.)**‘Prairie Harvest’ I(b/-)**

Parentage: ‘Edith Cecilia’ × ‘Radiant Glow’

R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)

Fls cream-yellow, fading to cream-fawn, throat fawn; slightly spotted. Tepals semi-reflexed. Stems up to 1 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 16 (1978).)**‘Prairie Midget’ I(a/-)**

Parentage: seedling of Preston Group × unknown

R: E. Robinson, N: E. Robinson (1976), I: E. Robinson (1976), REG: E. Robinson (1976)

Fls soft pale pink, tepal-tips pink. Stems 0.3 m, with a solitary fl.

(Erroneous name: ‘Midget’, as given in *Lilies and other Liliaceae*, 1977: 80, where the fls are erroneously described as ‘yellow’. Published in *Gaybird Nursery Cat.*, 1976.)

**‘Prairie Sands’ I(b/-)**

Parentage: Preston Group × ‘Edith Cecilia’

R: E. Robinson, N: E. Robinson, I: E. Robinson (1970)

Fls straw-sand, with a lilac line on inside and outside of each tepal. Stems 1-1.2 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 16 (1978).)**‘Prairie Sky’ I(c/-)**

Parentage: ‘Palomino’ × unknown

R: E. Robinson (1967), N: E. Robinson (1979), I: E.

Robinson (1979), REG: E. Robinson (1980)

Fls light rose-red, fading to a lighter colour; outside paler; spots numerous, dark. Tepal-margins smooth, tips strongly recurved, pointed. Lvs scattered, dark green. Stems 1 m, mid green.

(Published in Gaybird Nursery lily list, 1979.)

**‘Prairie Sunset’ VI(-/a)**Parentage: contains *sargentiae*, *leucanthum* var. *centifolium* & *regale*

R: LeV. Freimann, N: LeV. Freimann, I: Northwest Gardens (1950)

Fls lemon-yellow overlaid with pink and rose-pink at tepal-edges; spots present.

(Included in *ILR* (1960).)

**'Prairie Sunset' I(b/-)**

Syn. of 'Prairie Gold'.

**'Prairie Treasure' I(b/d)**

Parentage: 'Edith Cecilia' × 'Radiant Glow'

R: E. Robinson (pre 1969), N: E. Robinson

Fls pale yellow with deeper throat, tepal-tips lavender; heavily spotted. Stems 1-1.2 m.

(Published in *ILR* (1969) Addenda.)

**'Prakseda' VI(b/a)**

Parentage unknown

R: R. Widerski, N: R. Widerski, I: R. Widerski (2004),

REG: R. Widerski (2004)

Inside creamy white, throat golden; outside pale green with darker midribs; spots absent; pollen pale brown; stigma green. Fls 140 mm wide; tepals 140 × 60 mm, slightly bent (outer more so), tough; pedicels 110 mm long, thick, green and brown. Lvs scattered, 100 × 10 mm, dull mid green. Stems 1.4 m, thick, brown-dotted, with long infl. Early July.

**'Pralinka' I(a-b/b & d)**

Parentage: white-flowered tetraploid × 'Longida'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004),

REG: B. Mičulka (2004)

Inside lemon-yellow, centre deep yellow, throat paler; outside with brownish midribs; spots numerous, dark brown-crimson, large, oval, on two-thirds of each tepal; nectaries white-granulated; pollen chocolate-brown; stigma brownish. Fls 155 mm wide; tepals thick, 90 × 47 mm, very strongly recurved, margins slightly wavy; pedicels 90 mm, very thick, freely dotted with dark brown. Lvs scattered, 130 × 25 mm, dull dark green. Stems 0.85 m, very thick, heavily brown-dotted. Early July.

**'Pranese' VII(a/b)**

Parentage: seedling 93-59 × seedling RH 97-09

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside yellowish white (155B), each tepal with a brilliant/light yellow (10A/B) flame, throat yellowish white (155B) with a narrow brilliant yellow (10A) edge; outside pale yellow-green (155A) flushed with pale yellow-green (4D), strong yellow-green (144C) at base, strong yellow-green (144B) at tepal-tips; spots absent; papillae yellowish white (155B) and brilliant yellow (10A); nectaries strong yellow-green (144A/B); pollen strong brown (172A); stigma pale yellow-green/dark purple (196C/79B). Fls 250 mm wide; tepals 145-155 × 47-66 mm, margins slightly fluffed, tips recurved. Lvs scattered, 190 × 47 mm. Stems 1.2 m, light green, with c.6 fls.

**'Praterstern' I(b-c/-)**

Parentage: 'Padua' × 'Connecticut King'

R: V. Strasser (1979), G: V. Strasser (1982), N: V. Strasser (1986), I: V. Strasser (1986), REG: V. Strasser (1990)

Inside vivid orange-yellow (23A), throat yellow-green;

outside red-brown; strongly spotted purple on half of each tepal; pollen orange. Fls 135 mm wide; tepals 77 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 17 mm, mid green. Stems 1.65 m, dark brown, with c.37 fls and some bulbils. Mid July.

**'Prato' I(a/b)**

Parentage: seedling OR 836 × seedling OR 84-7

R: Vletter & Den Haan, G: Vletter & Den Haan (1986),

N: Vletter & Den Haan (1989), I: Vletter & Den Haan,

REG: Vletter & Den Haan (1990)

Inside vivid reddish orange/vivid yellowish orange (30B/C); outside vivid reddish orange/strong orange (30B/D), midribs tinged with light yellow (11B) and suffused with light olive-brown (199B) at base; spots absent; pollen light red-brown. Fls 165 mm wide; tepals 80 × 45 mm, margins smooth, tips recurved. Lvs scattered, 175 × 15 mm, mid green. Stems 1.3 m, green with dark markings, and with c.6-10 fls. May (under glass).

(Originally and incorrectly classified in *ILR Ninth Supplement* as VII(b).)

**'Prawn Tiger' I(c/-)**

Parentage: 'Red Tiger' × unknown

R: D.M. Stone & F.H. Payne (1970), N: D.M. Stone &

F.H. Payne (1974), I: D.M. Stone & F.H. Payne (1975),

REG: Piedmont Gardens (1980)

Inside strong to moderate yellowish pink (33C/D); outside slightly paler and mottled; spots few, black; nectaries strong to moderate yellowish pink (33C/D); pollen brown. Fls 150 mm wide; tepals slightly recurved. Lvs scattered, 175-200 × 35 mm, mid green. Stems 1.5 m, mid green, with c.15 fls. Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 45 (1978).)

**'Prazdnichnaia' I(a/-)**

Parentage: 'Nochka' × ('Prince Charming' (Div. I) × unknown)

R: B.P. Guzhavin, N: B.P. Guzhavin (1982)

Fls deep lilac with a creamy white throat. Stems 0.8 m.

(Included in *ILR Second Supplement* (1984) as

'Prazdnicznaja' which is an unaccepted spelling.)

**'Prazdnichnaia' I(-/-)**

Parentage: ('Stroinaia' × *davidii* var. *willmottiae*) ×

('Enchantment' × 'Byam's Ruby')

R: M.F. Kireeva (1974)

Fls flame-red; filaments pale orange; anthers brown with orange pollen. Fls 100-110 mm wide. Stems 0.8-0.9 m, with 9-14 fls.

(Unaccepted spelling: 'Prazdnicznaja'. Published in M.F. Kireeva, *Lilii*, 61 (1984).)

**'Prazdnicznaja' I(-/-)**

Unaccepted spelling of 'Prazdnichnaia' (of Kireeva).

**'Prazdnicznaja' I(a/-)**

Unaccepted spelling of 'Prazdnichnaia' (of Guzhavin).

**'Precise' I(a/-)**

Parentage: 'Peachblush' × 'Gypsy'  
 R: E.A. McRae (1976), G: Oregon Bulb Farms, Inc. (1980), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)

Pink and cream bicolor, tepal-tips soft wine-pink, throat cream/gold; outside soft wine-pink; almost unmarked except for a few, tiny spots in extreme centre of fl.; nectaries soft cream; pollen orange/gold. Tepals 80 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 10 mm, mid green. Stems 0.9 m, dark-mottled, with 8-20 fls. Mid June.  
 (Published in *Oregon Bulb Farms Cat.*, 1986/87.)

**'Predosa' I(a/c)**

Parentage: seedling G 93-8 × seedling AJ 95-11  
 R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid orange-yellow (23A), tepal-margins narrow, strong orange (25B), throat pale orange-yellow (24D); outside light orange-yellow (23C), tepal-margins and tips brilliant orange-yellow (23B), midribs strong yellow-green (141D) with deep yellowish green (141B) top; spots absent; papillae strong orange (25B); nectaries light orange-yellow (23C); pollen dark reddish orange (173A); stigma deep red (60A). Fls 180 mm wide; tepals 100 × 57 mm, margins smooth, tips slightly recurved. Lvs 130 × 16 mm. Stems 1.15 m, green with darker markings, with c.6 fls.

**'Preference' I(a/b-c)**

Parentage: 'Sinai' × yellow-flowered seedling  
 R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside vivid yellow (9B), throat strong yellow-green (143C); outside light greenish yellow (7D) with tepal-edges brilliant yellow (7A), midribs brilliant yellow-green (150A/B); spots few, small, dark red (187A) around the throat; nectaries spotted with moderate purplish red (58A); pollen moderate reddish orange (171A). Fls 170 mm wide; tepals 80 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 13 mm, mid green. Stems 0.8 m, green, with 4-5 fls. Apr. (under glass).

**'Prelude' III(-/-)**

Parentage: 'June Fragrance' × *bulbiferum* var. *croceum*  
 R: C. Robinson, N: C. Robinson (1979)  
 Inside vivid yellowish orange (30C), tepal-tips slightly more reddish; outside vivid yellowish orange (30C); spots present; nectaries creamy white; pollen reddish brown. Lvs 100 mm long, 5-veined, mid green, wavy and curved, many V-shaped.

**'Prelude' I(a/-)**

Syn. of 'Prudence'.

**'Preludium' I(-/-)**

Parentage: 'Enchantment' × 'Fire King' (Div. I)  
 N: F. Rijnveld & Sons (c. 1950)  
 AMH 1961

Fls vivid orange (28A); spots brown, on basal half of each tepal. Pedicels purple-brown. Stems 0.6 m, with fls in a pyramidal infl. June.

**'Premiantka' I(a-b/b)**

Parentage: (('Rusalka' (of Mičulka) × unknown) × ('Dawn Star' × 'Parfait')) × 'Genev'  
 R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside pale pink, tepal-tips white; outside pink, midribs deep pink and brownish; spots medium sized, dark brown-pink, on half of each tepal; nectaries cream-granulated; filaments pinkish; pollen apricot-brown; style brownish and greenish; stigma brownish. Fls 130 mm wide; tepals 80 × 37 mm, firm and thick, tips slightly recurved; pedicels 65 mm, lightly brown-dotted. Lvs scattered, 135 × 24 mm, dull dark green, slightly drooping. Stems 1.15 m, dark green. Late June.

**'Premier' I(b-c/-)**

Parentage: 'Connecticut King' × 'Challenger'  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1984), REG: B. Mičulka (1984)

Inside red-orange; outside paler with brownish midribs at the base; spots more-or-less numerous, large, dark violet on half of each tepal; nectaries pale orange-frosted; pollen brown. Fls 120 mm wide; tepals 80 × 40 mm, slightly recurved. Lvs 80 × 14 mm, dark glossy green. Stems 1.1 m, slightly dotted red-brown. Early July.

**'President Truman' Div. ?**

Parentage unknown  
 R: A.J. van der Zwet & Sons, N: A.J. van der Zwet & Sons, I: A.J. van der Zwet & Sons (1951)  
 Fls orange-red with dark spots.

**'Prestige' VII(b/b-c)**

Syn. of 'Rascal Prestige'.

**'Presto' VIII(a/-)**

Parentage: unnamed seedling × unnamed seedling  
 R: Peacock B.V. & Imanse Lelieveredeling B.V. (1993), G: Peacock B.V., N: Peacock B.V. & Imanse Lelieveredeling B.V. (1996), I: Peacock B.V. & Imanse Lelieveredeling B.V. (1995), REG: Peacock B.V. (1997)  
 Inside moderate red (185B) on a lighter ground, ageing to moderate purplish red/deep pink (185C/D); outside deep pink (185D), tepals edged moderate red (185B) with yellowish white (155B) at the base; spots moderate brown (165A) in the throat; papillae absent; nectaries strong yellow-green (143B), with a pale yellow-green (155A) rim; pollen moderate reddish brown (175A); stigma strong orange-yellow (22A). Fls 160 mm wide; tepals 90 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 1.1 m, green with darker markings, and with c.12 fls.  
 (A *longiflorum*/Asiatic *LA* hybrid.)

**Preston Group I(a-c/-)**

Parentage: *dauidii* var. *willmottiae* × (*dauricum* × *L.* × *maculatum*)

R: I. Preston, N: I. Preston

Fls various oranges and reds.

(Includes the Stenographer and Fighter Groups.)

**'Pretender' I(a/-)**

Parentage: ('Connecticut King' × 'Pirate') × 'Kismet'  
R: Gebr. Mak B.V. (1983), G: Gebr. Mak B.V. (1985),  
N: Gebr. Mak B.V. (1988), I: Gebr. Mak B.V. (1988),  
REG: Gebr. Mak B.V. (1989)

Inside vivid orange (28B); outside strong orange (25A), flushed with brilliant orange-yellow (23B); spots dark red (187A) on the basal half of each tepal; pollen strong orange (169C). Fls 185 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 10 mm, mid green. Stems 0.6-0.9 m, green with darker markings, and with c.10 fls. July.

**'Pretoria' VII(a-b/c)**

Parentage: seedling 99 × unnamed seedling  
R: Vletter & Den Haan (1987), G: Vletter & Den Haan,  
N: Vletter & Den Haan (1993), I: Vletter & Den Haan (1996),  
REG: Vletter & Den Haan (1997)

Inside moderate purplish pink (62B), tepal margins narrow, whitish; outside light purplish pink (65B); spots red, on basal part of tepals; papillae pink; nectaries green; pollen orange-brown; stigma dark purple. Tepals hardly ruffled, tips strongly recurved. Stems green, with c.8 fls.

**'Pretty Baby' I(b/-)**

Parentage unknown

R: S. Kaul (1984), G: S. Kaul (1986), N: S. Kaul (1988),  
I: S. Kaul (1990), REG: S.R. & R. Kaul (1990)

Very light pink underlaid with greenish yellow, throat pale green; outside light yellowish green; spots absent; nectaries pale green; pollen rust-brown. Tepals 70 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 110 × 10 mm, very pale green. Stems 0.9 m, light green with 15-20 fls. Midseason.

**'Pretty Girl' I(a/b-c)**

Parentage: unnamed seedling × unnamed seedling  
R: R.H. Bazett (1990), G: R.H. Bazett (1992), N: R.H. Bazett (2000), I: The Lily Nook, REG: R.H. Bazett (2002)

Inside strong purplish pink (63C), basal part of each tepal pale yellow (11C/D), throat pink; outside strong purplish red (63B), midribs pale green; spots numerous, small, on basal part of each tepal; nectaries pink to green; pollen moderate reddish brown (166B); stigma dark purple-brown. Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 21 mm. Stems 1.2 m, mid green, with c.8 fls. Late June to early July. Tetraploid.

(Nomenclatural standard: colour reproduction provided by registrant (WSY 0035139).)

**'Pretty Lady' VII(-/b)**

Parentage: unnamed seedling × 'Joy'

R: Gebr. N. & B. Laan & Zn (1990), G: Gebr. N. & B. Laan & Zn (1992), N: Gebr. N. & B. Laan & Zn (1995), I: Gebr. N. & B. Laan & Zn (1996), REG: Gebr. N. & B. Laan & Zn (1996)

Inside strong purplish red (60D), midvein deep red (60A), tepal-tips a little paler than 60D, throat yellowish white (155D); outside strong purplish red (59D), inner tepals paler, with a little yellowish white (155D) at base, midribs light yellow-green (144D) tinged with strong yellow-green (144A) at base and top; spots dark red (187B) on the basal part of each tepal; papillae present; nectaries strong yellow-green (144B) with light greenish yellow (8B) alongside; pollen dark reddish orange (175B); stigma dark red (187B). Fls 200 mm wide; tepals 115 × 35-50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 30 mm, mid green. Stems 1 m, pale green with a few darker markings, and with c.4 fls. June.

**'Preview' I(a/b)**

Parentage: ('Keystone' × 'Juliana') × (*dauricum* (as "*var. alpinum*") × unknown)

R: L.D. Marshall (1975), G: J.F. McRae (1978), N: J.F. McRae & Columbia-Platte Lilies (1982), I: Columbia-Platte Lilies (1982), REG: Columbia-Platte Lilies (1984)  
Inside strong orange (25A/B), tepal-tips and throat vivid reddish orange (34A/B); outside strong orange (25B) fading to creamy tones; spots copious, small, magenta, on the centre third of tepals; nectaries vivid reddish orange (34A); pollen moderate reddish orange (171A). Tepals 70-100 × 20-30 mm, margins slightly ruffled, tips slightly recurved, base clawed. Lvs scattered, 120-180 × 15-20 mm, dark green. Stems 0.6-0.9 m, green, with 3-6 fls. May.

(Published in *Rex Lilies Cat.*, 1982.)

**'Pribina' I(a/b)**

Parentage: 'Connecticut King' × 'Tabasco'  
R: B. Mičulka (1983), N: B. Mičulka, REG: B. Mičulka (1987)

Inside orange-red with paler rays, throat darker; outside veined red; spots small, sparse, dark violet on a fifth of each tepal; pollen pale brown. Fls 160 mm wide; tepals 80 × 35 mm, channelled at tips. Lvs 100 × 11 mm, glossy dark green. Stems 1.4 m, with dark spots at the base. Late June.

**var. *pricei* IX(b/a)**

See *formosanum* var. *pricei*.

**Pride Group VI(-/a)**

Parentage: 'Pride of Charlotte' × ? *L.* × *imperiale*  
Shelburne Group

R: A. Graham, N: F.M. Abbey, I: Gardenside Nurseries (1949), REG: (pre 1960)

Fls basically white, but variable, scented. Early Aug. (Published in *Gardenside Gossip* 10(1): 6 (Jan. 1945). Included in *ILR* (1960) as Pride Seedlings grex.)

**'Pride of Charlotte' VI(b-c/a)**

Parentage: raised from seed collected from plants growing among some *regale*

R: W.N. Craig & F.M. Abbey (c. 1934), N: W.N. Craig & F.M. Abbey  
Fls white with yellow throat; outside shaded with chocolate-brown. Stems 1.5-1.9 m, with bulbils. July to Aug.  
(Published in *Horticulture* 1934: 274, with illustration.)

**'Pride of Gold'** VI(-/a)

Parentage: selection from Golden Clarion Group  
S: J. de Graaff (pre 1962), N: J. de Graaff  
Fls creamy gold. Lvs *regale* type.

**Pride Seedlings** VI(-/a)

See Pride Group.

**'Pride Star'** VIII(a/b)

Parentage: orange-flowered seedling × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1997), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2001)  
Inside light orange-yellow (24C), midveins strong orange (24A), throat light orange-yellow (22C); outside pale orange-yellow (24D), becoming light orange-yellow (24C) towards tepal-edges, midribs suffused with strong yellow-green (144C); spots dark red (187A/B) on up to half of each tepal; papillae few, in the throat; nectaries light orange (26C); pollen moderate reddish brown (175A); stigma strong yellowish pink (34D) with a little vivid reddish orange (34A). Buds hairy. Fls 190-200 mm wide; tepals 125 × 45-65 mm, margins ruffled, tips recurved. Lvs scattered, 225 × 25 mm. Stems 1.05 m, green, with 5-6 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Prima'** I(a/b)

Parentage: 'Tabasco' × *L. × hollandicum*  
R: K. Mynett (1984), N: K. Mynett  
Fls orange peach-coloured with bronze spots. Fls 120 mm wide; tepals 74 × 40 mm, tips slightly recurved. Lvs dark green, slightly glossy. Stems 0.45 m, dark green flushed with violet, with c.9 fls. Early June.

**'Primadonna'** II(-/-)

See *L. × dalhansonii* 'Primadonna'.

**'Primánka'** I(a-b/b)

Parentage: ('Rosita' × unknown) × ('Plavovláška' × 'Dekora')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside salmon-pink, centre of each tepal tinted with deeper apricot, tips rosy; outside with brownish midribs; spots absent; nectaries white-granulated; pollen red-brown; stigma red-brown. Fls 130 mm wide; tepals 80 × 37 mm, thick, margin finely wavy, tips scarcely recurved; pedicels 70 mm long, densely dotted. Lvs scattered, 110 × 11 mm, dark green, dull. Stems 0.85 m, brown-dotted, with a short infl. Early June.

**'Primavera'** I(a/-)

Parentage: Yellow Blaze Group × Sundrop Group  
R: Bischoff Tulleken Leliecultuur B.V. (1974), G: Bischoff Tulleken Leliecultuur B.V. (1977), N: Bischoff Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken Leliecultuur B.V. (1983), REG: Bischoff Tulleken Leliecultuur B.V. (1988)  
Inside brilliant yellow (21C), midveins slight orange, tepal-tips tinged with orange, throat strong orange (25A); outside light orange-yellow (22B); fine, brown spots in the throat and in the centre of each tepal; pollen dark reddish brown. Fls 160 mm wide; tepals 80 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 10 mm, mid green. Stems 0.6 m, green with darker spots, and with c.7 fls. June.  
(No longer in production.)

**'Primavera'** VII(-/d)

Parentage: 'White Delight' × 'Star Gazer'  
R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1992)  
Inside yellowish white (155D), throat strong yellow-green (144C); outside yellowish white (155D) suffused with strong yellow-green (144B) on the apical part of outer tepals, midribs pale yellow-green (4D); papillae ivory-white, in the throat; nectaries dark red (187B); pollen strong orange (169C). Fls 210 mm wide; tepals 100 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, mid green.  
Syn.: 'Primeur'.  
(Registered and included in *ILR Eleventh Supplement* as 'Primeur'. However, in 1992 Dutch PBR (LEL 854) were granted to this cv. under the epithet 'Primavera' and this latter epithet must be accepted (ICNCP, 2004: Art. 24.4). This causes confusion with the earlier 'Primavera' registered in 1988 by the same registrant. No longer in cultivation.)

**'Primeró'** VII(-/c)

Parentage: 'Montana' × unnamed seedling  
R: Lybelmex Hillegom B.V. (1984), G: Lybelmex Hillegom B.V. (1987), N: Lybelmex Hillegom B.V. (1991), I: Lybelmex Hillegom B.V. (1991), REG: Lybelmex Hillegom B.V. (1992)  
Inside greenish white (155C), midveins pale yellow-green (155A), throat strong to light yellow-green (145A/B); outside yellowish white (155D) with phlox pink spots at base, outer tepals with pale yellow-green (4D) midribs which become light greenish yellow (5C) at the top; spots pale yellow-green (155A) on all but tepal-tips; nectaries dark purple (79B); pollen moderate reddish orange (171A). Fls 265 mm wide; tepals 130 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 35 mm, mid green. Stems 1.05 m, pale green, with c.4 fls.

**'Prime Time'** I(c/-)

Parentage unknown, but involving *pumilum*  
R: W.D. Evans, G: W.D. Evans, N: W.D. Evans (1982), I: Borbeleta Gardens (1983), REG: J. Wadekamper (1983)

Inside delicate light yellowish pink (36A), tepal-tips moderate yellowish pink (39C), throat greenish white; outside light yellowish pink (36A); purple spots and lines on basal half of tepals; nectaries white; pollen bright rust. Tepals 70 × 25 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 4 mm, mid green. Stems 0.9 m, tan, with 20-25 fls. Late.  
(Published in *Borbeleta Gardens Cat.*, 1983.)

**‘Primeur’ VII(-/d)**  
Syn. of ‘Primavera’ (Div. VII).

**Primrose Group VI(-/a)**  
Parentage: *sargentiae* × *leucanthum*  
R: L.B. Tuffery, N: L.B. Tuffery  
Fls primrose-yellow.  
(Published in *Dunhampton Lily Fields Cat.*, 1951.  
Included in *ILR* (1960) as Primrose grex.)

**‘Primrose Beacon’ VI(b/a)**  
Parentage unknown  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1978),  
REG: C. Helsley (2003)  
Inside and outside brilliant yellow (12B); spots absent; nectaries light olive-green; pollen golden brown; stigma green. Fls 150 mm wide, strongly scented; tepals 140 mm long, inner 60 mm wide, outer 30 mm wide, margins slightly ruffled, tips strongly recurved. Lvs scattered, 140 × 15 mm. Stems 1.5 m, grey-green, faintly red-dotted, with c.15 fls. Late June.  
Syn.: ‘Primrose Bells’.  
(Formerly called ‘Primrose Bells’. Included (as unregistered) in *ILR* (1982).)

**‘Primrosebelle’ VI(-/a)**  
Parentage: selection from Golden Trumpet Group  
S: D. Foxwell (c. 1960), N: D. Foxwell  
AM 1963  
Fls brilliant greenish yellow (6C).

**‘Primrose Bells’ VI(b/a)**  
Syn. of ‘Primrose Beacon’.

**‘Primroseflare’ VI(-/a)**  
Parentage: selection from Golden Clarion Group  
S: D. Foxwell (c. 1962), N: D. Foxwell  
Inside light greenish yellow (4C); outside pea-green and cream.

**Primrose Glory Group I(-/-)**  
Parentage: selections from Futura Group  
S: Blackthorne Gardens, N: Blackthorne Gardens, I: Blackthorne Gardens (1982)  
Fls primrose-yellow.

**‘Primrose Green’ I(a/-)**  
Parentage: ‘Connecticut Yankee’ × green-tinted selection from Yellow Blaze Group  
R: D.M. Stone & F.H. Payne (1967), N: D.M. Stone & F.H. Payne (1970), I: D.M. Stone & F.H. Payne (1970),  
REG: (between 1970 and 1981)

Fls primrose-yellow (HCC 601), throat pod-green (HCC 061/1); outside HCC 601 and HCC 061/1; heavily spotted brown; nectaries pod-green (HCC 061/1). Fls up to 150 mm wide; tepal-margins slightly ruffled. Lvs *lancifolium* type. Stems 1.5 m, with bulbils.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 8 (1978).)

**‘Primrose Lady’ VI(c/d)**  
Parentage: complex hybrid × *L. × aurelianense*  
R: C.F. Patterson (c. 1948), I: Dept. of Horticulture, University of Saskatchewan (1958)  
PC 1959  
Fls primrose-yellow, 100 mm wide. Stems 1.2-1.5 m, with up to 30 fls. July.  
(The classification of this cv. is problematic. In *ILR Fourth Supplement* it was suggested that ‘For most practical purposes, this can be treated as an Asiatic style lily and classified as I(c)’, but Ing. V. Jošt (*in litt.*) thinks that it would be better in Div. VIII because it shows little signs of Div. VI.)

**‘Primrose Star’ Div. ?**  
Parentage unknown  
R: F.M. Abbey (c. 1953), G: F.M. Abbey, N: F.M. Abbey, I: F.M. Abbey, REG: (1985)  
Fls soft yellow; spots absent. Fls with narrow tepals, like a huge star. Lvs scattered, pale green. Stems up to 1.5 m, light green, with fls in large heads. Aug  
(Published in *Gardenside Gossip* 29: 3 (1964).)

***primulinum* var. *burmanicum* (W.W. Smith) Stearn IX(c/a)**  
FCC 1888  
Fls greenish yellow, throat purple-blotched. Tepals recurved in apical third. Stems 1.2-2.4 m. W China, N Myanmar, Thailand.

***primulinum* var. *ochraceum* (Franch.) Stearn IX(c/a)**  
Fls very pale to very deep yellow, with throat vinous purple. Tepals recurved in apical two-thirds. Stems to 1.2 m, usually brown. June to July. W China.  
Syn.: *majoense* Lévl.

***primulinum* var. *primulinum* Baker IX(c/a)**  
Fls yellow or greenish yellow, unmarked; nectaries green; pollen orange-brown. Fls usually fragrant; tepals 60-150 × 13-45 mm, recurved for about half their length. Lvs scattered, up to 150 × 40 mm, Stems up to 2.4 m, brown, or green with brown spots, with 2-8(-18) fls. N Myanmar.

**‘Princ Bajaja’ I(b-c/c)**  
Parentage: ‘Talisman’ × *L. × scottiae* ‘Roter Prinz’  
R: V. Baloun (1981), N: V. Baloun, REG: V. Baloun (1986)  
Fls orange-red, throat paler, tepal-centres orange; outside pale orange-red, midribs redder; spots numerous, medium sized, dark purple on four-fifths of each tepal; nectaries white-frosted; pollen brown. Fls 95 mm wide;

tepals 70 × 21 mm, slightly and irregularly recurved; pedicels lightly dotted with dark violet. Lvs 70 × 6 mm, dull pale green. Stems 1.1 m, spotted dark violet, with c.30 fls. Late June.

**'Prince' I(a/-)**

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1994)

Inside yellowish white (155B) in basal part, shading to a patchy suffusion of strong purplish red (63A) on a yellowish white (155B) ground towards each tepal-tip, tinged with strong red (53C) at tip, basal parts edged strong purplish red (60D); outside deep purplish pink (64D), midribs tinged with dark greenish yellow (152D), each tepal edged moderate purplish red (58A) and tipped strong yellow-green (143A); pollen brownish orange/deep orange-yellow (164A/163A); stigma moderate yellowish pink (173D). Fls 180 mm wide; tepals 95 × 24 mm. Lvs scattered, 70 × 23 mm. Stems 1.1 m, green with darker markings, and with c.6 fls.

**'Prince Charming' I(a/b-c)**

Parentage: (('Mega' × 'Lemon Queen' (Div. I)) × 'Edith Cecilia') F<sub>2</sub>

R: J. de Graaff (c. 1964), N: J. de Graaff

Fls lilac red, centre white; spots dark, mainly on white part of each tepal; pollen deep red. Fls 140 mm wide; tepals recurved in apical half to a third. Stems 1.2 m. June to July.

(Published in *ILR* (1969).)

**'Prince Charming' VI(-/c)**

Parentage: Aurelian Group

R: G.E. Holland, N: G.E. Holland

Fls tangerine. Stems 1.2-1.5 m. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 47 (1978).)

**'Prince Favourite' I(a/b-c)**

Parentage: ('Mont Blanc' × unknown) × 'Blizzard'

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2002)

Fls yellowish white (155D); spots dark red (59A) at base of each tepal; papillae present; nectaries yellowish white (155D); pollen moderate orange (172D); stigma moderate purplish red (59C). Fls 145 mm wide; tepals 90 × 40 mm, margins smooth, tips recurved. Lvs scattered, 95 × 21 mm. Stems 0.53 m, green, with c.7 fls. June

**'Prince of Nitra' VI(b/b)**

Parentage: *L. × kewense* 'White Henryi' × ('Damson' × 'Mabel Violet')

R: A. Mego (1993), N: A. Mego (2005), I: A. Mego (2005), REG: A. Mego (2005)

Inside white suffused with pink, tepal-centres and throat golden yellow; outside deep pinkish purple, midribs

green; spots absent; nectaries dark green; pollen ochre-yellow; stigma grey-green. Fls 150 mm wide, slightly scented; tepals 130 × 45 mm, firm and waxy, strongly recurved; pedicels 120 mm, thick, brown-dotted. Lvs scattered, 170 × 20 mm, dull mid green. Stems 1.5 m, thick, dark green. Early July.

**'Prince of Orange' I(a/b)**

See *L. × maculatum* 'Prince of Orange'.

**'Prince of Wales' I(a/b)**

see *L. × hollandicum* 'Prince of Wales'.

**'Prince Promise' VIII(b/b)**

Parentage: *longiflorum* × 'Pink Promise'

R: Takii & Co. Ltd (c. 1993), G: Takii & Co. Ltd (c. 1995), N: De Jong Lelies Holland B.V. (2000), REG: De Jong Lelies Holland B.V. (2001)

Inside with a third of each tepal suffused with strong purplish red (59D) on a ground whiter than 155D, the tip nearly white, throat whiter than 155D; outside whiter than 155D, suffused with strong purplish red (59D) along tepal-edges, midribs pale yellow-green (155A) with strong yellow-green (144C) at base and top which fades into the midvein; spots and papillae absent; nectaries strong yellow-green (144B) fading into the midvein; pollen moderate orange (167A); stigma strong to light yellow-green (145A/B). Fls 175 mm wide; tepals 175-180 × 55-70 mm, margins hardly ruffled, tips recurved. Lvs scattered, 145-200 × 35-40 mm. Stems 1.4 m, light green, with c.4 fls. June to July.

(A *longiflorum*/Oriental (LO) hybrid.)

**'Princept' VIII(a-b/b)**

Syn. of 'Coral Fashion'.

**'Princese Gundega' I(a/b)**

Parentage: 'Rozovaia Prima' × unknown

R: D.-V. Škimele (1989), G: D.-V. Škimele (1991), N: D.-V. Škimele (1994), REG: D.-V. Škimele (2001)

Inside soft pink with a pale yellow ring and a carmine centre and throat; outside pink, midribs green; spots small, vivid brown on a third of each tepal; nectaries pinkish white; pollen orange; stigma carmine. Fls 150 mm wide; tepals 85 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 10 mm. Stems 0.9 m, dark green, with c.6 fls. Mid July.

(Misspelling: 'Princess Gundega'. Published in *Lilium Balticum Lily Register*, 1994.)

**'Princess' I(a/b)**

See *L. × maculatum* 'Princess'.

**'Princess' VII(-/c)**

Syn. of *L. × parkmanii* 'Lavender Princess'.

**'Princess Anna' VII(-/c)**

Parentage unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1962), N: R.L. Strahm (1970), I: H.J. & R.L. Strahm (1970), REG: Strahm's Lilies, Inc. (1981)

Inside white, throat pale chartreuse; outside the midribs of outer tepals with moderate purplish red (184C) stripes, yellow towards top; spots absent; papillae white, long, whiskery, in the throat; pollen brownish orange (166C). Fls scarcely fragrant; tepals 100 × 50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 40 mm, pale green. Stems 1.2-1.5 m, green. July. (Misspelling: 'Princess Anne'. Published in *Rex Bulb Farms Cat.*, 1970.)

**'Princess Anne'** VII(-/c)  
Misspelling of 'Princess Anna'.

**'Princess Christine'** VI(-/a)  
Parentage: selection from Penetang Group  
S: E.O. Clement (c. 1946), N: E.O. Clement  
(Published in *Inglewood Lily Gardens Cat.*, 1946. No further details.)

**'Princess Gracia'** VII(-/-)  
Parentage unknown  
R: De Jong Lelies (1970), G: De Jong Lelies, N: De Jong Lelies, REG: De Jong Lelies (1989)  
Fls greenish white (155C), midveins pale greenish yellow (2D); outside marked with moderate to light purplish pink (62B/C) at junction with pedicel; papillae white on entire surface of each tepal; pollen strong orange (169D). Fls 280 mm wide; tepals 140 × 50 mm, margins ruffled, tips strongly recurved. Lvs scattered, 150 × 40 mm, mid green. Stems 0.75 m, green, with c.8 fls. Aug.

**'Princess Gundega'** I(a/b)  
Misspelling of 'Princese Gundega'.

**'Princess Helen'** VI(-/a)  
Parentage: selection from Penetang Group  
S: E.O. Clement (c. 1946), N: E.O. Clement  
(Published in *Inglewood Lily Gardens Cat.*, 1946. No further details.)

**'Princess Julia'** VI(-/a)  
Parentage: selection from Penetang Group  
S: E.O. Clement (c. 1946), N: E.O. Clement  
(Published in *Inglewood Lily Gardens Cat.*, 1946. No further details.)

**'Princess Juliana'** Div. ?  
Given as a parent of 'New Look'. No further details. 'New Look' was raised by A.J. van der Zwet & Sons (The Netherlands) and it is probable that 'Princess Juliana' is an error for 'Prinses Juliana', raised by the same company.

**'Princess Kerrie'** I(a/-)  
Parentage: 'Pirate' × 'Connecticut King'  
R: F. Ewald (1973), G: R.M. Withers (1976), N: R.M. Withers (1982), I: R.M. Withers (1982), REG: R.M. Withers (1983)  
Inside vivid yellowish orange (30C), tepal-tips vivid reddish orange (30A), throat vivid reddish orange (30B); outside vivid reddish orange (30A); spots absent; nectaries strong orange (30D); pollen dark reddish orange (175B).

Fls 130 mm wide; tepals 75 × 28 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 13 mm, mid green. Stems 1.2 m, dark green shading to deep red (60A), with c.18 fls. Dec. (Australia).

**'Princess Nita-Nee'** I(b/-)  
Parentage: 'Princess Royal' × (Citronella Group × ('Edith Cecilia' × 'Nubian'))  
R: L. Lutz (1964), N: L. Lutz (1968), REG: (1983)  
Inside dark raspberry-red; outside plum-coloured. Tepal-margins smooth, tips strongly recurved. Lvs scattered, 65 × 7 mm, mid green. Stems 1-1.2 m, mid green, with up to 20 fls. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978) as 'Princess Nita Nee'.)

**'Princess Royal'** I(c/d)  
Parentage: 'Edith Cecilia' × 'Rosabelle'  
R: A.J. Porter, N: A.J. Porter  
Fls lilac-crimson. Stems 1.2 m, with up to 30 fls, and with bulbils. July.  
(Published in *Honeywood Cat.*, 1963.)

**'Princess Tammy'** VII(-/c)  
Parentage unknown  
R: L. Woodriff (1958), G: H.J. Strahm (1963), N: R.L. Strahm (1972), I: H.J. & R.L. Strahm (1974), REG: Strahm's Lilies, Inc. (1983)  
Inside strong red (53C), tepal-tips pale pink, throat strong greenish yellow (151B); outside strong red (53C); spots deep red (53A) halfway along tepals; nectaries brilliant yellow-green (154B); pollen strong reddish orange (31A). Fls 175 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 40 mm, mid green. Stems 1.2 m, dark green, with 8-15 fls. Mid July.  
(Published in *Rex Bulb Farms Cat.*, 1981.)

**'Principál'** I(a-b/b-c)  
Parentage: ((Hallmark Group × unknown) × 'Buccaneer') × 'Dagmar'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2001), REG: B. Mičulka (2001)  
Inside pale peach, tepal-centres with a golden tinge, tips and edges paler; outside with greyed greenish midribs; spots numerous, large, dark purple-brown on two-thirds of each tepal; pollen chocolate-brown; stigma red-brown. Fls 140 mm wide; tepals 75 × 38 mm, hardly recurved; pedicels 70 mm long, thick, green. Lvs scattered, 95 × 18 mm, dull mid green. Stems 1.05 m, very thick, green with a silver sheen and slightly brown-dotted. Late June.

**'Prins Constantijn'** I(b/-)  
Parentage: *leichtlinii* var. *maximowiczii* × 'Citronella'  
R: Gebr. N. & B. Laan & Zn (c. 1970), N: Gebr. N. & B. Laan & Zn  
Fls strong orange (25A) spotted ruby-red; anthers burnt orange.  
Syn.: 'Apricot'.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 16 (1978).)

**'Prinses Amalia' VIII(a/b)**

Parentage: ('Gran Paradiso' × 'Compass') × ('Sterling Star' × 'Connecticut King')

R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2005)

Inside strong orange (30D), tepal-margins vivid orange (28B), brilliant orange (25C) along basal half of midveins, throat vivid yellowish pink (28A) with light orange (28D) edges; outside with outer tepals light orange (28D), changing into strong orange (30D) towards margins, inner tepals slightly paler; spots strong purplish red (59D); papillae vivid orange (28B); nectaries strong yellow-green (143A); pollen strong reddish orange (169A); stigma strong orange (168A). Fls 190 mm wide; tepals 107 × 40-60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 135 × 25 mm. Stems 0.95-1.2 m, green with darker markings, and with 9-12 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Prinses Juliana' I(-/-)**

Parentage: *bulbiferum* var. *croceum* ? × 'Butterfly' (of van der Zwet)

R: A.J. van der Zwet & Sons (c. 1949), N: A.J. van der Zwet & Sons

AMH 1949, FCCCH 1951

Fls dark orange to cadmium-yellow, spotted brown.

**'Prinses Margriet' I(-/-)**

Parentage: *davidii* var. *willmottiae* × ? *bulbiferum* var. *croceum*

R: A.J. van der Zwet & Sons (c. 1950), N: A.J. van der Zwet & Sons

AMH 1950

Fls dark orange to cadmium-yellow, spotted.

**'Printal' VIII(a-b/b)**

Parentage: seedling 92.10.229-1 × seedling 91.88.01

R: World Breeding B.V. (1994), G: World Breeding B.V. (1996), N: World Breeding B.V. (2001), I: World Breeding B.V. (2001), REG: World Breeding B.V. (2002)

Inside pale yellow-green (4D) becoming paler with age, midveins green at base, throat pale yellow-green (4D); outside pale yellow-green (4D); spots and papillae absent; nectaries green; pollen orange-brown; stigma orange-yellow. Fls 180 mm wide; tepals 115 × 55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 135 × 40 mm. Stems 1.15 m, dark, with 5-7 fls. Midseason. (A *longiflorum*/Asiatic (LA) hybrid.)

**'Prinz Eugen' I(a/-)**

Parentage: 'Pirate' × 'Connecticut King'

R: F. Ewald (1974), N: F. Ewald (1978), I: G. & F. Ewald (1980), REG: G. & F. Ewald (1979)

Fls vivid reddish orange (30B) with maroon spots on centre of tepals. Tepal-margins ruffled, tips slightly recurved. Lvs scattered, 100 × 10 mm. Stems 0.8 m.

**'Prinz von Pankow' I(a/b)**

Parentage: 'Johanna' × mixed pollen of 'Vater Zille',

'Fanal' & 'Brushstroke'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2001)

Inside moderate purplish pink (54D), each tepal suffused with soft orange especially at edges towards the base and with a small white tip, throat deep red (60A) suffused with soft orange; outside moderate purplish pink (54D), midribs green; a few small spots and a suggestion of brushmark lines, both deep red (60A) on the basal third of each tepal; nectaries strong pink (49A), white-hoary; anthers on long pink filaments; pollen vivid orange (28A); style long, vivid reddish orange (34A); stigma yellowish white (155B). Fls 120 mm wide; tepals 75 × 26 mm, margins smooth, tips not recurved; pedicels long. Lvs scattered, 85 × 10 mm. Stems 1.1 m, dark green, with tufts of white hairs at nodes, and with c.22 fls. Mid to late June.

(Pankow is a district of Berlin. Nomenclatural standard: colour print provided by registrant (WSY 0028904).)

**'Priority' VII(a/b)**

Parentage: seedling 86-282 × seedling 89-48

R: Vletter & Den Haan Beheer B.V. (1993), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside yellowish white (155D); outside yellowish white (155D), with pale yellowish green (1D) stripe along midribs; spots and papillae present; nectaries light yellow-green (145B); pollen vivid orange (28A/B); stigma yellowish pink (36D). Fls 260 mm wide; tepals 140 × 65 mm, margins smooth, tips recurved. Lvs scattered, 155 × 50 mm. Stems 1.1 m, green, with c. 4 fls.

**'Prisilla' II(c/d)**

See *L. × dalhansonii* 'Prisilla'.

**Pristine Group I(a-b/-)**

Parentage: ('Stroinaia' × 'Scamp') × 'Connecticut Lemonglow'

R: J.F. McRae (1977), G: J.F. McRae (1979), N: Columbia-Platte Lilies (1982), I: Columbia-Platte Lilies (1982), REG: Columbia-Platte Lilies (1984)

Fls vivid yellow (9A) throughout (throat sometimes vivid yellow (14A); unspotted or lightly spotted in centre of fl. only; nectaries yellow or green; the moderate orange-yellow (167D) anthers do not open. Tepals 60-90 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 0.6-0.9 m, green, with 5-8 fls. June.

(Published in *Rex Lilies Cat.*, 1982; *Borbeleta Gardens Cat.*, 1982. Included in *ILR Third Supplement* as Pristine grex.)

**'Privet Leningradu' VI(b/a)**

Parentage unknown

Fls orange, 130-160 × 90 mm. Stems 0.9 m. July.

(Published in *Cvetovodstvo*, 1981(2): 21. Raised and named in the Baltic Republics.)

**'Probus' I(b/-)**

Parentage: 'West Riding' × 'Frederick Stern'

R: A.D. Harrison (1974), G: A.D. Harrison (1977), N: A.D. Harrison (1985), I: A.D. Harrison (1985), REG: A.D. Harrison (1985)

Inside vivid reddish orange (34A), throat strong reddish orange (31A); outside vivid reddish orange (33B); spots black, small, profuse; nectaries vivid reddish orange (34A); pollen strong red (46A). Fls 135 mm wide; tepals 75 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 12 mm, dark green. Stems 1.2 m, with c.10 fls. Mid July.

**'Prochora' I(b/b)**

Parentage unknown

N: J. Dudek, I: J. Dudek (2004), REG: J. Dudek (2004)

Inside pink, tepal-centre cream, throat pink; outside pink, midribs green; spots purple, oblong, large, moderately dense, on half of each tepal; stamens rudimentary, brownish, lacking pollen; stigma purple. Fls 130 mm wide; tepals 68 × 30 mm, slightly twisted, margins slightly ruffled, tips recurved. Lvs scattered, 130 × 14 mm, glossy dark green. Stems 1.5 m, thick, green-brown, hairy in upper part. Mid July.  
(Raised from seeds from a hybrid produced by R.A. Prochaska.)

**'Professor Henry Nehrling' I(a/-)**

See *L. × maculatum* 'Professor Henry Nehrling'.

**'Profile' I(a/c)**

Parentage unknown

R: Columbia-Platte Lilies (pre 1982), N: Columbia-Platte Lilies, REG: ICRA (1997)

Inside warm orange, overlaid with crimson; dark spots on basal third of tepals. Fls 150 mm wide; tepals recurved from about half way. Stems 1.2 m, dark. June.

**'Profit' I(a-b/b-c)**

Parentage: ('Chinook' × 'Wattle Bird') × brushmarked seedling

R: B. Mićulka, N: B. Mićulka, I: B. Mićulka (1996), REG: B. Mićulka (1996)

Inside pale beige-apricot, tepal-centre darker, throat paler; outside beige-white; large, numerous, dark brown-purple spots on half of each tepal and narrow, dark crimson brushmarks near midvein; papillae numerous; nectaries white-papillate; pollen dark red-brown; stigma brown-red. Fls 145 mm wide; tepals 85 × 38 mm, tips not recurved; pedicels copiously spotted. Lvs scattered, 90 × 9 mm, dark green. Stems 0.75 m, slightly brown-spotted. Late June.

**'Progenitor' I(c/d)**

Parentage: 'Pygmalion' × *lancifolium* var. *flaviflorum*

R: G.W. Darby (c. 1963), N: G.W. Darby

Fls reddish orange.

**Progetors Group II(-/-)**

Parentage: 'Pantrillis' × 'Filibuster'

R: J.C. Ericksen, G: J.C. Ericksen, N: J.C. Ericksen,

REG: J.C. Ericksen (2000)

Fls varying from white, yellow, buffy light orange to lilac; with various spot patterns (spots pink to light red); nectaries variable; pollen yellow to orange. Tepals varying in degree to which they are recurved. Stems 1.2-1.9 m, green, with 10 or more fls.

**'Progress' I(a/-)**

Parentage: 'Keystone' × 'Sunkissed'

R: E.A. McRae (1977), G: Oregon Bulb Farms, Inc. (1980), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)

Inside vivid reddish orange (30A/B) to strong reddish orange (32B), tepal-tips and throat strong reddish orange (32B); outside vivid yellowish orange to strong orange (30C/D) underlying soft green; usually unspotted, occasionally with a few, tiny magenta spots; nectaries soft orange; pollen strong orange (17A), anthers not opening fully. Tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 1.1 m, mottled brown, with 10-30 fls. Late June.

**'Progression' VI(-/a)**

Parentage: (*L. × sulphurgale* × *regale*) × *longiflorum*

R: J. Koeman (c. 1951), N: J. Koeman

AMH 1955

Inside somewhat yellowish green; outside white, midribs green.

**PROMESA VIII(a/b)**

Trade designation of 'Zanlapromes'

**'Prometheus' I(b/-)**

Parentage unknown

R: W. Windus (1970), N: W. Windus (1976), I: J.

Wadekamper (1977), REG: W. Windus (1976)

Fls dark red (59A); spots absent; pollen moderate red (47A). Lvs long, dark green. Stems 0.8-1 m, with up to 5 fls and many bulbils. July.

(Published in *Lilies and other Liliaceae*, 1976: 93.)

**'Prominence' Div. ?**

Given as a parent of 'Cerise' and 'Red Chair'. No further details.

**'Promise' I(a/-)**

Parentage: 'Joan Evans' × 'Connecticut King'

R: E.A. McRae (1968), N: Oregon Bulb Farms, Inc. (1978), I: Oregon Bulb Farms, Inc. (1978), REG: E.A. McRae (1981)

Inside tepal-tips brilliant greenish yellow (6B), throat with brilliant greenish yellow (6A) midveins; outside brilliant greenish yellow (6B/C) overlying pale green; spots absent; nectaries light green; pollen strong orange (168A). Tepals 70-90 × 25-40 mm, margins smooth, tips slightly recurved. Lvs 120-150 × 15 mm, mid green. Stems 0.8-0.9 m, mid green, with 9-11 fls. June to July. (Published in *George Park Seed Co. Cat.*, Spring 1980.)

**'Prom Night' I(a/-)**

Parentage: ('Hawaiian Punch' × pink-flowered *Tesca*

seedling) × pink-flowered Summers seedling  
R: J. Wadkamper, N: J. Wadkamper, I: Borbeleta Gardens (1994), REG: ICRA (1997)  
Inside pink with white 'accent' and purple spots. Stems 0.8 m. Midseason.  
(Published in *Borbeleta Gardens Cat.*, 1994.)

#### 'Pronto' I(a/-)

Parentage: 'Zephyr' × 'Montreux'  
R: W. Paauw & Zn B.V. (1987), G: W. Paauw & Zn B.V. (1988), N: W. Paauw & Zn B.V. (1989), I: W. Paauw & Zn B.V. (1989), REG: W. Paauw & Zn B.V. (1994)  
Inside light purplish pink (62C), stronger-coloured on the apical part of each tepal, throat with some ivory-white which suffuses into coloured parts apically; outside moderate to light purplish pink (62B/C), midribs with a suffusion of moderate yellow-green (146D) over 20 mm, with some moderate red (182A) apically and tipped strong yellow-green (144C); spots dark red (187A) on a third of each tepal; papillae light purplish pink, in the throat; pollen brownish orange (166C); stigma moderate brown (165A). Fls 170 mm wide; tepals 80 × 45 mm. Lvs scattered, 60 × 10 mm. Stems 0.75 m, pale green, with c.8 fs.

#### 'Propinquity' I(a/-)

Parentage: (*bulbiferum* var. *croceum* × unknown) × 'Connecticut Yankee'  
R: E. Hickling, N: J. Wadkamper (1974), I: J. Wadkamper (1977), REG: J. Wadkamper (1977)  
Fls red-orange throughout; spots on basal half of tepals; nectaries red-orange; pollen brown. Tepal-margins slightly ruffled. Stems 1-1.2 m, with up to 22 fs. June.  
(Published in *Lilies and other Liliaceae*, 1977: 80.)

#### 'Prosperity' I(b/-)

Parentage: *amabile* var. *luteum* × 'Valencia'  
R: J. de Graaff, N: J. de Graaff, I: Oregon Bulb Farms, Inc. (c. 1955)  
Fls lemon-yellow; spots dark on basal half of each tepal. Fls 100-120 mm wide; tepal-tips slightly recurved. Stems 0.8-1.2 m. July.  
(Published in *Oregon Bulb Farms Cat.*, 1955.)

#### 'Prospero' I(a/-)

Parentage: derived from 'Gwen Mills'  
R: J. Aldred (pre 1969), N: J. Aldred, REG: J. Aldred (1971)  
Fls vivid yellow (13A) overlaid with vivid orange-yellow (21A) in throat; more-or-less unspotted.  
(Published in *Lilies and other Liliaceae*, 1973: 113.)

#### 'Provence' VII(b/b)

Parentage: Magic Pink Group × 'Star Gazer'  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1986), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1997)  
Inside strong purplish red (60D), tepals darker at tips, yellowish white (155D) at base, midveins deep red (185A), throat yellowish white (155D); outside close to

light purplish pink (65B), darker towards the tepal-edges, yellowish white (155D) at base, midribs dark pink; spots purple; some papillae present; pollen brown; stigma green. Tepal-margins ruffled, tips slightly recurved. Stems 0.8 m, light green with darker markings.

#### 'Proveyors Group' II(-/-)

Parentage: yellow-flowered *martagon* × *hansonii* hybrids × mixed pollen of "west coast hybrids"  
R: J.C. Ericksen (1973), G: J.C. Ericksen (1980), N: J.C. Ericksen (1991), REG: J.C. Ericksen (1991)  
Fls mixtures of lilac pink/yellow/buff, tepal-tips reddish pink, throat white-yellow; outside greyish yellow; spots red on the basal half of each tepal; pollen light orange. Tepals 40 × 20 mm, margins smooth, tips not recurved. Lvs whorled, 100 mm or more long. Stems 1 m, light green, with 6-8 fs. Late June.

#### 'Provincial' I(b/-)

Parentage: seedling of Tango Group × seedling of Tango Group  
R: J. Vasarietis, G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)  
Inside light yellow (11B) overlaid with pink, tepal-tips light yellowish pink (27A), throat brilliant greenish yellow (2B); outside light yellowish pink (27A) with light yellow (11B) tepal-edges; tepals spattered with purple spots except at tips and with an indistinct, greenish blotch around the white nectaries; pollen orange. Fls 110 mm wide; tepals 70 × 33 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 10 mm, dark green. Stems 0.9 m, greenish brown, with c.10-14 fs. Early July.

#### 'Prudence' I(a/-)

Parentage: 'Joan Evans' × 'Connecticut King'  
R: E.A. McRae (1967), G: Oregon Bulb Farms, Inc. (1970), N: Oregon Bulb Farms, Inc. (1980), I: Oregon Bulb Farms, Inc. (1982), REG: Oregon Bulb Farms, Inc. (1983)  
Fls brilliant greenish yellow (6B) throughout, becoming more golden (vivid to brilliant yellow (9B/C)) with age; spots absent; nectaries green; pollen soft brown. Fls 140-180 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 120-150 × 15 mm, mid green. Stems 1.2 m, green, with 8-30 fs. Late June.  
Syn.: 'Prelude' (Div. I).  
(Originally named 'Prelude' and included in *ILR* (1982) under that epithet. Still sometimes grown under the epithet 'Prelude'.)

#### 'Prune' I(a/-)

Parentage: ((*L.* × *hollandicum* × unknown) × *davidii* var. *willmottiae*) × (*cernuum* × (*cernuum* × 'Maxwill'))  
R: Gebr. N. & B. Laan & Zn (1976), G: Gebr. N. & B. Laan & Zn (1978), N: Gebr. N. & B. Laan & Zn (1984), I: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1985)  
Inside deep pink (48B), midveins currant-red, tepal-edges barium-yellow, tips rhodonite-red; outside violet-red, midribs yellow-green; spots dark brown on each tepal and in throat; nectaries rust-brown; pollen moderate reddish

orange (171A). Fls 120 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, 160 × 12 mm, dark green. Stems 1 m, dark-pigmented, with c.6 fls. June to July.

(Published in *Bloembollencultuur*, 1984.)

#### 'Prunotto' I(a-b/b)

Parentage: seedling AJ 95-21 × seedling AJ 96-7

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2001), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside vivid red/vivid reddish orange (45A/34A), tepal-margins vivid reddish orange (30A), throat moderate reddish orange (35A); outside with outer tepals (169A/171A), margins vivid red (45A), strong orange (170A) at base, strong yellow-green (144A) at top, inner tepals vivid to strong reddish orange (34A/B/C), midribs strong brown (172A); spots dark purple (79A); papillae few; nectaries strong yellowish pink (37B); pollen moderate reddish orange/strong brown (171A/172A); stigma dark red/dark purple (187B/79A). Fls 140 mm wide; tepals 100 × 36-56 mm, margins smooth, tips slightly recurved. Lvs scattered, 141 × 19 mm, dark green. Stems 0.9 m, light green, with c.11 fls. Tetraploid?

#### 'Pseudo-Wallacei' I(a?/b)

Parentage: probably a selection from *L. × maculatum*

Fls deep apricot. Fls like *L. × maculatum* 'Wallacei'. Very early.

(Published in *K. Wada Cat.*, 1936.)

#### 'Puccini' I(a-b/b)

Parentage: seedling RS 85-23 × seedling RS 86-48

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1995), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1997)

Inside moderate purplish pink (62B), strong purplish pink (62A) at base, paler at tepal-tips, overall ageing to light purplish pink (62C); spots few, small; papillae present; nectaries green changing to white; pollen brown; stigma purple. Tepal-margins slightly ruffled, tips slightly recurved. Stems 1.2-1.25 m, green with darker stripes and speckling, and with c.8 fls. Midseason.

#### 'Puchanta' I(a/-)

Parentage: 'Enchantment' × ('Enchantment' × *pumilum*)

R: J.M. van Tuyl (1981), G: IVT (1983), N: IVT (1985), I: IVT (1985), REG: IVT (1988)

Inside vivid reddish orange (33B) to capsicum-red; outside nasturtium-red with a carrot-red base; pollen brownish red. Fls 140 mm wide; tepals 80 × 35 mm. Lvs scattered, 130 × 15 mm. Stems 1 m, with c.5-6 fls.

#### 'Puerto Rico' VII(a/b)

Parentage: unnamed seedling × 'Mero Star'

R: W. Paauw & Zn B.V. (1991), G: W. Paauw & Zn B.V. (1992), N: W. Paauw & Zn B.V. (1993), I: Peacock B.V. & Imanse Lelieveredeling B.V., REG: W. Paauw & Zn B.V. (1996)

Inside yellowish white (155B), midveins pale yellow-

green (155A) from above the nectaries; outside yellowish white (155B), midribs moderate purplish red (59C) at base, shading upwards through light greenish yellow/pale yellow-green (4C/D) to brilliant greenish yellow (6C) and tipped strong yellow-green (143C); spots varying from none to many; self-coloured papillae over two-thirds of each tepal; nectaries strong yellow-green (144B); pollen strong orange (169C); stigma greyish yellow-green/light greenish grey (198A/B). Fls 240 mm wide; tepals 140 × 40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 200 × 45 mm, mid green. Stems 1.1 m, green with darker markings, and with 4-6 fls. Syn.: 'White Mero Star'.

#### 'Puglia' VII(a-b/-)

Parentage unknown

R: Vletter & Den Haan (pre 1991)

Inside pale yellowish pink (29D), tepals deep pink (48B) towards margins, margins at base moderate red (179A/181A); outside pale yellowish pink (29D), tepals deep pink (48B) towards margins; spots red, papillae present; pollen orange; stigma purple-red. Tepals rather short, margins ruffled, tips slightly recurved. Lvs scattered, of medium length. Stems of medium height to tall, green.

(In 1993, Dutch PBR (LEL 936) were to granted this lily, but it was not registered and the raiser destroyed the stock.)

#### var. *pulchellum* IX(a/c)

See *concolor* var. *pulchellum*.

#### 'Pulsar' I(a/-)

Parentage: seedling W 664 × 'Sancerre'

R: Vletter & Den Haan, G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1991)

Inside yellowish white (155D), tepal-tips moderate reddish orange (173B), throat strong yellow-green (143A) with strong yellow-green (144C) edge; outside yellowish white (155D), midribs broad, light yellow-green (154D), the 'tube' strong yellow-green (144C) suffused with moderate orange (173C); nectaries dark red (59A); pollen strong orange (169D). Fls 180 mm wide; tepals 90 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 0.75 m, green, with c.10 fls. June (under glass).

#### 'Pumena' I(a/-)

Parentage: *pumilum* × 'Enchantment'

R: IVT (1982), G: IVT, N: IVT, I: C.H. Adrichem (1984), REG: C.H. Adrichem (1989)

Inside vivid reddish orange (30B), throat light orange (28C); outside strong orange (30D) with vivid reddish orange (30A) tepal-margins; spots deep purplish red (59B); nectaries deep purplish red; pollen dark reddish orange (172B). Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 20 mm, mid green. Stems 0.6 m, green, with c.7 fls.

**'Pumenta' I(a/b)**

Parentage: ('Enchantment' × (*pumilum* × unknown)) × 'Enchantment'  
 R: J.M. van Tuyl (1981), G: J.M. van Tuyl (1983), N: J.M. van Tuyl (1985), I: IVT (1985), REG: J.M. van Tuyl (1985)  
 Fls dark orange; spots absent; pollen brown. Tepal-margins smooth, tips recurved. Lvs scattered. Stems 0.7-1.2 m, green, with 1-15 fls. (2n = 48)

***pumilum* DC. IX(c/d)**

AGM 1993  
 Fls bright glossy scarlet; spots absent or with black dots at base of each tepal; nectaries with papillate margin; pollen scarlet. Buds sometimes white-hairy. Fls 45-50 mm wide, slightly fragrant; tepals 30-40 mm long; each pedicel with 2 bracts at base. Lvs scattered, 30-100 × 1-3 mm, very narrow. Stems 0-15-0.5(-1.3) m, slender, with up to 20(-30) fls. June to early July or Aug. Siberia, Mongolia, N Korea, N China.  
 Syn.: *tenuifolium*.

***pumilum* 'Dark Gold' I(c/d)**

Syn. of 'Dark Gold'.

***pumilum* 'Golden Gleam' I(c/d)**

Syn. of 'Golden Gleam'.

***pumilum* 'Goldfinch' I(c/d)**

Syn. of 'Goldfinch' (Div. I(c/d)).

***pumilum* 'Red Star' I(b/c-d)**

Syn. of 'Red Star'.

***pumilum* 'Yellow' I(c/d)**

Syn. of 'Yellow'.

***pumilum* 'Yellow Bunting' I(c/d)**

Syn. of 'Yellow Bunting'.

**'Pumivetta' I(a/-)**

Parentage: 'Enchantment' × ('Enchantment' × *pumilum*)  
 R: J.M. van Tuyl (1981), G: IVT (1983), N: IVT (1985), I: IVT (1985), REG: IVT (1988)  
 Inside vivid reddish orange (30A); outside vivid reddish orange (30A/B), midribs tangerine-orange; spots reddish brown on the whole of each tepal; pollen dark reddish brown. Fls 160 mm wide; tepals 80 × 40 mm. Lvs scattered, 120 × 20 mm, pale green. Stems 1 m, green, with c.10 fls.

**'Pumpkin' IV(c/d)**

Parentage: Bullwood Group × (*parryi* × unknown)  
 R: D.B. Fox, N: D.B. Fox, I: D.B. Fox (1972), REG: D.B. Fox (1972)  
 Fls between vivid and brilliant orange-yellow (23A & B); tepals finely spotted maroon on basal half, green at base; pollen orange-brown. Tepals recurved. Lvs whorled. Stems up to 2.2 m, with c.23 fls.  
 (Published in *Lilies and other Liliaceae*, 1973: 115.)

**'Pumpkin Pie' I(a/-)**

Parentage: ('Connecticut King' × unknown) × Oregon Bulb Farms "brushmarks" pollen  
 R: J. Wadepkamper, N: J. Wadepkamper (1977), I: J. Wadepkamper (1979), REG: J. Wadepkamper (1978)  
 Inside orange; outside orange-brown; spots absent, a brown-purple brushmark in centre of each tepal; nectaries orange; pollen brown. Stems 0.6 m.  
 (Published in *Lilies and other Liliaceae*, 1978/9: 112.)

**'Pumpkin Pie' I(-/-)**

Parentage: 'Starfire' × 'Willow Wood'  
 R: J. Wadepkamper (1979), G: J. Wadepkamper (1981), N: J. Wadepkamper (1991), I: Borbeleta Gardens (1991)  
 Inside and outside vivid orange (28A), each tepal with an intense maroon brushmark covering half of area; spots absent; pollen dark orange. Tepals 90 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 20 mm, dark green. Stems 0.75 m, dark green, with 8-10 fls. Midseason.  
 (Unacceptable name: ICNCP, 2004: Art.27.1 - name already used for another lily. Published in *Borbeleta Gardens Cat.*, 1991.)

**'Pumpkin Sweet' I(a/-)**

Parentage: 'Nutmegger' × unnamed seedling  
 R: B. Johnson, G: B. Johnson, N: B. Johnson (1982), I: Borbeleta Gardens (1983), REG: J. Wadepkamper (1983)  
 Inside vivid reddish orange (30A), tepal-tips vivid orange (28A) to vivid reddish orange (30A), throat vivid orange (28A); outside vivid reddish orange (30A); brown spots on inner third of tepals; nectaries frosty orange; pollen light brown. Tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 65 × 12 mm, mid green. Stems 0.5 m, light green, with 8-10 fls. Late.  
 (Published in *Borbeleta Gardens Cat.*, 1983.)

**var. *punctatum* IX(b-c/d)**

See *speciosum* var. *punctatum*.

**'Punctatum' IX(b-c/d)**

See *speciosum* var. *punctatum*.

**'Punctatum Album' IX(b-c/d)**

See *speciosum* 'Punctatum Album'.

**'Pünktchen' II(-/-)**

Parentage unknown  
 R: H. Fuchs, N: H. Fuchs, REG: H. Fuchs (1997)  
 Fls pale lilac with dark spots. Stems 1.5 m, robust. Mid June.  
 (Published in German Lily Group sales list, 1995.)

**'Pure Gold' VI(-/a)**

Parentage: gold-flowered trumpet seedling × 'Regal Image'  
 R: F.S. & G.G. Blake (1982), G: F.S. & G.G. Blake (1984), N: F.S. Blake (1988), I: F.S. Blake (1988), REG: F.S. Blake (1988)  
 Inside and outside vivid yellow (13A); spots absent; nectaries moderate yellow-green (146D); pollen strong

orange-yellow (22A). Fls 90 mm wide; tepals 125 × 34 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 10 mm, dark green. Stems 2.1 m, moderate yellow-green (147B), mottled. Jan. (Australia).

**‘Purity’ VII(-/-)**

Syn. of ‘Mrs A. Waterer’.

**‘Purity Blush’ Div. ?**

Parentage unknown

R: L.A. Jury, N: L.A. Jury

Inside pure white; outside flushed with pale shell-pink; pollen chocolate-brown. Tepals partially reflexed.

**‘Purple Fantasy’ I(a/-)**

Parentage: ‘Monte Rosa’ × (‘Connecticut King’ × ‘Firebrand’)

R: L. Høpfner (1992), G: L. Høpfner (1994), N: L. Høpfner (1997), REG: L. Høpfner (1997)

Inside strong purplish pink (63C) and vivid orange (28A), throat more orange than pink; outside strong purplish pink (63C) and white; spots deep red (53A) in the throat; nectaries green; pollen strong orange (169C); stigma light yellow-green (144D). Fls 140 mm wide; tepals 70 × 35 mm, margins very slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 18 mm, mid green. Stems 1.1 m, greyish reddish brown (200B), with 10 or more fls. July.

**‘Purple Glory’ VII(-/-)**

Parentage: *speciosum* seedling 494 × *L. × parkmanii* ‘Jillian Wallace’

R: G. Errey (c. 1956), N: G. Errey

Fls vivid red (57A).

(Published in *LYB* 20: 79 (1957).)

**‘Purple Haze’ I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1982), N: Gebr. Mak B.V. (1987), I: Gebr. Mak B.V. (1988), REG: Gebr. Mak B.V. (1990)

Inside strong red (53C); outside strong purplish red (60C) flushed with light yellow (19B), tepal-edges deep red (53A); spots dark red (187A) on the whole of each tepal; pollen vivid orange (28A). Fls 130 mm wide; tepals 65 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 10 mm, mid green. Stems 0.65 m, green with darker markings, and with c.6 fls.

**‘Purple King’ VIII(a/b)**

Parentage unknown

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)

Inside pale purplish pink (65C), each tepal with a strong purplish red (60B) flame, throat yellowish white (155D); outside with outer tepals moderate purplish red (186A/B), dark purplish red (186C) towards margins, margins very pale purple (73D), midribs strong yellow-green (144C) at base and top, inner tepals very pale purple (69C), moderate purplish red (186A) along midribs, brilliant yellow-green (142B) at base; spots and

papillae absent; nectaries strong yellow-green (144B) with narrow brilliant greenish yellow (2B) margins; pollen greyish brown (166A); stigma light greenish grey (188B). Fls 195 mm wide, fragrant; tepals 150 × 44-63 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 140 × 20 mm. Stems 1-1.15 m, dark green with darker markings, and with 2-5 fls. (An Orienpet (OT) lily.)

**‘Purple Majesty’ VI(b/a)**

Parentage unknown

R: L. Woodriff (1965), G: Bowman Creek Farm (1967), N: Bowman Creek Farm (1981), REG: Bowman Creek Farm (1981)

Fls purple, throat yellow; spots absent; nectaries green-yellow; pollen orange. Fls 130 mm wide; tepals 120 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 0.9 m, green, with 10-20 fls. Late July.

**‘Purple Para’ VI(-/a)**

Parentage: selection from Pink Perfection Group

S: B.G. Hayler (1975), N: B.G. Hayler (1980), REG: B.G. Hayler (1980)

Inside red-purple, tepal-tips strong purplish red (71D), throat with a yellow margin around nectaries; outside strong purplish red (71C), midribs deep purplish red (71A); spots absent; nectaries green; pollen pale orange. Fls 150 mm wide; tepals 115 × 50 mm, slightly recurved. Lvs scattered, 115 × 10 mm, dark green. Stems 1.5 m, green-purple, with c.15 fls. Late Dec. (Australia).

**‘Purple Queen’ I(a/b)**

See *L. × maculatum* ‘Purple Queen’.

**‘Purple Rain’ I(a/-)**

Parentage: ‘Abu Hassan’ × seedling P7

R: Gebr. N. & B. Laan & Zn (1980), G: Gebr. N. & B. Laan & Zn (1983), N: Gebr. N. & B. Laan & Zn (1987), I: Gebr. N. & B. Laan & Zn (1987), REG: Gebr. N. & B. Laan & Zn (1988)

Inside moderate red (185B) to strong red (53B); outside moderate purplish red (184C/D) flushed with purplish red; black spots on two-thirds of each tepal; pollen dark purplish red. Fls 140 mm wide; tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 10 mm, dark green. Stems 1.5-1.7 m, green with some darker pigmentation, and with c.15-16 fls. June.

**‘Purple Reign’ I(a-b/b)**

Parentage: ‘Hot Fudge’ × ‘White Prince’

R: J. Wadekamper (1987), G: J. Wadekamper (1989), N: J. Wadekamper (1990), I: Borbeleta Gardens (1995)

Inside white, each tepal with a large, deep purple brushmark, paler around edges of brushmark and breaking into spots at the base; outside white; nectaries lime-green; pollen brown. Tepals 90 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 20 mm, dark green. Stems 1 m, dark green, with 10-12 fls. Midseason. (Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name has the same pronunciation as ‘Purple Rain’.)

**'Purple Robes' I(c/d)**

Parentage: Preston Group × 'Edith Cecilia'

R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)  
Fls fuchsia-purple with lighter spotting in throat. Stems 1 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 23 (1978).)

**'Purple Sensation' I(a/-)**

Parentage unknown

R: Fa P. Hoff & Zn (1980), G: Fa P. Hoff & Zn (1982), N: Hoffgaarde B.V. (1986), I: Hoffgaarde B.V. (1988), REG: Hoffgaarde B.V. (1986)

Inside deep pink (185D) shaded purple-red, with orange-buff, ribbed blotches in the throat; outside moderate red (185B), each tepal with a paler flame and orange-yellow midrib; spots tiny, red, in the throat; nectaries brownish red; pollen dark reddish brown. Fls 170 mm wide; tepals 80 × 40 mm, slightly recurved. Lvs scattered, 100 × 10 mm, pale green. Stems 0.8 m, green, with c.12 fls.

**'Purple Shadows' I(a-b/-)**

Parentage: 'Appleblossom' × 'Willow Wood'

R: J. Wadekamper (1978), N: J. Wadekamper (1983), I: Borbeleta Gardens (1984), REG: Borbeleta Gardens (1984)

Inside and outside pale yellow (11C), throat brilliant yellow (13C); half of each tepal with purple brushmark lines and large, purple spots; nectaries frosty green; pollen light brown. Tepals 80 × 30 mm, margins ruffled, tips not recurved. Lvs scattered, 90 × 15 mm, dark green. Stems 0.7 m, brown, with 15-18 fls. Early July.

Syn.: 'Moon Shadow' (of Wadekamper).

(Published in *Borbeleta Gardens Cat.*, 1985. Originally published in *Borbeleta Gardens Cat.*, 1984 as 'Moon Shadow', an epithet already used for another lily.)

**'Purple Spire' IX(c/d)**

See *martagon* 'Purple Spire'.

**'Purple Splendor' I(a/-)**

Syn. of 'Purple Queen'.

(The spelling of the epithet is correct!)

**subsp. *purpurascens* IX(b/a-b)**

See *washingtonianum* subsp. *purpurascens*.

**var. *purpurascens* IX(b/a-b)**

See *washingtonianum* subsp. *purpurascens*.

**'Purpuratum' IX(b-c/d)**

See *speciosum* 'Purpuratum'.

**var. *purpureum* IX(b/a)**

See *candidum* var. *purpureum*.

**'Purpurkönig' VII(-/b)**

Parentage: seedling from Atomic Group × seedling from Little Fairies Group

R: W. Daunicht (1967), G: W. Daunicht (1971), N: W. Daunicht (1982), REG: W. Daunicht (1983)

Fls dark purple; spots few, dark purple; nectaries green with a yellow-white fringe; pollen yellow. Fls 160-170 mm wide; tepals 80 × 45-50 mm, margins ruffled, tips not recurved. Lvs scattered, 120-140 mm, mid green. Stems 1.2 m, green with a few purple spots, and with 5-12 fls. June to July.

**'Purpurrobe' I(b/-)**

Parentage unknown

R: H. Böhm (pre 1991), N: H. Böhm

Inside deep yellowish pink (43C), each tepal with a narrow yellow stripe at the base; spots absent. Fls 170 mm wide. Lvs dark green. Stems with bulbils.

(Published in German Lily Group sales list, 1991.)

**'Pussycat' I(c/-)**

Parentage: 'Pink Tiger' (Woodriff) × 'Dolly'

R: R.P.H. Clas (1964), N: R.P.H. Clas (1970), I: Borbelata Gardens (1980), REG: J. Wadekamper (1983)

Fls close to old rose, with orange centre and small, dark spots; pollen very dark brown. Tepal-margins smooth, tips slightly recurved. Stems 1 m, dark green, with 10-20 fls. Mid July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 45 (1978).)

**'Pygmalion' I(c/-)**

Parentage: ('Maxwill' × 'Edna Kean') F<sub>3</sub> × 'Dark Princess'

R: G.W. Darby (c. 1958), N: G.W. Darby

Fls blood-red, spotted black. Tepal-tips reflexed.

**'Pyramid' VII(-/d)**

Parentage: *speciosum* var. *album* × pink-flowered seedling

R: Gebr. Mak B.V. (1984), G: Gebr. Mak B.V. (1987), N: Gebr. Mak B.V. (1989), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1991)

Inside moderate to light purplish pink (62B/C), throat yellowish white (155B) and strong yellow-green (143C); outside greenish white (155C) suffused with light purplish pink (62C), tepal-edges moderate purplish pink (62B), midribs light greenish yellow to pale yellow (8C/D); papillae few, ivory-white, in the throat; nectaries pale yellow-green (193D); pollen moderate reddish orange to brownish orange (171A/B). Fls 270 mm wide; tepals 130 × 55 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 240 × 62 mm, mid green. Stems 1.1 m, green, with c.6 fls. June.

**'Pyramidalnoya' I(a/-)**

Unaccepted spelling of 'Piramidalnaia'.

***pyrenaicum* Gouan IX(c/d)**

Fls yellow to greenish yellow; spots and dashes dark purple; papillae purplish; pollen orange, red or brown. Fls with a faint to strong unpleasant smell; tepals 40-65 mm. Lvs scattered, 70-150 × 3-20 mm, the veins hairless beneath. Stems 0.3-1.35 m, green with sparse purple spots and with up to 12 fls. N Spain, SW France.

**pyrenaicum 'Aureum'** IX(c/d)  
Parentage: selection from *pyrenaicum*  
Fls deep yellow.

**pyrenaicum subsp. carniolicum (W. Koch) Matthews**  
IX(c/d)

Fls yellow, orange or red, often spotted with brownish purple; papillae purplish or rarely yellow; filaments smooth. Lvs scattered, 30-110 × 4-17 mm, hairless or downy beneath. Stems to 1.2 m, green, with c.6(-12) fls. SE Europe.

**pyrenaicum subsp. carniolicum var. albanicum (Grisebach) Matthews** IX(c/d)

Fls yellow; spots absent. Lvs with veins hairless beneath. Stems to 0.4 m. SW former Yugoslavia, Albania, NE Greece.  
Syn.: *albanicum*; *carniolicum* var. *albanicum*.

**pyrenaicum subsp. carniolicum var. carniolicum**  
IX(c/d)

Fls red or orange, spotted. Lvs with veins densely downy beneath. Stems to 1.2 m. SE Alps, N former Yugoslavia.

**pyrenaicum subsp. carniolicum var. jankae (Kerner) Matthews** IX(c/d)

Fls yellow, with or without spots. Lvs with veins downy beneath. Stems to 0.8 m. NW Italy, NW former Yugoslavia, W Bulgaria, C Romania.  
Syn.: *jankae*; *carniolicum* var. *jankae*.

**pyrenaicum subsp. ponticum (C. Koch) Matthews**  
IX(c/d)

Fls deep yellow or deep orange, with dense red-brown or purplish stripes towards base; papillae absent; filaments papillate. Lvs 30-80 × 8-20 mm, with the veins downy beneath. Stems 0.15-0.9 m, green. NE Turkey, Georgia.

**pyrenaicum subsp. ponticum var. artvinense (Mishchenko) Matthews** IX(c/d)

Tepals deep tawny orange, 5-6 mm broad. Lvs narrower than in var. *ponticum* itself, and stems more slender. NE Turkey, Georgia.  
Syn.: *artvinense*; *ponticum* var. *artvinense*.

**pyrenaicum subsp. ponticum var. ponticum** IX(c/d)

Tepals deep yellow, 7-10 mm broad. Stems usually stout. NE Turkey

Syn.: *ponticum*; *carniolicum* var. *ponticum*; *georgicum*.

**pyrenaicum forma rubrum Stoker** IX(c/d)

Fls orange-red; spots maroon.  
Syn.: *pyrenaicum* 'Rubrum'.

**pyrenaicum 'Rubrum'** IX(c/d)  
Syn. of *pyrenaicum* forma *rubrum*.

**'Pyrit'** I(a-b/b-c)

Parentage: 'Connecticut King' × 'Odysseus'  
R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)  
Inside brownish orange, tinted with pink in the throat

and with apricot flares over nectaries; outside brown-orange; spots red-brown, numerous, medium sized, on half of each tepal; nectaries strongly white-feathered; pollen brown. Fls 100 mm wide; tepals 80 × 30 mm, recurved, rigid; pedicels 80 mm long, dark violet. Lvs 85 × 13 mm, dark green, slightly glossy. Stems 1.2 m, thick, dark violet, with numerous, dark red-brown bulbils. Mid July.

**'Quadroon'** I(b/-)

Parentage: complex parentage including hybrids of Red Knight Group & Stenographer Group  
R: J.C. Ericksen (c. 1956), N: J.C. Ericksen  
Fls very dark, pure, shining red throughout, including stamens, pollen and stigma. Tepals gently reflexed. Stems 1.2 m.  
(Published in *ILR* (1969).)

**'Quapelle'** I(c/-)

Misspelling of 'Quappelle'.

**'Quappelle'** I(c/-)

Parentage: 'Fuchsia Lady' × unknown  
R: J.C. Ericksen (c. 1967), N: J.C. Ericksen, REG: J.C. Ericksen (1975)  
Fls pink, shaded lilac, with dark plum-coloured lacings and spots; pollen wine-purple. Fls strongly scented. Lvs narrow. Stems up to 1.7 m. July.  
(Published in *Lilies and other Liliaceae*, 1975: 95 as 'Quapelle' which is a misspelling.)

**'Quecksilber'** I(b/d)

Syn. of 'Drewitzer Chic'.

**'Queen Bess'** IX(b/c)

See *auratum* 'Queen Bess'.

**'Queen Charlotte'** IX(c/d)

See  *davidii* 'Queen Charlotte'.

**'Queen Citrona'** I(a/-)

Syn. of 'Citronu Karaliene'.

**'Queen Elizabeth'** I(c/d)

Parentage: ('Cromottiae' × unknown) ×  *davidii* var.  *unicolor*  
R: W.A. Constable Ltd (c. 1951), N: W.A. Constable Ltd  
Fls golden yellow; spots absent; pollen light yellow; stigma creamy white. Lvs scattered, 125 × 10 mm, mid green. Stems 1.5-1.9 m, dark green mottled with purplish brown, with 12-18 fls.  
(Published in *Constable Cat.*, 1951.)

**'Queenie'** IX(b-c/d)

See  *speciosum* 'Queenie'.

**'Queen Katie'** I(a/-)

Parentage unknown  
R: V. Jošt, G: V. Jošt, N: V. Jošt, I: V. Jošt & Borbeleta Gardens (1987), REG: Borbeleta Gardens (1988)  
Fls bright yellow; spots few, dark brown, in centre of fl.;

nectaries light green; pollen brown. Tepals 80 × 40 mm, not recurved. Lvs scattered, 100 × 25 mm. Stems 0.6 m, green, with 8-10 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1987.)

#### **'Queen of Hearts' I(a/-)**

Parentage: *L. × hollandicum* × *lancifolium*

R: J. de Graaff (c. 1960), N: J. de Graaff

Fls deep red; spots dark in centre of fl. Fls up to 150 mm wide; tepal-tips reflexed. Stems 1 m. July.

(Published in *ILR* (1969). In E. Fisher, *Named Lily Hybrids and their Origins*, 9 (1978) the parentage is given as 'Sunstar' × 'Mega'.)

#### **'Queen of Night' II(c/d)**

See *L. × dalhansonii* 'Queen of Night'.

#### **'Queen of Sheba' I(a/b)**

Parentage: 'Marijean' × 'Mildred'

R: R.F. Nelson (1979), G: R.F. Nelson (1984), N: R.F. Nelson, I: R.F. Nelson, REG: R.F. Nelson (1985)

Fls strong red (46A); spots absent; nectaries strong red (46A); pollen strong brown (172A). Buds very hairy.

Tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 15 mm, mid green, very hairy beneath. Stems 1.2 m, heavily marked with brown, with c.10 fls. Nov. to Dec. (Australia).

#### **'Queen's Fancy' I(b/-)**

Parentage: pink-flowered Harlequin Group × 'Hawaiian Punch'

R: Hartle-Gilman Gardens (1981), G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1989), I: Hartle-Gilman Gardens (1989), REG: Hartle-Gilman Gardens (1990)

Inside yellowish white (155B); outside with a green cast, midribs dark brown; spots dark wine-red on the central third of each tepal; nectaries yellowish white (155B); pollen orange-brown. Tepals 50 × 25 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 101 × 15 mm, dark green. Stems 1.42 m, mid green, with 25-27 fls. Midseason.

#### **'Queen's Promise' VIII(a-b/b)**

Parentage: *longiflorum* × 'Pink Promise'

R: Takii & Co. Ltd (c. 1993), G: Takii & Co. Ltd (c. 1995), N: De Jong Lelies Holland B.V. (2000), REG: De Jong Lelies Holland B.V. (2001)

Inside moderate purplish red (59C) on a white ground, paler towards tepal-edges, midveins stronger coloured, throat whiter than 155D; outside whiter than 155D, suffused with very pale red-purple at tepal-edges, midribs pale yellow-green (155A) with strong yellow-green (144C) at base and top which fades into midvein; spots and papillae absent; nectaries strong yellow-green (144A/B), fading into tepal, white-hairy at edges; pollen greyish brown (166A); stigma pale yellow-green (193A/B). Fls 210 mm wide; tepals 155-160 × 50-65 mm, margins very slightly wavy, tips recurved. Lvs scattered, 175 × 30-40 mm. Stems 1.3-1.4 m, light green, with c.3 fls. June to July.

(*A. longiflorum*/Oriental hybrid. The form of the epithet used in the grants of both European and Dutch PBR was 'Queens Promise'. However, under the provision of ICNCP, 2004: Art. 32.14 (2004), this spelling is corrected to 'Queen's Promise'.)

#### **'Queen Wilhelmina' VI(-/)**

Parentage: contains *regale*, *L. × imperiale* 'George C. Creelman' & *henryi*

R: A.J. van der Zwet & Sons (c. 1951), N: A.J. van der Zwet & Sons

AMH 1951, FCCCH 1953

Fls yellow-ochre or ivory-white, with green midribs.

#### **'Querido' I(a/-)**

Parentage: ('Ladykiller' × *cernuum*) × 'Bright Beauty'

R: Gebr. N. & B. Laan & Zn, g: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn, I: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1993)

Inside strong orange (24A), tepals shading to strong orange-yellow (24B) towards the top and tipped strong orange (25A); outside strong orange-yellow (24B), shading to strong orange (24A) at tepal-edges; outer tepals with a brilliant orange-yellow (23B) midrib, tipped moderate olive-green (147A); spots dark red (187A) on half of each tepal; nectaries dark red (187C); pollen moderate reddish orange (171A). Fls 200 mm wide; tepals 105 × 47 mm, margins smooth, tips strongly recurved. Lvs scattered, 118 × 9 mm, mid green. Stems 0.88 m, mid green with darker markings, and with c.6 fls.

#### **'Quest' VII(-/b)**

Parentage: (*auratum* × unknown) × 'Doris Russell'

R: W.M. Gardiner (1968), G: W.M. Gardiner (1971), I: K.L. Watkins (1979)

Fls yellowish white (155D); spots absent; nectaries yellow-green. Tepal-margins ruffled, tips slightly recurved. Lvs and stems pale green. Stems 1.5 m.

#### **'Quicksilver' VI(-/a)**

Parentage: selection from *leucanthum* var. *centifolium* Sentinel Group

S: J. de Graaff (c. 1962), N: J. de Graaff

Fls very large, pure white, throat yellow; spots absent. Fls up to 210 mm wide. Stems 1.2 m, with up to 15 fls. July.

#### **'Quickstep' I(a/-)**

Parentage: 'Connecticut King' × 'Croesus'

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1978), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)

Fls strong orange (25A/B), deepening to vivid orange (28B) along centre of tepals, tepal-tips and throat vivid orange (28B); outside strong to brilliant orange (25B/C), slightly lighter at tepal-tips and base of bud; spots absent; nectaries white; pollen vivid orange (28A). Fls 160-190 mm wide; tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 15 mm, dark green. Stems 0.9 m, light green, with 7-30 fls. Late June.

**‘Quiet Times’ VI(b/b)**

Parentage: ‘Royal Flush’ × (‘Pamela’s Joy’ × ‘Kiri’ (Div. VI))

R: G. & A. Geering (pre 1998), N: G. & A. Geering  
Inside white with a pale yellow throat; outside white with pale red stripes; spots absent; nectaries green; anthers purplish; pollen dark orange; style purplish at top; stigma pale greenish grey. Tepal-margins smooth, tips not or slightly reflexed. Stems with 6 or more fls.

**‘Quilp’ I(a/b)**

See *L. × maculatum* ‘Quilp’.

**‘Quinella’ I(b/-)**

Parentage: *dauidii* × unknown

R: B.G. Hayler, N: B.G. Hayler (1970), I: B.G. Hayler (1970), REG: (between 1970 and 1981)

Tepal-tips red-tinged, throat orange-yellow; outside bright orange-yellow. Tepals slightly reflexed. Lvs *dauidii* type. Stems 0.6-1 m, with up to 30 fls. Early Dec. (Australia).

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 16 (1978).)

**‘Quinta’ I(a/b)**

Parentage: seedling OR 90-10 × seedling G 93-08

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside strong orange (24A), tepals narrowly edged vivid orange (28A), throat light orange-yellow (24C); outside strong/light orange-yellow (24B/C), shading to strong orange (25A) near tepal-margins and edged vivid orange (28A); spots few (less than 10 per fl), dark red (187A); papillae in the throat; nectaries white-hairy; filaments orange; pollen strong brown (172A); stigma dark red (187C). Fls 170 mm wide; tepals 105 × 30-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 165 × 20 mm, dark green. Stems 1.2 m, green with a little darker marking, and with 5-9 fls.

**‘Quintana’ VI(b/a)**

Parentage: (‘Mabel Violet’ × unknown) F<sub>2</sub>

R: I. Wiesner (1989), N: I. Wiesner, REG: I. Wiesner (1990)

Fls deep pink, tepal-tips paler; outside pink; pollen yellow-orange; stigma dark purple. Fls 100 × 100 mm, scented; tepals 105 × 54 mm, tips slightly recurved, extra, smaller tepals also present; pedicels 80-120 mm long. Lvs scattered, 110 × 9 mm, dark green. Stems 0.8-0.9 m, green. Bulbs pale violet-brown. Mid July.

**‘Quito’ I(a/b)**

Parentage unknown

R: P. Hoff (1993), G: Hoffgaarde B.V. (1994), N: Hoffgaarde B.V. (1995), I: Hoffgaarde B.V. (1996), REG: Hoffgaarde B.V. (1997)

Inside yellowish white (155B); outside yellowish white (155B), midveins strong yellow-green (145A), tipped dark red (187A); spots dark red (187A) on half of each

tepal; papillae few, in the throat; nectaries strong yellow-green (143A); pollen strong orange (24A); stigma dark red (59A). Fls 170 mm wide; tepals 115 × 40-60 mm, margins smooth, tips strongly recurved. Lvs scattered, 115 × 25 mm, mid green. Stems 1.05 m, green, with 4-6 fls.

Trade designation: JUMBO® QUITO.

**‘Quo Vadis’ VII(a-b/-)**

Parentage unknown

R: Mak-Leek Inc. (1990), G: Mak-Leek Inc. (1993), N: Mak-Leek Inc. (2000), REG: Mak-Leek Inc. (2003)

Inside yellowish white (155D), midveins light yellow (10B); outside yellowish white (155D); spots yellow; papillae present; nectaries green; pollen brown; stigma purple-red. Fls 200 mm wide; tepals 120 × 50-60 mm, margins ruffled, tips strongly recurved. Lvs 190 × 40-50 mm, moderate yellowish green (138A). Stems 0.95 m, with 5 fls. Midseason.

**‘Rachel Davis’ VI(-/c)**

Parentage: contains ‘T.A. Havemeyer’ & *L. × aurelianense*

R: LeV. Freimann, N: LeV. Freimann

Fls creamy apricot; tepals semi-reflexed. (Published in *LYB NALS* 6: 86 (1963).)

**‘Rachel Pappo’ VII(-/d)**

Parentage: *L. × parkmanii* Imperial Crimson Group × ‘Black Beauty’

R: R. Pappo, N: R. Pappo, I: R. Pappo (1970)

Fls apricot, creamy apricot towards tepal-edges. Tepals slightly recurved. Lvs dark green. Stems 1.5-1.9 m. Aug. (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 41 (1978). Classified in *ILR* (1982) as Div. VI.)

**‘Radar’ I(b-c/b-c)**

Parentage: (‘Tigrimount’ × (‘Hornback’s Gold’ × ‘Tetra Mountaineer’)) × cream-flowered tetraploid seedling

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside orange-apricot, centre of each tepal tinted with red; outside pale orange, edges of outer tepals slightly rosy, midribs yellow with brown and green base; spots fairly numerous, large, oval, dark brown-pink on half of each tepal; nectaries white-granulated; pollen brown; stigma brown. Fls 145 mm wide; tepals 85 × 52 mm, very thick, margins slightly wavy, tips (especially of outer tepals) slightly recurved; pedicels 50 mm long, thick, brown-dotted. Lvs scattered, 125 × 19 mm, deep yellowish green, dull. Stems 0.9 m, very thick, with fine pale brown dots, and a short infl. Late June. Polyploid.

**‘Radda’ I(a/-)**

Parentage unknown

Fls dark ruby-red.

(Published in M.F. Kireeva, *Lilii*, 38 (2000).)

**‘Radegast’ I(b-c/d)**

Parentage: ‘Tigrimount’ × (‘Pinegos Ares’ × ‘Bold Knight’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003),

REG: B. Mičulka (2003)

Inside deep red, tepal tips paler, throat orange; outside paler orange-red; spots large, black, on two-thirds of each tepal; nectaries glassy-granulated; pollen brown-red; stigma dark brown-red. Fls 115 mm wide; tepals 85 × 38 mm, tips strongly recurved; pedicels 70 mm long, very dark brown-dotted. Lvs scattered, 130 × 18 mm, dull light green. Stems 0.95 m, thick, spotted very dark brown, with a medium-length infl. Late June. Polyploid.

**‘Radiance’ I(a/-)**

Parentage: selection from Coronado Group  
S: J. de Graaff, N: J. de Graaff (c. 1947), I: J. de Graaff (c. 1947)

Fls rich mahogany, lightly spotted. Stems 1.5 m. June. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Amer. LYB* 1: 106 (1947/48).)

**‘Radiance’ I(a/b)**

See *L. × maculatum* ‘Radiance’.

**‘Radiance’ IX(b-c/d)**

See *speciosum* ‘Radiance’.

**‘Radiant Glow’ I(a/-)**

Parentage: (‘Edna Kean’ × unknown) × (‘Edna Kean’ × unknown)

R: E. Robinson (c. 1956), N: E. Robinson

Fls mauve-red, centre paler; lightly spotted. Stems 1 m. July.

(Published in *ILR* (1969).)

**‘Radiant Pink’ I(b/-)**

Parentage: ‘Radiant Glow’ × ‘Edith Cecilia’

R: E. Robinson, N: E. Robinson, I: E. Robinson (1971), REG: E. Robinson (1971)

Fls bright pink throughout. Tepals reflexed at tips. Stems 1-1.2 m.

(Published in *Lilies and other Liliaceae*, 1973: 112.)

**forma *radiatum* IX(b-c/d)**

See *speciosum* forma *radiatum*.

**‘Radium’ IX(b-c/d)**

See *speciosum* forma *radiatum*.

**‘Radion’ VI(a/a-b)**

Parentage unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside white, slightly rosy-veined, tepals with deeper edges, throat lemon-yellow, the colour extending to two-fifths of tepals; outside rosy-veined, midribs rosy; nectaries dark green; pollen apricot; stigma pale yellow-green. Fls 145 mm wide, 125 mm long; tepals 150 × 65 mm, thick, tips recurved; pedicels 60 mm long, thick, spotted. Lvs scattered, 120 × 10 mm, dull dark green. Stems 1.4 m, with fine brown dots. Early July.

**‘Radka’ I(a/b)**

Parentage: ‘Connecticut King’ × seedling C-15

R: Šlechtitelaká Stanice Heřmanův Městec, N:

Šlechtitelaká Stanice Heřmanův Městec, REG:

Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside scarlet with red shading and some orange shining through; spots absent. Fls 110-130 mm wide, with slightly recurved, overlapping tepals. Lvs 80-95 × 11-14 mm, mid green. Stems 0.7-0.8 m, dark brown-violet, with 12-20 fls. Mid June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1991.)

**‘Radostnaia’ I(b-c/-)**

Parentage unknown

R: E.N. Zaitseva (1959), N: E.N. Zaitseva

Fls red-orange; spots small, brown-violet; filaments pale orange; anthers brown. Fls 110-120 mm wide. Stems 0.9-1.3 m, with 15-25 fls.

(Unaccepted spelling: ‘Radostnaya’. Included in *ILR* (1982) as ‘Radosnaya’, which is an unaccepted spelling. Published in M.F. Kireeva, *Lilii*, 61 (1984).)

**‘Radostnaya’ I(b-c/-)**

Unaccepted spelling of ‘Radostnaia’.

**‘Rae Chel’ VI(-/a)**

Parentage: seedling of Aurelian Group × ‘Golden Clarion’

R: R.C. Crawford, G: Montana State University, N: D.C. Merkely (1978), I: Borbeleta Gardens (1979), REG: Borbeleta Gardens (1981)

Inside light butter yellow with chartreuse centre; outside reddish brown; spots absent; nectaries greenish; pollen brown. Tepals 100 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 1 m, blue-green, with up to 25 fls. July. (Published in *Borbeleta Gardens Cat.*, 1979.)

**‘Raffaello’ I(a/b)**

Parentage: seedling OR 90-09 × seedling G 89-16

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1997), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside vivid reddish orange (30B), throat vivid yellowish orange (30C); outside strong orange (26B), changing to vivid reddish orange (30A/B) towards tepal-edges, tipped strong yellow-green (143A); spots absent; papillae light yellowish pink (26D) in the throat; nectaries light yellowish pink (26D); pollen strong brown (172A); stigma strong reddish orange (34C). Fls 170 mm wide; tepals 90 × 30-50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 130 × 15 mm. Stems 0.95 m, greenish white with some darker markings, and with 4-6 fls.

**‘Raganīņa’ Div. ?**

Given as a parent of ‘Nakts Tango’. No further details.

**'Raggedy Ann'** I(b/-)

Parentage unknown

R: W. Windus (1970), N: W. Windus (1973), REG: W. Windus (1973)

Fls vivid reddish orange (33B), centre of tepals orange-red, throat orange with outside edge red. Tepals 190 × 28-46 mm, inner tepals recurved, outer tepals recurved and twisted; pedicels 110-125 mm long. Stems 1 m, with c.7 fls. Late June.

(Published in *Lilies and other Liliaceae*, 1973/1974: 112.)**'Raggio di Sole'** I(a/-)

Parentage: seedling RS 86-37 × seedling RS 89-20

R: Vletter &amp; Den Haan (1992), G: Vletter &amp; Den Haan, N: Vletter &amp; Den Haan (1996), I: Vletter &amp; Den Haan (1996), REG: Vletter &amp; Den Haan (1997)

Inside strong purplish red/deep purplish pink (54A/B), tepal-tips with a little strong purplish pink (55B), throat yellowish white (155B); outside a little lighter than strong purplish red (59D), tepals edged strong purplish red (60C) and tipped dark red (59A); spots greyish brown (166A) in the throat; papillae pale yellow-green (155A) in the throat; nectaries strong yellow-green (144B) and pale yellow-green (155A); pollen a little stronger than strong brown (172A); stigma dark red (187A). Fls 190 mm wide; tepals 95 × 40-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 20 mm, mid green. Stems 1.2 m, green with darker markings, and with 3-4 fls.

**'Raiba'** IX(-/d)See *henryi* 'Raiba'.**'Raiba'** IX(-/d)See *henryi* 'Raiba'.**Rainbow Group** I(a/-)

Syn. of Coronado Group.

**'Rain Dance'** VII(a-b/-)

Parentage unknown

R: Mak Breeding B.V., N: Liliande B.V. (2003), REG: Mak 't Zand B.V. (2005)

Inside yellowish white (155D), young fls with yellow at base of midveins; outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen brownish orange (171B); stigma deep purplish red (61A). Fls 260 mm wide; tepals 160-162 × 62-90 mm, margins strongly ruffled, tips recurved. Lvs scattered, 180-186 × 23-52 mm. Stems 0.9-1.1 m, green with some darker markings, and with 2-9 fls.

**'Raisa'** VI(-/a)

Parentage unknown

R: H. Beentjes (1982), G: H. Beentjes, N: H. Beentjes, I: H. Beentjes, REG: H. Beentjes (1989)

Inside strong red to deep pink (51A/B), each tepal flamed light yellow (21D); outside moderate red (182A), with a strong purplish red (64B/C) flush on outer tepals; spots dark red (187A) on the basal half of each tepal; pollen moderate reddish orange (171A). Fls 180 mm wide;

tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 20 mm, mid green with darker tips. Stems 0.9 m, green with darker markings, and with c.6 fls. July.

**'Ralph'** I(a/-)Parentage: probably *leichtlinii* var. *maximowiczii* × *L. × hollandicum*

N: C. Feldmaier (c. 1960)

Fls strong red (46A), with an orange-red dash near each nectary; spots elongated, brown; pollen dark red. Tepals narrow, slightly recurved. Lvs dark green. Stems 1-1.4 m. July.

(Published in *ILR* (1969). Raised from seed from R. Warner.)**'Ralph de Bricassart'** I(a/-)Parentage: red-flowered Feldmaier seedling × 'Torero'  
R: V. Matthé (1981), G: V. Matthé (1983), N: V. Matthé (1987), REG: V. Matthé (1988)

Fls vivid red (45A) throughout, with a slight touch of vivid reddish orange (41A) at the end of the nectaries; spots black, medium sized, on half of each tepal; nectaries deep red (185A); pollen red. Tepals 75 × 40 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 90 × 15 mm, dark green. Stems 0.9 m, mid to dark green, with 6-10 fls. July.

(The pollen parent 'Torero' is an unregistered cv. raised by A. Weinreich.)

**'Ramon'** VII(a-b/-)Parentage: (*speciosum* × 'Star Gazer') × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1988), N: R.B. Rooyakkers Bloembollen (1995), I: R.B. Rooyakkers Bloembollen (1997), REG: R.B. Rooyakkers Bloembollen (1997)

Inside strong purplish pink (73B), tepals paler than yellowish white (155D) at base; outside yellowish white (155D) tinged with pink at tepal-tips; spots pink-red; papillae present; nectaries green; pollen orange-brown; stigma grey. Fls c.150 mm wide; tepals 140 × 50 mm, margins ruffled, tips recurved. Lvs scattered, 140-150 × 50 mm. Stems 1.2 m, green with darker markings, and with 4-7 fls. Late.

**'Ramona'** I(b/-)

Parentage unknown

R: V.J. Hruby (1973), N: J. Wadkamper (1976), I: J. Wadkamper (1977), REG: J. Wadkamper (1977)

Fls red-orange throughout; spotted; nectaries red; pollen brown. Stems 0.3-0.8 m. June.

(Published in *Lilies and other Liliaceae*, 1977: 80.)**'Randa Lou'** I(a/c)

Parentage: unnamed seedling × unnamed seedling

R: R. &amp; H.R. Cocker (1981), G: R. &amp; H.R. Cocker, N: R. &amp; H.R. Cocker, I: R. &amp; H.R. Cocker, REG: R. &amp; H.R. Cocker (2003)

Inside deep pink (51C) shading to strong red (51A), tepal-edges paler, throat white; outside deep pink (51C), midribs greenish yellow; very dark spots on two-thirds

of each tepal; papillae white; nectaries green; pollen red-brown; stigma maroon. Fls 150 mm wide; tepals 75 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 125 × 10 mm. Stems 1 m, dark green, with 8-10 fls. Midseason.

(Named after one of the raisers' daughters. Nomenclatural standard: colour print supplied by registrant (WSY 0096345.)

#### 'Random Bliss' VIII(c/d)

Parentage: *martagon* var. *hirsutum* × 'Nightingale'  
R: N. Martschinke (1973), G: N. Martschinke (1978), N: E.E. Fox, I: Fox Lily Ranch, REG: E.E. Fox (2002)  
Inside very light purple (75C) in basal two-thirds of each tepal, and with a deep purplish red (59B) blotch of varying distribution in the top third, throat strong purple (77B); outside strong purple (77B), midribs deep reddish purple (77A); spots dark maroon with a paler halo, on central part of each tepal; nectaries deep reddish purple (77A); pollen vivid orange-yellow (23A); stigma deep reddish purple (77A). Fls 52 mm wide; tepals 40 × 16 mm, margins smooth, tips strongly recurved. Lvs whorled, 40 × 16 mm. Stems 1.2 m, dark green, with 18-22 fls. Late June to early July.

(A rare Div. II × Div. IV hybrid. Named in allusion to the configuration of the apical blotch, which is random, varying from fl. to fl. Nomenclatural standard: hard copy of a scanned colour print provided by registrant (WSY 0034905).)

#### 'Ranfurly' I(a/-)

Parentage: (pink-flowered, out-facing Asiatic seedling × 'Saskatoon') × 'Trogon'  
R: E.E. Fox (1991), G: E.E. Fox (1993), N: E.E. Fox (1997), I: Fox Lily Ranch (1997), REG: E.E. Fox (1997)  
Inside strong purplish red (60B), each tepal with a white and strong purplish pink (55B) flash above nectaries-furrow, throat strong purplish red (60B); outside vivid purplish red (66A) on tepal-margins shading to deep purplish pink (66C) centrally; spots tiny, dark red (59A) scattered on the basal two-thirds of each tepal; nectaries frosted; pollen vivid reddish orange (34B); stigma moderate red (180C) at centre, moderate red (180A) at margin. Fls 150 mm wide; tepals 75 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 12 mm, mid green. Stems 0.9 m, green with some brown mottling, and with up to 28 fls. Mid July.

#### 'Ranger' I(a/-)

Parentage: (('Mega' × 'Lemon Queen' (Div. I)) × 'Edith Cecilia') F<sub>2</sub> × 'Enchantment'  
R: J. de Graaff, N: J. de Graaff, I: J. de Graaff (1970), REG: Oregon Bulb Farms, Inc. (1969)  
Fls vivid red (45C) in centre, tepal-tips vivid yellowish orange (30C). Stems 1.2 m. June to July.  
(Published in *LYB* 33: 256 (1970).)

#### 'Rangitara' I(b/-)

Parentage: *davidii* × pink-flowered *L.* × *hollandicum*  
R: L.B. Tuffery (c. 1946), N: L.B. Tuffery  
Fls pinkish crimson.

#### Rangitoto Group VII(-/d)

Parentage: (*speciosum* × *auratum*) × unknown

R: N. Copey, N: N. Copey

Fls pure white, white with maroon spots to deep soft pinks, or heavy blackberry-red with white tepal-margins.

Fls scented, *speciosum* shape.

(Grown in New Zealand.)

#### 'Rangoon' I(a/-)

Parentage: (*lancifolium* var. *flaviflorum* × *wilsonii*) × 'Redstart'

R: D.B. Fox, N: D.B. Fox (1968), REG: D.B. Fox (1968)

Fls vivid reddish orange (34A/B), with strong red (46A) staining near centre; spots present. Fls c.165 mm wide.

(Published in *ILR* (1969).)

#### 'Rapallo' VII(b/b-d)

Parentage: seedling 666 × seedling 429

R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside strong to light purplish pink (63C/D), shading to yellowish white (155D) at tepal-edges, midveins on the basal half of each tepal suffused with strong red (47B), throat strong yellow-green (144C) edged light greenish yellow (6D); outside light purplish pink (65B), outer tepals suffused with strong purplish pink (63C), midribs light yellow-green (150D); papillae dark red (187C) and deep purplish red on the basal half of each tepal; nectaries deep reddish purple (77A); pollen strong orange (24A) and strong reddish orange (169A). Fls 250 mm wide; tepals 120 × 70 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 180 × 30 mm, mid green. Stems 0.95 m, pale green, with c.6 fls.

#### 'Raphael' I(a/-)

Parentage unknown

R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1989)  
Inside light yellow (11B), tepal-tips strong pink (50C), throat vivid yellow (15B); outside pale yellow (20C) with the outer tepals flushed with light yellow (20B) and the edges spotted deep pink (48A/B); spots small, dark red (187A) on the apical part of each tepal; pollen strong reddish orange (169A). Fls 160 mm wide; tepals 75 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 10 mm, mid green. Stems 0.6 m, green with darker markings, and with c.13 fls. June.

#### 'Rapid' VI(b-c/c-d)

Parentage: ((Palmer seedling 582812 × 'Gold Eagle') × 'Mimosa Star') × ('Oneida' × 'Toni')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside yellow with an apricot tint, tepal-tips paler, centre of each tepal lightly tinted with gold; outside pastel yellow, midribs light pink with green base; spots tiny, raised, pale apricot, on two-thirds of each tepal; nectaries deep green; pollen orange-chocolate; stigma green. Fls 125 mm wide; tepals 100 × 35 mm, thick, margins smooth, tips moderately recurved; pedicels 85 mm long,

green. Lvs scattered, 152 × 23 mm, dull pale green. Stems 1.15 m, with pale black-brown dots, and a medium-length infl. Early July.

#### **'Raptura' Div. ?**

Given as a parent of 'Midnight Star' which was raised by R.L. Strahm. No further details. Possibly an error for Raptura Group which was raised at the Strahm Bulb Farm.

#### **Raptura Group VII(-/b)**

Parentage: derived from *L. × parkmanii* type hybrids  
R: Strahm Bulb Farm (pre 1971), N: Strahm Bulb Farm  
Inside of tepals with watermelon-red rays, white edges and profuse crimson spots. Fls 225-250 mm wide. Stems 1-1.9 m. Aug.  
(Unacceptable name: ICNCP, 1980; Recommendation 13 Ah - name too similar to 'Rapture'.)

#### **'Rapture' VIII(b/-)**

Parentage: (*lancifolium* 'Splendens' × *chalconicum*) × apricot-flowered seedling  
R: L.B. Tuffery, N: L.B. Tuffery  
Fls pinkish apricot; spots absent.  
(Published in *LYB* 20: 72 (1957).)

#### **RASCAL BELLEVUE VII(b/d)**

Trade designation of 'Bellevue'.

#### **RASCAL EVERYTHING VII(-/c)**

Trade designation of 'Everything'.

#### **RASCAL HEARTBEAT VII(b/d)**

Trade designation of 'Heartbeat'.

#### **RASCAL LITTLE LOVE VII(b/b)**

Trade designation of 'Little Love'.

#### **'Rascal Macho' VII(b/b)**

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × *L. × parkmanii* Little Rascal Group  
R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside yellowish white (155D); outside yellowish white (155D), midribs tinged with strong yellow-green (144B) at base and top; spots absent; papillae yellowish white (155D) on the basal part of each tepal; nectaries light yellow-green (145B); pollen strong orange (25A); stigma darker than dark red (59A). Fls 120 mm wide; tepals 75 × 25 mm, margins ruffled, tips slightly recurved. Lvs scattered, 100 × 40 mm, mid green. Stems 0.35 m, mid green, with c.5 fls.  
Syn.: 'Macho'.  
(Submitted for registration as 'Macho' but epithet changed to 'Rascal Macho' before registration was completed.)

#### **'Rascal Miracle' VII(a-b/b)**

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star

Gazer') × *L. × parkmanii* Little Rascal Group  
R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside yellowish white (155B), midveins brilliant yellow (9C) on the basal part of each tepal; outside yellowish white (155B), midribs strong yellow-green (144B); spots greyish brown (166A) on two-thirds of each tepal; papillae yellowish white (155B) on the basal part of each tepal; nectaries strong yellow-green (144B); pollen brownish orange (171B); stigma yellowish grey (156C). Fls 150 mm wide; tepals 60 × 30 mm, margins of outer tepals slightly ruffled, tips of outer tepals slightly recurved. Lvs scattered, 90 × 45 mm, mid green. Stems 0.3 m, mid green, with c.5 fls.

Syn.: 'Miracle'.

(Submitted for registration as 'Miracle' but epithet changed to 'Rascal Miracle' before registration was completed.)

#### **RASCAL MOMENTUM VII(c/-)**

Trade designation of 'Momentum'.

#### **'Rascal Prestige' VII(b/b-c)**

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × *L. × parkmanii* Little Rascal Group  
R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside strong purplish red (60C) fading towards the yellowish white (155D) tepal-edges, midveins deep red (60A), throat yellowish white (155D); outside yellowish white (155D) suffused with moderate purplish red (64A), tepal-edges yellowish white (155D), midribs and base light yellow-green (150D); spots dark red (187A) on two-thirds of each tepal; papillae dark red (187B), near the nectaries; nectaries strong yellow-green (144C); pollen brownish orange (171B); stigma light yellow-green (145D). Fls 140 mm wide; tepals 80 × 30 mm, margins hardly ruffled, tips strongly recurved. Lvs scattered, 110 × 40 mm, mid green. Stems 0.48 m, pale green, with c.9 fls.  
Syn.: 'Prestige'.  
(Submitted for registration as 'Prestige' but epithet changed to 'Rascal Prestige' before registration was completed.)

#### **RASCAL SANTA BARBARA VII(a-b/b)**

Trade designation of 'Santa Barbara'.

#### **RASCAL SUBLIME VII(-/d)**

Trade designation of 'Sublime'.

#### **RASCAL THRILLER VII(c/-)**

Trade designation of 'Thriller'.

#### **'Raschoetz' I(b/c-d)**

Parentage: 'Snow Lark' × 'Chios'  
R: N. Martschinke (1979), G: N. Martschinke (1982),

N: N. Martschinke (1988), REG: N. Martschinke (1991)  
Inside strong to light orange-yellow (24B/C), throat strong yellow-green (144B); outside strong greenish yellow (151A) with moderate reddish brown/greyish reddish orange (174A/B) spots; inside heavily spotted dark red on the basal half of each tepal; pollen strong orange (25A). Fls 120 mm wide; tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 13 mm, dark green. Stems 1.4 m, dark green, with c.27 fls. July.

#### **'Rasma' I(b-c/c)**

Parentage unknown

R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs

Fls golden yellow throughout; spots dark brown, numerous in centre of fl.; pollen brown. Fls 120 mm wide; tepals 80 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered. Stems 1.1 m, brown.  
(Published in *Dārzs un Drava* 7: 21 (1986).)

#### **'Raspberries and Cream' I(a/-)**

Parentage unknown

R: J. Wadekamper (1976), G: J. Wadekamper (1979), N: J. Wadekamper (1991), I: Borbeleta Gardens (1991), REG: J. Wadekamper (1993)

Inside deep purplish pink (55A) on the apical half of each tepal, shading to creamy white and then to the moderate red (47A) throat; outside tan-pink; spots insignificant; nectaries cream; pollen light brown. Tepals 70 × 18 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 20 mm, mid green. Stems 0.6 m, tan-green, with c.8 fls. Early.  
(Published in *Borbeleta Gardens Cat.*, 1991.)

#### **'Raspberry Butterflies' I(c/d)**

Parentage unknown

R: Columbia-Platte Lilies, N: Columbia-Platte Lilies, I: Columbia-Platte Lilies (1996), REG: ICRA (1998)

Inside raspberry-pink, with a few darker spots towards the base of each tepal. Fls slightly scented; tepal-margins smooth, tips distinctly recurved. Lvs blue-green. Stems 1 m. Mid to late June.  
(Published in *The Lily Garden Cat.*, 1996/97: 3, with colour illustration.)

#### **'Raspberry Delight' II(-/-)**

Parentage unknown

R: E. Robinson (pre 1975), G: E. Robinson (c. 1980), N: D. Dale (1991), I: Parkland Perennials (1994), REG: D. Dale (1993)

Inside raspberry rose-pink with a light pink throat; outside raspberry rose-pink; some very fine spots, framed in cream, occur sporadically on the centre of each tepal; nectaries cream; pollen rusty orange. Fls 65 mm wide; tepals 29 × 16 mm, margins smooth, tips strongly recurved. Lvs whorled, 95 × 28 mm, pale green. Stems 0.9-1.3 m, plum-coloured in upper part, brown at base, with 10-18 fls. Early July.

#### **'Raspberry Fizz' I(a/-)**

Parentage: ('Red Spire' × 'Juliana') × out-facing, pink-flowered hybrid of 'Peachblush'

R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987), REG: Columbia-Platte Lilies (1988)

Inside moderate to strong purplish red (59C/D), each tepal with a tiny mark (10 × 3 mm) extending above nectaries; outside strong purplish red (59D); spots tiny, self-coloured, on the basal third of each tepal; nectaries white-downy with soft pink margins; pollen dark reddish orange (172B). Tepals 70-90 × 30-35 mm, margins ruffled, tips very slightly recurved; pedicels dark. Lvs scattered, 100-150 × 20-25 mm, dark green. Stems 1.5-1.8 m, dark green, with 7-10 fls. Late June.

#### **'Raspberry Ice' I(c/-)**

Parentage: ('Hawaiian Punch' × seedling OC-38) × pink-flowered Whipple seedling

R: J. Wadekamper, N: J. Wadekamper, I: Borbeleta Gardens (1994), REG: ICRA (1997)

Inside reddish pink, with a darker line down the centre of each tepal; spots tan. Stems c.1 m. Late.  
(Published in *Borbeleta Gardens Cat.*, 1994.)

#### **'Raspberry on Whip' I(a-b/b-c)**

Parentage: 'Carol Jean' ? × unknown

G: F. Fellner (1983), N: F. Fellner (1996), I: Riverside Gardens (1996), REG: F. Fellner (1996)

Inside reddish pink in basal half, apical half cream, shading to near white at tepal-tips; outside turning red before opening; spots large, dark reddish pink on half to three-quarters of each tepal; nectaries reddish pink; pollen brown. Fls 125 mm wide; tepals 65 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 75 × 15 mm, dark green. Stems 0.75 m, blackish, with 6-10 fls. Early to mid July.  
(Possibly raised by Dick Thomas.)

#### **'Raspberry Ripple' I(b/-)**

Parentage: ('Appleblossom' × 'Sunrise') × 'Bunt 1'

R: Hartle-Gilman Gardens (1981), G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1989), I: Hartle-Gilman Gardens (1993), REG: Hartle-Gilman Gardens (1994)

Inside greenish white (155C) and moderate purplish red (186B), tepal-tips moderate purplish pink (186D), throat moderate purplish red (186B); outside moderate purplish pink (186D); spots numerous, small, dark, on the basal two-thirds of each tepal; nectaries slightly pink-frosted; pollen rust-coloured. Tepals 64 × 33 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 6 mm, mid green. Stems 0.65 m, mid green, with 15-22 fls. Midseason.

(Published in Hartle-Gilman Gardens list, 1993. Colour may suffuse over a large part of the greenish white inner surface.)

#### **'Raum und Zeit' I(a/c)**

Parentage: ('Medora' × 'Mont Blanc') × Asiatic seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N:

G. Steinbrück (1995), I: G. Steinbrück (1995), REG: G. Steinbrück (1996)

Inside and outside pale yellow (158A); spots absent; nectaries greenish white (157D); pollen dark reddish orange (178B). Fls 120 mm wide; tepals 65 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 22 mm, dark glossy green. Stems 1.2 m, rather dark green, with c.12 fls. July.

**‘Ravenglass Variety’ IX(c/d)**  
See *lancifolium* ‘Ravenglass Variety’.

**RAVENNA VII(a/b)**  
Trade designation of ‘Zanlorvenna’

**‘Raylee’ VII(-/b)**  
Parentage unknown  
I: B.G. Hayler (1962)  
Inside white, each tepal with crimson (HCC 22/1) ray, fading to flush of Tyrian rose (HCC 24/2) over tepal; spots raised, crimson-brown; nectaries edged with green-yellow. Fls 230 mm wide, *auratum* type. Lvs *auratum* var. *platyphyllum* type. Stems 1.2 m.  
(Published in *Golden Ray Gardens Cat.*, 1962. Possibly raised by J.S. Yeates in New Zealand.)

**‘Razna’ IX(-/d)**  
See *henryi* ‘Rāzna’.

**‘Rāzna’ IX(-/d)**  
See *henryi* ‘Rāzna’.

**‘Razzle Dazzle’ I(a/b)**  
Parentage unknown  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Inside fire engine-red; spots absent; style red. Tepal-margins smooth, tips slightly recurved. Stems 1.2-1.5 m. Early July.  
(Published in *The Lily Garden Cat.*, 1996/97: 13.)

**‘Reale’ I(a-b/-)**  
Parentage: seedling W 93-3 × seedling W 93-10  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2000), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside yellowish white (155D), midveins green at base; outside yellowish white (155D); spots and papillae absent; nectaries green; pollen orange-brown; stigma green with purple spots. Tepal-margins slightly ruffled, tips slightly recurved. Stems medium to tall. Midseason.

**‘Real Time’ VIII(a-b/b)**  
Parentage: unnamed seedling × (*longiflorum* × ‘Sterling Star’)  
R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2001), REG: Bischoff Tulleken Lelies B.V. (2001)  
Inside yellowish white (155D); outside greenish white to yellowish white (155C/D), midveins moderate red

(182B); spots dark red (187A); papillae absent; nectaries greenish white (155C), surrounded by a little strong yellow-green (144A); pollen moderate reddish brown (175A); stigma pale greenish yellow (160C). Fls 235 mm wide; tepals 125-135 × 45-60 mm, margins smooth, tips recurved. Lvs scattered, 160 × 25 mm. Stems 1.05 m, green with darker markings, and with 4-6 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Rebecca’ I(a-b/c)**  
Parentage: (yellow-flowered seedling × ‘Connecticut King’) × yellow-flowered *dauricum* hybrid  
R: K. de Jong (1978), G: De Jong Lelies (1980), N: De Jong Beheer B.V. (1984), I: De Jong Lelies (1981), REG: De Jong Beheer B.V. (1988)  
Inside vivid yellow (9A), throat green-yellow; outside brilliant greenish yellow (3B), with pale green midribs and a broad, green to brownish flame on outer tepals; spots dark brown, in the throat; nectaries greenish yellow, edged reddish brown. Fls 140 mm wide; tepals 90 × 50 mm, slightly recurved. Lvs scattered, 105 × 10 mm, pale green. Stems 1-1.3 m, green with some dark pigmentation, and with 8-14 fls. July.

**‘Rebel’ I(a/b)**  
Parentage: ‘Target’ × ‘Windahlo’  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002), REG: B. Mičulka (2002)  
Inside orange-red on a bronze ground, with a narrow yellow rim, throat yellowish; outside bronze-orange, midribs pale greenish yellow; large, diffused, dark mahogany brushmarks and a few, small, dark red-brown spots on fifth of each tepal; papillae few, small, in the throat; nectaries white-granulated; pollen-brown ochre; stigma dark crimson. Fls 120 mm wide; tepals 75 × 38 mm, outer tepals slightly reflexed; pedicels 20 mm long, thick, brown-spotted, hairy. Lvs scattered, 65 × 11 mm, pale green. Stems 0.85 m, thick, slightly hairy, slightly brown-spotted, with a short infl. Late June.

**forma rebunense IX(a/b)**  
See *dauricum* forma *rebunense*.

**‘Red Ace’ VII(-/c)**  
See *L. × parkmanii* ‘Red Ace’.

**‘Red Admiral’ I(a/-)**  
See *L. × scottiae* ‘Red Admiral’.

**‘Red Alert’ VIII(a-b/b)**  
Parentage: unnamed seedling × unnamed seedling  
R: Testcentrum voor Siergewassen B.V., G: Marklily C.V. (1998), N: Marklily C.V. (2001), I: Marklily C.V. (2001), REG: Marklily C.V. (2002)  
Inside dark red (183B/187B); outside deep red (185A); spots purple-red; papillae present; nectaries purple-red; pollen red; stigma red. Fls 150 mm wide; tepals 100 × 50 mm, margins smooth to very slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 20 mm. Stems 0.9 m, green and brown, with 3-9 fls. Early to midseason.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Red Arrows' VIII(a/c)**

Parentage: unnamed seedling × unnamed seedling  
 R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2000), REG: Bischoff Tulleken Lelies B.V. (2001)  
 Inside moderate purplish red (184C), throat pale yellow (18D) with a pink suffusion; outside greyish red (184A) changing to dark yellowish pink (181D) towards moderate purplish red (184D) tepal-edges; spots dark red (187A); papillae pale yellowish pink (27C); nectaries pale orange-yellow (19D); pollen dark red (187A); stigma moderate purplish red (185C). Fls 200 mm wide; tepals 120 × 45-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 155 × 20 mm. Stems 0.9-1.2 m, light green, with c.4 fls. June.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Red Artiste' I(a/b)**

Parentage unknown  
 R: Columbia-Platte Lilies (pre 1997), N: Columbia-Platte Lilies, REG: ICRA (1998)  
 Fls red, each tepal with a dark plum brushmark and associated spot on an orange ground. Tepal-margins smooth, tips slightly recurved. Stems 1-1.5 m. Late June to July.  
 (Published in *The Lily Nook Cat.*, 1998/99: 15.)

**'Red Badge' I(a/-)**

Parentage unknown  
 R: E.H. Doerr (1988), G: E.H. Doerr, N: Hartle-Gilman Gardens (1995), I: Hartle-Gilman Gardens (1995), REG: Hartle-Gilman Gardens (1995)  
 Inside dark red (187), tips and throat vivid red (46B); outside a red blend; spots dark, barely visible in the centre half of the fl.; nectaries frosted; pollen bright orange. Fls 138 mm wide; tepals 70 × 40 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 103 × 5 mm, moderate olive-green (137A). Stems 1.17 m, dark green, with c.18 fls. Midseason.

**'Red Band' IX(b/c)**

See *auratum* var. *rubrum* 'Red Band'.

**Red Band Group VII(-/b)**

Parentage: *auratum* × unknown  
 R: J. de Graaff (c. 1957), N: J. de Graaff  
 Tepals with a pronounced crimson-red stripe down the centre, edges white. Stems 1.5 m. Aug.  
 (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv.)

**'Red Bank' I(a/-)**

Syn. of 'Red Chair'.

**'Red Baron' VII(-/b)**

See *L. × parkmanii* 'Red Baron'.

**'Red Beauty' I(c/-)**

Parentage: 'Radostnaia' × unnamed seedling  
 R: De Jong Lelies Beheer B.V. (c. 1979), N: De Jong

Lelies Beheer B.V.

Inside vivid reddish orange (34A) and vivid reddish orange/vivid red (42A/45A); outside moderate red (179A); spots few, black; pollen light brown. Tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 25 mm. Stems 1.2 m, brown-violet, with 8-12 fls. July.

**'Red Beauty' I(a/-)**

Parentage: ('Harmony' × ('Tabasco' × 'Connecticut Yankee')) × 'Gran Paradiso'  
 R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1995)  
 Inside vivid reddish orange (34A), tepals with a little vivid reddish orange (42A) at tip and with a little vivid reddish orange (32A) above nectaries; outside vivid reddish orange (34B), outer tepals edged with vivid reddish orange (34A); spots and papillae absent; nectaries vivid reddish orange (32A); pollen moderate reddish brown (175A); stigma dark red (187A). Fls 150 mm wide; tepals 90-95 × 35-50 mm, margins smooth, tips recurved. Lvs 190 × 20 mm, mid green. Stems 1.35 m, green with some darker markings, and with 4-9 fls. June.  
 (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Red Bess' I(b/-)**

Parentage: 'Red Tiger' × red-flowered *L. × hollandicum* hybrid  
 R: D.M. Stone, N: D.M. Stone & F.H. Payne (1966), I: D.M. Stone & F.H. Payne (1969), REG: (between 1970 and 1981)  
 Inside currant-red (HCC 821), tepal-tips HCC 821/4, throat currant-red (HCC 821); outside HCC 821/3; spots black; nectaries slightly white. Lvs very dark green, broader than in *lanceifolium* type. Stems 1.2 m, with bulbils. Aug.  
 (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 16 (1978).)

**'Red Bird' IV(-/d)**

Parentage: selection from Bellingham Group  
 S: J. de Graaff (c. 1954), N: J. de Graaff  
 Fls deep red.  
 (Published in *Oregon Bulb Farms Cat.*, 1954.)

**'Redbird' I(a/-)**

Parentage: (*bulbiferum* var. *croceum* × *L. × maculatum* 'Mahogany') × *lanceifolium*  
 R: E.F. Palmer (c. 1940), N: E.F. Palmer  
 Fls medium red, shaded darker and spotted mahogany. Stems up to 1.5 m, dark, with up to 16 fls. July.  
 (Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Red Bird'. Published in *B.L. Palmer Cat.*, 1957.)

**'Red Blaze' I(a-b/b)**

Parentage: unnamed bicolor × 'Connecticut Dream'  
 R: F. Fellner, G: F. Fellner (1981), N: F. Fellner (1998), I: Riverside Gardens (1999), REG: F. Fellner (1999)

Inside red, tepal-tips pink, throat frosted; outside pinkish; spots large, dark, on half of each tepal; nectaries frosted; pollen brown. Fls 125 mm wide; tepals 65 × 35 mm, very slightly wavy-edged, tips slightly recurved. Stems 0.9-1.3 m, green, with c.10 fls. Mid to late July.

**‘Red Brush Bird’ I(a/-)**

Parentage: (‘Red Song’ × unknown) × Hayler seedling  
R: H. Georgi (1987), G: H. Georgi (1990), N: H. Georgi (1992), REG: H. Georgi (1992)

Inside clear red, throat yellow-green; outside greenish red, each tepal with regular black brushmarks and without additional spots; nectaries pale green-yellow; pollen moderate red. Fls 150 mm wide; tepals 90 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 20 mm, mid green. Stems 0.75 m, pale green, with 5-8 fls, lacking bulbils. Mid June to early July.

(Both known parents were up-facing, red-flowered Asiatic seedlings with black brushmarks.)

**‘Red Bud’ VII(-/b)**

See *L. × parkmanii* ‘Red Bud’.

**‘Red Bullet’ I(a/-)**

Parentage: unnamed hybrid ex Laan × unnamed hybrid ex Laan

R: Gebr. N. & B. Laan & Zn (1986), G: Gebr. N. & B. Laan & Zn (1988), N: Gebr. N. & B. Laan & Zn (1990), I: Bloembollenbureau Cebeco (1996), REG: Laan Flora Facilities v.o.f. (2001)

Inside deep red (185A), darker at the base, a little lighter at tepal-tips; outside strong red (46A), lighter along midribs; spots and papillae present; nectaries dark red; pollen reddish brown; stigma dark purple. Fls 100 mm wide; tepals 80 × 20 mm, margins strongly ruffled, tips strongly recurved. Lvs scattered, 70 × 15 mm. Stems 0.7 m, green with dark stripes and spots, and with c.8 fls. Midseason (two weeks earlier than ‘Enchantment’).

**‘Red Bunch’ I(a/b)**

Parentage: ‘Connecticut Red’ × ‘Chiquita’

R: J. Bodalski (1871), G: J. Bodalski (1983), N: J. Bodalski (1986), I: J. Bodalski (1987), REG: J. Bodalski (1987)

Fls red, tepal-tips vivid red (45A), throat strong red (46A); outside strong red (46A); spots dark brown on basal half of each tepal; pollen strong reddish orange (169A). Tepals 90 × 20-30 mm, margins ruffled, slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 0.9 m, mid green, with c.20 fls. July.

**‘Red Callant’ I(a/-)**

Parentage unknown  
REG: D. Schoon (1999)

Inside vivid reddish orange (34A) to vivid red (44A), becoming vivid orange (28A) at the base; outside vivid reddish orange (34A) to vivid red (44A); spots black on basal part of each tepal; nectaries red; pollen and stigma red-brown. Tepals 50 × 10 mm, margins smooth, tips slightly recurved. Stems 1 m, with dark markings, and with c.5 fls.

**‘Red Carpet’ I(a/b)**

Parentage: *L. × scottiae* × unknown

R: A.J. Porter (1960), N: A.J. Porter (1969), I: A.J. Porter (1969), REG: A.J. Porter (probably 1969)

Fls vivid red (44A) throughout; spots absent; nectaries vivid red (44A); pollen vivid reddish orange (34B). Lvs strong yellow-green (144B), narrow. Stems 0.3 m. July. (Published in *Niagara Highland Lily Gardens Cat.*, 1974.)

**‘Red Chair’ I(a/-)**

Parentage: ‘Connecticut King’ × ‘Prominence’

R: Gebr. Mak B.V. (1977), G: Gebr. Mak B.V. (1979), N: Gebr. Mak B.V. (1984), I: Gebr. Mak B.V. (1984), REG: Gebr. Mak B.V. (1988)

Moderate reddish orange (179C) flushed with brown-red; outside moderate red (179A), midribs paler; pollen brownish red. Fls 140 mm wide; tepals 70 × 35 mm, slightly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 0.7 m, pale green with some darker marking, and with c.12 fls.

Syn.: ‘Red Bank’.

**Red Champion Group IX(b-c/d)**

See *speciosum* Red Champion Group.

**‘Red Charme’ I(-/-)**

Parentage: ‘Avignon’ × unnamed seedling

R: M. van Egmond (1986), G: M. van Egmond (1988), N: M. van Egmond (1992), I: M. van Egmond (1992), REG: van Egmond Callantsoog B.V. (1994)

Inside vivid reddish orange (32A), throat deep pink (51C); outside strong reddish orange (31A) striped moderate red (47A) and strong reddish orange (32B), tepal-edges vivid reddish orange (42A); spots dark greyish reddish brown (200A) in the throat; pollen moderate reddish orange (171A); stigma dark red (59A). Fls 170 mm wide; tepals 85 × 50 mm, margins smooth. Lvs scattered, 120 × 15 mm, mid green. Stems 0.67 m, green with darker markings, and with c.6 fls.

**‘Red Classic’ VIII(a-b/b)**

Parentage: (*longiflorum* × unknown) × Asiatic hybrid

R: Bischoff Tulleken Lelies B.V., N: Salmon Classic Group (2001), REG: Salmon Classic Group (2003)

Inside moderate to deep red (179A/185A) changing to moderate red (179A/B) towards tip of each tepal, midveins deep red (185A) fading into the tepals, throat deep red (185A); outside moderate reddish orange (35A/B), vivid reddish orange (34A/B) towards tepal-edges; spots few in throat, dark red (187A); papillae present; nectaries similar to tepals; pollen strong reddish orange (169A); stigma deep red (185A). Fls 210 mm wide; tepals 110 × 40-50 mm, margins smooth or very slightly ruffled, tips recurved. Lvs 145-160 × 15-25 mm. Stems 1.15 m, green, with reddish markings in basal part, with c.10 fls. Very early. (*A longiflorum*/Asiatic (LA) hybrid.)

**‘Red Cloud’ I(c/-)**

Parentage unknown

R: H.O. Beracha (pre 1978), N: H.O. Beracha

Fls mid red. Stems 0.8 m. June.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 45 (1978).)

**'Red Cloud'** VII(-/-)

See *L. × parkmanii* 'Red Cloud'.

**'Redcoat'** I(b/c)

Parentage: 'Edith Cecilia' × unknown  
R: E. Robinson, N: E. Robinson (1976), I: E. Robinson (1976), REG: E. Robinson (1977)

Fls red with yellow stripe down each tepal. Fls 150 mm wide. Stems 1-1.2 m.

(Published in *Gaybird Nursery Cat.*, 1976.)

**'Red Comet'** VII(-/c)

Parentage unknown

R: L. Woodriff (1958), G: H.J. & R.L. Strahm (1962), N: J. Straver (1969), I: H.J. & R.L. Strahm (1969), REG: H.J. & R.L. Strahm (1984)

Inside crimson-rose, tepals crimson in centre, tips and edges white; outside pink and tan; spots dark crimson; nectaries green. Fls 225 mm wide; tepals 115 × 50 mm, tips strongly curled. Lvs scattered. Stems 1.2 m. Aug.  
(Published in *Rex Bulb Farms Cat.*, 1969.)

**'Red Commander'** I(a/-)

Parentage: 'Golden Coronet' × ('Algonquin' × 'Marijean')

R: G.S. Jacobs, G: G.S. Jacobs, N: G.S. Jacobs (1982), I: Borbeleta Gardens (1983), REG: J. Wadkamper (1983)

Inside vivid reddish orange (33A), lighter in centre of tepals, throat deep red, tips vivid reddish orange (32A), throat vivid red (44A); outside vivid reddish orange (34B); spots few, fine, on a third of each tepal; nectaries red; pollen light brown. Tepals 90 × 30 mm, margins smooth; tips slightly recurved. Lvs scattered, 125 × 10 mm, pale green. Stems 1 m, tan, with 10-12 fls. Late.  
(Published in *Borbeleta Gardens Cat.*, 1983 (where the seed parent is erroneous).)

**'Red David'** I(-/d)

Parentage: derived from  *davidii*  & Preston Group

R: A.C. McKillop, N: G. Errey, I: L. Ball

Fls deep blood-red, *davidii*-shaped.  
(Published in *LYB* 14: 63 (1950).)

**'Red David'** I(c/-)

Parentage unknown

R: T.L. Bartel, N: T.L. Bartel

Fls red-orange.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 45 (1978).)

**'Red Devil'** VII(-/-)

Parentage unknown

R: F. Jury (pre 1997), N: F. Jury

Fls clear bright red throughout, including nectaries.  
(Published in *M. Jury Cat.*, 1998.)

**'Red Diamond'** VII(-/-)

Parentage unknown

R: P. van Leeuwen (1974), G: P. van Leeuwen (1976), N: P. van Leeuwen (1982), I: P. van Leeuwen (1983), REG: P. van Leeuwen (1968)

Fls strong purplish red (54A), each tepal flamed vivid red (52A) and edged white; spots currant-red on the whole fl.; nectaries blue-black; pollen dark red-brown.

Syn.: 'Red Jewel'.

(Named and introduced in 1983 as 'Red Jewel'.)

**'Redding'** VIII(a-b/b)

Parentage: seedling E 905-6 × seedling OR 2

R: World Breeding B.V., N: World Breeding B.V. (2001), REG: World Breeding B.V. (2004)

Inside brilliant yellow (12B), lighter towards tepal-margins and tips, midveins vivid yellow (12A) at base; outside light greenish yellow (8C); spots absent; papillae present; nectaries yellow-green; pollen orange-red; stigma green. Tepals short to medium sized, margins ruffled, tips strongly recurved. Lvs scattered, medium sized, dark green. Stems c.1.3 m, green, with 2-10 fls. Late.

(An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096408).)

**'Red Dragon'** VII(-/b)

See *L. × parkmanii* 'Red Dragon'.

**Red Dragon Group** VI(-/a)

Syn. of Rubaster Group.

**'Red Duchess'** I(a/-)

Parentage unknown

R: Van der Salm Bulb Farm, Inc. (1974), G: Van der Salm (Holland) (1979), N: Van der Salm Bulb Farm, Inc. (1990), I: Van der Salm Bulb Farm, Inc. (1990), REG: Van der Salm Bulb Farm, Inc. (1990)

Inside vibrant clear red, tepal-tips clear red, throat burgundy-red; outside soft burgundy-red; spots absent; pollen brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1 m, mottled dark purple. Mid June.

**'Red Duke'** IX(b-c/d)

See *speciosum* 'Red Duke'.

**'Red Dutch'** I(a-b/c)

Parentage: unnamed seedling × unnamed seedling

R: World Breeding B.V. (1993), G: World Breeding B.V. (1996), N: World Breeding B.V. (2000), I: World Breeding B.V. (2000), REG: Kwekersvereniging "Het Vrije Westen" (2001)

Inside close to deep red (183A/185A) shading to a broad ray of brilliant to light yellow (11A/B) and with some brilliant yellow (20A) at tepal-edge, throat pale yellow (11C); outside deep to moderate red (185A/B) on a light yellow (10C) ground, tepal-edges mainly yellow, midribs strong yellow-green (144C) at base; spots absent; papillae on up to a half of each tepal (mainly in throat); nectaries strong yellow-green (144A) surrounded by vivid orange-yellow (21A); pollen moderate reddish brown (166B);

stigma moderate yellow-green (146C/D). Fls 210-250 mm wide; tepals 110-115 × 45-60 mm, margins hardly ruffled, tips recurved. Lvs scattered, 130-140 × 25-35 mm. Stems 1-1.15 m, green with a little darker marking, and with relatively few fls.

**'Red Dwarf' I(a/b)**

Parentage: 'Charisma' × 'Red Carpet'  
R: H. Mantel (1983), G: H. Mantel (1986), N: Mt Hood Lilies Inc. (1993), I: Mt Hood Lilies Inc. (1993), REG: Mt Hood Lilies Inc. (1996)

Inside vivid reddish orange (44B) to moderate/strong red (47A/B) shading into vivid red (46B); outside vivid reddish orange (44C) to vivid red (46B); spots absent; nectaries shiny red; pollen red; stigma moderate reddish orange (42D). Fls 150-170 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered, 80-120 × 15-25 mm, mid to dark green. Stems 50-70 cm, green, with 4-8 fls (from 14/16 cm bulbs).

**'Red Echo' I(a/-)**

Parentage: a Canadian seedling × 'Firebright'  
R: G.M. Chandler (c. 1967), G: G.M. Chandler (1970), N: G.M. Chandler, I: G.M. Chandler (post 1970), REG: G.M. Chandler (1973)

Fls blood-red (HCC 820), 125 mm wide; spots small, dark, on inner tepals. Lvs 100 × 13 mm. Stems 0.6 m, with up to 17 fls.  
(Published in *Lilies and other Liliaceae*, 1973/1974: 112.)

**'Red Elegance' I(b/-)**

Parentage: ('Mega' × unknown) × unknown  
R: E. Robinson (1974), G: E. Robinson (1977), N: E. Robinson (1979), I: E. Robinson, REG: E. Robinson (1984)

Inside bright red, outside orange-red; dark spots on most of the fl.; pollen orange. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 0.3-0.6 m, dark green, with c.5 fls. July.

Syn.: 'Red Elegans'.

(Previously known under the illegitimate epithet 'Red Elegans'.)

**'Red Elegans' I(b/-)**

Syn. of 'Red Elegance'.

(An illegitimate epithet, now replaced by 'Red Elegance' (q.v.).)

**'Red Elf' VII(-/b)**

Parentage: Little Red Rascal Group × Little Red Rascal Group

R: Fairdale Nursery (1991), N: Fairdale Nursery, REG: Van der Salm Bulb Farm, Inc. (1992)

Inside crimson-red with white tepal-tips and margins, throat crimson-red; outside suffused with green; papillae numerous; nectaries lime-green. Miniature habit.

**'Redelia' I(b/-)**

Parentage: ('Mic Mac' × unknown) × 'Quadroon'  
R: J.C. Ericksen (pre 1975), N: J.C. Ericksen, REG: J.C. Ericksen (1975)

Fls shining dark pink, fading to clear red. Stems 1.2 m. July.

(Published in *Lilies and other Liliaceae*, 1975: 95.)

**'Red Emperor' IX(b/c)**

See *auratum* 'Red Emperor'.

**'Red Emperor' I(a/b)**

See *L. × maculatum* 'Red Emperor'.

**'Red Empress' Div. ?**

Given as a parent of Devon Dawn Group. No further details.

**'Red Fire' VII(-/-)**

See *L. × parkmanii* 'Red Fire'.

**'Red Flare' Div. ?**

Parentage unknown  
(Published in *Wallace & Barr Cat.* No further details.)

**Red Flare Group I(a/-)**

Parentage unknown

R: unknown (pre 1982)

Inside red with dark spots on basal half of each tepal.

Tepal-margins ruffled.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv. This epithet has been attributed to Jan de Graaff, but Ed McRae (*in litt.* Aug. 1983) said that it is not an Oregon Bulb Farms lily.)

**'Red Fortune' I(a/-)**

Parentage: 'Brenda Watts' × *L. × hollandicum* 'Vermilion Brilliant'

R: E.F. Palmer (c. 1945), N: E.F. Palmer, I: E.F. Palmer (1956)

Fls deep currant-red; spots present. Stems 0.6 m. June to July.

(Published in *ILR* (1960).)

**'Red Fox' I(c/d)**

Parentage: ('Maxwill' × *regale*) × *L. × maculatum* 'Mahogany'

R: Gebr. N. & B. Laan & Zn (c. 1963), N: Gebr. N. & B. Laan & Zn

Fls vivid reddish orange (42A) suffused with dark brownish red; spots dark brown.

Syn.: 'Abendglut'; 'Red Tiger' (Div. 1(c/d)).

Trade designation: LA SERENISSIMA.

**'Red Fury' VII(-/l)**

See *L. × parkmanii* 'Red Fury'.

**'Red Galaxy' I(a-b/b-c)**

Parentage: 'Coppertone' × unknown

R: F. Fellner (1988), G: F. Fellner, N: F. Fellner (1999), I: Riverside Gardens (1999), REG: F. Fellner (1999)

Inside red, each tepal with a slight orange tinge above nectaries and with fine, darker red spots on three-quarters of area; outside pinkish; nectaries pinkish; stigma pale (not pinkish). Fls 125 mm wide; tepals 60 × 35 mm,

margins smooth, tips not recurved. Stems 0.8 m, with 10-12 fls. Mid to late July.

**'Red Gauntlet'** II(-/-)

Parentage unknown

R: ? Dobbie & Co. (pre 1963), N: ? Dobbie & Co. PC 1933

Fls cream, with chocolate-brown tepal-tips; spots chocolate-brown. Lvs whorled. Stems 1 m. (Published in *JRHS* 59: xxix (1934).)

**'Red Gem'** VII(-/b)

See *L. × parkmanii* 'Red Gem'.

**'Red Giant'** I(c/-)

Parentage unknown

R: K. Kiel (pre 1986), N: K. Kiel

Inside brick-red. Stems 1.5-1.8 m, with bulbils. Late July. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in German Lily Group sales list, 1986.)

**'Red Giant'** I(b/-)

Syn. of 'Byam's Red Giant'.

**'Red Giant'** IX(c/d)

Syn. of *pardalinum* var. *giganteum*.

**Red Glory Group** I(-/-)

Parentage: selections from Futura Group

S: Blackthorne Gardens, N: Blackthorne Gardens (1982),

I: Blackthorne Gardens (1982)

Fls red.

**'Red Goblets'** I(a/-)

Parentage: unknown × Red Knight Group

R: Campbell, N: Campbell

Fls deep red. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978) where seed parent is given as perhaps 'Algonquin'.)

**'Red Gold'** I(b/-)

Syn. of 'Copper Gold'.

**Red Gold Group** VI(-/a)

Parentage: *regale* 'Royal Gold' × unknown

R: J. de Graaff (c. 1956), N: J. de Graaff

Fls yellow, veined red. Stems 1 m. July.

(Published in *LYB* 21: 61 (1958). Included in *ILR* (1960) as Red Gold grex.)

**'Redgoldina'** VI(b/a)

Parentage: *regale* 'Royal Gold' × unknown

R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B.

Mičulka (1984)

Inside golden apricot; outside paler with mahogany-red midribs; pollen brown; stigma dark violet-brown. Fls 110 × 125 mm.; tepals 130 × 42 mm, tips strongly recurved. Lvs 70 × 9 mm, dull green. Stems dark green, scarcely violet-spotted. Early July.

**'Red Hot'** VIII(c-d/b)

Parentage: seedling 821-11 × Oriental mixture

R: World Breeding B.V., N: World Breeding B.V. (2001),

REG: World Breeding B.V. (2004)

Inside strong reddish orange (42C), becoming bluer with age, tepal-margins brilliant yellow/light greenish yellow (8A/B), midveins orange-yellow at base changing into red-pink; outside strong/light purplish pink (63C/D), tepal-margins brilliant yellow (8A); spots and papillae present; nectaries green changing into red; pollen strong orange (168A); stigma green. Fls 190 mm wide; tepals 125-130 × 35-57 mm, margins slightly ruffled, tips recurved. Lvs scattered, 71-207 × 18-40 mm, dark green. Stems 1-1.2 m, green, with 3-12 fls. (An *Oripenet* (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096405).)

**'Red Improved'** I(a/b)

See *L. × maculatum* 'Red Improved'.

**'Red Jamboree'** Div. ?

Given as a parent of 'Analyzer', 'Intercept' and 'Memory' which were raised by M. van Egmond. No further details.

**'Red Jewel'** I(-/-)

Syn. of 'Red Diamond'.

**Red Jewels Group** I(c/d)

Parentage: (*pumilum* × *anabile*) × 'Maxiclas'

R: J.F. McRae & L.D. Marshall (1979/1980), G: J.F.

McRae (1981/1982), N: Columbia-Platte Lilies (1982),

I: Columbia-Platte Lilies (1982), REG: Columbia-Platte Lilies (1984)

Inside vivid reddish orange (32A/34A); outside vivid reddish orange (32A); some fls unspotted, some with medium to small spots on the centre half of tepals; nectaries green or reddish green; pollen dark reddish orange (173A). Some fls scented; tepals 50-70 × 15-20 mm, margins smooth, tips strongly recurved. Lvs scattered, c.100 × 15 mm, dark green. Stems 0.9-1.5 m, green, with 6-20 or more fls. June.

Syn.: Red Jewels of Albany Group.

(Published in *Rex Lilies Cat.*, 1982; *Borbeteta Gardens*

*Cat.*, 1982. Originally named and listed under the illegitimate synonym Red Jewels of Albany Group.

Included in *ILR Third Supplement* as Red Jewels grex.)

**Red Jewels of Albany Group** I(c/-)

Syn. of Red Jewels Group.

**'Red Jumprava'** VIII(a/c)

Parentage: 'Jumprava' × 'Apricot Supreme'

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode

(1999), REG: A. Balode (1999)

Inside vivid reddish orange (42A), midveins deep red (53A), throat orange; outside red; some black spots on a third of each tepal; nectaries dark red; pollen dark red. Fls 190 mm wide; tepals 95 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 18 mm, dark green. Stems 0.9 m, dark green with dark brown markings, and with c.4 fls. Early July.

**'Red King' I(a/c)**

Parentage: unknown × 'Connecticut King'  
 R: W. Windus (1970), N: W. Windus (1973), REG: W. Windus (1973)  
 Fls vivid reddish orange (43A), tepal-tips buff, margins narrowly edged silver; spots few. Tepals broad. Stems 1 m. June.  
 (Published in *Lilies and other Liliaceae*, 1973/1974: 112.)

**'Red King' VII(-/-)**

See *L. × parkmanii* 'Melford Red'.

**'Red Knight' Div. ?**

Given as a parent of 'Fiery Chariot'. No further details. Perhaps an error for Red Knight Group.

**Red Knight Group I(c/d)**

Parentage: ('Skyrocket' × 'Sultan') × *davidii*  
 R: P.H. Wright & A.J. Porter, N: P.H. Wright & A.J. Porter, I: C.A. Best (1957)  
 Fls waxy red, centres dark. Stems 1.2 m, with up to 40 fls. July.  
 (Published in *Greenock Farms Cat.*, 1957. Included in *ILR* (1960) as Red Knight grex.)

**'Red Label' VIII(a/b)**

Parentage: dark red-flowered Asiatic × ('Aristo' × *longiflorum*)  
 R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2002)  
 Inside deep red (185A), throat very pale purple (75D); outside vivid purplish red (57C), each tepal moderate purplish red (59C) towards margin; spots dark red (59A); papillae absent; nectaries strong yellowish pink (43D); pollen strong reddish orange (169A); stigma deep purplish red (59B). Fls 180 mm wide; tepals 130 × 53 mm, margins smooth, tips slightly recurved. Lvs scattered, 195 × 17 mm. Stems 0.92 m, green, with c.3 fls. June.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Red Lance' I(b/-)**

Parentage: 'Red Tiger' × 'Rosabelle'  
 R: D.M. Stone & F.H. Payne (1968), G: F.H. Payne (1970), N: D.M. Stone & F.H. Payne (1970), I: D.M. Stone & F.H. Payne (1970), REG: Piedmont Gardens (1980)  
 Fls strong red (46A) throughout except for deep yellowish pink (46D) tepal-tips; almost unspotted; nectaries deep yellowish pink (46D); pollen orange. Tepals 50 × 45 mm, margins ruffled, tips not recurved. Lvs scattered, 175 × 30 mm, mid green. Stems up to 1.5 m, mid green, with c.16 fls. July.  
 (Published in Stone & Payne list, 1970.)

**'Redland' I(a/-)**

Parentage: ('Flame' × unknown) × *L. × hollandicum* 'Christmas Red'  
 R: A.J. Porter (c. 1963), N: A.J. Porter

Fls vivid red; spots absent. Tepals broad. Stems up to 1.2 m, with up to 15 fls, and with bulbils. July.  
 Syn.: 'Warrior'.  
 (Published in *ILR* (1969).)

**'Red Leather' I(b-c/-)**

Parentage unknown  
 R: G. Brown, G: G. Brown, N: G. Brown (1986), REG: G. Brown (1991)  
 Inside strong reddish orange (31A) flushed with vivid reddish orange (33A) and overlaid deep red (60A), tepal-tips strong yellowish pink (31C), throat deep red (60A); outside with brown midribs; spots brown on the inner third of each tepal; nectaries green; pollen brownish orange (171B). Tepals 70 × 27-37 mm, margins smooth, tips slightly recurved, with a lustrous sheen on both sides. Lvs scattered, 70 × 12 mm, dark green. Stems 1 m, dark green, with up to 20 fls. Midseason.

**'Red Lion' (De Vries) I(a/b)**

Parentage unknown  
 R: De Vries Veredelings B.V.  
 Inside moderate to strong red (47A/B), midveins yellow-green at base; outside moderate red to deep yellowish pink (47A/47C), deep pink (47D) along midribs; spots and papillae present; nectaries green; pollen light brown; stigma purple. Tepal-margins slightly ruffled, tips recurved. Stems tall, with some dark coloration. Early to midseason.  
 ('Red Lion' was submitted for registration by De Vries in 2003; this was refused because the name is already in use for another lily (ICNCP, 2004: Art. 27.1). However, 'Red Lion' of De Vries is protected by European PBR granted in 2002 and although the epithet cannot be registered, it has to be retained as legitimate (ICNCP, 2004: Art. 24.4). Unfortunately 'Red Lion' of Laan has Dutch PBR and so both epithets are accepted. To distinguish them, the name of the raiser is appended to each and should be thus cited when the epithets are used (ICNCP, 2004: Art. 27.5).)

**'Red Lion' (Laan) I(a/-)**

Parentage: (*dauricum* × unknown) × *L. × hollandicum*  
 R: Gebr. N. & B. Laan & Zn (1972), N: Gebr. N. & B. Laan & Zn (1979), I: Gebr. N. & B. Laan & Zn (1979), REG: Gebr. N. & B. Laan & Zn (1982)  
 Inside moderate red (179A), throat moderate red (179B); outside dark reddish orange (173A); spots dark brown, elliptic; pollen orange-brown. Tepal-margins ruffled, tips slightly recurved. Lvs scattered, dark green. Stems brownish below.  
 (See note under 'Red Lion' (De Vries))

**'Red Lips' VII(a/b)**

Parentage: red-flowered seedling × ('Rosalie' × 'Star Gazer')  
 R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2004)  
 Inside with inner tepals deep red (60A), outer tepals deep red (60A) with narrow very pale purple (69D) margins, throat yellowish white (155D); outside with outer tepals

deep purplish red (61A), yellowish white (155D) at base, midribs strong yellow-green (143C) at base changing into deep purplish red (61A), inner tepals strong purplish red (60C), towards margins moderate purplish red (64A), yellowish white (155D) at base, midribs strong yellow-green (143C) at base changing into strong purplish red (61B); spots absent; papillae dark red (59A); nectaries strong yellow-green (144C) with narrow brilliant yellow-green (154C) edge; pollen deep orange-yellow (163A); stigma deep reddish purple (77A). Fls 240-260 mm wide, fragrant; tepals 145 × 45-55 mm, margins slightly ruffled, tips recurved. Lvs scattered, 135 × 37 mm. Stems 0.85-1.1 m, green with darker markings at base, and with c.6 fls.

**‘Red Maid’ IV(-/a)**

See *L. × burbankii* ‘Red Maid’.

**‘Redman’ II(c/d)**

Parentage: *hansonii* × *medeoloides*

R: F.L. Skinner, N: F.L. Skinner, I: F.L. Skinner (1948)

Fls red. Stems 1-1.2 m. July. Intermediate between parents.

(Published in *Skinner’s Nursery Cat.*, 1948.)

**‘Red Matador’ I(a/-)**

Syn. of ‘Olivia’ (Div. I(a/-)).

**‘Red Max’ I(c/d)**

Parentage: ‘Maxwill’ × unknown

R: R.J. Platt (c. 1950), N: R.J. Platt

AM 1955

Fls vivid reddish orange (30B) with some spots. Tepals recurved. Lvs linear, dark green. Stems over 1.9 m, with up to 60 fls in a pyramidal infl.

(Published in *JRHS* 80: 529 (1955).)

**‘Redmound’ I(b/-)**

Parentage unknown

R: E. Robinson, N: E. Robinson (1976), I: E. Robinson (1976), REG: E. Robinson (1977)

Fls blood-red throughout. Stems 0.8 m.

(Published in *Gaybird Nursery Cat.*, 1976.)

**‘Red Night’ I(-/b)**

Parentage unknown

Fls dark red.

(Grown in Germany.)

**‘Red Night’ I(a/b)**

Parentage: ((*L. × hollandicum* × unknown) × (*lancifolium* × unknown)) × *L. × hollandicum* ‘Mahogany’

R: Gebr. N. & B. Laan & Zn (1972), N: Gebr. N. & B. Laan & Zn (1979), I: Gebr. N. & B. Laan & Zn (1979)

Inside dark red, throat brilliant red; outside maroon-red; spots few, dark; nectaries purple-black; pollen orange. Tepals 80 long, margins smooth, tips not recurved. Lvs scattered, dark green. Stems 0.8-1 m, purple and dark green, with 15-20 fls. Early July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Red Night’ I(a/-)**

Syn. of ‘Roter Cardinal’.

**Red Nuera Group I(b/-)**

Parentage: *lancifolium* ‘Splendens’ × dark-flowered *wilsonii*

R: L.B. Tuffery (c. 1952), N: L.B. Tuffery

Fls deep crimson.

(Published in *Dunhampton Lily Fields Cat.*, 1953.

Included in *ILR* (1960) as Red Nuera grex.)

**‘Red Nymph’ VII(-/c)**

Parentage unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1962),

N: R.L. Strahm (1972), I: H.J. & R.L. Strahm (1972),

REG: Strahm’s Lilies, Inc. (1981)

Inside vivid red (46C), tepal-tips white, throat moderate

yellow-green (139C); outside paler; spots numerous, strong red (46A), on apical part of tepals; nectaries strong

red (46A); pollen moderate reddish brown (166B). Fls 170 mm wide, scented; tepals 90 × 45 mm, margins

ruffled, tips not recurved. Lvs scattered, 170 × 50 mm, dark green. Stems 1 m or more, dark red, with 7-10 fls.

Aug.

(Published in *Rex Bulb Farms Cat.*, 1972.)

**‘Red Orange Bedder’ I(a/-)**

Parentage: ‘Enchantment’ × unknown

R: E. Robinson (1967), N: E. Robinson (1977), I: E.

Robinson (1977), REG: E. Robinson (1978)

Fls orange-red, well spotted. Tepals broad. Lvs wide, *L. × maculatum* type. Stems 0.6 m.

(Published in *Lilies and other Liliaceae*, 1978/9: 112.)

**‘Redpath’ II(-/l)**

Parentage: *L. × dalhansonii* ‘Brocade’ × unknown

R: E. Robinson (1966), N: E. Robinson (1979), I: E.

Robinson (1979), REG: E. Robinson (1980)

Fls dark red throughout; spots absent. Tepal-tips slightly reflexed. Lvs whorled, dark green. Stems 1-1.2 m, green, with numerous fls.

(Published in *Gaybird Nursery list*, 1979.)

**‘Red Pepper’ IX(b/c)**

See *auratum* var. *platyphyllum* ‘Red Pepper’.

**‘Red Pine’ I(b/b)**

Parentage unknown

R: F. Fellner (1981), G: F. Fellner (1983), N: F. Fellner

(1994), I: Riverside Gardens, REG: F. Fellner (1994)

Inside orange-red; outside green-cream; spots absent; nectaries orange-red; pollen orange. Fls 140 mm wide;

tepals 70 × 30 mm, margins not or very slightly ruffled, tips slightly recurved. Lvs scattered, 70 × 15 mm, very

densely borne on the stems. Stems 0.4-0.5 m, green, with c.15 fls. Late July.

**‘Red Planet’ VIII(a-b/b)**

Parentage: (*longiflorum* × unknown) × Asiatic hybrid

R: Bischoff Tulleken Lelies B.V., N: Fa W.F. Houdijk &

Zn. (2001), REG: Fa W.F. Houdijk & Zn. (2003)

Inside deep to strong red (53A/B); outside moderate red (180C/182A); spots and papillae present; nectaries orange; pollen red-brown; stigma light purple-red. Fls 220 mm wide; tepal-margins smooth to very slightly ruffled, tips slightly recurved. Stems 1-1.1 m, with reddish markings, with c.5 fls. Very early.  
(*A longiflorum*/Asiatic (LA) hybrid.)

#### 'Red Racer' I(a/-)

Parentage: 'Charisma' × 'Bingo'  
R: Columbia-Platte Lilies (1979), G: Columbia-Platte Lilies (1981), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Inside vivid reddish orange (34A/33A), tepal-tips vivid reddish orange (34A), throat vivid reddish orange (33A); outside vivid reddish orange (33A/B); spots absent; nectaries orange-red; pollen greyish red (178A). Buds slightly hairy. Tepals very glossy, 60-90 × 25-30 mm, margins ruffled in older fls, tips slightly reflexed; pedicels dark. Lvs scattered, 100-150 × 20-30 mm, dark green. Stems 1-1.5 m, dark red, with 7-10 fls in a compact infl. Late June.

#### 'Red Rapture' VII(-/b)

Parentage: 'Star Gazer' × 'Joy'  
R: Van der Salm (Holland) (1979), G: Van der Salm (Holland) (1987), N: Van der Salm (USA) (1990), I: Van der Salm (Holland) (1990), REG: Van der Salm (USA) (1990)

Inside pink, each tepal with a central red ray with colour suffusing outwards to the white margins, tips white, throat lime-green with gold margins; outside mid red; lightly spotted with oxblood-red papillae; nectaries lime-green; pollen soft golden brown. Tepals 100 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm, dark green. Stems 1.7 m, light green, with 4-25 fls. Aug.

#### 'Red Raven' I(b/b)

Parentage: dark red-flowered seedling × red-flowered seedling  
R: F. Fellner (1979), G: F. Fellner (1980), N: F. Fellner (1994), I: Riverside Gardens, REG: F. Fellner (1994)  
Inside blackish red; outside dark red; black spots in the area around nectaries; pollen reddish brown. Fls 150 mm wide with large ovaries; tepals 70 × 36 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 13 mm. Stems 1 m, green tinged with black, and with c.10 fls. Late July.

#### 'Red Regal' I(a/b)

Parentage: unnamed seedling × 'Gran Paradiso'  
R: Cebeco Lilies, Inc. (1990), G: Cebeco Lilies, Inc (1991), N: Bloembollenbureau Cebeco (1997), I: Bloembollenbureau Cebeco (1997), REG: Bloembollenbureau Cebeco (2001)  
Inside vivid reddish orange (32A,33A), tepal-edge deep red (53A) in the basal part, throat vivid reddish orange (30B); outside vivid reddish orange (34A), each tepal with a little light olive (152A) at the base, and strong

orange (26B) above the base fading towards the tip; spots and papillae absent; nectaries moderate yellowish pink (31D); pollen moderate reddish brown (175A); stigma dark red (59A). Fls 160 mm wide; tepals 80 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm. Stems 1.2 m, green, with c.9 fls.

#### 'Red Riding Hood' Div. ?

Parentage unknown  
R: E.C. Genat, N: E. Rowse  
Fls vivid red with darker crimson spots, and a crimson ray along each midrib. Fls 140 mm wide. Stems 1-1.2 m.

#### 'Red Rooster' I(a/-)

Parentage: 'Piedmont Red' × unnamed seedling  
R: R.A. Prochaska (1980), G: R.A. Prochaska (1983), N: R.A. Prochaska (1990), I: Hartle-Gilman Gardens (1990), REG: Hartle-Gilman Gardens (1990)  
Fls strong red (46A) throughout; spots small, very dark, in the centre half of each tepal; nectaries strong red (46A); pollen orange. Tepals 70 × 34 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 1.1 m, mid green, with 15-20 fls. Midseason.

#### 'Red Ruby' VII(b/c)

Parentage: (*L. × parkmanii* × unknown) × (*L. × parkmanii* × unknown)  
R: J.S. Yeates (1956), N: J.S. Yeates (1959), I: J.S. Yeates, REG: J.S. Yeates (1980)  
Fls strong red (53C), tepal-tips white; spots deep red (53A) on basal two-thirds of each tepal; nectaries greyish yellow-green (197D); pollen strong orange (25A). Fls 180 mm wide; tepals 120 × 35-55 mm, slightly recurved. Lvs 90 × 35 mm, mid green. Stems 1.2 m, dark greyish reddish brown (200A), speckled, with 6-8 fls. Feb. to Mar. (New Zealand).

#### 'Redruth' I(b/-)

Parentage: red-flowered *lancifolium* × 'Enchantment'  
R: Rosewarne EHS (pre 1975), N: Rosewarne EHS, REG: Rosewarne EHS (1975)  
Fls red. Lvs dark green. Stems 1.2 m. Midseason.  
(Published in *Lilies and other Liliaceae*, 1975: 95.)

#### 'Red Satin' I(a/-)

Parentage: unnamed seedling ex Tesca × 'Winnie'  
R: J. Wadkamper (1986), G: J. Wadkamper (1988), N: E. Reed (1991), I: Borbeleta Gardens (1992), REG: J. Wadkamper (1993)  
Inside vivid reddish orange (43A), throat deep orange; outside deep red; spots few, inconspicuous, in the centre of the fl.; nectaries white; pollen brown. Buds brilliant red. Tepals 70 × 15 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 10 mm, dark green. Stems 1.2 m, brown, with 15-17 fls. Late.  
(Published in *Borbeleta Gardens Cat.*, 1992.)

#### 'Red Saucer' I(a/-)

Parentage: 'Red Tiger' × unknown  
N: H.O. Beracha, I: H.O. Beracha, REG: H.O. Beracha (1984)

Fls medium red, paler in throat; spots many, black, on all of tepals except tips; nectaries pink; pollen orange. Tepals 100 × 32 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 1.5-2.2 m, green, with 14-32 fls, and with bulbils. July to Aug. (This classification and that given in *ILR* (1982) is correct; the revised I(c) given in the *Third Supplement* was an error. Probably from Stone & Payne stock. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)

**'Red Selected'** IX(b/c)  
See *auratum* 'Red Selected'.

**'Red Shields'** I(b/b)  
Parentage: 'Lime Ice' × *L.* × *scottiae* 'Schuetzenli'  
G: W. Kuligowski (1992), N: W. Kuligowski (1995), I: W. Kuligowski (1995), REG: W. Kuligowski (1998)  
Inside and outside orange-red; spots tiny, dark brown on the basal quarter of each fl.; nectaries frosted pale orange-red; pollen dark brown; stigma dark brown. Fls 140 mm wide; tepals 78 × 35, margins not or very slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 13 mm, pale green. Stems 1.05 m, pale green, with 7-9 fls. Mid to late July.  
(Published in Kuligowski's sales list, Autumn 1995.  
Raised from seed obtained from the NALS seed distribution in 1989.)

**'Red Shine'** VII(a-b/c)  
Parentage: unnamed seedling × unnamed seedling  
R: P.N.A. van den Berg (1987), G: M.A. van den Berg (1990), N: M.A. van den Berg, I: M.A. van den Berg (2000), REG: M.A. van den Berg & J.A. van der Salm de Goede (2003)  
Inside between deep red (60A) and strong purplish red (60D), tepal-margins white, midveins with yellow base; outside strong purplish pink (63C); spots and papillae present; nectaries green; filaments white; pollen orange-brown; stigma purple. Fls 210 mm wide; tepals 105 × 60 mm, margins ruffled, tips strongly recurved. Lvs scattered, 140 × 50 mm. Stems 1 m, with c.5 fls. Midseason.

**'Red Sign'** VIII(a/c)  
Parentage: ('Firecracker' × *dauricum*) × red-flowered seedling  
R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)  
Inside vivid reddish orange (43A), throat strong reddish orange (31A); outside vivid reddish orange (34B), vivid reddish orange (34A) towards tepal-margins and tips, midribs vivid red (45C); spots many, dark red (59A); papillae strong reddish orange (31A); nectaries strong reddish orange (31A); pollen moderate red (179A); stigma dark red (187A). Fls 185 mm wide; tepals 100 × 60 mm, margins smooth, tips recurved. Lvs scattered, 120 × 18 mm, green. Stems 1.1 m, green, with 5 fls. June. (*A longiflorum*/Asiatic (LA) hybrid.)

**'Red Silk'** I(a/-)  
Parentage unknown  
R: unknown (1980), G: Hartle-Gilman Gardens (1982), N: Hartle-Gilman Gardens (1993), I: Hartle-Gilman Gardens (1994), REG: Hartle-Gilman Gardens (1994)  
Inside vivid reddish orange (43A), tepal-tips vivid reddish orange (43A), throat red; outside green and vivid reddish orange (43A); spots black, small; nectaries lightly frosted; pollen red-rust. Tepals 98 × 36 mm, margins smooth, tips recurved, softly shiny. Lvs scattered, 122 × 10 mm, dark green. Stems 1.2 m, dark green, with 8-12 fls. Midseason.  
(Published in Hartle-Gilman Gardens list, 1994.)

**'Red Smoke'** I(a/-)  
Parentage: (*bulbiferum* var. *croceum* × *L.* × *hollandicum*) × 'Darkest Favorite'  
R: Gebr. N. & B. Laan & Zn (c. 1966), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1969)  
Fls deep red (185A) striped orange towards centre; spots black. Stems 0.8 m.  
(Published in *LYB* 33: 256 (1970).)

**Red Snappers Group** I(c/-)  
Parentage: ('Red Spire' × 'Crimsonia') × (*pumilum* × bicoloured selection from Coronado Group)  
R: L.D. Marshall (1978), G: Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987), REG: Columbia-Platte Lilies (1988)  
Inside strong red (46A) to deep red (185A), tepal-tips strong red to deep red (46A/185A), throat strong to vivid red (46A/B); outside deep to moderate red (185A/B); spots tiny on the basal third of each tepal, obscured by the deep tepal colour; nectaries deep plum; pollen moderate red (180A). Tepals 50-70 × 20-30 mm, margins ruffled, tips strongly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green (almost blue-bronze). Stems 1.2-1.8 m, deep black-plum, with 8-30 fls in a compact infl. with many secondary buds. Early to mid June.  
(Published in *B & D Lilies Cat.*, 1987. Included in *ILR Seventh Supplement* as Red Snappers grex.)

**'Red Song'** I(a/-)  
Parentage: 'Connecticut Red' × 'Lovesong'  
R: E.A. McRae (1972), G: Oregon Bulb Farms, Inc. (1976), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)  
Inside dark, glowing rich red, throat and outside burgundy-red; spots many, tiny, black, shiny; nectaries red-brown; pollen brown. Tepals 90 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 25 mm, dark green. Stems 1.2 m, dark mottled brown, with 8-30 fls. Late June.  
(Registered as 'Redsong', but in 1988 a USPP was granted under the epithet 'Red Song', so the latter form of the name must be accepted (ICNCP, 2004: Art. 24.4).)

**'Redsong'** I(a/-)  
See 'Red Song'.

**'Red Spider' I(a/b)**

Parentage: 'Gran Paradiso' × 'Tetra Connecticut King'  
 R: Oregon Bulb Farms, Inc. (1988), G: Oregon Bulb Farms, Inc. (1990), N: Cebeco Lilies, Inc. (1996), I: Cebeco Lilies, Inc. (1998), REG: Cebeco Lilies, Inc. (1998)

Inside vivid reddish orange (42A), throat vivid reddish orange (30B); outside vivid reddish orange (34A) with vivid reddish orange (33B) near midribs; spots absent or very few on inner tepals, dark red (187A); nectaries moderate red (47A); pollen vivid reddish orange (34A); stigma dark red (183B). Fls 160-185 mm wide; tepals 90-100 × 32-52 mm, margins smooth, tips slightly recurved. Lvs scattered, 82-120 × 16-20 mm. Stems 0.95-1.2 m, strong yellow-green (144A) with maroon markings, and with c.9-12 fls (from 14 cm bulbs). Early. Tetraploid.

**'Red Spire' I(a/-)**

Parentage: red-flowered Preston seedling × red-flowered Preston seedling

R: E. Robinson (c. 1959), N: E. Robinson

Fls dark red, small. Stems 0.6-1 m, with numerous fls. July.

(Published in *ILR* (1969).)

**'Red Star' I(b/c-d)**

Parentage unknown (but see note below)

R: unknown

Fls scarlet, with irregularly arranged tepals, broader and less reflexed than in *pumilum*. Stems to 0.6 m.

Syn.: *L. × intermedium* 'Red Star'; *pumilum* 'Red Star'. (Published in *Wallace Cat.*, 1936 as *tenuifolium* × *concolor* var. *pulchellum*. If this parentage is correct then it can be assigned to *L. × intermedium*. However, an article by N. Davis, 'The mystery of *Lilium tenuifolium*' in *NZ Lily Soc. Bull.* July 1996: 15-18 suggests that this cv. is pure *tenuifolium* (= *pumilum*).)

**'Red Star' I(a/b)**

See *L. × maculatum* 'Red Star'.

**'Red Start' IV(b/d)**

Error for 'Milden Red Start'.

**'Redstart' I(b/c)**

Parentage: *L. × hollandicum* × triploid form of *lancifolium*

R: J.C. Taylor, N: J.C. Taylor  
 AM 1960

Fls close to mahogany-red, heavily spotted. Tepals partly reflexed. July to Aug.

(Published in *Greenock Farms Cat.*, 1960.)

**'Red Success' I(b-c/-)**

Parentage unknown

R: Bischoff Tulleken Lelies B.V. (c. 1982), N: Bischoff Tulleken Lelies B.V., REG: ICRA (1989)

Fls dark red, each tepal with paler tip and an apricot flare over nectary; outside paler with beige-tinted midribs; spots large, dark violet on three-quarters of each tepal; nectaries dark pink-frosted; pollen chocolate-brown. Fls

115 mm wide; tepals 80 × 28 mm, slightly recurved; pedicels dark violet. Lvs scattered, 75 × 10 mm, glossy green. Stems 1.05 m, dark violet. Mid July.

**'Red Sultan' I(a/b)**

Parentage: 'Pirate' × orange-flowered, brushmarked seedling

R: J.G. Smith (1980), G: J.G. Smith (1983), N: J.G. Smith (1984), REG: J.G. Smith (1984)

Fls orange-red throughout, each tepal with a black brushmark in the throat and black spots on basal third; pollen brown. Tepals 76 × 37 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 20 mm, dark green. Stems 1.1 m, dark green, with c.12 fls.

**'Red Sun' VII(-/-)**

See *L. × parkmanii* 'Red Sun'.

**'Red Sunset' IX(c/d)**

Syn. of *pardalinum* var. *giganteum*.

**'Red Surprise' I(a/-)**

Parentage: 'Cinnabar' (Div. I) × (*dauidii* × red-flowered seedling)

R: De Jong Lelies Beheer B.V. (pre 1978), N: De Jong Lelies Beheer B.V., REG: De Jong Lelies Beheer B.V. (1978)

Fls strong reddish orange (42C), centre slightly spotted with dark brown; anthers brownish orange (171B).

(Published in *Lilies and other Liliaceae*, 1978/9: 113.)

**'Red Ticklers' I(a/b)**

Parentage unknown

R: Cebeco Lilies, Inc. (pre 1997), N: Cebeco Lilies, Inc., REG: ICRA (1998)

Inside mid red, throat darker red; spots present; pollen absent. Tepal-tips slightly recurved. Stems 1-1.2 m. Late June to July.

**'Red Tiger' I(b/-)**

Parentage: *lancifolium* var. *flaviflorum* × 'Gold Urn'

R: D.M. Stone (1964), N: D.M. Stone & F.H. Payne (1967), I: D.M. Stone & F.H. Payne (1967), REG: (between 1967 and 1978)

Fls blood-red (HCC 820/3), throat blood-red (HCC 820/3), tepal-tips and outside paler; slightly spotted; nectaries blood-red (HCC 820/3). Lvs *lancifolium* type. Stems 1.5 m. Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 17 (1978).)

**'Red Tiger' I(c/d)**

Syn. of 'Red Fox'.

**'Red Torch' I(a-b/-)**

Parentage: complex hybrid

R: C.F. Patterson (c. 1946), N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1958)

Fls light red. Stems 1.2 m. June.

(Published in *ILR* (1960). This is the correct spelling for the plant listed in *ILR* (1982) as 'Red Touch'.)

**'Red Touch' I(b/-)**

Error for 'Red Torch'.

**'Red Trillium' I(b/-)**

Syn. of 'Piedmont Red'.

**'Red Tristar' I(a/-)**

Parentage unknown

R: Gebr. Mak B.V., N: Gebr. Mak B.V., REG: Gebr. Mak B.V. (1989)

Inside deep purplish red (187D), fading to pink, midveins on basal half of each tepal flushed with pale yellow; outside dark red (187C), midribs strong purplish red to light purplish pink (64B/65B); spots small, dark red (187A), in the throat; pollen strong reddish orange (169A). Fls 200 mm wide; tepals 100 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 0.7 m, green, with c.7 fls. July. Syn.: 'Tristar'.

(Published in *Lilydale Lilies Cat.*, 1991 as 'Tristar'. Dutch PBR were rejected under this epithet, but accepted as 'Red Tristar' (LEL 621) in 1990, so the latter epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Red Trump' VII(b/c)**

See *L. × parkmanii* 'Red Trump'.

**'Red Velour' II(-/-)**

Parentage unknown

R: E. Robinson (pre 1978), G: E. Robinson (c. 1980), N: E. Robinson (1985), I: E. Robinson (c. 1985), REG: D. Dale (1993)

Inside dark red, throat a lighter red over cream-green; outside dark red with deeper red tepal-margins; spots very few, medium sized, dark red ringed with cream; nectaries red over cream; pollen rust-coloured. Fls 70 mm wide; tepals 36 × 20 mm, margins smooth, tips slightly recurved. Lvs whorled.

**'Red Velvet' I(c/d)**

Parentage: 'Red Tiger' × 'Nubian'

R: D.M. Stone & F.H. Payne (c. 1964), N: D.M. Stone & F.H. Payne

Fls deep red throughout, almost unspotted. Tepals slightly recurved. Stems 1.1-1.5 m. July. Tetraploid.

(According to *LYB* 30: 50 (1967), 'Red Velvet' was raised by D.M. Stone from 'Red Tiger' × *davidii* var. *unicolor*. Classified in *ILLR* (1982) as Div. I(b).)

**'Redwine' II(-/-)**

See *L. × dalhansonii* 'Redwine'.

**'Redwing' I(a/-)**

Parentage: *L. × scottiae* × unknown

R: G.M. Chandler (c. 1945), N: G.M. Chandler

Fls orange-yellow, shading to red at tepal-tips. Tepals slightly reflexed.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Redwing' IX(c/a)**

See *canadense* var. *editorum* 'Redwing'.

**'Redwood' IV(-/d)**

Parentage: selection from Bullwood Group

S: D.B. Fox (1967), N: D.B. Fox (1970), REG: D.B. Fox (between 1970 and 1981)

Fls strong to vivid red (46A/C) ageing to deep to strong red (53A/B), throat orange; heavily spotted red/maroon; pollen orange-brown. Lvs whorled, dark green. Stems 2 m.

**'Redwood' I(a/-)**

Parentage unknown

R: E.H. Doerr (1977), N: E.H. Doerr (1981), I: Borbeleta Gardens (1982)

Inside deep red; spots absent; nectaries-furrows pale; stigma pale. Tepals rather narrow, margins smooth, tips slightly reflexed. Lvs deep green. Stems 1 m, with up to 30 fls.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Borbeleta Gardens Cat.*, 1982.)

**'Reflection' VII(a/-)**

Parentage: ('Allure' × 'Star Gazer') × red-pink-flowered Oriental seedling

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1995)

Inside moderate purplish red (64C) on a yellowish white (155B) ground, midveins brilliant yellow (10A) on lower third of each tepal, throat yellowish white (155B); outside similar but with tepal-tips strong yellow-green (143A) and base strong yellow-green (144C); spots deep purplish red (59B) on basal two-thirds of each tepal; papillae yellowish white (155B) and light yellow (10B) in the throat; nectaries strong yellow-green (144B); pollen dark reddish orange (175C); stigma light brownish grey (201B) with a purple flush. Fls 180 mm wide; tepal-margins ruffled. Lvs 145 × 50 mm, moderate yellow-green (147C). Stems 1.25 m, green with some darker coloration, and with c.8 fls. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cultivar Group.)

**Reflection Group VI(-/a)**

Parentage: Aurelian Group × *sargentiae*

R: J. de Graaff (c. 1954), N: J. de Graaff

Inside with deep yellow throat and ivory tepal-tips; outside deep wine. Stems 1.9 m. July.

(Published in *Oregon Bull Farms Cat.*, 1956. Included in *ILLR* (1982) as Reflection group.)

**'Refour' I(a-b/b-c)**

Parentage unknown

R: Vletter & Den Haan (pre 1989)

Inside yellowish white (155D), midveins light yellow-green (145C); outside yellowish white (155D); spots purple, few; papillae present; pollen orange-brown; stigma yellow. Tepals rather short, margins strongly

ruffled, tips recurved. Lvs scattered, of medium length. Stems tall, light green with dark spots and stripes. (Granted Dutch PBR (LEL 683) in 1991, but not registered - the stock was destroyed by the raiser.)

**'Refreshment' I(a/c)**

Parentage: brushmarked seedling × brushmarked seedling  
R: J. Vasarietis (1981), G: J. Vasarietis (1984), N: J. Vasarietis (1987), I: J. Vasarietis (1987), REG: J. Vasarietis (1992)

Inside and outside brilliant yellow (10A) on opening, throat white, the whole fl. fading to white; basal half of each tepal with small, longitudinal rays surrounded by dark spots; nectaries greenish white; pollen orange-brown. Fls 140 mm wide; tepals 75 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 17 mm, mid green. Stems 0.95 m, green, with c.10 fls. Early July.

**'Refulgence' I(a/b)**

See *L. × hollandicum* 'Refulgence'.

**'Regal Crown' IX(b/a)**

See *regale* 'Regal Crown'.

***regale* E.H. Wilson IX(b/a)**

AGM 1993

Inside white; outside pinkish purple; pollen yellow. Fls fragrant; tepals 120-150 × 20-37 mm, tips spreading. Lvs scattered, 50-130 × 4-6 mm. Stems 0.5-2 m, grey-green spotted and flushed with red-purple, with up to 25 fls. W China.

***regale* 'Album' IX(b/a)**

Parentage: selections from *regale*

S: J. Tensen (c. 1935), N: J. Tensen

AMH 1942, FCCCH 1960

Outside almost pure white; anthers orange.

(This cv. consists of more than one clone.)

***regale* 'Big Boy' IX(b/a)**

A giant form of *regale*.

(Published in *Wayside Garden Bulb Cat.*, 1946.)

***regale* 'Blondie' IX(b/a)**

Parentage: selection from *regale*

S: Simpson, N: Simpson

No further details.

(Unacceptable name: see note under 'Blondie' (Div. I).

Published in *Kline Cat.*, 1945.)

***regale* 'E.C. Butterfield' IX(b/a)**

Parentage: selection from *regale*

S: E.C. Butterfield (pre 1953), N: E.C. Butterfield

Fls creamy white. Stems 1-1.2 m. July.

Syn.: 'Butterfield'.

(Published in *LYB NALS* 6: 75 (1953).)

***regale* 'Gloriosum' IX(b/a)**

Given as a parent of *L. × imperiale* 'Estoniia'.

***regale* 'Gold Cup' IX(b/a)**

Parentage: selection from *regale*

Fls yellow.

(Published in *Wayside Garden Bulb Cat.*, 1946.)

***regale* 'Lesterina' IX(b/a)**

Parentage: selection from *regale*

N: L. Laughlin (1930s)

Fls yellowish.

(Published in *LYB NALS* 7: 43 (1954).)

***regale* 'Paradou' IX(b/a)**

Parentage: raised from irradiated bulbs of *regale*

R: General Electric Co., N: General Electric Co., I: J.T.

Scheepers

(Published in *LYB* 11: 31 (1947). Became sterile through X-ray exposure.)

***regale* 'Regal Crown' IX(b/a)**

Parentage: *regale* × *regale* 'Album'

R: M. Ménard (1962), G: M. Ménard, N: M. Ménard

(1985), REG: M. Ménard (1986)

Fls white throughout except for a light yellow throat; spots absent; nectaries yellow; pollen yellow. Tepals 150-170 × 40 mm, margins smooth, tips slightly recurved.

Lvs scattered, 70-80 × 5-10 mm, mid green. Stems 1.15 m, green, with 12-15 or more fls, arranged in two regular whorls. July.

***regale* 'Royal Gold' IX(b/a)**

Parentage: yellow-flowered form of *regale*

S: J. de Graaff (c. 1955), N: J. de Graaff

AMH 1965

Fls empire yellow (HCC 603) throughout. Stems 1.2-1.5 m. July.

(Published in *LYB NALS* 8: 102 (1955). This cv. consists of more than one clone.)

***regale* 'White Perfection' IX(b/a)**

Parentage: selection from *regale* 'Album'

S: F. Singer (c. 1949), N: F. Singer

AMH 1962

Fls white with silvery shading, centre light greenish yellow (8B); anthers yellow. Tepals slightly reflexed.

***regale* 'White Swan' VI(-/-)**

Syn. of 'White Swan'.

**'Regalia' VII(-/c)**

Parentage unknown

R: L. Woodriff (1958), G: H.J. Strahm (1964), N: R.L.

Strahm (1972), I: H.J. & R.L. Strahm (1972), REG:

Strahm's Lilies, Inc. (1983)

Fls with white tepal-tips, throat green; spots large, dark crimson over whole fl.; nectaries green; pollen orange. Fls 225 mm wide; tepals 115 × 65 mm, margins ruffled, tips slightly recurved. Lvs scattered, 175 × 50 mm, mid green. Stems c.1.7 m, dark, with 7-12 fls. Late Aug. to Sept.

(Published in Strahm's price list, 1973.)

**'Regal Image' VI(-/a)**Parentage: *regale* × unknown

R: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1976)

Fls pure white. Stems 1-1.2 m, with up to 10 fls.

**'Regalina' VI(b/a)**

Parentage: Olympic Group × 'Lilaurel'

R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B.

Mičulka (1984)

Inside white with half of throat yellow; outside with pale pink midribs; pollen apricot. Fls 135 mm wide; tepals 125 × 55 mm, margins slightly ruffled; tips slightly recurved. Stems slightly violet-dotted. Early July.

**'Regal Star' VIII(c/d)**

Parentage: 'Tetra Black Beauty' × 'Tetra White Henry'

R: R.H. Bazett (1989), G: R.H. Bazett (1992), N: R.H.

Bazett (1998), I: R.H. Bazett (1999), REG: R.H. Bazett

(1998)

Inside dark red (59A) shading to strong purplish red (59D) towards tepal-margins and tips, margins 2 mm wide, white, throat light yellow; outside moderate purplish pink (62B) shading to white at tepal-margins and tips, midribs dark green; spots absent; papillae dark red-purple; nectaries distinct, deep green (the light yellow in the throat outlining the nectary-furrows); stamens 87 mm long, exceeded by style/stigma; pollen strong brown; stigma pale green. Fls 145 mm wide; tepals 110 × 37 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 185 × 49 mm, dark green. Stems 1.6 m, mid green, with c.16 fls including secondary buds. Mid July. A fertile tetraploid. (An Oripenet (OT) lily.)

**'Regata' I(a/b)**Parentage: *wilsonii* × 'Enchantment'

R: Fa A.J. van der Zwet (1980), G: Fa A.J. van der Zwet

(1982), N: Gebr. Van Zanten B.V. (1986), I: Gebr. Van

Zanten B.V., REG: Gebr. Van Zanten B.V. (1986)

Orange throughout, with brown spots near base of tepals; nectaries orange-red; pollen orange. Fls 140 mm wide; tepals 80 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 33 mm, mid green. Stems 1.05 m, green, with c.10 fls (from 12-14 cm bulbs).

**'Regent' I(b/b)**

Parentage: 'Hornback's Gold' × 'Tetra Mountaineer'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1994),

REG: B. Mičulka (1994)

Inside deep red with a brownish tint, throat and tepal-tips paler; outside with paler bands and brownish midribs; spots numerous, small, dark scarlet on two-thirds of each tepal; nectaries white-granulated. Fls 105 mm wide; tepals 70 × 38 mm, slightly to moderately recurved; pedicels 70 mm long, dotted dark brown. Lvs scattered, 70 × 13 mm, slightly glossy pale green. June.

**'Regina' Div. ?**

Parentage unknown

R: A.J. van der Zwet &amp; Sons, N: A.J. van der Zwet &amp; Sons AMH 1951

Inside yellow-ochre on white; outside with purple markings.

**'Regina' VI(-/c)**Parentage: *henry* × (*L. × aurelianense* × unknown) × sulphur-yellow-flowered trumpet derived from *regale*, *sargentiae* & *sulphureum*

R: E.F. Palmer, N: E.F. Palmer, I: E.L. Kline (1959)

Fls with lemon centre and cream tepal-tips; anthers reddish brown. Stems 1.9-2.2 m. July to Aug. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Regina Light' VI(-/c)**

Parentage: 'Regina' (Div. VI) × 'Limelight'

R: F. Howarth (1962), N: F. Howarth (1971), I: F.

Howarth (1972), REG: F. Howarth (1971)

Fls brilliant yellow (12B), midribs strong yellow-green (144B); spots brown; nectaries green; anthers brownish orange. Tepal-margins slightly ruffled. Lvs short and broad. Stems 1.5 m.

(Published in *Lilies and other Liliaceae*, 1973: 113.)**'Regina Star' VI(-/c)**

Parentage: 'Regina' (Div. VI) × 'Limelight'

R: F. Howarth (1962), N: F. Howarth (1971), I: F.

Howarth (1972), REG: F. Howarth (1971)

Fls brilliant yellow (12B) throughout, midribs strong yellow-green (144B); spots absent; nectaries green; anthers brownish orange. Tepal-tips slightly reflexed. Lvs short and broad. Stems 1 m.

(Published in *Lilies and other Liliaceae*, 1973: 113.)**'Rehbraun' I(a/-)**

Parentage unknown

R: H. Böhm (pre 1986), N: H. Böhm, REG: H. Böhm (1994)

Fls creamy pinkish brown.

(Published in German Lily Group sales list, 1993.)

**'Reimei' I(a/-)**Parentage: 'Enchantment' × *L. × maculatum*

R: S. Fujishima (c. 1968), N: S. Fujishima

Fls red.

**'Reina Dione' V(a-b/a)**See *longiflorum* 'Reina Dione'.**'Reinesse' I(a/b)**

Parentage: 'Mont Blanc' × unnamed seedling

R: Peacock B.V. (1985), G: Peacock B.V. (1987), N:

Peacock B.V. (1989), I: Peacock B.V. &amp; H. Willemse Jr.

B.V. (1989), REG: H. Willemse Jr. B.V. (1992)

Inside yellowish white (155D), throat brilliant yellow-green (142B); outside greenish white (155C), midribs yellowish white (155D) slightly suffused with dark pink (182D); spots absent nectaries greyish red (182B); pollen moderate orange (167A). Fls 175 mm wide; tepals 85 × 40 mm, margins smooth, tips recurved. Lvs scattered, 120 × 20 mm, mid green. Stems 0.65 m, green with darker markings, and with c.12 fls. Early flowering.

**'Reklāma' I(a/b)**

Parentage: 'Liāra' × 'Endeavor'

R: D.-V. Škimele (1994), G: D.-V. Škimele (1997), N: D.-V. Škimele (2000), REG: D.-V. Škimele (2004)  
Inside deep orange with paler tepal-tips, throat light orange; outside orange, midribs yellow; dark red pencil brushmark over half of each tepal; nectaries yellow; pollen brown; stigma purplish pink. Fls 150 mm wide; tepals 75 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 10 mm. Stems 1.15 m, green with brownish spots, with c.9 fls. Mid July.  
(Published in *Lilium Balticum Register*, 2002.)

#### 'Reliance' VI(-/c)

Parentage: selection from Sunburst Group  
S: J. de Graaff (c. 1963), N: J. de Graaff  
Inside golden yellow; outside dark. Fls large. Stems 1.5 m. July.

#### 'Rembrandt' I(a/-)

Parentage: seedling RS 519 × seedling RS 844  
R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside moderate yellowish pink (179D), each tepal with a pale purplish pink/light pink (62D/50D) centre and a strong orange ((169B/C) flare; outside pale purplish pink (62D), outer tepals with strong to light purplish pink (63C/D) edges, inner tepals tinged with pale yellow (164D); spots dark red (187A); pollen vivid reddish orange (32A). Fls 170 mm wide; tepals 80 × 37 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 12 mm, mid green. Stems 1.25 m, green, with c.15 fls. May.

#### 'Remembrance' VI(-/c)

See *L. × aurelianense* 'Remembrance'.

#### 'Remus' VI(b-c/d)

Parentage: ((*henryi* × 'Gold Eagle') × 'Toni') × unknown  
R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside white with beige tint, tepal-centres and throat with beige-apricot rays; outside with apricot shining through, midribs deep green; spots sparse, cinnamon; nectaries deep green; filaments pale green; pollen chocolate-brown; style and stigma green. Fls 125 mm wide; tepals 95 × 33 mm, margins slightly wavy, tips strongly reflexed; pedicels 85 mm long, pale brown-dotted. Lvs 135 × 23 mm, dull yellowish green. Stems 1.05 m, thick, rigid, brown-dotted, with a medium-sized infl. Mid July.

#### 'Rena' I(a/b)

Parentage: ('Juno' × (Hallmark Group × 'Odysseus')) × ('Schloss Atzelsberg' × 'Snow Bunny')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997), REG: B. Mičulka (1997)  
Inside salmon-pink, outer tepals deep pink in centre with prominent veining, tips and edges pale; outside whitish pink, midribs brownish; spots sparse, small, cinnamon, on half of each tepal; nectaries white and pink, granulated; filaments pale pink; pollen ochre-apricot; stigma pale pink. Fls 135 mm wide; tepals 80 × 36 mm,

hardly recurved; pedicels 60 mm long, slightly spotted. Lvs scattered, 75 × 12 mm, slightly glossy mid green. Stems 0.6 m, thick, pale green, brownish at base, with a short infl. Late June.

#### 'Renaissance' I(b/-)

Parentage: selection from *lancifolium* hybrids  
S: Laan Lelie B.V. (early 1970s), N: Laan Lelie B.V.  
Fls brick-red. Stems 1.2 m. Early July.  
(In 1987 Laan said that it was not commercial.)

#### 'Renata' I(a/-)

Parentage: 'Connecticut King' × Golden Chalice Group  
R: V. Jošt (1974), G: V. Jošt (1977), N: V. Jošt (1984), I: Semptra Praha a.s., REG: V. Jošt (1984)  
Inside strong orange (24A), throat strong orange-yellow (23B) with a darker overlay; outside strong orange-yellow (23B); spots small, dark red (187B) on two-thirds of each tepal; pollen strong orange (169B). Fls 160 mm wide; tepals 94 × 52 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 96 × 11 mm, mid green. Stems 0.6-0.7 m, mid green, with c.13 fls. June.

#### 'Rendez-vous' I(a/-)

Parentage unknown  
R: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn  
(Was unclassified in *ILR* (1982). No further details.)

#### 'Renee' I(a/-)

Parentage: ('Appleblossom' × 'Connecticut King') × ('Bianca' × 'Mont Blanc')  
R: Gebr. Mak B.V. (1983), G: Gebr. Mak B.V. (1985), N: Gebr. Mak B.V. (1989), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1989)  
Inside strong orange (30D); outside strong reddish orange (31B); spots few, dark red (187A) in the throat; pollen strong reddish orange (169A). Fls 180 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 0.7 m, green with darker markings, and with c.9 fls. July.

#### 'Rennes' I(a/b)

Parentage: seedling OR 87-11 × 'Nove Cento'  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside vivid orange (28A/B), throat light orange (28C); outside light orange (28C), with strong orange (28B) towards tepal-edges and a suffusion of strong yellow (153D) on midveins, tipped strong yellow-green (143A); spots absent; papillae few, in the throat; nectaries light orange (28C); stigma dark red (59A). Fls 170 mm wide; tepals 95 × 32-47 mm, margins smooth, tips slightly recurved. Lvs scattered, 175 × 27 mm, green. Stems 1 m, green with darker markings, and with 4-5 fls.

#### 'Reno' I(a/-)

Parentage: seedling G 203 × 'Parma'  
R: Vletter & Den Haan, G: Vletter & Den Haan (1985),

N: Vletter & Den Haan (1988), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1991)  
Inside brilliant yellow (9C) with a vivid yellow (17B) flush, tips of outer tepals strong yellow-green (143A), throat suffused with light yellow-green (2C); outside light greenish yellow (7D), midribs brilliant yellow-green (150C); spots absent; nectaries strong yellow-green (145A) striped strong purple (83C); pollen dark reddish orange (175C). Fls 160 mm wide; tepals 80 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 0.8 m, pale green, with c.6 fls. July (under glass).

#### **‘Renoir’ I(a-b/b)**

Parentage: ‘Assisi’ × seedling RS 88-12  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V. (pre 1998), N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside light purplish pink (55C), midveins white at base; outside strong purplish pink (55B); spots and papillae present; nectaries green; pollen pale brown; stigma purple. Tepal-margins slightly ruffled, tips recurved. Stems 1.1 m, green with darker stripes and spots, and with c.7 fls. Midseason.  
(There are 2 cvs with this epithet, but this one, which is registered, has been selected by the ICRA as accepted (ICNCP, 2004: Art. 26.3).)

#### **‘Renoir’ I(-/-)**

Parentage unknown  
R: A. Weinreich (pre 1989), N: A. Weinreich  
Fls salmon-orange.  
(Unacceptable name: see note under ‘Renoir’ (of Vletter & Den Haan).)

#### **‘Reputation’ VII(b/b-b)**

Parentage: (*L. × parkmanii* Everest Group × ‘Star Gazer’) × white-flowered seedling  
R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside yellowish white (155B), tepal-tips and edges suffused with pale purplish pink (65D) and with a light yellow (10C) blotch towards the strong yellow-green (143C) throat; outside yellowish white (155B), outer tepals suffused with strong purplish pink (63C), midribs light greenish yellow (8C); papillae ivory-white and light yellow, on the basal half of each tepal; nectaries very pale green (192B); pollen moderate orange/moderate orange-yellow (168C/D). Fls 240 mm wide; tepals 145 × 67 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 180 × 40 mm, mid green. Stems 1.15 m, green with darker markings, and with 5-8 fls. May (under glass).

#### **‘Residence’ I(a-b/-)**

Parentage unknown  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan

Beheer B.V. (2003)  
Inside and outside yellowish white (155D); midribs green; spots and papillae present; nectaries green; pollen orange-brown; stigma green with purple spots. Tepal-margins slightly ruffled, tips slightly recurved. Stems 1.15 m. Early to midseason.

#### **‘Resista-1’ I(b/c-d)**

Parentage: ‘Herold’ × ‘Solstice’  
R: A. Balode (1996), G: A. Balode (1998), N: A. Balode (1999), REG: A. Balode (1999)  
Inside vivid yellow (17C) with strong orange-yellow (24B) shading on each tepal-centre, throat green; outside yellow-green; spots large, dark red (59A), on a third of each tepal; nectaries dark brown; pollen bright orange. Fls 170 mm wide; tepals 90 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 20 mm, very dark green, waxy. Stems 1.45 m, dark green striped brown, with c.7 fls and some bulbils. Mid July. (Disease-resistant stems and lvs.)

#### **‘Reta’s Comet’ I(b/c-/-)**

Parentage: ‘Pink Tiger’ (Woodriff) × ‘Russian Red Tiger’  
R: E. Robinson (1980s), G: E. Robinson (1980s), N: B. Strohmman (1994), I: B. Strohmman (1994), REG: B. Strohmman (1994)  
Inside light orange (28D) at tepal-tips, tepal-centres and throat vivid orange (28B); outside moderate reddish orange (42D); spots numerous, medium sized, dark red (59A), on the central half of each tepal; nectaries vivid orange (28B); pollen bright orange, anthers opening irregularly. Fls 150 mm wide; tepals 85 × 35 mm, margins smooth, tips slightly reflexed. Lvs scattered, 85 × 15 mm, mid green. Stems 1.5 m, green, mottled, with 13-16 fls and some bulbils. Mid July to mid Aug.  
Syn.: ‘Comet II’.

#### **‘Retro’ I(a-b/b)**

Parentage unknown  
R: M.F. Kireeva & N.V. Ivanova (1992)  
Fls carmine-pink, tepals with a creamy white patch towards base. Fls 140-150 mm wide; tepal-margins smooth, tips recurved. Stems 0.8-0.9 m, with 7-11 fls. (Published in M.F. Kireeva, *Lilii*, 60 (2000).)

#### **Revelry Group I(a/-)**

Parentage: ‘Red Spire’ × several pastel-flowered, up-facing Asiatic clones  
R: J.F. McRae (1978), G: J.F. McRae (1980), N: Columbia-Platte Lilies (1982), I: Columbia-Platte Lilies (1982), REG: Columbia-Platte Lilies (1984)  
Fls raspberry, peach, buff, orange, salmon and pink, tepal-tips deeper than throat which may be pink, buff, orange, cream or light peach; outside similar to throat; all slightly to moderately spotted; nectaries green; pollen variable. Tepals 50-80 × 20 mm, margins not or slightly ruffled, tips slightly recurved. Lvs scattered, 100-150 × 20 mm, mid to dark green. Stems 0.75-1.2 m, green, with 10-20 or more, starry fls in a long, candelabrum-like infl. June. (Published in *Rex Lilies Cat.*, 1982. Included in *ILR Third Supplement* as Revelry grex.)

**'Revena' I(b-c/-)**

Parentage unknown

G: M.D. Holloway (1993), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)  
 Inside dark red, paling as tepals narrow towards the base but with a slightly darker red throat; outside dark red; spots black, on two-thirds of each tepal; nectaries frosted; pollen orange. Fls 200 mm wide; tepals 114 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 18 mm, dark green. Stems 1.32 m, very dark, very strong and ridged, with c.20 fls (including some secondary buds). Late July to mid Aug.  
 (Raised from seed from the NALS seed exchange, 1992.)

**'Reverend Katie' VII(b/b)**

Parentage: 'Skyline' × *L. × parkmanii* 'Red Dragon'  
 R: Blackdown Lilies (1988), G: Blackdown Lilies (1990), N: Blackdown Lilies (1998), I: Blackdown Lilies (1998), REG: Blackdown Lilies (1998)

Inside evenly strong purplish red (54A), tepal-edges and throat white; outside pink (colour derived mainly from pigment on inner side); spots few, dark pink, mainly towards centre of fl. (mostly on inner tepals); nectaries green; pollen red-brown; style pale green; stigma green, slightly flushed with purple. Fls 150-200 mm wide; tepal-margins ruffled, tips slightly recurved. Lvs scattered, pale to mid green. Stems 1-1.2 m, pale green, with 6-18 fls. Late July to early Sept.

**'Reverie' VI(-/c)**

Parentage unknown

R: C. Yerex, G: C. Yerex (pre 1964), N: C. Yerex (pre 1964)  
 Inside Chinese yellow shading to near white at tepal-tips, throat deep green; lightly spotted garnet-brown in throat. Stems 1-1.5 m, with (3-10 or more fls. Mid July.  
 (Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to Revelry Group. Published in *Rex Bulb Farms Cat.*, 1966/67.)

**'Revival' I(a/-)**

Parentage: 'Rosefire' × 'Eurovision'

R: Peacock B.V. (1983), G: Peacock B.V., N: Peacock B.V. (1987), I: Peacock B.V. (1987), REG: Peacock B.V. (1989)  
 Inside brilliant yellow (13B), throat moderate red (179A); outside strong orange (169D), midribs majolica-yellow; spots vivid yellowish orange (30C); pollen dark brown. Tepal-margins smooth, tips not recurved. Lvs scattered, 140 × 10 mm, mid green. Stems 1.4 m, green with darker markings, and with c.10 fls.

**'Rex' IX(c/d)**See *dauidii* 'Rex'.**Rexgold Group VI(b/b)**Parentage: *sargentiae* × Aurelian types

N: J.M. Shaver, I: J.M. Shaver, REG: (1984)  
 Inside bright yellow; outside yellow; spots absent. Tepal-margins smooth. Lvs scattered. Stems 1.3-2 m. July to Aug.  
 (Published in *Rex Bulb Farms Cat.*, 1966: 27.)

**'Rézi' I(c/d)**

Parentage: 'Connecticut Lemonglow' × 'Fuga'

R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B. Mičulka (1984)  
 Inside brownish yellow, throat orange-red, each tepal with a yellow tongue over nectary; outside beige with orange tepal-margins, midribs green; spots sparse, small, dark purple on a quarter of each tepal; nectaries white-frosted; pollen ochre; stigma brown. Fls 100 mm wide; tepals 90 × 35 mm, strongly recurved. Lvs 100 × 7 mm, dull green. Stems 0.8 m, slightly brown-dotted at base. Early July.

**'Rhabus' I(b/-)**

Parentage: 'Roter Cardinal' × 'Tetra Mountaineer'

R: V. Strasser (1974), G: V. Strasser (1976), N: V. Strasser (1977), I: V. Strasser (1981), REG: V. Strasser (1985)  
 Fls blood-red throughout with black spots; pollen red. Tepals 80 mm long, margins smooth, tips not recurved. Lvs scattered, dark green. Stems 1.1 m, dark green, with up to 17 fls. Mid June. Triploid.  
 Syn.: 'Rokardmount Number 2'.

**'Rhapsody' IX(b/c)**See *auratum* 'Rhapsody'.**'Rhea' I(b-c/c-d)**

Parentage: unspotted, white-flowered seedling × out-facing, yellow-flowered Asiatic seedling  
 R: Mak-Leek Inc. (1991), G: Mak-Leek Inc. (1993), N: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)  
 Inside pale greenish yellow (2D) at first with a green suffusion and a light flame of light yellow (11B) on each tepal, on the second day ground colour is pale yellow-green (155A) with a very light yellow-green flame; outside yellow-green, midribs brilliant yellow-green/light yellow-green (142C/D); spots absent; nectaries light green; pollen strong orange (169C); stigma dark to moderate red (183A/D). Fls down-facing in bud, out-facing when open, 150 mm wide; tepals 90 × 25-35 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 95 × 7.5 mm, dark green. Stems 0.6 m, dark green, with 4-10 fls. Late June.

**'Rheingold' I(a/-)**Parentage: *L. × hollandicum* × (*lancifolium* × unknown)

R: J. Koeman, G: J. Koeman, N: J. Koeman (1979), REG: J. Koeman (1980)  
 Fls vivid yellow (15A), centre brilliant yellow (12B); spots oxblood-red; anthers dark reddish orange (175C). Stems 0.7 m.  
 (Published in *Bloembollencultuur*, June 1979.)

**'Rhinegold' VI(-/l)**

Parentage unknown

N: B.G. Hayler (1976), I: B.G. Hayler (1976)  
 Inside deep golden apricot. Stems 1.2-1.5 m. Dec. to Jan. (Australia).  
 (Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Rheingold'.)

**'Rhino' I(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Hoffgaarde B.V. (1991), G: Hoffgaarde B.V. (1993),  
 N: Hoffgaarde B.V. (1997), I: Hoffgaarde B.V. (2000),  
 REG: Hoffgaarde B.V. (2001)

Inside deep to strong pink (48B/C), each tepal with a large pale yellow (19C) flash towards the base and a very narrow pale margin; outside deep to strong pink (48B/C); spots and papillae present; nectaries green; pollen orange; stigma purple. Fls 140 mm wide; tepals 80 × 40 mm, margins smooth, tips not or very slightly recurved. Lvs scattered, 80 × 10 mm. Stems 1 m, green, with 4-6 fls (from 12-14 cm bulb) in a shortly pyramidal infl. Very early to early.

**'Rhodesia' VII(-/b)**

Parentage: selection from Zealandia Group  
 S: L.B. Tuffery (c. 1966), N: L.B. Tuffery  
 Fls bright scarlet-pink. Fls very large, *auratum*-like. Stems very tall.

***rhodopaeum* Delipavlov IX(c/a-d)**

Fls yellow; spots absent; pollen red. Fls unpleasantly scented. Tepals 80-120 mm long. Lvs scattered, margins ciliate. Stems 0.6-1 m, with 1-5 fls. June. Bulgaria, Greece.

**'Rhodos' I(b/c)**

Parentage: 'Sonnewende' × 'Sonnentiger'  
 R: V. Strasser (1975), G: V. Strasser (1977), N: V. Strasser (1980), I: V. Strasser (1982), REG: V. Strasser (1986)  
 Fls yellow throughout, apart from a green throat; spots blackish brown on three-quarters of each tepal. Fls 180 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, dark green. Stems 0.8-0.9 m, brownish green, with up to 26 fls. July to Aug.

**'Rhumba' I(a/-)**

Parentage: ('Enchantment' × 'Connecticut King') × 'Rosefire'  
 R: E.A. McRae (1977), G: E.A. McRae (1979), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)  
 Inside vivid reddish orange (33A/B), throat vivid orange (28A); outside medium to deep orange; spots absent; nectaries red/yellow; pollen moderate reddish orange (171A). Fls 140-150 mm wide; tepals 120 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 20 mm, dark green. Stems 1.2 m, dark purple/green, with 6-30 fls. Mid June.

**'Rhythm' VII(-/c)**

Parentage unknown  
 R: L. Woodriff (1958), G: H.J. & R.L. Strahm (1962), N: H.J. Strahm (1978), REG: Strahm's Lilies, Inc. (1983)  
 Inside light purplish pink (55C), tepal-tips paler pink, throat green; outside light purplish pink (55C); spots vivid red (46C) over the whole fl.; nectaries green; pollen rust-coloured. Fls 250-300 mm wide; tepals 125-150 × 65 mm, margins ruffled, tips slightly recurved. Lvs scattered, 50 mm wide. Stems 1.5 m, green, with 10 or more fls. Early July.

**'Ria' I(b-c/d)**

Parentage: (Golden Chalice Group × unknown) × 'Impact'  
 R: K. Vereš, N: K. Vereš, REG: K. Vereš (1995)  
 Inside greyed orange; outside with brownish midribs; spots large, fairly numerous, crimson-brown on two-thirds of each tepal; nectaries pale orange; pollen brown; stigma pale orange. Buds hairy. Fls 150 mm wide; tepals 80 × 30 mm, margins smooth; tips recurved; pedicels 150 mm long, green. Lvs scattered, 100 × 20 mm, dull pale green. Stems 1 m, thick, pale green, with a pyramidal infl. and sparse, large, green bulbils. Bulbs flattened. Late June.  
 (Resistant to *Botrytis*.)

**'Riabinka' I(a/-)**

Parentage: unnamed seedling × 'Connecticut King'  
 R: M.F. Kireeva & N.V. Ivanova (1980), N: M.F. Kireeva & N.V. Ivanova  
 Fls bright orange-red; spots dark brown, 110-120 mm wide. Stems 0.7-1 m, with 11-20 fls, and with bulbils. June to July.  
 (Unaccepted spelling: 'Rjabinka'. Published in M.F. Kireeva, *Lilii*, 37 (2000).)

**'Rialto' VII(a/b)**

Parentage: seedling 89-59 × seedling 93-14  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
 Inside greenish white (155C); outside greenish white (155C), midribs yellowish white (155D), outer tepals tipped strong yellow-green (144B); spots absent; papillae greenish white (155C) in the throat; nectaries strong yellow-green (144B); pollen moderate reddish orange (171A); stigma very pale green (192B). Fls 245 mm wide; tepals 140 × 45-80 mm, margins ruffled, tips recurved. Lvs scattered, 165 × 55 mm. Stems 1.2 m, light green, with c.4 fls.

**'Ribalta' VIII(a/b)**

Parentage: seedling BG 96-15 × seedling AG 94-7  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)  
 Inside vivid yellow (12A), midveins strong yellow-green (144A); throat light yellow-green (145C); outside light greenish yellow (4C), changing towards tepal-tips to vivid yellow (12A), midribs brilliant greenish yellow (2B); spots and papillae absent; nectaries pale greenish yellow (2D); pollen dark reddish orange (175C); stigma brilliant yellow-green (154B). Fls 150 mm wide; tepals 100 × 50 mm, margins smooth, tips recurved. Lvs scattered, 130 × 15 mm. Stems 1.2-1.25 m, green with darker markings, and with c.4 fls.  
 (*A. longiflorum*/Asiatic (LA) hybrid.)

**'Ribbon Bows' I(c/-)**

Parentage: 'Edith Cecilia' × 'Radiant Glow'

R: E. Robinson (pre 1969), N: E. Robinson  
Fls fuchsia-purple, paler outside; lightly spotted. Stems  
1-1.2 m. July.  
Syn.: 'Royal Bows'.  
(Published in *ILR* (1969) Addenda.)

#### 'Ribera' VII(a/b)

Parentage: seedling 88-111 × seedling 93-48  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den  
Haan Beheer B.V., N: Vletter & Den Haan Beheer  
B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG:  
Vletter & Den Haan Beheer B.V. (2001)  
Inside dark purplish pink/deep purplish pink  
(186C/70C), throat yellowish white (155D); outside of  
inner tepals dark/moderate purplish pink (186C/D) at  
the base on a paler ground, outside of outer tepals dark  
purplish pink (186C), midribs brilliant yellow-green  
(150C), tipped strong yellow-green (144A); spots deep  
purplish red (61A); papillae absent; nectaries strong  
yellow-green (144B); pollen darker than strong reddish  
orange (169A); stigma yellowish white (156D) with  
purple speckling. Fls 240 mm wide; tepals 130 × 45-70  
mm, margins slightly ruffled, tips recurved. Lvs scattered,  
195 × 60 mm. Stems 1.2-1.25 m, light green with a little  
darker marking, and with c.5-6 fls.

#### 'Rica Jewel' I(a/b)

Parentage: 'Tetra Monaco' × 'Tetra Gloria'  
R: De Jong Lelies Holland B.V. (1994), G: De Jong Lelies  
Holland B.V. (1996), N: De Jong Lelies Holland B.V.  
(2001), REG: De Jong Lelies Holland B.V. (2001)  
Inside strong red (46A) on a vivid reddish orange (32A)  
ground, throat vivid reddish orange (32A) edged strong  
red; outside of inner tepals vivid reddish orange (33B)  
with little strong red (46A) stripes on the basal part from  
base towards the edges, midribs moderate red (179A),  
outside of outer tepals strong red (46A) on a vivid reddish  
orange (32A) ground; spots absent; papillae vivid reddish  
orange (33B); nectaries strong yellowish pink (35C)  
changing into vivid reddish orange (34B); pollen dark  
reddish orange (175B); stigma dark red (187C). Fls 150  
mm wide; tepals 100 × 35-45 mm, margins smooth, tips  
recurved. Lvs scattered, 150 × 25 mm. Stems 1.15 m,  
green with darker markings, and with c.6 fls. June to July.

#### 'Richard Latty' VI(-/a)

Parentage unknown  
R: unknown  
Inside greenish yellow, tepal-tips brighter; outside white-  
green; filaments green; anthers purplish when young,  
maturing to orange-brown; pollen chocolate-brown. Fls  
150-200 mm long and 180 mm wide, fragrant; tepal-tips  
recurved; pedicels 110 mm long. Lvs 150 × 12 mm, dark  
green. Stems 1.4-1.5 m (up to 2.15 m in shade), with up  
to 12 fls, and with brownish bulbils. Early Aug.  
(Originated from seed sent from South Africa. Published  
in *Cvetovodstvo* 1981(4): 21.)

#### 'Richelieu' I(a/-)

Parentage unknown  
N: Vletter & Den Haan Beheer B.V. (2001), REG:

Vletter & Den Haan Beheer B.V. (2003)  
Inside and outside yellowish white (155D); spots and  
papillae present; nectaries green; pollen orange-yellow;  
stigma green. Tepal-margins slightly ruffled, tips slightly  
recurved. Stems medium to tall, with reddish markings.  
Midseason.

#### 'Ricky' I(b/c-d)

Parentage unknown  
R: C. Biddle (1972), G: R.J. Sinclair (1974), N: R.J.  
Sinclair (1980), I: R.J. Sinclair (1981), REG: R.J. Sinclair  
(1981)  
Fls brilliant yellow (7A) flushed with orange especially  
in throat; outside yellow overlaid with red; fine brown  
spots on basal third of each tepal; nectaries green; pollen  
brown. Fls 90 mm wide; tepals 60 × 30 mm, margins  
smooth, tips slightly recurved. Lvs scattered, 120 × 15  
mm, dark green. Stems 1 m, dark, with 7-10 fls. Dec.  
(Australia).

#### 'Ridzene' VIII(a/b)

Parentage: 'New Age' (Div. I) × mixed pollen of  
tetraploid *longiflorum*/Asiatic derivatives  
R: A. Balode (1996), G: A. Balode (1998), N: A. Balode  
(1999), REG: A. Balode (1999)  
Inside deep purplish pink (54B), each tepal with brilliant  
orange-yellow (23B) tinge in the centre, throat light  
yellow (20B); outside red with some green; spots absent;  
nectaries red; pollen red. Fls 170 mm wide, slightly  
scented; tepals 100 × 60 mm, margins slightly ruffled,  
tips slightly recurved. Lvs scattered, 150 × 25 mm, dark  
green. Stems 1.5 m, dark green, with c.5 fls. Early July.  
(Disease-resistant. Nomenclatural standard: colour print  
provided by registrant (WSY 0022989).)

#### 'Riesen Tiger' I(c/-)

Parentage unknown  
R: J. Klein (pre 1993), N: J. Klein  
Fls light red. Stems 1 m, with up to 15 fls. Early July.  
(Published in German Lily Group sales list, 1993.)

#### 'Riga' I(a/-)

Parentage unknown  
R: S.D. Wierstra, G: Douwe Wierstra B.V., N: S.D.  
Wierstra, I: Douwe Wierstra B.V., REG: Douwe Wierstra  
B.V. (1994)  
Inside with each tepal vivid orange (28B) on basal part,  
the apical part strong reddish orange (31A), with a  
dark red (187A) mark at the base of outer tepals only,  
midveins with 2 dark red (187A) stripes on basal part,  
throat moderate red (181B); outside vivid yellowish  
orange (30C), with some dark greenish yellow (152D)  
at base, each tepal tipped with dark red (187A), midribs  
suffused with strong reddish orange (34C) and moderate  
red (180B/C); spots dark red (187A) on basal part of each  
tepal; pollen dark red (183A); stigma dark red (187A).  
Fls 170 mm wide; tepals 85 × 45 mm. Lvs scattered, 150  
× 20 mm, dark green, with c.8 fls.

#### 'Rigoletto' I(c/-)

Parentage: *lancifolium* × unknown

R: J. Koeman (pre 1972), N: J. Koeman, REG: J. Koeman (1972)  
Fls vivid reddish orange (32A/B); spots black.  
(Published in *Lilies and other Liliaceae*, 1973/1974: 112.)

**‘Rikarda’ I(a/-)**

Parentage: *bulbiferum* var. *croceum* × ‘Enchantment’  
R: V. Strasser (1973), G: V. Strasser (1976), N: V. Strasser (1980), I: V. Strasser (1986), REG: V. Strasser (1986)  
Fls fire-red; spots purple on two-thirds of each tepal.  
Tepals not recurved. Lvs scattered, dark green. Stems 1.2 m, dark brown, with c.20 fls. Mid June

**‘Rimini’ VII(a-b/b)**

Parentage: seedling NR 99 × seedling NR 526  
R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1988), N: Vletter & Den Haan (1993), I: Vletter & Den Haan (1994), REG: Vletter & Den Haan (1995)  
Inside moderate purplish pink (65A), tepals paler at margins and base, throat strong yellowish pink (37A); outside light purplish pink (65B); spots and papillae present; nectaries green, changing to yellow; pollen orange-brown; stigma grey. Tepals c.145 × 51 mm, margins smooth or slightly ruffled, tips slightly recurved. Lvs scattered, c.194 × 38 mm, green. Stems 1.25 m, with dark stripes and splashes and with 4-9 fls. Early to midseason.

**‘Ring’ I(b/d)**

Parentage: ‘Connecticut King’ × ‘Orion’  
R: K. Braun, N: K. Braun, I: K. Braun (1992), REG: K. Braun (1993)  
Fls creamy, with paler midribs outside; spots large, sparse, dark brown, on two-thirds of each tepal; nectaries cream; pollen orange; stigma cream. Fls 80 mm wide; tepals 80 × 30 mm, strongly recurved; pedicels 100 mm long, green. Lvs scattered, 70 × 10 mm, dull mid green. Stems 0.8 m, green, with secondary buds. Early July.

**‘Ringatira’ VII(-/b)**

See *L. × parkmanii* ‘Ringatira’.

**‘Ringla’ I(a/b)**

Parentage: brushmarked seedling × brushmarked seedling  
R: J. Vasarietis (1984), G: J. Vasarietis (1987), N: J. Vasarietis (1991), I: J. Vasarietis (1991), REG: J. Vasarietis (1992)  
Inside vivid yellow (12A); outside brilliant yellow (12B); each tepal with a large, purplish black brushmark; nectaries white; pollen brownish. Fls 150 mm wide; tepals 85 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 17 mm, mid green. Stems 0.9-1.15 m, greenish brown, with 7-9 fls. Early July.

**‘Rio’ VII(b/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Gebr. Mak B.V. (1980), G: Gebr. Mak B.V. (1983), N: Gebr. Mak B.V. (1984), I: Oriental Express (1987), REG: Oriental Express (1989)  
Inside strong purplish red to strong purplish pink (63B/C), midveins vivid reddish orange (42A); outside

strong purplish pink (68B) with narrow, ivory-white tepal-margins; papillae deep red (185A); nectaries strong yellow-green (144C); pollen strong orange (169B/C). Fls 220 mm wide; tepals 110 × 55 mm, margins smooth to very slightly wavy, tips not or slightly recurved. Lvs scattered, 80 × 30 mm, mid green. Stems 0.4 m, dark, with c.7 fls.

**‘Rio Blanco’ VII(b/b-c)**

Parentage: (*auratum* var. *platyphyllum* × unknown) from USA × (*auratum* var. *platyphyllum* × unknown) from IVT, Wageningen  
R: J.W.A. van der Wereld (1988), G: J.W.A. van der Wereld (1992), N: J.W.A. van der Wereld (2000), I: J.W.A. van der Wereld (2000), REG: J.W.A. van der Wereld/Van der Marel Lelie B.V. (2001)  
Inside and outside yellowish white (155D); spots and papillae absent; nectaries green; pollen orange-brown; stigma dark purple. Tepal-margins ruffled, outer more so, tips strongly recurved. Stems 1.2 m, green with darker stripes and spots, and with c.7 fls. Midseason to late.

**‘Rioe-Kioe’ VII(-/a)**

Parentage unknown  
R: Gebr. Vletter & Den Haan (pre 1994), N: Gebr. Vletter & Den Haan (2002), REG: Gebr. Vletter & Den Haan (2002)  
Inside light purplish pink (65B), midveins strong purplish red (63A) at base; outside yellowish white (155D) suffused with pink; spots and papillae present; nectaries green changing into white; pollen orange-brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems with some darker markings. Midseason.  
(Despite ICNCP, 2004: Art. 32.13 (the second element of a hyphenated word is to start with a lower case letter), the upper case ‘K’ is retained because it was published that way in the grant of Dutch PBR (LEL1070).)

**‘Rio Grande’ I(a/-)**

Parentage: red-flowered seedling × red-flowered seedling  
R: Peacock B.V. (1983), G: Peacock B.V., N: Peacock B.V., I: Peacock B.V., REG: Peacock B.V. (1991)  
Inside vivid reddish orange (34A/B), each tepal with a large, vivid yellowish orange (30C) flame and vivid orange (28B) tips, throat orange; outside vivid reddish orange (34B), each tepal edged vivid reddish orange (34A), midribs suffused with brilliant greenish yellow (151D); spots few, small, dark red (187A), in the throat; nectaries moderate purplish red (184C); pollen strong orange (169B). Fls 160 mm wide; tepals 82 × 50 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 150 × 11 mm, mid green. Stems 1.5 m, green, with c.6 fls. May (under glass).

**‘Rio Marina’ I(b/b)**

Parentage unknown  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside variegated strong red (51A) on a paler ground,

throat pale greenish yellow (2D); outside of inner tepals strong purplish pink (55B), edged deep purplish pink (55A), midribs light yellow-green (145D), outer tepals dark purplish pink (186C), edged strong red (53C), midribs strong yellow-green (144B); spots few, dark red (187A); papillae absent; nectaries deep purplish pink (58D); pollen dark reddish orange (175C); stigma dark red (187C). Fls 170 mm wide; tepals 100 × 45 mm, margins smooth, tips recurved. Lvs scattered, 155 × 15 mm. Stems 1.2 m, dark, with c.3 fls.

**‘Rio Negro’ I(a/b-c)**

Parentage: ‘Roter Cardinal’ × ‘Ginny of Millis’

R: V. Baloun (1986), N: V. Baloun, REG: V. Baloun (1988)

Inside dark wine-red, tepal-tips paler; outside with dark beige-brown midribs; spots numerous, rather large, black, over half of each tepal; nectaries pink-frosted; papillae long; pollen brownish apricot; stigma red. Fls 145 mm wide; tepals 90 × 47 mm, tips slightly recurved; pedicels with dark spots. Lvs scattered, 80 × 12 mm, glossy mid green. Stems 0.7 m, thick, violet-black, infl. crowded. Early July.

**RIO NEGRO VII(a-b/b-c)**

Trade designation of ‘Corvara’.

**‘Ripe Banana’ I(a/c)**

Parentage unknown

R: J.G. Smith (1978), G: J.G. Smith (1981), N: J.G. Smith (1985), I: J.G. Smith (1985), REG: J.G. Smith (1985)

Inside yellow; outside brownish; heavily spotted brown on three-quarters of each tepal; nectaries yellow; pollen brown. Tepals 100 × 29 mm, slightly recurved. Lvs scattered, 110 × 12 mm, dark green. Stems c.1.2 m, dark green, with c.7-12 fls.

**‘Ripro’ I(a-b/b)**

Parentage unknown

N: J. Dudek, I: J. Dudek (2004), REG: J. Dudek (2004)

Inside pink, throat with cream band; outside with creamy midribs; spots purple, small, sparse, on a half of each tepal; stamens rudimentary, pink, lacking pollen; stigma pinkish. Fls 180 mm wide; tepals 60 × 20 mm, margins slightly ruffled, tips slightly recurved; pedicels 70 mm long. Lvs scattered, 90 × 10 mm, dull mid green. Stems 1 m, thick, dotted, with a moderately long infl. Late June. (Raised from seeds from a hybrid produced by R.A. Prochaska.)

**‘Risabonne’ VII(a-b/b)**

Parentage unknown

REG: Sande B.V. (2004)

Inside strong purplish pink (68B), each tepal lighter towards tip, margin nearly white, midveins purple-red at base; outside strong/moderate purplish pink (68B/C); spots and papillae present; nectaries light green; pollen orange-brown; stigma purple. Tepals medium to long, margins ruffled, tips moderately to strongly recurved. Stems tall. Early to midseason.

**‘Rising Star’ VII(-/b)**

See *L. × parkmanii* ‘Rising Star’.

**‘Rising Sun’ VIII(a/b)**

Parentage unknown

R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V., N: H.J.A. Rooyakkers B.V. (1995), REG: H.J.A. Rooyakkers B.V. (1997)

Inside light orange (28C/D) with orange midveins; outside light orange (28D) with orange midribs; spots and papillae present; nectaries green; pollen brown; stigma purple. Tepal-margins smooth to very slightly ruffled, tips recurved. Stems 0.6-1 m, green with darker stripes and spots, with about 7 fls. Mid to late season. (*A. longiflorum*/Asiatic (LA) hybrid.)

**‘Rita’ I(b/-)**

Parentage: selection from Jautrie Bèrni Group

S: V.P. Orehovs, N: V.P. Orehovs

Fls orange.

(Published in *LYB* 33: 79 (1970).)

**‘Rita Zwaigne’ I(a/-)**

Misspelling of ‘Rita Zvaigzne’.

**‘Rita Zwaigzne’ I(a/-)**

Misspelling of ‘Rita Zvaigzne’.

**‘Rita Zvaigzne’ I(a/-)**

Parentage: selection from Zelta Vainags Group

S: V.P. Orehovs, N: V.P. Orehovs

Fls orange.

(Published in *LYB* 33: 80 (1970) as ‘Rita Zwaigzne’ and in *ILR* (1982) as ‘Rita Zwaigne’ - both names are misspellings.)

**‘Ritenitis’ I(b/-)**

Misspelling of ‘Ritenītis’.

**‘Ritenītis’ I(b/-)**

Parentage: Asiatic hybrid × ‘Baltā Amālija’

R: V.P. Orehovs (1983), N: V.P. Orehovs, REG: ICRA (1995)

Fls yellow-orange with dark spots. Stems 0.8 m. July. (Included in *ILR Fourteenth Supplement* as ‘Ritenītis’ which is a misspelling.)

**‘Ritmo’ I(a/-)**

Parentage: ‘Sally’ × ‘Abu Hassan’

R: K. Braun, N: K. Braun, I: K. Braun (1992), REG: K. Braun (1993)

Inside dark violet-purple, throat green; outside with green midribs; spots sparse, small, brown, on two-thirds of each tepal; nectaries violet-purple; pollen yellow; stigma violet-purple. Fls 135 mm wide; tepals 70 × 37 mm, margins gently wavy; tips slightly recurved; pedicels 60 mm long, green. Lvs scattered, 80 × 12 mm, dark glossy green. Stems 0.5 m, green and violet, slightly hairy. Early July.

**'Riva' I(c/-)**

Parentage: (*cernuum* × unknown) × 'Orchid Queen'  
 R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1980), I: V. Strasser (1986), REG: V. Strasser (1997)  
 Fls soft yellow-pink. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1 m, with up to 34 fls. Early July.

**'Riva Ligure' I(a/-)**

Parentage: 'Kismet' × 'Papillon'  
 R: Lybelmex Hillegom B.V. (1981), G: Lybelmex Hillegom B.V. (1983), N: Lybelmex Hillegom B.V., I: Lybelmex Hillegom B.V., REG: Lybelmex Hillegom B.V. (1989)

Inside pale orange-yellow (23D), throat brilliant orange-yellow (23B); outside greyish red (182B), each tepal with a pale orange-yellow (24D) margin; spots dark red (187A) in the throat; pollen dark reddish orange (173A). Fls 190 mm wide; tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 22 mm, mid green. Stems 0.75 m, green with darker spotting, and with c.3 fls.

**Riviera Group I(c/-)**

Parentage: (*davidii* var. *willmottiae* × unknown) × unknown

R: Rosewarne EHS (1967), G: Rosewarne EHS (1969), N: Rosewarne EHS (1974), I: Rosewarne EHS (1978), REG: Rosewarne EHS (1979)

Fls pale to dark orange or orange-red, spotted. Stems 0.8-1 m.

(Published in *ILR* (1982) as Riviera grex.)

**'Rjabinka' I(a/-)**

Unaccepted spelling of 'Riabinka'.

**'Robert Blanch' VII(b/d)**

Parentage: *speciosum* 'Pink Pearl' × (pink-flowered *L.* × *parkmanii* × unknown)

R: M.A. Stuart (1976), G: M.A. Stuart (1980), N: M.A. Stuart (1985), REG: M.A. Stuart (1985)

Inside amaranth-rose (HCC 530/1), tepal-tips and throat white; outside pink; spots bright red; nectaries light green; pollen mid brown. Fls 214 mm wide; tepals 96 × 44 mm, margins ruffled, tips strongly recurved. Lvs scattered, 151 × 44 mm, mid green. Stems 1.2 m, mid green, with c.12 fls. Late Jan. to early Feb. (New Zealand).

**'Robert Erskine' I(a/b-c)**

Parentage: 'Simonet Jewel' × 'Apricot Pie'

R: M.D. Holloway (1992), G: M.D. Holloway (1993), N: M.D. Holloway (1995), I: M.D. Holloway (1995), REG: M.D. Holloway (1995)

Inside golden yellow shading to bright pink at tepal-tips, throat pink; outside with inner tepals pink blended with gold, outer tepals golden with pink edges; spots numerous, fine, dark wine-coloured, above the throat; nectaries frosty pink; filaments and style dark pink; pollen bright orange. Fls 140 mm wide; tepals 70 × 33 mm, margins smooth, tips not or slightly recurved. Lvs

scattered, 145 × 8 mm, mid green. Stems c.10 m, mid green, with c.23 fls in a pyramidal infl. Mid July to mid Aug.

**'Robert Griesbach' VIII(c/b-c)**

Parentage unknown

R: R.J. Griesbach, N: Lily Company B.V. (2004), REG: Lily Company B.V. (2004)

Inside dark red (59A), changing into yellowish white (155D) towards tepal-margins and tips, brilliant yellow (13B) above and next to nectaries, throat pale yellow green (4D); outside with outer tepals yellowish white (155D), up to two-thirds of each tepal flushed with strong purplish red (59D), strong yellow-green (143C) along midribs changing into light yellow-green (144D), strong yellow-green (143C) at top, inner tepals similar but with light yellow (21D) along midribs at base; spots and papillae absent; nectaries strong yellow-green (143C); pollen strong brown (172A); stigma very pale green (189D). Fls 160-200 mm wide; tepals 120 × 33-43 mm, margins smooth, tips strongly recurved. Lvs scattered, 155 × 27 mm. Stems 1-1.45 m, green with darker markings, and with c.4 fls.

(An Orienpet (OT) lily.)

**'Robert Simonet' I(c/-)**

Parentage: (*davidii* × *lancifolium*) × *cernuum*

R: R. Simonet & F. Fellner (1974), N: F. Fellner (1977), I: J. Wadepammer & Piedmont Gardens (1978), REG: J. Wadepammer (1978)

Inside purplish pink, throat cream, tepal-tips pinkish; outside darker pink; spots present; nectaries cream; pollen light brown. Stems 1-1.1 m, with up to 36 fls. Midseason.

(Published in *Lilies and other Liliaceae*, 1978/9: 113.)

**'Roberts' Ruby' IX(c/a-d)**

See *canadense* 'Roberts' Ruby'.

**'Robert Swanson' VIII(b-c/b)**

Parentage unknown

R: R.J. Griesbach, N: Lico Company B.V. (2002), REG: Lico Company B.V. (2003)

Inside brilliant orange-yellow (23B), each tepal with a strong red (53B) flame and a brilliant yellow (11A) spot above the nectaries, throat light greenish yellow (8C); outside pale yellow (11C), light orange-yellow (23C) towards edges, midribs flushed with light yellow-green (145C); spots deep red (53A); papillae absent; nectaries strong yellow-green (144A); pollen strong brown (172A); stigma very light green (130C). Fls 170 mm wide, slightly fragrant; tepals 100 × 36 mm, margins smooth, tips recurved. Lvs 108 × 23 mm, with a small moderate reddish brown (176B) spot at top of lf-stalk. Stems 1.42 m, green marked with reddish.

**'Robin' IV(-/d)**

Parentage: complex *kelloggii* × *pardalinum* hybrid

R: J. de Graaff (c. 1965), N: J. de Graaff

Fls vermilion and orange, heavily spotted in basal half.

Stems up to 1.9 m.

**'Robina' VIII(a-b/b-c)**

Parentage: an Orienpet (OT) seedling × 'Mero Star'  
R: Testcentrum voor Siergewassen B.V., N: Marklily C.V. (2001), REG: Marklily C.V. (2004)

Inside moderate purplish red (70A), strong purplish red (61B) along midveins, yellowish white (155D) next to and above nectaries, throat yellowish white (155D); outside with outer tepals moderate purplish red (70A), margins strong purplish red (71B), yellowish white (155D) at base, midribs strong yellow-green (143C) at base with moderate purplish red (70A) streak, strong yellow-green (143C) at top, inner tepals strong reddish purple (70B), margins moderate purplish red (70A), basal third of tepals yellowish white (155D) with purple veins, midribs strong yellow-green (143C) at base changing towards top into moderate purplish red (186B); spots absent; papillae few, moderate purplish red (70A); nectaries strong yellow-green (143C); pollen strong orange (25A); stigma dark red (187C). Fls 255 mm wide, fragrant; tepals 150 × 50-80 mm, margins slightly ruffled, tips recurved. Lvs scattered, 200 × 41 mm. Stems 1.1-1.5 m, green with darker markings, and with 3-5 fls. (An Orienpet (OT) lily.)

**'Robin Hood' I(a/-)**

Parentage: (*L. × hollandicum* × unknown) × (*lancifolium* × unknown)

R: Gebr. N. & B. Laan & Zn (pre 1974), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1974)  
Fls vivid orange (28A); spots greyish purple. Stems 0.6 m, with bulbils. Early July.  
(Published in *Lilies and other Liliaceae*, 1975: 95.)

**'Robinson's Comet' I(b-c/d)**

Parentage: 'Pink Tiger' (Woodriff) × "Russian Red Tiger"

R: E. Robinson, G: E. Robinson (1980s), N: B. Strohman (1994), I: B. Strohman (1994), REG: B. Strohman (1994)

Inside with tepal-tips deep purplish pink (58D), the central part light orange (28C), throat creamy magenta; outside deep purplish pink (58D); spots small, purple, on the basal three-quarters of each tepal; nectaries deep purplish pink (58D); pollen red-orange (but very little produced). Fls 150 mm wide; tepals 75 × 30 mm, margins smooth, tips recurved. Lvs scattered, 30 × 10 mm, dark green. Stems 1.5 m, green, mottled, with 8-10 fls in a racemose infl., and with bulbils. Early July to early Aug.  
Syn.: 'Comet I'.

**'Robustum' I(a/b)**

Syn. of *L. × maculatum* 'Aureum'.

**'Rocco' VI(b/a)**

Parentage: *longiflorum* 'Mount Everest' (selection no. 78016-4) × 'White Diamond' (selection no. 78009-1)  
R: J.W.A. van der Wereld (1986), G: J.W.A. van der Wereld (1987), N: J.W.A. van der Wereld (1989), I: J.W.A. van der Wereld (1988), REG: J.W.A. van der Wereld (1990)

Inside greenish to yellowish white (155C/D), throat light

yellow-green (145B); outside greenish white (155C), midribs tinged with pale yellow-green; spots absent; pollen vivid yellow (17B). Fls 160 mm wide, tepals 140 × 40 mm, margins smooth, tips recurved. Lvs scattered, 180 × 22 mm, mid green. Stems 1.5 m, green, with c.7 fls. May (under glass).

**'Rochester' Div. ?**

Given as a parent of 'Dandy', 'Dark Star' and 'Delisle'. No further details.

**'Rochford' I(b-c/d)**

Parentage: ('Citronella' × (*davidii* × unknown)) self-pollinated

R: D.B. Fox, N: D.B. Fox (1977), REG: D.B. Fox (1977)  
Fls vivid orange-yellow (23A) with dark, fine spots. Stems 1.4 m, dark, with c.8 fls.  
(Published in *Lilies and other Liliaceae*, 1977: 81.)

**'Rocky' I(a/-)**

Parentage: 'Jeanne d'Arc' × 'Sergeant Kelly'

R: S.R. Kaul (pre 1987), G: S.R. Kaul (1989), N: S.R. Kaul (1989), I: S.R. Kaul (1996), REG: S.R. Kaul (1996)  
Inside garnet-red, each tepal with a bright tan 'thumb print' from centre to the basal three-quarters; outside also deep garnet-red; garnet-coloured spots in thumb print (smaller spots in nectaries area, ranging to larger spots at outer edge of mark); nectaries garnet-red; pollen deep rust-orange. Tepals 70 × 20-27 mm, margins smooth, tips not recurved (outer pointed, inner rounded to truncate), scattered pedicels with secondary fls. Lvs scattered, 120 × 13 mm, mid green. Stems 1.3 m, the midsection mid green, darker below, with 12-16 fls. Early to midseason.  
(Published in Wind Song Lilies bulb sale listing, June 1996.)

**'Rocky Mountain' I(a/-)**

Parentage: 'Connecticut King' × 'Chinook'

R: M.A. van den Berg (1977), G: M.A. van den Berg (1979), N: M.A. van den Berg (1986), I: M.A. van den Berg, REG: M.A. van den Berg (1988)  
Inside light yellow (18A/B), throat orange-yellow; outside pale yellow to light yellowish pink (158A/159A), outer tepals with a light grey-brown flame and edged light orange-yellow to light yellow (19A/B); spots outer dark brown, in a ring around centre of fl.; pollen light red-brown. Fls 160 mm wide; tepals 75 × 50 mm. Lvs scattered, 100 × 10 mm, mid green. Stems 0.7 m, pale green, with c.10 fls.

**'Rodeo' VIII(a-b/b)**

See 'Rodeos'.

**'Rodeos' VIII(a-b/b)**

Parentage: ('Duet' (of Bischoff Tulleken) × ('Winesap' × 'Aristo')) × (*longiflorum* × pink-flowered seedling)  
R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1993), I: Bischoff Tulleken Lelies B.V. (1993), REG: Bischoff Tulleken Lelies B.V. (1994)  
Inside yellowish white (155D), apical part of each tepal

suffused with deep purplish pink (64D), shading to strong purplish red (64B) at tip, on a yellowish white (155D) ground; outside strong purplish red (64B) on a yellowish white (155D) ground, tepals tinged with strong yellow-green (144B) at base and tip; spots dark red (59A) on a third of each tepal; pollen moderate reddish brown/dark reddish orange (175A/B); stigma strong/light yellow-green (144C/D). Fls 200 mm wide; tepals 105 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 0.75 m, green with darker markings, and with 4-6 fls.

(A *longiflorum*/Asiatic (LA) hybrid. It was registered and included in *ILR Thirteenth Supplement* as 'Rodeo', but the grant of Dutch PBR (LEL 1050) was to 'Rodeos' and this latter spelling of the epithet must be accepted (ICNCP, 2004: Art. 24.4).

#### 'Rodin' VIII(a/b)

Parentage: seedling BG 97-14 × seedling AG 95-10  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2001), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside light greenish yellow (5D), brilliant greenish yellow (5B) along midveins and on tepal-margins, throat yellowish white (155D); outside pale greenish yellow (2D), tepal-margins light greenish yellow (8B), midribs strong yellow-green (141D) at base; spots and papillae absent; nectaries strong yellow-green (143A); pollen moderate brown (165A); stigma strong yellow-green (144C). Fls 160 mm wide, slightly fragrant; tepals 126 × 43-58 mm, margins smooth, tips recurved. Lvs scattered, 142 × 20 mm. Stems 1-1.35 m, green with some darker markings, and with 5-6 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### RODINA VII(a/b)

Trade designation of 'Zantrirod'.

#### 'Rodiso' I(a-b/-)

Parentage unknown  
REG: G. Bottema (2003)

Inside with inner tepals vivid reddish orange to vivid red (34A/44A), outer tepals vivid red (45A), all tepals vivid reddish orange (33B) towards base; outside vivid reddish orange (34A); spots and papillae absent; nectaries orange; pollen orange-brown; stigma dark purple. Tepal-margins ruffled, tips strongly recurved. Stems tall, with reddish markings. Midseason to late.

#### 'Rodolfa' VII(a-b/-)

Parentage: unnamed seedling × unnamed seedling  
R: Trior Lelie B.V., G: Trior Lelie B.V., N: Trior Lelie B.V. (1996), I: Trior Lelie B.V. (1998), REG: Trior Lelie B.V. (1997)

Inside whiter than yellowish white (155D), midveins pale yellow-green (155A); outside whiter than yellowish white (155D), midribs strong yellow-green (144C); spots absent; papillae over half of each inner tepal; nectaries strong yellow-green (145A); pollen more-or-less moderate brown (167A); stigma moderate yellow-green (147D). Fls 240 mm wide; tepals 130-135 × 50-65 mm, margins

ruffled, outer tepals more so, tips strongly recurved. Lvs scattered, 135 × 35 mm, mid green. Stems 0.6 m, light green, with c.7 fls.

(Submitted for registration and published in *ILR Seventeenth Supplement* as 'Rudolfa'. This epithet was erroneous and has been corrected to 'Rodolfa', the epithet under which PBR have been granted in various countries.)

#### 'Rodrigo' I(a/-)

Parentage: unnamed seedling × seedling CPRO 85932  
R: Sande B.V., G: Sande B.V., N: Sande B.V. (1995), I: Sande B.V., REG: Sande B.V. (2001)

Inside a little darker than vivid red (45A); outside vivid reddish orange (42A); spots and papillae present; nectaries orange; pollen reddish brown; stigma dark purple. Tepal-margins slightly wavy, tips recurved. Stems 1.1-1.2 m, green with darker stripes and spots, and with 4-6 fls (from 14-16 cm bulbs). Very early to early.

#### 'Roemeri' IV(-/-)

Parentage: *parryi* × *parvum* var. *crocatum*  
R: Miss Roemer (pre 1926), N: Miss Roemer (Published in *Gard. Chron.*, ser. 3, 92: 177 (1932). Exhibited by Messrs Bees, 19 June 1926.)

#### *roezlii* Purdy IX(c/d)

Syn. of *pardalinum* subsp. *vollmeri*.

#### *roezlii* Regel IX(c/d)

Syn. of *pardalinum*.

#### 'Rogalo' VI(b-c/b-c)

Parentage: 'Henriëtina' × orange-flowered trumpet  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1992), REG: B. Mičulka (1992)

Inside yellow with a golden tint, tepal-tips paler; outside golden yellow, midribs brownish, rosy tinted; nectaries large, green; pollen brown; stigma green. Fls 60 × 135 mm; tepals 110 × 42 mm, margins slightly wavy, tips recurved, often twisted; pedicels slightly spotted violet-brown. Lvs scattered, 100 × 8 mm, dark green, arching. Stems 1.25 m, spotted violet-black, silvered. Mid July.

#### 'Roi' I(a/-)

Parentage unknown  
R: C. Kouwenhoven (1976), G: C. Kouwenhoven, N: S.H. Steltenpool (1989), REG: S.H. Steltenpool (1989)  
Inside light greenish yellow (4B) with a vivid yellow (15A/B) blush; outside light greenish yellow (3C/4B), flushed with moderate red (180C) on outer tepals; spots few, dark red (187A) on the basal half of each tepal; pollen strong orange (169C). Fls 195 mm wide; tepals 90 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 85 × 15 mm, mid green. Stems 0.6 m, green, with c.12 fls. July.

#### 'Roja' II(-/-)

Parentage: (*martagon* × unknown) × (*martagon* × unknown)  
R: E.E. Fox (1985), G: E.E. Fox (1990), N: E.E. Fox

(1995), I: Fox Lily Ranch (1997), REG: E.E. Fox (1996) Inside very pale purple (73D), tepal-margins narrow, pale greenish yellow (9D), throat white; outside light purplish pink (73C), midribs strong purplish pink (73B); spots small, deep purplish red (71A) in centre of tepals; nectaries brilliant yellowish green (134C); pollen moderate orange (168C). Fls 70 mm wide; tepals 33 × 15 mm, margins smooth, tips strongly recurved. Lvs whorled, 150 × 35 mm, mid green. Stems c.1.8 m, green with some brown mottling, and with 24-30 fls. July.

#### **Rokardmount Group I(a-b/-)**

Parentage: 'Roter Cardinal' × 'Tetra Mountaineer'  
R: V. Strasser (1974), G: V. Strasser (1977), N: V. Strasser (1980), I: V. Strasser (1986), REG: V. Strasser (1997)  
Fls red throughout. Tepal-margins smooth, tips not recurved. Lvs dark green. Stems 0.8-0.9 m, rather dark green, with 8-17 fls. Late June. Triploid.

**'Rokardmount Number 1'** I(a/-)  
Syn. of 'Chokaschin'.

**'Rokardmount Number 2'** I(b/-)  
Syn. of 'Rhabus'.

**'Rokardmount Number 8'** I(a/-)  
Syn. of 'Noris Red'.

**'Rokardmount Number 11'** I(b/-)  
Syn. of 'Markomania'.

**'Rokardmount Number 13'** I(b/-)  
Syn. of 'Khanbalic'.

#### **'Rokkoko'** I(a/-)

Parentage: 'Antre' × 'Ambra-gamma'  
R: A.V. Otroshko (1990), N: A.V. Otroshko, REG: A.V. Otroshko (1994)  
Inside strong reddish orange with a yellow centre; outside red; spots black; nectaries frosted white; filaments united as in *monadelphum*; pollen brown. Fls scented; tepals 65-68 × 21-28, margins ruffled, tips not recurved. Stems 0.8 m, black, with c.5 fls. June.

#### **'Rolito'** I(a/b)

Parentage: 'Pirate' × 'Tabasco'  
R: J.M. van Tuyl (1978), G: J.M. van Tuyl, N: J.M. van Tuyl (1985), I: IVT (1985)  
Fls red, tepals with brown spots in basal half; pollen brown. Tepal-margins smooth, tips very slightly recurved. Lvs scattered. Stems 1-1.5 m, dark green, with 1-15 fls. (2n = 24)  
(This cv. is tolerant of low light.)

#### **'Roma'** I(a/b)

Parentage unknown  
R: H. Jacobi, G: H. Jacobi, N: Vletter & Den Haan (c. 1983), I: Vletter & Den Haan (c. 1983), REG: Van der Salm Bulb Farm, Inc. (1989)  
Fls opening cream, fading to pale greenish yellow (9D) in some conditions, tepal-tips cream to white, throat

cream to soft yellow; outside green in bud with brown-red colouring; spots very small, brownish, at base of tepals; nectaries lime-green; pollen soft brown. Tepals 80 × 18 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 25 mm, dark green. Stems 1.2-1.5 m, dark brown, with 6-30 fls. Early July.

#### **'Roman'** VII(-/-)

Parentage unknown  
R: Bischoff Tulleken Lelies B.V. (pre 1994), N: H.J.A. Rooyakkers B.V., I: H.J.A. Rooyakkers B.V.  
Inside moderate purplish red (58A) on a yellowish white (155D) ground, midveins pale yellow-green (155A) towards base; outside yellowish white (155D) flushed with moderate purplish red (58A) along midribs, midribs suffused with golden yellow and some strong purplish red (59D) at base and tipped with strong yellow-green (143B); spots moderate purplish red (58A) on two-thirds of each tepal; papillae yellowish white (155D); pollen orange; stigma light brownish grey (201B). Fls 220 mm wide; tepals 110 × 57 mm, margins ruffled, tips slightly recurved. Lvs scattered, 130 × 40 mm. Stems 0.9 m, pale green with slight darker markings, and with c.7 fls. (Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Roma' and 'Romano'.)

#### **'Roman Candle'** I(a/-)

Parentage: 'Pirate' × (*concolor* × *pumilum*)  
R: Columbia-Platte Lilies (1979), G: Columbia-Platte Lilies (1981), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)  
Inside vivid reddish orange (34A/B), tepal-tips vivid reddish orange (34A), throat vivid reddish orange (30A) to strong or light orange-yellow (22A/B) above nectaries; outside strong to light orange-yellow (22A/B), overlaid with plum to give a bronze effect (darker in cooler weather, paler in intense light or heat); spots few (5-10), very tiny, magenta, near the base of each tepal; nectaries soft orange; pollen strong brown (172A). Tepals 50-60 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green shaded bronze (deeper in cooler weather). Stems 1.2-2.2 m, very dark, almost black, with 7-20 fls. June.

#### **'Romance'** I(a/b)

Parentage: 'Sonnentiger' × mixed pollen of 'Connecticut Bronze', 'Sun Ray' & 'Red King' (Div. I)  
R: K. Braun (1983), N: K. Braun, REG: K. Braun (1986)  
Inside sulphur-yellow; outside flushed yellow-pink, midribs yellow-pink; spots large, chocolate-brown on two-thirds of each tepal; nectaries creamy; pollen chocolate-brown. Fls 180 mm wide; tepals 100 × 90 mm, slightly recurved. Lvs 100 × 20 mm, glossy green. Stems 0.85 m, brown. Mid July.

#### **'Romanesco'** VII(a-b/c)

Parentage: pink-flowered seedling × (*L.* × *parkmanii*) 'Allegra' × 'Star Gazer'  
R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies

B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside yellowish white (155B), each tepal with a flare of strong purplish red (64B), the colour a little stronger over the strong yellow-green (144B) nectaries, tips and throat yellowish white (155B); outside yellowish white (155B), with a flush of strong purplish red (64B), each tepal edged yellowish white (155B), midribs yellowish white (155B) tinged with light greenish yellow (3C) at top; spots moderate purplish red (64A) on two-thirds of each tepal; papillae yellowish white (155B) in the throat; pollen dark reddish orange (175B); stigma light greyish olive (195A). Fls 240 mm wide; tepals 110 × 40 mm, margins slightly ruffled, tepals strongly recurved. Lvs scattered, 150 × 40 mm, mid green. Stems 0.7 m, mid green with some darker marking, and c.7 fls.

#### **‘Romaneto’ I(a-b/c)**

Parentage: ((‘Jason’ × Sundrop Group) × ‘Schneewitchen’) × ‘Montreux’

R: B. Mićulka, N: B. Mićulka, I: B. Mićulka (2000), REG: B. Mićulka (2000)

Inside pale pink tinted with violet, above nectaries brown apricot with a small greenish ray, throat pink; outside pink, midribs yellowish; spots sparse, small, brown-black, on a quarter of each tepal; nectaries partly open, green, pink-granulated at margin; pollen ochre-yellow; stigma pink. Fls 115 mm wide; tepals 75 × 37 mm, the inner slightly recurved, the outer very strongly so; pedicels 75 mm long, brown-dotted, with secondary buds. Lvs scattered, 80 × 14 mm, yellowish green, slightly glossy. Stems 0.75 m, thick, rigid, green with brown at base, and a short infl. Early July.

#### **‘Roman Gold’ IX(b/c)**

See *auratum* ‘Roman Gold’.

#### **‘Romanii’ V(-/a)**

Syn. of *longiflorum* ‘Howardii’.

#### **‘Romanita’ VI(c/d)**

Parentage: ‘Henrieta’ × ‘Brighton’

R: R. Widerski, N: R. Widerski, I: R. Widerski (2004), REG: R. Widerski (2004)

Inside deep orange, tepal-tips paler; outside pale orange with green midribs; brown-orange dashes on a half of each tepal; nectaries green; pollen yellow; stigma green. Fls 120 mm wide; tepals 85 × 14 mm, strongly recurved, slightly twisted and ruffled; pedicels 100 mm long, thick, green and brown, with tertiary buds. Lvs scattered, glossy mid green. Stems 1.4 m, thick, green and brown, with long infl. Mid July.

#### **‘Romano’ I(a/b)**

Parentage unknown

R: Vletter & Dan Haan (1985), G: Vletter & Den Haan (1988), N: Vletter & Den Haan (1994), I: Vletter & Den Haan (1994), REG: Vletter & Den Haan (1995)

Inside vivid yellow (9A); outside vivid yellow (9B); very small spots and papillae near the base of each tepal; nectaries yellow-green; pollen orange-brown; stigma

yellow, with purple dots. Buds hairy. Tepals c.102 × 41 mm, margins smooth, tips slightly recurved. Lvs scattered, c.133 × 21 mm, shiny green. Stems 0.9 m, green, with c.6-10 fls. Midseason to late.

#### **‘Romantica’ VII(b/-)**

Parentage: unnamed seedling × unnamed seedling

R: Trior Lelie B.V., G: Trior Lelie B.V., N: Trior Lelie B.V. (1996), I: Trior Lelie B.V. (1998), REG: Trior Lelie B.V. (1997)

Inside more white than yellowish white (155D), the apical part of each tepal suffused with moderate purplish red (58A) and darker at the tip, midveins strong/light yellow-green (144C/D), fading out into rest of tepal, throat yellowish white (155D); outside similar but the outer tepals more strongly coloured; spots absent; self-coloured papillae on basal part of each tepal; nectaries light yellow-green (145C/D); pollen strong orange (24A); stigma dark red (187A). Fls 220 mm wide; tepals 110-120 × 40-55 mm, margins ruffled, tips strongly recurved. Lvs scattered, 180 × 40 mm, mid green. Stems 0.95 m, green with darker markings, and with 4-6 fls.

#### **‘Romanze in Rheinsberg’ I(a/c)**

Parentage: Neumann Asiatic seedling NN D.4.25 × mixed pollen of ‘Impact’ & brushmarked seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2002), I: G. Steinbrück (2003), REG: G. Steinbrück (2003)

Inside dark red (187A) suffused with blackish, tepal-tips moderate red (179A), vivid reddish orange (34A) streaks continuing the line of the nectaries, throat dark red (187A); outside dark orange to dark red, edge of tepals with slight beige tinge; spots numerous, tiny, inconspicuous, black, on three-quarters of each tepal; nectaries white, hoary; filaments long, dark; anthers large with moderate red (183C) pollen; stigma deep purplish red (187D). Fls 110 mm wide; tepals 60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 72 × 12 mm. Stems 0.8 m, dark green, with c.9 fls. Early July. (Nomenclatural standard: colour print provided by registrant (WSY 0038757).)

#### **‘Romeo’ II(-/d)**

See *L. × dalhansonii* ‘Romeo’.

#### **ROMERO V(b/a)**

Trade designation of ‘Immaculé’.

#### **‘Romikanda’ VI(b/a-b)**

Parentage: unknown × ‘Bamberg’

R: R. Widerski, N: R. Widerski, I: R. Widerski (2004), REG: R. Widerski (2004)

Inside pink, throat yellow; outside dark pink, midribs darker; spots absent; pollen yellow; stigma pale brown. Fls 120 mm wide, shortly trumpet-shaped; tepals 140 × 60 mm, slightly curved, tough; pedicels 80 mm long, brown and green. Lvs scattered, 110 × 11 mm. Stems 1.2 m, thick, brown and green, with medium-sized infl. Early July.

**'Romonya' I(b/-)**

Parentage: ('Nutmegger' × 'Sonnentiger') × Yellow Blaze Group

R: V. Strasser (1986), G: V. Strasser (1988), N: V. Strasser (1992), REG: V. Strasser (1992)

Inside vivid yellow (13A), throat yellow, marked with strong orange-yellow (17A); outside vivid yellow (12A), midribs reddish brown; spots purple on a third of each tepal; nectaries white; pollen brown. Tepals 77 × 37 mm, margins smooth, tips not reflexed. Lvs scattered, 120 × 20 mm, dark green. Stems 1.25 m, green, with up to 37 fls. Mid July to mid Aug.

**'Romulus' VI(b-c/b)**

Parentage unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside beige-apricot, tepal-tips paler; outside paler apricot, midribs mid mahogany; sparse cinnamon dusting on a third of each tepal; nectaries green; pollen brown; stigma whitish-brown. Fls 115 mm wide; tepals 85 × 37 mm, tips strongly recurved; pedicels 50 mm long, slightly brown-dotted. Lvs scattered, 95 × 10 mm, dull dark green. Stems 0.85 m, dark green, dotted at base, with a short infl. Mid July.

**'Rondo' I(c/d)**

Parentage: 'Minaret' × 'Atila'

R: K. Braun (1984), N: K. Braun, REG: K. Braun (1987)

Inside cream-yellow, each tepal with centre tinted red and edges reddish, tips and outside yellow; spots fairly numerous, large, brown-red on two-thirds of each tepal; papillae cream; nectaries cream; pollen brown. Fls 80 mm wide; tepals 68 × 25 mm; pedicels 100 mm long. Lvs scattered, 102 × 11 mm, dull green. Stems 1.3 m, with c.18 fls. Early July.

**'Rondo' I(a/b)**

Parentage unknown

Fls dark raspberry-red.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in M.F. Kireeva, *Lilii*, 51 (2000).)

**'Roni' V(-/a)**

See *longiflorum* 'Roni'.

**'Roparun' VIII(a-b/b)**

Parentage: 'Paola' × seedling LA 93008-6T

R: De Jong Lelies Beheer B.V., N: Flora Holland/De Jong Lelies Beheer B.V. (2003), REG: De Jong Lelies Holland B.V. (2004)

Inside with inner tepals moderate red (180B/C), with some moderate red/dark yellowish pink (181C/D) along top of midveins; outer tepals similar but with some moderate red (180A) along midveins and towards margins, throat dark greenish yellow (152C) with dark yellowish pink (181D) on edges; outside with outer tepals moderate purplish red to dark yellowish pink (186A/B to 181D), margins strong yellowish pink (34D), tips with some strong yellow-green (144C), inner tepals

(181C/D), moderate purplish red (186B) along midribs, margins strong yellowish pink (34D); spots few, dark red (187A); papillae absent; nectaries dark yellowish pink (181D); pollen dark reddish orange (173A); stigma deep purplish red (187D). Fls 180 mm wide; tepals 102-110 × 37-49 mm, margins smooth, tips slightly recurved. Lvs scattered, 176 × 16 mm dark green. Stems 0.85-1.2 m, green with darker markings, and with 3-9 fls. (*A longiflorum*/Asiatic (LA) hybrid.)

**'Rosa' Div. ?**

Given as a parent of 'Coruña'. No further details.

**'Rosabelle' I(a/c)**

Parentage: *lancifolium* × mixed pollen of *L. × scottiae* & *L. × maculatum* 'Mahogany'

R: A.J. Porter (c. 1956), N: A.J. Porter

Fls deep old rose, spotted with maroon. Stems 1 m. July. (Published in *Honeywood Lilies Cat.*, 1956.)

**'Rosabelle Number 2' I(c/d)**

Parentage: 'Edith Cecilia' × unknown

R: unknown

Fls old rose, tepals strongly recurved. Stems 1.2 m. Late July.

(Listed in *Parkland Perennials Cat.* 1995: 8.)

**'Rosa di Lima' I(a/-)**

Parentage unknown

R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1989)

Inside strong purplish red (60C), tepal-edges pale orange-yellow (159C), throat pale yellow-green (4D); outside strong purplish red to moderate red (60C/185B); spots dark red (187A) on the basal half of each tepal; pollen strong orange (168B). Fls 200 mm wide; tepals 100 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 0.8 m, green with slight, darker markings, and with c.7 fls. June.

**'Rosa Falter' II(-/-)**

Parentage unknown

R: G. & F. Ewald, N: G. & F. Ewald, REG: G. & F. Ewald (1997)

Inside light pastel pink; outside cream; spots brown, framed in white; pollen reddish brown. Tepals slightly reflexed ('resembling butterflies'). Stems 1.2 m. Mid June. (Published in German Lily Group sales list, 1995.)

**'Rosa Hoffnung' I(a/c)**

Parentage unknown

R: G. Steinbrück (pre 1992), N: G. Steinbrück

Fls cream and rose-pink.

**'Rosalie' VII(-/c)**

Parentage unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1960), N: R.L. Strahm (1971), I: H.J. & R.L. Strahm (1971), REG: Strahm's Lilies, Inc. (1981)

Inside deep purplish pink (54B), tepal-tips moderate purplish pink (54D), throat green; outside pink; spots

very small, moderate purplish red (58A) around centre of fl.; pollen moderate reddish brown (166B). Fls 150 mm wide, scented; tepals 75 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 175 × 50 mm, mid green. Stems 1.5 m, dark red, with 15 or more fls. July to Aug.  
(Published in Strahm's sales list, 1971.)

**'Rosaliene' VII(b-c/b)**

Parentage unknown

R: Testcentrum voor Siergewassen B.V. (1998), G: (2000), N: Marklily (2001), I: Marklily (2003), REG: Marklily (2003)

Inside light purple (75B), throat pale yellow-green (155A), with light purple (75A) along two-thirds of each midvein; outside very light purple (75C), tepal-tips light purple (75B); spots moderate purplish red (58A); papillae present; nectaries light yellow green (144C); pollen strong orange (168B); stigma light yellowish green (136D). Fls 270 mm; tepals 140 × 65 mm, margins ruffled, tips recurved. Lvs 185 × 40 mm. Stems 1 m, light green, with c.3 fls.

**'Rosalind' I(c/-)**

Parentage: *lanceifolium* × (*davidii* var. *willmottiae* × *cernuum*)

R: C.F. Patterson, N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1958)  
Fls rose-pink, slightly spotted. Stems 0.8 m, with 15-20 fls. July.

**'Rosalinda' II(c/d)**

See *L. × dalhansonii* 'Rosalinda'.

**'Rosalind's Joke' I(a/-)**

Parentage unknown

R: unknown (pre 1994), REG: ICRA (1996)  
Fls light salmon. Lvs dark green. Stems robust, 1.2 m. Early July.  
(Published in European Lily Group sales list, 1994. B. Mičulka (*in litt.*, Sept. 1997) says this is the same as 'Atilla'.)

**'Rosaline' VII(c/c)**

Parentage: *L. × parkmanii* Spectre Group × unknown  
R: G.M. Chandler (1953), G: G.M. Chandler (1956), N: G.M. Chandler, REG: G.M. Chandler (1961)  
Inside deep red, each tepal with white edge. Fls 125 mm wide; tepals slightly reflexed. Stems 1.1 m.  
(Published in *ILR* (1969) and included in *ILR* (1982) in Div. II.)

**'Rosamunde' I(a/-)**

Parentage: 'Mies Bouwman' × 'Chinook'  
R: Bischoff Tulleken Leliecultuur B.V. (1977), G: Bischoff Tulleken Leliecultuur B.V. (1980), N: Bischoff Tulleken Leliecultuur B.V. (1985), I: Bischoff Tulleken Leliecultuur B.V. (1987), REG: Bischoff Tulleken Leliecultuur B.V. (1988)  
Inside moderate purplish red (185C), each tepal with a deep yellowish pink (47C) blotch; outside deep pink to

moderate purplish pink (180D/186D), midribs greyish reddish orange; spots fine, dark brown, in the throat; pollen strong brown (172A). Fls 170 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 10 mm, mid green. Stems 0.6 m, green, with 6-8 fls. June.

**'Rosanella' I(a/b)**

Parentage: Yellow Blaze Group × 'Miss Rosa'  
R: K. Braun (1987), N: K. Braun, REG: K. Braun (1990)  
Yellow and rose-pink bicolor, tepal-tips rose-pink; outside rose-pink with greenish midribs; spots sparse, medium sized, dark brown, on half of each tepal; papillae light rose-pink; nectaries rose-pink; pollen brownish red; stigma rose-pink. Fls 188 mm wide; tepals 93 × 39 mm, margins slightly wavy, tips recurved; pedicels 68 mm long, green and brown. Lvs scattered, 85 × 19 mm, green. Stems 0.85 m, green, with c.6 fls. Mid July.

**'Rosanna' VI ?(-a-b)**

Parentage: 'Leuchstern' × 'Damson'  
R: Saatzucht Zierpflanzen Erfurt (pre 1996), N: Saatzucht Zierpflanzen Erfurt  
Flowers flushed pinkish, with a light yellow centre; nectaries green; pollen light brown. Stems 1.3-1.6 m. Mid July.  
(Listed in German Lily Group sales list, 1996)

**'Rosario' VII(b/b)**

Parentage unknown  
R: T.T. Kirsch (1974), G: Sun Valley Bulb Farms, Inc. (1977), N: Sun Valley Bulb Farms, Inc. (1982), I: Sun Valley Bulb Farms, Inc. (1982)  
Inside light purplish pink (62C), tepal-tips strong purplish pink (63C), throat slightly darker; outside pale purplish pink (56A); inner tepals with maroon spots below, outer tepals hardly spotted; nectaries green to light yellow; pollen strong orange (25A). Fls 150-180 mm wide; tepals 100 × 54 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 130 × 40 mm, dark green. Stems 0.9 m, green tinged with maroon above, with 6-8 fls. July.

**'Rosa Rispe' I(a/-)**

Parentage unknown  
R: J. Klein (pre 1993), N: J. Klein, REG: J. Klein (1994)  
Fls pink. Stems 1 m, with up to 15 fls. July.  
(Published in German Lily Group sales list, 1993.)

**'Rosa Schmetterling' I(c/d)**

Parentage: 'Herta' × Asiatic seedling  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)  
Inside strong purplish pink (63D), tepal-tips and outside very pale purple (73D); spots absent; pollen moderate reddish brown (175A). Fls 130 mm wide; tepals 70 × 25 mm, margins smooth, the whole tepal bent back but not curved over. Lvs scattered, 100 × 13 mm, pale green. Stems 1.2 m, almost black, with up to 30 fls. July.

**'Rosa Schönheit'** I(b/b-c)

Parentage: 'Red Success' × 'Impact'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)

Inside moderate purplish pink (68C) with a light yellowish tinge, tepal-tips light purplish pink (63D); outside strong purplish pink (68B); spots small, elongated, moderate reddish orange (178C) on the basal half of each tepal; nectaries yellowish white (158C); pollen moderate brown (165A). Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly reflexed. Lvs scattered, 90 × 12 mm, mid green. Stems 0.8 m, almost black, with up to 15 fls. July.

**'Rosato'** VII(-/-)

Parentage unknown

R: Vletter &amp; Den Haan, G: Vletter &amp; Den Haan (1988), N: Vletter &amp; Den Haan (1992), I: Vletter &amp; Den Haan (1993), REG: Vletter &amp; Den Haan (1993)

Inside strong purplish pink (55B) on a yellowish white (155D) ground, tepal-edges and base yellowish white (155D), midveins light greenish yellow (8B) to pale yellow-green (155A); outside slightly suffused with strong purplish pink (55B) on a yellowish white (155B) ground (outer tepals stronger coloured), midribs yellowish white (155D) becoming brilliant greenish yellow (151D) towards the top, tepals tinged with green at base and tip; spots few, dark red (187B) on the basal part of each tepal; pollen strong orange (169B); stigma moderate yellow-green (147B) and dark purple (79B). Fls 280 mm wide; tepals 155 × 83 mm, margins ruffled, outer more so, tips slightly recurved. Lvs scattered, 212 × 35 mm, dark green. Stems 1.08 m, mid green, with 6-8 fls.

**'Rosciano'** I(a/-)

Parentage: unnamed seedling × unnamed seedling

R: Peacock B.V. &amp; Imanse Lelieveredeling B.V. (1993), G: Peacock B.V., N: Peacock B.V. &amp; Imanse Lelieveredeling B.V. (1995), I: Peacock B.V. &amp; Imanse Lelieveredeling B.V. (1995), REG: Peacock B.V. (1997)

Inside variegated deep purplish pink (54B) and strong purplish pink (55B), throat with a little yellowish white (155D) and a yellow flush; outside variegated deep purplish pink (54B) and strong purplish pink (55B) on a white ground, stronger coloured towards tepal-edges, midribs (mainly on outer tepals) suffused with strong yellow-green (144C); spots dark red (187C) in the throat; papillae absent; nectaries strong yellow-green (143A), white-hairy; pollen vivid orange-yellow (23A); stigma moderate red (185B). Fls 190 mm wide; tepals 100 × 35-50 mm, margins smooth, tips recurved. Lvs scattered, 165 × 15 mm, mid green. Stems 1.1 m, light green, with c.6 fls. Midseason.

**'Roseanna McCoy'** I(a/-)

Parentage: selection from Mid-century Group

S: J. de Graaff, N: J. de Graaff, I: J. de Graaff (1950)

Fls orange. Stems 1.2-1.5 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1950.)**Rosebank Group** I(a,b/-)

Parentage unknown

R: N. Copey, N: N. Copey

Fls peach-pink to velvety black-red.

**'Rose Beauty'** IX(b-c/d)See *speciosum* 'Rose Beauty'.**'Rosebelle'** Div. ?

Given as a parent of 'Iowa Rose' and 'Krushevitsa'. No further details. Perhaps an error for 'Rosabelle'.

**Rose Bowl Group** I(a/-)

Parentage: ('Connecticut King' × Hallmark Group) × ('Connecticut King' × Hallmark Group)

R: J.F. McRae (1978), G: J.F. McRae &amp; Columbia-

Platte Lilies (1980), N: Columbia-Platte Lilies (1983),

I: Columbia-Platte Lilies (1983), REG: Columbia-Platte Lilies (1984)

Inside light to pale purplish pink (62C/D), tepal-tips pale purplish pink (62D), throat strong purplish red (58C); outside light to pale purplish pink (62C/D); spots absent; nectaries green; pollen moderate orange (167A/B).

Tepals 30-40 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-150 × 20 mm, mid green.

Stems 0.6-0.9 m, green, with 6-8 fls. July.

(Published in *Rex Lilies Cat.*, 1983. Included in *ILR Third Supplement* as Rose Bowl grex.)**'Rose Coral'** I(a/c)

Parentage: tall seedling with up-facing pink fls × short seedling with red and white bicolor fls

R: E.E. Fox (1991), G: E.E. Fox (1993), N: E.E. Fox (1997), I: Fox Lily Ranch (2003), REG: E.E. Fox (2002)

Inside moderate reddish orange (35B), each tepal with light orange (29B) margin and tip, throat deep yellowish pink (39B); outside moderate reddish orange (35B), midribs vivid yellow (16A); spots small, blackish, finely sprinkled on basal quarter of each tepal; nectaries moderate reddish orange (35B), frosted; pollen vivid orange (28A); stigma light orange-yellow (22B). Fls 160 mm wide; tepals 80 × 42 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 160 × 25 mm. Stems 0.75 m, green, with 18-22 fls. Late July.

(The epithet describes the fl. colour. Nomenclatural standard: hard copy of a scanned colour image provided by registrant (WSY 0034903).)

**'Rose Cream'** I(c/-)

Parentage unknown

R: G. Brown, G: G. Brown, N: F. Brown (1989), REG: G. Brown (1991)

Inside with the apical half of tepals moderate pink (49B), blending into light orange (28D) on basal half, throat strong pink (49A); outside light yellowish pink (36A); light spotting on the basal two-thirds of tepals; pollen vivid orange (28A). Tepals 75 × 22-32 mm, margins smooth, tips strongly recurved. Lvs scattered, 120 × 10 mm, dark green. Stems 1.5 m, dark reddish, with up to 30 well-spaced fls on long pedicels. Early to mid July.

**'Rose Cup' I(a/-)**

See *L. × scottiae* 'Rose Cup'.

**Rose Dale Group II(-/-)**

Parentage: deep pink-flowered seedling × deep pink-flowered seedling

R: D. Dale (1984), G: D. Dale (1990), N: D. Dale (1993), I: Parkland Perennials (1994), REG: D. Dale (1993)

Inside rose-red, throat cream-green; outside rose-red; spots fine, maroon, on the basal two-thirds of each tepal; nectaries rose-red; pollen rust, turning towards golden yellow. Fls 40 mm wide; tepals 28 × 14 mm, margins smooth, tips strongly recurved. Lvs whorled, 160 × 35 mm. Stems 0.9-1.2 m, black, mottled dark green, with 22-28 fls. Mid to late June.

**'Rose Dawn' I(b/d)**

Parentage: (*davidii* var. *willmottiae* × *L. × maculatum*) × *regale*

R: C.F. Patterson (c. 1943), N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1951)

Fls rose-pink with orange shading in centre; spots dark, on basal half of tepals; pollen orange-brown. Stems 1 m. July.

(Published in *ILR* (1960).)

**Rose Elegance Group VII(-/-)**

Parentage: Imperial Pink Group × unnamed seedling

R: Fairdale Nursery, N: Fairdale Nursery (1992), REG: Van der Salm Bulb Farm, Inc. (1992)

Fls in shades of rose-pink, with shell-pink throats and variable patterns of spotting.

**'Rosefection' VI(b/a)**

Parentage: ('Damson' × unknown) × 'Damson'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)

Inside light pinkish rose, throat with yellow rays extending up half of each tepal; outside deeper rose, midribs violet-pink; pollen apricot. Fls 115 × 125 mm; tepals 115 × 14 mm, moderately recurved, rigid; pedicels 75 mm long, green. Lvs scattered, 90 × 9 mm, dull green, held horizontally. Stems 1 m, slightly spotted with dark violet at base. Mid July.

**'Rosefire' I(a/b)**

Parentage: 'Old Hollandicum' × 'Connecticut King'

R: E.A. McRae (1973), N: Oregon Bulb Farms, Inc. (1982), I: Oregon Bulb Farms, Inc. (1982), REG: Oregon Bulb Farms, Inc. (1982)

Tepal-tips strong reddish orange (31A/B) with a vivid yellow (12A) blush on centre of each tepal, centre of fl. vivid reddish orange (34A); more-or-less unspotted; nectaries green; pollen moderate orange (167A). Fls 150-180 mm wide; tepals 120 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80-120 × 15 mm, dark green. Stems 1.2 m, dark, with 6-20 fls. June.

**'Rose Hall' I(c/d)**

Parentage: (*davidii* × unknown) × *cernuum*

R: G. Errey, N: G. Errey (1958), I: G. Errey (1958)  
Fls fuchsia-pink fading below, with brown spots on basal third of each tepal. Fls 50 mm wide, *martagon* type.

Stems 1 m.

(Classified in Div. VIII in *ILR* (1969), but re-classified here in Div. I. Although mixed *cernuum* and *rubellum* pollen was used, there are no signs of *rubellum* in this clone, and it is assumed that *cernuum* is the pollen parent.)

**'Roseinebelle' VI(-/a)**

Parentage: selection from *L. × imperiale* Pink Trumpet Group

N: D. Foxwell (1960)

Fls Roseine purple (HCC 629/3) throughout. Buds c.130 mm long.

**'Rose Ivory' IX(b/c)**

See *auratum* 'Rose Ivory'.

**'Rose Jewel' VII(c/b)**

Parentage: selection from Oriental Group

S: L.G. Farina, N: L.G. Farina, I: L.G. Farina (1972), REG: L.G. Farina (1973)

Fls deep red, with green star in centre; tepals with narrow white border. Stems 1 m.

(Published in *Lilies and other Liliaceae*, 1973/1974: 112.)

**'Rosello' I(a/-)**

Parentage: seedling RS 86-17 × seedling RS 87-5

R: Vletter & Den Haan (1988), G: Vletter & Den Haan (1990), N: Vletter & Den Haan, I: Vletter & Den Haan (1995), REG: Vletter & Den Haan (1995)

Inside and outside close to strong purplish pink (55B) but a little more red, throat white changing to pink; spots very few, pale, on a small area of each tepal; papillae also present; nectaries green; pollen pale brown; stigma purplish red. Tepals 90 mm long, margins smooth, tips slightly recurved. Lvs scattered, green. Stems 1.15 m, with dark speckles and stripes, and with 9-13 fls. Early.

**'Rose Madder' Div. ?**

Parentage unknown

(Illustrated in *Amer. LYB* 1946: 108. No further details.)

**'Rose Marie' I(b/-)**

Parentage: complex hybrid

R: C.F. Patterson, N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1970)

Fls crimson (HCC 22/3), with small area of Egyptian buff (HCC 407/3) at top of each nectary; spots numerous, orchid purple (HCC 31/1) on basal third of each tepal giving illusion that the base is darker than crimson (HCC 22/3); pollen Mars orange (HCC 013). Stems 0.8 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 17 (1978).)

**'Rosemarie Nell' I(a/b)**

Parentage unknown

R: B.G. Hayler (1982), G: B.G. Hayler (1984), N: E.J.D.

Ogden (1987), I: Golden Ray Gardens (1987), REG: Golden Ray Gardens (1988)  
Inside light reddish purple (74C), tepal-tips strong reddish purple (72C), throat light yellow-green (142C); outside strong reddish purple (72C); spots small, even, strong reddish purple (72C) on the basal half of each tepal; nectaries light yellow-green (142C); pollen strong reddish purple (72C). Tepals 60 × 27 mm, margins smooth, tips not recurved. Lvs scattered, 65 × 9 mm, mid green. Stems 0.75 m, green, with 6-10 fls. Dec. (Australia).

**'Rosemary Margaret' I(b/b)**

Parentage unknown  
R: F. Fellner (1987), G: F. Fellner (1989), N: B. Strohmman (1994), I: B. Strohmman (1994), REG: B. Strohmman (1994)  
Inside and outside strong purplish red (58B); spots numerous, deeper-coloured, on three-quarters of each tepal; nectaries paler; pollen moderate reddish orange (171A). Fls 120 mm wide; tepals 60 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 10 mm. Stems 0.86 m, green-black, with 13-15 fls. Early to late July.

**'Rosemary North' I(c/d)**

Parentage: (*lankongense* × 'Maxwill') × 'Enchantment'  
R: C. North (1973), G: SHRI (1975), N: C. North (1985), I: RHS Lily Group (1985), REG: RHS Lily Group (1986)  
Inside orange-ochre; outside orange; spots few, dark ochre; nectaries orange. Fls slightly scented; tepals 74 × 29 mm, margins smooth, tips strongly recurved. Lvs scattered, 120 × 11 mm, mid green. Stems 0.9-1 m, with 12 or more fls. Midseason. Allotriploid.

**'Rose Mason' I(a/-)**

Parentage unknown  
R: P.M. Johnson (pre 1981), N: P.M. Johnson  
Inside rose-pink, spotted. Lvs short, broad, dark green. Stems 0.8 m.

**'Rosemede' IX(b-c/d)**

See *speciosum* 'Rosemede'.

**'Rose Mist' IX(b-c/d)**

See *speciosum* 'Rose Mist'.

**'Rosemist' VII(-/b)**

Parentage: selection from Atomic Group  
S: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1976)  
Fls rose-pink throughout, 200 mm wide. Stems 1.2 m. Late Jan. (Australia).  
(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to *speciosum* 'Rose Mist'.)

**'Rosenfinger' VI(-/a)**

Parentage unknown  
R: C. Feldmaier (pre 1967), N: C. Feldmaier  
Fls white with pale pink tepal-margins and pale pink outside.

**'Rosenfingerturm' VI(-/-)**

Given as a parent of 'Bayreuth' and 'Benedetto', both raised by V. Strasser. Strasser raised 'Rosenfingerturm' but kept no record of its parentage or characteristics.

**'Rosenkavalier' I(a/-)**

Parentage unknown  
R: H. Böhm (pre 1993), N: H. Böhm, REG: ICRA (1996)  
Fls dark red with paler tepal-tips. Stems 1 m. Mid July. (Published in European Lily Group sales list, 1994.)

**Rosepoint Lace Group I(c/-)**

Parentage: Southern Belles Group × 'Alpenglow' & other pink-flowered Asiatics  
R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)  
Inside pure white to pale yellowish pink (27D), tepal-tips and throat white, often flushed with pink; outside soft pink to white; heavily marbled (like *lankongense*) with moderate to strong purplish red (58A/B); nectaries green, with white margins; pollen dark red (183A/B) to greyish reddish brown (200B): most fls pollen-sterile. Fls scented; tepals 80-100 × 25-30 mm, margins smooth, tips strongly recurved. Lvs scattered, 100-150 × 15-25 mm, dark green. Stems 1.25-1.75 m, dark green, with 8-20 fls. (Resembles paler Southern Belles Group, but with larger, more open fls and increased marbling. All so far checked are triploid (2n = 36). Published in *ILR Seventh Supplement* as Rosepoint Lace grex.)

**'Rose Queen' I(c/d)**

Parentage: (*lancifolium* × ('Maxwill' × *regale*)) × seedling L. 37-538-1  
R: C.F. Patterson (c. 1943), N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1952)  
Fls deep rose-pink. Stems 1.5 m. July.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *ILR* (1960).)

**'Rose Queen' VII(-/b)**

Parentage: *L. × parkmanii* 'Excelsior' × Sakata-raised Oriental hybrid  
R: Sakata Co. (1972), N: Sakata Co., I: Sakata Co. (1982)  
Inside rose-pink. Fls 260 mm wide, sweetly scented; tepals broad; buds rosy red. Stems 1.5-1.8 m. Midseason. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Rose Queen' IX(b/c)**

See *auratum* 'Rose Queen'.

**'Rose Royale' I(a/-)**

Parentage: unnamed seedling × 'Lavish Lady'  
R: C. Robinson (1977), G: C. Robinson (1980), N: C. Robinson (1983), I: C. Robinson (1984), REG: C. Robinson (1983)  
Fls strong purplish pink (55B) throughout; spots very

fine, dark brown, in the centre; nectaries very pale green; pollen brown. Tepals 70 × 28 mm, margins smooth, tips not recurved. Lvs scattered, 105 × 10 mm, mid green. Stems 0.9 m, mid green, with c.10 fls. July.

**‘Rose Sunshine’ I(-/-)**

Given as a parent of ‘Hawaiian Punch’.

**‘Rose Tapestry’ I(a/-)**

Parentage: (sibling of ‘Aberfoyle’ × (‘Tamerlane’ × ‘Connecticut King’)) × ‘Dawn Star’

R: W.D. Evans (1980), G: W.D. Evans (1984), N: W.D. Evans (1986), I: W.D. Evans (1986), REG: W.D. Evans (1986)

Inside strong pink (54C), extreme tepal-tips green, throat deep purplish pink (54B); outside moderate purplish pink (54D), midribs brilliant yellow-green (154C); spots sparse, moderate purplish red (58A) in the throat; nectaries green; pollen orange. Fls 140 mm wide; tepals 74 × 39 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 74 × 39 mm, mid green. Stems 0.9 m, green, with c.16 fls. Midseason.

**‘Rose Tattoo’ II(c/d)**

Parentage: (‘Pink Attraction’ × *L. × dalhansonii* ‘Juanita’) × unnamed pink- and white-flowered seedling

R: E.E. Fox (1985), G: E.E. Fox (1991), N: E.E. Fox (1993), I: Fox Lily Ranch (1994), REG: E.E. Fox (1993)

Inside each tepal white in centre, rose-pink at tip, throat cream; outside suffused with rose-pink, tepal-margins white, midribs deep rose-pink; spots maroon, small near tepal-centres, but becoming larger and more blotch-like near tips; nectaries celery-green; pollen golden. Fls 55 mm wide; tepals 45 × 13 mm, margins smooth, tips strongly recurved. Lvs whorled. Stems 1.4 m, brown, with 16-22 fls. Late June to early July.

**‘Rose-tipped Freckles’ I(a/b)**

Parentage: ‘Simonet Jewel’ × ‘Appaloosa Queen’

R: M.D. Holloway (1992), G: M.D. Holloway (1993), N: M.D. Holloway, I: M.D. Holloway (1995), REG: M.D. Holloway (1995)

Inside gold-yellow on basal half of each tepal, shading out to rose-pink tips, throat a blend of golden yellow and rose-pink; outside a blend of golden yellow and rose-pink; dark, wine-coloured, heavy spotting on basal three-quarters of each tepal; nectaries frosted, prominent; pollen orange. Fls 160 mm wide; tepals 80 × 39 mm, margins very slightly ruffled, tips not recurved. Lvs scattered, 140 × 16 mm, mid green. Stems just over 1 m, mid green, with c.17 fls. Early July to mid Aug.

**‘Rosetta’ IX(b-c/d)**

See *speciosum* ‘Rosetta’.

**Rosette Group I(c/-)**

Parentage: *dauidii* × *cernuum*

R: R.W. Bemis (pre 1967), N: R.W. Bemis, I: R.W. Bemis

Fls in very varied pastel colours, some bicoloured.

Pedicels very long. Stems 1-1.2 m.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Rosetta’. Published in ‘Deep-Freeze’ *Lilies Cat.*, 1966/67: 2.)

**var. roseum IX(b-c/d)**

See *speciosum* var. *roseum*.

**‘Rosewood’ IV(-/d)**

Parentage: selection from Bullwood Group

S: D.B. Fox (pre 1969), N: D.B. Fox, REG: D.B. Fox (1969)

Fls pink, spotted. Lvs whorled. Stems 2.2 m.

(Published in *LYB* 33: 257 (1970).)

**‘Rosina’ I(b/-)**

Parentage unknown

R: R. Simonet, G: R. Erskine, N: R. Erskine, I: R.

Erskine, REG: R. Erskine (1995)

Inside red-pink, throat rose-pink; outside pink, outer tepals with a gilt-coloured line; spots numerous, small, dark purple; nectaries purple; pollen brown. Fls 80 mm wide; tepals 40 × 16 mm, margins smooth, tips slightly recurved. Lvs scattered, 40 × 5 mm, mid green. Stems 0.6 m, green, with 6-7 fls. Aug.

**‘Rosinante’ VI(-/-)**

Parentage: ‘Pride of Charlotte’ × *L. × imperiale* ‘Bowles’ Variety’

R: O.E.P. Wyatt (c. 1953), N: O.E.P. Wyatt

PC 1953

(Published in *JRHS* 78: 77 (1953), without description.)

**‘Rosinka’ I(b-c/d)**

Parentage: (‘Stroinaia’ × ‘Rubinovaia’) × *cernuum* & its hybrids

R: M.F. Kireeva (c. 1979), N: M.F. Kireeva

Fls creamy white with small spots; filaments cream; anthers brown-red. Fls 90-100 mm wide. Stems 0.8-1.5 m, with 10-20 fls, and with bulbils. July.

(Published in M.F. Kireeva, *Lilii*, 67 (1984). In *ILR Third Supplement* the male parent was given as “mixed pollen of Harlequin Group”).

**‘Rosita’ I(a/b-c)**

Parentage: Asiatic hybrid × *cernuum*

R: De Jong Lelies Beheer B.V., G: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (1979), REG: De Jong Lelies Beheer B.V. (1980)

Fls deep pink (185D); centre spotted blackish; anthers red-brown. Stems 0.75-0.8 m, with 8-12 fls (from 16-18 cm bulbs).

(Published in *Bloembollencultuur*, 1979.)

**‘Rosovoye Utro’ VII(-/b)**

See *L. × parkmanii* ‘Rosovoye Utro’.

**‘Rossini’ I(a/-)**

Parentage unknown

R: Hoffgaarde B.V. (1980), G: Hoffgaarde B.V. (1983),

N: Hoffgaarde B.V. (1986), I: Hoffgaarde B.V. (1986),

REG: Hoffgaarde B.V. (1986)

Inside strong reddish orange (32B), tepal-tips orange; outside strong reddish orange (31B); spots oxblood-red at base of each tepal; nectaries light orange (29B); pollen pale brown. Fls 150 mm wide; tepals 100 × 40 mm, slightly recurved. Lvs scattered, 160 × 15 mm. Stems 1.5 m, pale green, with c.14 fls.

**'Ross Martin'** VI(c/a)

Parentage: 'Golden Galleon' × 'King's Ransom'  
R: T.R. Martin (1995), G: T.R. Martin & G. Brundrett (1998), N: G. Brundrett (1999), I: T.R. Martin & G. Brundrett (1999), REG: G. Brundrett (1999)  
Inside vivid yellow (13A); outside yellow with strong to light yellow-green (145A/B) midribs; spots absent; nectaries strong yellow-green (145A); pollen strong orange-yellow (163B) at first, darkening with age; stigma light green. Fls 140 mm wide, strongly scented; tepals 130 × 95 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 23 mm. Stems 1.54 m, moderate olive-green (146A), with c.13 fls in a pyramidal infl. Mid to late July.  
(Nomenclatural standard: colour print provided by registrant (WSY 0015437).)

**'Rosstrappe'** I(a/b-c)

Parentage: Asiatic seedling × mixed pollen of a brushmarked seedling & 'Brushstroke'  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)  
Inside light orange (26C), tepal-tips brilliant yellow (14C), throat light orange (26C); outside brilliant yellow (14C); spots numerous, large, strong purplish red (60B) on the basal half of each tepal; nectaries moderate yellow-green (139C); pollen moderate red (185B). Fls 140 mm wide; tepals 80 × 40 mm, margins slightly wavy-edged, tips fairly strongly reflexed. Lvs scattered, 60 × 12 mm, dark green. Stems 1 m, rather dark green, with c.10 fls. Mid to late July.

**'Rostani'** I(a/-)

Parentage unknown  
R: R.R. Rutkovskaya (1986), G: R.R. Rutkovskaya (1988), N: R.R. Rutkovskaya (1991), I: R.R. Rutkovskaya (1993), REG: A.V. Otroshko (1995)  
Inside light apricot, throat with red and green tones; outside pale apricot; a dark plum brushmark (16 × 22 mm) and sparse, dark spots in the centre of each tepal; pollen orange. Fls 160 mm wide; tepals 85 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 115 × 10 mm, dark green. Stems 0.9-1 m, dark brown, with c.6 fls. Mid July.

**rosthornii** Diels IX(c/d)

Fls yellow or orange; spots purple-red; nectaries green, frosted. Tepals 60-65 × 9-11 mm. Lvs scattered, lower and middle lvs narrowly lanceolate, 80-150 × 8-10 mm, upper lvs ovate, 30-45 × 10-12 mm. Stems 0.4-1 m, with (1-) 3-9 fls. Late. W China.

**'Rostock'** I(a/b-c)

Parentage: seedling 'Col 1' × 'Parisienne'  
R: G. Steinbrück (1989), G: G. Steinbrück (1991), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2003)  
Inside and outside moderate purplish red (185C); spots numerous, medium sized, dark brown, on three-quarters of each tepal; nectaries moderate purplish red (185C); pollen brownish orange (166C); style long, light orange (26C); stigma moderate reddish orange (35A). Fls 150 mm wide; tepals 80 × 30 mm, margins smooth, tips slightly recurved; pedicels long. Lvs scattered, 60 × 14 mm. Stems 0.9 m, dark green, with 8-10 fls. Mid July.  
(Named for the north German town where the International Garden Exhibition was held in 2003.  
Nomenclatural standard: colour print provided by registrant (WSY 0036755).)

**'Roswitha'** I(a/-)

Parentage unknown  
R: A. Rech (pre 1986), N: A. Rech  
Inside white. Stems 1 m, dark green, with c.10 fls. Late June.  
(Published in German Lily Group sales list, 1986.)

**'Rosy'** I(a/-)

Syn. of 'Papillon'.

**'Rosy'** VII(-/c)

See *L. × parkmanii* 'Rosy'.

**'Rosy Amber'** I(b/-)

Parentage: 'Typhoon' × unknown  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)  
Fls bronze-pink, with bronze yellow ring and pink-frosted centre. Tepal-tips reflexed. Stems 0.6-1 m.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 17 (1978).)

**'Rosy Baron'** VIII(a-b/b)

Parentage unknown  
R: Bischoff Tulleken Lelies B.V., G: Bischoff Tulleken Lelies B.V. (1988), N: Fa Th. G.W. van Haaster, I: Fa Th. G.W. van Haaster & Fa W. van Lierop & Zn (1998), REG: Fa Th. G.W. van Haaster & Fa W. van Lierop & Zn (1998)  
Inside moderate purplish red (185B/186C) ageing to strong purplish red (59D), at the base purple-red, changing on the midveins to orange-pink; outside strong purplish red (59D); a few spots and some papillae present; nectaries purple-red; pollen brown; stigma yellow-green. Fls 140 mm wide; tepal-margins very slightly wavy, tips slightly recurved. Stems 0.7 m, green, with c.5 fls. Very early.  
(*A longiflorum*/Asiatic (LA) hybrid.)

**'Rosy Dawn'** VI(-/a)

Parentage: selection from Pink Perfection Group  
S: J. de Graaff (c. 1960), N: J. de Graaff  
Fls Pansy violet (HCC 033/3).

**'Rosy Dawn' VII(a/b)**

Parentage: white-flowered seedling × (*L. × parkmanii* 'Allegra' × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (1997), I: Bischoff Tulleken Lelies B.V. (1999)

Inside with the inner tepals greenish white (155C), midveins strong red (53C) fading towards margin and tip, outer tepals somewhat more strongly coloured, throat greenish white (155C); outside greenish white (155C), midribs greenish white (157D), the top of the midribs of outer tepals light greenish yellow (3D) and tipped with strong yellow-green (145A); spots deep red (53A); papillae greenish white (155C) and deep red (53A); nectaries strong yellow-green (144C) surrounded by brilliant greenish yellow (2B); pollen strong reddish orange (169A); stigma dark red (59A). Fls 245 mm wide; tepals 140 × 50-70 mm, margins ruffled, tips recurved. Lvs scattered, 190 × 50 mm, dark green. Stems 1 m, light green, with c.3 fls. July.

Syn.: 'Rosy Morn' (Div. VII(a/b)).

(Unacceptable name. Originally submitted for registration in 2000 as 'Rosy Morn', but this epithet was rejected because it had already been used for another lily (ICNCP, 2004: Art. 27.1). The raiser then changed the epithet to 'Rosy Dawn' and as such this lily is being sold and grown. Unfortunately the epithet 'Rosy Dawn' has also been used for another lily and so Bischoff Tulleken's 'Rosy Dawn' is unacceptable and cannot be registered.)

**'Rosy Dimple' VII(a/b)**

See *L. × parkmanii* 'Rosy Dimple'.

**'Rosy Flirt' I(c/c-d)**

Parentage: 'Juliana' × 'Beatrice'

R: N. Martschinke (1982), G: N. Martschinke (1985), N: N. Martschinke (1988), REG: N. Martschinke (1991) Fls strong purplish red (63A); spots darker red, on the basal third to half of each tepal; nectaries vivid purplish red (57D); pollen vivid reddish orange (32A). Fls 70 mm wide, many open together; tepals 65 × 28 mm, margins smooth, tips slightly recurved; pedicels long. Lvs scattered, 80 × 5 mm, mid green. Stems 0.65 m, dark green, with c.19 fls. July.

**'Rosy Future' I(c/-)**

Parentage unknown

R: A. Oistad (1969), N: T.L. Bartel (1975), REG: T.L. Bartel (1976)

Inside rosy lavender; outside whitish lavender; spots present; nectaries pale lavender; pollen brown. Lvs dark green. Stems 1.1-1.2 m, white-woolly. July.

(Published in *Lilies and other Liliaceae*, 1976: 93.)

**'Rosy Light' I(b/-)**

Parentage: 'Radiant Glow' × 'Edith Cecilia'

R: E. Robinson, N: E. Robinson, I: E. Robinson (1971), REG: E. Robinson (1971)

Fls fuchsia-red, with straw-yellow centre. Stems 1-1.2 m. (Published in *Lilies and other Liliaceae*, 1973: 113.)

**'Rosy Morn' IX(b/c)**

See *auratum* 'Rosy Morn'.

**'Rosy Morn' VII(-/c)**

See *L. × parkmanii* 'Rosy Morn'.

**'Rosy Morn' VII(a/b)**

Syn. of 'Rosy Dawn' (Div. VII).

**'Rosy Star' I(a/b)**

Parentage: 'Tirreno' × mixed pollen

R: A. Balode (1996), G: A. Balode (1998), N: A. Balode (2000), REG: A. Balode (2000)

Inside strong purplish red (63B), with a light purplish pink (65B) centre and a greenish throat; outside purple; spots many, very small, marbled, deep red (60A); nectaries dark greyed purple; pollen dark yellow. Fls 140 mm wide; tepals 80 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 90 × 12 mm. Stems 1.3 m, green, with c.5 fls. Mid to late July.

**'Rosy Sunrise' I(a/b)**

Parentage: selection from Mid-century Group

S: L.M. Harrison, I: L.M. Harrison

Fls rose-pink with pink spots in throat, 100-125 mm wide. Stems 1-1.2 m, with 10-12 fls. Dec. to Jan. (New Zealand).

**Rosy Treasures Group VII(-/b)**

See *L. × parkmanii* Rosy Treasures Group.

**'Rosy Wings' I(a/-)**

Parentage: *cernuum* × unknown × Yellow Blaze Group

R: Gebr. N. & B. Laan & Zn (1980), G: Gebr. N. & B. Laan & Zn (1982), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)

Inside bright pink, throat deeper pink; outside pink; spots few, deep purple, in the throat; nectaries light pink; pollen dark orange. Fls 150 mm wide; tepals 80 × 40 mm, margins ruffled, tips not recurved. Lvs scattered, 140 × 20 mm, dark green. Stems 1.5 m, dark green, with c.10 fls. July.

**'Rosy Wonder' VII(a/c)**

Parentage: unnamed seedling × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1988), N: Licomba (1991), I: Coöp.

Kwekersvereniging "The Originals" U.A. (1991), REG: Coöp. Kwekersvereniging "The Originals" U.A. (2000) Inside yellowish white (155D) towards base, towards tepal-tips vivid purplish red (57D) on a yellowish white (155D) ground; outside similar, midribs strong yellow-green (144C); spots few, moderate reddish orange (175D); papillae yellowish white (155D); pollen deep red (60A); stigma moderate purple (82C). Fls 200 mm wide; tepals 110 × 55 mm, margins very slightly ruffled, tips recurved. Lvs scattered, 160 × 50 mm, green. Stems 1.1 m, green, with c.5-8 fls. July.

**'Rotaļa' I(a/b)**

Parentage: 'Enchantment' × *L. × hollandicum*

R: Ā. Zorgevics (1975), G: Ā. Zorgevics (1980), N: Ā. Zorgevics (1981), I: Ā. Zorgevics (1984), REG: Ā. Zorgevics (1987)

Fls bright orange throughout; spots absent; nectaries light yellow; pollen dark brown. Fls 140-150 mm wide; tepals 100 × 30 mm, margins smooth, tips strongly recurved.

Lvs scattered, 100 × 12 mm, glossy pale green. Stems 0.8-0.9 m, dark green, with c.10(-16) fls. July.

(Published in *Dārzs un Drava* 7: 19 (1986). M.V.

Baranova, *Lilii*, 322 (1990) says the fls have sparse spots.)

**'Rotbrauner Tiger' I(b/-)**

Parentage unknown

R: H. Böhm (pre 2000), N: H. Böhm

Fls reddish brown. Stems 1 m. Mid June.

(Published in ELG sales list, 2000.)

**'Rote Finkenrech' I(a/b)**

Parentage unknown

R: J. Klein (pre 1986), N: J. Klein, REG: J. Klein (1988)

Fls dark red. Tepals slightly reflexed. Late July.

(Published in German Lily Group sales list, 1986.)

**'Rote Horn' VIII(b/a)**

Parentage: *longiflorum* × 'Utageo'

R: Y. Asano (1974), G: Y. Asano (1976), N: Zabo Plant B.V., REG: Miyoshi & Co. Ltd (1990)

Inside moderate purplish pink (66D), tepal-tips pale purplish pink (62D); outside strong to light purplish pink (63C/D) vaguely suffused with pale yellow (158B); pollen dark reddish orange to brownish orange (172B/C), sterile. Fls 150 mm wide; tepals 120 × 55 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 25 mm, mid green. Stems 0.6 m, green with some slightly darker markings, and with c.3 fls. July. Triploid.

Syn.: 'Casa Rosa'.

(A *longiflorum*/Asiatic (LA) hybrid. It resembles a pink-flowered *longiflorum* and has sometimes been treated as Div. V.)

**'Rote Kralle' Div. ?**

Given as a parent of 'Bronzetum'. No further details.

**'Roter Bär' I(b/-)**

Parentage: 'Brauner Bär' × unknown

R: C. Feldmaier (c. 1977), G: C. Feldmaier (1980), N: C. Feldmaier (1984), I: C. Feldmaier (1984), REG: G. & F. Ewald (1988)

Inside moderate red (180A), midveins strong orange-yellow (163B), throat green; outside moderate red (179A); nectaries green; pollen strong orange (26A). Fls 160 mm wide; tepals thick, waxy, 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 12 mm, dark green. Stems 1.3 m, dark green overlaid with brown, with c.10 fls, and with bulbils.

(Published in Gesellschaft der Staudenfreunde bulb list, 1984.)

**'Roter Bernstein' Div. ?**

Given as a parent of 'Schönholzer Schwingen'. No further details.

**'Roter Cardinal' I(a/-)**

Parentage: (*lancifolium* × unknown) × 'Document'

R: Gebr. N. & B. Laan & Zn (1969), N: Gebr. N. & B. Laan & Zn (c. 1974), REG: Gebr. N. & B. Laan & Zn (1974)

Fls dark maroon-red, throat dark red; spots black-purple in throat; nectaries green; anthers red-brown. Fls 160 mm wide; tepals 120 × 70 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 15 mm, dark green. Stems 0.9 m, dark green flushed with red, with 16-20 fls, and with bulbils. Late June to early July. Triploid.

Syn.: 'Red Night'.

Trade designation: ORIENTAL SUNSET.

(Published in *Lilies and other Liliaceae*, 1975: 95.)

**'Roter Dreispitz' IV(c/d)**

Parentage: 'Lake Tulare' × American hybrid with flat fls

R: N. Martschinke (1986), G: N. Martschinke

(1991), N: N. Martschinke (1998), I: Europäische

Liliengesellschaft (1998), REG: N. Martschinke (2000)

Inside strong to vivid red (46A/B), throat brilliant orange-yellow (23B); outside strong orange-yellow to moderate yellow (163B/C); spots deep purplish red (59B); nectaries strong yellow-green (143B); pollen dark orange-red; stigma dark red (59A). Fls 80 mm wide; tepals 85 × 23 mm, margins slightly ruffled, tips strongly recurved (outer tepals more so, giving the fl. a triangular symmetry). Lvs whorled, 120 × 15 mm, mid green. Stems 1.2 m, green, with c.8 fls. Late June.

(Published in Europäische Liliengesellschaft list, 1998. Named in allusion to Baroque 3-cornered hats.

Nomenclatural standard: colour print provided by registrant (WSY 0022851).)

**'Roter Falter' I(c/-)**

Parentage unknown

R: J. Klein (pre 2001), N: J. Klein

Fls light red. Stems 1 m. Mid June.

**'Roter Husar' I(a/-)**

Parentage unknown

R: H. Gärtner (pre 1987), N: H. Gärtner, REG: H. Gärtner (1988)

Fls dark red; spots absent. Stems 1 m. Mid July.

(Published in German Lily Group sales list, 1987.)

**'Roter Kakadu' I(a/-)**

Parentage unknown

R: Wiedmann, N: Wiedmann, REG: Wiedmann (1997)

Fls light red. Lvs lightly hairy. Stems 1.5 m, with up to 30 fls and with bulbils. Mid July.

(Published in European Lily Society sales list, 1996.)

**'Roter Prinz' I(a/-)**

See *L. × scottiae* 'Roter Prinz'.

**‘Roter Riesentiger’ I(c/-)**

Parentage unknown

R: J. Klein, N: J. Klein, REG: J. Klein (1997)

Fls light red. Stems 1 m, with up to 15 fls. Mid July.  
(Published in European Lily Society sales list, 1995.)**‘Roter Sarafan’ I(b/-)**

Parentage unknown

R: J. Welsch (1979), N: J. Welsch

Fls red, slightly spotted. Stems 1.2 m. July.

**‘Roter Speer’ I(b/-)**

Parentage unknown

R: J. Klein (pre 1989), N: J. Klein, REG: J. Klein (1989)

Fls dark red. Stems 1.2 m, with 15 fls in a long,

pyramidal infl. Early July.

(Published in German Lily Group sales list, 1989.)

**‘Roter Spion’ IV(c/c)**

Parentage: ‘Lake Tulare’ × an American hybrid with flat fls

R: N. Martschinke (1986), G: N. Martschinke (1992),

N: N. Martschinke (1998), I: N. Martschinke (1998),

REG: N. Martschinke (2000)

Inside strong to vivid red (46A/B), throat brilliant orange-yellow (23B); outside moderate yellow (163C) to moderate red (179B); spots dark red (59A), mostly on yellow areas inside, and fine spotting on yellow outside; nectaries strong yellow-green (143B); pollen dark reddish orange (172B); stigma dark red (183A). Fls 100 mm wide; tepals 70 × 23 mm, margins smooth, tips slightly recurved. Lvs whorled, 60 × 17 mm, mid green. Stems 1.6 m, green, with c.9 fls. Late June.

(Published in Europäische Liliengesellschaft list, 1998.

Nomenclatural standard: colour print provided by registrant (WSY 0022852).)

**‘Roter Stern’ I(-/b)**

Parentage unknown

R: Dr Reichhardt, N: Dr Reichhardt

Fls terracotta.

**‘Roter Tiger’ I(b/-)**

Parentage unknown

R: C. Feldmaier (pre 1980), N: C. Feldmaier

Inside red (46B) with many, small brown spots. Tepals slightly recurved. Stems 1.2 m, with some bulbils. July.

(Included in *ILR Twentieth Supplement* erroneously as unacceptable.)**‘Roter Tiger’ I(c/-)**

Parentage unknown

R: J Klein (pre 1993), N: J. Klein

Fls dark red. Stems 1 m, with up to 15 fls. Early July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in German Lily Group sales list, 1993.)

**‘Roter Traum’ IV(c/d)**

Parentage: ‘Lake Tulare’ × an American hybrid with flat fls

R: N. Martschinke (1986), G: N. Martschinke (1992),

N: N. Martschinke (1998), I: N. Martschinke (1998),

REG: N. Martschinke (2000)

Inside vivid red (45A). throat vivid yellow (13A); outside of outer tepals vivid yellow (14A) overlaid with dark reddish orange (178B), of inner tepals vivid yellow (14A) shading to moderate red (179B) at tips; spots numerous, dark red (59A) on the basal half of each tepal; nectaries moderate olive-green (146A); pollen dark reddish orange (172B); stigma dark red (59A). Fls 95 mm wide, pleasantly scented; tepals 80 × 22 mm, margins smooth, tips strongly recurved (outer more than inner). Lvs whorled, 110 × 25 mm, mid green. Stems 1.2 m, mid green, with c.13 fls. Mid June.

(Published in Europäische Liliengesellschaft list, 1998.

Nomenclatural standard: colour print provided by registrant (WSY 0022856).)

**‘Rote Zunge’ VIII(b/b)**Parentage: (*regale* × unknown) × ‘Blood Tiger’

R: P. Müller (1992), G: P. Müller (1996), N: P. Müller

(1998), REG: P. Müller (2002)

Inside deep red (53A); outside of inner tepals dark red (187B), of outer tepals moderate purplish red (64A); a few, thin markings of dark red (187A); nectaries vivid reddish orange (34A); pollen dark red-brown, but anthers often absent; stigma dark purplish pink (186C). Fls 130 mm wide; tepals 90 × 22-33 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 7 mm. Stems 1 m, brown with green spots, and with c.12 fls. Midseason. (An Asiatic/trumpet hybrid. Nomenclatural standard: colour illustration provided by registrant (WSY 0035253).)

**‘Rotgold’ VI(-/-)**

Parentage unknown

R: H. Böhm (pre 1988), N: H. Böhm

Inside gold; outside reddish; scented; pollen golden yellow. Stems 1.6 m. Mid July.

(Published in German Lily Group sales list, 1988.)

**‘Rotgoldschuppe’ I(a/-)**Parentage: hybrid involving *davidii* ‘Rex’, Bronzino Group, ‘Enchantment’, Citronella Group & a *cernuum* hybrid

R: H. Gerke (pre 1981), N: H. Gerke, REG: ICRA (1997)

Inside yellow; outside red. Stems 0.9 m. Mid July.

**‘Rotkelch’ I(a/-)**

Parentage unknown

R: J. Klein (pre 1989), N: J. Klein, REG: J. Klein (1990)

Fls orange-red. Stems 1 m. Early July.

(Published in German Lily Group sales list, 1989.)

**‘Rotlicht’ I(b/d)**

Parentage unknown

R: L. Denkwitz (pre 1980), N: L. Denkwitz, REG: L. Denkwitz (1988)

Fls vivid red with a few spots. Stems 0.8 m, with c.10 fls. Early July.

(Published in German Lily Group sales list, 1980.)

**'Rotonda' I(a/-)**

Parentage: 'Connecticut King' × seedling N 37-2-7  
 R: M.F. Kireeva, V.V. Martynova & N.V. Ivanova (1983),  
 G: M.F. Kireeva, V.V. Martynova & N.V. Ivanova, N:

 Kireeva, V.V. Martynova & N.V. Ivanova (1990), REG:  
 M.F. Kireeva, V.V. Martynova & N.V. Ivanova (1992)  
 Fls pale rose-pink and pale yellow. Fls 130-150 mm wide;  
 tepal-margins smooth. Stems 0.9-1.2 m., with 7-12 fls.  
 July.

(Published in M.F. Kireeva, *Lilii*, 63 (2000).)

**'Rotriese' I(a/-)**

Parentage unknown  
 R: J. Klein (pre 1988), N: J. Klein, REG: J. Klein (1990)  
 Fls blood-red. Stems 1 m. July.

(Published in German Lily Group sales list, 1988.)

**'Rotterdam' I(a/b)**

Parentage unknown  
 R: Vletter & Den Haan (pre 1986), N: Vletter & Den  
 Haan (2002), REG: Vletter & Den Haan (2002)  
 Inside of inner tepals dark yellowish pink (181D) at  
 tips, moderate red/moderate purplish red (184/C) at  
 base, inside of outer tepals dark pink (182C/D) at tips,  
 moderate red (184B/185B) at base; outside of inner  
 tepals moderate red (184B), with moderate red (181C)  
 to moderate purplish pink (54D) at tips, outside of outer  
 tepals moderate purplish pink (54D); spots and papillae  
 present; pollen orange; stigma red-purple. Tepal-margins  
 smooth, tips recurved. Stems brown, with mid green ribs,  
 and spots and darker markings.

**'Roubaix' VII(a/b)**

Parentage unknown  
 R: Vletter & Den Haan Beheer B.V. (1995), N: Vletter  
 & Den Haan Beheer B.V. (2002), REG: Vletter & Den  
 Haan Beheer B.V. (2002)  
 Inside moderate purplish pink (65A) with deep purplish  
 pink (66C) stripes along midveins, throat light purplish  
 pink (68D); outside light purplish pink (73C); spots  
 deep purplish pink (68A); papillae present; nectaries light  
 yellow-green (145B); pollen moderate reddish orange  
 (171A); stigma light blue-violet. Fls 220 mm wide,  
 slightly scented; tepals 130 × 73 mm, margins slightly  
 ruffled, tips recurved. Lvs scattered, 205 × 50 mm. Stems  
 1.25 m, dark, with c.4 fls.

**'Roudnice' I(b/b-c)**

Parentage unknown  
 R: J. Frajman (1980), N: J. Frajman, REG: J. Frajman  
 (1990)  
 Inside orange-red, tepals paler orange-red in centre;  
 outside with red-beige midribs; spots numerous, dark  
 brown, very large, oval, on five-sixths of each tepal;  
 papillae numerous, in the throat; nectaries orange-red;  
 pollen red-brown; stigma brown-crimson. Fls 170 mm  
 wide; tepals 95 × 40 mm, slightly recurved; pedicels 90  
 mm long, spotted with red-brown, with secondary buds.  
 Lvs scattered, 105 × 12 mm, dark slightly glossy green.  
 Stems 1.5 m, thick, with almost black dots. Mid June.

**'Rouge Pixie' I(a/-)**

Parentage: Pastel Group clone OH 6 × ('Connecticut  
 Lemonglow' × 'Red Carpet')  
 R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc.  
 (1977), N: Oregon Bulb Farms, Inc. (1985), I: Oregon  
 Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc.  
 (1986)  
 Fls orange-red throughout, with a soft purple suffusion  
 outside; spots absent; nectaries soft reddish brown; pollen  
 brown. Tepals 80 × 40 mm, margins smooth, tips not  
 recurved. Lvs scattered, 80 × 15 mm, pale green. Stems  
 0.25-0.3 m, light green, with 8-30 fls. Early June.

**'Roulette' I(a/-)**

Parentage: Asiatic seedling × ('Connecticut King' ×  
 unknown)  
 R: Bischoff Tulleken Leliecultuur B.V. (1974), G:  
 Bischoff Tulleken Leliecultuur B.V. (1977), N: Bischoff  
 Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken  
 Leliecultuur B.V. (1983)  
 Inside vivid orange-yellow (23A), tepals with strong  
 orange (25B) edges and yellow tips, throat yellow-green;  
 outside brilliant orange (25C), midribs green; fine, brown  
 spots in the throat; nectaries reddish brown; pollen  
 majolica-brown. Fls 120 mm wide; tepals 75 × 25 mm,  
 margins smooth, tips slightly recurved. Lvs scattered, 80  
 × 10 mm, mid green. Stems 0.8 m, green, with c.5 fls.  
 Late June.

**'Rousillon' VII(a/b)**

Parentage: 'Barbaresco' × seedling 86-205  
 R: Vletter & Den Haan (1994), G: Vletter & Den Haan,  
 N: Vletter & Den Haan (1997), I: Vletter & Den Haan  
 (1997), REG: Vletter & Den Haan (1997)  
 Inside strong purplish red (60B), midveins deep red  
 (60A), throat yellowish white (155D); outside deep  
 purplish red (59B), with some yellowish white (155D)  
 towards the base, midribs pale yellow-green (155A)  
 and deep purplish red (59B) with strong yellow-green  
 (144B) at the top; spots dark red (187A/B) on the basal  
 part of each tepal; papillae yellowish white (155D),  
 in the throat (on inner tepals only); nectaries strong  
 yellow-green (144B) with rim of brilliant greenish  
 yellow (6C). Fls 200 mm wide; tepals 120-130 × 45-  
 65 mm, margins slightly ruffled, tips recurved. Lvs  
 scattered, 130 × 45 mm, mid green. Stems 0.6 m, light  
 green, with c.6 fls.  
 Trade designation: VLETROUS.

**'Rousseau' VIII(a/b-c)**

Parentage: seedling BW 95-3 × seedling OR 92-15  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den  
 Haan Beheer B.V., N: Vletter & Den Haan Beheer  
 B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG:  
 Vletter & Den Haan Beheer B.V. (2001)  
 Inside light orange-yellow (22C), tepals edged strong  
 orange-yellow (22A), throat pale yellow (20D); outside  
 pale yellow (20C), tepals edged strong orange-yellow  
 (24B); midribs of inner tepals light yellow-green (2C), of  
 outer tepals light/strong yellow-green (2C/144B); spots  
 and papillae absent; nectaries pale yellow (19C); pollen

dark red (187A); stigma brilliant orange (25C). Fls 205 mm wide; tepals 130-140 × 50-65 mm, margins smooth or slightly ruffled, tips recurved. Lvs scattered, 155 × 25 mm. Stems 1.25-1.3 m, green with darker markings, and with c.5-7 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### **'Rovigno' VIII(a-b/b)**

Parentage: seedling BG 95-53 × seedling AG 95-11  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid yellow (14A), midveins with yellow-green base; outside vivid yellow (14A/B); spots and papillae absent; nectaries green; pollen light brown; stigma yellow. Tepal-margins smooth to very slightly wavy, tips slightly recurved. Stems 1.25 m, marked with reddish, and with c.9 fls. Early to midseason.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### **'Rowena' VI(b-c/b)**

Parentage unknown

R: G.S. Jacobs, G: G.S. Jacobs, N: G.S. Jacobs (1987), I: Ozark Mountain Lilies, REG: C. Helsley (1989)

Inside light reddish purple (74C), throat yellow; outside light reddish purple (74C) with the basal 25 mm white; spots absent; nectaries light green; pollen deep yellow. Fls 130 mm wide; tepals 130 × 35-55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 10 mm, mid green. Stems 1-1.5 m, grey-green, with c.15 fls. Late June.

#### **'Rowena Sunshine' VI(b-c/a)**

Parentage: unknown × Golden Splendor Group

R: W. Lindsay, G: W. Lindsay (1999), N: D. Lindsay (2002), REG: D. Lindsay (2002)

Inside butter-yellow, throat green at base; outside of inner tepals lemon-yellow with a narrow brownish purple midrib, outside of outer tepals yellow, overlaid with brownish purple, except at margins; spots absent; nectaries light yellow-green; pollen burnt orange; stigma light green. Fls 180 mm wide, strongly scented; tepals 140 × 50 mm, margins not or slightly ruffled, tips strongly reflexed. Lvs scattered, 90 × 10 mm. Stems 0.6 m, green with dark speckling, with 3-4 fls. Late July to mid Aug.

(Named for the raiser's mother, Rowena Lindsay. Nomenclatural standard: colour print provided by registrant (WSY 0034921).)

#### **'Roxanne' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: P. Hoff (1983), G: Hoffgaarde B.V. (1985), N: P. Hoff (1986), I: Hoffgaarde B.V. (1986), REG: Hoffgaarde B.V. (1988)

Inside light yellow (18A) tepal-edges orange-yellow, midveins pale orange-yellow (19D), throat orange; outside light yellow (19B) flushed with a green; spots brown, in the throat; pollen moderate red (180A). Fls 180 mm wide; tepals 100 × 35 mm. Lvs scattered, 115 × 10 mm. Stems green tinged with bronze, with c.7 fls.

#### **'Roxelane' VIII(-/-)**

Parentage: 'Leuchtstern' × 'Damson'

R: Saatzucht Zierpflanzen Erfurt (1983), G: Saatzucht Zierpflanzen Erfurt (1986), N: Saatzucht Zierpflanzen Erfurt, REG: Institut für Gemüse- und Zierpflanzenbau Grossbeeren Erfurt (1994)

Inside pale purplish pink (56D), tepal-edges light purple (75A), throat pale purplish pink (56D); outside pale purplish pink (56D); spots absent; nectaries strong yellow-green (144A) surrounded by brilliant yellow (15C); pollen golden yellow. Fls 150 mm wide; tepals 90-100 × 24-37 mm, margins smooth, tips slightly recurved. Lvs scattered, 110-120 × 12 mm, mid green. Stems 1.6 m, dark green, with 15-17 fls. Early to mid July.

#### **Royal Group VI(-/-)**

Parentage: various (*benryi* × unknown) × various trumpets  
R: Blackthorne Gardens (pre 1960), N: Blackthorne Gardens

Form and colours of fls varies.

(Published in *ILR* (1982) as Royal grex.)

#### **'Royal American' V(b/a)**

See *longiflorum* 'Royal American'.

#### **'Royal Art' VIII(a-b/-)**

Parentage: seedling E-31-9 × seedling PM-40

R: J.W.A. van der Wereld (1986), G: J.W.A. van der Wereld (1988), N: J.W.A. van der Wereld (1992), I: J.W.A. van der Wereld (1992), REG: J.W.A. van der Wereld (1995)

Inside strong pink to moderate purplish pink (54C/D), tepal-tips rose-pink, throat orange-pink, midveins with an orange-pink tinge near base, and more orange-pink when young; outside moderate purplish pink (65A), more reddish towards tepal-tips; spots and papillae present; nectaries pink; pollen orange; stigma purple-red. Tepals 80 × 35 mm, margins smooth. Lvs scattered, 90 × 20 mm, mid green. Stems 0.7 m, with darker markings and 3-5 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

#### **'Royal Ballade' VIII(a-b/b)**

Parentage: seedling A-87-051 × seedling 87-59-12

R: J.W.A. van der Wereld (1988), G: J.W.A. van der Wereld (1990), N: J.W.A. van der Wereld (1999), I: J.W.A. van der Wereld (1999), REG: J.W.A. van der Wereld (2001)

Inside and outside deep pink (48A); spots and papillae present; nectaries red; pollen orange-brown; stigma orange. Tepal-margins smooth or very slightly wavy, tips recurved. Stems green with dark stripes and spots. Early. (A *longiflorum*/Asiatic (LA) hybrid.)

#### **'Royal Beauty' I(b/-)**

Parentage: Preston seedling 0-25 × unknown

R: E. Robinson (pre 1969), N: E. Robinson  
Inside pale lavender-pink, with extended pale yellow throat; outside lavender; lightly spotted with brown; pollen brown-pink. Fls large. Lvs broad, dark green. Stems 1-1.2 m. July.

(Published in *ILR* (1969) Addenda.)

**'Royal Blush' VII(-/b)**

Parentage: *auratum* × seedling of *L. × parkmanii* type  
 R: G.M. Chandler (1951), G: G.M. Chandler (1955), N: G.M. Chandler (1955), I: G.M. Chandler (1960)  
 Inside white, each tepal with a lilac ray, faintly flushed with lilac; spots lilac. Fls *auratum* type, 230 mm wide. Lvs *auratum* var. *platyphyllum* type. Stems 1.5 m.

**'Royal Bows' I(c/-)**

Syn. of 'Ribbon Bows'.

**'Royal Bright' II(-/b)**

Parentage: (*martagon* × unknown) × 'Redman'  
 R: J.C. Ericksen (c. 1964), N: J.C. Ericksen, REG: J.C. Ericksen (1975)  
 Fls large, dark red-purple; spots absent. Lvs whorled, dark green. Stems up to 1.9 m, dark green. June.  
 (Published in *Lilies and other Liliaceae*, 1975: 95.)

**'Royal Class' VII(a-b/b)**

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × (*L. × parkmanii* Little Rascal Group × 'Star Gazer')  
 R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1992)  
 Inside light purplish pink (62C), pale purplish pink (62D) towards the light yellow-green (144D) throat; outside pale purplish pink (62D), midribs light yellow-green (144D); spots light to pale purplish pink (62C/D) and a few, deep purplish pink (70C) papillae in the throat; nectaries light yellow-green (142D); pollen strong orange (169B). Fls 230 mm wide; tepal-margins not or slightly ruffled, tips recurved. Lvs scattered, 170 × 50 mm, mid green. Stems 0.85 m, green, with 2-6 fls.

**'Royal Club' VIII(a-b/b)**

Parentage: (('Sterling Star' × "Connecticut" cultivar) × 'Mont Blanc') × (*longiflorum* × pink-flowered seedling)  
 R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)  
 Inside yellowish white (155B) slightly suffused with moderate purplish pink (70D), tepal-tips a little darker than moderate purplish pink (70D), throat edged moderate purplish pink (70D); outside yellowish white (155B) slightly suffused with strong reddish purple (70B), each tepal edged with yellowish white (155B), midribs tinged with strong yellow-green (143B) at the base; spots yellowish white (155B) on the basal part of each tepal; papillae dark red (187A); nectaries strong yellow-green (143A); pollen moderate brown (165A); stigma light greenish yellow (4C). Fls 200 mm wide, darker on first opening; tepals 115 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 0.6 m, mid green, with c.5 fls.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Crown' I(a/-)**

Parentage: *wilsonii* × unknown  
 R: Fa A.J. van der Zwet (1980), G: Gebr. Van Zanten B.V. (1982), N: Gebr. Van Zanten B.V. (1982), I: Gebr. Van Zanten B.V., REG: Gebr. Van Zanten B.V. (1983)  
 Inside Orpiment-orange with a strong orange (25A/30D) flush; outside light orange (28C); spots rust-brown, in the throat and elsewhere on tepals; nectaries violet-red; pollen reddish brown. Lvs 90 × 25 mm. Stems 0.75 m, green, with 6-12 fls.

**'Royal Delight' VIII(a-b/b)**

Parentage: seedling E 31-G × seedling PM-40  
 R: J.W.A. van der Wereld (1989), G: J.W.A. van der Wereld (1990), N: J.W.A. van der Wereld, I: J.W.A. van der Wereld (1995), REG: J.W.A. van der Wereld (1995)  
 Inside vivid yellow (between 12A and 14A), margins at base of tepals striped purplish red, base of midveins striped purplish red, tips yellow, throat green changing into yellow; outside brilliant yellow (12B); spots absent; nectaries green; pollen dark brown; stigma purple. Tepal-margins not or weakly wavy, tips recurved. Lvs scattered, glossy green. Stems to 1.25 m, green with dark stripes and speckles, and with 6-7 fls (from 14-16 cm bulbs). Midseason to late.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Diamond' VIII(a-b/-)**

Parentage: seedling E-81-3 × seedling PM 16  
 R: J.W.A. van der Wereld B.V. (1990), G: J.W.A. van der Wereld B.V. (1992), N: J.W.A. van der Wereld B.V. (1993), REG: J.W.A. van der Wereld B.V. (2003)  
 Inside and outside strong pink (54C), each tepal moderate purplish red (186B) at base; spots and papillae present; nectaries pink; pollen orange-brown; stigma orange. Tepal-margins ruffled, tips recurved. Stems of medium height, green with reddish stripes and spots. Early to midseason.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Discovery' VIII(-/b)**

Parentage: seedling E-49-11 × seedling PM-41  
 R: J.W.A. van der Wereld & Zn (1985), G: J.W.A. van der Wereld & Zn (1986), N: J.W.A. van der Wereld & Zn (1992), I: J.W.A. van der Wereld & Zn (1993), REG: J.W.A. van der Wereld & Zn (1994)  
 Inside strong reddish orange (42B/C), midveins strong reddish orange (42B), throat moderate yellow (163C); outside dark yellowish pink (181D), midribs moderate yellow (161A), tipped strong yellow-green (143A) and brilliant yellow (9C), and edged moderate red/moderate purplish red (184B/C); spots dark greyish reddish brown (200A) in the throat; pollen dark reddish orange (172B); stigma moderate red (180C). Fls 210 mm wide; tepals 110 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 20 mm, dark green. Stems 0.6-1.2 m, mid green with darker markings, and with 3-6 fls. July.  
 (A *longiflorum*/Asiatic (LA) hybrid. The description of this lily included in *ILR Thirteenth Supplement* was the description of 'Royal Perfume': the registrant inadvertently transposed the descriptions of these two lilies. The correct description is given here.)

**'Royal Dream' VIII(a-b/b)**

Parentage: seedling E-84-16 × seedling PM-7

R: J.W.A. van der Wereld & Zn (1985), G: J.W.A. van der Wereld & Zn (1986), N: J.W.A. van der Wereld & Zn (1992), I: J.W.A. van der Wereld & Zn (1993), REG: J.W.A. van der Wereld & Zn (1994)

Inside pale greenish yellow (2D) and pale yellow-green (155A); outside similarly coloured, outer tepals tipped strong yellow-green (143B), midribs brilliant yellow-green (154C); spots absent; pollen moderate orange (167A); stigma brilliant greenish yellow (1B) edged greyish brown (166A). Fls 160 mm wide; tepals 110 × 49 mm, margins smooth, tips slightly recurved. Lvs scattered, 172 × 18 mm, dark green. Stems 0.44-1.2 m, mid green with darker markings, and with 2-7 fls. Early July.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Duke' I(a/-)**

Parentage: 'Grace Marshall' × (*L.* × *hollandicum* × unknown)

R: G.E. Holland (c. 1953), N: G.E. Holland

Fls dark red. Stems 1.2 m. July.

(Published in *Lilyhaven Cat.*, 1953.)

**'Royal Dutch' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: G. Van der Salm (1982), G: G. Van der Salm (1983),

N: G. Van der Salm (1988), I: G. Van der Salm (1988),

REG: G. Van der Salm (1988)

Inside vivid orange (28B), throat strong orange-yellow (24B); outside strong orange (169C) with a tinge of yellowish grey (194C) in the middle of each tepal; spots few, dark red, on the basal half of each tepal; pollen moderate reddish orange to brownish orange (171A/B). Fls 205 mm wide; tepals 100 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 0.9 m, green, with 8-9 fls. June to July.

**'Royal Fantasy' VIII(a-b/b)**

Parentage: seedling E-27-10 × seedling PM-33

R: J.W.A. van der Wereld (1985), G: J.W.A. van der

Wereld (1986), N: J.W.A. van der Wereld (1992), I:

J.W.A. van der Wereld (1991), REG: J.W.A. van der

Wereld (1994)

Inside pale yellow-green (4D), throat pale yellow-green (155A); outside of inner tepals yellowish white (155D) shading to light greenish yellow/yellowish white (5D/155D) at edges, midribs light yellow-green (154D) tinged with strong yellow-green (144B) at base, outside of outer tepals light greenish yellow (4B), midribs suffused with brilliant yellow-green (154C) and tipped strong yellow-green (143A); spots absent; pollen vivid orange-yellow (23A); stigma light greenish yellow (5C). Fls 195 mm wide; tepals 105 × 51 mm, margins smooth, tips slightly recurved. Lvs scattered, 143 × 18 mm, dark green. Stems 0.52 m, pale green with some darker markings, and with c.5 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Favourite' IV(-/-)**

Parentage: selection from Bellingham Group

N: RHS Garden, Wisley (1956)

AM 1956

Fls vivid yellow (16A) lightly speckled with maroon.

Tepals recurved.

**'Royal Flush' VI(-/-)**

Parentage: derived from Pink Ice Group

R: G. & A. Geering (pre 1987), N: G. & A. Geering

Fls white to cream.

**'Royal Giant' VIII(a/-)**

Parentage: seedling A 412-87 × seedling AH 627-A-444

R: World Bulbs bvba (1991), G: World Bulbs bvba

(1993), N: World Bulbs bvba (1999), I: World Bulbs

bvba (1999), REG: World Bulbs bvba (2002)

Inside brilliant greenish yellow (6C), each tepal paler towards tip and edges, base yellow-green; outside light greenish yellow (6D); spots and papillae absent; nectaries green; pollen brown; stigma yellow. Stems 1.3 m, green. Early to midseason.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Gold' IX(b/a)**

See *regale* 'Royal Gold'.

**Royal Gold Group Div.?**

Given as a parent of 'Plejáda'. No further details.

**'Royal Grace' VIII(a-b/b)**

Parentage: 'Monte Negro' × a *longiflorum*/Asiatic derivative no. 87.1.7-1

R: J.W.A. van der Wereld (1989), G: J.W.A. van der

Wereld, N: J.W.A. van der Wereld (1996), I: J.W.A. van

der Wereld (1996), REG: World Flower B.V. (1996)

Inside moderate red (180A), throat moderate yellow (162A);

outside greyish red (184A) with some strong yellow-green

(144B) at base; spots and papillae absent; pollen moderate

reddish brown (175A); stigma moderate red/moderate

reddish orange (179B/C). Fls 200 mm wide; tepals 110 ×

30-45 mm, margins smooth, tips very slightly recurved. Lvs

scattered, 110 × 25 mm, mid green. Stems 0.45 m, green

with darker markings, and with c.6 fls. Midseason.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Hall' VIII(a/b-c)**

Parentage: seedling BG 95-60 × seedling G92-10

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan

(2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside pale greenish yellow (1D), tepal-margins and

midveins brilliant greenish yellow (1B), throat greenish

white (157D); outside pale yellow-green (4D), tepal-

margins light yellow-green (2C), midribs brilliant yellow-

green (142B) at base; spots absent; papillae brilliant

greenish yellow (1B); nectaries strong yellow-green (143C);

pollen vivid orange-yellow (23A); stigma pale greenish

yellow (1D). Fls 170 mm wide; tepals 120 × 50-60 mm,

margins slightly ruffled, tips recurved. Lvs scattered, 150 ×

25 mm. Stems 1-1.2 m, green, with c.5 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Highness' VIII(a/a-b)**

Parentage: seedling E-73-24 × seedling PM-12

R: J.W.A. van der Wereld & Zn (1985), G: J.W.A. van der Wereld & Zn (1986), N: J.W.A. van der Wereld & Zn (1992), I: J.W.A. van der Wereld & Zn (1991), REG: J.W.A. van der Wereld & Zn (1994)

Inside yellowish white (155D), tepal-edges and midveins light orange-yellow (25D); outside yellowish white (155D), tepal-edges light orange-yellow (25D), outer tepals tipped strong greenish yellow (151C); spots few, dark red (187C) on a third of each tepal; pollen strong brown (172A); stigma brilliant orange (25C). Fls 170 mm wide; tepals 112 × 49 mm, margins smooth, tips recurved. Lvs scattered, 129 × 12 mm, mid green. Stems 0.6-1.2 m, mid green with many darker markings, and with 4-9 fls. July.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Humboldt' VIII(a-b/-)**

Parentage: seedling A-226-83 × seedling 8759-12

R: J.W.A. van der Wereld & Zn (1998), N: J.W.A. van der Wereld & Zn, I: J.W.A. van der Wereld & Zn, REG: World Flower B.V. (2002)

Inside deep purplish pink (54B), paler towards tepal-tips, red at base; outside strong pink (54C); spots and papillae present; nectaries green; pollen brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems 1.3 m, green. Early.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Impulse' I(a/-)**

Parentage: 'Candy' × seedling AL-15-86

R: J.W.A. van der Wereld (1989), G: J.W.A. van der Wereld (1991), N: J.W.A. van der Wereld (1995), I: J.W.A. van der Wereld (1995), REG: World Flower B.V. (1997)

Inside strong orange-yellow (24B), each tepal edged strong orange (25A) and tinged with strong orange (24A) above the nectaries, throat lighter than pale orange-yellow (24D); outside strong/light orange-yellow (24B/C), tepal-edges narrow, strong orange (25A); spots few, dark red (187B); papillae absent; nectaries brilliant orange (29A); pollen strong reddish orange (169A); stigma moderate red (179B). Fls 150 mm wide; tepals 100 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 15 mm, mid green. Stems 1.25 m, light green, with c.2 fls.

**'Royal Inspiration' VIII(a-b/-)**

Parentage unknown

R: J.W.A. van der Wereld, N: J.W.A. van der Wereld, REG: World Flower B.V. (2002)

Inside light orange-yellow (23C) towards tepal-tips; outside light orange-yellow (23C); spots and papillae present; pollen orange-brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems green with darker markings. Midseason to late.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Jewel' VII(-/b)**

Parentage unknown

R: L.G. Farina (1970), N: L.G. Farina (1973), I: L.G.

Farina, REG: L.G. Farina (between 1973 and 1981)  
Fls pastel pink throughout; unspotted; nectaries green; pollen dark red. Lvs broad. Stems 1 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 39 (1978).)

**'Royal Justice' VIII(a-b/b)**

Parentage: seedling E 31-G × seedling AL-14-85

R: J.W.A. van der Wereld (1989), G: J.W.A. van der Wereld (1990), N: J.W.A. van der Wereld, I: J.W.A. van der Wereld (1995), REG: J.W.A. van der Wereld (1995)

Inside brilliant yellow (7A), paler near midveins; outside brilliant yellow (7A); spots few, along margins at base of tepals; nectaries yellow-green; pollen orange-yellow; stigma yellow. Fls 130 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered, green. Stems 0.9 m, uniformly dark, with 5-8 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Lace' VIII(b/b)**

Parentage: seedling E-52-32 × seedling PM-48

R: J.W.A. van der Wereld & Zn (1985), G: J.W.A. van der Wereld & Zn (1986), N: J.W.A. van der Wereld & Zn (1991), I: J.W.A. van der Wereld & Zn (1991), REG: J.W.A. van der Wereld & Zn (1994)

Inside pale yellow-green/pale greenish yellow (155A/10D), tepal-edges and midveins pale greenish yellow (10D); outside pale yellow-green (155A), midribs light greenish yellow (1C) at the base, strong yellow-green (145A) at top, midribs of outer tepals suffused with moderate red (47A), apical parts edged light yellow (11B); spots dark red (187A) on a third of each tepal; pollen moderate orange (167A); stigma moderate red (181B). Fls 170 mm wide; tepals 116 × 54 mm, margins smooth, tips slightly recurved. Lvs scattered, 145 × 22 mm, dark green. Stems 0.73 m, pale green with some darker markings, and with c.5 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**Royal Lancer Trumpets Group VI(-/a)**

Parentage unknown

R: J.M. Shaver, N: J.M. Shaver, I: J.M. Shaver

Inside white; outside white to maroon. Stems 1.2-2.1 m. July.

(Published in *Rex Bull Farms Cat.*, 1971/72. Included in *ILR Fourth Supplement* as Royal Lancer Trumpets grex.)

**'Royal Leopard' I(b/-)**

Parentage: selection from *L. × hollandicum* hybrids

S: H. Deleeuw Co. Ltd (c. 1962), N: H. Deleeuw Co. Ltd., I: D. Barnhoorn (1968)

Fls persimmon-orange (HCC 710/1), with narrow, purple tepal-edges; spots present. Stems 0.8 m. ("*L. × maculatum* type".)

**'Royal Love' VIII(a-b/b)**

Parentage: *longiflorum*/Asiatic derivative no. 84.183-1 × Asiatic seedling no. 78.015

R: J.W.A. van der Wereld (1988), G: J.W.A. van der Wereld, N: J.W.A. van der Wereld (1995), I: J.W.A. van der Wereld (1995), REG: World Flower B.V. (1996)

Inside moderate purplish red (184D) on a yellowish ground, tepal-tips a little stronger coloured; outside moderate purplish red (184D), hairy; spots dark red (187A) in the throat, with a few papillae; nectaries moderate purplish red (184D); pollen moderate reddish brown (175A), with a little deep orange-yellow (163A); stigma moderate purplish pink (68C). Fls 180 mm wide; tepals 110 × 35-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 20 mm, mid green. Stems 0.9 m, green, with c.3 fls.  
(*A longiflorum*/Asiatic (LA) hybrid.)

#### 'Royal Majesty' VIII(-/c)

Parentage: unnamed seedling × 'Star Gazer'  
R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1993), I: Bischoff Tulleken Lelies B.V. (1993), REG: Bischoff Tulleken Lelies B.V. (1994)  
Inside yellowish white (155D), midveins pale yellow-green (4D), fading towards top; outside yellowish white (155D), midribs paler than brilliant greenish yellow (151D); spots and papillae yellowish white (155D), those on midveins pale yellow-green (4D); pollen moderate reddish orange/brownish orange (171A/B); stigma greyish yellow-green (148D) and dark red (187B). Fls 230 mm wide; tepals 115 × 5 mm, margins ruffled, tips slightly recurved. Lvs scattered, 125 × 30 mm, mid green. Stems 0.8 m, green, with c.3 fls.

#### 'Royal Masquerade' VIII(a-b/b)

Parentage: 'Monte Negro' × unnamed *longiflorum*/Asiatic derivative no. 79-186  
R: J.W.A. van der Wereld (1989), G: J.W.A. van der Wereld, N: J.W.A. van der Wereld (1995), I: J.W.A. van der Wereld (1996), REG: World Flower B.V. (1996)  
Inside deep/moderate red (185A/B), tepal-edges and tips with a little strong orange-yellow (22A), throat deep/moderate red (185A/B), with a light orange-yellow (22B) ground; outside variegated moderate red/moderate purplish red (185B/C), tepal-edges with a little moderate red (179B); spots dark red (187A), at c. a third of the distance from base of tepal; papillae few, in the throat; nectaries deep/moderate red (185A/B), white-hairy; pollen strong brown (172A); stigma pale yellow (161D) with darker speckling. Fls 160 mm wide; tepals 105 × 44-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 25 mm, green. Stems 1 m, pale green, with 3-7 fls.  
(*A longiflorum*/Asiatic (LA) hybrid.)

#### 'Royal Melody' VIII(a/-)

Parentage: seedling 5804-1 × seedling A 0204-7  
R: J.W.A. van der Wereld, N: J.W.A. van der Wereld, REG: World Flower B.V. (2002)  
Inside strong orange (26A); outside brilliant orange (25C); spots and papillae absent; nectaries green; pollen brown; stigma light brownish orange. Stems green. Very early to early.  
(*A longiflorum*/Asiatic (LA) hybrid.)

#### 'Royal Parade' VIII(a/b-c)

Parentage: seedling E-49-79 × seedling PM 19  
R: J.W.A. van der Wereld B.V., G: J.W.A. van der Wereld B.V., N: J.W.A. van der Wereld B.V. (1993), I: J.W.A. van der Wereld B.V., REG: J.W.A. van der Wereld & Zn B.V. (1998)  
Inside a combination of strong red (46A,53B) and moderate red (179A), midveins yellow-green at base, changing into red; outside deep to strong red (53A/B); spots and papillae absent; nectaries green; pollen reddish brown; stigma orange with purple spots. Tepal-margins smooth, tips recurved. Stems c.1 m, with c.8 fls.  
Midseason.  
(*A longiflorum*/Asiatic (LA) hybrid.)

#### 'Royal Perfume' VIII(a/b-c)

Parentage: seedling E-81-18 × seedling PM 11  
R: J.W.A. van der Wereld & Zn (1985), G: J.W.A. van der Wereld & Zn (1986), N: J.W.A. van der Wereld & Zn (1992), I: J.W.A. van der Wereld & Zn (1991), REG: J.W.A. van der Wereld & Zn (1994)  
Inside strong orange (26A), tepal-edges strong orange (25A), midveins greyish red (178A) at base and strong yellow-green (144C) at top; spots dark red, on a third of each tepal; pollen strong orange (168A); stigma moderate reddish orange (178D). Fls 200 mm wide; tepals 115 × 52 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 16 mm, dark green. Stems 0.56 m, mid green with some darker marking, and with c.2 fls.  
(*A longiflorum*/Asiatic (LA) hybrid. The description of this lily included in *ILR Thirteenth Supplement* was the description of 'Royal Discovery': the registrant inadvertently transposed the descriptions of these two lilies. The correct description is given here.)

#### 'Royal Present' VIII(a/b)

Parentage: 'Gran Paradiso' × *longiflorum*/Asiatic derivative no. 87.33.21-2  
R: J.W.A. van der Wereld (1989), G: J.W.A. van der Wereld, N: J.W.A. van der Wereld (1995), I: J.W.A. van der Wereld (1996), REG: World Flower B.V. (1996)  
Inside moderate red/moderate purplish red (185B/C) on a light to pale orange-yellow (23C/D) ground, tepals narrowly edged darker than deep red (185A), throat moderate red (185B) on a light to pale orange-yellow (23C/D) ground; outside variegated moderate purplish red and moderate red (185C & B), more 185B towards the tepal-edge, midribs tinged with strong/light yellow-green (144C/D); spots dark red (187A) in the throat, also a few papillae; nectaries moderate red/moderate purplish red (185B/C), white-hairy; pollen strong brown (172A) and strong orange (169B); stigma light yellow (21D). Fls 200 mm wide; tepals 120 × 40-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 30 mm, green. Stems 1.25 m, green with darker markings, and with 3-6 fls. July.  
(*A longiflorum*/Asiatic (LA) hybrid.)

#### 'Royal Princess' Div. ?

Given as a parent of 'Sundowner'. No further details.

**'Royal Purple' VII(-/b)**

Parentage: selection from Zealandia Group  
S: L.B. Tuffery (c. 1950), N: L.B. Tuffery  
Fls *auratum* type; each tepal with a deep purple ray.

**'Royal Queen' VII(-/b)**

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1992)  
Inside yellowish white (155D), the basal part of each tepal with a brilliant yellow (8A) midvein, throat strong yellow-green (144C); outside yellowish white (155D), midribs light greenish yellow (3D); papillae moderate red (185B) in the throat, yellowish white on the apical part of each tepal; nectaries deep purple (79C); pollen brownish orange (171B). Fls 220 mm wide; tepals with ruffled margins, tips slightly recurved. Lvs scattered, 195 × 36 mm, mid green. Stems 1.4 m, green, with c.7 fls.

**'Royal Rain' VIII(a-b/b)**

Parentage: 'Bora' × seedling Al-11-85  
R: J.W.A. van der Wereld & Zn (1999), N: J.W.A. van der Wereld & Zn, I: J.W.A. van der Wereld & Zn, REG: World Flower B.V. (2002)  
Inside moderate yellowish pink (39C), yellow at base; outside light pink (50D); spots and papillae present; nectaries yellow; pollen red; stigma orange. Tepal-margins scarcely ruffled, tips recurved. Stems 0.95 m, green with darker markings, and with c.5 fls. Early.  
(*A longiflorum*/Asiatic (LA) hybrid.)

**'Royal Record' VII(a-b/b)**

Parentage: ('Royal Queen' × (*L. × parkmanii* 'Allegra' × 'Star Gazer')) × (*speciosum* var. *rubrum* 'Uchida' × 'Star Gazer')  
R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1996), REG: Bischoff Tulleken Lelies B.V. (1997)  
Inside yellowish white (155D), midveins light greenish yellow (8B/C); outside yellowish white (155D), tepal-tips strong yellow-green (143A), midribs lighter than brilliant greenish yellow (151D); brilliant yellow and light greenish yellow (8A & B) spots and papillae on two thirds of each tepal; nectaries strong yellow-green (144C); pollen strong orange (24A); stigma dark red (59A). Fls 250 mm wide; tepals 130-135 × 40-60 mm, margins ruffled, tips recurved. Lvs scattered, 180 × 45 mm, mid green. Stems 0.95 m, light green, with 4-5 fls. July.

**'Royal Respect' VIII(a-b/b)**

Parentage: seedling E-47-17 × seedling P-M.20  
R: J.W.A. van der Wereld & Zn B.V. (1988), G: J.W.A. van der Wereld & Zn B.V. (1992), N: J.W.A. van der Wereld & Zn B.V. (1993), REG: J.W.A. van der Wereld & Zn B.V. (1997)  
Inside pale greenish yellow (9D), midveins green-yellow; outside pale greenish yellow (9D); a few small spots

present; papillae yellow; nectaries green; pollen orange-brown; stigma yellow. Tepal-margins very slightly wavy, tips recurved. Lvs scattered, mid green. Stems 1 m, green with dark stripes and spots, and with 6-7 fls. Midseason to late.

(*A longiflorum*/Asiatic (LA) hybrid.)

**'Royal River' I(a/b)**

Parentage: seedling A-226-83 × seedling S-4-85  
R: J.W.A. van der Wereld (1990), G: J.W.A. van der Wereld (1993), N: J.W.A. van der Wereld (1998), I: J.W.A. van der Wereld (1997), REG: J.W.A. van der Wereld (2001)  
Inside moderate purplish red (186A); outside moderate purplish pink (186D); spots and papillae present; nectaries purple; pollen brown; stigma green. Tepal-margins smooth, tips recurved. Stems 0.95 m, green with darker stripes and spots, and with 6-8 fls (from 16-18 cm bulbs). Very early to early.  
(*A longiflorum*/Asiatic (LA) hybrid.)

**'Royal Robes' I(b/-)**

Parentage: 'Edith Cecilia' × Preston Group  
R: E. Robinson (c. 1962), N: E. Robinson (1965)  
Fls deep purple-red, large. Tepals rolled, slightly reflexed. Stems 1.2 m. July.  
(Published in *ILR* (1969).)

**'Royal Salute' VII(-/l)**

See *L. × parkmanii* 'Royal Salute'.

**'Royal Scarlet' I(-/l)**

Parentage: *dauricum* × *pumilum*  
R: F.H. Horsford, N: F.H. Horsford  
(Published in *LYB NALS* 1: 95 (1947/48). No further details.)

**'Royal Sea' VIII(a/b)**

Parentage: seedling 5805-6 × seedling 87-59-14  
R: World Flower B.V. (1990), G: World Flower B.V. (1993), N: World Flower B.V. (1999), I: World Flower B.V. (1997), REG: World Flower B.V. (2001)  
Inside deep/strong red (53A/B); outside strong red (53B); spots and papillae present; nectaries reddish orange; pollen reddish orange; stigma reddish brown. Tepal-margins smooth, tips recurved. Stems 1.1 m, green, with 8-10 fls (from 16-18 cm bulbs). Early.  
(*A longiflorum*/Asiatic (LA) hybrid.)

**'Royal Shadow' I(a/-)**

Parentage: 'Monte Negro' × seedling 5866-1  
R: J.W.A. van der Wereld B.V. (1998), N: J.W.A. van der Wereld B.V., I: J.W.A. van der Wereld B.V., REG: J.W.A. van der Wereld B.V. (2002)  
Inside strong red/deep red (46A/185A); outside deep red (53A); spots and papillae present; nectaries green; pollen dark brown; stigma red. Tepal-margins ruffled, tips recurved. Stems 1.25 m, green with darker markings. Early to midseason.

**'Royal Sherbet' VIII(a/-)**

Parentage: 'Unique' × seedling AH 627-42  
 R: J.W.A. van der Wereld (1989), G: J.W.A. van der Wereld (1991), N: J.W.A. van der Wereld (2000), I: J.W.A. van der Wereld (2000), REG: World Flower B.V. (2000)  
 Inside moderate reddish orange/strong yellowish pink (35B/C), base light orange-yellow (19A); outside strong yellowish pink (35C); a few spots and papillae present; nectaries purple; pollen reddish brown; stigma light orange. Fls 180 mm wide; tepals 90 × 50 mm, margins ruffled, tips recurved. Lvs scattered, 200 × 25 mm. Stems 1.25 m, green with dark spots and stripes, and with c.9 fls. Early.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Show' VIII(a/b)**

Parentage: seedling BG 95-23 × seedling AG 95-04  
 R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)  
 Inside vivid yellow (12A), throat light greenish yellow (1C); outside vivid yellow (12A), midribs flushed with strong yellow-green (143B), strong yellow-green (143C) at top; spots and papillae absent; nectaries strong yellow-green (143B); pollen strong brown (172A); stigma brilliant greenish yellow (4A). Buds slightly hairy. Fls 220 mm wide, slightly fragrant; tepals 120 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 25 mm. Stems 1.05-1.1 m, green with darker markings in lower part, and with c.6 fls.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Silk' I(a-b/-)**

Parentage unknown  
 I: Miyoshi & Co. Ltd (1989)  
 Inside white; spots numerous, dark, on the basal half of each tepal; pollen dark reddish brown. Tepal-margins very slightly ruffled, tips not recurved, rather blunt. Stems with 4-5 fls.  
 (Published in *Miyoshi & Co. Cat.* no. 87: 110 (1989), with colour illustration.)

**'Royal Song' VIII(a/b)**

Parentage: seedling 90.83.031 × seedling 5866.1  
 R: World Breeding B.V. (1993), G: World Breeding B.V. (1997), N: World Breeding B.V. (1999), I: World Breeding B.V. (1999), REG: World Breeding B.V. (2001)  
 Inside strong red (53C/D), with orange around each orange-pink nectaries; outside strong purplish red (54A); a few spots, but no papillae; pollen orange-red; stigma purple. Tepal-margins ruffled, tips recurved. Stems 1.1 m, green with dark stripes and spots, and with c.7 fls. Early to midseason.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Sovereign' I(b/-)**

Parentage: *lanceifolium* × *L. × hollandicum*  
 R: J. de Graaff (c. 1954), N: J. de Graaff  
 Fls yellow, spotted. Stems 1 m. June to July.  
 (Published in *ILR* (1969).)

**'Royal Star' Div. ?**

Given as a parent of 'Percy Wright'. No further details.

**'Royal Sunset' VIII(a-b/b)**

Parentage: seedling 5809-1 × seedling 5804-2  
 R: J.W.A. van der Wereld, G: J.W.A. van der Wereld, N: J.W.A. van der Wereld (1996), REG: J.W.A. van der Wereld & Zn B.V./World Flower B.V. (1999)  
 Inside strong orange (26A); outside moderate red (179A), paler along midribs; a few small red spots and some papillae present; nectaries orange; pollen red-brown; stigma orange. Tepal-margins smooth or a little ruffled, tips slightly recurved. Stems 1-1.3 m, with c.7 fls. Midseason.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Surprise' VIII(a/b)**

Parentage: seedling A-62-3 × seedling 91-20-009-7  
 R: World Breeding B.V. (1993), G: World Breeding B.V. (1996), N: World Breeding B.V. (2000), I: World Breeding B.V. (1998), REG: World Breeding B.V. (2001)  
 Inside and outside yellowish white (155D); spots and papillae present; nectaries green; pollen yellow-orange; stigma purple. Tepal-margins smooth, tips recurved. Stems 1.2 m, green, with 7-9 fls (from 16-18 cm bulbs). Early.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Trinity' VIII(a-b/b)**

Parentage: 'Carambole' × *longiflorum*/Asiatic cross, no. 87.21.3-7  
 R: J.W.A. van der Wereld (1989), G: J.W.A. van der Wereld, N: J.W.A. van der Wereld (1996), I: J.W.A. van der Wereld (1996), REG: World Flower B.V. (1996)  
 Inside brilliant yellow (21C) changing into brilliant orange-yellow (21B), with paler tepal-edges; outside light yellow (18B), tepals narrowly edged strong orange (24A), midribs suffused with dark red (183A), strongly coloured towards top and strong yellow-green (143B) at tip; spots and papillae absent; pollen dark reddish orange (175B); stigma greyish red (178A). Fls 190 mm wide; tepals 110 × 40-60 mm, margins smooth, tips very slightly recurved. Lvs scattered, 105 × 20 mm, mid green. Stems 1.15 m, green, with c.5 fls. Midseason.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Royal Velvet' I(a/b)**

Parentage: 'Connecticut King' × 'Sailor's Sunset'  
 R: G. Brown (1977), N: G. Brown (1980), I: G. Brown (1981), REG: G. Brown (1982)  
 Fls dark red throughout; unspotted; nectaries yellow; pollen reddish brown. Tepals 55 × 25 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 1.4 m, mid green, with 15-20 fls. July.

**'Royal Victory' VIII(a/-)**

Parentage: seedling E-27-10 × seedling PM 14  
 R: J.W.A. van der Wereld & Zn (1985), G: J.W.A. van der Wereld & Zn (1986), N: J.W.A. van der Wereld & Zn (1992), I: J.W.A. van der Wereld & Zn (1991), REG:

J.W.A. van der Wereld & Zn (1994)  
Inside pale greenish yellow (2D), midveins light greenish yellow (4C) at base; outside pale yellow-green (4D), shading to pale greenish yellow (2D) at tepal-edges, midribs brilliant yellow-green (150C) suffused with strong yellow-green (143C) at top; spots absent; pollen strong orange (24A); stigma brilliant greenish yellow (3B). Fls 210 mm wide; tepals 105 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 15 mm, dark green. Stems 0.48 m, mid green, with c.4 fls. (*A. longiflorum*/Asiatic (LA) hybrid.)

**'Royal Wedding' VII(a-b/b)**

Parentage unknown  
R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V., REG: Combinatie Strijwaco (2003)  
Inside yellowish white (155D), midveins light yellow (10B); outside yellowish white (155D); spots yellow; papillae present; nectaries green; pollen red-brown; stigma dark purple. Tepal-margins ruffled, tips recurved. Stems of medium height to tall, with c.6 fls. Late.

**'Rozárka' I(a/b-c)**

Parentage: 'Appleblossom' × 'Wattle Bird'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)  
Inside violet-pink, each tepal with a with a cream centre, tinted brown around nectaries, throat violet-pink; outside pink, midribs pale beige; spots pink, sparse, on half of each tepal; nectaries frosted white and red-brown; pollen light brown. Fls 125 mm wide; tepals 75 × 40 mm, slightly recurved; pedicels 100 mm long, spotted dark brown. Lvs scattered, 95 × 12 mm, dull light green, held horizontally. Stems 0.75 m, rigid, green. Early July.

**'Rozina' I(a/b-c)**

Parentage: 'Hawaiian Punch' × 'Wattle Bird'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1995), REG: B. Mičulka (1995)  
Inside greyish pink, tepal-tips reddish, throat white at the base; outside with brownish midribs; spots moderately large and numerous, dark crimson-brown, on two-fifths of each tepal; nectaries white-granulated; pollen orange-brown; stigma brown-crimson. Fls 125 mm wide; tepals 85 × 40 mm, moderately recurved; pedicels 70 mm long, brown-dotted. Lvs scattered, 105 × 15 mm, dark and slightly glossy green. Stems 0.85 m, slightly brown-dotted. Early July.

**'Rozmarija' I(b/-)**

Parentage: selection from Amálijas Group  
S: V.P. Orehova, N: V.P. Orehova (1985)  
Fls pink; spots dark pink, in centre of fls; nectaries cream; pollen orange. Tepals 55 × 35 mm. Stems 0.65 m, green. (Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Rose Marie'. Published in *Dārzs un Drava* 7: 21 (1986).)

**'Rozovaia Dymka' I(c/-)**

Parentage: 'Rubinovaia' × mixed pollen of Harlequin Group

R: M.F. Kireeva (1985), N: M.F. Kireeva  
Fls pale fuchsia-pink, with small, darker spots in the basal half of each tepal. Fls 110-130 mm wide; tepal-tips recurved. Stems 0.9-1.2 m, brown, downy, with 7-12 fls and with bulbils. July.  
(Published in M.V. Baranova, *Lilii*, 336 (1990). Included in *ILR Fourth Supplement* as 'Rozovaja Dymka' which is an unaccepted spelling.)

**'Rozovaia Fantaziia' I(a/b)**

Parentage unknown  
R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1992)  
Fls dark pink, each tepal with a cream central patch towards base. Fls 140-150 mm wide. Stems c. 1.3 m, with 11-15 fls. July.  
(Published in M.F. Kireeva, *Lilii*, 49 (2000).)

**'Rozovaia Prima' I(b-c/c)**

Parentage: derived from 'Stroinaia', 'Rubinovaia', 'Prince Charming' (Div. I) & *dauidii* var. *willmottiae*.  
R: M.F. Kireeva (1978), N: M.F. Kireeva  
Fls dark lilac to fuchsia-pink; spots brown, on lower half of each tepal; filaments pink; anthers pink-orange with orange pollen. Fls 100-110 mm wide; tepals narrow, with recurved tips. Lvs 100 × 10 mm, glossy dark green. Stems 0.8-1.3 m, brown, with 10-18 fls and with bulbils. July.  
(Published in M.F. Kireeva, *Lilii*, 61 (1984). Included in *ILR Third Supplement* as 'Rozovaja Prima', which is an unaccepted spelling. In the *Third Supplement* the parentage is given as ('Rubinovaia' × Harlequin Group) × unknown.)

**'Rozovaja Chaika' I(a/b-c)**

Parentage: 'Volkhova' × seedling N 37-2-7  
R: M.F. Kireeva, V.V. Martynova & N.V. Ivanova (1983), G: M.F. Kireeva, V.V. Martynova & N.V. Ivanova, N: M.F. Kireeva, V.V. Martynova & N.V. Ivanova, I: M.F. Kireeva, V.V. Martynova & N.V. Ivanova (1991), REG: M.F. Kireeva, V.V. Martynova & N.V. Ivanova (1992)  
Fls pearly pink, 140-150 mm wide. Stems 0.9-1 m, with 10-15 fls. July.  
(Published in M.F. Kireeva, *Lilii*, 64 (2000).)

**'Rozovaja Dymka' I(b-c/c)**

Unaccepted spelling of 'Rozovaia Dymka'.

**'Rozovaja Prima' I(a/-)**

Unaccepted spelling of 'Rozovaia Prima'.

**'Rozovyi Shar' I(b/-)**

Parentage: unnamed seedling × 'Sniegurochka'  
R: M.F. Kireeva (1984), N: M.F. Kireeva  
Fls pink, spotted. Stems 1.2 m. July.

**'Rozula' I(a/b)**

Parentage: speckled seedling (Latvian origin) × speckled Wadekamper seedling  
R: J. Wadekamper (1995), G: J. Wadekamper (1997), N: J. Wadekamper (1999), I: Willowood (2000), REG: J. Wadekamper (1999)  
Inside dark cream, covered with purple speckles, throat

white; outside cream, midribs light tan; nectaries white; pollen orange. Fls 150 mm wide; tepals 80 × 32 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 12 mm, mid green. Stems 0.65 m, tan-green, with c.12 fls. Midseason.

(Published in *Willowood Cat.*, 2000.)

### **Rubaster Group VI(-/a)**

Parentage: selections from Olympic Group

S: J. de Graaff (c. 1948), N: J. de Graaff

Inside white; outside oxblood-red. Stems 1.5-1.9 m. July.

Syn.: Red Dragon Group.

(Published in *ILR* (1960) as *Rubaster grex*.)

### **rubellum Baker IX(b/a)**

Fls pink; spots absent, or maroon, at base of each tepal; anthers yellow. Fls fragrant; tepals 60-80 × 17-25 mm. Lvs scattered, c.100 × 40-50 mm, shortly stalked. Stems 0.3-0.8 m, green marked with brown-purple, with up to 9 fls. June. Japan.

### **rubellum var. album hort. Wallace ex Woodcock & Coutts IX(b/a)**

Fls white with green midribs.

### **'Rubens' I(a/-)**

Parentage: selection possibly from *L. × hollandicum*

Fls crimson, shading to yellow in centre; spots small, black; some brown marks also present; anthers red. Stems 0.6 m.

(Published in *Rev. Hort.* 1: 284 (1952). Said to be taller than 'Titian' but with less striking fls.)

### **rubescens S. Watson IX(a/a)**

Fls white or whitish, ageing to pinkish purple or purple; spots absent or sometimes deep purple or magenta, small, towards base of each tepal; filaments purple; anthers and pollen yellow. Tepals 40-50 mm long; tips spreading or recurved. Lvs in whorls of 50-12, with some scattered lvs below, 50-120 × 15-35 mm, often twisted towards tip. Stems up to 1.8(-3) m, green flushed with purple, with up to 30(-100) fls. W USA (S Oregon, NW California).

### **'Rübezah!' I(a/-)**

Parentage: Asiatic seedling × ('Medora' × 'Mont Blanc')  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)

Inside vivid yellow (17B), tepal-tips light yellow (18B); outside vivid yellow (17B); spots vivid orange-yellow (23A) on half of each tepal; nectaries white-frosted; pollen moderate reddish brown (175A). Fls 130 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 22 mm, dark green. Stems 0.9 m, almost black, with c.15 fls. Early July.

### **'Rubies' I(a/-)**

Parentage: 'Peachblush' × 'Winesap'

R: E.A. McRae (1976), G: Oregon Bulb Farms, Inc. (1980), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1985)

Inside rich wine to fuchsia-pink, tepal-tips rich wine, throat dark wine-pink; small spots concentrated in centre of fl.; nectaries dark brown; pollen brown. Tepals 50-60 × 30-40 mm, margins smooth, tips slightly recurved.

Lvs scattered, 90 × 10-15 mm, mid green. Stems 1.2 m, mottled purple-brown, with 8-25 fls. Mid June.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Oregon Bulb Farms Cat.*, 1985.)

### **'Rubies' IX(b/c)**

See *auratum* 'Rubies'.

### **'Rubin' I(a/-)**

Error for 'Rubinstern'.

### **'Rubinette' VIII(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: Peacock B.V. & Imanse Lelieveredeling B.V.

(1993), G: Peacock B.V., N: Peacock B.V. & Imanse

Lelieveredeling B.V. (1996), I: Peacock B.V. & Imanse

Lelieveredeling B.V. (1995), REG: Peacock B.V. (1997)

Inside moderate purplish pink (54D), lighter towards tepal-tips; outside strong purplish red (59D) on a lighter ground, tepal-edges deep purplish red (59B); spots few, moderate brown (165A) on the inner tepals; papillae absent; nectaries strong yellow-green (143B) with a pale pink (49D) rim; pollen vivid orange-yellow (23A); stigma greyish red (178A). Fls 190 mm wide; tepals 100 × 40-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 20 mm, mid green. Stems 1.1 m, green, with c.6 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

### **'Rubinovaia' I(b/-)**

Parentage: 'Stroinaia' × *lancifolium*

R: V.A. Grot (1959), N: V.A. Grot

Fls dark cherry-red, spots brown; filaments pale orange; pollen orange; stigma violet. Fls 80-100 mm wide, faintly scented. Lvs 100-120 × 10-15 mm, margins downy.

Stems 1.1-2.2 m, brownish, downy, with 15-25 fls, and with bulbils. July.

(Unaccepted spelling: 'Rubinovaya'. Published in M.F. Kireeva, *Lilii*, 64 (1984). Included in *ILR Second Supplement* as 'Rubinovaja' which is also an unaccepted spelling.)

### **'Rubinovaja' I(b/-)**

Unaccepted spelling of 'Rubinovaia'.

### **'Rubinovaya' I(b/-)**

Unaccepted spelling of 'Rubinovaia'.

### **'Rubínový Skvost' I(a/b-c)**

Parentage: 'Roter Cardinal' × 'Ginny of Millis'

R: V. Baloun (1990), N: V. Baloun, REG: V. Baloun (1990)

Inside crimson-red, tepal-tips paler; throat darker; outside paler, with darker midribs; spots numerous, small, dark red to black, on three-quarters of each tepal; nectaries crimson-frosted; pollen orange-brown. Fls 135 mm wide;

tepals glossy; pedicels 55 mm long, thick, abundantly spotted red-brown. Lvs scattered, 85 × 12 mm, dull pale green. Stems 0.6 m, thick, dark red-brown. Mid June.

**‘Rubinstern’ I(a/-)**

Parentage: ‘Redstart’ × unknown

R: J. Petruske, G: J. Petruske (1974), N: J. Petruske (1982), I: J. Petruske (1982), REG: J. Petruske (1984)  
Inside strong red (46A), tepal-tips moderate red (47A), throat vivid orange-yellow (21A); outside strong pink (48D), darker towards tepal-margins; spots numerous, large, dark greyish purple (202A); nectaries frosty white; pollen strong reddish orange (169A). Fls 150 mm wide; tepals c.100 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 132 × 16 mm, dark green. Stems 0.75 m, hairy, dark purple. Late July.  
(Sometimes listed erroneously as ‘Rubin’.)

**‘Ruby Flash’ VII(b/b-c)**

Parentage: ‘Miss Norway’ × (‘USA’ × ‘USA’)

R: Mak-Leek Inc. (1990), G: Mak-Leek Inc. (1992), N: Mak-Leek Inc. (1996), I: Mak-Leek Inc. (1997), REG:

Mak-Leek Inc. (1997)

Inside pale purplish pink (65D) to light purplish pink (62C), tepal-tips light purplish pink (65B), throat vivid reddish orange to deep yellowish pink (44C/D); outside ivory-white to pale pink (49D) or pale purplish pink (65D); papillae medium sized, magenta-pink, on the basal half of each tepal; nectaries light greenish grey (202D); pollen strong yellowish pink to vivid reddish orange (37A/34B); stigma green. Fls 150-180 mm wide; tepals 95 × 45 mm, margins ruffled, outer tepals more so, tips strongly recurved. Lvs scattered, 80-110 × 40-60 mm, mid green. Stems 0.35-0.45 mm, green with darker markings, and with 5-10 fls. June.  
(Fl. colour is slightly affected by temperature and light levels.)

**‘Ruby Giant’ IX(b-c/c)**

See *auratum* ‘Ruby Giant’.

**‘Ruby Glow’ I(b/c)**

Parentage: red-flowered seedling × red-flowered seedling  
R: A.J. Burnett (1989), G: A.J. Burnett (1991), N: E.E. Fox (1997), I: Fox Lily Ranch (2002), REG: E.E. Fox (2001)

Inside vivid red (46B), throat vivid orange-yellow (23A); outside vivid red (46C); spots fine, dark red (187A) on the basal third of each tepal; nectaries strong red (46A); pollen vivid orange (28A); stigma greyish red (176A). Fls 150 mm wide; tepals 75 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 17 mm. Stems 0.85 m, mid green, with 18-20 fls. Late July.

(The epithet is descriptive of fl. colour when back-lit.)

**‘Ruby Jewels’ VII(a)**

See note under Ruby Jewels Group

**Ruby Jewels Group VII(b-c/-)**

Parentage unknown

R: H.J. Strahm (c. 1969), N: H.J. Strahm, I: Strahm’s Lilies, Inc., REG: Strahm’s Lilies, Inc. (1984)

Fls crimson, tepal-tips white; spotting light; pollen orange. Fls 170-225 mm wide; tepal-margins ruffled, tips slightly recurved. Stems 1-1.5 m. Aug. to Sept.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 48 (1978) and included in *ILR* (1982) as a cv. (Div. VII(a) ‘Ruby Jewels’.)

**‘Ruby Pixie’ I(a/-)**

Parentage: Pastel Group clone OH 6 × (‘Connecticut Lemonglow’ × ‘Red Carpet’)

R: E.A. McRae (1976), G: Oregon Bulb Farms, Inc. (1979), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)

Inside strong to vivid red (46A/B) to vivid red (44A), tepal-tips vivid reddish orange (34A/B), throat vivid red (46B); outside vivid reddish orange (43B) to deep yellowish pink (43C); spots 10-15, tiny, inconspicuous, magenta, at base of inner tepals; nectaries green, overlaid with white hairs; pollen strong to moderate reddish orange (169A/171A). Fls 120-170 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs

scattered, 100 × 10 mm, mid green. Stems 0.25-0.35 m, light green, with 6-20 fls. Early June.

**‘Ruby Queen’ I(-/-)**

Parentage unknown

Given as a parent of ‘Maori Chief’.

**‘Rudoch’ I(a-b/c)**

Parentage: ‘Connecticut King’ × ‘Pink Champagne’

R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B. Mičulka (1984)

Fls old rose overlying beige, fading to beige, tepal-tips tinted with bronze; outside pink-beige with brownish midribs; spots sparse, medium to large, dark purple, on a quarter of each tepal; nectaries frosted white; pollen pale brown. Fls 170 mm wide; pedicels violet-black. Lvs 90 × 12 mm, slightly glossy. Stems violet-black, with a short pyramidal infl. Mid July.

**‘Rudolfa’ VII(a-b/-)**

Error for ‘Rodolfa’.

**‘Ruffed Grouse’ I(a/b)**

Parentage: ‘Connecticut King’ × seedling SX 76-2

R: W.S. Summers (1976), G: W.S. Summers (1978), N: W.S. Summers (1991), REG: W.S. Summers (1992)

Inside vivid reddish orange (30B); outside strong orange (30D); spots absent; nectaries vivid reddish orange (30B); pollen orange (168). Fls 140 mm wide; tepals 75 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 145 × 15 mm, dark green. Stems 0.9 m, green, with 9-24 fls. Late June to mid July.

**‘Ruffles’ I(a/c)**

Parentage: (up-facing, pink-flowered seedling × ‘Connecticut King’) × another clone of the same parentage

R: J.F. McRae (1978), G: Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1984), I: Columbia-Platte Lilies (1984), REG: Columbia-Platte Lilies (1984)

Inside cream to white; outside cream to green; spots few, large, magenta, in the centre; nectaries green. Fls double; tepals 60-80 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-180 × 20 mm, mid green. Stems 0.3-0.6 m, green overlaid with plum, with 4-7 fls. June to July.

Syn.: ‘White Ruffles’.

(Published in *Rex Lilies Cat.*, 1984.)

**‘Rufina’ I(a-b/b-c)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1994)

Fls pearly pink. Fls 140-160 mm wide; tepal-margins smooth. Stems 0.9-1.1 m, with 7-13 fls. July.

(Published in M.F. Kireeva, *Lilii*, 65 (2000).)

**‘Rufous’ VII(-/b)**

Parentage unknown

R: L. Woodriff (1959), G: H.J. & R.L. Strahm (1962),

N: R.L. Strahm (1970), I: H.J. & R.L. Strahm (1972),

REG: Strahm’s Lilies, Inc. (1983)

Fls white, tepals with central rays of moderate reddish orange (35A), tips white, throat strong greenish yellow (151B); outside with moderate reddish orange (35A) midribs; profusely spotted strong red (46A); nectaries strong greenish yellow (151B); pollen strong reddish orange (31A). Fls 250 mm wide; tepals 125 × 75 mm, margins smooth, tips strongly recurved. Lvs scattered, 175 × 65 mm, dark green. Stems 1-1.2 m, dark green, with 6 or more fls. Early Aug.

(Published in *Rex Bulb Farms Cat.*, 1972.)

**‘Rügenflirt’ VI(c/d)**

Parentage: *henryi* × mixed pollen of *L. × kewense* ‘White Henryi’, ‘Mimosa Star’ & ‘Louise’

R: G. Steinbrück (1990), G: G. Steinbrück (1994), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)

Inside pale yellow-green (155A), throat light orange-yellow (24C); outside with tepal-bases pale green, otherwise greenish white (157D); spots and streaks moderate purplish red (59C), many, moderate sized; papillae conspicuous, large, light orange-yellow (24C); nectaries moderate yellowish green (138A); filaments very long, moderate yellowish green (138A); pollen moderate reddish brown (175A); style long, pale green; stigma moderate yellow-green (138B). Fls 97 mm wide; tepals 75 × 25 mm, margins slightly ruffled, tips strongly reflexed. Lvs scattered, 200 × 25 mm. Stems 1.2 m, dark green, with c.15 fls. Mid to late July.

(Nomenclatural standard: colour print provided by registrant (WSY 0032264).)

**‘Rulada’ I(b/c-d)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1995)

Fls greenish white; spots absent. Fls 100-120 mm wide. Stems 0.7-0.9 m, with 15-30 fls. June.

(Published in M.F. Kireeva, *Lilii*, 71 (2000).)

**‘Rumba’ I(a/-)**

Parentage: ‘Enchantment’ × ‘Connecticut King’

R: K. Mynett & A. Wilkońska (1978), G: K. Mynett & A. Wilkońska (1981), N: K. Mynett & A. Wilkońska, I: Research Institute of Pomology & Floriculture (1997), REG: Research Institute of Pomology & Floriculture (1997)

Inside vivid reddish orange (30B), throat vivid reddish orange (33A); outside strong yellowish pink (34D); spots absent; nectaries light green; pollen light bronze; stigma deep bronze. Fls 135 mm wide; tepals 80 × 40 mm, margins slightly ruffled. Lvs scattered, 80 × 12 mm, dark green. Stems 0.55 m, with c.10 fls. Early July.

(Good for forcing in Jan. to March.)

**‘Rumělka’ I(a-b/b-c)**

Parentage unknown

R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1989)

Inside glowing orange-red, throat orange; outside tinged with violet; spots small, sparse, dark brown on a quarter of each tepal; pollen orange-red. Fls 140 mm wide; tepals

75 × 36 mm, margins smooth, tips very slightly recurved. Lvs scattered, 100 × 6 mm, glossy dark green. Stems 0.8 m, slightly brown-spotted. Early July.

**‘Rumpelstilzchen’ I(c/d)**

Parentage: ‘Vishenka’ × ‘Snowcap’  
R: G. Steinbrück (1988), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (2000), REG: G. Steinbrück (2003)

Inside deep purplish red (59B); outside similarly coloured, midribs soft green-yellow; spots small to medium sized, black, on a third of each tepal; nectaries grey-white, hoary; filaments long, pink shading to white at base; pollen moderate reddish orange (173B); style long, moderate red (179B); stigma moderate reddish brown (175A). Fls 110 mm wide; tepals 60 × 36 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 80 × 13 mm, Stems 0.4-0.6 m, dark green, brown-spotted, with 6-8 fls. Mid June.

(Published in ELG sales list, 2000. This short-stemmed lily was named after Rumpelstilzchen (Rumpelstiltskin) - a dwarf in a fairy tale.)

**‘Runcis Renārs’ I(a/b)**

Parentage: ‘Peach Delight’ × ‘Menton’  
R: D.-V. Škimele (1996), G: D.-V. Škimele (1999), N: D.-V. Škimele (2001), REG: D.-V. Škimele (2004)

Inside orange-yellow, tepal-tips a little paler; outside orange-yellow, midribs greenish orange; spots absent; nectaries greenish yellow; pollen dark brown; stigma vivid orange. Fls 180 mm wide; tepals 95 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm. Stems 0.6 m, green with brown markings, with c.6 fls. Mid July. Tetraploid.

(Published in *Lilium Balticum Register*, 2001.)

**‘Rusalka’ I(a/b-c)**

Parentage: ‘Appleblossom’ × ‘Wattle Bird’  
R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)

Inside creamy white, throat white, yellowish over nectaries; outside white, midribs greenish and pinkish; spots small, sparse, cinnamon, on a fifth of each tepal; nectaries green, white-frosted; pollen dark brown. Fls 175 mm wide; tepals 100 × 46 mm, slightly arched; pedicels 100 mm long, moderately spotted. Lvs 95 × 16 mm, glossy dark green. Stems 1.15 m, dark green, dark brown at base. Mid July.

**‘Rusalka’ I(a/-)**

Parentage: (‘Pink Champagne’ × unknown) × ‘Connecticut King’

R: A. Weinreich (pre 1986), N: A. Weinreich  
Inside rosewood-coloured, spotted. Stems 1.3-1.5 m. Late.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Russell Leslie’ I(a/-)**

Parentage: ‘Edith Cecilia’ × Preston Group  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1970)  
Fls cream with pale orange spots in centre. Tepal-tips

reflexed. Stems 1-1.2 m. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 17 (1978).)

**‘Russet Ribbons’ I(a/-)**

Parentage: ‘Honeybunch’ × probably ‘Delicious’  
R: R. Erskine (c. 1980), G: R. Erskine (pre 1985), N: R. Erskine (1987), I: R. Erskine (1992), REG: R. Erskine (1994)

Inside and outside russet-coloured, tepal-tips sometimes tinged with pink, throat pink; some brown spots; nectaries whitish; pollen orange. Fls 120 mm wide; tepals 60 × 25 mm, margins slightly ruffled, tips slightly recurved, the tepals twisted and hanging down, leaving stamens and pistil pointing upwards. Lvs scattered, 70 × 10 mm, mid green. Stems 0.6 m, green, with c.15 fls. Midseason.

**‘Russett’ VIII(-/-)**

See *L. × phildauricum* ‘Russett’.

**‘Russia’ I(a/-)**

Parentage unknown  
N: H. Larsen (1980), I: H. Larsen (1980), REG: H. Larsen (1987)

Vivid reddish orange (34B), throat vivid reddish orange (34A); outside strong reddish orange (34C); heavy spots of moderate reddish brown (175A) on the whole tepal area; nectaries yellow; pollen strong orange (24A). Tepals 70 × 26 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 10 mm, pale green. Stems 0.7 m, dark green, with c.6 fls, and bulbils. Mid Aug.  
(Originated in Russia; introduced in 1980 as no. ST11.)

**‘Russian Scope’ I(a/-)**

Parentage unknown  
R: M.F. Kireeva (c. 1976), N: M.F. Kireeva  
Fls bright orange. Stems 1.2 m, with bulbils.

**‘Russkaia Zavitaia’ VI(-/a)**

Parentage unknown  
R: A.V. Grot (1957)  
Inside cream, throat yellow-green; outside lilac; pollen yellow; stigma brown. Fls 150 mm wide, strongly scented. Stems 1.3 m. July.  
(Published in M.V. Baranova, *Lilii*, 357 (1990).)

**‘Russkoe Pole’ I(a-b/b)**

Parentage unknown  
R: M.F. Kireeva (1974), N: M.F. Kireeva  
Fls yellow-orange with small dark brown spots. Fls 110-120 mm wide. Stems 0.75-1.3 m, with 16-20 fls. June to July.  
(Published in M.F. Kireeva, *Lilii*, 66 (1984). Included in *ILR Third Supplement* ‘Russkoye Pole’ which is an unaccepted spelling.)

**‘Russkoye Pole’ I(a-b/b)**

Unaccepted spelling of ‘Russkoe Pole’.

**'Rustica' I(a/-)**

Parentage unknown

R: B.G. Hayler (1974), G: B.G. Hayler (1977), N: B.G. Hayler (1980)

Inside vivid reddish orange (44B), throat vivid orange (28A); outside vivid red (45B); spots black on centre half of tepals; nectaries purple-red; pollen brown. Fls 125 mm wide; tepals 70 × 32 mm, slightly recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 1 m, purple-green, with c.30 fls. Early Dec. (Australia).

**'Rusty' I(a/b-c)**Parentage: from seed labelled "F<sub>2</sub> Preston Hybrids"

R: A.J. Porter (c. 1956), N: A.J. Porter

Fls rusty orange, fading to gold; spots present. Lvs dark green. Stems 0.5-0.6 m. July.

(Published in *Honeywood Lilies Cat.*, 1956.)**'Ruthie' I(a/-)**

Parentage: 'Chrisie' × seedling 85/2

R: G.R. Meyer (1997), G: G.R. Meyer (1998), N: G.R. Meyer (2001), REG: G.R. Meyer (2001)

Inside brilliant greenish yellow (6C), tepal-tips strong purplish red (63D), throat brilliant greenish yellow (6C); outside light purplish pink (63D); spots many, strong purplish red (63A); nectaries grey/white; pollen vivid yellow. Fls 120 mm wide; tepals 70 × 33 mm, margins smooth. Lvs scattered, 100 × 15 mm. Stems c.0.8-0.9 m, light green, with c.22 fls. Early July.

**'Ruth Woodriff' VII(a/b)**Parentage: probably *L. × parkmanii* × *nobilissimum*

R: L. Woodriff (pre 1960), N: L. Woodriff

Fls white; nectaries green; pollen brown. Fls 275 mm wide; tepals 150 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 125-150 × at least 25 mm, dark green. Stems c.1 m, green, with up to 14 fls. Aug. (Named for the raiser's wife. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 48 (1978).)

**'Ruud' VII(b/b-c)**See *L. × parkmanii* 'Ruud'.**'Růženka' VI(b/a)**

Parentage: 'Lilaurel' × 'Mabel Violet'

R: B. Mičulka (pre 1984), N: B. Mičulka, REG: B. Mičulka (1985)

Fls pale rose-pink, tepal-tips paler, throat yellow; outside rose-pink with darker midribs; pollen apricot; stigma dark purple. Fls 135 mm wide. Lvs 100 × 10 mm, dull dark green. Stems 1.1 m, lightly violet-dotted. Mid July.

**'Růžice' I(a/b-c)**

Parentage: 'Appleblossom' × 'Wattle Bird'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)

Inside light pastel pink with a cream centre, tinted with apricot around nectaries, throat pink; outside pink with brownish midribs; spots numerous, large, oval, dark purple-black, on two-thirds of each tepal; nectaries white-frosted; pollen brown. Fls 180 mm wide; tepals 95 ×

40 mm, margins slightly waved, tips slightly recurved; pedicels 75 mm long, green. Lvs scattered, 110 × 16 mm, yellowish green, glossy, held slanting. July.

**'Rybnik' VI(b-c/b)**

Parentage: 'Aldona' × 'Traumstein'

R: R. Widerski, N: R. Widerski, I: R. Widerski (2004), REG: R. Widerski (2004)

Inside creamy yellow, tepal tips creamy, throat with orange-yellow rays; spots absent; pollen yellow; stigma bronze-brown. Fls 180 mm wide; tepals 130 × 55 mm, curved, slightly ruffled and twisted, tough; pedicels 120 mm long, green and brown. Lvs scattered, 150 × 13 mm, dull mid green. Stems 1.4 m, thick, bronze-brown, with long infl. Early July.

**Ryrube Group VIII(b-c/-)**Parentage: 'Canterbury Belle' × (*henryi* × an apricot-flowered trumpet)

R: A.E. Alexander (1989), G: A.E. Alexander (1982), N: A.E. Alexander, I: A.E. Alexander (1995), REG: A.E. Alexander (1995)

Inside ranging from white or cream to orange, throat orange or green; outside ranging from cream shaded with pink, green and gold, white shaded with green and pink to clear orange; spots absent; nectaries green; pollen orange to brown. Fls 120-180 mm wide; tepals 70-100 × up to 40 mm, margins smooth, tips slightly recurved. Lvs scattered, up to 200 × 30 mm, mid to dark green. Stems 1.5-2.4 m, dark green, mottled, with 8-16 fls. Jan. (New Zealand).

(An Oriempet (OT) lily. Fls have a very heavy texture and are long-lasting.)

**'Saarfürst-tiger' I(c/-)**

Parentage unknown

R: J. Klein (pre 1987), N: J. Klein, REG: J. Klein (1988) Fls dark red, 120 mm wide. Stems 1.2 m. Mid July. (Published in German Lily Group sales list, 1987.)

**'Saarglut' I(a/b)**

Parentage unknown

R: J. Klein (pre 1987), N: J. Klein, REG: J. Klein (1988) Fls blood-red, 150 mm wide. Stems 1.2 m. Early July. (Published in German Lily Group sales list, 1987.)

**'Saargold' I(a/-)**

Parentage unknown

R: J. Klein (pre 1987), N: J. Klein, REG: J. Klein (1988) Bright yellow. Stems 1.2 m, with secondary buds in infl. Early July. (Published in German Lily Group sales list, 1987.)

**'Saargruss' I(a/-)**

Parentage unknown

R: J. Klein (1985), N: J. Klein, REG: ICRA (1996) Fls yellow. Infl. with secondary and tertiary buds. Late July. (Published in German Lily Group sales list, 1989.)

**‘Saartiger’ I(c/-)**Parentage: *lanceifolium* × unknownR: J. Klein (pre 1982), N: J. Klein, REG: J. Klein (1988)  
Fls blood-red with black spots; pollen red. Fls 140 mm wide. Stems 1.5 m, the infl. with secondary buds. Late July.

(Published in German Lily Group sales list, 1984.)

**‘Saarturm’ I(b/b-c)**

Parentage unknown

R: J. Klein (pre 1985), N: J. Klein, REG: ICRA (1996)  
Fls blood-red, 140 mm wide. Stems 1.4 m. Early July.  
(Published in German Lily Group sales list, 1989.)**‘Saba’ VII(a/a)**

Syn. of ‘Star Spirit’.

**‘Saba Jewel’ I(a/b)**

Parentage: ‘Nove Cento’ × ‘Monaco’

R: De Jong Lelies Holland B.V. (1991), G: De Jong Lelies Holland B.V. (1993), N: De Jong Lelies Holland B.V. (2002), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2002)

Inside vivid orange (28A/B), throat light orange (28D); outside strong orange (25B), tepal-margins vivid orange (28B); spots absent; papillae present; nectaries strong orange (30D); pollen dark reddish orange (173A); stigma moderate purplish red (59C). Fls 175 mm wide; tepals 97 × 41 mm, margins smooth, tips recurved. Lvs scattered, 110 × 20 mm. Stems 0.8-1 m, dark, with c.7 fls. June.

**‘Sabine’ I(a/c)**

Parentage: dark red-flowered, up-facing Asiatic seedling 87-25 × ‘Red Song’

R: H. Georgi (1988), G: H. Georgi (1990), N: H. Georgi (1992), REG: H. Georgi (1993)

Inside dark red; outside dark red with blackish red midribs; spots inconspicuous, blackish red, on basal half of each tepal; nectaries pink with yellow-red streaks; pollen red-brown. Fls 150 mm wide; tepals 80-85 × 15-20 mm, margins smooth, tips very slightly recurved. Lvs scattered, 100-110 × 5-15 mm, dark green. Stems 0.6-0.7 m, dark green, with 4-6 fls. Late June to mid July.

**‘Sabrina’ I(a/-)**

Parentage unknown

R: F. Köhlein (pre 1982), N: F. Köhlein, REG: F. Köhlein (1988)

Fls bronze. Stems 0.9 m, with 8-10 fls. Early July.  
(Published in German Lily Group sales list, 1982.)**‘Sacajawea’ IV(-/d)**

Parentage: selection from Bellingham Group

R: D. Griffiths (c. 1924), N: D. Griffiths

Fls orange, flushed with red at tepal-tips; smallest spots in throat; anthers yellowish and purple-red; pollen yellow-orange. Lvs whorled, except at stem-base where they are scattered, glossy. Stems 1.9 m, with 12-18 fls.

(Published in *USDA Circular* no. 299: 9 (1933). The parents are thought to be *pardalinum* and *humboldtii* var. *ocellatum*.)***sachalinense* Vrishcz IX(a/b)**

Fls orange, with dark spots. Lvs scattered. NE former USSR.

**‘Sachsen’ I(c/-)**Parentage: *lanceifolium* × unknown

R: H. Böhm, N: H. Böhm, REG: ICRA (1992)

Fls golden bronze, with an orange-red line on each tepal. Fls 160 mm wide. Stems 1.5 m, with bulbils. Late July.  
(Published in German Lily Group sales list, 1991.)**‘Sachsenflamme’ I(a/b)**

Parentage: yellow-orange-flowered seedling 308/1 × ‘Cabaret’

R: G. Thürmer (1989), G: G. Thürmer (1991), N: G. Thürmer, I: G. Thürmer (2003), REG: G. Thürmer (2001)

Inside deep yellowish pink (39B) in apical half, each tepal with a very narrow, pale margin, giving way to a broad zone of brilliant yellow (12B), base dark reddish; outside deep yellowish pink (39B); spots few, deep purplish red (59B), above the dark basal area; nectaries greenish; pollen strong reddish orange (169A). Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 110 × 12 mm. Stems 1 m, pale green, with bulbils and with c.10 fls. Mid to late July.  
(Nomenclatural standard: colour print provided by registrant (WSY 0030948).)**‘Sacramento’ I(a/b)**

Parentage: ((Hallmark Group × ‘Connecticut King’) × (Sundrop Group × ‘Sterling Star’)) × yellow-flowered seedling

R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1993)

Inside darker than vivid yellow (12A), tepal-tips vivid yellow (12A); outside brilliant yellow (10A), tepal-margins vivid yellow (12A), midribs suffused with strong yellow-green (144B), outer tepals tipped strong yellow-green (143A); spots few, dark red (187A); pollen deep orange-yellow (163A); stigma light yellow-green (154D) and deep red (60A). Fls 190 mm wide; tepals 101 × 45 mm, tips slightly recurved. Lvs scattered, 96 × 17 mm, dark green. Stems 0.85 m, mid green, with c.11 fls.

**‘Sacré Coeur’ V(a-b/a)**See *longiflorum* ‘Sacré Coeur’.**‘Sado Sukashi’ I(a/-)**See *L. × maculatum* ‘Sado Sukashi’.**‘Saeki’ Div. ?**

Given as a parent of ‘White Friendship’. No further details.

**‘Safari’ I(a/-)**

Parentage unknown

R: L. Woodriff (1974), G: L. Woodriff (1976), N: Bowman Creek Farm (1981), REG: Bowman Creek Farm

(1981)

Fls red in throat, blending to orange at tepal-tips, each tepal with a yellow flare from nectary to mid tepal; outside red-orange; heavily spotted with black on basal two-thirds of each tepal; nectaries red; pollen rust-coloured. Tepals 95 × 35 mm, margins smooth, tips not reflexed. Lvs scattered, 145 × 20 mm, dark green. Stems 1.2 m, red-brown, with c.20 fls. Early July.

**SAFARI I(a/-)**

Trade designation of 'Hadeco-Safari'.

**'Safari Sunset' VII(-/b)**

Parentage unknown

R: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1976)

Fls white suffused with pink, especially at tepal-edges, centre sulphur-gold. Stems 1 m.

**'Saffronbelle' VI(-/a)**

Parentage: selection from Golden Trumpet Group

N: D. Foxwell (c. 1960)

PC 1966

Buds green, tinted with brown, opening brilliant yellow (21C) throughout.

(Published in *LYB* 28: 135 (1965).)

**'Safián' I(a/b-c)**

Parentage: 'Letkis' × 'Advent'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1994),

REG: B. Mičulka (1994)

Inside apricot-peach, deeper in the centre and with whitish tepal-tips; outside with pale mahogany midribs; spots small, sporadic, brown-scarlet, on a fifth of each tepal; nectaries white-granulated; pollen orange-brown; stigma dark brown-scarlet. Fls 125 mm wide; tepals 70 × 31 mm, slightly to moderately recurved; pedicels 70 mm long, strongly dotted dark red-brown. Lvs scattered, 120 × 13 mm, yellowish green. Stems 0.95 m, brown-black. July.

**'Saga' V(b/a)**

See *longiflorum* 'Saga'.

**'Sagami' I(a/b)**

See *L. × maculatum* 'Sagami'.

**'Sage Ghost' I(b/-)**

Parentage unknown

R: H.E. Hoepner (pre 1985), G: S.R. Kaul, N: S.R. Kaul, I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)

Fls rusty red, overlaid with red in centre of fl., each tepal with a slight yellow to green stripe running into each nectary; pollen yellow. Lvs narrow, dark green. Stems 1.2 m, brown, with secondary fls. Midseason to late.

**'Sahara' I(a/-)**

Parentage: *L. × hollandicum* type × 'Connecticut King'

R: Bischoff Tulleken Lelies B.V., G: Bischoff Tulleken

Lelies B.V., N: Bischoff Tulleken Lelies B.V. (1980),

REG: Bischoff Tulleken Lelies B.V. (1980)

Fls vivid yellow (16A), tinted with lemon-yellow, midveins orange-yellow; spots brown, in the throat; anthers reddish brown. Stems 0.6 m.

(Published in *Bloembollencultuur*, September 1980.)

**'Saidja' I(a/b)**

Parentage: ((Gran Paradiso' × unknown) × 'Tetra Monaco') × 'Gloria'

R: De Jong Lelies Holland B.V. (1993), G: De Jong Lelies Holland B.V. (1995), N: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2001) Inside vivid reddish orange (34A), vivid reddish orange (34B) at tepal-tips, throat moderate red (180A); outside of inner tepals strong reddish orange (169A) changing towards edges to moderate red (180B), midribs moderate red (181A), outside of outer tepals vivid to strong reddish orange (34A/C); spots and papillae absent; nectaries moderate red (180A) surrounded by strong reddish orange (169A); pollen dark red (183A); stigma dark red (187A). Fls 150 mm wide; tepals 110 × 40-55 mm, margins smooth, tips not recurved. Lvs scattered, 155 × 20 mm. Stems 1.1 m, dark, with c.5-7 fls. June.

**'Saigon' I(a/b-c)**

Parentage: unnamed seedling × unnamed seedling

R: Hoffgaarde B.V. (1991), G: Hoffgaarde B.V. (1993),

N: Hoffgaarde B.V. (1997), I: Hoffgaarde B.V. (1998),

REG: Hoffgaarde B.V. (2001)

Inside vivid orange/vivid yellowish orange (28A/30C); outside vivid orange (28B); unspotted but with some papillae; nectaries green; pollen reddish brown; stigma orange. Fls 120 mm wide; Tepals 80 × 30 mm, margins smooth, tips recurved. Lvs scattered, 70 × 15 mm. Stems 0.4 m, green with darker stripes and spots, with 4-6 fls (from 10-12 cm bulbs). Midseason.

Trade designation: PETIT® SAIGON.

**'Sailor's Sunset' I(a/-)**

Parentage unknown

R: D.M. Stone & F.H. Payne, G: S. Johnson (pre 1982),

N: S. Johnson, REG: ICRA (1997)

Inside orange in the centre, deepening to deep pink tepal-tips; outside rosy pink; spots very few, fine, brown; nectaries orange; pollen red-brown. Tepals 90 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 15 mm wide, mid green. Stems 1.5 m, pale green, with c.11 fls. Early July.

**'Saint Austell' I(a/-)**

Parentage: selection from Cornish Group

S: Rosewarne EHS, N: Rosewarne EHS (1974), I:

Rosewarne EHS (1974)

PC 1974

Fls strong red (46A). Stems 0.4 m. Late June.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 9 (1978).)

**'Saint Blazey' I(b/-)**

Parentage: selection from Cornish Group

S: Rosewarne EHS, N: Rosewarne EHS (1974), I:

Rosewarne EHS (1974), REG: Rosewarne EHS (1974)

Vivid red (46B) at tepal-tips, merging to vivid yellowish orange (30C) at centre of fl. Stems 0.7 m, with c.10 fls. Early July.  
(Published in *Lilies and other Liliaceae*, 1975: 95.)

**'Saint Cyr' I(a/b)**

Parentage unknown  
R: Fa Jaap Boon, G: Fa Jaap Boon, N: Fa Jaap Boon, REG: Fa Jaap Boon (2000)  
Inside vivid yellow (9A), throat light greenish yellow (5C); outside of inner tepals brilliant yellow (9C), vivid yellow (9A) towards edges, outside of outer tepals vivid/brilliant yellow (9B/C), tipped strong yellow-green (143B); spots few, dark red (187A); papillae absent; nectaries greenish white (155C), somewhat hairy; pollen strong orange/strong reddish orange (25A/169A); stigma moderate red/deep pink (180C/D). Fls 180 mm wide; tepals 105 × 30–45 mm, margins smooth, tips recurved. Lvs scattered, 205 × 17 mm. Stems 1.25 m, light green, with c.6–7 fls.

**'Saint David's Star' V(b/a)**

See *longiflorum* 'Saint David's Star'.

**'Saint Day' I(b/-)**

Parentage: selection from Cornish Group  
S: Rosewarne EHS, N: Rosewarne EHS (1974), I: Rosewarne EHS (1974), REG: Rosewarne EHS (1974)  
Tepals strong red (47B) at tips, merging to vivid yellowish orange (30C) at centre. Stems 0.7 m, with c.23 fls. Early July.  
(Published in *Lilies and other Liliaceae*, 1975: 95.)

**'Saint Ives' I(a/-)**

Parentage: selection from Cornish Group  
S: Rosewarne EHS, N: Rosewarne EHS (1974), I: Rosewarne EHS (1974), REG: Rosewarne EHS (1974)  
Reddish orange (32B) at tepal-tips, merging to strong orange (24A) at centre of fl., heavily spotted. Stems c.0.5 m, with c.8 fls. Early July.  
(Published in *Lilies and other Liliaceae*, 1975: 95.)

**'Saint Just' I(a/-)**

Parentage: selection from Cornish Group  
S: Rosewarne EHS, N: Rosewarne EHS (1974), I: Rosewarne EHS (1974), REG: Rosewarne EHS (1974)  
Fls strong red (46A) at centre, merging to strong reddish orange (42B), with strong orange-yellow (24B) at tepal-tips. Stems 0.6 m, with c.12 fls. Early July.  
(Published in *Lilies and other Liliaceae*, 1975: 95.)

**'Saint Keverne' I(a/-)**

Parentage: selection from Cornish Group  
S: Rosewarne EHS (1965), N: Rosewarne EHS (1973), I: Geest Ltd, REG: Rosewarne EHS (1976)  
Fls vivid orange (28B) throughout; spots present; nectaries light orange (29B); pollen strong reddish orange (169A). Tepals c.80 mm long, margins smooth. Lvs moderate olive-green (137B), lance-shaped, narrow and straight. Stems c.0.5 m. June.  
(Published in *Lilies and other Liliaceae*, 1976: 93.)

**'Saint Louis' V(b/a)**

See *formosanum* 'Saint Louis'.

**'Saint Mawes' I(a/-)**

Parentage: selection from Cornish Group  
S: Rosewarne EHS, N: Rosewarne EHS (1974), I: Rosewarne EHS (1974), REG: Rosewarne EHS (1974)  
Fls vivid reddish orange (30B). Stems 0.5 m, with c.12 fls. Early July.  
(Published in *Lilies and other Liliaceae*, 1975: 96.)

**Saint Michaelis Group II(-/-)**

Parentage unknown  
R: E. Schacht (pre 1981), N: E. Schacht, REG: E. Schacht (1988)  
Fls golden yellow, each tepal light brownish at tip and ochre-yellow at base; spots dark brown. Fls large. Stems 1.5 m. Mid June.  
(Published in German Lily Group sales list, 1981.  
Included in *ILR Seventh Supplement* as Saint Michaelis grex.)

**'Saint Nicholas' II(c/d)**

See *L. × dalhansonii* 'Saint Nicholas'.

**'Saint Patrick' I(a/b)**

Parentage unknown  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Inside chartreuse-yellow; spots absent; buds tinged with pink; pollen orange-brown. Tepal-margins smooth, tips slightly recurved. Stems 1.2–1.5 m, with numerous fl. in a pyramidal infl. June.

**Saint Paul's Group VI(-/a)**

Parentage: *leucanthum* var. *centifolium* 'Black Magic' & Pink Perfection Group crossed reciprocally  
R: R.C. Paget (c. 1966), N: R.C. Paget  
Fls white, flushed with pink or green, throat yellow. Buds deep wine-red. Fls 170 × 150 mm, sweetly scented.

**'Saint Raphael' I(-/-)**

Parentage unknown  
R: unknown  
Fls rich gold with an orange flush in the centre, and a few spots. Tetraploid.  
(Published in *New Zealand Lily Soc. Bull.* July 1986, p. 8.)

**'Saint Tropez' I(a/-)**

Parentage: 'Gran Paradiso' × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1994)  
Inside vivid reddish orange/vivid yellowish orange (30B/C), tepals tinged with vivid reddish orange (32A) at tip; outside strong orange (169C/D), tepals edged vivid reddish orange (30B) and tinged with strong yellow-green (143C) towards top, tipped dark red (59A), midribs moderate orange (168C); papillae in the throat, coloured as tepals; pollen dark reddish orange (172B); stigma dark

red (59A). Fls 180 mm wide; tepals 90 × 50 mm. Lvs scattered, 100 × 17 mm, mid green. Stems 0.95 m, pale green with darker markings, and with c.7 fls. (Jefferson-Brown (in *New Zealand Lily Soc. Bull.* July 1996: 8) says this cv. is tetraploid.)

**‘Sakigake’ I(a/-)**

Parentage: ‘Enchantment’ × *L. × maculatum*

R: S. Fujishima, N: S. Fujishima

Fls red.

**‘Saku Akaka’ VII(-/-)**

See *L. × parkmanii* ‘Saku Akaka’.

**SAKURA VII(a-b/b)**

Trade designation of ‘Peru’.

**‘Salamanca’ I(a/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside strong purplish pink (63C), tepal-edges pale purplish pink (65D), all on a light purplish pink (62C) ground, throat yellowish white (155D); outside light/pale purplish pink (65B/C), midribs pale greenish yellow (2D), outer tepals a little darker; spots and papillae absent; nectaries strong yellow-green (143C); pollen strong orange (24A); stigma light greenish yellow (3C). Fls 80 mm wide; tepals 95 × 30-40 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 170 × 30 mm. Stems 1.5 m, light green, with c.7 fls.

**‘Salaška’ I(a/b)**

Parentage unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002), REG: B. Mičulka (2002)

Inside deep yellow, throat greenish; outside with greenish midribs; spots dark brown, numerous, small, on two-fifths of each tepal; nectaries green, white-granulated; pollen pale brown; stigma greenish. Fls 140 mm wide; tepals 80 × 41 mm, not recurved; pedicels 50 mm long, thick, green, with secondary buds. Lvs scattered, 90 × 12 mm, dark green. Stems 0.9 m, thick, green, with a moderately long infl. Early June.

**‘Salem’ I(a/c)**

Parentage: ((‘Showboat’ × yellow-flowered seedling) × (selection from Sundrop Group × ‘Connecticut King’)) × ((‘Connecticut King’ × ‘Pirate’) × ‘Kismet’)

R: Mak-Leek Inc. (pre 1996), N: Mak-Leek Inc., REG: ICRA (1998)

Fls orange, with a reddish edge; buds orange-brown. Tepal-margins smooth, tips recurved. Lvs and stems very dark. Stems c.1 m. Early June to early July. (Published in *Parkland Perennials Cat.*, 1996: 8.)

**‘Salerno’ VII(a-b/-)**

Parentage: unnamed seedling × unnamed seedling

R: Sande B.V. (1987), G: Sande B.V. (1991), N: Sande

B.V. (1995), I: Sande B.V. (1995), REG: Sande B.V. (1996)

Inside strong/moderate purplish pink (62A/B); outside light purplish pink (62C); spots and papillae present; nectaries green; pollen reddish brown; stigma purple. Tepal-margins ruffled, tips strongly recurved. Lvs scattered, mid green. Stems 0.7-0.9 m, green.

**‘Sallijejan’ I(b-c/b)**

Parentage: ‘Sally’ × ‘Marijean’

R: C.K. Kroell (c. 1983), G: C.K. Kroell (1985), N: C.K. Kroell (1985), REG: C.K. Kroell (1997)

Inside moderate red (47A), throat vivid reddish orange (34B); outside moderate red (47A) but paler towards midrib; spots black, small to medium, on the basal half of each tepal; nectaries vivid reddish orange (34B); pollen dark reddish orange (173A); stigma orange-red. Fls 125 mm wide; tepals 93 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 18 mm. Stems 1.1 m, green, with c.15 fls (including secondaries). July. (An aneuploid with c.40 chromosomes (‘Sally’ is triploid, ‘Marijean’ is diploid).)

**‘Sally’ I(c/-)**

Parentage: ‘Marlin’ × ‘Redbird’

R: R.W. Lighty (c. 1965), N: R.W. Lighty

Fls close to brilliant orange (25C) at tepal-tips, deepening to vivid reddish orange (30A/B) at centre; spots chocolate-brown. Lvs dark green. Stems 1.5 m. July.

**‘Sally Gilkison’ VI(c/-)**

See *L. × aurelianense* ‘Sally Gilkison’.

**‘Sally Jo Ann’ I(b/b)**

Parentage: *davidii* × *cernuum*

R: R. Simonet, G: F. Fellner, N: F. Fellner, I: Borbeleta Gardens (1979), REG: Borbeleta Gardens (1981)

Inside cardinal-red, throat greenish; outside currant-red; spots inconspicuous; nectaries pea-green; pollen deep brown. Tepal-margins smooth, tips not recurved. Lvs scattered, 60 × 8 mm, mid green. Stems 0.6-0.9 m, brownish green, with c.18 fls. June. (Published in *Borbeleta Gardens Cat.*, 1979.)

**‘Salmon Beauty’ I(a/-)**

Parentage: (‘Sterling Star’ × ‘Connecticut King’) × ‘Gran Paradiso’

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1997)

Inside vivid/brilliant orange-yellow (23A/B), tepal-tips strong orange (25A), throat pale yellow (20D); outside pale yellow (20D); outside pale yellow (20D), tepals edged strong orange (24A) and tipped strong orange (25A); spots dark red (187A), on a third of each tepal; papillae vivid/brilliant orange-yellow (23A/B), in the throat; nectaries light orange-yellow (24C); pollen moderate reddish brown (175A); stigma dark red (187A). Fls 190 mm wide; tepals 110 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 ×

15 mm, mid green. Stems 1.1 m, green with darker markings, and with 6-7 fls. June.

#### 'Salmon Classic' VIII(a-b/b)

Parentage: ('Sinai' × *dauricum*) × (*longiflorum* × 'Aristo')  
R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1995), REG: Classic Group (1996)  
Inside paler than pale orange-yellow (24D), midveins strong orange (25C) fading towards top, throat close to pale yellowish pink (27D); outside pale yellowish pink (27D) suffused with strong yellow-green (144C) on midribs; spots dark red (187B), on a third of each tepal; papillae dark red (187B), in the throat; nectaries brilliant orange (25C); pollen strong reddish orange (169A); stigma moderate orange (168C). Fls 180 mm wide; tepals 115 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 20 mm, mid green. Stems 0.75 m, pale green, with c.8 fls. June to July.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Salmon Cream' I(a/b-c)

Parentage: ('Marjory Linda' × pale yellow-flowered seedling) × (yellow-flowered seedling × 'Snow Bunting')  
R: F. Fellner (1980), G: F. Fellner (1983), N: F. Fellner (1991), I: F. Fellner (1991), REG: F. Fellner (1991)  
Inside peach-pink at first, fading to a very light peach-cream; outside light green; dark spots very few, very fine, on basal third of each tepal; pollen reddish brown. Fls 112 mm wide; tepals 55 × 25 mm, margins smooth, tips slightly to strongly recurved. Lvs scattered, 150 × 12 mm. Stems 1-1.3 m, green, with 8-10 fls. Late July to Aug.

#### 'Salmon Jewels' VII(-/c)

See *L. × parkmanii* 'Salmon Jewels'.

#### 'Salmon Pride' VIII(a-b/b)

Parentage: ('Sinai' × unnamed seedling) × (*longiflorum* × 'Aristo')  
R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1996), REG: Bischoff Tulleken Lelies B.V. (1997)  
Inside light orange-yellow (22B/C), tepal-tips light orange-yellow (22D), midveins strong orange (25A) in the basal part; outside pale yellow (20C), tepals narrowly edged strong orange-yellow (24B), midribs strong yellow-green (143B), fading towards top; spots dark red (187A) on the basal part of each tepal; papillae light orange-yellow (22B), in the throat; nectaries strong orange (25D), surrounded by a light orange-yellow (22D) rim; pollen strong brown (172A); stigma deep pink (48A). Fls 180 mm wide; tepals 110 × 40-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 20 mm, mid green. Stems 0.95 m, green, with c.4 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Salmon Queen' VIII(a-b/b)

Parentage: ('Admiration' × unnamed seedling) × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1988), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside pale orange-yellow (23D/24D), throat a little paler than pale yellow (20D); outside paler than pale orange-yellow (23D/24D), each tepal narrowly edged with pale orange-yellow (24D) and tipped dark red (187A), midribs suffused with strong yellow-green (144C), white-hairy; spots dark red (187B) on a third of each tepal; papillae few, dark red (187B), near the nectaries; nectaries paler than pale orange-yellow (24D), hairy; pollen moderate reddish orange (171A); stigma dark red (187B). Fls 230 mm wide; tepals 120 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 15 mm, mid green. Stems 0.75 m, mid green, with 3-5 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Salmonstar' I(a/b)

Parentage: 'Polárka' × (Bronzino Group × 'Fury' (of de Graaff))  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)  
Inside pale lavender-pink, tepal-centres tinted apricot, throat light cream; outside whitish, midribs pale green; spots numerous, small, cinnamon, on half of each tepal; nectaries white-feathered; pollen dark brown. Fls 115 mm wide; pedicels 90 mm long, brown-spotted. Lvs scattered, 70 × 10 mm, glossy green, held slightly slanting, dense. Stems 1 m, thick, spotted violet-brown, densely so at base. Late June.

#### 'Salmon-trout' I(c/-)

Parentage: selection from Jewel Tone Group  
S: J. de Graaff (c. 1960), N: J. de Graaff  
Fls salmon-pink, with slight lilac shading.

#### 'Salmon Twinkle' I(b-c/c)

Parentage unknown  
N: Lily Company B.V. (2002), REG: Lily Company B.V. (2004)  
Inside of each tepal light orange-yellow/vivid yellow (16C/A) in basal third, changing into moderate purplish pink (186D) above, midveins dark purplish pink (186C), throat moderate purplish pink (186D) on a yellow ground; outside moderate purplish pink (186D), pale orange-yellow at the base, midribs moderate red (181A/B); spots dark red (187A) on basal third of each tepal; papillae absent; nectaries moderate purplish pink (186D); pollen strong to moderate reddish orange (169A/171A); style green; stigma dark red (187A). Fls 90-160 mm wide; tepals 85 × 25-35 mm, margins slightly ruffled, tips recurved. Lvs 115 × 15 mm. Stems 1-1.3 m, with some darker markings, with c.13 fls. July.  
(Nomenclatural standard: colour print supplied by registrant (WSY 0096366).)

#### 'Salna Pavasari' I(a/b)

Parentage: unnamed seedling × 'Vanta'  
R: D.-V. Škimele (1993), G: D.-V. Škimele (1995), N: D.-V. Škimele (1998), REG: D.-V. Škimele (2001)

Inside white with a greenish yellow throat; outside creamy white, midribs greenish brown; spots absent; nectaries green; pollen light orange; stigma light brown. Fls 130 mm wide; tepals 70 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 10 mm. Stems 1 m, green, with c. 16 fls. Early July.  
(Published in *Lilium Balticum Lily Register*, 1998.)

**‘Salome’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1981), G: J. Vasarietis (1985), N: J. Vasarietis (1989), I: J. Vasarietis (1989), REG: J. Vasarietis (1992)  
Fls strong orange (25A) throughout; spots few, tiny, in the throat; nectaries orange-white; pollen dark orange. Fls 150-160 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 13 mm, dark green. Stems 1 m, dark green, with 10-13 fls. Early July.

**var. *salonikae* IX(b/a-b)**

See *candidum* var. *salonikae*.

**‘Salonika Variety’ IX(b/a-b)**

Syn. of *candidum* var. *salonikae*.

**‘Salsa’ I(a/b)**

Parentage: (‘Sinai’ × *dauricum*) × ‘Gran Paradiso’  
R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1997), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2000)  
Inside vivid orange (28A), each tepal vivid orange-yellow (23A) on a quarter to two-thirds, tipped vivid reddish orange (34A), throat vivid reddish orange (32A); outside moderate orange (170B), each tepal edged vivid orange (28A); spots and papillae absent; nectaries deep pink (48A); pollen strong reddish orange (169A); stigma dark red (187B). Fls 160 mm wide; tepals 95 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 95 × 45 mm. Stems 0.95 m, green with darker markings, and with c.9 fls. June.

**‘Salt Lake City’ VIII(a-b/b)**

Parentage: ‘Sahara’ × (*longiflorum* × ‘Aristo’)  
R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)  
Inside and outside light yellow (10C), tepal-margins and tips vivid yellow (13A), ageing to pale orange-yellow (19D), midveins strong yellow-green (144C), throat pale yellow-green (4D); spots moderate red (181B); papillae light yellow (10C); nectaries pale yellow-green (4D); pollen dark red (183A/187A); stigma brilliant orange-yellow (21B). Fls 190 mm wide; tepals 130 × 65 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 20 mm, green. Stems 1.2 m, green, darker at base, and with 4-6 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Salut’ I(a/-)**

Parentage: *L. × hollandicum* type × ‘Connecticut King’  
R: Bischoff Tulleken Lelies B.V., G: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (1980), REG: Bischoff Tulleken Lelies B.V. (1980)  
Fls vivid yellow (17C), throat blotched with cadmium-orange and slightly spotted brown; anthers greyish brown. Stems 0.7 m.  
(Published in *Bloembollencultuur*, September 1980.)

**‘Salutations’ VI(b-c/b)**

Parentage: unnamed seedling × ‘T.A. Havemeyer’ type  
R: J.C. Ericksen (c. 1964), N: J.C. Ericksen, REG: J.C. Ericksen (1975)  
Fls pink-copper, delicately spice-scented; pollen orange-yellow. Lvs broad, dark green. Stems up to 1.5 m. July.  
(Published in *Lilies and other Liliaceae*, 1975: 96.)

**‘Salvatore’ I(a/-)**

Parentage unknown  
R: Lybelmex Hillegom B.V. (1990), G: Lybelmex Hillegom B.V. (1992), N: Lybelmex Hillegom B.V., I: Lybelmex Hillegom B.V., REG: Lybelmex Hillegom B.V. (1996)  
Inside strong orange-yellow (17A), with a little vivid orange-yellow (23A) above each nectaries; outside vivid yellow (17B), midribs strong yellow-green (144C); spots dark red (187A); papillae few, strong orange-yellow (17A), in the throat; pollen a little stronger than moderate orange (167A); stigma moderate reddish brown (166B). Fls 200 mm wide; tepals 110 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 15 mm, mid green. Stems 1.5 m, green, with c.5 fls.

**‘Salzburg’ VII(a/b)**

Parentage: seedling 88-75 × seedling 93-43  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside pale purplish pink (65C), tepal-tips light purplish pink (65B), midveins suffused with white, those of inner tepals brilliant yellow-green (150C), fading towards the top which has reddish brown pigmentation, throat greenish white (155C); outside greenish white (155C) at base, shading to very pale purple (69D) at tepal-tips, midribs of outer tepals deep pink (180D); spots absent; papillae greenish white (155C) papillae; nectaries strong yellow-green (144B); pollen moderate reddish orange/brownish orange (171A/B); stigma greenish grey (188A). Fls 250 mm wide; tepals 155 × 50-70 mm, margins ruffled, tips recurved. Lvs scattered, 205 × 40-50 mm. Stems 1.15 m, green, with c.4 fls.  
(A chimaera.)

**‘Sam’ VII(b/c)**

See *L. × parkmanii* ‘Sam’.

**‘Šaman’ I(a-b/b)**

Parentage: ‘Kismet’ × ‘Windahloo’  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1999),

REG: B. Mičulka (1999)

Inside yellow with a greenish tint at first, throat greenish; outside paler; brushmarks conspicuous, mahogany; spots few, in the throat; nectaries green; pollen brown; stigma brown. Fls 135 mm wide; tepals 80 × 40 mm, slightly recurved (outer more so). Lvs scattered, 80 × 11 mm, dull dark green. Stems 0.85 m, green. Late June.

**‘Samantha’ VII(b/c)**

Parentage unknown

R: G.M. Chandler (1970), N: G.M. Chandler (1977), I: K.L. Watkins (1979), REG: K.L. Watkins (1980)

Inside pale purplish pink (65D) at first, fading to white, midveins light yellow-green (2C) above nectaries merging to deep yellowish pink (43C) above; outside light purplish pink (68D), fading to tepal-edges, midribs light purplish pink (68D); spots scattered, strong purplish pink (54C), in the throat; nectaries strong yellow-green (144B); pollen strong brown (172A). Tepals 120 × 30-50 mm, margins ruffled; tips strongly reflexed. Lvs scattered, 160 × 40 mm, dark green. Stems 2-2.5 m, mid green, with up to 15 fls. Jan. to Feb. (Australia).

(Published in Kenro Liliium bulb list, 1979.)

**‘Samarkand’ I(c/-)**

Parentage: ‘Sultan’ × ‘Skyrocket’

R: R.C. Palmer (pre 1950), N: R.C. Palmer, I: B.L. Palmer (1952)

Fls deep red. Tepals recurved. Stems 1.2 m, with 30-50 fls. July.

(Published in Exp. Farm Report, Summerland, BC, Canada, 1950.)

**‘Samba’ I(a/-)**

Parentage: selection from Sundrop Group

G: Bischoff Tulleken Lelies B.V. (1974), N: Bischoff Tulleken Lelies B.V. (1979), I: Bischoff Tulleken Lelies B.V. (1979)

Fls vivid orange-yellow (23A) throughout; spots small, brown, in centre; pollen red-brown. Tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 0.7 m, mid green, with c.4 fls. Late June.

(Partially male-sterile.)

**‘Samba’ I(a/-)**

Parentage: ‘Enchantment’ × ‘Connecticut King’

R: K. Mynett & A. Wilkońska (1978), G: K. Mynett & A. Wilkońska (1981), N: K. Mynett & A. Wilkońska, I: Research Institute of Pomology & Floriculture

Inside vivid orange (28B), throat light orange (28D); outside strong yellowish pink (31C); spots absent; nectaries light green; pollen orange; stigma light bronze. Fls 140 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 74 × 9 mm, mid green. Stems 0.7 m, mid green, with c.7 fls. Early July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. However, the plant is registered with the Polish Research Centre for Cultivars and patented there under no. 0121, and so the name has to be retained (ICNCP, 2004: Art. 24.4).)

**‘Samback’ IX(b-c/a)**

Syn. of *candidum* ‘Sultan Zamback’.

**‘Samoa’ VII(a/b)**

Parentage: seedling 92-45 × seedling RM 95-17

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1994), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside yellowish white (155D), each tepal with a large patch of light greenish yellow (8C) on basal two-thirds, midveins brilliant yellow (12B); outside yellowish white (155D) flushed with pale yellow (11D) or sometimes reddish, midribs pale yellow (11D); spots and papillae brilliant yellow (12B); nectaries strong yellow-green (144B); pollen moderate reddish orange (171A); stigma deep purple (79C). Fls 260 mm wide, slightly fragrant; tepals 155 × 68 mm, margins ruffled, tips slightly recurved. Lvs 210 × 52 mm, light green. Stems 1.5 m, light green flushed with reddish brown, with c.6 fls.

**‘Samos’ I(b)**

Parentage unknown

R: V. Strasser (1973), G: V. Strasser (1975), N: V. Strasser (1979), I: V. Strasser (1983), REG: V. Strasser (1986)

Fls dark red throughout. Tepal-margins smooth, tips slightly reflexed. Lvs scattered, dark green. Stems 1 m, brownish green, with c.18 fls. Mid July.

**‘Samson’ I(a/-)**

Parentage: selection from Yellow Blaze Group

S: Bischoff Tulleken Lelies B.V. (1975), N: Bischoff Tulleken Lelies B.V. (1979), I: Bischoff Tulleken Lelies B.V. (1979)

Inside yellow; outside tinged with green; spotted dark red-brown all over; pollen brown. Tepals 90 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 10 mm, mid green. Stems 1.1 m, green. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Samson’ IX(b-c/d)**

See *speciosum* ‘Samson’.

**‘Samur’ VIII(a/b)**

Parentage: seedling J 57 × ‘Larino’

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside strong purplish red (64C) on a paler ground, with pale yellow-green (155A) above nectaries; outside strong purplish red (64C) on a paler ground, tepal-edges narrow, strong purplish red (64B), midribs strong yellow-green (144B/C), tipped strong yellow-green (143B); spots few, dark red (187B); papillae absent; nectaries strong yellow-green (143B); pollen strong orange (26A); stigma light yellow-green (145C). Fls 200 mm wide; tepals 100 × 40-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 30 mm, dark green. Stems 1.4 m, dark green, with 5-8 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Sancerre' I(a/c)**

Parentage: seedling OR 408 × seedling W 81  
 R: Vletter & Den Haan, G: Vletter & Den Haan (1983),  
 N: Vletter & Den Haan (1988), I: Vletter & Den Haan  
 (1991), REG: Vletter & Den Haan (1991)

Inside yellowish white (155B). throat strong yellow-green (144B); outside yellowish white (155B) suffused with light yellow-green (145B/C) at the base; spots absent; nectaries strong purplish red (60B); pollen strong orange (169C). Fls 185 mm wide; tepals 90 × 52 mm, margins smooth, tips strongly recurved. Lvs scattered, 105 × 10 mm, mid green. Stems 0.75-1.1 m, with dark markings and 9-12 fls (from 16-18 cm bulbs). July (under glass).

**'Sancho' VI(c/b-c)**

Parentage: 'Lady Alice' × 'Gold Eagle'  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1991),  
 REG: B. Mičulka (1991)

Inside yellow-apricot, tepal-tips and edges paler; outside with light red-brown midribs which are greenish at base; nectaries green; pollen brown; stigma yellow. Fls 115 mm wide; tepals 100 × 43 mm, strongly reflexed; pedicels 110 mm long, brown-dotted. Lvs scattered, 90 × 15 mm, yellowish green, glossy. Stems 1.25 m, brown-dotted, with a short infl. Mid July.

(The description published in *ILR Tenth Supplement* was supplied by the registrant in error, and in the *Eighteenth Supplement* was replaced by the description given here.)

**'San Christina' VIII(a/b)**

Parentage unknown  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)

Inside yellowish white (155B), flushed with light yellow-green (150D) in the throat, up to a third of each tepal strong yellow-green (145A); outside light yellow-green (145B) on a yellowish white (155B) ground, midribs tipped strong yellow-green (143B); spots few, dark red (187B); papillae absent; nectaries vivid yellow (14B) with a little light yellow-green (150D); pollen moderate reddish brown (175A); stigma moderate purplish red (186A). Fls 190 mm wide; tepals 105 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 25 mm, dark green. Stems 1.1 m, pale green with dark spotting, and with c.5 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Sanciro' I(a/b)**

Parentage: 'Mont Blanc' × seedling RS 147  
 R: Vletter & Den Haan, G: Vletter & Den Haan (1983),  
 N: Vletter & Den Haan (1988), I: Vletter & Den Haan,  
 REG: J.T. & N.W. op den Kelder (1991)

Inside pale purplish pink (62D) suffused with strong purplish pink (63C), throat strong yellow-green (144B) edged brilliant yellow-green (150C); outside strong purplish pink (73B) on a light to pale purplish pink (62C/D) ground, midribs light greenish yellow to pale yellow-green (4C/D); spots few, dark red (59A), in the throat; nectaries moderate purplish red (58A); pollen

vivid orange-yellow (23A). Fls 150 mm wide; tepals 70 × 40 mm, margins smooth to slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 18 mm, mid green. Stems 0.6 m, with slightly darker markings and c.7 fls.

**Sancta Maria Group VI(-/a)**

Parentage unknown  
 R: J.C. Ericksen (1950s), N: J.C. Ericksen, REG: (1983)  
 Inside white; outside red-brown. Stems up to 1 m, with 6-7 fls. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 46 (1978) as a clone; included in *ILR* (1982) as Sancta Maria grex.)

**'Sandhurst' I(a/b)**

Parentage unknown  
 R: Fa Jaap Boon, G: Fa Jaap Boon, N: Fa Jaap Boon,  
 REG: Fa Jaap Boon (2000)

Inside vivid yellow (12A), throat brilliant greenish yellow (1B); outside light greenish yellow (8B), changing to vivid yellow (12A) towards tepal-edges, midribs brilliant greenish yellow (2B); spots and papillae absent; nectaries light yellow-green (2C) hairy; pollen moderate orange (167A); stigma strong reddish orange (42B). Fls 140 mm wide; tepals 80 × 40 mm, margins smooth, tips recurved. Lvs scattered, 165 × 15 mm. Stems 1.1 m, dark, with c.7 fls.

**'San Diego' I(a/d)**

Parentage: 'Roter Cardinal' × 'Connecticut King'  
 R: H. Bartel, N: H. Bartel, REG: H. Bartel (1988)  
 Fls bright orange; spots absent. Stems 1.2 m. Early July.  
 (Published in German Lily Group sales list, 1986.)

**'Sandokan' I(a/-)**

Parentage unknown  
 R: Hoffgaarde B.V. (1981), G: Hoffgaarde B.V. (1983),  
 N: Hoffgaarde B.V. (1989), REG: Hoffgaarde B.V. (1989)  
 Inside strong orange (169B), throat strong orange (25A); outside strong orange (169B/C) with a moderate orange (168C) spot at base; spots few, small, dark red spots (187A); pollen moderate reddish orange/brownish orange (171A/B). Tepals 100 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 20 mm, mid green. Stems 1 m, green with darker markings, and with 8-10 fls. July.  
 Syn.: 'Jaguar'.

**'Sandra' I(a/-)**

Parentage: 'Enchantment' × ( *davidii* × unknown)  
 R: De Jong Lelies Beheer B.V., G: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (1979), REG: De Jong Lelies Beheer B.V. (1980)  
 Fls vivid reddish orange (33B), centre spotted black; anthers oxblood-red. Stems 1 m.  
 (Published in *Bloembollencultuur*, June 1979.)

**'Sandra Kalniete' I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: J. Vasarietis, G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)

Inside deep pink (48A), tepal-tips pink (48B), throat a light yellow (18A); outside deep pink (48B); spots black, on half of each tepal; nectaries reddish; pollen brown. Fls 150 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 12 mm, dark green. Stems 1.25 m, greenish brown, with 8-10 fls. Early July.

(Published in *Latvian Lily Register*, 1993.)

#### **‘San Francisco’ I(a/-)**

Parentage unknown

R: Hoffgaarde B.V. (1980), G: Hoffgaarde B.V. (1982), N: Hoffgaarde B.V. (1988), I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1989)

Inside vivid yellow (9A); outside light greenish yellow (4B), tepal-margins vivid yellow (12A); spots brown, in the throat and on basal half of each tepal; pollen dark reddish orange (172B). Fls 155 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, mid green. Stems 1.2 m, green, with 7-20 fls. July.

#### **San Gabriel Group IV(c/d)**

Parentage: complex *parryi* × *humboldtii* hybrids

R: J. de Graaff (c. 1967), N: J. de Graaff

Fls in shades of yellow, spotted with red and/or black. Fls 125 mm wide, fragrant. Stems 1.5-1.9 m, with up to 20 fls.

(Published in *ILR* (1969) as San Gabriel grex.)

#### **‘Sangria’ VII(-/c)**

Parentage: ‘Star Gazer’ × ‘Rosalie’

R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1983), N: Bischoff Tulleken Lelies B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1993)

Inside strong purplish red (61B), tepal-tips and edges moderate purplish pink (70D), midveins deep red (60A); outside strong purplish red (64B) to moderate purplish red (64A), tepal-edges moderate purplish pink (70D), midribs light purplish pink (63D) suffused with moderate orange (170C) at the top, tipped strong yellow-green (143B); pollen dark reddish orange (175C); stigma pale yellow-green (194D). Fls 240 mm wide; tepals 120 × 60 mm. Lvs scattered, 150 × 30 mm, mid green. Stems 1.2 m, pale green, with c.6 fls.

#### **‘Sanguine’ VII(b-c/b)**

See *L. × parkmanii* ‘Sanguine’.

#### **forma sanguineopunctatum IX(b-c/d)**

See *speciosum* var. *gloriosoides* forma *sanguineopunctatum*.

#### **var. sanguineopurpureum IX(c/d)**

See *martagon* var. *sanguineopurpureum*.

#### **‘Sanguineum’ I(a/b)**

See *L. × maculatum* ‘Sanguineum’.

#### **‘Sanity’ I(a/-)**

Parentage: ‘Roter Cardinal’ × ‘Red Lion’ (Laan)

R: Gebr. N. & B. Laan & Zn (1979), G: Gebr. N. & B. Laan & Zn (1981), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)

Fls red throughout; spots few, deep purple; nectaries light red; pollen brown. Fls 150 mm wide; tepals 90 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 12 mm, dark green. Stems 1.3 m, green, with c.10 fls. July.

#### **‘San José’ VIII(a/b)**

Parentage: ‘Admiration’ × (*longiflorum* × ‘Aristo’)

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1994)

Inside pale yellow (18C), midveins light yellow (18B) in basal part, throat edged yellowish white (158D); outside pale orange-yellow (159C), each tepal shading to a slight suffusion of moderate yellowish pink (38B) edge and with a light orange-yellow (22D) margin, midribs strong yellow-green (143C), tipped brownish orange (166C), slightly suffused with strong yellow-green (143C) alongside, tinged with brownish orange (165B) at base; spots dark red (59A) on the basal part of each tepal; pollen moderate reddish brown (175A); stigma moderate purplish red (59C). Fls 240 mm wide; tepals 120 × 50 mm. Lvs scattered, 140 × 20 mm, mid green. Stems 0.54 m, pale green, with c.3 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

#### **San Juan Group IV(-/-)**

Parentage: derived from a wide mixture of western American species and hybrids

R: D.H. Brown (1958 and onwards), G: D.H. Brown (1985), N: D.H. Brown (1985), REG: D.H. Brown (1985)

Fls very variable, ranging from yellow, orange and red, to pink, some selfs, some bicolours; spots variable in size and number. Tepal-margins smooth, tips strongly reflexed. Lvs scattered or whorled. Stems 1.5-1.75 m, green, sometimes overlaid with purple, with 5-30 fls. Late June to early July.

#### **‘San Leandro’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1998), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside brilliant yellow (7A), midveins vivid yellow (12A); outside brilliant yellow (7A), with a little vivid yellow (14D) along midribs; nectaries strong yellow-green (143A); pollen dark reddish orange (175C); stigma moderate reddish brown (166B). Fls 160 mm wide; tepals 90 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm. Stems 0.5 m, dark green, with c.7 fls. June.

#### **‘San Lugano’ I(a/b)**

Parentage: unknown × seedling OR 87-13

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den

Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)  
Inside vivid reddish orange (32A), throat strong yellowish pink (32C); outside moderate reddish orange (178C), tepals edged with vivid orange (28A) and with moderate reddish orange (178C) at base of outer tepals, midribs moderate orange (168C) with strong reddish orange (31B) alongside; spots absent; papillae negligible; nectaries strong yellowish pink (32C); pollen moderate reddish orange (178C); stigma deep purplish red (59B). Fls 170 mm wide; tepals 100 × 40-60 mm, margins smooth, tips recurved. Lvs scattered, 120-140 × 15-20 mm. Stems 1.3 m, green, with c.6 fls.

#### 'San Marco' VII(-/-)

Parentage unknown

R: Gebr. Vletter & Den Haan, G: Gebr. Vletter & Den Haan (1987), N: Gebr. Vletter & Den Haan (1992), I: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1993)

Inside greenish white (155C), midveins light greenish yellow (6D), becoming brilliant greenish yellow (6C) at the otherwise yellowish white (155D) top; outside yellowish white (155B), tepals edged greenish white (155C), midribs light yellow-green (150D) at top, strong yellow-green (144B) at base; spots moderate red (181B); pollen strong orange (169C); stigma greyish yellow-green (197D). Fls 250 mm wide; tepal-margins ruffled, tips slightly reflexed. Lvs scattered, 160 × 40 mm, dark green. Stems 0.75 m, pale green with some darker markings, and with c.6 fls.

#### 'San Marino' VII(a-b/-)

Parentage: seedling 87-112 × 'Barbaresco'

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1995), I: Vletter & Den Haan, REG: Vletter & Den Haan (1998)

Inside strong purplish red (60B), paler at the base, midveins yellow-green changing to purple; outside strong purplish red (60D); spots and papillae present; nectaries yellow-green surrounded by a yellow rim; pollen brown-orange; stigma grey. Tepal-margins ruffled, tips recurved. Stems 1.3 m, green with darker spots and stripes. Midseason.

#### 'San Mateo' VIII(b/b)

Parentage: 'Montreux' × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside strong purplish red (54A), paler towards tepal-tips, midveins strong red (53C), fading towards top, with a light greenish yellow (8C) mark above each nectaries, throat light greenish yellow (8C); outside deep purplish pink (64D) on a strong yellow-green (144C) ground, tepals edged strong purplish red (60B), midribs strong yellow-green (144C), fading towards top; spots greyish red (178A) on the basal part of each tepal; papillae strong yellowish pink (34D), in the throat; nectaries moderate pink (51D); pollen moderate reddish brown (175A);

stigma moderate orange-yellow (167D). Fls 210 mm wide; tepals 110 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 200 × 25 mm. Stems 1.15 m, green, with 5-7 fls. June.

(*A. longiflorum*/Asiatic (LA) hybrid.)

#### SANNA VII(a/b)

Trade designation of 'Zanlorsanna'.

#### 'San Nunzia' I(a/-)

Parentage: unnamed seedling × unnamed seedling

R: Sande B.V. (1984), G: Sande B.V. (1987), N: Sande B.V. (1990), I: Sande B.V. (1990), REG: Sande B.V. (1991)

Inside yellowish white (155D), throat strong yellow-green (143C); outside yellowish white (155B), slightly suffused with dark pink (182D) at base, midribs light yellow-green (150D); spots absent; nectaries dark red (187B); pollen moderate orange-yellow (167D). Fls 175 mm wide; tepals 80 × 47 mm, margins smooth, tips not recurved. Lvs scattered, 145 × 12 mm, mid green. Stems 1.05 m, with darker markings and c.8 fls. July.

#### 'San Pablo' I(a/b)

Parentage: (*dauricum* × 'Symphony') × ('Sahara' × unknown)

R: Bischoff Tulleken Lelies B.V. (1993), G: Bischoff Tulleken Lelies B.V. (1996), N: Bischoff Tulleken Lelies B.V. (1997), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside vivid yellow (9A), with a vivid yellow (14A) patch above each nectary, throat brilliant greenish yellow (2B); outside light greenish yellow (7D); spots few, dark red (59A); papillae (14A); nectaries strong yellow-green (143B); pollen strong orange (168A); stigma dark red (59A). Fls 175 mm wide; tepals 100 × 55 mm, margins smooth, tips recurved. Lvs scattered, 80 × 15 mm, dark green. Stems 1.1 m, green with some reddish brown, with c.8 fls. June.

#### 'San Pedro' VII(a/c)

Parentage: unnamed seedling × unnamed seedling

R: Peacock B.V. & Imanse Lelieveredeling B.V., G: Testcentrum voor Siergewassen B.V., N: Testcentrum voor Siergewassen B.V. (1999), I: Marklily C.V. (2000), REG: Testcentrum voor Siergewassen B.V. (2002)

Inside deep to strong red (53A/B), changing to moderate purplish red (59C) on a white ground near tepal-edges, tepals edged white (narrowly so at base), throat white; outside moderate purplish red (59C), paler towards tepal-tips, tepals narrowly edged white, midribs light yellow-green (150D) with a little strong yellow-green (144B) at base; spots dark red (187A&B) on up to two-thirds of each tepal; papillae dark red (187A & B), in the throat; nectaries strong yellow-green (144B) surrounded by a little greenish yellow (8B); pollen strong brown (172A); stigma deep purplish red (59B) on a beige ground. Fls 300 mm wide; tepals 155-160 × 45-75 mm, margins strongly ruffled, tips strongly recurved. Lvs scattered, 150-185 × 25-50 mm. Stems 1 m, light green with a little darker marking, and with 4-5 fls.

**‘San Raffael’ I(a/-)**

Parentage: ‘Gran Paradiso’ × ‘Snowstar’

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside strong orange (24A), midveins of inner tepals a little darker, tepal-edges strong orange (25A) shading into the ground colour, throat near light orange-yellow (24C) edged pale orange-yellow (23D); spots dark red (187A) on basal part of each tepal; papillae strong orange (24A), near nectaries; nectaries near light orange-yellow (24C), hairy; pollen strong brown (172A); stigma dark red (187B). Fls 180 mm wide; tepals 100 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 0.85 m, mid green with darker markings, and with c.4 fls. Tetraploid.

**‘San Remo’ I(a/b)**

Parentage unknown

R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1989)

Inside vivid yellow (12A), the basal half of each tepal edged with deep red (185A), tips strong reddish orange (34C), throat dark red (187B); outside moderate orange-yellow to moderate orange (164C/167C), flushed with dark reddish orange (178B), outer tepals and midribs greyish red (178A); spots few, small, dark red (187A), above the throat; pollen moderate reddish brown to brownish orange (166B/C). Fls 195 mm wide; tepals 95 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 25 mm, mid green. Stems 0.85-1.1 m, green with darker markings, and with 7-9 or more fls. July.

**‘Sans à Tout’ I(a/c)**

Parentage unknown

R: Mak-Leek Inc. (pre 1997), N: Mak-Leek Inc., REG: ICRA (1998)

Inside clear white; with some spots in centre of fl.; buds cream/green/white and hairy. Tepal-tips recurved. Stems 1 m. Midseason.

(Published in *The Lily Nook Cat.*, 1997: 9.)

**‘San Sebastian’ I(a/b)**

Parentage: seedling G 91-18 × seedling AG 95-16

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid yellow (9A), throat pale greenish yellow (1D); outside brilliant yellow (7A), midribs brilliant yellow-green (150C) with a moderate green (135B) spot at top; spots few, dark red (59A); papillae vivid yellow (9A); nectaries strong yellowish green (135C); pollen strong to moderate orange (170A/B); stigma dark red (59A). Fls 190 mm wide; tepals 100 × 58 mm, margins smooth, tips recurved. Lvs 150 × 18 mm, dark green. Stems 1.2 m, green, with c.12 fls.

**‘Sans Pareil’ I(a/b)**

Parentage: seedling RS 179 × seedling G 352

R: Vletter & Den Haan, G: Vletter & Den Haan, N:

Vletter & Den Haan (1986), I: Vletter & Den Haan, REG: Vletter & Den Haan (1998)

Inside and outside vivid to light yellow (17C/D) towards base, deep pink (51B/C) towards tepal-tips; spots few, dark pink; some papillae present; pollen light brown; stigma green. Tepal-margins ruffled, tips recurved. Stems 1.1-1.25 m, green with darker markings, and with 12-14 fls (from 16-18 cm bulbs).

**‘Sans Souci’ VII(-/d)**

Parentage: *speciosum* var. *rubrum* × ? *rubellum*

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1961), N: H.J. Strahm (1971), I: H.J. & R.L. Strahm (1971), REG: Strahm’s Lilies, Inc. (1981)

Inside white suffused with light purplish pink (55C), tepal-edges and tips white, throat light yellow-green (138D); outside pale pink; spots strong purplish red (54A) on all but tips; nectaries light greenish yellow (1C); pollen dark reddish orange (178B). Fls 175 mm wide, with a faint sweet fragrance; tepals 90 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 175 × 40 mm, dark green. Stems 1 m, mottled dark red and green, with 5-15 fls. July to Aug.

(Published in Strahm’s sales list, 1971.)

**‘San Stefano’ VIII(a/b)**

Parentage: seedling BG 95-60 × seedling AG 95-04

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside light greenish yellow (7D), brilliant greenish yellow (5A) along tepal-margins and midveins, inner tepals dark red (187A) on edges at base, throat pale greenish yellow (2D); outside light greenish yellow (4C), brilliant greenish yellow (6B) on tepal-margins; midribs (141D) at base and top, inner tepals dark red (187A) on edges at base; spots few, dark red (59A); papillae brilliant greenish yellow (5A); nectaries strong yellow-green (143A); pollen moderate reddish brown (175A); stigma light greenish yellow (1C). Fls 185 mm wide, slightly fragrant; tepals 115 × 53-65 mm, margins smooth, tips slightly recurved. Lvs scattered, 135 × 28 mm. Stems 1.05-1.4 m, green, with 4-6 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Santa Barbara’ VII(b/d)**

Parentage: *L. × parkmanii* Little Rascal Group × ‘Star Gazer’

R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside light purplish pink (65B), midveins pale yellow-green (4D) changing to ivory-white, tepal-tips suffused with moderate purplish pink (65A), throat yellowish white (155B); outside yellowish white (155D) suffused with very light purple (75C); papillae yellowish white (155D) on basal half of each tepal; nectaries light greyish olive (197C); pollen strong orange (26A). Fls 160 mm wide; tepals 80 × 60 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 110 × 50 mm, mid

green. Stems 0.27 m, green with darker markings, and with c.5-7 fls. July (under glass).

Trade designation: RASCAL SANTA BARBARA.

#### 'Santa Clara' I(a/c)

Parentage: 'Dawn Star' × 'Summer Night'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)

Inside and outside strong reddish orange (169A); spots orange, tiny, scattered in centre of fl.; nectaries pale yellow-green (157B); filaments moderate yellow (162A); pollen greyish red (184A); stigma deep red (185A). Fls 150 mm wide; tepals 82 × 37 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 15 mm. Stems 0.75 m, mid green, with 6-8 fls. Mid July.

(Santa Clara is a Cuban town. Published in *ILR Twenty-first Supplement*. The registrant has revised the description for the tepal-colour and the spots, and these changes have been incorporated into the description above. Nomenclatural Standard: colour print provided by registrant (WSY 0038511).)

#### 'Santa Claus' IV(-/c)

Parentage: selection from Del Norte Group

N: A.D. Reid (1973), I: A.D. Reid (1974), REG: A.D. Reid (between 1973 and 1981)

Fls between strong purplish red (60B) and strong red (53B), throat white; spots present; nectaries mid yellow. Fls 65 mm wide; tepals moderately reflexed. Stems 1 m, with 15-20 fls. June.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 28 (1978).)

#### 'Santa Cruz' I(a/-)

Parentage: (('Sterling Star' × 'Connecticut King') × 'Palette') × yellow-flowered seedling

R: Mak Lelieveredelung B.V. (1988), G: Mak-Leek Inc. (1990), N: Mak-Leek Inc. (1991), I: Mak-Leek Inc., REG: Mak-Leek Inc. (1997)

Inside vivid yellow (9A/12A); outside brilliant yellow (9C), tepals with margins vivid yellow (9B) and tips strong yellow-green (143C), midribs strong yellow-green (144C); some dark red (187B) spots in the throat; nectaries strong yellow-green (143C); pollen orange brown/yellow; stigma yellow-green. Fls 190 mm wide; tepals 95 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 175 × 20 mm, mid green. Stems 0.8-1.2 m, light green with plum-purple markings, and with 5-12 fls. Late June.

#### 'Santa Fé' VII(-/b)

Parentage: 'Casa Blanca' × unnamed seedling

R: Sande B.V., G: Sande B.V., N: Sande B.V. (1995), I: Sande B.V., REG: Sande B.V. (2001)

Inside and outside yellowish white (155D); spots absent; some papillae present; nectaries green; pollen reddish brown; stigma purple. Tepal-margins ruffled, tips strongly recurved. Stems 1.1 m, green with dark spots and stripes. Early to midseason.

#### 'Šantán' I(a-b/b-c)

Parentage: 'Red King' (Div. I) × 'Edith'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1998), REG: B. Mičulka (1998)

Inside bright carmine, centre of fl. with apricot showing through, throat paler; outside carmine, midribs brownish; spots fairly numerous, large, black, on half of each tepal; nectaries white-granulated; pollen orange-brown; stigma beige. Fls 115 mm wide; tepals 75 × 37 mm, slightly recurved, outer tepals more so; pedicels 50 mm long, green. Lvs scattered, 75 × 12 mm, glossy dark green. Stems 0.6 m, thick, green, with a short infl. Early July.

#### 'Santana' I(a/-)

Parentage: 'La Boheme' × seedling 14

R: Fa P. Hoff & Zn (pre 1974), N: Fa P. Hoff & Zn, REG: Fa P. Hoff & Zn (1974)

Fls vivid yellow (12A) spotted greyish purple. (Published in *Lilies and other Liliaceae*, 1975: 96.)

#### 'Santander' VII(a-b/b-c)

Parentage: seedling RW 94-21 × seedling 96-1

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2000), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside greenish white (155C); outside greenish white (155C), midribs with some light yellow-green (145D) at the top; spots and papillae white; nectaries light yellow-green (145B); filaments pale green; pollen moderate reddish orange (171A) in large anthers; style green; stigma dark purple (79B). Fls 300 mm wide; tepals 150 × 85 mm, margins slightly ruffled, tips recurved. Lvs scattered, 215 × 60 mm. Stems 1.1 m, light green, with 3-6 fls.

#### 'Sante' VII(-/c-d)

Parentage: 'Fantango' × 'Star Gazer'

R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1983), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1989)

Inside deep to moderate purplish pink (66C/D), each tepal with a greenish white (155C) stripe and edged deep to strong red (53A/B), throat strong yellow-green (145A) edged light greenish yellow (7D); outside yellowish white, flushed with pale purplish pink (65D), midribs pale yellow (8D); spots dark red (187A) on the entire surface of each tepal; pollen strong reddish orange (169A). Fls 215 mm wide; tepals 100 × 55 mm, margins smooth, tips strongly recurved. Lvs scattered, 110 × 50 mm, mid green. Stems 0.65 m, pale green, with c.3 fls. July.

#### 'Santiago' IV(c/d)

Parentage: complex *kelloggii* × *pardalinum* hybrid

R: J. de Graaff (c. 1965), N: J. de Graaff

Inside light orange; outside pink.

#### 'Santorin' I(a/-)

Parentage: 'Chaco' × Mercury Group

R: W. Gackstatter (1977), G: V. Strasser (1979), N: V. Strasser (1981), I: V. Strasser (1986), REG: V. Strasser (1997)

Fls red-orange throughout; pollen dark brown. Tepal-

margins smooth, tips slightly recurved. Lvs scattered, 160 × 16 mm, dark green. Stems 1.5 m, rather dark green, with up to 40 fls. Mid July.

#### 'Santos' I(b/-)

Parentage: 'Pumpkin Sweet' × 'Ambrosia'  
R: G.C. Keast (1987), G: G.C. Keast (1989), N: G.C. Keast (1989), I: G.C. Keast, REG: G.C. Keast (1990)  
Fls light apricot throughout, except for a deeper colour in the throat and some maroon spots in the centre of the fl.; pollen brown. Fls 50 mm wide; tepals 31 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 22 mm, dark green. Stems 0.75 m, green, with c.6 fls. Dec. (New Zealand).

#### 'Sao Paulo' VII(a/-)

Parentage: unnamed seedling × unnamed seedling  
R: Gebr. Vletter & Den Haan (1992), G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1996), I: Gebr. Vletter & Den Haan (1996), REG: Gebr. Vletter & Den Haan (1996)

Inside yellowish white (155D), tepals slightly suffused with strong purplish red (59D) along edges, and with light greenish yellow (8C) above nectaries, the colour shading out into the tepal, throat yellowish white (155D); outside similarly coloured, midribs paler than light yellow-green (150D), tinged with strong yellow-green (144C) at base and top; spots absent; papillae present (some light greenish yellow (8B), others coloured as the tepals); nectaries strong/light yellow-green (144C/D); pollen strong orange (168A/B); stigma pale yellow-green (193A). Fls 200 mm wide; tepals 130 × 45-75 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 195 × 45 mm, mid green. Stems 1.15 m, pale green, with 4-5 fls.

#### 'Sapņojums' VI(b-c/a)

Parentage: 'Ave Sol' × lavender-flowered seedling  
R: I. Zilgalvis (1999), G: I. Zilgalvis (2000), N: I. Zilgalvis (2001), REG: I. Zilgalvis (2004)  
Inside light lavender, throat green; outside light lavender; spots and papillae absent; nectaries green; pollen yellow; stigma green. Fls 120 mm wide, slightly scented; tepals 140 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 8 mm. Stems 1.7 m (under glass), green. (Nomenclatural standard: colour print supplied by registrant (WSY 0096376).)

#### 'Sapnotaja' I(c/-)

Misspelling of 'Sapņotāja'.

#### Sapnotaja Group I(c/d)

Misspelling of Sapņotāja Group.

#### 'Sapņotāja' I(c/-)

Parentage: selection from Sapņotāja Group  
S: V.P. Orehovs (post 1956), N: V.P. Orehovs  
Fls orange-red.  
(Misspelling: 'Sapnotaja'. Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as 'Sapnotaya' which is also a misspelling.)

#### Sapņotāja Group I(c/d)

Parentage: ('Tsvetaeva' × seedling 364-4-20) × 'Stroinaia'  
R: V.P. Orehovs (1957), N: V.P. Orehovs  
Fls apricot-pink to orange-red; spots reddish brown; pollen brown; stigma reddish brown. Fls 150 mm wide, slightly scented. Lvs scattered, up to 100-120 × 10-12 mm. Stems up to 1.6 m, with 10-12 fls. Bulbs white. July.  
Syn.: Dreaming Group.  
(Misspelling: Sapnotaja Group. Published in *LYB* 33: 78 (1970) and included in *ILR* (1982) as Sapnotaya Group which is also a misspelling. The parentage given here is as in *LYB* 33, but E. Shipovskaya et al., *Lilium* (1972) gives the parentage as ('Doch Fialkovoï' × seedling 364-4-20) × mixed pollen and Nesaule & Orehovs, *Lilijas* (1970) say it is ('Tsvetaeva' × 'Radostnaia') × mixed pollen.)

#### 'Sapnotaya' I(c/-)

Misspelling of 'Sapņotāja'.

#### Sapnotaya Group I(c/d)

Misspelling of Sapņotāja Group.

#### 'Sappho' I(a/b)

See *L. × hollandicum* 'Sappho'.

#### 'Sapporo' (Sande) VII(a-b/c)

Parentage unknown  
R: Sande B.V. (1994), G: Sande B.V., N: Sande B.V. (2001), I: Sande B.V. (2002), REG: Sande B.V. (2002)  
Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen red-brown; stigma purple. Tepal-margins strongly ruffled, tips strongly recurved. Stems 1 m, with c.10 fls. Midseason to late. (Two cvs with the epithet 'Sapporo' have been granted Dutch PBR: 'Sapporo' of Vletter & Den Haan in 1991 and 'Sapporo' of Sande in 2002. This is an unusual and unfortunate situation. In addition, 'Sapporo' of Sande was granted a USPP in 2004. Sande applied for registration of their 'Sapporo' in 2002, before Vletter & Den Haan applied, and Vletter's 'Sapporo' was later rejected for registration because Sande had already used the name (ICNCP, 2004: Art. 27.1). But because the name of a cv. with PBR must be accepted (ICNCP, 2004: Art. 24.4), both 'Sapporo's are legitimate. To distinguish them, the name of the raiser is appended to each and should be thus cited when the names are used (ICNCP, 2004: Art. 27.5).)

#### 'Sapporo' (Vletter & Den Haan) I(a/b)

Parentage unknown  
R: Vletter & Den Haan (pre 1991)  
Inside yellowish white (155D), throat light yellow-green (145B); outside yellowish white (155D), tepals light yellow-green (145B) at base, midribs pink at base; spots and papillae absent; pollen deep yellow to orange; stigma yellow. Tepal-margins ruffled, tips recurved. Stems of medium height, with some darker markings. (See note under 'Sapporo' (Sande).)

#### 'Saptiataia' I(c/-)

Parentage: (Tsvetaevoi Group × 'Radostnaia') × unknown

R: V.P. Orehovs (c. 1959), N: V.P. Orehovs  
No further details.

**‘Šaráda’ I(a-b/b)**

Parentage: (‘Polednice’ × (‘Wattle Bird’ × ‘Heloma’)) × ‘Velehrad’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003),  
REG: B. Mičulka (2003)

Inside yellow-apricot, tepal-tips paler; outside of tepals paler in centre, midribs green; light, linear brushmarks and scattered, medium-sized, oval, mahogany spots on a quarter of each tepal; nectaries green, white-granulated; pollen ochre-brown; stigma pale apricot. Fls 125 mm wide; tepals 78 × 48 mm, margins strongly wavy (outer tepals less so), tips slightly recurved; pedicels 45 mm long, green, hairy. Lvs scattered, 90 × 12 mm, dark green (tips paler), dull. Stems 0.7 m, thick, green, hairy, with a short infl. Mid June.

**‘Sarah Aimée’ I(a/-)**

Parentage unknown

R: J. Wadekamper (pre 1989)

Inside white, flushed with gold in basal third; spots few, dark, on lower part of gold area.  
(Published in *Dunhampton Lily Fields Cat.*, 1989.)

**‘Sarajewo’ VI(-/a)**

Parentage: Aurelian seedling × Aurelian seedling

R: V. Strasser (1985), G: V. Strasser (1988), N: V. Strasser (1992), REG: V. Strasser (1992)

Inside vivid yellow (12A); outside reddish brown; nectaries green; pollen orange. Tepals 125 × 40 mm, slightly recurved. Lvs scattered, 130 × 13 mm, dark green. Stems 1.35 m, green, with up to 18 fls. Mid July.

**‘Sara Marshall’ I(b/-)**

Parentage: albino, male-sterile Payne seedling × ‘Bingo’  
R: L.D. Marshall (1977), G: J.F. McRae (1980), N: Columbia-Platte Lilies (1984), I: Columbia-Platte Lilies (1984), REG: Columbia-Platte Lilies (1984)

Inside strong purplish red (58B/C), tepal-tips strong purplish red (58B), throat strong purplish red (58B) with a white sliver; outside moderate to strong purplish red (58A/C) (depending on temperature); spots absent; nectaries white/rose-pink; pollen deep orange-yellow (163A), anthers sometimes not opening. Tepals 60-80 × 20-30 mm, margins very slightly ruffled, tips slightly recurved. Lvs scattered, 100-180 × 20 mm, mid green. Stems 0.8-1 m, very dark, with 5-8 fls. June.  
(Published in *Rex Lilies Cat.*, 1984.)

**‘Sarcee’ II(c/d)**

Parentage: (*martagon* × unknown) × ‘Hantsing’

R: F. Tarlton (1972), G: F. Tarlton (c. 1976), N: F. Tarlton (1988), I: Honeywood Lilies, REG: F. Tarlton (1988)

Inside deep red (53A), tepal-tips almost black; outside of outer tepals strong purplish red (63A), outside of inner tepals deep red (53A) with a stripe of strong purplish red (63A); spots absent; nectaries strong purplish red (63A); pollen strong orange (26A). Tepals 37 × 15 mm, margins

smooth, tips strongly recurved. Lvs whorled, 95 × 30 mm, mid green. Stems 1.2 m, dark green, with 16 or more fls. June.

**‘Sardegna’ I(a/b)**

Parentage unknown

R: Vletter & Den Haan (pre 1988), N: Vletter & Den Haan (2002), REG: Vletter & Den Haan (2002)

Inside strong pink (50C), shading to deep pink (50B) at base and tepal-margins, a central patch of pale yellow (11C/D) on each tepal, markings purple-red, throat pink; spots and papillae present; pollen orange-brown; stigma light brown. Tepal-margins ruffled, tips recurved. Stems light green. Early.

**‘Sardze’ I(b/-)**

Parentage: selection from Vasaras Prieks Group

S: V.P. Orehovs, N: V.P. Orehovs

Fls orange-red.

(Published in *LYB* 33: 78 (1970).)

***sargentiae* E.H. Wilson IX(b-c/a)**

Inside white, throat yellow; outside pinkish or brownish purple, or sometimes greenish; nectaries with sparse papillae along edges; anthers purplish; pollen brown. Fls fragrant; tepals 120-150 mm long, outer 15-20 mm wide, inner 35-50 mm wide, tips recurved. Lvs scattered, 100-120 × 5-20 mm. Stems up to 1.5 m, grey-green, spotted and tinged with pinkish purple, leafless at base, with 2-5 fls, and with bulbils. W China.

***sargentiae* ‘Greenbush’ IX(b-c/a)**

Parentage: selection from *sargentiae*

S: unknown (pre 1958)

Given as a parent of Glengarry Group. No further information.

***sargentiae* ‘Horsford’ IX(b-c/a)**

Parentage: selection from *sargentiae*

Outside stained with garnet-red.

(Published in *Sandyloam Cat.*, 1945.)

**‘Sarina’ I(a/b)**

Parentage: (yellow-flowered seedling × ‘Connecticut King’) × yellow-flowered *dauricum* hybrid

R: K. de Jong (1978), G: De Jong Lelies (1980), N: De Jong Beheer B.V. (1985), I: De Jong Lelies (1981), REG: De Jong Beheer B.V. (1988)

Inside vivid yellow (12A), throat greenish; outside greenish yellow, each tepal with a broad pale green flame, outer tepals with brownish midribs and basal markings; spots brown, in the throat; pollen strong orange (170A). Fls 175-200 mm wide; tepals 80-95 × 35 mm, margins slightly ruffled, tips recurved. Lvs scattered, 80 × 35 mm, pale green. Stems 1.1-1.5 m, pale green, with 8-25 fls. July.

**‘Šárka’ VI(b-c/a)**

Parentage: ‘Damsou’ × unknown

R: V. Baloun (1990), N: V. Baloun, REG: V. Baloun (1990)

Inside pink, throat pale yellow; outside pink, midribs darker; nectaries olive-green; pollen ochre-yellow; stigma dark purple. Fls 95 × 135 mm; tepals 140 × 60 mm, recurved, twisted; pedicels 75 mm long, slender, slightly spotted violet-brown. Lvs scattered, 100 × 10 mm, dull green. Stems 1.2 m, slender, flushed with bluish. Early July.

**‘Sarkangalvite’ I(b/-)**  
Misspelling of ‘Sarkangalvite’.

**‘Sarkangalvite’ I(b/-)**  
Parentage: selection from Vasaras Prieks Group  
S: V.P. Orehova (pre 1956), N: V.P. Orehova  
Fls orange-red.  
(Misspelling: ‘Sarkangalvite’. Published in *LYB* 33: 78 (1970) and included in *ILR* (1982) as ‘Sazkandalvite’ which is also a misspelling.)

**‘Sarlotte’ I(a/b)**  
Parentage: ‘Nepal’ × mixed pollen of ‘Alisa’ & ‘Nakts Tango’  
R: A. Balode (1994), G: A. Balode (1996), N: A. Balode, REG: A. Balode (1997)  
Inside white, with a deep red (185A) spot in centre of fl. and a brilliant yellow-green (142B) throat; outside white and strong purplish pink (63C); dense spots on half of each tepal; nectaries orange; pollen bright orange-brown. Fls 160 mm wide; tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs 90 × 10 mm, dark green. Stems 0.65 m, green, with c.3 fls. Mid July  
(Included in *ILR Seventeenth Supplement* as ‘Sarlotte’. The spelling is corrected here.)

**‘Šarmantā’ II(c/d)**  
Parentage unknown  
R: D. Hercbergs, G: D. Hercbergs (1998), N: D. Hercbergs (2002), I: D. Hercbergs (2002), REG: D. Hercbergs (2003)  
Inside pink, throat orange-yellow; outside pink, tepal-edges spotted light yellow, midribs green; spots brownish red on yellow to white blush; pollen light brown. Fls 55 mm wide; tepals 43 × 13 mm, margins smooth, tips slightly recurved. Lvs whorled, 135 × 50 mm. Stems 1.4 m, green, with c.22 fls. Late June to early July.  
(Raised from seed obtained through NALS seed exchange.)

**‘Sarmite’ VII(-/c)**  
See *L. × parkmanii* ‘Sarmite’.

**‘Sarpentele’ I(b/-)**  
Parentage: ‘Gloriette’ × ‘Sonnentiger’  
R: V. Strasser (1986), G: V. Strasser (1989), N: V. Strasser (1992), REG: V. Strasser (1992)  
Inside and outside yellow; spots purple on two-thirds of each tepal; nectaries white; pollen brown. Tepals 90 × 30 mm, margins smooth, tips slightly reflexed. Lvs scattered, 150 × 15 mm, dark green. Stems 1.25 m, almost black, with up to 27 fls. Early to late July.

**‘Sārtā’ VII(b/b)**  
Parentage: unnamed seedling × red-flowered Dutch Oriental  
R: Ē. Ieviņa (1994), G: R. Krūmiņš (1997), N: R. Krūmiņš (2001), REG: Liliūm Balticum Association (2004)  
Inside cherry-red; outside brownish red, midribs light green; papillae dark red-brown, on a third of each tepal; nectaries green; pollen dark brown; stigma greenish grey. Fls to 220 mm wide; tepals 125 × 55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 160 × 60 mm. Stems 0.9-1 m, green, with c.7 fls. Late July.

**‘Sartre’ VII(a-b/b)**  
Parentage unknown  
R: Vletter & Den Haan, N: Vletter & Den Haan, REG: Vletter & Den Haan (1994)  
Inside shaded deep to strong purplish pink (68A/B), midveins light yellow (10B), fading towards top, throat yellowish white (155D); outside suffused with moderate purplish pink (70D) on a yellowish white (155D) ground, tepals edged moderate purplish pink (70D) and with yellowish white at base, midribs yellowish white (155B), shading to strong yellow-green (145A) towards top and tipped strong yellow-green (143B), tepals tinged with moderate purplish red (59C) along the midrib at base; spots deep purplish red (59B) on basal part of each tepal; papillae present; pollen brownish orange (171B); stigma light greyish olive (195A). Fls 240 mm wide; tepals 130 × 55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 185 × 40 mm, mid green. Stems 1.25 m, pale green with much darker markings, and with c.7 fls.

**‘Sasaotome’ VII(-/l)**  
Parentage: *japonicum* × *rubellum*  
R: H. Myodo (pre 1977), N: H. Myodo  
Fls pink.

**‘Sasatame’ VII(-/l)**  
Parentage: *japonicum* × *auratum* var. *platyphyllum*  
R: H. Myodo (c. 1966), N: H. Myodo  
Fls white, shaded pink.

**Saskaleen Group VI(-/a)**  
Parentage: derived from *leucanthum* var. *centifolium* & *L. × aurelianense*  
R: J.C. Ericksen (c. 1963), N: J.C. Ericksen  
Fls lime-yellow and white. Aug.

**‘Saskaleen Beauty’ VI(-/a)**  
Parentage: derived from Saskaleen Group  
(Raised in Australia, after 1963, using pollen from Saskaleen Group. No further details.)

**‘Saskatoon’ I(a/-)**  
Parentage: complex hybrid involving *cernuum*  
R: A.J. Porter, I: Dept. of Horticulture, University of Saskatchewan (1977), REG: (1977)  
Fls moderate purplish red (186B) at base, paler towards tepal-tips; spots dark red (187A) on basal two-thirds of

each tepal; nectaries white. Tepals slightly reflexed, inner twice as wide as outer. Stems medium height.  
(Published in *Lilies and other Liliaceae*, 1977: 81.)

### **Saskawin Group VI(b/a)**

Parentage: derived from *L. × aurelianense* & 'T.A. Havemeyer'  
R: J.C. Ericksen (c. 1963), N: J.C. Ericksen  
Fls apricot to nearly white.

### **'Saskia' I(c/-)**

Parentage: (*cernuum* × unknown) × (*dauidii* × unknown)  
R: V. Strasser (1970), G: V. Strasser (1973), N: V. Strasser (1977), I: V. Strasser (1978), REG: V. Strasser (1985)  
Inside yellowish pink, tepal-tips, centre and outside red; spots red; nectaries red; pollen red. Tepal-margins smooth, tips slightly recurved. Lvs scattered. Stems 0.9 m, dark green, with up to 40 fls. Late June.  
(Published in *Der Staudengarten*, 1978.)

### **'Satan' I(a/b)**

Parentage: (*L. × hollandicum* × unknown) × (*L. × hollandicum* × unknown)  
R: G.L. Slate, N: G.L. Slate  
Fls deep blood-red. Stems 1 m, with 4-5 fls. June to July.  
Syn.: *L. × hollandicum* 'Satan'.  
(Published in *Sandyloam Cat.*, 1946.)

### **'Satanus' I?**

Parentage unknown  
R: C. Wittneben (pre 1972), N: C. Wittneben  
Fls deep shining red. Very late.

### **'Satan's Breath' VII(-/-)**

Parentage unknown  
R: F. Jury (pre 1998), N: F. Jury  
Fls pale creamy white, with a very deep mahogany-red centre.  
(Published in *M. Jury Cat.*, 1998: 16.)

### **'Satchmo' I(b/-)**

Parentage: (*lancifolium* var. *flaviflorum* × *wilsonii*) × 'Destiny'  
R: D.B. Fox, N: D.B. Fox (1972), REG: D.B. Fox (1972)  
Fls vivid orange-yellow (23A) and brilliant orange-yellow (23B); spotted in centre; pollen dark orange-brown. At least outer tepals recurved. Stems c.1.1m, dark, with c.9 fls, and occasional bulbils.  
(Published in *Lilies and other Liliaceae*, 1973: 115.)

### **'Satellite' I(a/-)**

Parentage: selection from *dauricum* seedlings  
S: H. Eckstein (pre 1958), N: H. Eckstein  
Fls deep blood-red.  
(Published in *Kline Cat.*, 1958.)

### **Satin Pink Group VII(-/a)**

Parentage unknown  
R: L. Woodriff (1958), G: H.J. & R.L. Strahm (1962), N: J.M. Shaver (1966), I: H.J. & R.L. Strahm (1966), REG: H.J. & R.L. Strahm (1984)

Fls in various shades of pink. Fls 150-230 mm wide; tepal-tips not recurved. Stems 1-1.9 m. Aug.  
(Published in *Rex Bulb Farms Cat.*, 1966.)

### **'Satin Slippers' I(c/d)**

Parentage: 'Ivy Helen' × 'Edith Cecilia'  
R: J. Wadekamper (1989), G: J. Wadekamper (1992), N: J. Wadekamper (1999), I: Willowood (2000), REG: J. Wadekamper (1999)  
Inside soft pink over cream, throat frosty white; outside dark rose-pink; brown spots on half of each tepal; nectaries greenish; pollen brown. Fls 140 mm wide; tepals 70 × 30 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 100 × 8 mm, dark green. Stems 1.2 m, green, with up to 58 well spaced fls in a large infl. Midseason.  
(Published in *Willowood Cat.*, 2000.)

### **'Saturnus' VII(-/b)**

Parentage: 'Star Gazer' × (*speciosum* × unknown)  
R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1983), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989)  
Inside strong purplish red (60D), tepal-edges ivory-white, midveins strong red (53C/D) changing to strong red (46A) towards the throat, which is strong yellow-green (144B) edged light greenish yellow (8B); outside moderate purplish red (186B), tepal-edges yellowish white (155B), midribs light greenish yellow (4B); spots dark red (187A/B) on entire surface of each tepal; nectaries spotted deep reddish purple (77A); pollen strong reddish orange (169A). Fls 280 mm wide; tepals 135 × 65 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 165 × 35 mm, mid green. Stems 1.2 m, green, with 5 fls. June (under glass).  
(Unacceptable name: ICNCP, 2004: Art. 19.13 - after 1959 a name must be in any language other than Latin. The name is also unacceptable under ICNCP, 2004: Art. 27.1 - name already used for another lily. However, the plant is protected by PBR (LEL 716) in The Netherlands and therefore the name has to be retained as legitimate (ICNCP, 2004: Art. 24.4).)

### **'Saturnus' I(-/-)**

Parentage: selection from Egmont Group  
S: R.E. Harrison (pre 1970), N: R.E. Harrison  
Fls orange flame-coloured, 120 mm wide. Stems 0.6 m.  
(Unacceptable name: ICNCP, 2004: Art. 19.13 - after 1959 a name must be in any language other than Latin.)

### **'Satyr' VI(b/a)**

Parentage: Palmer's selection no. 582812 × (unnamed Aurelian × 'Damsen')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1993), REG: B. Mičulka (1993)  
Inside white, with sporadic rose-pink veins at tepal-edges, the yellow of the throat extending over two-thirds of each tepal; outside white, with pink-veined tepal-edges, midribs deep pink; nectaries yellowish green; pollen apricot; stigma dark purple-brown. Fls 50 × 130 mm; tepals 125 × 50 mm, tips distinctly recurved; pedicels 80

mm long, spotted. Lvs scattered, 150 × 11 mm, yellowish green, slightly glossy. Stems 1.2 m, dotted with bright violet. Mid July.

**'Saulaina'** I(b/b-c)  
Misspelling of 'Saulainā'.

**'Saulainā'** I(b/b-c)  
Parentage: selection from Zelta Vainags Group  
S: V.P. Orehovs (post 1953), N: V.P. Orehovs  
Fls golden orange; spots brown; pollen brownish; stigma violet. Fls 90 mm wide, scented. Lvs 80-100 × 8-10 mm, margins downy. Stems 0.8 m, green, ribbed, downy, with 17-20 fls. July.  
(Misspelling: 'Saulaina'. Published in *LYB* 33: 80 (1970) as 'Saulainē' which is a misspelling. Included in *ILR* (1982) as 'Saulainē' and as Div. I(a).)

**'Saulaine'** I(b/b-c)  
Misspelling of 'Saulainā'.

**'Saulē'** I(b/-)  
Parentage: 'Connecticut Lemonglow' × seedling 382  
R: V.P. Orehovs, G: V.P. Orehovs (1977), N: V.P. Orehovs, I: V.P. Orehovs, REG: V.P. Orehovs (1987)  
Inside lemon-yellow (HCC 4) with an Indian yellow centre (HCC 6); outside pale yellow; spots absent; nectaries green; pollen brown. Fls 150 mm wide; tepals 90 × 45 mm. Lvs scattered, 120 × 12 mm, dark green. Stems 0.75 m, with c.12 fls. Early July. Triploid.  
(A. Balode in *Agromija Vēstis* 8: 315 (2005) says that the pollen parent is 'Amalija' and that the fls have orange-gold spots in the centre. 'Amalija' is not in *ILR* and may be a selection from Amālijas Group.)

**'Saulēs Māsa'** I(b/-)  
Parentage: 'Saulē' × Symphonietta Group  
R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)  
Inside bright yellow; outside darker; spots dark brown in centre of fl.; nectaries pale green. Fls 150 mm wide. Lvs scattered, dark green. Stems 0.7 m. Early July.

**'Saulēs Meita'** I(a/-)  
Parentage: 'Connecticut King' × ('Saulē' × (*L.* × *hollandicum* × unknown))  
R: J. Vasarietis, G: J. Vasarietis, N: J. Vasarietis (1984), I: J. Vasarietis, REG: J. Vasarietis (1987)  
Inside vivid orange-yellow (21A), throat vivid orange-yellow (23A); outside brilliant orange-yellow (23B); spots absent. Fls 140-150 mm wide; tepals 90 × 40-50 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 13 mm, dark green. Stems 0.8 m, mid green, with 12-14 fls. Mid June.  
(Published in *Dārzs un Drava* 7; 2 (1986). Similar to 'Connecticut King', but flowering a month earlier.)

**'Saulēs Sturiņš'** I(a/-)  
Parentage: selection from Zelta Vainags Group  
S: V.P. Orehovs (post 1953), N: V.P. Orehovs  
Fls golden orange.

(Published in *LYB* 33: 80 (1970) and included in *ILR* (1982) as 'Saulēs Sturitis' which is a misspelling.)

**'Saulēs Sturitis'** I(a/-)  
Misspelling of 'Saulēs Sturiņš'.

**'Saulkrasti'** VI(b/a)  
Parentage: 'Zeltīte' × seedling 376-S-16  
R: Ā. Zorgevics (1987), G: Ā. Zorgevics (1992), N: Ā. Zorgevics (2005), I: University of Latvia Botanical Garden (2005), REG: Ā. Zorgevics (2005)  
Inside brilliant yellow (13C), throat brilliant yellow-green (150A); outside greenish with brownish gleam; spots absent; nectaries colourless; pollen light brown; stigma green. Fls 140 mm wide, strongly scented; tepals 130 × 30 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 70 × 10 mm. Stems 1.2 m, green, with c.9 fls. Late July.  
(Nomenclatural standard: colour photograph provided by registrant (WSY 0096413).)

**'Saulstarīte'** I(a/-)  
Parentage: Golden Chalice Group × 'Enchantment'  
R: Ā. Zorgevics (1971), G: Ā. Zorgevics (1975), N: Ā. Zorgevics (1976), I: Ā. Zorgevics (1982)  
Fls yellow throughout except for greenish yellow throat; spots absent; nectaries light green; pollen brown. Fls 100 mm wide; tepals 70 × 30, margins smooth, tips strongly recurved. Lvs scattered, 70 × 12 mm, mid green. Stems 0.9 m, dark green, with c.7 fls. Late June to mid July.  
(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar phonetically to 'Saulēs Sturitis'.  
Published in *Dārzs un Drava* 7: 18 (1986))

**'Savana'** I(a/b)  
Parentage: 'Orange Light' × 'Connecticut King'  
R: K. Braun (1983), N: K. Braun, REG: K. Braun (1987)  
Inside yellow-gold, centre tinted orange, throat pale yellow; outside yellow, midribs orange; spots dark brown, sparse, medium sized, on half of each tepal; pale papillae in the throat; nectaries pale yellow. Fls 152 mm wide; tepals 71 × 31 mm, margins slightly recurved; pedicels 70 mm long. Lvs scattered, 86 × 14 mm, dull dark green. Stems 1.1 m, green, with c.10 fls. Early July.

**'Savio'** VII(a/b)  
Parentage: seedling 88-131 × seedling 93-13  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1999), REG: Vletter & Den Haan Beheer B.V. (2004)  
Inside deep/strong purplish pink (68A/B), lighter towards base, midveins white at base; outside dark purplish pink (186C); spots and papillae absent; nectaries green; pollen orange-brown; stigma yellow-green. Tepals short to medium sized, margins slightly to moderately ruffled, tips recurved. Lvs scattered. Stems 1.25 m, green with darker speckles and stripes. Early to midseason.

**SAVONA** VII(b/b)  
Trade designation of 'Vedeā'.

**'Savoje' VII(a/b)**

Parentage: seedling 86-282 × seedling 89-14  
 R: Vletter & Den Haan Beheer B.V. (1994), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)  
 Inside yellowish white (155D), tepal-tips strong yellow-green (144C), throat yellowish white (155D); outside yellowish white (155D), each tepal with pale yellow-green (4D) along midrib and strong yellow-green (144C) tip; spots and papillae present; nectaries strong yellow-green (144B); pollen strong orange (170A); stigma pale yellow-green (157C). Fls 230 mm wide, slightly scented; tepals 135 × 50 mm, margins slightly ruffled, tips recurved. Lvs scattered, 190 × 68 mm. Stems 1.1 m, green, with c.3 fls.

**'Sawa Yuri' I(a/b)**

See *L. × maculatum* 'Sawa Yuri'.

**'Saxana' VI(b-c/a-b)**

Parentage: ('Andrea' × 'Sommertraum') × ((Copper King Group × 'Life') × 'Cayuga')  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
 Inside creamy white, throat with apricot rays extending along basal half of each tepal; outside with green and mahogany midribs; nectaries green; pollen ochre-brown; stigma green. Fls 130 mm wide; tepals 145 × 46 mm, margins smooth, tips moderately recurved; pedicels 75 mm long, slightly brown-dotted. Lvs scattered, 110 × 15 mm, dull pale green. Stems 1.05 m, with fine brown dots, and a short infl. Mid July.

**'Saxonia' I(-/-)**

Parentage: 'Connecticut King' × 'Orange Kandelaber'  
 R: H. Böhm, N: H. Böhm  
 No further details.

**'Sayuri' I(a-b/c)**

Parentage unknown  
 R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1993), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1995)  
 Inside vivid orange (28A); outside vivid yellowish orange (30C); spots medium sized; some papillae present; pollen red-brown; stigma purplish red. Tepals 95 × 33 mm, margins smooth, tips slightly recurved at tips. Lvs scattered, 143 × 16 mm, glossy green. Stems 1.1 m, with dark markings and 7-9 fls. Midseason to late.  
 Trade designation: AKITA.

**'Sayville' I(a/-)**

Parentage: 'Connecticut Yankee' × unknown  
 R: H.O. Beracha (pre 1973), N: H.O. Beracha, REG: Borbeleta Gardens (1983)  
 Fls apricot with a few dark spots. Tepal-margins smooth. Stems 1-1.5 m. July.  
 (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)

**'Sázava' I(c/-)**

Parentage: 'Karmen' (of Jošt) × 'Connecticut Yankee'

R: V. Jošt (1971), G: V. Jošt (1974), N: V. Jošt (1984), I: Sempra Praha a.s., REG: V. Jošt (1984)  
 Inside orange-red, tepal-tips vivid reddish orange (30B), throat vivid reddish orange (32A); outside vivid reddish orange (30A); spots few, small, dark greyish purple (202A) on a third of each tepal; nectaries frosty orange; pollen strong reddish orange (169A). Fls 80-85 mm wide; tepals 80 × 34 mm, margins smooth, tips strongly recurved. Lvs scattered, 109 × 13 mm, dark green. Stems 0.75 m, mid green with some purple coloration, with c.13 fls. July.

**'Sazkandalvite' I(b/-)**

Misspelling of 'Sarkangalvite'.

**'Scala' I(a/-)**

Parentage: Yellow Blaze Group × 'Connecticut King'  
 R: Bischoff Tulleken Leliecultuur B.V. (1975), G: Bischoff Tulleken Leliecultuur B.V. (1978), N: Bischoff Tulleken Leliecultuur B.V. (1982), I: Bischoff Tulleken Leliecultuur B.V. (1983), REG: Bischoff Tulleken Leliecultuur B.V. (1983)  
 Inside each tepal with a tangerine flame and a vivid yellow (12A) edge, tepal-tips yellow, throat yellow-green at base; outside buttercup-yellow. midribs green; spots absent; nectaries brown; pollen mimosa-yellow. Fls 150-180 mm wide; tepals 100-130 × 25-40 mm, margins smooth, tips slightly recurved. Ls scattered, 110-130 × 10-15 mm, dark green. Stems 1 m, green or red-brown, with c.6 fls. Mid July.

**'Scamp' I(b/-)**

Parentage: *pumilum* × seedling of Golden Chalice Group  
 R: R.P.H. Clas (1970), G: R.P.H. Clas (1972), N: R.P.H. Clas (1974), REG: North American Lily Society (1983)  
 Fls medium orange; spots absent. Tepal-tips recurved. June.  
 (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978). Classified as Div. I(a) in *ILR* (1982).)

**'Scapino' VII(a-b/b)**

Parentage unknown  
 R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1994), I: Vletter & Den Haan (1994), REG: Vletter & Den Haan (1995)  
 Inside paler than moderate purplish pink (62B), more-or-less yellowish white (155D) towards base, with yellowish white (155D) around the green nectaries, throat at first yellowish white (155D) but changing to moderate purplish pink (63B); outside paler than moderate purplish pink (62B), more-or-less yellowish white (155D) at base; a few small spots and papillae present; pollen orange-brown; stigma grey. Tepals 130 mm long, margins smooth, tips slightly recurved. Lvs scattered, slightly glossy green. Stems 1.1 m, with dark stripes and speckles, and with c.6 fls (from 16-18 cm bulbs). Midseason.

**'Scarlatinum' I(a/-)**

See *L. × maculatum* 'Scarlatinum'.

**'Scarlet Band' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
 R: C. Robinson (1979), G: C. Robinson (1982), N:  
 C. Robinson (1986), I: C. Robinson (1986), REG: C.  
 Robinson (1986)

Inside brilliant greenish yellow (5A) overlaid with a ray of deep yellowish pink (41D) from 12 mm above the base almost to the tepal-tips; outside brilliant greenish yellow (5A); spots very few, dark brown, in the throat; nectaries pale green; pollen dark brown. Fls 135 mm wide; tepals 108 × 45 mm, margins wavy, tips not recurved. Lvs scattered, 125 × 11 mm, mid green. Stems 0.8 m, mid green, with 10-12 fls. Early July.

**'Scarlet Delight' VII(b-c/d)**

Parentage: *L. × parkmanii* 'Tetra Journey' × 'Tetra Black Beauty'

R: LeV. Freimann (1980), G: LeV. Freimann (1983), N: LeV. Freimann (1986), REG: LeV. Freimann (1986)

Inside strong red (53D), extreme tepal-tips and edges white, throat green; outside moderate pink (51D); spots black on two-thirds of each tepal; nectaries yellowish white; pollen orange. Fls 200 mm wide; tepals 104 × 50 mm, margins ruffled, tips slightly recurved (after several days). Lvs scattered, 200 × 65 mm, dark green. Stems 1.5 m, reddish brown, with 10-20 fls. Early Aug.

**'Scarlet Dwarf' I(a/b)**

Parentage: 'Charisma' × 'Red Carpet'

R: H. Mantel (1983), G: H. Mantel (1986), N: Mt Hood Lilies Inc. (1993), I: Mt Hood Lilies Inc. (1993), REG: Mt Hood Lilies Inc. (1996)

Inside between moderate pink and strong red (49B/53B); outside vivid reddish orange (44C) to strong red (53C); spots absent; pollen strong brown (172A) to greyed red; stigma moderate red (181C). Fls 150-170 mm wide; tepal-margins slightly ruffled, tips slightly recurved. Lvs scattered, 80-120 × 15-25 mm, pale to mid green. Stems 0.6-0.85 m, mid green, with 4-8 fls (from 14-16 cm bulbs).

**'Scarlet Emperor' I(a/b)**

Parentage: 'Paprika' × (*L. × scottiae* × unknown)

R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc. (1976), REG: Oregon Bulb Farms, Inc. (1977)

Fls scarlet. Lvs narrow. Stems 0.6 m, with 10-20 fls. June. (Published in *Lilies and other Liliaceae*, 1977: 81.)

**'Scarlet Herald' I(b/-)**

Parentage: *L. × bollandicum*? × unknown

R: L.B. Tuffery, N: L.B. Tuffery

Fls scarlet.

**'Scarlet Pimpernel' VII(-/c)**

See *L. × parkmanii* 'Scarlet Pimpernel'.

**'Scarlet Robe' I(c/-)**

Parentage: 'Edna Kean' × *pumilum*

R: C. Robinson, N: C. Robinson (1971), REG: C. Robinson (1971)

Fls bright orange-scarlet; spots absent. Lvs up to 100 × 15

mm, dark green. Stems 1.2 m, with up to 20 fls. Mid June. (Published in *Lilies and other Liliaceae*, 1973: 113.)

**'Scarlet Star' VIII(a/b)**

Parentage: ('Tip Top' × 'Wanda') × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (1997), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2000)

Inside near to deep red (53A), throat near to deep red (53A) on a yellowish ground; outside deep red (185A) on a yellowish ground, midribs strong yellow-green (144C) at base and top, fading into tepal, tepal-edges deep red (185A); spots dark red (187A) on the basal part of each tepal; papillae in the throat; nectaries strong yellowish pink (31C), hairy; pollen strong brown (172A); stigma moderate reddish orange/brownish orange (171A/B). Buds hairy. Fls 160 mm wide; tepals 90-100 × 35-50 mm, margins smooth or slightly ruffled, tips slightly recurved. Lvs scattered, 170 × 20 mm. Stems 0.9 m, light green, with c.3-4 fls. June.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Scarlett' I(c/d)**

Parentage: (Stenographer Group × unknown) × unknown

R: A.J. Porter (1960), N: A.J. Porter (1965), REG: A.J. Porter (1975)

Inside vivid reddish orange (32A), throat strong reddish orange (31A); outside vivid reddish orange (33B); spots absent; nectaries strong reddish orange (31A); pollen vivid reddish orange (34B). Lvs moderate olive-green (146A). Stems 1 m. July.

(Published in *Lilies and other Liliaceae*, 1975: 96.

Resembles a large-flowered *pumilum* but flowers later than that species.)

**'Scented Shuksan' IV(-/l)**

Parentage: derived from hybrids involving *parryi*, *pardalinum* var. *giganteum*, *washingtonianum* & 'Shuksan'

R: L. Woodriff (pre 1952), N: L. Woodriff

No further details.

**'Scented Sunset' IV(-/l)**

Parentage: derived from hybrids involving *parryi*, *pardalinum* var. *giganteum*, *washingtonianum* & 'Shuksan'

R: L. Woodriff (pre 1952), N: L. Woodriff

No further details.

**'Scentwood' IV(-/l)**

Parentage: selection from Bullwood Group

S: D.B. Fox (1964), G: D.B. Fox (1968), N: D.B. Fox (1982), I: D.B. Fox (1982), REG: D.B. Fox (1982)

Outside red, tips strong red (46A), throat strong orange (24A), green at base; outside similar but outer tepals have a whitish sheen and appear paler; heavy deep brown-magenta spotting mainly in throat. Fls faintly scented; tepals 70 × 19 mm, partially recurved, margins smooth. Lvs whorled, 145 × 30 mm. Stems 2-2.2 m, mid green. July.

**'Sceptre' II(-/-)**

See *L. × dalhansonii* 'Sceptre'.

**'Scheherazade' VIII(c/d)**

Parentage: 'Thunderbolt' × 'Tetra Black Beauty'

R: Columbia-Platte Lilies (pre 1994), N: Columbia-Platte Lilies, REG: ICRA (1998)

Inside deep red, each tepal edged with yellow, shading into narrow white margins and tips, 'throat shows the same dramatic colour pattern' - the gold is accentuated by cool weather. Tepal-margins ruffled, tips strongly recurved. Lvs broad. Stems 1-1.9 m (to 2.4 m or more when well established), with numerous fls. Mid Aug. (An Orienpet (OT) lily. Published in *The Lily Garden Cat.*, 1996/97: 18.)

**'Schellenbaum' I(c/c)**

Parentage: derived from  *davidii*, 'Maxwill' & *L. × maculatum* 'Mahogany'

R: C. Feldmaier, N: C. Feldmaier, I: C. Feldmaier (1974)

Fls vivid reddish orange (34A) with numerous, dark brown spots on basal half of each tepal; pollen moderate red (179A). Tepal-tips recurved. Lvs 150 × 9 mm, dark green. Stems up to 2 m, with 30-40 fls. July. Triploid (2n = 36).

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 24 (1978).)

**Schellmount Group I(a-c/-)**

Parentage: 'Schellenbaum' × 'Tetra Mountaineer'

R: V. Strasser (1975), G: V. Strasser (1976), REG: V. Strasser (1997)

Fls red. Tepal-margins smooth. Lvs scattered, mid green. Stems rather dark green, with 10-15 fls. Early to mid July. Triploids and tetraploids.

**'Schellmount Number 1' I(b/-)**

Syn. of 'Shalimar'.

**'Schellmount Number 5' I(b/-)**

Syn. of 'Maracana'.

**'Schierke' I(a/b-d)**

Parentage: 'Cynthia' × ('Alpenglow' × orange-flowered brushmarked seedling)

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2002)

Inside and outside strong yellowish pink (31C); spots few, dark red (183A) at the base of each tepal; nectaries moderate olive-green (147A); pollen dark red (183A); stigma yellowish grey (156B). Fls 150 mm wide; tepals 88 × 38 mm, margins smooth, tips slightly to strongly recurved. Lvs scattered, 90 × 15 mm. Stems 0.8 m, dark green with black markings, and with 8-10 fls. Late June. (Schierke is a town in the Harz region of Germany. Nomenclatural standard: colour print provided by registrant (WSY 0032265).)

**'Schloss Atzelsberg' I(a/-)**

Parentage: 'Earl of Rochester' × 'Destiny'

R: A. Winkler (1975), G: A. Winkler (1976), N: A. Winkler (1979), REG: A. Winkler (1985)

Inside light orange-yellow (16B); outside greenish yellow; spots brownish, in the throat; pollen brown. Tepals 60 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 15 mm, pale green. Stems 0.8 m, green, with up to 40 fls. Early July.

(Published in *Der Staudengarten* No. 4 (1981).)

**'Schloss Friedrichsfelde' I(a/b-c)**

Parentage: Asiatic seedling × mixed pollen of 'Brushstroke' & a brushmarked seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)

Inside strong orange-yellow (17A), tepal-tips brilliant yellow (17A); outside strong orange-yellow (11A); spots small, vivid reddish orange (34A) concentrated in a band across the base of each tepal; nectaries with moderate to light yellowish green (136C/D) hairs; pollen vivid reddish orange (34A). Fls 150 mm wide; tepals 80 × 30 mm, not recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 1.2 m, almost black, with c.25 fls. Early to mid July.

**'Schloss Pillnitz' I(a/-)**

Parentage unknown

R: H. Böhm, N: H. Böhm, REG: H. Böhm (1994)

Fls shining salmon-red, with small, brown spots around centre of fl. Stems 1 m. Late July.

(Published in German Lily Group sales list, 1992.)

**'Schlusslicht' I(b/-)**

Syn. of 'Herbstsonne'.

**'Schneeflocke' I(a-b/b)**

Syn. of 'Neptunsilber'.

**'Schneegebirge' I(b/c)**

Parentage: 'Feuer und Rauch' × 'Neptunsilber'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Inside and outside yellowish white (155D); spots dark red (59A), small, numerous, on the basal three-quarters of each tepal; nectaries dark greenish yellow (152D); pollen deep red (53A); stigma deep purplish red (71A). Fls 145 mm wide; tepals 75 × 37 mm, not or very slightly waved towards tip, tips not recurved. Lvs scattered, 70 × 13 mm. Stems 1.1 m, dark green, with 8-10 fls. Early to mid July. (Nomenclatural standard: colour print provided by registrant (WSY 0024678).)

**'Schneespuren' I(a/c-d)**

Parentage: 'Mont Blanc' × 'Bělásek'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1997), REG: G. Steinbrück (1998)

Inside pale ivory-white, paling to yellowish white (155D) at tepal-tips, throat yellowish; outside white; spots dark purple (79B), numerous, small to medium sized, on two-thirds of each tepal and a suggestion of brushmark

lines towards base (looking like tracks or trailmarks); nectaries white-frosted; pollen dark red (183B); stigma deep purplish red (71A). Fls 160 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly but distinctly recurved. Lvs scattered, 65 × 10 mm, mid green. Stems 0.8 m, rather dark green, with up to 8 fls. Early July.

**‘Schneewittchen’ I(c/-)**

Parentage: Sutter’s Gold Group × Hallmark Group  
R: A. Winkler (1974), G: A. Winkler (1976), N: A. Winkler (1977), REG: A. Winkler (1991)  
Inside greenish white; outside light green; spots very few; pollen strong orange (169B). Tepals 60 × 40 mm, margins smooth, tips not recurved, one tepal bending back less than the others. Lvs scattered, 60 × 20 mm, dark green. Stems 0.7 m, dark green, with c.5 fls. Early July.

**‘Schneider’s Goldstaub’ I(a/b)**

Parentage: ‘Talisman’ × ‘Talisman’  
R: O. Schneider (1970), G: O. Schneider (1973), N: Zentralstelle für Sortenwesen (1979), I: A. Weinreich (1980), REG: O. Schneider (1986)  
Inside golden yellow, throat with an underlying reddish tinge; outside bright golden yellow; dark spots on basal third of each tepal; pollen red-brown. Fls 140-170 mm wide; tepals 98 × 25-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 0.8-1 m, dark green, with 5-6 fls. Mid to late June. Syn.: ‘Goldstaub’.  
(Published in *Verband d. Kleingärtner-Siedler + Kleintierzüchter* 31801 (1981).)

**‘Schnittspeer’ I(a/-)**

Parentage unknown  
R: J. Klein (pre 1984), N: J. Klein, REG: J. Klein (1988)  
Fls yellow, with a few spots. Stems 0.8 m. Mid July.  
(Published in German Lily Group sales list, 1984.)

**‘Schokolade’ VI(-/-)**

Parentage unknown  
R: H. Böhm (pre 1986), N: H. Böhm, REG: ICRA (1996)  
Fls chocolate-brown, 150 mm wide. Lvs dark. Stems 1.8 m. Early July.  
(Published in German Lily Group sales list, 1989.)

**‘Schokomaid’ I(a/b/b)**

Parentage unknown  
R: G. Pätzold (1984), G: G. Pätzold (1987), N: H. Schmidt (1994), I: H. Schmidt (1990), REG: H. Schmidt (1994)  
Inside deep yellow, suffused brownish red in the middle and towards base of each tepal (much less so in inner tepals), throat olive-green; outside yellow, midribs brown, the darker colour suffusing over more of outer tepals; spots absent; pollen brown. Buds brown. Fls 150 mm wide; tepals 75 × 28-38 mm, tips slightly reflexed. Lvs scattered, 90 × 15 mm, mid green. Stems 0.8-1 m, dark-coloured with brown-red bulbils, with 8-11 fls. Early to mid July.

**‘Schönholzer Flirt’ I(a/c)**

Parentage: ‘Cynthia’ × (‘Alpenglow’ × brushmarked seedling)  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)  
Fls greenish white (155C) throughout; spots small, light purple (77C) on basal third of each tepal; nectaries light greenish white; pollen deep red (53A); stigma yellowish grey (156B). Fls 135 mm wide; tepals 72 × 32 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 15 mm. Stems 0.8 m, dark green, with c.9 fls. Mid June.  
(For meaning of epithet see ‘Schönholzer Stolz’.)

**‘Schönholzer Heide’ II(c/d)**

See *L. × dalhansonii* ‘Schönholzer Heide’.

**‘Schönholzer Schwingen’ I(b/c)**

Parentage: ‘Blood Tiger’ × mixed pollen of ‘Connecticut Queen’ & ‘Roter Bernstein’  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1997), REG: G. Steinbrück (1997)  
Inside and outside deep red (53A); spots blackish, fairly numerous, medium sized, on a half to three-quarters of each tepal, which has the slight suggestion of a brushmark; pollen moderate red (182A); stigma dark purple (83A). Fls 140 mm wide; tepals 75 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 65 × 18 mm, dark green. Stems 1.4 m, rather dark green, with up to 20 fls. Mid to late July.  
(For meaning of epithet see ‘Schönholzer Stolz’.)

**‘Schönholzer Stolz’ I(a/b-d)**

Parentage: ‘Skywatcher’ × mixed pollen of ‘Vater Zille’, ‘Fanal’ & ‘Brushstroke’  
R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)  
Inside strong orange (170B), tepal-tips moderate yellowish pink (37C), throat soft yellow-orange; outside strong orange (170B), with soft greenish yellow midribs; spots numerous, large, elongated, deep purplish red (71A) on basal half of each tepal; nectaries large, white (155A), forked at apex; filaments light orange-yellow (23C); pollen dark greyish reddish brown (200A); style deep orange-yellow (163A); stigma large, moderate brown (200D). Fls 160 mm wide; tepals 80 × 32 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 21 mm. Stems 1 m, dark green, with c.11 fls. Late June.  
(Schönholz is a part of Berlin near the registrant’s garden. Nomenclatural standard: colour print provided by registrant (WSY 0028912).)

**‘Schorfheide’ I(a/b-d)**

Parentage: ‘Heide III’ × ‘Berliner Morgen’  
R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)  
Inside deep pink (180D), tepal-tips moderate reddish orange (179C), throat greenish white (157D), hoary;

outside deep pink (180D); spots small, moderate reddish orange (171A) on basal half of each tepal; nectaries greenish white (157D); pollen dark reddish orange (178B); stigma moderate orange-yellow (168D). Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm. Stems 1.3 m, black, with 10-12 fls. Mid July.  
(Schortheide is a wooded region north of Berlin.  
Nomenclatural standard: colour print provided by registrant (WSY 0024701).)

**‘Schrymakersii’ I(b-c/d)**

See *speciosum* var. *rubrum* ‘Schrymakersii’.

**‘Schuetzenlis’ I(b/-)**

See *L. × scottiae* ‘Schuetzenlis’.

**‘Schwarzer Prinz’ I(b/-)**

Parentage unknown

R: H. Dierssen (pre 1997), N: H. Dierssen

Fls black-red with thick tepals. Stems 0.8 m. Mid July.

(Published in ELG sales list, 1997.)

**‘Schwarz-roter Diamant’ I(c/d)**

Parentage: red-flowered Asiatic seedling × ‘Impact’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N:

G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G.

Steinbrück (1997)

Inside and outside moderate purplish red (59C); each tepal with tiny reddish spots and an unusual dark greyish purple (202A) brushmark; pollen dark purple (79B). Fls 130 mm wide; tepals 70 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 60 × 13 mm, pale green. Stems 1.1 m, almost black, with c.13 fls. Mid July.

**‘Schwefelblüte’ I(b/-)**

Parentage unknown

R: H. Böhm, N: H. Böhm

Fls yellow tinged with orange; spots black, towards base of each tepal. Stems 1.1 m. Mid July.

**‘Science Fiction’ VIII(a-b/b)**

Parentage: ‘Unique’ × (*longiflorum* × ‘Aristo’)

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff

Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies

B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1998),

REG: Bischoff Tulleken Lelies B.V. (2001)

Inside moderate red (180B) on a moderate orange (170C) ground, tepal-tips moderate red (180A), edges narrow, moderate orange (170C), throat moderate orange-yellow (168D); outside a little lighter than moderate pink (35D), tepals with moderate red (180B/C) towards edges and narrow, moderate orange (170B/C) edges; spots dark red (187B) on the basal part of each tepal; papillae few, in the throat; nectaries moderate orange (170C); pollen moderate reddish brown (175A); stigma moderate red (180A). Buds hairy. Fls 210 mm wide; tepals 120 × 45-60 mm, margins hardly ruffled, tips recurved. Lvs scattered, 215 × 20 mm. Stems 0.95 m, light green, with 2-3 fls (or 4-6 fls from 12-14 cm bulbs). June.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Scimitar’ IX(b/c)**

See *auratum* ‘Scimitar’.

**‘Scotland’ I(b/c)**

Parentage: seedling RS 89-13 × seedling RS 91-1

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den

Haan Beheer B.V., N: Vletter & Den Haan Beheer

B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG:

Vletter & Den Haan Beheer B.V. (2001)

Inside strong purplish red (58C) on a deep purplish pink (58D) ground, throat light yellow-green (145C); outside pale purplish pink (65C), midribs light yellow-green (150D), tepal-edges vivid red (57A), midribs of outer tepals brownish orange (164A) in apical half; spots dark red (187A); papillae absent; nectaries deep purplish pink (58D); pollen and stigma strong orange (168A). Fls 170 mm wide; tepals 90 × 40-50 mm, margins smooth, tips not recurved. Lvs scattered, 90-100 × 15-20 mm. Stems 1.15-1.3 m, green with darker markings, and with c.5 fls.

**‘Scotsman’ Div.?**

Parentage unknown

R: J.E.H. Stooke (c. 1939), N: J.E.H. Stooke

Fls large, rich red, profusely spotted.

**× *scottiae* Skinner I(b/-)**

Parentage: *davidii* var. *willmottiae* × *L. × maculatum*

‘Mahogany’

R: F.L. Skinner (c. 1931), N: F.L. Skinner

AM 1932

Fls bright orange, shaded red, spotted. Tepals somewhat recurved. Stems 0.8 m. June.

Syn.: ‘Scottiae’.

(Published in *Gard. Chron.*, ser.3, 90: 256, fig.109

(1931). Named by Skinner after his mother Mrs J.

Skinner (née Scott).)

**‘Scottiae’ I(b/-)**

Syn. of *L. × scottiae*.

**× *scottiae* ‘Apricot Glow’ I(b/-)**

Parentage: *davidii* var. *willmottiae* × *L. × maculatum*

R: C.F. Patterson (c. 1938), N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1949)

Fls apricot, up to 175 mm wide, with dark spots. Stems 1.2 m, with up to 30 fls. July.

(Published in *LYB NALS* 5: 67 (1952).)

**× *scottiae* ‘Eileen Raffill’ I(a/-)**

Parentage: *L. × scottiae* × *davidii* ‘Macranthum’

R: C.P. Raffill (c. 1937), N: C.P. Raffill

PC 1938

Fls deep orange.

(Published in *LYB* 7: 81 (1938).)

**× *scottiae* ‘Festival of Britain’ I(b/-)**

Parentage: *davidii* var. *willmottiae* × *L. × maculatum*

R: A.J. van der Zwet & Sons (c. 1951), N: A.J. van der

Zwet & Sons

AMH 1951

Fls orange with darker centre.

× *scottiae* 'Garden of Eden' I(-/c)

Parentage: *L. × scottiae* × *davidii* var. *willmottiae*

R: A.J. van der Zwet & Sons (c. 1951), N: A.J. van der Zwet & Sons  
AMH 1951

Fls deep red with an orange sheen.

× *scottiae* 'Gay Passion' I(a/-)

Parentage: *L. × scottiae* × *L. × maculatum* 'Mahogany'

R: G.M. Chandler, N: G.M. Chandler, I: G.M. Chandler (1959)

Fls Indian lake (HCC 826); spots black. Fls 125 mm wide. Stems 0.4-0.6 m, with up to 10 fls.

Syn.: 'Black Prince'.

(Published in *Amer. Lily Soc. Bull.* 11 (1959).)

× *scottiae* 'Hesperos' I(c/-)

Parentage: *davidii* × *L. × maculatum*

R: C. Feldmaier, N: C. Feldmaier, I: C. Feldmaier (1974)

Fls vivid yellow (12A), centre with brown spots; pollen greyish red (178A). Lvs 100 × 25 mm, glossy. Stems 0.9-1 m, green suffused with brown. Mid July to early Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 22 (1978).)

× *scottiae* 'Jock Scott' I(-/l)

Parentage: *L. × scottiae* × *davidii* var. *willmottiae*

R: O.E.P. Wyatt (c. 1948), N: O.E.P. Wyatt

Exceptionally early.

(Published in *LYB* 14: 14 (1950).)

× *scottiae* 'Orange Wonder' I(-/l)

Parentage: *davidii* var. *willmottiae* × *L. × maculatum* 'Sanguineum'

R: A.J. van der Zwet & Sons (pre 1944), N: A.J. van der Zwet & Sons

AMH 1944, FCCH 1951

Fls orange-red with small, brown spots.

× *scottiae* 'Red Admiral' I(a/-)

Parentage: *L. × scottiae* × *L. × maculatum* 'Mahogany'

R: G.M. Chandler, N: G.M. Chandler (1950), I: G.M. Chandler (1958)

Fls blood-red (HCC 820), centre marigold orange (HCC 11/1); spots brown. Fls 150 mm wide; tepals slightly reflexed. Stems 0.5 m.

(Published in *LYB* 20: 77 (1957).)

× *scottiae* 'Rose Cup' I(a/-)

Parentage: *davidii* var. *willmottiae* × *L. × maculatum*, self-pollinated

R: C.F. Patterson (c. 1940), N: C.F. Patterson

Fls fuchsia and rose-pink, flushed with orange.

× *scottiae* 'Roter Prinz' I(a/-)

Parentage: complex *davidii* × *L. × maculatum* hybrid

R: C. Feldmaier (c. 1955), N: C. Feldmaier

Fls moderate reddish orange (35A); spots small, brown, on basal half of each tepal; pollen orange-red. Tepals narrow, slightly recurved. Lvs dark green. Stems up to

1.5 m. July.

(Published in *ILR* (1969).)

× *scottiae* 'Schuetzenlis' I(b/-)

Parentage: *davidii* × *L. × maculatum*

R: C. Feldmaier, N: C. Feldmaier, I: C. Feldmaier (1974)

Fls vivid orange (28A); tepals with basal two-thirds spotted chocolate-brown; pollen dark red-brown. Lvs 140 × 18 mm, dark green. Stems c.1.4 m, with 10-12 fls. July to Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 17 (1978).)

'Scout' I(b/-)

Parentage: 'Edith Cecilia' × 'Cinnabar' (Div. I)

R: J. de Graaff, N: J. de Graaff, I: J. de Graaff (1970), REG: Oregon Bulb Farms, Inc. (1969)

Fls vivid red (46B). Stems 1-1.2 m. June to July.

(Published in *LYB* 33: 257 (1970).)

'Screech Owl' I(a/-)

Parentage: bicolor seedling XX-9 × 'Mirage' (Div. I)

R: W.S. Summers (1978), G: W.S. Summers, N: W.S.

Summers (1991), I: Hartle-Gilman Gardens (1992), REG: W.S. Summers (1992)

Throat vivid yellow (14B), tepal-tips strong red (46A); outside moderate red (181B); spots absent; nectaries strong red (46A); pollen moderate orange (167A). Fls 135 mm wide; tepals 70 × 32 mm, margins smooth, tips slightly recurved; pedicels 110 mm long. Lvs scattered, 86 × 12 mm, mid green. Stems 1 m, green, with 9-25 fls. Late June to early July.

(Published in *Hartle-Gilman Gardens Lily Cat.*, 1992.

Striking bicolor with a sharp colour break between throat and tepal-tips.)

'Sculptor' I(a/b)

Parentage unknown

R: Columbia-Platte Lilies, N: Columbia-Platte Lilies, I: Columbia-Platte Lilies (1996), REG: ICRA (1998)

Inside pure peach; outside with darker bands of colour; spots dark, on basal third of each tepal; anthers dark, never opening. Tepal-margins smooth, tips recurved at tips. Stems 1.2-1.5 m, very dark, with a long infl. Late June.

(Published in *The Lily Garden Cat.*, 1996/97: 9, with colour illustration.)

'Seabreeze' I(a/-)

Parentage: (*concolor* × *davidii*) F<sub>2</sub> × 'Dayspring'

R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Inside brilliant to light greenish yellow (3B/C), tepal-tips brilliant greenish yellow (3B), throat light greenish yellow (3C); outside light greenish yellow (3C) with green midribs and base; spots deep magenta, many, tiny; nectaries soft yellow; pollen brownish orange (171B). Tepals 50-60 × 20-30 mm, margins very slightly ruffled, tips slightly recurved. Lvs scattered, 100-150 × 10-20

mm, dark green. Stems 0.8-1.5 m, dark green, with 8-22 fls in a long, candelabrum-like infl. Mid June.

**‘Sea Brilliant’ VIII(a/b)**

Parentage: ‘Dame Blanche’ (tetraploid form?) × seedling LO 93003.2BT

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004) Inside with inner tepals yellowish white (155D), strong purplish red (58C) along basal half of midveins, outer tepals more purplish red (58C) (purplish red fades with age); outside yellowish white (155D), pale yellow-green (155A) along midribs, midribs strong yellow-green (144C) at base and top; spots absent; papillae yellowish white (155D); nectaries strong yellow-green (144C); pollen moderate reddish brown (175A); stigma light yellow-green (145D). Fls 245 mm wide, fragrant; tepals 155 × 60-75 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 200 × 45 mm. Stems 0.7-1.2 m, green with darker markings, and with 1-5 fls. (A *longiflorum*/Oriental (LO) hybrid.)

**Seagold Group VI(-/a)**

Parentage: *sargentiae* × Aurelian types

R: J.M. Shaver (pre 1966), N: J.M. Shaver, I: J.M. Shaver (1966), REG: J.M. Shaver (1984)

Buds green, opening to greenish gold and chartreuse-yellow, tepal-tips and throat yellow; outside yellow with prominent green markings; spots absent. Tepal-margins smooth. Lvs scattered. Stems 1.3-2 m. Late July. (Published in *Rex Bulb Farms Cat.*, 1966: 24.)

**‘Seagull’ VII(a/b)**

Parentage unknown

R: Bischoff Tulleken Lelies B.V. (pre 1987), N: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2002)

Inside yellowish white (155D), throat white/light green; papillae present; pollen dark brown; stigma dark purple. Tepal-margins ruffled, tips recurved. Stems light green with darker markings.

**‘Seashell’ I(b-c/-)**

Parentage: ‘Golden Coronet’ × pink-flowered seedling from Tesca

R: J. Wadkamper (1973), N: J. Wadkamper (1976), I: Borbeleta Gardens (1978), REG: J. Wadkamper (1977)

Inside pink, tepal-tips and margins tan, throat cream-pink; outside pale tan-green; spots absent; nectaries pale cream; pollen pale brown. Lvs scattered, deep green. Stems 1 m. Midseason. (Published in *Lilies and other Liliaceae*, 1977: 81.)

**‘Sea Siren’ VI(-/a)**

Parentage: selection from Emerald Isle Group

S: D.F. McPherson (1975), N: D.F. McPherson (1980), I: D.F. McPherson (1980), REG: D.F. McPherson (1980)

Inside green, tepal-tips light yellow-green (150D), throat brilliant yellow-green (150B); outside brilliant yellow-green (150B), midribs strong yellow-green (142A); spots absent; nectaries strong yellow-green (142A); pollen

moderate reddish brown (174A). Fls 150 mm wide; tepals 130 × 23-38 mm, tips slightly recurved. Lvs scattered, c.80 × 6 mm, dark green. Stems 2 m, green, with c.15 fls.

**‘Seaspray’ VII(-/-)**

See *L. × parkmanii* ‘Seaspray’.

**‘Seastar’ I(a/-)**

Syn. of ‘Jūras Zvaigzne’.

**Seastar Group I(a/b)**

Syn. of Jūras Zvaigzne Group.

**‘Sea Treasure’ VIII(a-b/b)**

Parentage: *longiflorum* ‘Lorina’ × ‘Muscadet’

R: De Jong Beheer B.V. (1993), G: De Jong Beheer B.V. (1995), N: De Jong Beheer B.V. (2000), I: De Jong Beheer B.V. (2002), REG: De Jong Beheer B.V. (2002)

Inside greenish white (155C), midveins yellow-green at base shading into vivid purplish red (57C) at top; outside greenish white (155B); spots and papillae absent; nectaries green; pollen red-brown; stigma grey, suffused with purple. Tepals 164 mm long, margins smooth or slightly wavy. Tips recurved. Lvs scattered, 230 × 30 mm, veins more impressed than in ‘Wild Treasure’. Stems 1-1.1 m, green, with c.5 fls. Late. (A *longiflorum*/Oriental (LO) hybrid.)

**‘Seattle’ VII(a/b)**

Parentage: seedling 91-35 × seedling RF 95-07

R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside moderate purplish red (64A), tepal-tips yellowish white (155D), throat yellowish white (155D); outside moderate purplish red (70A), each tepal with white base and tip; spots and papillae present; nectaries strong yellow-green (145A) with a narrow brilliant greenish yellow (5A) margin; pollen moderate orange (167A); stigma pale purplish pink (65D). Fls 210 mm wide, slightly scented; tepals 145 × 55 mm, margins slightly ruffled, tips recurved. Lvs scattered, 190 × 53 mm. Stems 0.8-0.9 m, light green, with 2-3 fls.

**‘Seattle 54’ Div. ?**

Name used erroneously in *LYB* 21: 49 (1958).

**‘Seawind’ VII(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: P. van Leeuwen (1990), N: Mak ’t Zand B.V. (1996), I: Mak ’t Zand B.V. (1996), REG: Mak ’t Zand B.V. (1997)

Inside strong purplish red (60C), tepal-edges yellowish white (155D), midveins strong red (53B), throat yellowish white (155D); outside strong reddish purple (70B) on a white ground, tepal-edges yellowish white (155D), midribs strong yellow-green (144C) at top; spots and papillae absent; nectaries strong yellow-green (144C) surrounded by a light greenish yellow rim; pollen strong reddish orange/strong orange (169A/B); stigma moderate yellowish green (138A) with a little reddish brown. Fls

280 mm wide; tepals 130 × 40-60 mm, margins ruffled, tips recurved. Lvs scattered, 160 × 40 mm, mid green. Stems 0.9 m, light green with darker markings, and with 3-4 fls.

**‘Second Life’ I(a/-)**

Parentage: ‘Connecticut Bronze’ × ‘Sahara’  
R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1987), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside deep yellowish pink (47C), blushed light greenish yellow (5C), throat suffused with deep pink; outside strong violet (86B/C) on a pale greenish yellow (10D) ground, midribs light yellow-green (2C) at base; spots deep purplish red (59B), few, small, in the throat; nectaries spotted moderate red (183D); pollen moderate orange (167A). Fls 180 mm wide; tepals 83 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered, 140 × 10 mm, mid green. Stems 0.9 m, with darker markings, slightly hairy and with c.7 fls. June to July (under glass).

**‘Second Paradise’ VII(-/d)**

Syn. of ‘Pink Eden’.

**‘Seidenschimmer’ I(b/c)**

Parentage: ‘Pohls Weinrote’ × mixed pollen from seedling St. 33/1/88 & a yellow-flowered Asiatic seedling with red brushmarks  
R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (2003), I: G. Steinbrück (2004), REG: G. Steinbrück (2004)  
Inside moderate orange-yellow (168D), throat somewhat darker; outside soft pink and yellow; spots many, medium sized, dark purple, on the basal half of each tepal, those along centre of tepal more linear; nectaries white, tinged with soft pink, running into black at top; pollen greyish brown (166A); stigma brownish orange. Fls 140 mm wide, slightly scented; tepals 70 × 15 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 70 × 15 mm. Stems 0.75 m, dark green marbled violet, with c.8 fls. Late June to early July.  
(Nomenclature standard: colour print supplied by registrant (WSY 0096353).)

**‘Seika’ I(a/-)**

Parentage: ‘Enchantment’ × *L. × maculatum*  
R: S. Fujishima (1959), N: S. Fujishima  
Fls orange-red.

**‘Seiser Glöckel’ VII(-/r)**

Parentage: *cernuum* × unknown  
R: N. Martschinke (pre 1989), N: N. Martschinke, REG: ICRA (1996)  
Fls white. Stems 0.9 m. Resembling ‘Nordmilch’ but with a narrower infl.

**‘Seitlicher Riesenstern’ I(b/-)**

Parentage unknown

R: C. Wittneben (pre 1970), N: C. Wittneben  
Fls glittering orange. Stems 1.2 m.

**‘Seitliches Entzücken’ I(b/-)**

Parentage unknown  
R: K. Wittneben, N: K. Wittneben, I: K. Wittneben (pre 1970)  
Inside vivid reddish orange (41A), tepal-tips and margins vivid reddish orange (34A), throat vivid reddish orange (30B); outside brilliant orange-yellow (23B); spots tiny, dark red (187A); nectaries deep purplish red (59B); pollen dark reddish orange (178B). Fls 125 mm wide; tepals 77 × 44 mm, margins smooth, tips not recurved. Lvs scattered, 92 × 9 mm, mid green. Stems 0.7 m, mid green, with c.7 fls. Mid June.  
(Published in *Liliárska ročenka*, 1983.)

**‘Seitliche Sonne’ I(b/-)**

Parentage: (*lancifolium* × *L. × maculatum*) F<sub>2</sub>  
R: L. Denkewitz (pre 1986), N: L. Denkewitz, REG: L. Denkewitz (1988)  
Fls yellow, spotted. Fls 130 mm wide. Stems 1.1 m, dark green, with up to 35 fls (including secondaries). Mid July.  
(Published in German Lily Group sales list, 1986.)

**‘Šejk’ I(b/c)**

Parentage: (‘Rézi’ × (‘Rubinovaia’ × ‘Connecticut King’)) F<sub>2</sub>  
R: B. Mičulka (pre 1988), N: B. Mičulka, REG: B. Mičulka (1988)  
Inside apricot, tepal-centres apricot-yellow, edges veined orange; outside brownish orange, with red-veined edges, midribs greenish; spots large, numerous, dark brown-purple. on three-quarters of each tepal; nectaries white-frosted; pollen ochre; stigma pale ochre. Fls 110 mm wide; tepals 85 × 35 mm, recurved; pedicels dark green. Lvs scattered, 95 × 10 mm, dull dark green. Stems 1.2 m, slightly brown-dotted at base. Late June.

**‘Selena’ I(a/b)**

See ‘Moonshot’.

**‘Selga’ III(-/r)**

Parentage: *monadelphum* × *candidum* ‘Sultan Zambak’  
R: V.P. Orehovs, G: V.P. Orehovs (1980), N: V.P. Orehovs (1980)  
Fls white; spots absent.  
(Epithet given to two similar seedlings.)

**‘Selina’ I(a/-)**

Parentage: ‘Mont Blanc’ × (‘Twilight’ × ‘Pirate’)  
R: Gebr. Mak B.V. (1983), G: Gebr. Mak B.V. (1985), N: Gebr. Mak B.V. (1988), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1989)  
Deep yellowish pink (47C) flushed with strong yellowish pink (33C); outside deep pink (51C), tepal-edges deep pink (50B); spots dark red (187A) in the throat; pollen strong orange (168B). Fls 170 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 65 × 10 mm, mid green. Stems 0.9 m, green with slight, darker markings, and with c.9 fls. July.

**'Selma' I(a/b)**

Parentage: unnamed seedling × 'Vivaldi'  
 R: De Jong Lelies Holland B.V., N: De Jong Lelies  
 Holland B.V. (1998), REG: De Jong Lelies Holland B.V.  
 (2003)

Inside pale purplish pink (55D), lighter towards tepal-edges, midveins white at base; outside light to pale purplish pink (55C/D); spots and papillae present; nectaries green; pollen orange-yellow; stigma light purple-red. Tepal-margins very slightly ruffled, tips slightly recurved. Stems 1.3-1.4 m. Early to midseason.

**'Selonija' I(a/c)**

Parentage: unnamed seedling × unnamed seedling  
 R: J. Vasarietis, G: J. Vasarietis (1989), N: J. Vasarietis  
 (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)  
 Inside and outside brilliant yellow (20A); spots absent;  
 nectaries white; pollen brown. Fls 180 mm wide; tepals  
 95 × 50 mm, margins smooth, tips slightly recurved. Lvs  
 scattered, 85 × 15 mm, dark green. Stems 0.9 m, black,  
 with c.8 fls. Mid July.  
 (Published in *Latvian Lily Register*, 1993.)

**'Selva' VIII(a-b)**

Parentage: seedling W 89-9 × seedling W 40  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den  
 Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V.,  
 I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den  
 Haan Beheer B.V. (2000)  
 Inside pale yellow-green (155A); outside yellowish white  
 (155D) with a reddish flush at base of midribs; spots and  
 papillae present. Tepal-margins ruffled, tips recurved. Stems  
 1.2 m, green with darker spots and stripes. Early to midseason.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Semipleno' I(a/b)**

See *L. × maculatum* 'Semipleno'.

**'Semiramis' VI(-/c)**

Parentage unknown  
 R: P. Geiser (pre 1983), N: P. Geiser  
 Inside dark yellow with small brown papillae and light  
 green nectaries. Fls 160 mm wide, scented. Stems 1.6 m.  
 Late July.  
 (In *ILR Twentieth Supplement* this cv. was listed as  
 unacceptable (under ICNCP, 1995: Art. 17.9 - after 1959  
 a name must be in a modern language) but this rule was  
 later revised (ICNCP, 2004: Art. 19.13 - a name may be  
 in any language other than Latin). Semiramis was the  
 Hellenized name of Shamiram, a possibly mythological,  
 originally Assyrian Queen of Babylon. Published in  
 German Lily Group sales list, 1983.)

**'Semperoper' I(b/c)**

Parentage unknown  
 R: H. Böhm (pre 1986), N: H. Böhm, REG: H. Böhm  
 (1988)  
 Fls vivid yellow (12A), throat brownish red, with a  
 few spots; pollen orange. Fls 150 mm wide; tepals not  
 reflexed. Stems dark, with bulbils. Mid July.  
 (Published in German Lily Group sales list, 1986.)

***sempervivoideum* Lév. IX(b-c/b)**

Fls white, speckled with purple-red. Tepals 35-40 × 5-15  
 mm. Lvs scattered, 25-55 × 2-4 mm. Stems 0.2-0.3 m,  
 with solitary fls. W China (Sichuan, Yunnan).

**'Sempione' I(b/b)**

Parentage: seedling W 91-16 × seedling W 91-15  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den  
 Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V.,  
 I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den  
 Haan Beheer B.V. (2000)  
 Inside yellowish white (155D), throat strong yellow-  
 green (143B); outside of inner tepals yellowish white  
 (155D) with light greenish yellow (1C) midribs, outer  
 tepals light greenish yellow (1C), edged yellowish white  
 (155D); spots and papillae absent; nectaries white-hairy;  
 pollen moderate orange (167A); stigma light yellow-green  
 (2C) with moderate red (47A) hairs. Fls 160 mm wide;  
 tepals 90 × 50 mm, margins smooth, tips recurved. Lvs  
 scattered, 120 × 15 mm. Stems 1.05 m, green, with c.5  
 fls.

**'Sempre Avanti' VII(a-b/b-d)**

Parentage: 'Casa Blanca' × seedling 801  
 R: Vletter & Den Haan (1984), G: Vletter & Den Haan  
 (1987), N: Vletter & Den Haan, I: Vletter & Den Haan  
 (1990), REG: Vletter & Den Haan (1992)  
 Inside pale purplish pink (65D) shading to strong  
 purplish pink (64B) at tepal-edges, tips moderate  
 purplish pink (74D), midveins on basal part of tepals pale  
 yellow-green (4D) and in the throat strong yellow-green  
 (144B/C) edged light greenish yellow (8B/C); outside  
 very pale purple (69B), tips of outer tepals suffused with  
 light purple/moderate purplish pink (75B/74D), midribs  
 pale yellow-green (4D); spots dark red (187B) in the  
 throat; nectaries dark red (187A); pollen strong brown  
 (172A). Fls 290 mm wide; tepals 140 × 60 mm, margins  
 ruffled, tips recurved. Lvs scattered, 165 × 30 mm, mid  
 green. Stems 1.15 m, pale green, with c.6 fls.  
 (Originally submitted for registration with the spelling  
 'Semprevanti' and registered under that epithet (see *ILR  
 Eleventh Supplement*. In 1992 Dutch PBR (LEL 809)  
 were granted under epithet 'Sempre Avanti', so this  
 spelling must be accepted (ICNCP, 2004: Art. 24.4).)

**'Semprevante' VII(a-b/b)**

Error for 'Sempre Avanti'.

**'Senator' I(a/-)**

Parentage: 'Golden Coroner' × mixed pollen of  
 'Connecticut King' & Sundrop Group  
 R: Bischoff Tulleken Lelies B.V. (1977), G: Bischoff  
 Tulleken Lelies B.V. (1980), N: Bischoff Tulleken Lelies  
 B.V. (1984), I: Bischoff Tulleken Lelies B.V. (1986),  
 REG: Bischoff Tulleken Lelies B.V. (1986)  
 Inside vivid yellow (14A); outside yellow with paler  
 midribs; some tiny red spots in centre of fl.; nectaries  
 light brown; pollen light brown. Fls 150 mm wide; tepals  
 70 × 25 mm. Lvs scattered, 150 × 15 mm. Stems 1.5 m,  
 pale green, with c.7 fls. June.

**‘Senator Sid’ I(a/-)**

Parentage: (‘Red Torch’ × *L.* × *scottiae* ‘Rose Cup’) × ‘Redland’

R: A. Scharf (pre 1982), N: A. Scharf

Fls red. Stems 1.2 m.

**‘Seneca’ I(c/-)**

Parentage: *lanceifolium* (triploid) × *leichtlinii* var. *maximowiczii*

R: G.L. Slate (c. 1942), N: G.L. Slate

Fls orange-red. Buds woolly. Stems 1.5 m, woolly, with up to 25 fls. July to Aug.

(Published in *Sandyloam Cat.*, 1942.)

**‘Senegalo’ VII(a/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside pale yellow-green (155A), midveins brilliant yellow (10A); outside pale yellow-green (155A), midribs pale yellow (8D); spots vivid yellow (9A); papillae present; nectaries strong yellow-green (145A) edged with brilliant yellow (10A); pollen strong reddish orange (169A); stigma light yellow-green (145D) with small strong purplish pink (68B) streaks. Fls 295 mm wide; tepals 140 × 70 mm, margins slightly ruffled, tips recurved. Lvs 225 × 55 mm. Stems 1.3 m, light green, with c.9 fls.

**‘Senhora Alice’ I(a/-)**

Parentage: (‘Hawaiian Punch’ × Oregon Bulb Farms seedling OC-38) × (Hallmark Group × ‘Connecticut King’)

R: J. Wadepammer (1978), G: J. Wadepammer (1980), N: J. Wadepammer (1992), I: Borbeleta Gardens (1983), REG: J. Wadepammer (1993)

Inside vivid reddish orange (33A) over yellow, tepal-tips and throat red; outside tan-red; spots absent; nectaries yellow; pollen brown. Tepals 90 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 20 mm, dark green. Stems 1.3 m, dark green, with 12-15 fls. Midseason.

Syn.: ‘Miss Alice’.

(First introduced in 1983 as ‘Miss Alice’ - this epithet was published in *Borbeleta Gardens Cat.*, 1983.)

**‘Senko’ I(a/b)**

See *L.* × *maculatum* ‘Senko’.

**‘Sensation’ I(a/-)**

Parentage: *L.* × *hollandicum* × *L.* × *maculatum*

Fls vivid orange-red.

(Published in *JRHS* 26: 366 (1901/02).)

**‘Sentiment’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (1983), G: J. Vasarietis (1986), N: J. Vasarietis (1990), I: J. Vasarietis (1990), REG: J. Vasarietis (1992)

Fls moderate pink (49B) throughout; spots black, on half of each tepal; nectaries rosy white; pollen brown.

Fls 140 mm wide; tepals 80 × 34 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 15 mm, dark green. Stems 1.05 m, green, with c.11 fls. Early July.

**‘Sentinel Group IX(-/a)**

See *leucanthum* var. *centifolium* Sentinel Group.

**‘Seoul’ I(a/-)**

Parentage unknown

R: Peacock B.V., G: Peacock B.V., N: Peacock B.V.

(1988), I: Peacock B.V., REG: Peacock B.V. (1990)

Inside yellowish white (155D); outside yellowish white (155D), midribs dark pink (182D); spots few, small, dark red (187B) at base of each tepal; pollen strong orange (24A). Fls 150 mm wide; tepals 75 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 15 mm, mid green. Stems 0.85 m, green, with c.7 fls. May (under glass).

**‘Sequoia’ VII(b/b-c)**

Parentage unknown

R: H.J. Strahm (pre 1983)

Fls crimson-red, tepals with a narrow white margin; spots profuse, smaller towards tepal-margins. Fls 250 mm wide; tepal-margins ruffled, tips recurved. Stems 1-1.2 m. Aug. (Published in Strahm’s sales list, 1983.)

**‘Seraph’ I(b/-)**

Parentage unknown

R: R.A. Prochaska (c. 1978), G: R.A. Prochaska (1980),

N: Hartle-Gilman Gardens & R. Prochaska (1996), I: Hartle-Gilman Gardens (1996), REG: Hartle-Gilman Gardens (1997)

Inside light yellowish pink (36A), tepal-tips light yellowish pink (36C), throat vivid orange-yellow (23A); outside pinkish brown, midribs green; spots few, almost black, raised, small, on basal two-fifths of each tepal; nectaries strong yellowish pink (37B) with a greenish tinge; pollen rusty orange. Fls 143 mm wide; tepals 76 × 38 mm, margins slightly ruffled, tips somewhat recurved. Lvs scattered, 108 × 15mm, moderate olive-green (137A). Stems 1.13 m, fairly dark, with 12-14 fls in a well-spaced inf.

(Originally named ‘Exotica’ by Prochaska (although this epithet may never have been published). It appeared in *Hartle-Gilman Gardens Cat.*, 1994 as seedling RP6000.)

**‘Serdts’ I(b/-)**

Unaccepted spelling of ‘Sirds’.

**‘Serena’ VII(-/l)**

Parentage: unnamed seedling × ‘Montana’

R: Lybelmex Hillegom B.V. (1984), G: Lybelmex

Hillegom B.V. (1988), N: Lybelmex Hillegom B.V.

(1992), I: Lybelmex Hillegom B.V. (1992), REG:

Lybelmex Hillegom B.V. (1993)

Inside yellowish white (155D), midveins yellowish white (155D) at base, shading to brilliant/light greenish yellow (6C/D) at top; outside yellowish white (155D), midribs yellowish white (155D) at base, shading to brilliant/light greenish yellow (6C/D) at top, tinged with strong

purplish red (59D) along each midrib and tipped strong yellow-green (143A); spots yellowish white (155D) and pale yellow-green (4D); nectaries moderate purple (79D); pollen strong orange (169C). Fls 220 mm wide; tepals 100 × 55 mm, slightly recurved. Lvs scattered, 160 × 35 mm, mid green. Stems 0.55 m, pale green, with darker markings and c.4 fls.

**‘Serenade’ I(b/-)**

Parentage: selection from Mid-century Group  
S: J. de Graaff (pre 1949), N: J. de Graaff  
Fls orange, spotted deep purple. Stems 0.6-1 m. July.  
(Published in *Oregon Bulb Farms Cat.*, 1949.)

**‘Serena Green’ VI(-/c)**

Parentage: (‘Good Hope’ × ‘Bright Star’) × *L. × kewense*  
‘White Henryi’

R: V.E. Bowen (1978), G: V.E. Bowen (1981), N: V.E. Bowen (1997), REG: V.E. Bowen (1997)  
Inside pale yellow-green (155A), throat brilliant greenish yellow (6C); outside pale yellow-green (155A), midribs green, outer tepals green from base to half way up; spots absent; nectaries green; pollen dark brown. Fls 160 mm wide; tepals 115 × 20-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 1.5 m, dark green with brown flecks, and with 12-15 fls. Mid to late July.

**‘Serenity’ I(b/-)**

Parentage: ‘Hawaiian Punch’ × ‘Sunrise’  
R: J. Wadkamper (1976), N: J. Wadkamper (1978), I: J. Wadkamper (c. 1979), REG: J. Wadkamper (1978)  
Inside white, throat slightly yellow; outside white and tan; spots on a third of each tepal; nectaries greenish white; pollen red. Stems 0.6 m.  
(There are two cvs with this epithet: Wadkamper’s was registered before the ICRA found the name *auratum* ‘Serenity’ in the literature. Although *auratum* ‘Serenity’ is earlier it probably no longer exists, and the registered ‘Serenity’ of Wadkamper has been selected by the ICRA as accepted (ICNCP, 2004: Art. 26.3). Published in *Lilies and other Liliaceae*, 1978/9: 113.)

**‘Serenity’ IX(b/c)**

See *auratum* ‘Serenity’.

**‘Sergeant Kelly’ I(a/-)**

Parentage: ‘Pirate’ × unnamed seedling  
R: H.E. Hoepner (1976), G: H.E. Hoepner (1979), N: H.E. Hoepner (1983), I: H.E. Hoepner (1985), REG: H.E. Hoepner (1985)  
Fls vivid red.

**‘Sergeant Pepper’ I(a/-)**

Parentage: ‘Sterling Star’ × (‘Sunrise’ × ‘Juliana’)  
R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc. (1984)  
Inside creamy white, fading to pure white; outside suffused with green; spots lavender, many, small; nectaries

green; pollen brown. Fls 140-160 mm wide; tepals 60 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 70-80 × 10 mm, pale green. Stems 1.2 m, mottled with purple, and with 10-25 fls. Mid June.  
(Published in *Oregon Bulb Farms Retail Cat.*, 1985.)

**‘Serrada’ VIII(a-b/b)**

Parentage: seedling BG 95-53 × seedling G 90-05  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside vivid yellow (14A), throat strong yellow-green (143A); outside vivid yellow (14A), midribs of inner tepals vivid yellow (9A), midribs of outer tepals brilliant yellow-green (150B); spots and papillae absent; nectaries brilliant greenish yellow (1B); pollen moderate reddish brown (166B); stigma brilliant greenish yellow (6A). Fls 185 mm wide; tepals 120 × 55 mm, margins smooth, tips recurved. Lvs scattered, 200 × 30 mm. Stems 1 m, green with darker markings, and with 4-7 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Servino’ VII(-/b)**

Parentage: seedling OR 848 × seedling OR 843  
R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside vivid reddish orange (42A), each tepal with a vivid yellow (13A) flare edged with brilliant orange-yellow (21B); outside strong red (53B); pollen vivid orange-yellow/strong orange (23A/24A). Fls 175 mm wide; tepals 80 × 37 mm, margins smooth, tips not recurved. Lvs scattered, 135 × 10 mm, mid green. Stems 1.3 m, with dark markings. May.

**‘Sesta’ VI(-/-)**

Parentage unknown  
R: S.A. Eicher-Lorka  
Fls cream with orange throat; pollen, style and stigma brown. Fls 100-120 mm wide, fragrant. Stems 0.8-1 m. Aug.  
(Published in M.V. Baranova, *Lilii*, 358 (1990).)

**‘Sestriere’ VII(a/b)**

Parentage unknown  
R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)  
Inside yellowish white (155D), each midvein with a light yellow (12C) stripe, throat yellowish white (155D); outside yellowish white (155D), some outer tepals with midribs vivid purplish red (57D) shading into light yellow-green (154D) and strong yellow-green (144B) at top; spots light yellow (12C); papillae present; nectaries strong yellow-green (144B); pollen dark reddish orange (172A); stigma greenish white (192D). Fls 260 mm wide, slightly scented; tepals 155 × 55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 220 × 50 mm. Stems 1.3 m, green, the lowest 30 cm dark, with c.4 fls.

**‘Sestroretskaia’ I(b/-)**

Parentage: selection from Sestroretskaia Group  
 S: I.L. Zalivski (1939), N: I.L. Zalivski  
 Fls pinkish yellow; spots brown; pollen brownish; stigma violet. Fls 120 mm wide, faintly scented. Lvs 70-80 × 15 mm, margins downy. Stems 1.3 m. July.  
 (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cultivar Group. Published in M.V. Baranova, *Lilii*, 330 (1990). Included in *ILR Second Supplement* as ‘Sestroretskaja’, which is an unaccepted spelling.)

**Sestroretskaia Group I(-/-)**

Parentage: *dauricum* × *davidii* var. *willmottiae*  
 R: I.L. Zalivski, N: I.L. Zalivski  
 (Published in *LYB* 33: 74 (1970) as Sestroretskaya  
 Hybrids, which is an unaccepted spelling.)

**‘Sestroretskaja’ I(b/-)**

Unaccepted spelling of ‘Sestroretskaia’.

**Sestroretskaya Group I(-/-)**

Unaccepted spelling of Sestroretskaia Group.

**‘Set Point’ VII(b/b)**

Parentage: (‘Primavera’ (Div. VII) × ‘Joy’) × (‘Dame Blanche’ × unnamed seedling)  
 R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997), REG: Bischoff Tulleken Lelies B.V. (1997)  
 Inside yellowish white (155D), tepals narrowly edged moderate purplish red (64A), the edging wider towards the tip, midveins brilliant yellow-green (150C); outside yellowish white (155D), tepals edged moderate purplish red (64A), tipped strong yellow-green (143B), midribs light/strong yellow-green (15D/145A); spots few, pale yellow (8D), in the throat; papillae yellowish white (155D) in the throat; nectaries strong yellow-green (144B); pollen strong orange (169C); stigma light brownish grey (201B). Fls 220 mm wide; tepals 120 × 35-45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 180 × 35 mm, mid green. Stems 1.05 m, green with dark markings where the leaves are attached to the stem, and with 4-6 fls. July.

**‘Seventeen Hundred and Seventy-six’ I(a/-)**

Syn. of ‘Firecracker’.

**‘Severka’ VI(b-c/d)**

Parentage: (‘Cayuga’ × ‘Bright Star’) × ((*henryi* × ‘Gold Eagle’) × ((Palmer’s selection no 582812 × ‘Gold Eagle’) × ‘Mimosa Star’))  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2001), REG: B. Mičulka (2001)  
 Inside creamy white, tepal-tips white, tepal-centres and throat yellow; outside with yellow showing through, base green, midribs yellow; scanty cinnamon ‘dust’ on a quarter of each tepal; nectaries green; pollen brown; stigma green. Fls 120 mm wide; tepals 100 × 42 mm, margins slightly wavy, tips strongly recurved; pedicels 110

mm long, brown. Lvs scattered, 140 × 22 mm, dull dark green. Stems 1.2 m, stiff, strongly speckled with brown. Mid July.

**‘Severnaia Palmira’ VI(-/a)**

Parentage: (*sargentiae* × *henryi*) × *regale*  
 R: I.L. Zalivski (1952), N: I.L. Zalivski  
 Inside pinkish white, throat yellow; outside greenish lilac; pollen deep yellow; stigma brown. Fls 160 mm wide, strongly scented. Stems 1.2-1.7 m, with bulbils. July to Aug.  
 Syn.: ‘North Palmira’.  
 (Published in *LYB* 33: 74 (1970) as ‘Severnaya Palmira’ which is an unaccepted spelling.)

**‘Severnaya Palmira’ VI(-/-)**

Unaccepted spelling of ‘Severnaia Palmira’.

**‘Sevilla’ I(a-b/b)**

Parentage unknown  
 R: Gebr. Mak B.V. (pre 1988), N: Gebr. Mak B.V. (2002), REG: Gebr. Mak B.V. (2002)  
 Inside light orange-yellow (22C), midveins flushed with strong orange-yellow (22A), throat orange; outside orange with paler midribs; spots and papillae absent; pollen orange-brown; stigma orange. Tepal-margins ruffled, tips recurved. Stems light green with some darker marking at the base. Very early to early.

**‘Sfinks’ Div. ?**

Given as a parent of ‘Small Red Hat’. No further details.

**‘Shaftesbury Hybrid’ II(-/-)**

See *L. × dalhansonii* ‘Shaftesbury Hybrid’.

**‘Shah’ IX(b/c)**

See *auratum* ‘Shah’.

**‘Shaka’ I(a/-)**

Parentage: selection from *L. × hollandicum* hybrids  
 R: Hadeco (Pty) Ltd (1970), N: Hadeco (Pty) Ltd (1975), I: Hadeco (Pty) Ltd (1978), REG: Hadeco (Pty) Ltd (1983)  
 Inside vivid red (45A), throat vivid red (44A); outside vivid red (45C); spots deep purple, small, from the tip down three-quarters of each tepal; nectaries vivid yellowish orange (30C); pollen vivid red (44A). Fls 110 mm wide; tepals 65 × 35 mm, margins smooth, slightly recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 0.8-0.9 m, mid green, with 7-9 fls. Spring.

**Shakespeare Group I(c/-)**

Parentage unknown  
 R: G.W. Darby (c. 1965), N: G.W. Darby  
 Fls of four distinct colours: pale yellow (11D), vivid yellow (12A), vivid reddish orange (34A) and strong red (51A); minutely spotted purple-brown. Stems 0.8 m.

**‘Shalimar’ I(b/-)**

Parentage: ‘Schellenbaum’ × ‘Tetra Mountaineer’  
 R: V. Strasser (1975), G: V. Strasser (1976), N: V. Strasser

(1978), I: V. Strasser (1980), REG: V. Strasser (1986)  
Fls vivid red (44A) throughout. Tepals not reflexed. Lvs scattered, mid green. Stems 0.7 m, almost black, with c.10 fls. July. Tetraploid.  
Syn.: 'Schellmount Number 1'.

**'Shalimar Gold' VI(b/b)**

See note under Shalimar Gold Group.

**Shalimar Gold Group VI(b/b)**

Parentage: Topaz Temple Group × 'Madame Edouard Debras'

R: J.M. Shaver (pre 1973), N: J.M. Shaver, I: J.M. Shaver (1973), REG: J.M. Shaver (1984)

Inside golden and sulphur-yellow; outside yellow; spots absent; nectaries purple or mahogany-black. Fls with spicy scent; tepal-margins smooth. Lvs scattered. Stems 1.3-2 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 47 (1978) as a clone and listed as such in *ILR* (1982). However, it was registered as a Group.)

**'Shalunia' I(c/-)**

Parentage: Fiesta Group × *cernuum*

R: B.P. Guzhdavin (1984), N: B.P. Guzhdavin

Fls pink with numerous violet spots. Stems up to 1.7 m. July.

**'Shanghai' VII(a-b/b)**

Parentage: 'Pompei' × 'Pisaro'

R: Sande B.V. (1990), G: Sande B.V. (1993), N: Sande B.V. (1997), I: Sande B.V. (2000), REG: Sande B.V. (2001)

Inside strong purplish red (64B) on a yellowish white (155B) ground, midveins light greenish yellow (8B) at base, and surrounded by a yellowish white (155B) rim; outside strong purplish red (64B) on a yellowish white (155B) ground; spots brilliant yellow (7A) on basal part of tepals; papillae brilliant yellow (7A) and yellowish white (155B), in the throat; nectaries strong yellow-green (143B); pollen moderate reddish orange/strong brown (171A/172A); stigma moderate purplish red (70A). Fls 240 mm wide; tepals 120 × 45-70 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 170 × 45 mm. Stems 1 m, green, with 4-6 fls.

**'Shangri-la' V(b/a)**

See *longiflorum* 'Shangri-la'.

**Shantung Group II(-/d)**

See *L. × dalhansonii* Shantung Group.

**'Sharon Lee' VII(b/b)**

See *L. × parkmanii* 'Sharon Lee'.

**'Sharp' I(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Sande B.V. (1987), G: Sande B.V. (1990), N: Sande B.V. (1994), I: Sande B.V. (1995), REG: Sande B.V. (1996)

Inside vivid yellowish pink (30C); outside strong orange

(30D); spots absent; papillae present; nectaries orange; pollen reddish brown; stigma purple. Tepal-margins slightly ruffled, tips recurved. Lvs scattered, green. Stems 1.2-1.35 m, green with darker markings, and with 6-10 fls (from 15-16 cm bulbs).

**'Shasta' VI(-/a)**

Parentage: *sulphureum* × 'T.A. Havemeyer'

R: S.L. Emsweller, N: S.L. Emsweller

Fls creamy yellow.

(Published in *USDA Notice of Release and Introduction*, 1953.)

***shastense* (Eastwood) Beane IX(c/d)**

Syn. of *pardalinum* subsp. *shastense*.

**subsp. *shastense* IX(c/d)**

See *pardalinum* subsp. *shastense*.

**'Sheba' VI(b/b)**

See *L. × parkmanii* 'Sheba'.

**'Shedd Variety' I(a/b)**

See *L. × maculatum* 'Shedd Variety'.

**'Sheer Bliss' I(b/c-d)**

Parentage unknown

R: Columbia-Platte Lilies, N: Columbia-Platte Lilies, I: Columbia-Platte Lilies (1996), REG: ICRA (1998)

Inside intense rose-pink; spots darker, small, sparse, on basal half of each tepal. Tepal-margins smooth, tips recurved. Stems 1 m. June.

(Published in *The Lily Garden Cat.*, 1996/97: 2, with colour illustration.)

**SHEILA VII(a/b-c)**

Trade designation of 'Zantrishi'.

**'Sheila's Choice' I(a/b)**

Parentage: 'Matterhorn' × 'Unique'

R: M.D. Holloway (1993), G: M.D. Holloway (1995), N: M.D. Holloway (1995), I: M.D. Holloway (1996), REG: M.D. Holloway (1996)

Inside and outside white, midribs pink and brown; spots black, very few, above the throat; nectaries soft pink; pollen very dark chocolate-brown. Fls 150 mm wide; tepals 74 × 36 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 15 mm, dark green. Stems 0.75 m, very dark brown, with c.9 fls; buds conspicuous, pink and white. Late June to mid July.

**'Shelan' I(b/-)**

Parentage: (*lancifolium* × unknown) × 'Embarrassment'

R: J.C. Ericksen (c. 1975), N: J.C. Ericksen

Fls candy-pink with a few, darker spots. Stems up to 1.2 m, with bulbils.

(Published in *Lilies and other Liliaceae*, 1975: 96.)

**Shelburne Group VI(-/a)**

See *L. × imperiale* Shelburne Group

**'Shelley Hall' VI(-/a-b)**

Parentage: yellow-flowered trumpet seedling × dwarf seedling with orange throat  
 R: D.F. McPherson (1971), G: D.F. McPherson (1973), N: D.F. McPherson, I: D.F. McPherson (1978), REG: D.F. McPherson (1978)  
 Inside white, throat brilliant orange-yellow (23B); outside white and bronze. Fls 80 mm long, 110 mm wide.  
 (Published in *Lilies and other Liliaceae*, 1978/9: 113.)

**'Shellman' Div. ?**

Given as a parent of Champlain Group. No further details. Perhaps an error for *L. × imperiale* Shellman Group.

**Shellman Group VI(-/a)**

See *L. × imperiale* Shellman Group.

**Shellrose Group VI(-/a)**

Parentage: 'Pride of Charlotte' × *leucanthum* var. *centifolium*  
 R: J.M. Shaver (pre 1956), N: J.M. Shaver  
 Inside shell-pink to rose-pink; outside rose-pink or purple; pollen yellow. Stems 1.5 m.  
 (Published in *Kline Cat.*, 1956.)

**'Shenandoah' VI(-/a)**

Parentage: selection from Aurelian Group  
 S: C. Yerex (c. 1953), N: C. Yerex  
 Inside apricot; outside ivory. Stems 1.5-1.9 m. July.  
 (Published in *LYB* 21: 47 (1958).)

**'Sheri Katherine' I(a/-)**

Parentage: 'Eleonore Edna' × 'Connecticut Dream'  
 R: F. Fellner, N: F. Fellner, I: Riverside Gardens (1986), REG: ICRA (1993)  
 Fls copper tone; spotted. Stems 0.8-1 m, with 8-10 fls. Midseason.

***sherriffiae* Stearn IX(c/a)**

Inside chequered deep yellow and green towards tepal-tips; outside deep brown-purple; nectaries with warty margins; pollen yellow. Tepals 14-20 mm broad, tips not or scarcely recurved. Lvs scattered, 30-130 × 3-9 mm. Stems 0.3-0.9 m, green flushed with purple, usually with solitary fls. Bhutan, Nepal.

**'Shikayama' VIII(-/-)**

Parentage: (*speciosum* var. *rubrum* × (*auratum* × *speciosum*)) × *henryi*  
 R: H. Myodo (c. 1964), N: H. Myodo  
 Fls purplish red.  
 (An Oriental (OT) lily. Previously classified in Div. VII.)

**'Shila' I(c/d)**

Parentage unknown  
 R: N. Martschinke (pre 1985), N: N. Martschinke, REG: N. Martschinke (1988)  
 Fls ivory to pastel brownish, with small spots in centre; pollen red. Fls 70 mm wide. Stems 1 m. Mid July.  
 (Published in German Lily Group sales list, 1985.)

**'Shiloah' VI(-/c)**

Parentage: 'Madame Edouard Debras' × seedling 50-8  
 R: C. Yerex (c. 1956), N: C. Yerex  
 Fls vivid yellow (17C) in centre, blending to light yellow (12C) at tepal-tips. Tepals broad, papillate at centre, with recurved tips. Stems 1.5 m. July.

**'Shimara' I(b/-)**

Parentage: complex parentage from bowl-shaped Preston Group  
 R: J.C. Ericksen (c. 1964), N: J.C. Ericksen  
 Fls shining, dark old gold, with darker throat and inner ray. Tepal-margins ruffled, tips slightly reflexed. Lvs very dark green, closely packed. Stems up to 1.5 m.  
 (Published in *ILR* (1969).)

**'Shining Star' I(a/-)**

Parentage: 'Phyllis Cox' × unknown  
 R: E. Robinson, N: E. Robinson (1956)  
 Fls glossy orange, moderately spotted. Tepals pointed. Stems 0.6-1 m. Mid July.  
 (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)

**'Shin-judai' I(a/b)**

See *L. × maculatum* 'Shin-judai'.

**'Shinkanoko' VII(-/-)**

See *L. × parkmanii* 'Shinkanoko'.

**'Shinsetu Select' V(-/a)**

Parentage: selection from Formolongi Group  
 S: Miyoshi & Co. Ltd (pre 1989), N: Miyoshi & Co. Ltd  
 (Published in *Miyoshi & Co. Cat.* no. 87: 62 (1989).)

**'Shinshu-kisukashi' I(a/b)**

See *L. × maculatum* 'Shinshu-kisukashi'.

**'Shiraz' I(a/b)**

Parentage unknown  
 R: Sande B.V. (1985), G: Sande B.V. (1987), N: Sande B.V. (1991), I: Sande B.V. (1991), REG: Sande B.V. (1993)  
 Inside deep to strong purplish pink (55A/B) ageing to strong purplish pink (62A); outside strong purplish pink (55B) on inner tepals; spots few or very few; nectaries green; pollen orange-yellow. Fls 190 mm wide; tepals 100 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 18 mm, dark green. Stems 1.1 m, dark, with c.7 fls.

**'Shirley' I(a/-)**

Parentage: 'Nepal' × unknown  
 R: Gebr. Mak B.V. (1984), G: Gebr. Mak B.V. (1986), N: Gebr. Mak B.V. (1989), I: Gebr. Mak B.V. (1989), REG: Gebr. Mak B.V. (1989)  
 Inside light greenish yellow (6D), the basal half of each tepal with a small, moderate red (180C) flame and a dark red edge; outside pale yellow-green (4D), each tepal with brilliant to light greenish yellow (6C/D) margins, and flushed with moderate red (182A) in centre; spots dark

red (187A) in the throat; pollen moderate orange (167A). Fls 165 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 16 mm, mid green. Stems 1.5 m, green with darker markings, and with c.15 fls. May.

**'Shirley Marie' I(a-b/b)**

Parentage: 'Connecticut Dream' × 'Connecticut King'  
R: F. Fellner (1977), G: F. Fellner (1980), N: F. Fellner (1993), I: Riverside Gardens (1993/94), REG: F. Fellner (1993)

Fls pale yellow; spots absent, but with an orange 'Connecticut King'-like blush in the throat; pollen brown. Fls 130 mm wide; tepals 75 × 35 mm. Lvs scattered, 150 × 12 mm. Stems 0.7-1 m, light green, with 15-18 fls. Late July.

(An earlier lily registered under this epithet deteriorated rapidly and was never distributed. All stocks of this cv. were destroyed by both the raiser and the introducer and no plants were released; its registration (in *ILR Fifth Supplement*) was subsequently cancelled.)

**'Shirley Variety' IX(b/c)**

See *auratum* var. *platyphyllum* 'Shirley Variety'.

**'Shocking' VIII(a-b/b)**

Parentage unknown

REG: World Breeding B.V. (2003)

Inside light greenish yellow (4B/4C), midveins strong red (46A); outside light greenish yellow/pale yellow-green (4C/4D); spots red; papillae present; nectaries yellow-green; pollen dark red-brown; stigma purple with green star. Fls 210 mm wide, slightly fragrant; tepal-margins slightly ruffled, tips recurved. Stems 1.3 m, with c.7 fls. Late to very late.

(An Orienpet (OT) lily.)

**'Shocking Pink' I(a/-)**

Parentage: unnamed seedling × 'Make Up' (of Lybelmex)

R: Lybelmex Hillegom B.V. (1985), G: Lybelmex Hillegom B.V. (1987), N: Lybelmex Hillegom B.V. (1991), I: Lybelmex Hillegom B.V. (1991), REG: Lybelmex Hillegom B.V. (1997)

Inside deep pink (48B), tepal-edges and tips a little darker, midveins light orange (29B) at base; outside deep pink (48B); spots and papillae present; nectaries purple; pollen orange; stigma purple. Fls 200 mm wide; tepals 100 × 35 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 170 × 18 mm, mid green. Stems 1.1 m, green with dark streaks and spots, and with 1-15 fls (from 16/18 cm bulbs). June.

**'Shogun' VII(-/d)**

Parentage unknown

R: Sakata Co. (pre 1983), REG: Van Til-Hartman B.V. (2002)

Inside strong purplish red (60C/D), each tepal with deep red (60A) along midveins and yellowish white (155D) along margins and at tip, throat yellowish white (155D) with red-purple markings; outside moderate purplish red (186B), tepal-margins and tips yellowish white (155D),

outer tepals with some moderate purplish red (59C); spots and papillae present; pollen orange; stigma purple. Tepal-margins ruffled, tips recurved. Stems light green with darker markings, and a greyish waxy layer at the base as well as at the nodes.

**'Shooting Star' (de Graaff) IX(b-c/d)**

See *speciosum* 'Shooting Star' (de Graaff).

**'Shooting Star' (Schouten) Div. ?**

Parentage unknown

R: Schouten B.V. (pre 1978), N: Schouten B.V., REG: Schouten B.V. (1978)

Fls strong purplish pink (63C), veined with strong red (51A), each tepal with a small, whitish ray, strong yellow-green (145A) at base; spots currant-red.

(Published in *Lilies and other Liliaceae*, 1978/9: 113. Unfortunately, two cvs with the epithet 'Shooting Star' have been registered. Although one is a selection from *speciosum*, the use of the species name is not mandatory, so to distinguish them, the name of the raiser is appended to each and should be thus cited when the names are used - see ICNCP, 2004: Art. 27.5.)

**'Shoreline' VII(a/b)**

Parentage: ((*speciosum* × 'Star Gazer') × (*L. × parkmanii* Little Rascal Group × 'Star Gazer')) × yellow-/white-flowered seedling

R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside yellowish white (155D), midveins brilliant yellow/light greenish yellow (8A/B) shading into tepal, throat yellowish white (155D); outside yellowish white (155D), outer tepals edged pale yellow (8D) and with strong/light yellow-green (144C/D) midribs; spots brilliant yellow (7A) on three-quarters of each tepal; papillae present; nectaries strong yellow-green (144B); pollen strong reddish orange (169A); stigma dark red (187A). Fls 190 mm wide; tepals 110 × 40-60 mm, margins ruffled, tips recurved. Lvs scattered, 120 × 30 mm, mid green. Stems 0.8 m, green with darker markings, and with 4-7 fls. July.

**'Shoshah' Div. ?**

Parentage unknown

R: unknown

Fls white with a green throat; nectaries green; pollen yellow. Tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs 100 × 30 mm, mid green. Stems 1.6 m, with 8-12 fls. April to May (Israel).

**'Shovav' V(-/a)**

See *longiflorum* 'Shovav'.

**'Showbiz' VIII(a/b-c)**

Parentage: Asiatic seedling × (*longiflorum* × Asiatic seedling)

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies

B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1995)  
Inside strong purplish pink (63C), throat paler to cream, tinged with green and flushed with pale yellowish pink (27D); outside strong purplish pink (63C); spots in centre of fl.; nectaries green; pollen dark brown; stigma green. Fls 200 mm wide; tepals 100 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, green. Stems 0.9-1.2 m, green with darker markings, and with 5-9 fls (from 16 cm bulbs). Midseason to late.  
(A *longiflorum*/Asiatic (LA) hybrid. Misspelling: 'Show Bizz'.)

**'Show Bizz'** VIII(a/a-b)  
Misspelling of 'Showbiz'.

**'Showboat'** I(a/-)  
Parentage: 'Sunspot' × 'Byam's Ruby'  
I: Oregon Bulb Farms, Inc. (1975)  
Fls very deep plum-maroon, with white nectary-star. Lvs purplish. Stems 1-1.2 m. July.  
Syn.: 'Independence'.  
(Originally named 'Independence' and published as such in *Lilies and other Liliaceae*, 1975: 93. A USPP was granted under the epithet 'Showboat' in 1978 and this latter epithet must be accepted (ICNCP, 2004: Art. 24.4). Published in E. Fisher, *Named Lily Hybrids and their Origins*, 17 (1978) as 'Showboat'.)

**'Show Girl'** I(b/c)  
Parentage: 'Lyla McCann' × *L. × maculatum* 'Red Star'  
R: P.M. Byam (pre 1958), N: P.M. Byam  
Fls Mars orange, paler than moderate yellowish pink (31D), shaded pale yellow.  
(Published in *JRHS* 83: 67 (1958).)

**'Show Off'** I(b/b)  
Parentage: *bulbiferum* var. *croceum* × 'Connecticut Yankee'  
R: E. Hickling, N: E. Hickling (1980), I: Borbeleta Gardens (1983), REG: J. Wadkamper (1983)  
Fls brilliant orange, each tepal with yellow in basal third and small dark spots on yellow area; nectaries reddish.  
(Published in Borbeleta Gardens list, 1983.)

**'Showroom'** VIII(a-b/b)  
Parentage: seedling J 57 × seedling OR 87-20  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside deep/moderate purplish red (59B/C), paler at tepal-tips, throat deep/moderate purplish red (59B/C) on a paler ground with a little strong yellow-green (143C); outside deep/moderate purplish red (59B/C), paler towards base, outer tepals tipped strong yellow-green (144A); spots dark red (187A) on a third of each tepal; papillae few, in the throat; nectaries pale purplish pink (65D); pollen moderate orange (167A); stigma brilliant greenish yellow (3B). Fls 230 mm wide; tepals 125-130 × 45-60 mm, margins a little ruffled, tips slightly recurved.

Lvs scattered, 225 × 25 mm. Stems 1.3 m, green, with c.4-5 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Showtime'** I(b/-)  
Parentage: *L. × hollandicum* × (*pumilum* × *L. × hollandicum*)  
R: Columbia-Platte Lilies (1979), G: Columbia-Platte Lilies (1981), N: Columbia-Platte Lilies (1986), I: Columbia-Platte Lilies (1986), REG: Columbia-Platte Lilies (1988)  
Inside vivid to brilliant orange-yellow (21A/B), tepal-tips vivid orange (28A) except in hot weather, throat brilliant orange-yellow (21A/B); outside brilliant orange-yellow (21B); spots c.10, very small and inconspicuous at the base of each tepal; nectaries soft yellow-gold; pollen moderate orange (170B/C). Tepals 70-90 × 30 mm, margins very slightly ruffled in old fls, tips slightly recurved. Lvs scattered, 100-150 × 10-20 mm, glossy dark green. Stems 0.8-1.8 m, dark green, with 7-20 fls (including secondaries). Early to mid June.  
(Published in *Rex Bulb Farms Cat.*, 1986.)

**'Showwinner'** VII(a/b-c)  
Parentage: unnamed seedling × 'All Right'  
R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2001)  
Inside moderate purplish red (186B), tepal-edges dark/moderate purplish pink (186C/D), throat very pale purple (69D); outside moderate purplish pink (186D), midribs dark purplish pink (186C) changing to brilliant yellow-green (154B) towards top and tipped strong yellow-green (144A); spots absent; papillae very pale purple (69A); nectaries brilliant yellow-green (150A); pollen darker than moderate reddish orange (173B); stigma very pale green (189D) speckled with purple. Fls 260 mm wide; tepals 135-140 × 50-70 mm, margins slightly ruffled, tips recurved. Lvs scattered, 195 × 80 mm. Stems 0.4-0.45 m, light green, with c.10 fls. July.

**'Shrimp Cocktail'** VII(b-c/c)  
Parentage: 'Swan Lake' × Coralbee Group  
R: D.K. Kölli (1982), G: D.K. Kölli (1986), N: D.K. Kölli (1987), REG: D.K. Kölli (1994)  
Inside white, each tepal with a general suffusion of coral and with a deeper coral central ray (fl. ages to a light pink/coral suffusion and a bolder coral ray), margins and tips narrowly edged white, throat yellow-green to white to coral; outside white; spots dark pink, large, on two-thirds to three-quarters of each tepal; nectaries palest green blending out to yellow; pollen rust/dark red. Fls 215 mm wide; tepals 126 × 60 mm, outer tepals only with slightly ruffled margins, tips slightly recurved. Lvs scattered, up to 225 × 51 mm, mid green. Stems 1.5 m, pale green, with c.8 fls. Late July to mid Aug.

**'Shuho'** I(a/-)  
Parentage: 'Enchantment' × *L. × maculatum*

R: S. Fujishima (c. 1959), N: S. Fujishima  
Fls red.

### 'Shuksan' IV(c/d)

Parentage: selection from Bellingham Group

R: D. Griffiths (c. 1924), N: D. Griffiths

AM 1939, FCC 1952

Fls yellow-orange (HCC 19), tepal-tips flushed with red; spots deep crimson, small near tepal-base, bigger and paler towards tip; anthers purplish red; pollen orange-brown. Pedicels horizontal. Lvs mainly whorled, scattered towards base of stem, dull above, glossy beneath. Stems 1.2-1.9 m, pale green, with 12-18 fls. July.

(Named after a mountain 50 miles from Bellingham.

Published in *USDA Circular* no. 299: 11 (1933). The parents are thought to be *pardalinum* and *humboldtii* var. *ocellatum*.)

### 'Shyrin' I(c/-)

Parentage: 'Nutmegger' × 'Connecticut King'

R: V. Strasser (1973), G: V. Strasser (1975), N: V. Strasser (1980), I: V. Strasser (1984), REG: V. Strasser (1986)

Inside vivid orange-yellow (21A) to vivid yellow (12A), tepal-tips vivid yellow (12A), throat green; outside vivid yellow (12A) to red-brown; spots purple, on a third of each tepal; nectaries green; pollen orange. Fls 145 mm wide; tepals 80 × 22 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 1.4 m, brownish green, with c.37 fls and with bulbils. Buds and stems slightly hairy. Mid July to mid Aug.

### 'Siam' I(b/d)

Parentage: 'Spitfire' × 'Skyrocket'

R: R.C. Palmer (c. 1950), N: R.C. Palmer, I: B.L. Palmer (1952)

Fls vivid orange. Stems 1.2-1.6 m. July.

(Published in Exp. Farm Report, Summerland, BC, Canada, 1950.)

### 'Siberia' VII(a-b/b)

Parentage unknown

R: Mak-Leek Inc., REG: Siberia Oriëntal B.V. (2003)

Inside and outside yellowish white (155D); spots white or pale yellow; papillae absent; nectaries green changing to white; pollen light brown; stigma purple-red. Fls 220 mm wide; tepals 150 × 45-75 mm, margins ruffled, tips strongly recurved. Lvs 130-230 × 35-60 mm. Stems 1 m, with 3-10 fls. Midseason to late.

### 'Sibirischka' I(a/b)

Parentage unknown

R: M.F. Kireeva & N.V. Ivanova (1988)

Fls dark red, almost unspotted. Fls 120-130 mm wide; tepal-margins smooth to slightly wavy, tips recurved.

Stems 0.9-1.2 m, with 7-13 fls. July.

(Published in M.F. Kireeva, *Lilii*, 37 (2000).)

### 'Sibirischer Frühling' I(a/b)

Parentage: 'Johanna' × yellow-brown-flowered brushmarked seedling

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N:

G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Fls greenish white (155C) throughout, each tepal with a large vivid yellow (14B) blotch just below the centre; spots dark purple (79B), numerous, medium sized; pollen dark purple (79A). Fls 130 mm wide; tepals 60 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 45 × 11 mm, mid green. Stems 0.8 m, pale green, with c.14 fls. Early July.

### 'Sibirische Schlittenfahrt' I(a/b)

Parentage: 'Johanna' × mixed pollen of 'Vater Zille', 'Fanal' & 'Brushstroke'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N:

G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside pale yellow-green (155A), throat white suffused with light yellow-green (150D); outside pale yellow-green (155A); spots dark red (59A), numerous, medium sized, mostly elongated, and also brushmark lines, on basal half of each tepal; nectaries yellowish white (155D), greenish yellow towards top and running out into the brushmark lines; filaments light yellow-green (154D); pollen moderate red (179A); style dark yellowish green (139A); stigma strong greenish yellow (153C). Fls 125 mm wide; tepals 73 × 31 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 12 mm. Stems 1.2 m, dark green, with 7-10 fls. Early July.

(Nomenclatural standard: colour print provided by registrant (WSY 0028886).)

### 'Sibylla Augusta' VII(b/b-c)

Parentage: red-flowered Oriental hybrid × *auratum*

R: H. Müller (1979), G: H. Müller (1983), N: H. Müller (1988), I: H. Müller (1988), REG: H. Müller (1988)

Inside greenish white (155C), each tepal with a prominent, fairly sharply demarcated ray (12 mm wide), strong red (46A) in apical part, becoming light yellow (15D) towards base, throat moderate olive-green (146A); outside pale to light yellow (11D/B) to greenish white (155C); spots dark red (59A) on basal half to two thirds of each tepal (coloured bands almost devoid of spots); nectaries moderate olive-green (146A); pollen strong orange (169B). Tepals 135 × 55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 240-250 × 36-43 mm, mid green. Stems 1.6-1.8 m, moderate yellow-green (139C), with 6-21 fls. Late July to late Aug.

(Published in *Mein Schöner Garten*, August 1988.)

### 'Sicilia' I(a/b)

Parentage: seedling G 87-21 × seedling G 91-14

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside brilliant greenish yellow (4A), light greenish yellow (4B) towards tepal-tips, midveins of outer tepals suffused with green, throat light greenish yellow (4C); outside light greenish yellow (4B), midribs green; spots and papillae absent; nectaries greenish white (155C), hairy; pollen greyish brown/moderate reddish brown (166A/B);

stigma dark purple (79A). Fls 170 mm wide; tepals 100-105 × 40-45 mm, margins smooth, tips recurved. Lvs scattered, 200 × 30 mm. Stems 1.4 m, light green, with c.7 fls.

### 'Sidney' I(a/c)

Syn. of 'Sydney'.

### 'Sidorno' VIII(a/b)

Parentage: seedling BG 95-61 × seedling AG 96-15  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals light greenish yellow (3D), margins and above throat brilliant greenish yellow (3A), outer tepals more brilliant greenish yellow (3A), throat pale greenish yellow (1D); outside light greenish yellow (4C), tepal-margins brilliant greenish yellow (5B); spots absent; papillae brilliant greenish yellow (3A); nectaries strong yellow-green (143B); pollen dark greyish reddish brown (200A); stigma deep reddish purple (77A).

Buds hairy. Fls 155 mm wide; tepals 112 × 46-64 mm, margins smooth; tips recurved; pedicels hairy at base. Lvs scattered, 145 × 17 mm. Stems 0.95-1.3 m, brownish red with green, with c.6 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

### 'Sienna Star' I(a/b)

Parentage: 'Gran Paradiso' × 'Tetra Connecticut King'

R: Cebeco Lilies, Inc., N: Cebeco Lilies, Inc., REG: ICRA (1998)

Inside melon-coloured. Tepals slightly recurved. Stems 1 m. Midseason. Tetraploid.

(Published in *The Lily Nook Cat.*, 1995: 15.)

### 'Sierra' I(a/-)

Parentage: seedling G 203 × seedling G 1

G: Vletter & Den Haan (1985), N: Vletter & Den Haan, I: Vletter & Den Haan

Inside brilliant greenish yellow (6A), shading to brilliant greenish yellow (6B) at tepal-tips; outside brilliant greenish yellow (6C), midribs of outer tepals strong yellow-green (144B/C); spots dark red (187A) on a quarter of each tepal; pollen moderate orange (167A); stigma dark red (187C). Fls 170 mm wide; tepals 95 × 47 mm. Lvs scattered, 102 × 18 mm, dark green. Stems 0.74 m, mid green with darker markings, and with c.8 fls.

Trade designation: OSCAR.

(This lily was granted Dutch PBR (LEL 662) in 1991 and is therefore included here as part of the Checklist; it duplicates a name already used for another lily (ICNCP, 2004: Art. 27.1) and thus cannot be accepted for registration.)

### Sierra Group I(a-b/b-c)

Parentage: selections from Hollywood Group

S: J. de Graaff (c. 1952), N: J. de Graaff

Fls light orange-yellow to deepest maroon. Stems 1.2-1.8 m.

(Published in *Oregon Bulb Farms Cat.*, 1952.)

### 'Sierra Leone' VII(-/b)

Parentage: derived from four seedlings (84 × ML-3) × (88 × ML 344-12)

R: Mak-Leek Inc. (1991), G: Mak-Leek Inc. (1993), N: Mak-Leek Inc. (1997), I: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside strong purplish red to moderate purplish pink (64C/65A) with a thin, strong reddish orange (31B) ray starting from the soft greenish white nectaries; outside close to vivid purplish red (66A), softer at tepal-edges; spots close to vivid reddish purple (74B); pollen greyed orange. Fls 150-180 mm wide; tepals 85 × 45 mm, tips slightly recurved. Lvs scattered, 120 × 47 mm, mid green. Stems 0.6-1 m, green with darker markings, and with 7-12 fls held close to the stem. Late July.

### 'Sierra Nevada' VII(-/c)

Parentage: (rose-pink-flowered seedling × 'Star Gazer') × ('Star Gazer' × *L. × parkmanii* 'Allegra')

R: Lybelmex Hillegom B.V. (1985), G: Lybelmex Hillegom B.V. (1988), N: Coöp Leliekwekersvereniging "New Dimension", I: Coöp Leliekwekersvereniging "New Dimension" (1992), REG: Coöp Leliekwekersvereniging "New Dimension" (1994)

Inside yellowish white (155B), midveins brilliant yellow (10A) at the base, fading towards top; outside yellowish white (155B), pale yellow-green (155A) along midribs on basal part of tepal, slightly suffused with strong yellow-green (145A) at base, the midvein itself pale yellow-green (155A) tinged with light greenish yellow (1C) at top, the tepals tipped strong yellow-green (143A); spots brilliant yellow and pale greenish yellow (10A & D) on two-thirds of each tepal; papillae yellowish white (155B) in the throat; pollen strong orange (169B); stigma reddish grey (201C). Fls 240 mm wide; tepals 125 × 60 mm, margins strongly ruffled, tips slightly recurved. Lvs scattered, 160 × 55 mm, mid green. Stems 0.9 m, pale green, with c.4 fls.

### 'Sigillum' I(-/-)

Parentage: derived from 'Kirschrot', 'Johannisblut' & 'Enchantment'

R: C. Feldmaier (c. 1971), N: C. Feldmaier

Inside dark red, with a circle of spots in the throat.

(Unacceptable name: ICNCP, 2004: Art. 19.13 - after 1959 a name must be in any language other than Latin.)

### 'Sigma' VII(a/b)

Parentage: unnamed seedling × unnamed seedling

R: Koninklijke Van Zanten B.V. (1991), G: Van Zanten Flowerbulbs B.V., N: Koninklijke Van Zanten B.V.

(1998), I: Koninklijke Van Zanten B.V. (1998), REG: Van Zanten Flowerbulbs B.V. (1999)

Inside yellowish white (155B), midveins light greenish yellow (8B) towards base, fading towards top; outside yellowish white (155B), midribs light greenish yellow to pale yellow (8B/D), deep yellowish green (141A) at top; spots brilliant yellow (7A) on up to two-thirds of each tepal; papillae yellowish white (155B) and light greenish yellow (8B) in the throat; nectaries strong yellow-green (144B); pollen strong reddish orange (169A); stigma a

little stronger than deep purple (79C). Fls 240 mm wide; tepals 120 × 50-70 mm, margins scarcely ruffled, tips of outer tepals recurved. Lvs scattered, 170 × 45 mm, dark green. Stems 0.9-1 m, green, with c.3-4 fls. July to Aug.

**‘Signalstern’ I(a/-)**

Parentage unknown

R: J. Klein (pre 1989), N: J. Klein, REG: ICRA (1996)

Fls large, bright orange-red. Stems 1.2 m. Early July.

(Published in German Lily Group sales list, 1989.)

**‘Signature’ I(c/d)**

Parentage: ‘Paprika’ × ((‘Lemon Queen’ (Div. I) ×

‘Destiny’) × ‘Edith Cecilia’) F<sub>2</sub>

R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1970), REG: Oregon Bulb Farms, Inc. (1969)

Fls vivid red (45B). Stems c.1 m. Late June.

(Published in *LYB* 33: 257 (1970).)

**‘Signe’ I(a/c)**

Parentage: ‘Shirley’ × ‘Baltais Lācis’

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode

(2000), REG: A. Balode (2000)

Inside yellowish white (158C) with a bright deep yellowish pink (39B) blotch and a black line along each tepal-edge, throat greenish; outside greenish white; some black spots in centre of fl.; nectaries dark greyed purple; pollen dark yellow. Fls 120 mm wide; tepals 60 × 30 mm, margins smooth, tips slightly reflexed. Lvs scattered, 70 × 8 mm. Stems 1 m, green, with c.6 fls. Mid July.

**‘Signet’ I(a/b-c)**

Parentage unknown

R: Columbia-Platte Lilies (pre 1996), N: Columbia-

Platte Lilies, REG: ICRA (1998)

Inside deep pink, with a short, narrow white flare above nectaries. Tepal-margins smooth, tips not or very slightly recurved. Stems 1-1.2 m. June.

(Published in *The Lily Garden Cat.*, 1996/97: 4, with colour illustration.)

**‘Signorina’ I(a/-)**

Parentage unknown

R: Fa P. Hoff & Zn (1973), G: Fa P. Hoff & Zn (1975),

N: Fa P. Hoff & Zn, I: Fa P. Hoff & Zn

Inside vivid reddish orange (34A), each tepal with a short orange vein in the throat; outside vivid/strong reddish orange (34A/C); more-or-less unspotted; nectaries brown; pollen rust-brown. Lvs 80 × 16 mm. Stems 1.1 m, with c.10 fls.

**‘Silberball’ I(a/-)**

Parentage: ‘Mont Blanc’ × ‘Bělásek’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N:

G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G.

Steinbrück (1997)

Fls greenish white (155C) tinged with light yellow; spots purple-violet, numerous, medium sized, on basal three-quarters of each tepal; nectaries soft green; pollen strong red (46A). Fls 130 mm wide; tepals 70 × 40 mm, margins

smooth, tips reflexed. Lvs scattered, 67 × 11 mm, dark green. Stems 0.8 m, rather dark green, with c.12 fls. Late June.

**‘Silberbraut’ I(a/-)**

Parentage: ‘Dawn Star’ × Asiatic seedling

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N:

G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G.

Steinbrück (1997)

Creamy white (159D) throughout, with a slight light greenish yellow (5D) blotch towards base of each tepal and a few, small, reddish purple spots on the basal greenish yellow area; pollen deep red (60A); stigma deep red (60A). Fls 140 mm wide; tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 11 mm, mid green. Stems 1 m, rather dark green with c.20 fls. Early July.

**‘Silberquell’ Div. ?**

Given as a parent of ‘Sirius Transit’. No further details.

**‘Silbersee’ I(a/b)**

Parentage unknown

R: A. Weinreich (pre 1989)

Fls white with small red-brown spots.

**‘Silesia’ I(a/b)**

Parentage: (‘Tabasco’ × seedling of Preston Group) ×

‘Carolyn Marie’

R: B. Kondrot (1986), G: B. Kondrot (1988), N: B.

Kondrot (1995), I: B. Kondrot (1995), REG: B. Kondrot (1996)

Fls with the basal two-thirds and tips of each tepal cherry-red, the remainder dark carmine-brown, with a yellowish line above the white nectaries; outside cherry-brown with a conspicuous greenish yellow blotch; spots small, sparse, greyed red on basal half of each tepal; pollen rust-red; stigma carmine-brown. Fls 130 mm wide; tepals 70 × 38 mm, margins smooth, tips slightly recurved; pedicels 70-90 mm long. Lvs scattered, 70 × 9 mm, pale green. Stems 1 m, pale green, with 15-19 fls (including secondaries). Late June to early July.

**‘Silhouette’ I(a/b)**

Parentage: ‘Mont Blanc’ × (‘Sterling Star’ × ‘Aristo’)

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff

Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies

B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1990),

REG: Bischoff Tulleken Lelies B.V. (1991)

Inside yellowish white (155B), inner tepals with a dark red (187B) edge in basal part, throat somewhat hairy; outside yellowish white (155B), the inner tepals with light yellow-green (145C) midribs, the outer with deep pink (180D) midribs; spots dark red (187A/B) on basal part of each tepal; nectaries moderate yellow (161B) with edges spotted dark red (187C); pollen moderate orange (167A). Fls 170 mm wide; tepals 85 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 18 mm, mid green. Stems 0.58 m, with darker markings and c.8 fls. June (under glass).

**'Silk Road' VIII(b-c/b)**

Parentage unknown

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)

Inside crimson in the throat, shading to broad white tepal-margins and tips; spots absent. Fls fragrant; tepals slightly twisted and gently waved (especially the outer), tips not or slightly recurved. Stems 1.2-1.9 m or more, with numerous fls. Buds very large. Late July to early Aug.

(An Orienpet (OT) lily.)

**'Silky Belles' VIII(a-b/a)**Parentage: *L. × aurelianense* × Asiatic 75-36-1

R: L.M. Collicutt (1983), G: L.M. Collicutt (1984), N: Morden Research Center, I: Morden Research Center, REG: Morden Research Center (1997)

Inside light yellow-green (154D), tepals darker in centre, lighter at tips, throat light yellow (12C); outside moderate purplish red (184C), tepal-tips lighter; spots absent; nectaries mid green; pollen sparse, orange-brown. Fls 150 mm wide; tepals 110 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 145 × 20 mm, mid green. Stems 0.95 m, mid green, with 7-10 fls. Mid July.

**'Silly Girl' I(a/-)**

Parentage: purple-flowered, up-facing Asiatic seedling × 'Prince Charming' (Div. I)

R: Gebr. N. &amp; B. Laan &amp; Zn (1981), G: Gebr. N. &amp; B. Laan &amp; Zn (1983), N: Gebr. N. &amp; B. Laan &amp; Zn (1985), I: Gebr. N. &amp; B. Laan &amp; Zn (1985), REG: Gebr. N. &amp; B. Laan &amp; Zn (1985)

Inside purple, throat white; outside light purple; spots black, on all but tepal-tips; nectaries white; pollen orange. Fls 160 mm wide; tepals 90 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 12 mm, mid green. Stems 0.9 m, green, with c.5 fls. July.

**'Silmaci' I(b/-)**

Parentage unknown

R: V.P. Orehavs, G: V.P. Orehavs, N: V.P. Orehavs (1985), I: V.P. Orehavs, REG: V.P. Orehavs (1987)

Fls yellow, tepal-tips orange; spots small, many, in centre of fl.; nectaries pale yellow. Fls 120 mm wide; tepals 60 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 40 × 5 mm, mid green. Stems 0.8 m, green. (Published in *Dārzs un Drava* 7: 21 (1986).)

**'Silverado' VII(a-b/-)**

Parentage unknown

R: Mak Lelieveredeling B.V. (1985), G: Mak Lelieveredeling B.V. (1988), N: Mak-Leek Inc. (1994), I: Mak-Leek Inc. (1996), REG: Mak-Leek Inc. (2001)

Inside moderate purplish pink (62B), lighter at base, midveins light yellow (10B); outside yellowish white (155D) suffused with pink at apex; spots red and yellow; papillae present; nectaries green; pollen reddish brown; stigma purple. Fls 230 mm wide; tepals 130 × 80 mm, margins ruffled, tips recurved. Lvs scattered, 140 × 80 mm. Stems 0.6 m, green, with c.7 fls. Late.

**'Silver Bunny' I(a/b)**

Parentage unknown

R: Gebr. N. &amp; B. Laan &amp; Zn (pre 1987), N: Gebr. N. &amp; B. Laan &amp; Zn (2002), REG: Gebr. N. &amp; B. Laan &amp; Zn (2002)

Inside creamy white (159D), towards tepal-tips yellowish white (155D) with a creamy white (159D) suffusion, throat white with red-purple markings; spots and papillae present; pollen dark orange-brown; stigma dark pink. Tepal-margins slightly ruffled, tips not recurved. Stems with darker markings. Very early.

**'Silver Dream Group' VII(-/-)**Parentage: *rubellum* × unknown

R: R.W. Bemis (pre 1982), N: R.W. Bemis, I: Blackthorne Gardens

Inside white; spots crimson or rose-pink; nectaries green. Stems 1.2-1.5 m. July to Aug.

**'Silver Elf' VII(-/b)**See *L. × parkmanii* 'Silver Elf'.**'Silver Fox' IV(c/d)**

Parentage: selection from Bullwood Group

S: D.B. Fox (1972), G: D.F. Lee (1978), N: D.F. Lee (1980), I: D.F. Lee (1980), REG: D.F. Lee (1980)

Inside scarlet, tepal-tips pale scarlet, throat pale yellow shading to green; outside more-or-less translucent, the inner colour shining through; spots dark crimson with white/cream halos, especially in throat; nectaries green; pollen brown. Fls 60 mm wide; tepals 70 × 20 mm. Lvs whorled, 100 × 20 mm, with white margins and pale/dark green striped centres. Stems 0.7 m, with c.2 fls. July.

(Published in *The Garden* 105(7): 300 (1980).)**'Silverine' VI(-/c)**

Parentage: selection from Sunburst Group

S: J. de Graaff (c. 1954), N: J. de Graaff

Fls ivory-white with green nectary-star in centre. Stems 1-1.9 m. July to Aug.

**'Silver Prince' VI(-/c)**Parentage: *henryi* (upright form) × (*L. × aurelianense* × unknown)

R: E.F. Palmer, N: E.F. Palmer, I: C.A. Best (1958)

Fls ivory, centre pale tangerine. Tepals semi-reflexed. Stems up to 1.9 m, with up to 30 fls. Aug.

**'Silver Queen' VI(-/-)**See *L. × aurelianense* 'Silver Queen'.**'Silver Rails' VI(b/b)**

Parentage: Silver Sunburst Group × unknown

R: unknown (1988), G: S.R. Kaul (1991), N: S.R. Kaul (1997), I: S.R. Kaul (1997), REG: S.R. Kaul (1997)

Inside white, tepals with the basal two-thirds deep brilliant yellow, throat yellowish tinged with green; outside greenish, yellow at base, shading to white at tepal-tips, midribs tinged with lavender; spots absent; nectaries yellow; pollen golden orange; stigma greenish tan. Fls

170 mm wide; tepals 150 × 50 mm, margins slightly ruffled, outer tepal-tips strongly recurved, inner tepal-tips not recurved. Lvs scattered, 110 × 17.5 mm, mid green. Stems 1 m, mid green, with 6-10 fls. Midseason. (Raised from seed from NALS seed exchange.)

#### **‘Silver Realm’ VII(-/c)**

Parentage: *auratum* × unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1960), N: R.L. Strahm (1972), I: H.J. & R.L. Strahm (1972), REG: Strahm’s Lilies, Inc. (1981)

Fls yellowish white (155B) throughout except for a moderate yellow-green (139A) throat and strong red (46B) spots concentrated around middle of tepals; pollen moderate reddish brown (166B). Fls 200-250 mm wide; tepals 110 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, c.50 mm wide, mid green. Stems 1.2-2 m, green, with 10 or more fls. Aug. (Published in Strahm’s sales list, 1972.)

#### **‘Silver Rose’ I(a/b)**

Syn. of ‘Silver Sunrise’.

#### **Silver Royal Bowls Group VI(b/-)**

Parentage: selections from Royal Group

S: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens

No further details.

(Published in *ILR* (1982) as Silver Royal Bowls grex.)

#### **Silver Royal Coronas Group VI(-/d)**

Parentage: selections from Royal Group

S: R.W. Bemis (pre 1978), N: R.W. Bemis, I: R.W. Bemis (1978), REG: R.W. Bemis (1984)

Fls silvery white with yellow, orange or green throats; spots absent; pollen orange. Tepal-margins smooth, tips recurved. Stems 1.3-2 m. July to Aug.

(Published in *‘Deep-Freeze’ Lilies Cat.*, 1978/79: 4.)

#### **‘Silver Showers’ I(a/-)**

Parentage: ‘Connecticut Dream’ × ‘Sterling Silver’

R: E.E. Richardson (1974), N: E.E. Richardson (1979), I: E.E. Richardson (1979), REG: E.E. Richardson (1979)

Inside white, tepal-tips yellowish white (155B), throat brilliant yellow-green (142B); outside greenish white (157D), midribs brilliant yellow-green (142B); spots few, small, near nectaries; nectaries brilliant greenish yellow (4A); pollen vivid yellowish orange (30C). Tepals c.75 mm long. Lvs light yellowish green (135D), narrow to medium. Stems 1-1.2 m.

#### **‘Silver Skates’ VII(b/d)**

Parentage unknown

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)

Inside pure white; with numerous white papillae and conspicuous green nectaries; stigma purplish; pollen orange. Tepals ruffled, distinctly recurved. Stems 1-1.2 m. Aug.

(Published in *The Lily Garden Cat.*, 1996/97: 27.)

#### **‘Silver Slip’ I(c/-)**

Parentage unknown

R: H.E. Hoepner (pre 1985), G: S.R. Kaul, N: S.R. Kaul, I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)

Fls soft yellow, tepals shading to white at tips and with yellow margins, becoming more greenish at base of tepals; spots present. Tepals tightly recurved. Lvs long, dark green. Stems 1.5 m, dark green. June to July.

#### **‘Silver Spring’ I(c/d)**

Parentage: ‘Albipayne’ × (*pumilum* × bicoloured selection from Coronado Group)

R: L.D. Marshall (1977), G: Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1986), I: Columbia-Platte Lilies (1986), REG: Columbia-Platte Lilies (1988)

Inside pure white (may be pale yellow (11D) in very cool weather), tepal-tips white to pale yellow (11D), throat white; outside white flushed with soft pink at base; spots dark magenta, very small, medium sized, on basal half of each tepal; nectaries green, with white-downy margins; pollen moderate red (180A). Fls slightly scented; tepals 60-65 × 25-30 mm, margins ruffled, tips strongly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 1.25-1.75 m, dark (almost black in cool weather), with 7-25 fls in a long infl. Early June (for 3-4 weeks).

(Published in *Rex Lilies Cat.*, 1986.)

#### **‘Silver Star’ I(b/-)**

Parentage unknown

R: R. Elders (1983), G: J. Montgomery (1985), N: J. Montgomery, I: Monashee Perennials (1994), REG: J. Montgomery (1997)

Inside white, tinged with pink; outside white, midribs maroon; spots maroon on basal third of each tepal; nectaries white; pollen brown. Fls 120 mm wide; tepals 62 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 7 mm, mid green. Stems 1.5 m, green, with more than 20 fls. Early to midseason.

(Published in *Monashee Perennials Mail Order Cat.*, 1994.)

#### **‘Silverstone’ I(a/b)**

Parentage: seedling W 91-28 × seedling AW 95-7

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside yellowish white (155D), throat light yellow-green (142C); outside yellowish white (155D), midribs light yellow-green (145C); spots and papillae absent; nectaries strong yellow-green (143C); pollen brownish orange (171B); stigma brilliant greenish yellow (1B). Fls 160 mm wide; tepals 59 × 53 mm, margins smooth, tips slightly recurved. Lvs 150 × 20 mm. Stems 1.2 m, green with darker markings, with c.5 fls.

#### **Silver Sunburst Group VI(b/c)**

Parentage: selections from Aurelian Group

S: J. de Graaff, N: J. de Graaff

Fls white, throat golden. Tepals broad. Stems with up to

30 fls.  
(Published in *Oregon Bulb Farms Cat.*, 1959. Included in *ILR* (1960) as Silver Sunburst grex.)

**'Silver Sunrise' I(a/b)**

Parentage: 'Mont Blanc' × 'Ikaria'  
R: W. Kuligowski (1990), G: W. Kuligowski (1993), N: W. Kuligowski (1997), I: W. Kuligowski (1997), REG: W. Kuligowski (1999)

Inside and outside pale silvery pink/violet; spots absent; nectaries pale green; pollen orange; stigma pale bronze. Fls 120 mm wide; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 12 mm, mid green. Stems 0.8-1 m, dark green with brown markings, and with 9-11 fls in a racemose infl. Early to mid July. Syn.: 'Silver Rose'.

**Silver Swan Group VII(b/c)**

Parentage: ((*L.* × *parkmanii* Imperial Silver Group × *L.* × *parkmanii* Imperial Gold Group) × 'Swan Lake') × *L.* × *parkmanii* Imperial Gold Group

R: Blackdown Lilies (1984), G: Blackdown Lilies (1986), N: Blackdown Lilies (1987), I: Blackdown Lilies (1987), REG: Blackdown Lilies (1988)

Fls white with white or gold rays in the throat; lightly speckled maroon; nectaries green; pollen red or brown. Tepals sometimes with ruffled margins, tips slightly recurved. Lvs scattered, mid green. Stems c.1.2 m, with c.10 fls. Aug.

(Published in *ILR Seventh Supplement* as Silver Swan grex.)

**'Silvia' I(a/-)**

Parentage: 'Harmony' × (*davidii* × seedling 142)  
R: De Jong Lelies Holland B.V. (1970), N: De Jong Lelies Holland B.V. (1977), I: De Jong Lelies Holland B.V., REG: De Jong Lelies Beheer B.V. (1978)  
Fls vivid to light orange (28B/C), centre speckled with fine dark brown spots; nectaries dark; pollen rust-brown. Tepals 60 × 27 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 15 mm. Stems 0.8 m, pale green, with 8-10 fls. June.  
(Published in *Lilies and other Liliaceae*, 1978/9: 113.)

**'Silvretta' I(a/-)**

Parentage: seedling W 651 × seedling W 661  
R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside yellowish white (155B), throat pale yellow-green (4D); outside yellowish white (155B), midribs light yellow-green; spots few, dark red (187B) on inner tepals; pollen strong orange (24A). Fls 210 mm wide; tepals 100 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 15 mm, mid green. Stems 0.95 m, green, with c.18 fls. May.

**'Simabizin' I(a/-)**

Parentage: *L.* × *maculatum* × 'Destiny'  
R: T. Nimra (1981), N: T. Nimra  
Fls vivid yellow (12A/14A) with a moderate amount of

black spots. Fls up to 170 mm wide. Stems 0.6 m, with bulbils. Late.

**'Simanohikari' VII(b/c)**

See *L.* × *parkmanii* 'Simanohikari'.

**'Simcoe' VI(-c-d)**

See *L.* × *aurelianense* 'Simcoe'.

**'Simoen' I(a/-)**

Parentage: 'Prune' × 'Sterling Star'  
R: Gebr. N. & B. Laan & Zn (1979), G: Gebr. N. & B. Laan & Zn (1980), N: Gebr. N. & B. Laan & Zn (1984), I: Gebr. N. & B. Laan & Zn (1984), REG: Gebr. N. & B. Laan & Zn (1985)  
Inside pale orange-yellow (19D), tepal-tips orange-yellow (19D), throat pale yellow (19C); outside light yellow (19B); spots maroon, few, deep in the throat; nectaries green; pollen orange-brown. Fls 130 mm wide; tepals 70 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 0.9 m, mid green, with c.25 fls. Late June.

**'Simone Kleisma' VIII(a/b)**

Parentage: LA hybrid no. 93081-4 × 'Sancerre'  
R: De Jong Lelies Holland B.V. (1995), G: De Jong Lelies Holland B.V. (1998), N: De Jong Lelies Holland B.V. (2002), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2002)  
Inside yellowish white (155D), throat yellow-green (143C); outside yellowish white (155D), each tepal light yellow-green at base (142D), flushed with light purplish pink (63D), brilliant yellow-green (150A) at tip; spots absent; papillae present; nectaries yellowish white (155D); pollen brownish orange (164A); stigma light yellow-green (154D). Fls 190 mm wide; tepals 125 × 47 mm, margins smooth, tips slightly recurved. Lvs scattered, 135 × 35 mm, green, darker at base, with c.4 fls. June.  
(*A longiflorum*/Asiatic (LA) hybrid.)

**'Simonet Jewel' I(b/-)**

Parentage unknown  
R: R. Simonet, G: R. Erskine (pre 1980), N: R. Erskine, I: R. Erskine, REG: R. Erskine (1995)  
Inside yellow in centre of fl., pink at tepal-tips; outside cream, tepal-edges pink; spots brown on yellow centre; nectaries yellow; pollen brown. Fls 120 mm wide; tepals 70 × 30 mm, margins slightly ruffled, tips slightly recurved; pedicels c.120 mm long. Lvs scattered, 120 × 8 mm. Stems 1 m, green, with 12 fls. Midseason.

**'Simonet's Rosy' I(b/-)**

Parentage unknown  
R: R. Simonet (1960s), N: A.J. Porter (1960s), REG: J.C. Ericksen (1990)  
Inside bright pink, throat slightly darker; outside soft rosy pink; spots small, dark red on basal half of each tepal; nectaries rosy; pollen light yellow, fading to white. Tepal-margins very slightly ruffled, tips slightly recurved. Lvs scattered, c.75 × 17 mm, mid green. Stems 1.4-1.5 m,

green, with c.18 fls. July. Usually sterile.  
(Originally listed as named by Mrs J.C. Ericksen but she indicated (*in litt.*) that she received it under this name from A.J. Porter in the 1960s.)

**'Simonka' I(a/b)**

Parentage: 'Rosita' × unknown  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1996),  
REG: B. Mičulka (1996)  
Inside brownish apricot, tepal-tips pale rose-pink; outside pinkish white, midribs yellowish, greenish at top; spots numerous, fairly large, brown-black, on a third of each tepal; nectaries granulated; pollen brown; stigma purple. Fls 115 mm wide; tepals 65 × 30 mm, margins slightly waved; tips slightly recurved; pedicels 80 mm long, dotted red-brown. Lvs scattered, 125 × 9 mm, mid green. Stems 0.7 m, slightly dotted from base to mid point. Mid June.

**'Simpatiska'**

Misspelling of 'Simpatiskā' of Orehovs and Zeltans.

**'Simpatiskā' I(a/-)**

Parentage: selection from Jūras Zvaigzne Group  
S: V.P. Orehovs, N: V.P. Orehovs  
Fls orange.  
(Published in *LYB* 33: 80 (1970) and included in *ILR* (1982) as 'Simpatiska' which is a misspelling.)

**'Simpatiskā' VII(-/d)**

Parentage unknown  
R: K. Zeltans (pre 1958), N: K. Zeltans  
Inside Spiraea-red (HCC 025/3), deeper at base; outside pink, without rays; spots carmine; nectaries light green with white margins; pollen orange. Fls 210 mm wide. Lvs 180 × 50 mm. Stems 0.8 m, brown-violet. Mid Aug.  
(Included in *ILR Fifth Supplement* as 'Simpatiska' which is a misspelling.)

**'Simple Mind' I(a/-)**

Parentage: 'Bora' × 'Crimsonia'  
R: Gebr. N. & B. Laan & Zn (1981), G: Gebr. N. & B. Laan & Zn (1983), N: . Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)  
Fls pink throughout except for a dark pink throat; spots deep purple on all but tepal-tips; nectaries light pink; pollen orange. Fls 140 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 22 m, dark green. Stems 1.1 m, green, with c.10 fls and bulbils. July.

**'Simplicity' VI(-/a)**

Parentage: (*leucanthum* var. *centifolium* × *sargentiae*) × ('Green Dragon' × 'Limelight')  
R: H.S. Fothergill, N: H.S. Fothergill (1973), REG: H.S. Fothergill (1973)  
Fls white suffused with green, strongly scented. Tepals markedly pointed. Stems c.1.4 m.  
(Published in *Lilies and other Liliaceae*, 1973/1974: 112.)

**'Simplon' VII(a-b/b)**

Parentage: 'Casa Blanca' × seedling 803  
R: Vletter & Den Haan (1987), G: Vletter & Den Haan, N: Vletter & Den Haan (1993), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1996)  
Inside and outside yellowish white (155B); spots absent; nectaries green; pollen reddish brown; stigma purple. Tepal-margins strongly ruffled, tips strongly recurved. Lvs scattered, mid green. Stems 1.3 m, green, and with c.6 fls.

**'Simply Red' I(a/-)**

Syn. of 'Hobyza'.

**'Sinai' I(a/-)**

Parentage: *L. × hollandicum* type × 'Connecticut King'  
R: Bischoff Tulleken Lelies B.V., G: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (1980), REG: Bischoff Tulleken Lelies B.V. (1980)  
Fls vivid yellow (17C), tepals edged saffron-yellow, veined orange; spots absent; anthers brown. Stems 0.7 m.  
(Published in *Bloembollencultuur*, September 1980.)

**'Sincerity' IX(-/b)**

See *auratum* var. *virginale* 'Sincerity'.

**'Sindelberg' VI(c/c-d)**

Parentage: *regale* × *henryi*  
R: W. Reich (1989), N: W. Reich, REG: W. Reich (1990)  
Fls white with an orange centre; spots absent; papillae present. Fls 120-130 mm wide; tepal-margins wavy, tips reflexed. Lvs broad (similar to *henryi*). Stems 1.2m, dark, with 6-9 fls and some bulbils. Mid to late July.

**'Sinfonie in Gold' I(a/b)**

Parentage: 'Zlata' × 'Fantasie'  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)  
Inside strong orange-yellow (163B) suffused with strong reddish orange (31A); outside strong orange-yellow (163B); spots few, minute, strong red (46A), on basal third of each tepal; nectaries pale yellow-green (157C); pollen moderate reddish orange (35A). Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 20 mm, dark green. Stems 1.2 m, rather dark green, with c.20 fls. Mid June to early July.

**'Singapore' I(a/-)**

Parentage unknown  
R: H. Schouten (1976), G: H. Schouten (1978), N: Gebr. Van Zanten B.V. (1986), I: Gebr. Van Zanten B.V., REG: Gebr. Van Zanten B.V. (1986)  
Fls yellow throughout; spots brown, near base of tepals; nectaries orange; pollen brown. Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 20 mm, dark green. Stems 0.9 m, brown, with c.6 fls.

**'Singdrossel' I(a-b/b-c)**

Parentage: pale-flowered Weinreich seedling × 'Honey Creme'  
R: N. Martschinke (1981), G: N. Martschinke (1985),

N: N. Martschinke (1995), I: N. Martschinke (1995),  
REG: N. Martschinke (1997)

Inside pale yellow (19C) throughout; outside with greyish yellow-green (194B) stripes; spots dark reddish orange (178B) on basal half of each tepal; pollen greyish brown (166A); stigma greyish brown (166A). Fls 130 mm wide; tepals 75 × 28 mm, margins smooth, tips very slightly reflexed. Lvs scattered, 75 × 13 mm, mid green. Stems 1-2 m, green marked with red-brown in lower part, with c.10 fls. Late June.

(Published in European Lily Society sales list, 1995.

Named after the resemblance to the pattern on a song thrush (singdrossel).

**‘Sioux’ I(a/b-c)**

Parentage: ‘Redstart’ × ‘Nutmegger’

R: B. Mičulka (pre 1984), N: B. Mičulka, REG: B. Mičulka (1985)

Inside mahogany-red, each tepal with an ochre tongue over nectaries, throat paler, tepal-tips and edges bronze; outside violet-red; spots black, numerous, medium sized, on two-thirds of each tepal; pollen brown. Fls 150 mm wide; pedicels brown-dotted. Lvs 110 × 11 mm. Stems 1.3 m, lightly dotted, dark violet-brown at base, with bulbils later. Mid July.

**‘Sirdar’ I(b/-)**

Parentage: ‘Edna Kean’ ×  *davidii*

R: R.C. Palmer (c. 1950), N: R.C. Palmer, I: B.L. Palmer (1951)

Fls glowing dark red. Tepals slightly reflexed. Stems 1-1.2 m. (Published in Exp. Farm Report, Summerland, BC, Canada, 1950.)

**‘Sirds’ I(b/-)**

Parentage: selection from Vasaras Prieks Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls orange-red.

(Included in *ILR Second Supplement* as ‘Serdtsse’ which is a misspelling.)

**‘Sirena’ I(b/-)**

Misspelling of ‘Sirēna’.

**‘Sirēna’ I(b/-)**

Parentage: selection from Jautrie Bērni Group

S: V.P. Orehovs, N: V.P. Orehovs

Fls double, dark yellow.

(Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as ‘Sirena’ which is a misspelling.)

**‘Sirenevaia Orekhovsa’ VI(-/-)**

Misspelling of ‘Sireņevaja Orehova’.

**‘Sireņevaja Orehova’ VI(-/-)**

Parentage: *sargentiae* × *leucanthum* var. *centifolium*

R: V.P. Orehovs (c. 1960), N: V.P. Orehovs

No further details.

(Misspelling: ‘Sirenevaia Orekhovsa’. Included in *ILR Second Supplement* as ‘Sirenevaia Orekhov’ which is also a misspelling.)

**‘Sirenevaia Orekhov’ VI(-/-)**

Misspelling of ‘Sireņevaja Orehova’.

**‘Sirius’ I(a/b)**

Parentage: ‘Destiny’ × ‘Tabasco’

R: V. Baloun (1982), N: V. Baloun, REG: V. Baloun (1986)

Inside dark crimson, tepal-tips paler, each tepal with a short apricot ray over nectary; outside paler, midribs beige; spots dark violet-red, numerous, medium sized, on two-thirds of each tepal; nectaries pink-frosted; stigma dark purple. Fls 110 mm wide; tepals 75 × 31 mm, slightly recurved. Lvs 80 × 7 mm, slightly glossy. Stems 0.7 m, spotted brown. Late July.

**‘Sirius’ VI(-/c)**

Parentage: unnamed seedling × ‘Solntse Rossii’

R: V.A. Volkov (c. 1984), N: V.A. Volkov

Inside cream-white with a bright orange star in the throat; pollen brown. Stems 1 m. Aug.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Sirius Transit’ I(a/-)**

Parentage: ‘Silberquell’ × (‘Connecticut Queen’ × ‘Schneewittchen’)

R: P. Geiser (1982/83), G: V. Matthé (1985), N: V.

Matthé (1989), REG: V. Matthé (1990)

Inside at first pale greenish yellow (1D), soon fading to greenish white (157D), throat pale greenish yellow (1D); outside pale greenish yellow (1D) with green midribs and pencilling; almost unspotted (sometimes 5-7 tiny spots in extreme centre); nectaries strong yellow-green (144B); pollen strong orange-yellow (17A). Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 0.8 m, mid green with a brown overlay, and with c.8 fls. July.

**‘Sir Lancelot’ IV(-/-)**

Parentage: ‘Shuksan’ ×  *parryi*

R: O.E.P. Wyatt (c. 1952), N: O.E.P. Wyatt

AM 1952

Fls vivid yellow (17B), olive-green at base; slightly spotted with blackish purple. Tepals slightly reflexed.

(Published in *JRHS* 77: 422 (1952).)

**‘Sirocco’ I(a/c)**

Parentage: *L. × bollandicum* × ‘Papillon’

R: Gebr. N. & B. Laan & Zn (1976), G: Gebr. N. &

B. Laan & Zn (1979), N: Gebr. N. & B. Laan & Zn

(1984), I: Gebr. N. & B. Laan & Zn (1984), REG: Gebr.

N. & B. Laan & Zn (1985)

Light yellowish pink (36A), tepal-tips light yellowish pink (36A), throat strong yellowish pink (37B); outside strong yellowish pink (37A); a few spots in the throat; nectaries greenish; pollen brown. Fls 150 mm wide; tepals 80 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 12 mm, mid green. Stems 0.8-1.2 m, dark green, with 9-20 fls. Late June.

**'Siskiyou Dawn' IV(-/-)**

Parentage: selection from Del Norte Group  
 N: A.D. Reid (1973), I: A.D. Reid (1976), REG: A.D. Reid (between 1976 and 1981)  
 Fls rose-pink, throat white, tips moderate purplish pink (62B); finely spotted maroon; nectaries light yellow.  
 Stems 1.2 m, with 20-25 fls.  
 (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 28 (1978).)

**'Sissi' VII(b/b)**

Parentage: 'Star Gazer' × unnamed seedling  
 R: Sande B.V. (1982), G: Sande B.V. (1985), N: Sande B.V. (1989), REG: Sande B.V. (1989)  
 Strong purplish red to strong purplish pink (63B/C), midveins strong red (53C), tepal-edges yellowish white (155B), throat light yellow-green (145B) edged yellowish white (155B); outside light purplish pink (63D), midribs light greenish yellow (8B), tepal-edges yellowish white; spots dark red (187B/C) on basal half of each tepal; pollen strong reddish orange (169A). Fls 270 mm wide; tepals 125 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 190 × 65 mm, mid green. Stems 1.04 m, green, with c.5-8 fls. June (under glass).

**'Sissy' I(b/b)**

Parentage: 'Fedorov' × *candidum*  
 R: A.M. Fedorov (1995), G: A.M. Fedorov (1998), N: A.M. Fedorov (2000), I: A.M. Fedorov (2000), REG: A.M. Fedorov (2004)  
 Fls yellow; spots red-orange, on basal one third to two-thirds of each tepal; nectaries yellow; pollen red-orange; stigma red. Fls 60-65 mm wide; tepals 50 × 15 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 5 mm. Stems 0.5 m, green, with 4-6 fls. July.  
 (Nomenclatural standard: colour print supplied by registrant (WSY 0096378).)

**'Skaidra Sirds' I(a/-)**

Misspelling of 'Skaidrā Sirds'.

**'Skaidrā Sirds' I(a/-)**

Parentage: hybrid derived from the "Connecticut" range  
 R: V.P. Orehovs (1979), N: V.P. Orehovs, REG: ICRA (1994)  
 Fls cream to white, with some spots. Stems 0.9 m. July.  
 (Included in *ILR Thirteenth Supplement* as 'Skaidra Sirds' which is a misspelling.)

**'Skertso' I(a/b)**

Parentage unknown  
 Fls pale apricot.  
 (Published in M.F. Kireeva, *Lilii*, 57 (2000).)

**'Skinner's Orange' VIII(a/b)**

See *L. × philauricum* 'Skinner's Orange'.

**'Skookum' I(c/-)**

Parentage: *lancifolium* var. *flaviflorum* × *leichtlinii* var. *maximowiczii* (unspotted form)  
 R: W. Windus (c. 1967), N: W. Windus (1976), I: J.

Wadekamper (1976), REG: J. Wadekamper (1976)  
 Inside vivid orange (28A), tepal-tips orange, throat yellow-orange; outside darker; spots present; nectaries yellow-green; pollen greyish red (178A). Lvs dark green. Stems 1.4-1.5 m. Late.  
 (Published in *Lilies and other Liliaceae*, 1976: 93.)

**'Skriveri' I(b/-)**

Misspelling of 'Skriveri'.

**'Skriveri' I(b/-)**

Parentage: 'Gran Paradiso' × mixed pollen from tetraploids  
 R: A. Balode (1992), G: A. Balode (1994), N: A. Balode, REG: A. Balode (1996)  
 Inside vivid reddish orange (33B) with strong reddish orange (42B) tepal-edges, throat moderate purplish pink (62D); outside strong reddish orange (42C); spots few, small, dark greyish purple (202A) on a third of each tepal; nectaries dark red (187A); pollen vivid reddish orange (33A). Fls 130 mm wide; tepals 70 × 35 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 15 mm, dark green. Stems 1 m, mid green with some dark brown markings, and with c.9 fls. Mid July. Polyploid.  
 (Included in *ILR Sixteenth Supplement* as 'Skriveri' which is a misspelling. Skriveri is the name of a Latvian village.)

**'Skromnaia' I(a/-)**

Parentage unknown  
 R: V.A. Grot (pre 1983), N: V.A. Grot  
 Fls orange.  
 (Unaccepted spelling: 'Skromnaja'.)

**'Skromnaja' I(a/-)**

Unaccepted spelling of 'Skromnaia'.

**'Skumstu' I(b/-)**

Parentage: selection from Skumstu Group  
 S: V.P. Orehovs (post 1956), N: V.P. Orehovs  
 Fls bright red.  
 Syn.: 'Thoughtful'.  
 (Published in *LYB* 33: 79 (1970).)

**Skumstu Group I(b-c/d)**

Parentage: ('*Tsvetaeva*' × seedling 364-4-20) × ('*Stroinaia*' × *amabile*)  
 R: V.P. Orehovs (c. 1957), N: V.P. Orehovs  
 Fls orange-violet to dark red-brown; some with brown spots; pollen brown. Fls 150 mm wide, unscented. Lvs light green. Stems up to 0.8 m, with 5-10 fls. July.  
 Syn.: Pensive Group.  
 (Published in *LYB* 33: 79 (1970) as Skumstu Hybrids.)

**'Sky Blue' VII(-/b)**

Parentage: derived from *L. × parkmanii* & Zealandia Group seedlings  
 R: L.B. Tuffery (c. 1958), N: L.B. Tuffery  
 Fls white with 'pale blue' spots.

**'Skybolt' VI(b/c)**

Parentage: 'Thunderbolt' × 'Greatheart'

R: G. Brown (1981), G: G. Brown (1983), N: G. Brown (1983), I: G. Brown, REG: G. Brown (1988)

Inside orange, tepal-tips and apical margins white; outside light orange; conspicuous orange papillae on basal third to half of each tepal; nectaries prominent, green; pollen mid brown. Tepals 90 × 25 mm, margins very slightly ruffled, tips strongly recurved. Lvs scattered, 140 × 15 mm, mid green. Stems 1.6 m, mid green, with up to 40 or more fls. Late July.

**'Skydancer' I(c/d)**

Parentage: derived from 'Yellow Tiger' seed ex NALS seed exchange

R: A.J. Porter, N: Honeywood Lilies (1984), I: Honeywood Lilies (1984), REG: Honeywood Lilies (1984)

Inside brilliant yellow (9C), tepal-tips light greenish yellow (8B), throat pale greenish yellow (9D); outside pale greenish yellow (9D) strengthening to brilliant-vivid yellow (9C/B) along tepal-margins and midribs; spots on basal two-thirds of tepals, those on margins dark red (187A), those near centre of tepals dark red (183A); nectaries strong yellow-green (143B); pollen strong orange (25A). Fls 150-200 mm wide; tepals 100 × 25 mm, margins smooth, tips slightly recurved. Lvs 140 × 18 mm, pale green, very hairy below. Stems 2-2.25 m, dark black-green, very hairy, with stem bulbils and 10-15 fls. Aug.

(Published in *Honeywood Lilies Cat.*, 1984/85. It is not known whether the parent 'Yellow Tiger' is *lancifolium* var. *flaviflorum* 'Yellow Tiger' or the 'Yellow Tiger' which is a synonym of 'Yellow Star'.)

**'Skylark' I(b/-)**

Parentage: ('Lillian Cummings' × *lancifolium*) × *dauidii*

R: J.C. Taylor (1946), N: J.C. Taylor (1951), I: Ontario Agricultural College, Dept. of Horticulture (1960)

Fls lemon-yellow. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.2-1.5 m, with c.25 fls on long pedicels.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. de Graaff's 'Skylark' was included in *ILR* (1969), and Taylor's 'Skylark' was included in *ILR* (1982), the latter without any dates. Taylor's 'Skylark' was submitted for registration in 1983 and was rejected on the grounds that the name has already been used. Although Taylor's cv. was raised and published (in *Greenock Farms Cat.*, 1960) earlier than de Graaff's cv. (1968/69), this information was not known to the ICRA until 1983. To resolve a difficult problem, de Graaff's 'Skylark' was officially selected by the ICRA under what is now ICNCP, 2004: Art. 26.3.)

**'Skylark' IV(-/d)**

Parentage: complex *kelloggii* × *pardalimum* hybrid

R: J. de Graaff (c. 1965), N: J. de Graaff

Fls green to light orange through to lilac.

(Published in *Oregon Bulb Farms Cat.*, 1968/69. Included in *ILR* (1969) Addenda. See note under 'Skylark' of Taylor.)

**'Skylight' VIII(b-c/a)**

Parentage: ((McLaren trumpet × 'Canterbury Belle') × deep pink-flowered trumpet) × ((McLaren trumpet × 'Canterbury Belle') × deep pink-flowered trumpet)

R: A.E. Alexander (1996), G: A.E. Alexander (1999), N: A.E. Alexander (2002), I: A.E. Alexander (2002), REG: A.E. Alexander (2002)

Inside golden apricot; outside gold with broad pink bands; unmarked; nectaries green; pollen brown; stigma purple/black. Fls 130 mm wide; tepals 120 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 10 mm. Stems 1.2 m, light green, flecked with purple, with c.9 fls in a racemose infl. Jan. (New Zealand). (An Orienpet (OT) lily. Nomenclatural standard: colour print provided by registrant (WSY 0032051).)

**'Skyline' Div. ?**

Given as a parent of Devon Dawn Group and 'Reverend Katie'. No further details.

**'Skyrocket' I(c)**

Parentage: *dauidii* × 'Lillian Cummings'

R: R.C. Palmer, N: R.C. Palmer, I: R.C. Palmer (1945)

Fls bright scarlet with small, dark spots. Stems 1.5 m. July.

(Published in *LYB* 10: 43 (1946).)

**'Skyros' VII(a-b/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside yellowish white (155D), midveins yellow-green at base; outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen orange-brown; stigma grey. Tepal-margins ruffled, tips recurved. Stems medium to tall. Early to midseason.

**'Skywatcher' I(a/b)**

Parentage unknown

R: H. Peters, G: H. Peters, N: E.G. Mooney (1978), I: Borbeleta Gardens (1979), REG: Borbeteta Gardens (1981)

Inside strong reddish orange (31B), throat and outside pale orange; spots few, purple, on basal third of each tepal; nectaries whitish orange; filaments reddish orange; pollen pale rust-coloured. Tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 22 mm, mid green. Stems 1.5 m, light green, with 15-20 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1979.)

**'Slate's Select' II(-/l)**

Parentage unknown

R: G.L. Slate, N: H.R. & R. Cocker, I: H.R. & R. Cocker, REG: H.R. & R. Cocker (1997)

Inside strong purplish red (59D) at tepal-tips, colour gradually breaking up towards the light yellow base, throat light yellow with some dark purple spots, all tepals broadly edged with yellow; outside green, slightly suffused with pink; nectaries green; pollen mid brown. Tepal-margins smooth, tips strongly recurved. Lvs whorled. Stems 1.5 m, mid green, with 10-20 fls. Early.

**'Slavia' I(a-b/b)**

Parentage: 'Evina' × 'Tetra Mountaineer'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997), REG: B. Mičulka (1997)

Inside deep red-orange, throat slightly paler; outside with carmine midribs; spots medium sized, ovate, black, on three-quarters of each tepal; nectaries white-granulated; filaments orange; pollen red-brown; stigma pale beige-orange. Fls 130 mm wide; tepals 90 × 45 mm, slightly recurved; pedicels 85 mm long, violet-black. Lvs scattered, 100 × 15 mm, dark, slightly glossy green. Stems 0.85 m, thick, densely dotted above, violet-black at base, with a very short infl. Mid June. Triploid.

**'Slavianka' I(a/-)**

Parentage: ('Stroinaia' × *davidii* var. *willmottiae*) × 'Enchantment'

R: M.F. Kireeva (1972), N: M.F. Kireeva

Fls bright orange, spotted; filaments pale orange; anthers red-orange with orange pollen. Stems 0.6-0.7 m, with 20-30 fls. Very early.

(Unaccepted spelling: 'Slavjanka'. Published in M.F. Kireeva, *Lilii*, 66 (1984).)

**'Slavjanka' I(a/-)**

Unaccepted spelling of 'Slavianka'.

**'Slocum's Ace' V(b/a)**

See *longiflorum* 'Slocum's Ace'.

**'Sluchainaia Moskvichka' I(b/-)**

Parentage unknown

Inside with vivid reddish orange (32A) tepal-tips, throat strong orange (25B); outside strong reddish orange (34C); spots heavy, medium sized, dark red (187A/B) on three-quarters of each tepal; nectaries white; pollen absent. Fls 60-100 mm wide; tepals 50-58 × 16-19 mm, margins smooth, tips slightly recurved. Lvs 92-140 × 9-11 mm, mid green. Stems 1.1 m, with 20-40 fls, and with bulbils. July.

(Unaccepted spelling: 'Sluchainaja Moskvichka'. Raised in the former USSR before 1972.)

**'Sluchainaja Moskvichka' I(b/-)**

Unaccepted spelling of 'Sluchainaia Moskvichka'.

**'Slunovrat' I(c/d)**

Parentage: 'Talisman' × 'Connecticut King'

R: B. Mičulka (c. 1982), N: B. Mičulka, REG: B. Mičulka (1984)

Inside deep yellow, tepal-centre apricot, throat pale yellow; outside greenish beige; spots violet-brown, large, numerous, on half of each tepal; pollen ochre. Fls 90 mm wide; tepals 70 × 32 mm, margins slightly curled; tips strongly reflexed. Lvs 80 × 14 mm. Stems 1.2 m, brownish at base. Late June.

**'Smadies' I(b/-)**

Parentage: selection from Skumstu Group

S: V.P. Orehovs (pre 1956), N: V.P. Orehovs

Fls orange-yellow. (Published in *LYB* 33: 79 (1970).)

**'Small Red Hat' I(c/c)**

Parentage: 'Fedorov' × 'Sfinks'

R: A.M. Fedorov (1995), G: A.M. Fedorov (1997), N: A.M. Fedorov (2000), I: A.M. Fedorov (2000), REG: A.M. Fedorov (2004)

Fls bright red; spots black, on basal half of each tepal; nectaries dark; pollen light red and orange; stigma salmon-orange. Fls 60-75 mm wide; tepals 65 × 20 mm, margins smooth, strongly recurved in apical half. Lvs scattered, 110 × 7 mm. Stems green with 3-5 fls. July to Aug

(Nomenclatural standard: colour print supplied by registrant (WSY 0096377).)

**'Smaragda Meita' I(a/c)**

Parentage unknown

R: D.-V. Škimele (1991), G: D.-V. Škimele (1994), N: D.-V. Škimele (1997), REG: D.-V. Škimele (2001)

Inside light yellow tinged with green, tepal-tips pale yellow, throat yellow; outside light yellow, midribs green; spots absent; nectaries green; pollen light brown; stigma green. Fls 150 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 15 mm. Stems 1.1 m, dark green with brown stripes, and with c.11 fls. Early July.

(Published in *Lilium Balticum Lily Register*, 1998.)

**'Smash' I(a/-)**

Syn. of 'Holebb'.

**'Smena' I(a/-)**

Parentage: ('Stroinaia' × *davidii* var. *willmottiae*) × 'Enchantment'

R: M.F. Kireeva (1972), N: M.F. Kireeva

Fls bright orange, spotted; filaments pale orange; anthers red-orange. Fls 120-140 mm wide. Stems 0.7-1.2 m, with 15-20 fls. June to July.

(Published in M.F. Kireeva, *Lilii*, 67 (1984).)

**'Smiley' I(c/-)**

Parentage: 'Connecticut Lemonglow' × *amabile*

R: Columbia-Platte Lilies (1974), G: E.A. & J.F. McRae (1976), N: Columbia-Platte Lilies (1986), I: Columbia-Platte Lilies (1986), REG: Columbia-Platte Lilies (1988)

Inside vivid or brilliant orange-yellow (23A/B) to strong orange (24A), tepal-tips vivid or brilliant orange-yellow (23A/B), throat brilliant orange-yellow (23B); outside light to pale orange-yellow (23C/D); a few spots parallel to nectaries on each tepal; nectaries soft gold; pollen moderate reddish to brownish orange (171A/B), very sparse. Tepals 60-80 × 20-30 mm, margins ruffled, tips strongly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 0.6-1.4 m, dark green, with 6-20 fls (including secondary buds). Mid to late June. Triploid (2n = 36).

**'Smokie' I(a/b)**

Parentage unknown

R: F. Fellner (1982), G: F. Fellner (1984), N: F. Fellner (1994), I: Riverside Gardens, REG: F. Fellner (1994)

Inside smoked or burnt orange; outside orange-green;

spots absent; pollen orange. Fls 110 mm wide; tepals 50 × 25 mm. Lvs scattered, 130 × 12 mm. Stems 0.6-0.8 m, green, with c.10 fls. July.

**‘Smoky Mountain’ VIII(c/d)**

Parentage: large red-flowered Oriental × golden-flowered trumpet

R: Columbia-Platte Lilies (pre 1995), N: Columbia-Platte Lilies, REG: ICRA (1998)

Inside smoky pink and yellow blends, varying from fl. to fl. Fls scented; tepals strongly twisted, tips reflexed. Stems 1.2 m. Early to mid Aug. (An Orienpet (OT) lily.)

**‘Smuglianka’ I(a/-)**

Parentage: ‘Kičunova Piemiņa’ × ‘Connecticut King’

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls sulphur-yellow with bronze tepal-tips and a reddish throat; spots present. Stems 1.3 m, dark, with some bulbils.

**‘Smuščenje’ I(-/b)**

Parentage unknown

R: S.A. Eicher-Lorka (pre 1981), N: S.A. Eicher-Lorka  
Fls salmon-pink. Early.

**‘Snezhana’ I(a/c)**

Parentage unknown

R: M.F. Kireeva & N.V. Ivanova (1994)

Fls creamy white; spots purple-brown, many, on basal two-thirds of each tepal; anthers dark red. Fls 110-130 mm wide; tepal-margins smooth, tips recurved. Stems up to 1.2 m, with 7-11 fls. July.

(Published in M.F. Kireeva, *Lilii*, 71 (2000).)

**‘Snezhinka’ I(a/-)**

Parentage: (‘Rubinovaia’ × (*cernuum* × unknown)) × ‘Liudmila’ (of Kireeva)

R: M.F. Kireeva (1984), N: M.F. Kireeva

Fls white, spotted. Stems 1 m. July.

**‘Snidley Whiplash’ I(b-c/-)**

Parentage unknown

R: H.E. Hoepner (pre 1985), G: S.R. Kaul, N: S.R. Kaul, I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)

Fls brilliant orange; spots black; anthers black. Tepals recurved. Lvs long, dark green. Stems 1.5 m, black, with bulbils, the secondary fls extending beyond the primaries in a long infl. Mid to late season.

**‘Sniegurochka’ I(a-b/-)**

Parentage: complex hybrid involving *cernuum* and its hybrids

R: M.F. Kireeva (c. 1980), N: M.F. Kireeva

Fls white, spotted. Stems 0.8 m, with bulbils. July.

(Included in *ILR Fourth Supplement* as ‘Snieguroczka’ which is an unaccepted spelling.)

**‘Snieguroczka’ I(a-b/-)**

Unaccepted spelling of ‘Sniegurochka’.

**‘Snir’ V(-/a)**

See *longiflorum* ‘Snir’.

**‘Snoopic’ I(a/c)**

Parentage: orange-flowered, up-facing Asiatic seedling × ‘Dazzler’

R: R.F. Nelson (1980), G: R.F. Nelson (1984), N: R.F. Nelson (1986), I: R.F. Nelson, REG: R.F. Nelson (1986)

Inside vivid orange (28A); outside light orange (28C); with minute, scattered brown spots and papillae 10-20 mm from base of tepals; nectaries light orange (28C); pollen vivid reddish orange (34A). Fls 150-160 mm wide; tepals 70-80 × 50 mm, broadly overlapping, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15-20 mm, dark green. Stems 1 m, mid green, with 10-12 fls. Dec. (Australia).

**‘Snovidenie’ I(a/-)**

Parentage: (‘Sterling Star’ × ‘Sunrise’) × white-flowered seedling

R: B.P. Guzhavin (1984), N: B.P. Guzhavin

Fls cream-white with small, purple spots. Stems 0.7 m. June.

**‘Snow Angel’ I(a/-)**

Parentage: ‘Hawaiian Punch’ × ‘Sunrise’

R: J. Wadkamper (1976), N: J. Wadkamper (1978),

REG: J. Wadkamper (1978)

Fls white; spotted for half tepal length; nectaries white; pollen reddish. Lvs wide. Stems 0.6 m.

(Published in *Lilies and other Liliaceae*, 1978/9: 113.)

**‘Snow Angel’ VI(-/l)**

Parentage unknown

R: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1976)

Inside snow-white; spots absent. Stems 1-1.5 m, with 2-3 fls. Jan. (Australia).

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Snowbird’ I(a/c)**

Parentage: ((‘Edith Cecilia’ × ‘Rosabelle’) × (‘Golden Jubilee’ × unknown)) × ((‘Edith Cecilia’ × ‘Rosabelle’) × (‘Golden Jubilee’ × unknown))

R: F. Tarlton, I: F. Tarlton (1972), REG: F. Tarlton (1972)

Fls yellowish white (155D) with small purple spots.

(Published in *Lilies and other Liliaceae*, 1973: 115.)

**‘Snowbrite’ I(b/-)**

Parentage: ‘Edith Cecilia’ × white-flowered seedling of ‘Edith Cecilia’

R: E. Robinson, N: E. Robinson, I: E. Robinson (1973)

Fls pure white, spotted lilac in centre. Stems 1 m. Early July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 17 (1978).)

**‘Snowbrook’ I(a/b)**

Parentage unknown

R: Cebeco Lilies, Inc. (pre 1997), N: Cebeco Lilies, Inc.,

REG: ICRA (1998)

Inside bright white; spots absent; pollen absent. Tepals slightly recurved. Stems 1 m. June.

(Published in *The Lily Nook Cat.*, 1997: 9.)

**'Snow Bunny' Div. ?**

Given as a parent of 'Rena'. No further details.

**'Snow Bunting' I(b/d)**

Parentage: 'Edith Cecilia' × Preston Group

R: E. Robinson (c. 1962), N: E. Robinson (1965)

Fls white, spotted with lilac. Buds white with pink base.

Stems 1 m. July.

(Published in *ILR* (1969).)

**'Snowcap' I(a/-)**

Parentage: 'Connecticut King' × ('Sterling Star' × up-facing, white-flowered Asiatic)

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc.

(1977), N: Oregon Bulb Farms, Inc. (1983), I: Oregon

Bulb Farms, Inc. (1984), REG: Oregon Bulb Farms, Inc. (1985)

Inside pale greenish yellow (9D), throat richer cream; outside soft cream with green shading; spots in centre of fl. only; nectaries green; pollen soft golden yellow. Tepals 80 × 18 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 × 20 mm, mid green. Stems 1.2 m, light green, with 8-25 fls. Late June.

**'Snow Country' I(a/-)**

Parentage: 'Snowstar' × white-flowered seedling

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1997), I: Bischoff Tulleken Lelies B.V. (1998), REG: Bischoff Tulleken Lelies B.V. (1999)

Inside and outside greenish white (155C); spots dark red (187A); papillae few, white; nectaries strong yellow-green (144A); pollen brownish orange (164A); stigma brilliant greenish yellow (151D). Fls 190 mm wide; tepals 100 × 35-45 mm, margins ruffled, tips recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 1.1 m, green, with c.5 fls. June.

**'Snowcrest' IX(b-c/d)**

See *speciosum* var. *album* 'Snowcrest'.

**'Snow Crystal' I(a/b)**

Parentage: seedling A-112-80 × seedling A-077-82

R: Oregon Bulb Farms, Inc. (1982), G: Oregon Bulb Farms, Inc. (1986), N: B. Padberg (1993), I: Cebeco Lilies, Inc. (1994), REG: Cebeco Lilies, Inc. (1994)

Inside yellowish white (158D/155D), throat with a little light yellowish pink (159A) along the top half of each nectaries; outside yellowish white (158D/155D), with a slight blush of dark red near the base; spots absent; nectaries yellow-green; pollen vivid reddish orange (32A). Buds creamy white with a faint red-purple blush. Fls 115 mm wide, buds 60 × 20 mm, pale yellow (11D), with a faint red-purple blush; tepals 65 × 22-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 2.15 m, strong yellow-green (144A) mottled with dark red (183A), with 5-7 fls (from 12 cm

bulbs) in an umbel or modified raceme. Midseason.

Trade designation: WHITE PIXIE®.

**'Snow Diamond' VIII(a/-)**

Parentage: seedling LA 92081-4 × 'Sancerre'

R: De Jong Lelies Holland B.V. (1995), G: De Jong Lelies Holland B.V. (1997), N: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2001)

Inside greenish white (155C); outside greenish white (155C), with a little strong yellow-green (144B) at base and apex; spots and papillae absent; nectaries greenish white (155C) surrounded by strong yellow-green (144A/B) stripes; pollen greyish brown/moderate reddish brown (166A/B); stigma brilliant yellow-green (154C). Fls 190 mm wide; tepals 120-125 × 45-70 mm, margins smooth, tips recurved. Lvs scattered, 140 × 25 mm. Stems 1-1.2 m, green with a little darker marking, and with c.4 fls. June to July.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Snowdon' VII(a-b/-)**

Parentage: unnamed seedling × unnamed seedling  
R: Peacock B.V. & Imanse Lelieveredeling B.V.

(1992), G: Peacock B.V., N: Peacock B.V. & Imanse Lelieveredeling B.V. (1995), I: Peacock B.V. & Imanse Lelieveredeling B.V. (1995), REG: Peacock B.V. (1997)  
Inside yellowish white (155D), midveins yellowish white (155B); outside yellowish white (155D), midribs brilliant yellow-green (150B/C), tipped strong yellow-green (143A); yellowish white (155D) spots and papillae in the throat; nectaries strong yellow-green (143C); pollen strong orange (169C); stigma pale yellow-green (196C) and moderate purplish red (58A). Fls 220 mm wide; tepals 130-135 × 45-60 mm, margins ruffled, tips recurved. Lvs scattered, 140 × 45 mm, mid green. Stems 0.9 m, light green, with c.3 fls.

**'Snow Dream' VII(a/b)**

Parentage: unnamed hybrid ex Laan × unnamed hybrid ex Laan

R: Gebr. N. & B. Laan & Zn (1989), G: Gebr. N. & B. Laan & Zn (1992), N: Gebr. N. & B. Laan & Zn (1995), I: Gebr. N. & B. Laan & Zn (1996), REG: Gebr. N. & B. Laan & Zn (1996)

Inside yellowish white (155D), midveins pale greenish yellow (2D); outside yellowish white (155D), midribs light yellow-green (150D), tinged with strong yellow-green (144C) at base and top; spots pale greenish yellow (2D) on two-thirds of each tepal; papillae in the throat; nectaries strong yellow-green (144C); pollen brownish orange (171B); stigma dark red/very dark brown (187A/200A). Fls 240 mm wide; tepals 120 × 42-50 mm, margins ruffled, tips recurved. Lvs scattered, 180 × 30 mm, mid green. Stems 1.1 m, pale green, with 4-9 fls. June.

**'Snowdrift' V(b/a)**

See *longiflorum* 'Snowdrift'.

**'Snowdrift' VII(-/c)**

See *L. × parkmanii* 'Snowdrift'.

**'Snowdrop' I(c/-)**

Parentage: complex hybrid

R: C.F. Patterson (pre 1961), I: Dept. of Horticulture, University of Saskatchewan (1969)

Fls yellowish white (155D); spots present; nectaries brilliant yellow-green (150B). Outer tepals reflexed. Stems 1 m. July.

(Published erroneously as 'Snow Drop' in *ILR* (1969).)

**'Snow Drop' I(c/-)**

Error for 'Snowdrop'.

**Snow Falcon Flares Group VI(-/a)**

Parentage: selections from Aurelian Group

S: C. Yerex, N: C. Yerex, I: Walter Marx Gardens (1961)

Fls selected for whiteness, usually with some light yellow or chartreuse at centre. July.

(Published in *ILR* (1969) as Snow Falcon Flares grex.)

**'Snowfall' Div. ?**

Given as a parent of 'Stowport Heart Starter'. No further details.

**'Snowfire' I(b/-)**

Parentage unknown

R: W.S. Summers, G: W.S. Summers, N: W.S. Summers (1982), I: Borbeleta Gardens (1983), REG: Borbeteta Gardens (1983)

Inside brilliant greenish yellow (4A), tepal-tips vivid yellow (13A), throat frosty green; outside brilliant yellow (10A); spots brown, on half of each tepal; nectaries frosty green; pollen orange-yellow. Tepals 82 × 36 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 12 mm, pale green. Stems c.0.6 m, light green, with 9-12 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1983.)

**'Snowflakes' VII(b-c/b)**

See *L. × parkmanii* 'Snowflakes'.

**'Snow Gem' VII(-/c)**

Parentage: *auratum* × unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1963), N: R.L. Strahm (1969), I: H.J. & R.L. Strahm (1974),

REG: Strahm's Lilies, Inc. (1983)

Inside white, throat moderate yellow-green (139C); outside white to pale green; spots vivid red (46B) on middle of tepals; nectaries moderate yellow (162B); pollen dark reddish orange (172B). Fls up to 75 mm wide; tepals 150 × 15 mm, margins ruffled, tips slightly recurved. Lvs scattered, 250 × 75 mm, dark green. Stems 1.9 m, green, with 6-12 fls. Late Aug.

(Published in Strahm's sales list, 1974.)

**'Snow Goose' IV(-/d)**

Parentage: complex *kelloggii* × *pardalinum* hybrid

R: J. de Graaff (c. 1965), N: J. de Graaff

Tepals with lilac tips, fading to white, centre deep orange.

**'Snow Hill' V(b/a)**

Parentage: *formosanum* var. *pricei* 'Snow Queen' ×

***longiflorum* 'Sacré Coeur'**

R: W. Langelaan (1994), G: W. Th. Langelaan & Zn B.V. (1996), N: W. Langelaan (1999), I: W. Th. Langelaan & Zn B.V. (1999), REG: W. Th. Langelaan & Zn B.V. (1999)

Inside yellowish white (155D), midveins strong yellow-green (144C); outside yellowish white (155D), midribs with a light yellow-green (144D) flush; spots and papillae absent; pollen vivid yellow (14A); stigma light yellow-green (145C). Fls 170 mm wide; tepals 180 × 50-70 mm, margins smooth, tips strongly recurved. Lvs scattered, 180 × 30 mm, mid green. Stems 1.1 m, green, with 2-4 fls. Late July.

**'Snow King' VII(-/b)**

Parentage: 'Fair Lady' × *nobilissimum*

R: E.A. McRae (1967), G: Oregon Bulb Farms, Inc. (1970), N: Oregon Bulb Farms, Inc. (1986), REG:

Oregon Bulb Farms, Inc. (1986)

Fls pure white, throat soft cream; midribs soft green; spots magenta-pink, 10-20 on each inner tepal; papillae few, white and magenta; nectaries apple-green; pollen moderate red (179A). Fls 200-220 mm wide; tepals 100-115 × 35-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 230-120 × 70 mm, dark green. Stems 0.9-1.05 m, light green, with 4-20 fls. Late Aug.

(There are three lilies bearing the epithet 'Fair Lady'. The seed parent of 'Snow King' is probably 'Fair Lady' (Div. VII).)

**'Snow Kiss' I(a/-)**

Parentage: 'Exception' × 'White Happiness'

R: Gebr. N. & B. Laan & Zn (1982), G: Gebr. N. & B. Laan & Zn (1984), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)

Fls pure white throughout; unspotted; nectaries green-white; pollen absent. Fls 100 mm wide, with tepaloid stamens making 12 tepals; tepals 60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 20 mm, dark green. Stems 0.5 m, green, with c.7 fls. June.

**'Snow Lady' I(a/c)**

Parentage: 'Edith Cecilia' × 'Snow Bunting'

R: J.G. Smith (1979), G: J.G. Smith (1981), N: J.G. Smith (1985), REG: J.G. Smith (1985)

Fls white throughout; midribs suffused with red at base; spots small, red, in centre of fl.; nectaries white; pollen tan. Tepals 65 × 26 mm, margins smooth, tips slightly recurved. Lvs scattered, 62 × 7 mm, dark green. Stems 0.7 m, brown, with c.8 fls.

**'Snow Lake' VII(a/b)**

Parentage: ('Star Gazer' × 'Merci') × (('Sans Souci' × 'Star Gazer') × 'Casa Blanca')

R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside and outside yellowish white (155D), midribs light yellow-green (145C) at base, brilliant greenish yellow

(151D) at top, with strong yellow-green (144A) tip; spots and papillae yellowish white (155D); nectaries light yellow-green (145C); pollen strong reddish orange (169A); stigma dark purple (79B). Fls 230 mm wide, fragrant; tepals 155 × 70 mm, margins ruffled, tips recurved. Lvs scattered, 212 × 37 mm, dark green. Stems 1.2 m, green, with 4 fls. July.

**‘Snow Lark’ I(b/-)**

Parentage: seedling Tesca 6 × ‘Hawaiian Punch’  
R: J. Wadekamper (1973), N: J. Wadekamper (1979), I: Borbeleta Gardens (1980), REG: J. Wadekamper (1979)  
Fls pure white throughout; spots black, on half of each tepal; nectaries white; pollen reddish. Tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 17 mm, mid green. Stems 1 m, green, with 18-27 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1980. Disease-resistant. This is not the plant listed under this epithet in *Lilies and other Liliaceae*, 1978/1979: 113, which proved to be very susceptible to disease and was destroyed before any stock or pollen was released.)

**‘Snow Leopard’ I(a-b/b)**

Parentage unknown  
R: F. Fellner (mid 1980s), G: F. Fellner (1989), N: F. Fellner (1999), I: Riverside Gardens (2000), REG: F. Fellner (1999)  
Inside cream, throat cream; outside green/cream; spots red-brown on three-quarters of each tepal; pollen brown; stigma reddish brown. Tepal-margins smooth, tips not or very slightly recurved. Stems 0.6-0.8 m, green, with 8-10 fls. Late July.

**‘Snow Maid’ V(b/a)**

See *longiflorum* ‘Snow Maid’.

**‘Snow Paradise’ VIII(b/a)**

Parentage: *longiflorum* ‘Hinomoto’ × *candidum*  
R: Sakata Co. (1986), G: Sakata Co. (1991), N: Sakata Co. (1991), REG: ICRA (1998)  
Inside and outside pure white, suffused with green in the throat and at base outside; spots absent; pollen pale orange-yellow; stigma greenish white. Fls 145 mm wide; tepals relatively short and broad, broadly overlapping, margins not or very slightly wavy, inner tepals slightly recurved at tips, outer more strongly so. Stems 1.2 m, with 3-5 fls.

**‘Snow Pearl’ VII(a/b)**

Parentage: ‘Vedea’ × ‘Spinoza’  
R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)  
Inside yellowish white (155D); outside yellowish white (155D), midribs strong yellow-green (144C) at base and top, in between pale yellow-green (155A); spots absent; papillae yellowish white (155D); nectaries moderate yellow-green (143D); pollen strong/moderate reddish orange (169A/171A); stigma pale yellow-green (193D). Fls 220 mm wide, fragrant; tepals 130 × 42-68 mm, margins slightly ruffled, tips recurved. Lvs scattered, 140

× 37 mm, dark green. Stems 0.9-1.15 m, green with darker markings, and with 3-8 fls.

**‘Snow Pixie’ I(c/-)**

Parentage: *pumilum* hybrid 265 × seedling 1166  
R: C. Robinson (1971), N: C. Robinson (1982), I: C. Robinson (1983), REG: C. Robinson (1982)  
Inside and outside white, overlaid with apricot, soon fading to almost pure white; spots absent; nectaries yellow; pollen orange. Fls 75 mm wide; tepals 64 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 85 × 10 mm, mid green. Stems 0.75 m, mid green, reddish brown near base, with 16-18 fls. Early June.

**‘Snow Plume’ I(b/-)**

Parentage unknown  
R: H.E. Hoepner (pre 1985), G: S.R. Kaul, N: R. Mitchell, I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)  
Fls white, tinged with green. Tepal-margins slightly ruffled, tips slightly recurved. Lvs mid green. Stems 1.6 m, dark green, with male-sterile fls in a long, well-spaced infl. Mid to late season.

**‘Snow Princess’ Div. ?**

Given as a parent of ‘Nevada’. No further details.

**‘Snow Queen’ V(b/a)**

See *formosanum* var. *pricei* ‘Snow Queen’.

**‘Snowsprite’ V(b/a)**

See *wallichianum* var. *neilgherrense* ‘Snowsprite’.

**‘Snowstar’ I(a/b-c)**

Parentage: ‘Sterling Star’ × Asiatic seedling  
R: Bischoff Tulleken Leliecultuur B.V. (1976), G: Bischoff Tulleken Leliecultuur B.V. (1979), N: Bischoff Tulleken Leliecultuur B.V. (1984), I: Bischoff Tulleken Leliecultuur B.V. (1985), REG: Bischoff Tulleken Leliecultuur B.V. (1985)  
Inside greenish white, throat bright chartreuse-green; outside greenish white, midribs chartreuse; spots tiny, dark brown, in a star-shaped crown; nectaries greyish yellow; pollen ochre brown. Fls 155 mm wide; tepals 75 × 40 mm, margins slightly recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 1-1.25 m, with dark pigment and 8-12 fls (from 16-18 cm bulbs).

**SNOW STORM I(a-b/b)**

Trade designation of ‘Aspin’.

**‘Snow Trumpet’ V(-/l)**

See *longiflorum* ‘Snow Trumpet’.

**‘Snow White’ V(b/a)**

See *longiflorum* ‘Snow White’.

**‘Snowy’ VII(-/c)**

See *L. × parkmanii* ‘Snowy’.

**'Soar' VII(a-b/c)**

Parentage: 'Easter Bunny' × 'Star Gazer'

R: CPO, Wageningen, G: CPO, Wageningen (1990), N: W. Braakman B.V. (1998), I: W. Braakman B.V. (1998), REG: W. Braakman B.V. (1998)

Inside deep purplish pink (67C), tepals narrowly edged yellowish white (155B), midvein on basal part of tepal a little stronger than strong purplish red (63A), throat yellowish white (155B); spots deep red (60A) on a third of each tepal; papillae white tipped with deep red (60A), in the throat; nectaries strong yellow-green (144B); pollen dark red (183A); stigma dark red (59A). Fls 180 mm wide; tepals 100 × 30-40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 120 × 30 mm, mid green. Stems green with pale markings, and with 3-5 fls. July.

**'Soaring' I(a/b)**

Parentage: seedling 93.10.450 × seedling 93.10.661-1

R: World Breeding B.V., N: World Breeding B.V., REG: World Breeding B.V. (2004)

Inside vivid orange-yellow (21A), tepal-margins more red; outside brilliant orange to light orange-yellow (25C/D); spots few; papillae absent; nectaries orange, with red spot at base; pollen orange; stigma pink-red. Tepals small to medium sized, margins slightly ruffled, tips moderately to strongly recurved. Stems tall to very tall, green with darker spots and stripes.

**'Sofia' I(b/-)**

Misspelling of 'Sofija'.

**'Sofija' I(b/-)**

Parentage: selection from Vasaras Prieks Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Syn.: 'Sophia'.

(Published in *LYB* 33: 78 (1970) and included in *ILR* (1982) as 'Sofia' which is a misspelling.)

**'Sofokl' I(a/-)**

Parentage: 'Altyn' × 'Iolanta'

R: A.V. Otroshko (1990), N: A.V. Otroshko, REG: A.V. Otroshko (1994)

Inside soft rosy pink; spots black, on basal third of each tepal; nectaries yellowish green; pollen light yellow. Tepals 82 × 25-34 mm, margins smooth, tips slightly recurved. Stems 1.3 m, green, with c.12 fls and some bulbils. July.

**'Soft Moonbeam' VI(-/c)**

Parentage: (*henryi* × unknown) × *henryi*-type Aurelian

R: J. Wadepkamper (1974), N: J. Wadepkamper (1980), I: Borbeleta Gardens (1981), REG: Borbeleta Gardens (1981)

Inside white, with basal half of tepals light yellow (10C); outside white, flushed with tan, with faint, brown dusting on tepal-edges; nectaries green; pollen mid brown. Tepals 110 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 130 × 30 mm, mid green. Stems 1 m, brownish green, with 24-28 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1981.)

**'Sogdiana' VI(-/a-b)**

Parentage: Golden Dawn Group × unknown

R: I. Wiesner (1989), N: I. Wiesner, REG: I. Wiesner (1990)

Inside lemon-yellow, throat darker, tepal-tips paler; outside with green midribs; pollen cinnamon; stigma green. Fls 90 × 145 mm; tepals 100 × 38 mm, margins wavy; pedicels 60-80 mm long. Lvs scattered, 100 × 8 mm, dark green. Stems 0.8-1 m, greenish brown. Bulbs violet-brown. Late July.

**'Šohaj' I(b-c/d)**

Parentage: 'Hawaiian Punch' × 'Wattle Bird'

R: B. Mičulka, N: B. Mičulka, REG: B. Mičulka (1987)

Inside rose-crimson, tepal-tips paler; outside paler with a beige tint, midribs beige; spots numerous, medium sized, dark violet, on two-thirds of each tepal; nectaries white-frosted; pollen orange-brown. Fls 105 mm wide; tepals 95 × 42 mm, slightly twisted; pedicels 60 mm long. Lvs 100 × 13 mm, glossy dark green. Stems 0.9 m. Early July.

**'Soirée' I(a/b)**

Parentage: (('Connecticut Red' × unnamed seedling) × 'Roter Cardinal') × 'Avignon'

R: Mak-Leek Inc. (1990), G: Mak-Leek Inc. (1992), N: Mak-Leek Inc. (1996), I: Mak-Leek Inc. (1997), REG: Mak-Leek Inc. (1997)

Inside tepal-tips and edges vivid to strong reddish orange (42A/B), shading to vivid yellow (15A/17B) in throat; outside dark to very dark red; basal half of each tepal spotted with vivid reddish orange (more-or-less 43A) papillae; nectaries vivid reddish orange (33A); pollen vivid reddish orange (34A). Fls c.115 mm wide; tepals 75 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 0.8-1.1 m, dark green, with 8-13 fls. June to July.

Trade designation: GOOD NIGHT.

(Published in *The Lily Nook Cat.*, 1998: 15 (where it is said to be a tetraploid).)

**'Sojus' I(a/b)**

Parentage: 'Orange Kandelaber' × 'Connecticut King'

R: G. Thürmer (1982), G: G. Thürmer (1983), N:

G. Thürmer (1990), I: G. Thürmer (1990), REG: G. Thürmer (2001)

Inside vivid yellow (12A), throat greenish; outside yellow, midribs vivid yellowish green (140A); spots dark red (183B), few, variably sized, in centre of fl.; nectaries vivid yellowish green (140A); pollen strong brown (172A). Tepals 80 × 40 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 100 × 16 mm. Stems 1 m, pale green, with 10-15 fls. Early to mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0030337).)

**'Solaia' VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling

R: Vletter & Den Haan Beheer B.V. (1988), G: Vletter &

Den Haan Beheer B.V., N: Vletter & Den Haan Beheer

B.V. (1995), I: Vletter & Den Haan Beheer B.V., REG:

Vletter & Den Haan Beheer B.V. (1998)

Inside strong purplish red (60B), becoming more purplish with age, each tepal paler at tip and base and edged white, midveins yellow changing to deep red (185A); outside strong purplish red (60C); spots many; papillae present; nectaries green; pollen orange-brown; stigma purple. Tepal-margins ruffled, tips strongly recurved. Stems 1.35 m, green, and with c.10 fls. Early to midseason.

**‘Solar Eclipse’ VII(-/b)**

See *L. × parkmanii* ‘Solar Eclipse’.

**‘Solar Flare’ I(a/-)**

Parentage: ‘White Tiger’ × ‘Snow Lark’

R: Hartle-Gilman Gardens (1981), G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1984), I: Hartle-Gilman Gardens (1992), REG: Hartle-Gilman Gardens (1992)

Inside light orange-yellow (16C), tepal-tips and edges a darker orange-yellow, throat and outside light yellow (14D); spots few, tiny, dark, in centre of fl.; nectaries dark green, frosted; pollen absent. Tepals 80 × 36 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 11 mm, dark green. Stems 1.1 m, yellow-green, with up to 20 fls. Midseason.

(Published in Hartle-Gilman Gardens list, 1992.)

**‘Solaris’ I(b-c/d)**

Parentage: Sutter’s Gold Group × ‘Hornback’s Gold’

R: B Mičulka (c. 1982), N: B. Mičulka, REG: B. Mičulka (1984)

Inside yellow, each tepal with an apricot centre, throat pale yellow; outside beige; spots numerous, small, red-brown on half of each tepal; nectaries pale yellow; pollen ochre. Fls 105 mm wide; tepals strongly recurved. Lvs 80 × 18 mm, dark green. Stems 1.2 m, spotted brown at base. Early July.

**‘Soldera’ VII(a/b)**

Parentage: unnamed seedling × ‘Joy’

R: Gebr. Vletter & Den Haan (1988), G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1996), I: Gebr. Vletter & Den Haan (1996), REG: Gebr. Vletter & Den Haan (1996)

Inside strong purplish red (60C), each tepal with a narrow yellowish white (155D) edge, throat yellowish white (155D); outside moderate purplish red (58A) on a yellowish white ground, base yellowish white (155A), blending into midribs; spots dark red (187B); papillae absent; nectaries strong yellow-green (144A); pollen moderate reddish orange/brownish orange (171A/B); stigma dark red (187A). Fls 170 mm wide; tepals 105 × 45-50 mm, margins hardly ruffled, tips recurved. Lvs scattered, 150 × 25 mm, mid green. Stems 0.9 m, pale green with darker markings, and with c.4-7 fls. Trade designation: VLET SOL.

**‘Soleil’ I(a/b)**

Parentage: ‘Golden Show’ × seedling OR 91-10

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1997), I: Vletter & Den Haan Beheer B.V., REG:

Vletter & Den Haan Beheer B.V. (2001)

Inside vivid reddish orange (30B), paler towards tepal-edges, throat vivid yellowish orange (30C), paler towards edges; outside vivid reddish orange (30B) with a little moderate yellow-green (148A) at the base, tepals tipped strong yellow-green (143A); spots absent; papillae vivid reddish orange (30A) in the throat; pollen moderate reddish brown (175A); stigma dark red (187B). Fls 210 mm wide; tepals 110 × 35-50 mm, margins smooth, tips recurved. Lvs scattered, 180 × 10 mm. Stems 1.1 m, green with some darker markings, and with 3-11 fls.

**‘Solemio’ I(a/b)**

Parentage: seedling G 937 × ‘Parma’

R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside vivid yellow (9A), throat slightly suffused with brilliant greenish yellow (1B); outside brilliant yellow (9C), midribs brilliant yellow-green (150A/B), tepal-edges vivid yellow (9B); spots few, small, dark red (187A) in the throat of inner tepals only; nectaries dark red (187B); pollen greyish brown (166A). Fls 165 mm wide; tepals 80 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.1 m, with c.7 fls.

**‘Solemnity’ I(a/c)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (1981), G: J. Vasarietis (1985), N: J. Vasarietis (1988), I: J. Vasarietis (1988), REG: J. Vasarietis (1992)

Inside light orange-yellow (24C) in the throat gradually shading to pale yellow (20D) at tepal-tips; outside pale orange-yellow (24D); spots absent; nectaries orange; pollen brown. Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 35 mm, dark green. Stems 0.5-0.55 m, dark green, with 7-12 fls. Mid July.

Syn.: ‘Advent’.

(Originally named and introduced in 1988 as ‘Advent’, but this epithet had already been used, so this lily was registered as ‘Solemnity’.)

**‘Solfarino’ I(a-b/b)**

Parentage: seedling 5804-1 × seedling A-204-7

R: World Flower B.V. (1990), G: World Flower B.V. (1992), N: World Flower B.V. (2000), I: World Flower B.V. (2000), REG: World Flower B.V. (2000)

Inside strong red (46A), base a little paler than moderate red (179A), tepal-tips paler; outside moderate red (179A); spots and papillae present; nectaries red; pollen dark brown; stigma red-purple. Fls 140 mm wide; tepals 65 × 45 mm, margins smooth to ruffled, tips recurved. Lvs scattered, 120 × 20 mm. Stems 1 m, green with dark spots and stripes, and with c.6 fls. Very early. (The spelling, with an ‘a’, is deliberate.)

**‘Solid Gold’ I(a/-)**

Parentage: (‘Judith’ × ‘Connecticut King’) × ‘Festival’

R: Lybelmex Hillegom B.V. (1982), G: Lybelmex

Hillegom B.V. (1984), N: Lybelmex Hillegom B.V. (1990), I: Lybelmex Hillegom B.V., REG: De Lijster Hillegom B.V./Lybelmex Hillegom B.V. (1990) Inside vivid yellow (12A/14B); outside of outer tepals moderate reddish orange (178C), outside of inner tepals vivid yellow (12A), edged vivid yellow (13A), midribs flushed with brownish red; spots absent; nectaries dark red (187A); pollen strong orange (169B/C). Fls 190 mm wide; tepals 95 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 15 mm, mid green. Stems 0.9 m, green with darker markings, and with c.6 fls. July to Aug.

**‘Solistka Baleta’ IX(b/c)**  
See *henryi* ‘Solistka Baleta’.

**‘Solitaire’ I(a/c-d)**  
Parentage: ‘Skywatcher’ × mixed pollen of ‘Fanal’ & ‘Brushstroke’  
R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)  
Inside moderate orange (167C), tepal-tips light orange-yellow (16B), throat pale yellow-green (157C) and noticeably hoary; outside moderate orange (167C); spots dark reddish orange (175B), numerous, small, on basal three-quarters of each tepal, the spots hardly distinct from a very diffuse brushmark of the same colour; nectaries green-white; pollen greyish red (178A); stigma light greenish yellow (4C). Fls 150 mm wide; tepals 90 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 21 mm. Stems 1.1 m, dark green, with 8-10 fls. Mid July.  
(The cv. epithet is the name of the hotel in which the European Lily Society held their 1999 show.  
Nomenclatural standard: colour print provided by registrant (WSY 0024708).)

**‘Solitudine’ I(a/-)**  
Parentage: (‘Alpine’ × unnamed seedling) × (unnamed seedling × ‘Make Up’ (of Lybelmex))  
R: Lybelmex Hillegom B.V. (1988), G: Lybelmex Hillegom B.V. (1990), N: Lybelmex Hillegom B.V. (1996), I: Lybelmex Hillegom B.V., REG: Lybelmex Hillegom B.V. (1996)  
Inside yellowish white (155D), throat strong yellow-green (144B) along the nectaries; outside yellowish white (155D), midribs strong yellow-green (144C), tinged dark reddish orange (178C) at base; spots few, dark red (187A); papillae few, in the throat; nectaries white-hairy; pollen brownish orange (164A); stigma strong yellow-green (143C). Fls 170 mm wide; tepals 90 × 35-50 mm, margins smooth, tips hardly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 1.25 m, green with darker markings, and with c.13 fls. June to July.

**‘Solnechnaia’ I(a/b)**  
Parentage: ‘Stroinaia’ × Golden Chalice Group  
R: M.F. Kireeva (c. 1974), N: M.F. Kireeva  
Fls bright yellow, shaded apricot; outside slightly downy; spots present; pollen and stigma dark brown. Fls 110-120

mm wide; tepals 70-75 × 45 mm, nearly ovate. Lvs 100 × 10 mm, dark green. Stems 0.7-0.9 m, greenish brown, with bulbils. Very early.  
(Published in M.V. Baranova, *Lilii*, 322 (1990). Included in *ILR Third Supplement* as ‘Solnechnaja’ which is an unaccepted spelling. Baranova gives the year of raising as 1983, and the flowering time as June.)

**‘Solnechnaia Dolina’ VI(-/-)**  
Parentage: (*henryi* × Olympic Group) × trumpet hybrids  
R: N.G. Korshikova (1989)  
Fls golden yellow, scented. Stems 1.1-1.2 m, with 5-9 fls. July to Aug.

**‘Solnechnaja’ I(a/b)**  
Unaccepted spelling of ‘Solnechnaia’.

**‘Solntse Rossi’ Div. ?**  
Given as a parent of ‘Lubov Moja’, ‘Pamiat Druga’ and ‘Sirius’ (Div. VI). No further details.

**‘Solo’ VII(a/-)**  
Parentage unknown  
N: A. van der Marel B.V. (2003), REG: Van der Marel Lelie B.V. (2005)  
Inside greenish white (155C), tepals brilliant yellow (12B) in basal part; outside greenish white (155C); spots yellow; papillae present; nectaries yellow-green; pollen orange-brown; stigma purple. Tepals medium sized, margins strongly ruffled, tips slightly recurved. Lvs scattered. Stems mid-height, green. Midseason.

**‘Solomon Pearl’ VII(a/c)**  
Parentage: ‘Bernini’ × ‘Abruzzo’  
R: De Jong Lelies Holland B.V. (1996), G: De Jong Lelies Holland B.V. (1998), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2003)  
Inside vivid purplish red (57D), throat yellowish white (155D), yellowish white (155D) above nectaries and on basal half of midveins; outside strong purplish pink (73B), yellowish white (155D) at base and on basal third of midribs; spots vivid red (57A); papillae yellowish white (155D); nectaries strong yellow green (144C); pollen moderate reddish orange (171A); stigma light yellow green (150D). Fls 260 mm wide, slightly fragrant; tepals 147 × 65 mm, margins slightly ruffled, tips recurved. Lvs 180 × 38 mm. Stems 1.1 m, green with darker markings, with c.5 fls.

**‘Solotaya Devochka’ I(b/-)**  
Unaccepted spelling of ‘Zolotaia Devochka’.

**‘Solstice’ I(a/c)**  
Parentage unknown  
Fls pale yellow with a brighter apricot centre.  
(Weather-resistant. Perhaps raised in Canada.)

**‘Solvita’ I(a-b/-)**  
Parentage unknown  
R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs

(1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)  
Fls dark yellow throughout; numerous dark brown spots on half of each tepal. Tepals 70 × 40 mm. Lvs scattered, 100 × 7 mm. Stems 1 m, with c.14 fls.  
(Published in *Dārzs un Drava* 7: 2 (1986).)

#### **'Sombbrero' VII(a-b/b)**

Parentage: yellow-/white-flowered seedling × (*L.* × *parkmanii* Little Rascal Group × 'Star Gazer')  
R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1996)  
Inside yellowish white (155D), tepals suffused with strong purplish red (59D) at tips and along edges, midveins brilliant yellow/light greenish yellow (8A/B) at base, throat yellowish white (155D); outside yellowish white (155D), tepals slightly suffused with strong purplish red (59D) at tips and along edges, midribs paler than light yellow-green (150D) with some reddish brown at the base and with strong yellow-green (144B) at the top; spots deep red (60A) and vivid yellow (9A); papillae present; nectaries strong yellow-green (144B); pollen strong orange (169B); stigma dark red (59A/187B) on a moderate yellow-green (147C) ground. Fls 180 mm wide; tepals 100 × 45-65 mm, margins ruffled, tips recurved. Lvs scattered, 115 × 75 mm, mid green. Stems 0.6 m, green with darker markings, and with c.7 fls. July.

#### **'Somers Jewel' I(b/-)**

Parentage: 'Pumpkin Sweet' × 'Ambrosia'  
R: G.C. Keast (1986), G: G.C. Keast (1988), N: G.C. Keast (1990), I: G.C. Keast, REG: G.C. Keast (1991)  
Inside and outside moderate yellowish pink (38B), throat strong yellowish pink (38A); spots maroon on basal half of each tepal and a deeper flush on the midveins; nectaries slightly frosted; pollen brown. Fls 130 mm wide; tepals 70 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm. Stems 0.95 m, black, with c.10 fls. Mid Dec. to early Jan. (New Zealand).

#### **'Somers Joy' I(a/-)**

Parentage: 'Pumpkin Sweet' × 'Ambrosia'  
R: G.C. Keast (1987), G: G.C. Keast (1989), N: G.C. Keast (1990), I: G.C. Keast, REG: G.C. Keast (1990)  
Inside clear lemon, fading to white, tepal-tips lemon, throat deep yellow; outside with red midribs; spots absent; nectaries with a slightly frosted centre; pollen brown. Fls 50 mm wide; tepals 30 × 15 mm, margins smooth, tips slightly recurved. Lvs scattered, 40 × 24 mm, mid green. Stems 1 m, green, with c.8 fls. Late Nov. to late Dec. (New Zealand).

#### **'Somers Light' I(b/-)**

Parentage: 'Pumpkin Sweet' × 'Ambrosia'  
R: G.C. Keast (1987), N: G.C. Keast (1990), I: G.C. Keast, REG: G.C. Keast (1990)  
Inside clear lemon-yellow, fading to white, throat deep yellow; outside with red midribs; spots absent; nectaries with a slightly frosted centre; pollen brown. Fls 50 mm wide; tepals 30 × 15 mm, margins smooth, tips slightly

recurved. Lvs scattered, 40 × 24 mm, mid green. Stems 1 m, green, with c.8 fls. Late Nov. to late Dec. (New Zealand).

#### **'Somers Morn' I(b-c/-)**

Parentage: 'Ambrosia' × 'Black Butterfly'  
R: G.C. Keast, G: G.C. Keast (1985), N: G.C. Keast (1988), REG: G.C. Keast (1988)  
Inside vibrant red, throat cream; outside cream; spots absent; pollen brown. Fls 35 mm wide; tepals 20 × 13 mm, margins smooth, tips slightly recurved; pedicels 25-30 mm long. Lvs scattered, 110 × 5 mm, dark green. Stems 1 m, black, with 12-20 fls. Midseason.

#### **'Something Else' I(a/b)**

Parentage: 'Carol Jean' × 'Rosabelle'  
R: B. Strohmman (1987), G: B. Strohmman (1989), N: B. Strohmman (1994), I: B. Strohmman (1994), REG: B. Strohmman (1994)  
Inside with the apical part of tepals creamy white (159D), the central part deep red to deep pink (185A/D) forming a rather diffuse brushmark, deepest in centre of mark; outside creamy white (159D); spots dark red on basal half of each tepal; nectaries very pale green (189D); pollen deep purplish red (61A). Fls 140 mm wide; tepals 75 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 65 × 12 mm, mid green. Stems 0.6-0.85 m, dark green, with c.10 fls. Early to late July.

#### **'Sommeranfang' I(b/c-d)**

Parentage: 'Amurgold' × up-facing Asiatic seedling  
R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)  
Inside moderate yellow (162B), tepal-tips yellowish white (158D), throat creamy white (159D); outside moderate yellow (162B), midribs pale green; spots numerous, medium sized, deep purplish red (71A) on three-quarters of each tepal; nectaries pale yellow-green (157C); filaments creamy white (159D); pollen strong orange (25B); style thick, moderate yellow-green (146B); stigma dark purple (79A). Buds downy. Fls 130 mm wide; tepals 60 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm. Stems 1.25 m, pale green, with c.19 fls. Mid to late June.  
(Nomenclatural standard: colour print provided by registrant (WSY 0028907).)

#### **'Sommerflirt' I(a/c-d)**

Parentage: 'Dawn Star' × 'Butterscotch'  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)  
Inside yellowish white (158D) with a brilliant orange-yellow (21B) flush towards base; outside yellowish white (158D), midribs pale green; spots few, medium sized, deep purplish red (61A) on basal half of each tepal; nectaries large, yellowish grey (156B), papillate; pollen dark reddish orange (175B); stigma moderate reddish orange (175D) on a long, pale style. Fls 160 mm wide; tepals 80 × 35 mm, margins smooth, tips lightly reflexed.

Lvs scattered, 120 × 11 mm. Stems 1 m, pale green with c.8 fls. Early July.

(Nomenclatural standard: colour print provided by registrant (WSY 0028898).)

### 'Sommergold' I(a/-)

Parentage unknown

R: J. Klein (pre 1988), N: J. Klein

Fls large, golden yellow. Stems 1 m. July.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Summer Gold'. Published in German Lily Group sales list, 1988.)

### 'Sommerluft' I(a-b/b-c)

Parentage: 'Sunstar' × 'Sinai'

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1996), I: G. Steinbrück (1997), REG: G. Steinbrück (1998)

Inside and outside deep red (53A); spots absent; nectaries not noticeably contrasting in colour; pollen and stigma pale brown. Fls 130 mm wide; tepals 65 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 11 mm, mid green. Stems 0.8 m, rather dark green, with up to 10 fls. Early July.

### 'Sommers Darling' I(b/c)

Parentage: (Selected form of *davidii* var. *willmottiae* × *davidii* var. *unicolor*) × (selected form of *davidii* var. *willmottiae* × 'Pink Triangle')

R: N. Martschinke (1980), G: N. Martschinke (1984), N: N. Martschinke (1987), I: N. Martschinke (1996), REG: N. Martschinke (1997)

Inside light to pale yellow (19B/C), throat light orange-yellow (19A); outside with greenish stripes; fine brown spots on basal half of each tepal; nectaries greenish; pollen moderate reddish orange (35A); stigma moderate yellow (162A). Fls 150 mm wide; tepals 83 × 35 mm, margins smooth, tips recurved; pedicels slightly curved. Lvs scattered, 80 × 8 mm, mid green. Stems 1.2 m, green, with c.15 fls. Early July.

(Published in European Lily Society sales list, 1995.)

### 'Sommersonne' I(a/c)

Parentage: 'Abendsonne' × 'Connecticut King'

R: A. Weinreich, G: A. Weinreich (1980), N: A. Weinreich (1984), I: A. Weinreich (1985), REG: A. Weinreich (1984)

Inside vivid yellow (13A), throat vivid orange-yellow (23A); outside brilliant yellow (13B); spots large, dark red (187A), on half of each tepal; nectaries brilliant yellow (13C); pollen moderate orange (167A). Fls 180 mm wide; tepals 103 × 52 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 92 × 16 mm, mid green. Stems 1 m, with c.9 fls. July. Triploid.  
Syn.: 'Andromeda'.

### 'Sommertag' I(a-b/d)

Parentage: 'Destiny' × unknown

R: H. Böhm (pre 1981), N: H. Böhm, REG: H. Böhm (1987)

Fls yellow, tepal-centres darker, throat paler; spots

numerous, large, on two-thirds of each tepal; nectaries green, white-frosted; pollen brown. Fls 105 mm wide; tepals 75 × 31 mm. Lvs 90 × 8 mm, glossy dark green. Stems 1-1.3 m, red-brown, darker at base. Early July.  
Syn.: 'Gelbe Dolde'.

### 'Sommertraum' Div. ?

Given as a parent of 'Gurmán', 'Saxana' and 'Trend' which were raised by B. Mičulka. Mičulka says it was raised by P. Geiser. It has not been submitted for registration and there are no further details.

### 'Sommertrumpete' VI(-/-)

Parentage: *regale* × *henryi*

R: Saatzucht Zierpflanzen Erfurt (1983), G: Saatzucht Zierpflanzen Erfurt (1986), N: Saatzucht Zierpflanzen Erfurt, REG: Institut für Gemüse- und Zierpflanzenbau Grossbeeren Erfurt (1994)

Inside white and dark purplish pink (186C), tepal-tips brilliant greenish yellow (6C), throat light yellow (15D) to brilliant orange-yellow (23B); outside dark purplish pink (186C); papillae few, dark red; nectaries strong yellow-green (144A); pollen yellow-brown. Tepals 110-120 × 21-42 mm, margins smooth, tips slightly recurved. Lvs scattered, 120-130 × 18 mm, mid green. Stems 1.5 m, dark green, with c.15 fls. July.

### 'Sonata' I(c/d)

Parentage: (*cernuum* × *lancifolium*) F<sub>2</sub>

R: J. de Graaff (c. 1960), N: J. de Graaff

PC 1963, C 1967

Fls light coral-pink, with darker tepal-edges. Spots dark. Stems c.1 m. Midseason.

### 'Sonatina' I(a/c)

Parentage: ('Koral' × ('Chinook' × 'Wattle Bird')) × 'Montreux'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1999), REG: B. Mičulka (1999)

Inside orange, throat slightly paler; outside paler, midribs slightly pinkish; with darker brown crimson brushmarks and a few, medium-sized, dark brown-crimson spots in the throat; nectaries whiter and pink-granulated; pollen brown; stigma orange. Fls 120 mm wide; tepals 80 × 40 mm, margins slightly wavy, tips slightly recurved; pedicels 70 mm long, green. Lvs scattered, 100 × 14 mm, dull pale green. Stems 0.9 m, green. Early July.

### 'Sonatina' VIII(a/b)

Syn. of 'Mombasa'.

### 'Sonetto' VIII(a/b)

Parentage: seedling PG 95-39 × seedling RH 94-13

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside pale yellow-green (4D), tepal-margins brilliant yellow (10A), basal half of midveins brilliant yellow (10A); outside with outer tepals pale yellow-green (4D), basal half with pale yellow (8D) margins, midribs light yellow-green (144D) at base, changing towards top into

pale yellow (8D) and with strong purplish red (60C) flush (absent in young fls), inner tepals similar but with less yellow-green at base, pale yellow margins broader and purple flush absent; spots absent; papillae light greenish yellow (8B); nectaries strong yellow-green (144C); pollen strong orange (25A); stigma light purple (77C). Fls 215 mm wide; tepals 130 × 55-78 mm, margins slightly ruffled, tips recurved. Lvs scattered, 190 × 47 mm. Stems 1.15-1.2 m, green, with 2-3 fls. (An Orienpet (OT) lily.)

**'Songbird' I(c/-)**

Parentage: 'Edith Cecilia' × Taylor seedling 46341  
R: J.C. Taylor (c. 1976), N: (1977), I: Borbeleta Gardens (1978), REG: University of Guelph (1977)  
Fls strong pink (54C), throat pale orange; heavily spotted. Lvs scattered, dark green. Stems 1-1.5 m. Early to midseason.  
(Published in *Lilies and other Liliaceae*, 1977: 81.)

**'Song of Kimberly' I(b/c)**

Parentage unknown  
R: H.E. Hoepner (1985), G: H.E. Hoepner (1988), N: H.E. Hoepner (1991), REG: H.E. Hoepner (1991)  
Fls pink, shading to orange-pink in centre of each tepal and darker pink towards base, with green at extreme base; outside a blend of mauve-pink; spots absent; nectaries orange-pink; pollen orange-rust. Tepals 48 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 103-105 × 11-12 mm, mid green. Stems 1.3 m, mid green, with 15-20 fls (including secondary buds). Midseason.

**'Sonic' VII(a/d)**

Parentage: *speciosum* 'Shooting Star' (de Graaff) × unknown  
R: W.K. Crutcher (1988), G: W.K. Crutcher (1991), N: W.K. Crutcher (1994), I: W.K. Crutcher (1994), REG: W.K. Crutcher (1994)  
Inside bright crimson; outside softer crimson; spots numerous, raised, on basal three-quarters of each tepal; nectaries lime-green, conspicuous; pollen chocolate-brown. Tepal-margins not, or only very slightly, wavy, tips reflexed. Lvs scattered. Stems with 6-8 fls in a very symmetrical infl. July.

**'Sonic Whirlaway' I(b/-)**

Parentage unknown  
R: Hartle-Gilman Gardens (1980), G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1991), I: Hartle-Gilman Gardens (1992), REG: Hartle-Gilman Gardens (1992)  
Inside pale yellowish pink (17D), tepals with light yellowish pink (27B) tips, throat moderate purplish pink (54D); outside pale yellow-green; spots few, dark purple on central quarter of each tepal; nectaries pink; pollen red/brown. Tepals 90 × 30 mm, margins ruffled, tips slightly recurved. Lvs scattered, 105 × 18 mm, dark green. Stems 1.45 m, brown, hairy, with 14-16 fls. Midseason.  
(Published in *Hartle-Gilman Gardens Cat.*, 1992.)

**'Sonja' I(a/-)**

Parentage: 'Destiny' × ('Citronella' × yellow-flowered seedling)  
R: De Jong Lelies Beheer B.V. (pre 1978), N: De Jong Lelies Beheer B.V., REG: De Jong Lelies Beheer B.V. (1978)  
Fls vivid yellow (13A) dotted chocolate-brown; anthers dark reddish brown.  
(Published in *Lilies and other Liliaceae*, 1978/9: 113.)

**'Sonnenflecken' I(a/-)**

Parentage: 'Edith' × yellow-flowered seedling with brown brushmarks  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)  
Inside and outside brilliant yellow (13B); each tepal with a large, deep purplish red (71A) brushmark and a few spots below the brushmark; nectaries green, conspicuous; pollen strong brown (172A). Fls 160 mm wide; tepals 90 × 30 mm, margins smooth, tips not reflexed. Lvs scattered, 45 × 12 mm, dark green. Stems 0.9 m, almost black, with c.15 fls. Early July.

**'Sonnenglocke' I(-/d)**

Parentage unknown  
R: VEG(S), Erfurt (1979), N: VEG(S), Erfurt  
Fls sulphur-yellow. Stems 0.6-0.7 m. June.  
Syn.: 'Juligold'.

**'Sonnenglut' I(b/-)**

Parentage unknown  
R: VEG(S), Erfurt (1976), N: VEG(S), Erfurt  
Inside orange-red. Stems 0.7-0.8 m. June.

**'Sonnenkinder' I(c/-)**

Parentage: 'Impala' × orange-flowered Asiatic seedling  
R: G. Steinbrück (1988), G: G. Steinbrück (1992), N: G. Steinbrück (1994), I: G. Steinbrück (1994), REG: G. Steinbrück (1995)  
Inside moderate reddish orange (171A); outside moderate orange-yellow (168D); spots dark red (183A) on basal half of each tepal; nectaries light yellow-green (145D); stigma and pollen greyish reddish brown (200B). Fls 150 mm wide; tepals 80 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 50 × 15 mm, dark green. Stems 0.8 m, dark green, with up to 12 fls. Early July.

**'Sonnenkönig' I(b/-)**

Parentage unknown  
R: J. Klein, N: J. Klein, REG: ICRA (1996)  
Fls yellow with a golden centre. Stems 1.2 m. Mid July.  
(Published in German Lily Group sales list, 1989.)

**'Sonnenkönigin' Div. ?**

Given as a parent of 'Trojanka'. No further details.

**'Sonnenkranz' I(c/-)**

Parentage unknown  
R: H. Neuman, N: H. Neuman, I: H. Neuman (1973), REG: H. Neuman (1985)

Inside vivid yellow (13A); outside brilliant yellow (12B); spots dark red (187A), medium sized, on half of each tepal; nectaries yellow; pollen moderate orange (167A). Fls 145 mm wide; tepals 81 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, 122 × 17 mm, dark green. Stems 0.95 m, green, with c.16 fls. Mid July. (Published in *Liliářská ročenka*, 1983.)

**‘Sonnenrad’ I(a/-)**

Parentage unknown

R: S. Ziepké, N: S. Ziepké, I: S. Ziepké (pre 1970), REG: S. Ziepké (1985)

Inside with tepal-tips vivid yellow (12A), throat vivid yellow (13A); outside vivid yellow (12A); spots dark red (187A), sparse, small, on a quarter of each tepal; nectaries brilliant yellow (13B); pollen strong brown (172A). Fls 145 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, 59 × 9 mm, dark green. Stems 0.75 m, green, with c.7 fls. July.

(Published in *Liliářská ročenka*, 1983.)

**Sonnenstrahlen Group I(-/-)**

Parentage unknown

R: C. Wittneben (pre 1970), N: C. Wittneben

Inside orange-yellow; with or without spots.

**‘Sonnentempel’ I(b/b-d)**

Parentage: ‘Yukatan’ × Feldmaier seedling FE4

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2001), I: G. Steinbrück (2001), REG: G. Steinbrück (2002)

Inside pale orange-yellow (24D); outside pale orange-yellow (24D), midribs soft pink; spots deep purplish red (71A), many, large, mostly round, on three-quarters of each tepal; nectaries pale orange-yellow (159B), hoary; filaments soft pale yellow; pollen moderate reddish orange (171A); style thick, soft yellow-green. Fls 160 mm wide; tepals 81 × 40 mm, margins smooth, tips slightly recurved; pedicels violet-black. Lvs scattered, 90 × 16 mm. Stems 1.2 m, violet-black, with c.15 fls in a pyramidal inf. Early July.

(Nomenclatural standard: colour print provided by registrant (WSY 0032267).)

**‘Sonnentiger’ I(b/-)**

Parentage: *lanceifolium*? × (*L.* × *hollandicum* × unknown)

R: C. Feldmaier (c. 1960), N: C. Feldmaier

Fls brilliant yellow (12B), shaded brilliant yellow (21C) in centre; spots brown; pollen orange-yellow. Tepals hardly recurved. Lvs bright dark green. Stems 1.2 m. Late July.

(Published in *ILR* (1969).)

**‘Sonnenwende’ I(a/-)**

Misspelling of ‘Sonnewende’.

**‘Sonnenwunder’ I(b/c)**

Parentage: ‘Impala’ × ‘Impact’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1997), REG: G. Steinbrück (2000)

Inside moderate orange (172D), tepal-tips pale yellow (20D), throat slightly paler; a large, conspicuous, moderate purplish red (64A) brushmark on about half of each tepal with associated spotting of the same colour; nectaries very pale green (128D); pollen moderate purplish red (59C); stigma deep purplish pink (68A). Fls 150 mm wide; tepals 85 × 37 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 15 mm. Stems 1.1 m, mid green, with c.12 fls. Early July.

(Nomenclatural standard: colour print provided by registrant (WSY 0024695).)

**‘Sonnenzauber’ VI(-/-)**

Parentage unknown

R: VEG(S), Erfurt (1976), N: VEG(S), Erfurt

Fls yellow. Stems 1.1 m. July.

**‘Sonnet’ I(b/-)**

Parentage: derived from *cernuum*

R: L. Schmit, N: L. Schmit (1978), I: Borbeleta Gardens (1979), REG: Borbeleta Gardens (1981)

Inside strong orange (25D) to light orange (29B), throat peach-coloured; outside buff; spots brown, on two-thirds of each tepal; nectaries white; pollen orange. Tepals 100 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 10 mm, mid green. Stems 0.9 m, green, with c.18 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1979.)

**‘Sonnewende’ I(a/-)**

Parentage: ‘Golden Souvenir’ × ‘Destiny’

R: Gebr. N. & B. Laan & Zn (pre 1974), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1974)

Fls vivid yellow (12A), with veins of vivid yellow (14A); spots reddish; anthers purple.

(Misspelling: ‘Sonnenwende’. Published in *Lilies and other Liliaceae*, 1975: 96.)

**‘Sonnenwendfeuer’ II(-/-)**

Parentage unknown

R: H. Fuchs (pre 1987), N: H. Fuchs, REG: H. Fuchs (1988)

Fls light orange with many spots. Stems 1.5-1.8 m, with 8-12 fls. Mid July.

**‘Sonora’ VIII(a/b)**

Parentage: ‘Baltis Lācis’ × tetraploid *longiflorum*/Asiatic derivative

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)

Inside light yellow-green (145D), midveins brilliant yellow-green (154B), each tepal with a narrow, black contour line, throat brilliant yellow-green (150A); spots large, oval, dark red (187A); nectaries light green; pollen dark brown. Fls 200 mm wide, slightly scented; tepals 120 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 155 × 20 mm, dark green. Stems 1.3 m, green, with c.7 fls. Early July.

(A *longiflorum*/Asiatic (LA) hybrid. Nomenclatural standard: colour print provided by registrant (WSY 0022984).)

**‘Sontsing’ II(b-c/-)**Parentage: *L. × dalhansonii* × *tsingtauense*

R: E. Robinson (c. 1963), N: E. Robinson

Fls smoky orange with small spots in centre. Lvs

*tsingtauense* type. Stems 1.5-1.9 m. July.('Sontsing' (being formed from *dalhansonii* and*tsingtauense* is not acceptable under ICNCP, 2004: Art.

19.13 - after 1959 a name must be in any language other than Latin.)

**‘Sophia’ I(b/-)**

Syn. of 'Sofija'.

**‘Sophia Loren’ I(a/-)**

Syn. of 'La Loren'.

**‘Sopka’ I(a/b)**

Parentage: unknown × 'Mut'

R: J. Svoboda (1981), N: J. Svoboda, REG: J. Svoboda (1989)

Inside red, with ochre-red tepal-tips; outside dull red with ochre midribs; spots small, moderately numerous, dark brown, in the throat; pollen orange; stigma light orange. Fls 150 mm wide; tepals 90 × 30 mm, tips not recurved; pedicels 80 mm long, tinged with brown. Lvs scattered, 70 × 10 mm, mid green. Stems 0.7 m, mottled brown, with c. 10 fls. Bulbs tinged with brown. Mid July.

**‘Soprano’ VIII(a/b)**

Parentage: seedling PG 95-39 × seedling RH 95-01

R: Gebr. Vletter &amp; Den Haan, N: Gebr. Vletter &amp; Den Haan (2002), REG: Vletter &amp; Den Haan Beheer B.V. (2004)

Inside with inner tepals pale yellow-green (4D), brilliant greenish yellow (4A) along basal half of midveins, outer tepals similar but with less brilliant greenish yellow, throat (157D); outside with outer tepals pale yellow-green (4D), midribs strong yellow-green (144C) at base, light greenish yellow (4C) with strong yellow-green (144C) at top, with a strong purplish red (60C) flush along basal half of midribs (disappearing with age), inner tepals similar but lacking yellow-green (144C) at top and lacking purplish red flush; spots absent; papillae brilliant yellow (8A); nectaries strong yellow-green (144C) edged with brilliant greenish yellow (4A); pollen greyish brown/moderate reddish brown (166A/175A); stigma dark purple (79A). Fls 250 mm wide, slightly fragrant; tepals 165 × 59-99 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 175 × 40 mm. Stems 1.05-1.3 m, green with darker markings, and with 2-3 fls. (An Orienpet (OT) lily.)

**‘Sorbet’ I(a/b)**

Parentage: 'Sterling Star' × ('Concorde' × rose-pink-flowered seedling)

R: Gebr. Mak B.V. (1983), G: Gebr. Mak B.V. (1985), N: Gebr. Mak B.V. (1988), I: Gebr. Mak B.V. (1988), REG: Gebr. Mak B.V. (1990)

Inside greenish white (155C), each tepal with a strong purplish red (63A) edge, tips strong purplish red (63A); outside strong purplish pink (63C) with strong purplish

red (63A) tepal-margins; fine, currant-red spots in the throat; pollen moderate orange (167B). Buds pink. Fls 150 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 10 mm, dark green. Stems green, 0.6-0.9 m, with c.6 fls. July. Possibly polyploid.

**‘Sorbonne’ VII(a-b/b-c)**

Parentage: unnamed seedling × unnamed seedling

R: Vletter &amp; Den Haan (1988), G: Vletter &amp; Den Haan, N: Vletter &amp; Den Haan (1993), I: Vletter &amp; Den Haan (1996), REG: Vletter &amp; Den Haan (1997)

Inside deep purplish pink (64D), each tepal paler towards base and margin; outside moderate purplish pink (62B); spots deeper purplish pink; papillae present; nectaries green, changing to pink; pollen orange-brown; stigma purple. Tepals 140 × 51 mm, margins scarcely ruffled, tips recurved. Lvs scattered, 178 × 53 mm, mid green. Stems 1.1 m, green, with 5-9 fls. Early to midseason.

**‘Sorisso’ I(a/-)**

Parentage: 'Winesap' × 'Aristo'

R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1987), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside deep pink (51C), suffused with strong red/deep pink (51A/B) at first, tepal-tips dark red (187A); outside deep pink (51B/C), midribs slightly suffused with light yellow-green (145C); spots many, small, dark red (187C) on basal half of each tepal; nectaries moderate purplish red (59C); pollen moderate reddish orange (171A). Fls 160 mm wide; tepals 75 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 12 mm, mid green. Stems 0.8 m, with darker markings, and with c.10 fls. June (under glass).

**‘Sormyas’ I(b/d)**

Parentage: 'Firebird' × unknown

R: I. Wiesner (1988), N: I. Wiesner, REG: I. Wiesner (1988)

Inside dark red with a mahogany tint, tepal-tips paler; outside pale brown-red to orange-yellow; spots numerous, dark, on two-thirds of each tepal; papillae pale red; pollen red-brown. Fls 100-105 mm wide; tepals 32-35 × 24-26 mm; pedicels dark green. Lvs scattered, 70-75 × 8-9 mm, dark green. Stems 0.45-0.5 m, brownish green, with fls in a crowded infl., and with many bulbils.

(It is not known which 'Firebird' is the seed parent.)

**‘Sorpresa’ I(a/b)**

Parentage: 'Umbria' × seedling W 91-15

R: Vletter &amp; Den Haan Beheer B.V., G: Vletter &amp; Den Haan Beheer B.V. (pre 1996), N: Vletter &amp; Den Haan Beheer B.V., I: Vletter &amp; Den Haan Beheer B.V., REG: Vletter &amp; Den Haan Beheer B.V. (2000)

Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen orange; stigma green. Tepal-margins slightly ruffled, tips recurved. Stem 1.4 m, green with darker spots and stripes, and with c.5 fls. Midseason.

**‘Sorrento’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Gebr. Vletter & J.A. Den Haan (1978), G: Gebr. Vletter & J.A. Den Haan (1980), N: Gebr. Vletter & J.A. Den Haan (1984), I: Gebr. Vletter & J.A. Den Haan (1984), REG: Gebr. Vletter & J.A. Den Haan (1985)  
 Inside strong pink (52D), tepals edged with carrot-red, tips carmine, throat with orange-buff blotches; outside moderate pink (49B), tepals edged deep yellowish pink (41D); spots few, tiny, in the throat; nectaries dark red-brown; pollen strong orange (170A). Fls 120 mm wide; tepals 37 mm wide, margins smooth. Lvs scattered, 90 × 15 mm. Stems 0.9 m, green, with 10-12 fls (from 16-18 cm bulbs). July.  
 (Published in *Bloembollencultuur*, 1984.)

**‘Sortini’ I(a/b)**

Parentage unknown  
 R: J. Vasarietis (1990), G: J. Vasarietis (1993), N: J. Vasarietis (1996), I: J. Vasarietis (1996), REG: J. Vasarietis (2001)  
 Inside with a vivid yellow (12A) ground throughout; outside brilliant yellow (12B), vivid yellow (12A) at tepal-edges; above nectaries about half of each tepal is spotted with red-purple and marked with brushmark lines; nectaries white; pollen orange; stigma pale greyish. Fls 140 mm wide; tepals 90 × 43 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 20 mm. Stems 0.95 m, brownish green, with c.8 fls. Early to mid July.  
 (Sortini is the place where the raiser’s wife was born. Nomenclatural standard: colour print provided by registrant (WSY 0030815).)

**‘Soubrette’ I(a-b/b)**

Parentage unknown  
 R: J. Vasarietis (1989), G: J. Vasarietis (1992), N: J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J. Vasarietis (2000)  
 Inside strong purplish pink (63C), slightly darker around the nectaries, the base of each tepal creamy greenish; outside light purplish pink (63D); spots numerous, deep purple, medium sized, on basal half of each tepal; nectaries bright white; pollen orange-brown; stigma purplish brown. Fls 145 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved; pedicels 100 mm long. Lvs scattered, 65 × 9 mm, mid green. Stems 0.9 m, green, with c.10 fls. Early July.  
 Syn.: ‘Kolumbine’.  
 (Published in *Lilium Balticum Cat.*, 1996, as ‘Kolumbine’. Nomenclatural standard: colour print provided by registrant (WSY 0022983).)

***soulei* Franch. IX(c/a-b)**

Fls deep purple-maroon; spots absent; anthers purple-black. Tepals 25-35 × 9-18 mm. Lvs scattered, few (5-8), 30-60 × 6-15 mm. Stems 0.1-0.3 m, with solitary fls. W China (SE Xizang, Sichuan, Yunnan).  
 (Was formerly included in *Fritillaria* and *Nomocharis*.)

**‘Sousse’ I(a/b-d)**

Parentage: ‘Heidi III’ × ‘Berliner Morgen’

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)  
 Inside strong orange (170A), tepal-tips moderate orange (171D), throat brilliant orange-yellow (23B); outside moderate orange (171D); spots scattered, small, dark reddish orange (175B) on basal third of each tepal; nectaries yellowish white (156D); pollen strong reddish orange (169A); stigma moderate reddish brown (175A). Fls 150 mm wide; tepals 80 × 35 mm, margins smooth, tips recurved. Lvs scattered, 90 × 15 mm. Stems 0.75 m, dark green, with 5-8 fls. Mid July.  
 (Sousse is a town in Cuba. Nomenclatural standard: colour print provided by registrant (WSY 0032268).)

**‘Southampton’ VII(a/b)**

Parentage: seedling 93-13 × seedling 92-35  
 R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)  
 Inside strong purplish pink (73B), each tepal pale yellow (8D) and pale yellow-green (155A) at base, throat greenish white (155C); outside light purplish pink (73C), midribs and tepal-margins greenish white (155C); spots strong purplish red (60D); papillae present; nectaries greenish white (155C); stigma pale yellow-green (157A); pollen brownish orange (171B). Fls 235 mm wide; tepals 115 × 65 mm, margins ruffled, tips slightly recurved. Lvs 155 × 42 mm. Stems 1.1 mm, light green, with c.7 fls.

**Southern Group Div.?(a-b/a)**

Parentage unknown  
 Fls with short trumpets.  
 (Raised in Australia.)

**Southern Belles Group I(c/d)**

Parentage: *lankongense* × pollen of mixed pink- and white-flowered Asiatic hybrids  
 R: J.F. McRae (1973), G: E.A. & J.F. McRae (1975), N: J.F. McRae & L.D. Marshall (1979), I: Columbia-Platte Lilies/Borbeleta Gardens (1980), REG: Columbia-Platte Lilies (1980)  
 Inside strong purplish pink (63C), tepal-tips and throat strong purplish pink (63C); outside light purplish pink (63D) with deeper midribs; small spots of strong purplish red (63B) fading to strong reddish purple (70B) by midribs; nectaries usually green; pollen greyish reddish brown (200B). Fls scented; tepals 80-100 × 20-30 mm, tips strongly recurved. Lvs scattered, 70-100 × 20 mm, dark green. Stems 0.9-1.2 m, deep green, with 5-8 fls. June to July.  
 (Published in *Borbeleta Gardens Cat.*, 1980. Included in *ILR* (1982) as Southern Belles grex.)

**‘Southern Cross’ VI(c/-)**

Parentage: ‘T.A. Havemeyer’ × *henryi*  
 R: S.V. Gilkison, N: S.V. Gilkison  
 (Bulb sent to F.C. Stern in 1958. No further details.)

**Southern Lights Group VII(b-c/c)**

See *L. × parkmanii* Southern Lights Group.

**Southern Moon Group VI(b/b)**

Parentage: derived from various *henryi* × trumpet crosses  
 R: L.B. Tuffery (c. 1966), N: L.B. Tuffery  
 Fls moon-yellow, 250 mm wide, *auratum*-like in form.  
 Stems very tall.  
 (Published in *ILR* (1969) as Southern Moon grex.)

**'Southern Song' VIII(b/c)**

Parentage: (*henryi* × unnamed trumpet) × 'Canterbury Belle'  
 R: A.E. Alexander (1989), G: A.E. Alexander (1992), N: A.E. Alexander (2002), I: A.E. Alexander (2002), REG: A.E. Alexander (2002)  
 Fls pale apricot throughout, unmarked; nectaries green; pollen brown; stigma frosty green. Fls 160 mm wide; tepals 100 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 15 mm. Stems 1.2 m, mid green flecked black, with c.6 fls in a racemose infl. Jan. (New Zealand).  
 (An Orienpet (OT) lily. Nomenclatural standard: colour print provided by registrant (WSY 0032054).)

**Southland Group VI(a-b/a)**

Parentage: selection from seedlings of white-flowered *henryi*  
 S: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1976)  
 Fls pure white with a greenish yellow to deep apricot central star. Stems 1.9 m. Jan. (Australia).

**'South Pacific' VIII(-/-)**

Parentage: ('Connecticut King' × *longiflorum* 'Slocum's Ace') × mixed pollen of pastel-flowered Asiatics  
 R: E.A. McRae (1988), G: Van der Salm Bulb Farm, Inc. (1990), N: E.A. McRae (1994), I: Van der Salm Bulb Farm, Inc. (1994), REG: Van der Salm Bulb Farm, Inc. (1994)  
 Inside soft cream to white, throat lime-green; outside soft cream; spots few, in centre of fl.; nectaries lime-green; pollen soft brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 0.9 m, soft green. Mid June.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Souvenir' VII(a-b/b)**

Parentage: (unnamed seedling × 'Alibi' (Div. VII)) × 'Santa Barbara'  
 R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (1999), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (1999)  
 Inside deep purplish pink (68A) on a white ground, throat yellowish white (155B); outside deep purplish pink (68A) on a white ground, base yellowish white (155B), midribs yellowish white (155B) tipped strong yellow-green (143A); spots yellowish white (155B) on basal part of each tepal; papillae yellowish white (155B) and moderate yellow (161B), in the throat; nectaries strong yellow-green (144A); pollen moderate reddish orange (171A); stigma pale green (189C). Fls 150 mm wide; tepals 75 × 35-45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 110 × 65 mm, dark green. Stems 0.45 m, green, with c.5 fls. July.

**'Sovereign' I(c/b)**

Parentage: L. 35.29.05 (seedling of 'Lyla McCann') × unknown  
 R: I. Preston (pre 1948), N: I. Preston  
 Tepals vivid orange-yellow (21A), tips reflexed. Stems 1 m.  
 (Published in *Div. Hort., Central Experimental Farm Report, Ottawa*, (1934-48).)

**'Sovetskaia' VI(-/a)**

Parentage: *L. × imperiale* 'Estoniia' × Olympic Group  
 R: V.N. Esinovskaya (1965), N: V.N. Esinovskaya  
 Fls pale pink. Stems up to 1.2 m, with bulbils.  
 (Unaccepted spelling: 'Sovetskaja'.)

**'Sovetskaja' VI(-/a)**

Unaccepted spelling of 'Sovetskaia'.

**'Space Age' I(a/-)**

Parentage: unknown × 'Connecticut King'  
 R: W. Windus (1969), N: W. Windus (1973), I: Borbeleta Gardens (1979), REG: W. Windus (1973)  
 Tepals with margins vivid reddish orange (30B), centres strong orange (30D); spots absent. Lvs 150 × 20 mm. Stems 1.5 m. Late June.  
 (Published in *Lilies and other Liliaceae*, 1973/1974: 112.)

**'Space Mountain' VIII(a/b)**

Parentage: seedling 650-3 × seedling 88.212-2  
 R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)  
 Inside strong/moderate purplish red (63C/186B), tepals yellow-green in basal part, midveins yellow at base; outside strong purplish red (63C); spots and papillae present; nectaries green; pollen brown; stigma purple with green star. Tepals short to medium sized, margins slightly ruffled, tips recurved. Lvs scattered, dark green. Stems tall, green, with c.9 fls. Late.  
 (An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096399).)

**SPACER VIII(a/a)**

Trade designation of 'Zanlaspacer'.

**'Space Star' VII(a/b-c)**

Parentage: dwarf red-flowered seedling × 'All Right'  
 R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2003), I: Bischoff Tulleken Lelies B.V. (2003), REG: Bischoff Tulleken Lelies B.V. (2003)  
 Inside strong purplish red (60C), paler strong purplish red (60D) towards greenish white (155C) tepal-margins and tips, throat greenish white (155C); outside moderate purplish pink (66D), tepal-margins and tips greenish white (155C), midribs a little greenish white (155C) with light yellow-green (145C) at top; spots (187A); papillae present; nectaries strong yellow-green (145A); pollen moderate reddish brown (166B); stigma dark red (59A). Fls 210 mm wide; tepals 100 × 45 mm, margins ruffled, tips recurved. Lvs scattered, 175 × 46 mm, green. Stems 0.7 m, light green, with 6 fls. July

**'Spacious Living' I(a/-)**

Parentage: 'Connecticut Dream' × 'Connecticut King'  
 R: F. Fellner (1978), G: F. Fellner (1983), N: F. Fellner (1987), I: Riverside Gardens (1987), REG: F. Fellner (1987)  
 Inside bright yellow; outside light yellow; spots absent; pollen brown. Fls 120 mm wide, on long pedicels with secondary buds. Stems 0.75-1.1 m, green, with 15-20 fls. Mid July.

**'Spain' VII(a/b)**

Parentage: 'Barbaresco' × 'Trento'  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)  
 Inside strong/vivid purplish red (67A/B), with a little yellowish white (155B) in the throat; outside strong purplish red (71B) on a paler ground, with a little yellowish white (155B) at base, midribs strong yellow-green (144A/C); spots few, dark red (187B), in the throat; papillae few, similarly coloured; nectaries strong yellow-green (143C); pollen strong orange (169C); stigma moderate purplish red (70A) with a little moderate yellow-green (138B). Fls 200 mm wide; tepals 105 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 40 mm, dark green. Stems 1.2 m, green, with c.4 fls.  
 Trade designation: VLETSPA.

**'Spangles' VII(-/d)**

Parentage: *speciosum* var. *rubrum* × unknown  
 R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1961), N: R.L. Strahm (1972), I: H.J. & R.L. Strahm (1972), REG: Strahm's Lilies, Inc. (1981)  
 Inside vivid red (45C) with white tepal-edges and tips, throat light yellow-green (138D); outside pale pink; spots vivid red (45C) on entire tepals except for tips; nectaries light greenish yellow (1C); pollen dark reddish orange (178B). Fls 200 mm wide; tepals 100 × 40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 150 × 50 mm, mid green. Stems 0.8-1.1 m, dark green, with 6-10 fls. Aug.  
 (Published in Strahm's sales sheet, 1972.)

**'Spanish Flame' I(a/c)**

Parentage: 'Wattle Bird' × 'Corina'  
 R: J.S. Bennett (1992), G: J.S. Bennett (1994), N: J.S. Bennett (1995), I: J.S. Bennett (2001), REG: J.S. Bennett (2001)  
 Inside and outside vivid reddish orange (40B); spots absent; papillae few, near nectaries; nectaries vivid reddish orange (40B), blending to green at base; pollen vivid reddish orange (33B); stigma vivid reddish orange (40B). Fls 120 mm wide; tepals 75 × 42 mm, margins smooth, tips slightly recurved; all tepals notably broad and obtuse at tip and very thick. Lvs scattered, 80 × 15-20 mm. Stems 0.6-0.7 m, light green, with 12-18 fls. Mid Dec. (New Zealand).  
 (The flame-red colour is reminiscent of a Spanish flamenco dancer. Nomenclatural standard: colour print provided by registrant (WSY 0029156).)

**'Spanish Main' I(a/c)**

Parentage unknown  
 R: B.G. Hayler, G: B.G. Hayler (1981), N: B.G. Hayler (1985), I: B.G. Hayler, REG: B.G. Hayler (1985)  
 Fls strong orange-yellow (17A) throughout, each tepal with an orange-brown, black-spotted flush close to nectaries; nectaries green-white; pollen brown. Fls 160 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 20 mm, dark green. Stems 1.5 m, black, with c.10 fls. Dec. to Jan. (Australia).

**'Spanish Sunset' I(a/-)**

Parentage: 'Indian Brave' × 'White Pastel'  
 R: Hartle-Gilman Gardens (1982), G: Hartle-Gilman Gardens (1984), N: Hartle-Gilman Gardens (1990), I: Hartle-Gilman Gardens (1990), REG: Hartle-Gilman Gardens (1990)  
 Fls light yellowish pink (27A) throughout; spots few, small, purple, on central third of each tepal; nectaries light yellowish pink (27A); pollen rust-coloured. Tepals 100 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 11 mm, mid green. Stems 1 m, mid green, with 15-20 fls (including a few tertiary buds). Midseason.

**'Spark' I(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Sande B.V. (1984), G: Sande B.V. (1987), N: Sande B.V. (1990), I: Sande B.V. (1990), REG: Sande B.V. (1991)  
 Inside strong purplish pink (55B), each tepal with a pale yellow-green (4D) flush and a vivid yellow (15B) spot in the centre of the flush, changing to deep purplish pink/strong pink (54B/C) with a light yellow (10C) flush, throat strong pink (54C); outside strong to light purplish pink (55B/C), each tepal with strong purplish pink (55B) edges, the overall colour changing to strong pink (54C), the basal part pale yellow (11D); spots few, dark red (187A) in the throat on inner tepals; nectaries moderate purplish red (59C); pollen strong orange (168B). Fls 170 mm wide; tepals 80 × 45 mm, margins smooth, tips scarcely recurved. Lvs scattered, 140 × 12 mm, mid green. Stems 1.15 m, pale green, somewhat hairy, with c.9-15 fls. July (under glass).

**SPARK GLITTER I(b/c)**

Trade designation of 'Dzirkstele'.

**'Sparkle' I(a/b)**

Parentage: 'Connecticut King' × *wilsonii*  
 R: L. Woodriff (1975), G: L. Woodriff (1977), N: Bowman Creek Farm (1981), REG: Bowman Creek Farm (1981)  
 Fls yellow throughout; spots maroon, medium sized, on basal third of each tepal; nectaries light green; pollen yellow-orange. Fls 180 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly reflexed. Lvs scattered, 100 × 18 mm, dark green. Stems 0.7 m, red-brown, with 10-15 fls. Late June.

**'Sparkler' II(c/d)**

Parentage unknown

R: G.L. Slate, N: R. & H.R. Cocker (1999), REG: R. & H.R. Cocker (1999)

Inside vivid yellow (17B), throat light yellow (17D); outside vivid yellow (17C), tepal-edges ageing to white, midribs green; spots small, bright red, on almost the whole of each tepal; nectaries green; pollen red-orange; stigma light yellow. Fls 170 mm wide; tepals 35 × 15 mm, margins smooth, tips strongly (but not fully) recurved. Lvs whorled. Stems 1.5 m, mid green, with 10-15 fls. Early.

(Nomenclatural standard: colour print supplied by registrant (WSY 00156491).)

#### 'Sparkling Waters' I(a-b/-)

Parentage: unnamed seedling ex Wadkamper × unnamed seedling ex Wadkamper

R: J. Wadkamper (1979), G: J. Wadkamper (1981), N: J. Wadkamper (1992), I: Borbeleta Gardens (1993), REG: J. Wadkamper (1993)

Inside of inner tepals light orange-yellow (19A), of outer tepals light yellow (19B), tips cream, throat white; outside gold; spots bold, brown; nectaries white/green; pollen brown. Tepals 85 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 75 × 15 mm, mid green. Stems 0.9 m, green, with 12-15 fls. Very late.

(Published in *Borbeleta Gardens Cat.*, 1993.)

#### 'Spartaks' I(b/-)

Parentage: selection from Amālijas Group

S: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)

Lilac-pink throughout, except for yellow-orange throat; spots lilac, on half of each tepal; nectaries pale green; pollen orange. Fls wide open; tepals 55 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, mid green. Stems 0.8 m.

(Published in *Dārzs un Drava* 7: 21 (1986).)

#### 'Spartan' I(a/b-c)

Parentage: 'Suntan' × 'Connecticut Bronze'

R: B. Mičulka (pre 1984), N: B. Mičulka, REG: B. Mičulka (1985)

Inside mahogany red-orange, with an apricot yellow tongue over each nectary; outside paler; spots red-brown, fairly numerous, tiny, on half of each tepal; nectaries white, frosted yellow; pollen ochre; stigma pale green-yellow. Fls 135 mm wide; tepals 70 × 30 mm, spoon-shaped. Lvs 100 × 7 mm, dull green. Stems 1.1 m, violet-dotted, hairy. Early July.

#### 'Späte Flamme' Div. ?

Given as a parent of 'Kloster Maulbronn'. No further details.

#### 'Späte Liebe' I(b/-)

Parentage: *leichtlinii* var. *maximowiczii* × unknown

R: C. Feldmaier (pre 1969), N: C. Feldmaier

Inside dark red. Buds, lvs and stems densely white-hairy. Stems up to 1.5 m. Late.

(Published in *LYB NALS* 22: 111 (1969).)

#### 'Späte Liebe' I(c/c)

Parentage unknown

R: H. Böhm (pre 1986), N: H. Böhm

Inside light yellow; spots reddish brown in centre of fl.; pollen light brown. Lvs dark green. Stems 1.6-1.8 m, with bulbils. July to early Aug.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

#### 'Späte Sonne' I(b/-)

Parentage: (*lancifolium* × *L. × maculatum*) F<sub>2</sub>

R: L. Denkwitz (pre 1984), N: L. Denkwitz, REG: L. Denkwitz (1988)

Fls dark yellow, 130-150 mm wide; infl. with secondary buds. Stems 1.2 m. Late July.

(Published in German Lily Group sales list, 1984.)

#### 'Spätsommer' I(a/c)

Syn. of 'Wartburgmelodie'.

#### Special Group V(b-c/a)

See *formosanum* Special Group.

#### *speciosum* Thunb. IX(b-c/d)

Fls white or pale pink, each tepal with deep pink towards base; spots pink or crimson; papillae crimson, on basal part of each tepal; nectaries green; pollen dark red or brown. Fls 100-150 mm wide, fragrant; tepals to 100 × 45 mm, margins wavy; pedicels up to 100 mm long. Lvs scattered, shortly stalked, up to 200 × 60 mm, dark green. Stems 1.2-1.7 m, green or flushed with purple, with 2-12(-40) fls. Aug. to Sept. Japan.

#### *speciosum* var. *album* (Masters) Masters ex Baker IX(b-c/d)

Fls white; spots absent. Stems purplish brown.

Syn.: *speciosum* 'Album'.

#### *speciosum* var. *album* 'Crown Princess' IX(b-c/d)

Parentage: selection from *speciosum* var. *album*

S: J.H. Krelage ? (pre 1901), N: J.H. Krelage ? Floriferous.

(Published in *JRHS* 26: 367 (1901/02).)

#### *speciosum* forma *album-novum* Mallet IX(b-c/d)

Syn. of *speciosum* 'Album Novum'.

#### *speciosum* 'Album Novum' IX(b-c/d)

Parentage: selection from *speciosum*

N: G.B. Mallett (1901)

Fls white; spots absent; pollen yellow. Tepals large, thick, very broad.

Syn.: *speciosum* forma *album-novum*.

(Published in *Gard. Chron.*, ser.3, 30: 24 (1901).)

#### *speciosum* var. *album* 'Snowcrest' IX(b-c/d)

Parentage: selection from *speciosum* var. *album*

S: G.M. Chandler, G: G.M. Chandler (1958), N: G.M. Chandler, I: G.M. Chandler (1964)

Inside pure white, throat with pale green central star. Fls 150 mm wide; tepals broad, tips slightly reflexed. Stems 1.2 m.

***speciosum* var. *album* 'White Orchid' IX(b-c/d)**

Parentage: selections from *speciosum* var. *album*  
S: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens  
Fls snow-white. Stems 1 m. Sept. to Nov.  
(This cv. consists of more than one clone.)

***speciosum* 'Aotearoa' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: W.A. Christensen, N: W.A. Christensen  
Fls white, with lemon-yellow nectaries. Stems 1.5 m.

***speciosum* 'Attraction' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Attraction'.

***speciosum* 'Benikoshiki' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Benikoshiki'.

***speciosum* 'Black Beauty' VIII(b-c/d)**

Syn. of 'Black Beauty'.

***speciosum* 'Brabander' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Brabander'.

***speciosum* 'Brilliant' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: O. Ronalds  
Fls brilliant red. Stems rather short.

***speciosum* 'Brunette' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: G. Errey (c. 1930), N: G. Errey  
Fls a deep colour, poor form.

***speciosum* 'Calanthe Favourite' VII(-/c)**

Syn. of 'Calanthe Favourite'.

***speciosum* 'Calanthe Picture' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: G.M. Chandler (c. 1954), N: G.M. Chandler  
Fls deep pink.  
(Published in *LYB* 18: 139 (1955).)

***speciosum* 'Calliope' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: C.M. Hovey (c. 1850), N: C.M. Hovey  
No further details.

***speciosum* 'Cardinal' IX(b-c/d)**

See *speciosum* var. *magnificum* 'Cardinal'.

***speciosum* 'Cherry' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: G. Errey (c. 1958), N: G. Errey  
Fls bright Tyrian purple to scarlet.

***speciosum* 'Cinderella' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: F.M. Wilson (c. 1950), N: F.M. Wilson  
AMH 1963  
Fls white suffused with pink; spots pale purplish pink (56A). Stems 1-1.5 m. Aug.

***speciosum* 'Claire of Calanthe' VII(-/-)**

Syn. of 'Claire of Calanthe'.

***speciosum* 'Climax' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: USDA  
Tepals with crimson centre, fading to pale pink near white margins; spots deep crimson. Fls 125-150 mm wide. Stems 1.9-2.2 m.

***speciosum* 'Clio' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: C.M. Hovey (c. 1850), N: C.M. Hovey  
No further details.

***speciosum* var. *clivorum* S. Abe & Tamura IX(c/d)**

Fls paler than in *speciosum* itself; stigma subcapitately truncate. Lvs less pointed and slightly larger.

***speciosum* var. *clivorum* forma *metaroseum* S. Abe & Tamura IX(b-c/d)**

Fls pink, spotted with various shades.

***speciosum* var. *clivorum* forma *vittatum* S. Abe & Tamura IX(b-c/d)**

Fls white, each tepal with a rose-pink ray, and spots of various colours.

***speciosum* forma *coccineum* S. Abe & Tamura IX(b-c/d)**

Tepals crimson (paler than HCC 71), with white margins; spots darker crimson.

***speciosum* forma *compactum* S. Abe & Tamura IX(b-c/d)**

Fls in a compact infl. Plant dwarf.

***speciosum* forma *concolor* S. Abe & Tamura IX(b-c/d)**

Fls crimson, with very narrow, white tepal-margins; spots darker crimson.

***speciosum* 'Coral Queen' IX(b-c/d)**

Parentage: unnamed form of *speciosum* × unnamed form of *speciosum*  
R: B.G. Hayler, N: B.G. Hayler (1970), REG: B.G. Hayler (1970)  
Throat and tepal-tips pink; outside white; spots absent.  
Tepal-margins slightly ruffled. Stems 1.2 m.

***speciosum* var. *corymbiflorum* IX(b-c/d)**

(Published in *JRHS* 26: 367 (1901/02). Name given to some fasciated forms, as also was var. *monstrum*.)

***speciosum* 'Corymbiflorum Album' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: Truffaut (fls) (pre 1858), N: Truffaut (fls)  
Fls pure white; spots absent, scented; borne in corymbose panicles.  
(Published in *Rev. Hort.* 1858: 16.)

***speciosum* 'Corymbiflorum Roseum' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: Truffaut (fls) (pre 1858), N: Truffaut (fls)  
Fls tinted with pink with numerous red spots. Fls scented.  
Lvs lanceolate. Stems 0.6-1 m, pale green, branched  
above, with 10-25 fls in a very broad corymb. Late Aug.  
to Sept.  
(Published in *Rev. Hort.* 1858: 16.)

***speciosum* 'Corymbiflorum Rubrum' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: Truffaut (fls) (pre 1858), N: Truffaut (fls)  
Fls purple-pink, otherwise similar to 'Corymbiflorum  
Roseum'.  
(Published in *Rev. Hort.* 1858: 16.)

***speciosum* 'Crimson Giant' IX(b-c/d)**

Parentage: *speciosum* × *speciosum*  
R: R.W. Bemis (pre 1978), N: R.W. Bemis, REG: R.W.  
Bemis (1984)  
Tepals deep crimson with white edges. Tepal-margins  
ruffled, tips recurved. Stems 0.5-0.7 m. July to Aug.  
(Published in E. Fisher, *Named Lily Hybrids and their  
Origins*, 50 (1978); *Deep-Freeze' Lilies Cat.*, 1978/79: 5.  
Classified in Div. VII(d) in *ILR* (1982).)

***speciosum* 'Crimson Glory' IX(b-c/d)**

Parentage: selection from *speciosum*  
REG: ICRA (1984)  
Fls white, flushed and spotted with crimson and carmine.  
(Selected and named in the USA. Published in *Gardenside  
Gossip* 31(2): 10 (1966).)

***speciosum* 'Crown Princess' IX(b-c/d)**

See *speciosum* var. *album* 'Crown Princess'.

***speciosum* 'Cruentum' IX(b-c/d)**

Parentage: selection from *speciosum*  
N: W. Bull, I: W. Bull  
Fls white, each tepal with crimson ray and spots; pollen  
orange. Lvs short, lanceolate.  
(Published in *The Garden* 16: 576, pl. ccxii (1879).  
Imported from Japan.)

***speciosum* Darkest Red Group IX(b-c/d)**

See *speciosum* var. *magnificum* Darkest Red Group.

***speciosum* Darkest Red Selections IX(b-c/d)**

See *speciosum* var. *magnificum* Darkest Red Group.

***speciosum* 'Dawn' VII(-/-)**

Syn. of 'Dawn'.

***speciosum* 'Dawnette' VII(-/-)**

Syn. of 'Dawnette'.

***speciosum* 'Dutch Album' IX(b-c/d)**

Parentage: selection from *speciosum*  
Fls white, faintly flushed. Early.

***speciosum* 'Early Radiance' IX(-/-)**

Parentage: presumably a selection from *speciosum*  
No further details.

***speciosum* 'Early Reliance' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: W.F. Doreen, N: W.F. Doreen  
No further details.

***speciosum* 'Elite' IX(b-c/d)**

Parentage: selection from *speciosum*  
(Selected in the USA. No further details.)

***speciosum* 'Elkton' IX(b-c/d)**

Parentage: selection from *speciosum*  
(Grown in the USA. No further details.)

***speciosum* 'Ellabee' IX(b-c/d)**

Parentage: *speciosum* var. *rubrum* × *speciosum* var. *album*  
R: F.M. Wilson (c. 1953), N: F.M. Wilson, I: L. Berbee  
& Zn B.V. (1966)  
Fls white, each tepal with central green vein; anthers  
garnet-brown. Tepal-margins ruffled.

***speciosum* 'Ellen Wilson' IX(b-c/d)**

Parentage: presumably a selection from *speciosum*  
N: F.M. Wilson (c. 1951)  
(Published in *Amer. Lily Soc. Newsl.* 4(3) (1951). Found  
in mountains of Bellingham, Washington, USA. No  
further details.)

***speciosum* 'Elliott's Variety' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Elliott's Variety'.

***speciosum* 'Emsweller's Special Select' IX(b-c/d)**

Parentage: presumably a selection from *speciosum*  
(Sometimes known as 'Eugene Emsweller's Special Select'.  
No further details.)

***speciosum* 'Erato' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: C.M. Hovey (c. 1850), N: C.M. Hovey  
No further details.

***speciosum* 'Erectum' IX(a/d)**

Parentage: selection from *speciosum*  
I: Chugai Nursery Co.  
Fls with dark crimson markings.  
(First offered as 'Uprightum' in 1930.)

***speciosum* 'Essex' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: W.A. Constable Ltd, N: W.A. Constable Ltd  
Fls suffused with a uniform shade of pink.  
(Published in *Constable Cat.*, 1949.)

***speciosum* 'Eugene Emsweller's Special Select'  
IX(b-c/d)**

See *speciosum* 'Emsweller's Special Select'.

***speciosum* 'Euterpe' IX(b-c/d)**

Parentage: selection from *speciosum*

S: C.M. Hovey (c. 1850), N: C.M. Hovey

No further details.

***speciosum* 'Eva' IX(b-c/d)**

Parentage: selection from *speciosum*

S: C.M. Hovey (c. 1850), N: C.M. Hovey

Fls blush white with pale lilac-pink spots.

***speciosum* 'Fairy Princess' IX(b-c/d)**

Parentage: selection from *speciosum*

S: G.M. Chandler (c. 1957), N: G.M. Chandler

Fls pale pink. Stems 1.2 m.

***speciosum* 'Favorite' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Favorite'.

***speciosum* 'Flush' IX(b-c/d)**

Parentage: selection from *speciosum*

S: E.C. Genat (c. 1954), N: E.C. Genat

Fls white with rose-pink tint.

(Published in *LYB* 20: 78 (1957).)

***speciosum* 'Garnet Fire' IX(b-c/d)**

Parentage: selection from hybrids between *speciosum* cvs

S: R.W. Bemis, N: R.W. Bemis, I: R.W. Bemis, REG:

R.W. Bemis (1984)

Fls garnet-red, tepal-edges and tips white, throat white; nectaries pale green; pollen dark red. Fls *speciosum* type; tepal-margins somewhat ruffled, tips slightly recurved.

Stems 1 m, with bulbils. Late July to Aug.

(Published in 'Deep-Freeze' *Lilies Cat.*, 1978/79: 5.)

***speciosum* 'Gilrey' IX(b-c/d)**

Parentage: selection from *speciosum*

S: G. Errey, N: G. Errey, I: G. Errey (c. 1925)

Fls deep red with broad tepals, tepal-margins and tips white. Stems 1.2 m.

(Published in *LYB* 7: 151 (1938). The epithet is formed from the name of the raiser, **Gilbert Errey**.)

***speciosum* var. *gloriosoides* Baker IX(b-c/d)**

FCC 1860

Tepals white at base and apex, crimson in the middle, margined greenish yellow at base; spots and papillae scarlet, mainly on the third quarter of each tepal, counting from the tip downwards. C. China, Taiwan.

(Baker gave this variety the name *gloriosoides* saying 'the much reflexed crisped perianth segments [tepals] reminding one of those of *Gloriosa superba*'.)

***speciosum* var. *gloriosoides* forma *sanguineopunctatum***

**S. Abe & Tamura IX(b-c/d)**

Fls white; spots crimson; pollen brown.

***speciosum* 'Glorious' IX(b-c/d)**

Parentage: selection from *speciosum*

R: E.C. Genat (pre 1974), N: E. Rowse

Fls medium pink, fading to white at tepal-tips. Fls 160

mm wide, tepal-tips slightly recurved. Stems up to 1.9 m, with up to 40 fls. Jan. to Feb. (Australia).

***speciosum* 'Grand Commander' IX(b-c/d)**

Parentage: selection from *speciosum*

S: F.M. Wilson, N: F.M. Wilson, I: L. Berbee & Zn B.V. AMH 1964

Fls deep lilac-purple (HCC 031/2), tepals edged white; spots chrysanthemum red (HCC 824/3). Stems 1.2-2.1 m. Aug.

***speciosum* 'Healesville' IX(b-c/d)**

Parentage: selection from *speciosum*

Similar to 'Gilrey', but smaller.

(Published in *LYB* 10: 60 (1946). Found in State School Garden, Healesville, Victoria, Australia, by H. Gunner.)

***speciosum* 'Imperiale' IX(-/-)**

Parentage: presumed to be a selection from *speciosum*

No further details.

***speciosum* 'Ivymaud' IX(b-c/d)**

Parentage: selection from *speciosum*

S: G. Errey, N: G. Errey

Fls dark-coloured. Late.

***speciosum* var. *kraetzeri* (Duchartre ex Baker) Grove**

**IX(b-c/d)**

Fls white with a green stripe down each tepal; pollen orange.

***speciosum* 'Latecomer' IX(b-c/d)**

Parentage: selection from *speciosum*

S: D.J. Ross, N: D.J. Ross, I: R.E. & L.M. Harrison (1962)

Fls bright pink. Very late-flowering.

***speciosum* 'Little Star' IX(b-c/d)**

Parentage: selection from *speciosum*

S: R.B. Ware (c. 1955), N: R.B. Ware

Similar to *speciosum* var. *magnificum*, but shorter and with smaller fls.

***speciosum* 'Lucie Wilson' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Lucie Wilson'.

***speciosum* 'Macranthum' IX(b-c/d)**

Parentage: selection from *speciosum*

Fls deep rose-pink, very large.

(Published in *Wallace Cat.*, 1900.)

***speciosum* 'Maculis' IX(b-c/d)**

Parentage: selection from *speciosum*

S: W.A. Constable Ltd? (c. 1938), N: W.A. Constable Ltd?

Fls white with pale pink flush.

***speciosum* var. *magnificum* (E.H. Wilson) hort. Wallace ex JRHS IX(b-c/d)**

AM 1903

Fls rose-pink, spotted with deep crimson, tepal-margins paler; pollen red. Stems to 1.5 m, purple. Aug.

***speciosum* var. *magnificum* ‘Cardinal’ IX(b-c/d)**

Parentage: selection from *speciosum* var. *magnificum*

S: G.M. Chandler (c. 1954), N: G.M. Chandler

Fls deep red. Stems 1.2 m.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

***speciosum* var. *magnificum* Darkest Red Group**

**IX(b-c/d)**

Parentage: selections from *speciosum* var. *magnificum*

S: H. Eckstein (pre 1957), N: H. Eckstein, I: E.L. Kline (1957)

Fls dark red.

(Published in *Kline Cat.*, 1957. Included in *ILR* (1960)

and (1969) as *speciosum* Magnificum Darkest Red

Selections, and in *ILR* (1982) as *speciosum* Darkest Red

Selections but the epithet has now been changed to

*speciosum* var. *magnificum* Darkest Red Group (ICNCP, 2004: Art. 3.2, Ex. 7.).)

***speciosum* Magnificum Darkest Red Selections**

**IX(b-c/d)**

See *speciosum* var. *magnificum* Darkest Red Group

***speciosum* ‘Mapleton’ IX(b-c/d)**

Parentage: selection from *speciosum*

Fls pink.

(Perhaps selected in USA.)

***speciosum* ‘Marvellous’ IX(b-c/d)**

See *speciosum* var. *rubrum* ‘Marvellous’.

***speciosum* ‘Melpomene’ IX(b-c/d)**

Parentage: derived from various *speciosum* forms

R: C.M. Hovey, N: C.M. Hovey

FCC 1882

Fls dark red, tepal-margins white; papillae blackish

crimson. Stems purple.

(Published in *The Garden* 25: 82 (1884). The original plant from the 1880s disappeared; the present-day plant is similar, but of Japanese origin.)

***speciosum* ‘Meteor’ IX(b-c/d)**

Syn. of *speciosum* ‘Namazu Beauty’.

***speciosum* var. *monstrosum* IX(b-c/d)**

Syn.: ‘Monstrosum’.

(Published in *JRHS* 26: 367 (1901/02). Included in *ILR*

(1982) as ‘Monstrosum’. Epithet given to some fasciated forms, as also was var. *corymbiflorum*.)

***speciosum* ‘Monstrosum’ IX(b-c/d)**

See *speciosum* var. *monstrosum*.

***speciosum* ‘Monstrosum Rubrum’ IX(b-c/d)**

Parentage: selection from *speciosum*

G: Truffaut (fls) (pre 1858)

Stems fasciated.

(Published in *Rev. Hort.* 1858: 16.)

***speciosum* ‘Mrs Wright’ IX(b-c/d)**

Parentage: presumably a selection from *speciosum*

No further details.

***speciosum* ‘Multiflorum’ IX(b-c/d)**

Parentage: selection from *speciosum* var. *album* and var. *roseum*

(Epithet applied as early as 1875 to floriferous strains of *speciosum* var. *album* and var. *roseum*.)

***speciosum* ‘Namazu Beauty’ IX(b-c/d)**

Parentage: selection from *speciosum*

PC 1957

Fls dark red.

Syn.: *speciosum* ‘Meteor’; ‘Meteor’.

(Published in *Hakoneya Nurseries Cat.*, 1955.)

***speciosum* ‘Nanum’ IX(b-c/d)**

Parentage: selection from *speciosum*

Fls soft rose-pink. Lvs somewhat spoon-shaped, green.

Stems dwarf. Late.

(Published in *Wallace Cat.*, 1900.)

***speciosum* ‘Number Ten’ IX(b-c/d)**

See *speciosum* var. *rubrum* ‘Number Ten’.

***speciosum* ‘Oberon’ IX(b-c/d)**

Parentage: selection from *speciosum*

S: G.M. Chandler, N: G.M. Chandler

Fls pale pink; spots dark. Fls large with broad tepals.

Stems tall.

***speciosum* ‘Opal’ IX(b-c/d)**

Parentage: selection from *speciosum*

S: unknown (c. 1894)

No further details.

***speciosum* ‘Oregon Giant’ IX(b-c/d)**

See *speciosum* var. *rubrum* ‘Oregon Giant’.

***speciosum* ‘Pavlova’ VII(-/-)**

Syn. of ‘Pavlova’.

***speciosum* ‘Peak’s Radiance’ IX(b-c/d)**

Parentage: selection from *speciosum*

S: L. Woodriff (pre 1949), N: L. Woodriff

(Published in *LYB NALS* 2: 136 (1949). No further details.)

***speciosum* ‘Pearl’ IX(b-c/d)**

Parentage: selection from *speciosum*

S: G. Errey (1913), N: G. Errey

Fls mid to pale pink, with wine midrib on outside of each tepal; spots present.

(Smaller and flowering later than most *speciosum* cvs.)

***speciosum* ‘Pink Pearl’ IX(-/-)**

Given as a parent of ‘Robert Blanch’. No further details.

***speciosum* 'Pink Radiance'** IX(-/-)  
Parentage: presumably a selection from *speciosum*.  
No further details.

***speciosum* 'Polyhymnia'** IX(b-c/d)  
Parentage: selection from *speciosum*  
S: C.M. Hovey (c. 1850), N: C.M. Hovey  
No further details.

***speciosum* var. *punctatum* (Cels) Marnock**  
**IX(b-c/d)**  
Fls white suffused with pink; spots and papillae pink;  
pollen orange.  
Syn.: *speciosum* 'Punctatum'.

***speciosum* 'Punctatum'** IX(b-c/d)  
Syn. of *speciosum* var. *punctatum*.

***speciosum* 'Punctatum Album'** IX(b-c/d)  
Parentage: presumably a selection from *speciosum*  
No further details.

***speciosum* 'Purpuratum'** IX(b-c/d)  
Parentage: selection from *speciosum*  
S: C.L. Allen (c. 1888), N: C.L. Allen  
No further details.

***speciosum* 'Queenie'** IX(b-c/d)  
Parentage: selection from *speciosum*  
S: O. Ronalds, N: O. Ronalds  
Fls pure white, spotted with shell-pink. Fls large; tepals  
with wavy margins. Stems 1.2 m.

***speciosum* 'Radiance'** IX(b-c/d)  
Given as a parent of 'Claire of Calanthe'. No further  
details.

***speciosum* forma *radiatum* S. Abe & Tamura**  
**IX(b-c/d)**  
Fls white, each tepal with a rose-pink stripe; spot in  
various shades.  
Syn.: *speciosum* 'Radiatum'.

***speciosum* 'Radiatum'** IX(b-c/d)  
Syn. of *speciosum* forma *radiatum*.

***speciosum* Red Champion Group** IX(b-c/d)  
Parentage: selection from *speciosum*  
N: J. de Graaff, I: J. de Graaff (1948)  
Fls bright red. Lvs deep green, broad. Aug. to Sept.  
(Published in *Oregon Bulb Farms Cat.*, 1948. Selected  
from wild *speciosum* in Japan in early 1900s. Included in  
*ILR* (1960), (1969) and (1982) as a cv., but de Graaff (*in*  
*lit.* 1963) indicated that it is a Group.)

***speciosum* 'Red Duke'** IX(b-c/d)  
Parentage: selection from *speciosum*  
S: Strahm Bulb Farm (pre 1973), N: Strahm Bulb Farm  
Inside very dark red, tepal-margins narrow, white; spots  
blood-red; nectaries green. Stems 1.2-1.9 m. Aug

***speciosum* 'Rose Beauty'** IX(b-c/d)  
Parentage: selection from wild *speciosum*  
N: Hort. Exp. Station (Kanagawa) (c. 1977)  
Fls deep rose-pink.  
(Collected in the wild on Koshiki Island, Japan.)

***speciosum* 'Rosemede'** IX(b-c/d)  
Parentage: selection from *speciosum*  
N: F.M. Wilson, REG: ICRA (1984)  
Fls deep pink, tepals edged white towards tips; spots deep  
red. Tepal-margins ruffled, tips slightly recurved. Lvs  
scattered. Stems 1-1.6 m, with 12 or more fls. Aug.  
(Published in *Rex Bulb Farms Cat.*, 1973: 60. Similar  
to *speciosum* var. *rubrum* 'Lucie Wilson' but with fewer,  
slightly smaller fls.)

***speciosum* 'Rose Mist'** IX(b-c/d)  
Parentage: selection from *speciosum*  
S: E.C. Genat, N: E.C. Genat  
Fls pale pink. Dwarf.

***speciosum* 'Rosetta'** IX(b-c/d)  
Parentage: selection from *speciosum*  
S: R.H. Ashcroft, N: R.H. Ashcroft  
Fls deep pink, heavily spotted. Stems tall.

***speciosum* var. *roseum* (Masters) Masters ex Baker**  
**IX(b-c/d)**  
Fls rose-pink; spots in various shades. Stems green.

***speciosum* forma *rubropunctatum* S. Abe & Tamura**  
**IX(b-c/d)**  
Fls white, spotted with deep rose-pink; pollen brown.

***speciosum* var. *rubrum* (Masters) Masters ex Baker**  
**IX(b-c/d)**  
Fls carmine, with darker spots and papillae. Stems  
purplish brown. Aug. to Sept.  
Syn.: *speciosum* 'Rubrum'.

***speciosum* 'Rubrum'** IX(b-c/d)  
Syn. of *speciosum* var. *rubrum*

***speciosum* var. *rubrum* 'Attraction'** IX(b-c/d)  
Parentage: selection from *speciosum* var. *rubrum*  
S: C. Schoone (c. 1955), N: C. Schoone  
Fls spinel-pink (HCC 0625), lighter (HCC 625) at  
edges; spots present. Tube strongly curved. Stems 0.8-1  
m. July to Aug.

***speciosum* var. *rubrum* 'Benikoshiki'** IX(b-c/d)  
Parentage: selection from *speciosum* var. *rubrum*  
S: H. Nagahama (c. 1962), N: H. Nagahama  
Fls deep rose-pink. Early.

***speciosum* var. *rubrum* 'Brabander'** IX(b-c/d)  
Parentage: selection from *speciosum* var. *rubrum*  
(Grown in The Netherlands. No further details.)

***speciosum* 'Rubrum Elliott'** IX(b-c/d)  
See *speciosum* var. *rubrum* 'Elliott's Variety'.

***speciosum* var. *rubrum* 'Elliott's Variety' IX(b-c/d)**

Parentage: selection from *speciosum* var. *rubrum*  
Syn.: *speciosum* 'Rubrum Elliott'.  
(Published in *Constable Cat.*, 1949 as *speciosum* 'Rubrum Elliott', and in *Gard. Chron.*, ser. 3, 128: 43 (1950).  
Exhibited 11 July 1950. No further details.)

***speciosum* var. *rubrum* 'Favorite' IX(b-c/d)**

Parentage: selection from *speciosum* var. *rubrum*  
S: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn  
No further details.

***speciosum* var. *rubrum* 'Lucie Wilson' IX(b-c/d)**

Parentage: derived from *speciosum* var. *rubrum*  
N: F.M. Wilson (pre 1940), I: F.M. Wilson (c. 1940)  
Fls rose-pink, tepal-edges white; spots deep red. Stems 1-1.9 m. Aug.  
(Published in *LYB NALS* 1: 107-109 (1947/48). Found in a garden in NW Washington, USA.)

***speciosum* 'Rubrum Magnificum' IX(b-c/d)**

Parentage: selection from *speciosum*  
(Published in *L.Bochmer & Co. Cat.*, 1904/05. No further details.)

***speciosum* var. *rubrum* 'Marvellous' IX(b-c/d)**

Parentage: selection from *speciosum* var. *rubrum*  
S: C. van der Zon (c. 1941), N: C. van der Zon  
Fls Neyron-rose; spots present. Pedicels purplish-tinged.  
Stems 0.7-1 m, with a pyramidal infl. Mid Aug.

***speciosum* var. *rubrum* 'Number Ten' IX(b-c/d)**

Parentage: selection from *speciosum* var. *rubrum*  
REG: H. van der Westelaken (1993)  
Inside strong purplish pink (68B), tepal-margins and tips greenish to yellowish white (155C/D); outside deep to strong purplish pink (68A/B), with ivory-white tepal-margins and tips; papillae deep purplish red (59B); nectaries strong yellow-green (145A). Tepals 70 × 35 mm, margins ruffled, tips strongly recurved. Lvs scattered, 150 × 38 mm, mid green. Stems 1.2 m, green with darker markings.  
(Selected in North Brabant from original Japanese material before 1957.)

***speciosum* var. *rubrum* 'Oregon Giant' IX(b-c/d)**

Parentage: selections from *speciosum* var. *rubrum*  
S: R.B. Ware (c. 1946), N: R.B. Ware  
Fls white, with pink blotches and spots. Stems 1-1.5 m.  
(Published in *R.B. Ware Cat.*, 1946, without description.  
This cv. epithet covers several similar clones.)

***speciosum* var. *rubrum* 'Schrymakersii' IX(b-c/d)**

Parentage: selection from *speciosum* var. *rubrum*  
S: J.G. Baker ? (c. 1870), N: J.G. Baker  
No further details.

***speciosum* var. *rubrum* 'Uchida' IX(b-c/d)**

Parentage: selection from *speciosum* var. *rubrum*  
S: H. Uchida (pre 1939), N: M. Uchida (c. 1956), I: M.

Uchida

Inside brilliant crimson, tepals with narrow white margins; spots red and green; nectaries green; pollen dark red. Stems 1.2 m, dark green, with 8-10 fls (from 16-18 cm bulbs). Aug.

Syn.: 'Uchida Kanoka'; 'Uchida Speciosum'.  
(Published in *LYB* 23: 75 (1960).)

***speciosum* 'Ruby' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: R.B. Ware (c. 1955), N: R.B. Ware  
Similar to *speciosum* var. *rubrum* 'Oregon Giant', but fls darker.

***speciosum* 'Samson' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: G. Errey, N: G. Errey  
Fls dark crimson.  
(Similar to *speciosum* 'Melpomene'.)

***speciosum* 'Schrymakersii' IX(b-c/d)**

See *speciosum* var. *rubrum* 'Schrymakersii'.

***speciosum* 'Shooting Star' (de Graaff) IX(b-c/d)**

Parentage: selection from *speciosum* 'Superstar'  
S: J. de Graaff, N: J. de Graaff, REG: Oregon Bulb Farms, Inc. (1974)  
Fls warm red, tepals with white margins; spots darker red on basal half of each tepal; nectaries green; pollen orange-red. Fls 130 mm wide. Stems 1.2-1.5 m, with up to 24 fls. Sept.  
(Published in *Lilies and other Liliaceae*, 1975: 96.  
Unfortunately, two cvs with the epithet 'Shooting Star' have been registered. Although one is a selection from *speciosum*, the use of the species name is not mandatory, so to distinguish them, the name of the raiser is appended to each and should be thus cited when the names are used - see ICNCP, 2004: Art. 27.5.)

***speciosum* 'Snowcrest' IX(b-c/d)**

See *speciosum* var. *album* 'Snowcrest'.

***speciosum* 'Superstar' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: J. de Graaff (c. 1958), N: J. de Graaff  
Fls crimson and white.  
(This cv. epithet covers a number of similar clones.)

***speciosum* var. *tametomo* Siebold & Zucc. IX(b-c/d)**

Fls white; anthers brown. Stems green.  
Syn.: *speciosum* var. *vestale*.  
(Misspelling: var. *tametome*; var. *tamentano*.)

***speciosum* 'Terpsichore' IX(b-c/d)**

Parentage: selection from *speciosum*  
S: C.M. Hovey (c. 1850), N: C.M. Hovey  
No further details.

***speciosum* 'Thalia' IX(b-c/d)**

Parentage: selection from *speciosum*

S: G.M. Chandler, N: G.M. Chandler  
No further details.

***speciosum* ‘Thelma’ VII(-/-)**  
Syn. of ‘Thelma’.

***speciosum* ‘Titania’ IX(b-c/d)**  
Parentage: selection from *speciosum*  
S: G.M. Chandler, N: G.M. Chandler  
Fls mid pink, with a deeper flush by each green nectaries.  
Fls large. Stems tall.

***speciosum* ‘Tornado’ IX(b-c/d)**  
Parentage: selection from *speciosum*  
(Grown in USA. No further details.)

***speciosum* ‘Twinkle’ IX(b-c/d)**  
Parentage: selection from *speciosum*  
S: L. Woodriff (c. 1949), I: L. Woodriff (c. 1949)  
Fls white, with carmine blotch in centre.  
(Published in *LYB NALS* 2: 136 (1949). Selected from  
seed perhaps originally from Wada.)

***speciosum* ‘Uchida’ IX(b-c/d)**  
See *speciosum* var. *rubrum* ‘Uchida’.

***speciosum* ‘Uprightum’ IX(b-c/d)**  
Syn. of *speciosum* ‘Erectum’.

***speciosum* ‘Urania’ IX(b-c/d)**  
Parentage: selection from *speciosum*  
S: C.M. Hovey (c. 1850), N: C.M. Hovey  
No further details.

***speciosum* var. *vestale* Masters IX(b-c/d)**  
Syn. of *speciosum* var. *tametomo*.

***speciosum* ‘Wave Crest’ IX(b-c/d)**  
Parentage: *speciosum* ‘Album Novum’ × *speciosum*  
‘Punctatum Album’  
R: E.L. Kline (c. 1964), N: E.L. Kline  
Fls pure white, with green tepal-bases; pollen bright  
yellow. Early Aug.  
(This cv. epithet covers a number of similar clones.)

***speciosum* ‘White Champion’ IX(b-c/d)**  
Parentage: selection from *speciosum*  
S: J. de Graaff (pre 1950), N: J. de Graaff  
Fls white. Stems 0.8-1.2 m. Aug.  
(Published in *Oregon Bulb Farms Cat.*, 1950. Fls  
produced about two weeks later than *speciosum* Red  
Champion Group.)

***speciosum* ‘White Glory’ IX(b-c/d)**  
Parentage: selected clones of *speciosum*  
S: F.M. Wilson, REG: ICRA (1985)  
Fls pure white. Stems 1.2-1.5 m. Aug.  
(Published in *Rex Bulb Farms Cat.*, 1966/67. Clones  
obtained from F.M. Wilson.)

***speciosum* ‘White Orchid’ IX(b-c/d)**  
See *speciosum* var. *album* ‘White Orchid’.

***speciosum* ‘White Pearl’ IX(b-c/d)**  
Parentage: selection from *speciosum*  
Fls white.  
(Selected in the USA?)

***speciosum* ‘W.R. Hawkins’ IX(b-c/d)**  
Parentage: *speciosum* var. *roseum* × *speciosum* var.  
*punctatum*  
R: G. Errey (c. 1943), N: G. Errey  
Fl. shape and colour similar to *speciosum* var. *roseum*, but  
plant is taller and flowers earlier.  
Syn.: ‘Hawkins’.

***speciosum* ‘Yokohama Pride’ IX(b-c/d)**  
Parentage: selection from field-grown *speciosum*  
S: H. Nagahama (c. 1957), N: H. Nagahama, I: Van Til-  
Hartman B.V. (1966)  
AMH 1965  
Fls China rose (HCC 029), tepals edged white; spots  
purple-brown.  
(Grown in Koshiki Island, Japan.)

**‘Speckled Blaze’ I(a/-)**  
Parentage unknown  
R: J. Wadekamper (1979), G: J. Wadekamper (1982),  
N: J. Wadekamper (1991), I: Borbeleta Gardens (1991),  
REG: J. Wadekamper (1993)  
Inside pink over orange, becoming orange towards centre  
of fl., throat green; outside tan-salmon; spots distinct,  
brown, on basal third of each tepal, below a brown,  
pencil-line brushmark; nectaries white; pollen light  
brown. Tepals 90 × 30 mm, margins smooth, tips not  
recurved. Lvs scattered, 80 × 25 mm, dark green. Stems  
0.9 m, dark brown, with c.12 fls. Midseason.  
(Published in *Borbeleta Gardens Cat.*, 1991.)

**‘Speckled Rainbow’ I(c/-)**  
Parentage unknown  
R: T.L. Bartel, N: T.L. Bartel  
Fls speckled pink and white.  
(Published in E. Fisher, *Named Lily Hybrids and their  
Origins*, 45 (1978).)

**‘Spectacular’ VIII(c/b)**  
Parentage: soft yellow-flowered trumpet × deep crimson-  
flowered Oriental  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-  
Platte Lilies  
Fls crimson-rose in the centre, shading to cream-white  
(a suggestion of cream-yellow at tepal-edges in cool  
weather). Tepals broad, twisted and recurved at tips.  
Stems 1.2-1.9 m, very strong, with huge fls. Early Aug.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name  
already used for another lily. Similar to ‘Silk Road’, but fls  
larger, more open and softer in colour.)

**‘Spectacular’ IX(b/c)**  
See *auratum* ‘Spectacular’.

**'Spectatious' VII(-/b)**

See *L. × parkmanii* 'Spectatious'.

**Spectre Group VII(-/c)**

See *L. × parkmanii* Spectre Group.

**'Spectre Beauty' VII(-/c)**

See *L. × parkmanii* 'Spectre Beauty'.

**'Spectre Hy-lite' VII(-/c)**

See *L. × parkmanii* 'Spectre Hy-lite'.

**SPHINX I(a/c-d)**

Trade designation of 'Holecaca'.

**SPICCATO VIII(a/b)**

Trade designation of 'Zanlacato'.

**'Spice' III(-/)**

See *L. × testaceum* 'Spice'.

**'Spiced Custard' I(b/-)**

Parentage: 'Elmira' × 'Snow Bunting'

R: T.R. Martin (1968), N: T.R. Martin (1979), I: Borbeleta Gardens (1980), REG: T.R. Martin (1980)

Inside ivory-yellow, shading to clear yellow toward centre; outside creamy white; spots brown, heavy; pollen brown.

Tepal-tips slightly recurved. Lvs scattered, mid green.

Stems 1 m, mid green, with c.18 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1980.)

**'Spice Islands' I(a/-)**

Parentage: up-facing Asiatic seedling × 'Connecticut Yankee'

R: F. Ewald (1973), G: F. Ewald (1976), N: G. & F. Ewald (1978), I: G. & F. Ewald (1982), REG: G. & F. Ewald (1988)

Fls strong orange-yellow (24B) throughout; spots few, deep red (185A), at base of outer tepals only; nectaries greenish; pollen vivid reddish orange (32A). Fls 170 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 20 mm, dark green. Stems 1.3 m, dark green, brown-spotted, with c.20 fls. July.

(Published in Gesellschaft der Staudenfreunde bulb list, 1982.)

**'Spidola' I(b/d)**

Misspelling of 'Spidola'.

**'Spidola' I(b/d)**

Parentage: selection from Vasaras Priekis Group

S: V.P. Orehovs (c. 1959), N: V.P. Orehovs

Fls light orange; spots brown; pollen red. Fls 100-120 mm wide, unscented. Stems up to 1.5 m, brown. June to July.

(Published in *LYB* 28: 135 (1965) and included in *ILR* (1969) and (1982) as 'Spidola' which is a misspelling.)

**'Spigana' I(a/-)**

Misspelling of 'Spigana'.

**'Spigana' I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (1982), G: J. Vasarietis (1986), N: J. Vasarietis (1989), I: J. Vasarietis (1989), REG: J. Vasarietis (1992)

Fls deep red (53A) throughout, but throat vivid orange (28B); spots few, black, on a third of each tepal; nectaries white; pollen brown. Fls 140 mm wide; tepals 70 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 14 mm, mid green. Stems 0.9 m, green, with c.7 fls. Early July.

(Included in *ILR Eleventh Supplement* as 'Spigana' which is a misspelling.)

**'Spinel' I(c/-)**

Parentage: unnamed seedling × 'Mut'

R: J. Svoboda, N: J. Svoboda, I: J. Svoboda (1985), REG: J. Svoboda (1985)

Inside glowing red, tepal-tips orange, throat black-red; outside red with paler midribs; spots black, in the throat; pollen orange-brown; stigma dark red. Fls 140 mm wide; tepals 80 × 35 mm, slightly recurved. Lvs 100 × 25 mm, dark green. Stems 0.6-0.8 m, brown, slightly hairy, with 7-9 fls. Mid July.

**'Spinelli' VIII(b/b)**

Parentage: seedling Lars 93-4 × seedling RS 92-18

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside moderate purplish red (58A), each tepal brownish orange (164A) above nectaries for a third of the length, throat light purplish pink (63D); outside strong purplish pink (63C), tepals edged moderate purplish red (58A), outer tepals tipped strong yellow-green (144A); spots dark red; papillae absent; nectaries very light purple (76B), hairy; pollen moderate reddish brown (175A); stigma moderate purplish red (64A). Fls 175 mm wide; tepals 110 × 50 mm, margins smooth, tips recurved. Lvs scattered, 220 × 40 mm. Stems 1.35 m, green with slight darker markings, and with c.4 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Spinnentiger' I(a-b/d)**

Parentage unknown, but evidently a seedling of *lancifolium*

R: C. Feldmaier, N: C. Feldmaier

Fls tan-orange, with narrow tepals. Stems 1-1.2 m, with bulbils. July.

**'Spinning Wheel' I(a/b)**

Parentage: seedling A-271-77 × seedling A-133-83

R: Cebeco Lilies, Inc., N: Cebeco Lilies, Inc., REG: ICRA (1998)

Inside golden lemon-yellow, with a wheel of dark maroon pencil brushmarks at the base of the tepals. Tepals slightly recurved. Stems 0.8 m. Midseason.

(Published in *The Lily Nook Cat.*, 1998.)

**‘Spinoza’ VII(a-b/b-c)**

Parentage: seedling 142 × seedling 801

R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside very pale purple (69A), suffused with moderate purplish pink (65A), midveins on basal half of each tepal light yellow (12C); outside very pale purple (69A/B), tepal-margins suffused with light purplish pink (65B), midribs pale greenish yellow (1D) at the base shading to light greenish yellow (5D) towards top; spots deep red to strong purplish red (60A/B) on the basal half of each tepal; nectaries moderate purplish red (59C) and pale yellow-green (157B); pollen strong brown (172A). Fls 250 mm wide; tepals 125 × 65 mm, margins almost smooth, tips strongly recurved. Lvs scattered, 180 × 38 mm, mid green. Stems 1.2 m, pale green, with c.6 fls.

**‘Spintisonne’ I(a/-)**

Parentage: (‘Sonnentiger’ × ‘Spinnentiger’) × ‘Connecticut King’

R: H. Gärtner (pre 1987), N: H. Gärtner, REG: H. Gärtner (1988)

Fls yellow. Stems 1.1 m, brown. Mid July.  
(Published in German Lily Group sales list, 1987.)

**‘Spin Turn’ I(a-b/-)**

Parentage unknown  
R: Peacock B.V. (pre 1993)

Inside light greenish yellow/pale yellow (8C/D) (in older fls yellowish white (158C)), moderate red (182A) at base; outside pale yellow (8D); spots and papillae present; nectaries green; pollen light brown; stigma purple-red. Tepals short, margins slightly ruffled, tips recurved. Lvs scattered, of medium length. Stems of medium height to tall, green with some darker markings.  
(Granted Dutch PBR (LEL 1167) in 1995, but not registered - the stock was destroyed by the raiser.)

**‘Spirit’ VIII(-/-)**

Parentage: unnamed seedling × (*longiflorum* × ‘Aristo’)  
R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1993), I: P. Kuiper (1993), REG: Bischoff Tulleken Lelies B.V. (1994)

Inside the basal part yellowish white (155D) suffused with moderate purplish pink (54D), stronger-coloured at tepal-edges, apical part yellowish white (155D) shading to moderate purplish pink (54D) at tepal-edges, midveins strong yellow-green (144C) above nectaries, becoming strong yellow-green (145A) towards top, tipped dark red (187A); spots dark red on basal part of each tepal; pollen moderate reddish brown (175A); stigma strong brown (172A). Fls 200 mm wide; tepals 120 × 60 mm, tips slightly recurved. Lvs scattered, 120 × 20 mm, mid green. Stems 0.5 m, pale green, with c.4 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Spitfire’ I(a/-)**

Parentage: Fighter Group selection from Preston Group  
S: I. Preston, N: I. Preston (1941)

Fls flame-scarlet with medium-sized bay spots; pollen Brazil red. Stems 0.6-1 m. July.  
(Published in *Amer. LYB* 1942: 102.)

**‘Spitniece’ VI(b/b)**

Parentage: *henryi* × Golden Clarion Group  
R: Ā. Zorgevics (1974), G: Ā. Zorgevics (1979), N: Ā. Zorgevics (1980), I: Ā. Zorgevics (1984), REG: Ā. Zorgevics (1987)

Fls lemon-yellow throughout; spots absent; nectaries light green; pollen orange. Fls 140 mm wide; tepals 180 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 85 × 12 mm, mid green. Stems 1 m, dark green, with c.10 fls. Mid July to early Aug.  
(Published in *Dārzs un Drava* 7: 19 (1986).)

**‘Splendens’ IX(c/d)**

See *lancifolium* ‘Splendens’.

**‘Splendid’ I(a/b)**

See *L. × hollandicum* ‘Splendid’.

**‘Split’ VI(b-c/d)**

Parentage: ((‘Oneida’ × ‘Gold Eagle’) × ‘Gold Eagle’) × (‘Oneida’ × (‘Oneida’ × orange-flowered Trumpet))  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005), REG: B. Mičulka (2005)

Inside white with a beige tinge, each tepal with a broad pale orange ray originating in throat; outside tinged with pale pink; dusting of tiny cinnamon lines on half of each tepal; nectaries yellow-green; pollen chocolate-brown; stigma green. Fls 115 mm wide; tepals 95 × 38 mm, margins roughly wavy, tips very recurved; pedicels 85 mm, lightly brown-dotted. Lvs scattered, 105 × 16 mm, dull dark green. Stems 1.45 m, dotted with dark brown. July.

**‘Spoleto’ I(a/-)**

Parentage: seedling RS 686 × seedling RS 895  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside light to pale purplish pink (55C/D), throat slightly tinged with yellowish white (158D); outside pale purplish pink (55D), the outer tepals with strong red (53D) margins; spots few, small, dark red (187A) in the throat; pollen brownish orange (172C). Fls 165 mm wide; tepals 85 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 18 mm, mid green. Stems 1.2 m, green. May.

**‘Sporades’ I(a/-)**

Parentage: unnamed seedling × ‘Roter Cardinal’  
R: A. Rech (1974), G: V. Strasser (1977), N: V. Strasser (1980), I: V. Strasser (1986), REG: V. Strasser (1990)  
Fls vivid red (45A) throughout. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1 m, nearly black, with c.17 fls in a candelabrum-like infl. Mid July.

**‘Spotless’ I(c/d)**

Parentage: seedling of Preston Group × (*wilsonii* × unknown)

R: J.L. Martin (1948), G: J.L. Martin (1952), I: J.L. Martin (1960)

Inside clear orange; spots absent; pollen brown. Fls 75 mm wide. Stems 0.6-1 m.

**‘Spotlight’ VI(-/c)**

Parentage: selection from Aurelian Group

S: J. de Graaff (pre 1959), N: J. de Graaff

Fls gold, spotted.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Oregon Bulb Farms Cat.*, 1959.)

**‘Spotlight’ IX(a/b)**

See *philadelphicum* ‘Spotlight’.

**‘Spotlight’ I(a/-)**

Syn. of ‘Mogul’.

**‘Spotted Gold’ I(b/-)**

Parentage: (‘Phyllis Cox’ × unknown) × (Preston Group × unknown)

R: E. Robinson (c. 1956), N: E. Robinson

Fls golden orange, throat brownish; tinged green when first open; heavily spotted. Stems tall.

(Unacceptable name: ICNCP, 2004: Recommendation 19D.1 - name should not consist solely of descriptive (adjectival) words.)

**‘Spotted White’ I(a/-)**

Parentage: two unnamed seedlings ex E.H. Doerr

R: D. Dale (1987), N: D. Dale (1994), I: Parkland Perennials (1995)

Inside with inner tepals white, outer tepals cream; outside white, midribs cream; spots burgundy, many, on three-quarters of each tepal. Fls 90 mm wide; tepal-margins slightly wavy, tips not recurved. Lvs scattered, 50 × 10 mm, mid green. Stems 1 m, green, with c.8 fls. July.

(Unacceptable name: ICNCP, 2004: Recommendation 19D.1 - name should not consist solely of descriptive (adjectival) words.)

**‘Spreecharme’ I(a-b/c)**

Parentage: ‘Connecticut Red’ × mixed pollen of ‘Vater Zille’, ‘Fanal’ & ‘Brushstroke’

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)

Inside moderate red (47A) throughout; medium-sized, round spots and a small brushmark of dark red (187A) on the basal quarter of each tepal; nectaries pale yellow-green (155A), fading at top and becoming pink with a green centre; filaments slender; pollen strong reddish orange (31A); style short; stigma deep red (185A). Fls 150 mm wide; tepals 82 × 37 mm, the inner rather broadly ovate, margins smooth, tips not recurved. Lvs scattered, 80 × 15 mm. Stems 0.9 m, mid green, with 7-9 fls. Late June.

(Nomenclatural standard: colour print provided by registrant (WSY 0032269).)

**‘Spreequelle’ I(a/b)**

Parentage: ‘Impala’ × Asiatic seedling AS 12 W

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Inside and outside moderate orange (172D); with a few, inconspicuous, darker spots at base of each tepal; nectaries yellowish white, lightly white-frosted; pollen deep purplish red (61A); stigma deep purplish red (71A). Fls 100 mm wide; tepals 65 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 15 mm. Stems 0.8 m, dark green, with c.10 fls. Early July.

**‘Spree-romanze’ I(a/c)**

Parentage: ‘Connecticut Red’ × ‘Lime Ice’

R: G. Steinbrück (1988), G: G. Steinbrück (1992), N: G. Steinbrück (2002), I: G. Steinbrück (2003), REG: G. Steinbrück (2003)

Inside moderate red (47A), tepal-tips somewhat darker, moderate red (180A), margins with slight beige border, throat moderate red (47A); outside red-brown, beige in area of midribs; spots black, numerous, small, on basal half of each tepal; nectaries grey-white, hoary; filaments moderate purplish red (59C); pollen moderate orange (167A); style moderate purplish red (59C); stigma dark purple (79A). Fls 120 mm wide; tepals 60 × 35 mm, margins smooth, tips not recurved. Lvs scattered, dense, 110 × 8 mm. Stems 0.8 m, dark green, mottled red in infl., with c.10 fls. Late June.

(Published in *ILR Twenty-third Supplement* as ‘Spree-Romanze’, but this form of the epithet is not allowed (ICNCP, 2004: Art. 32.13 - the second element of a hyphenated word must start with a lower case letter).

Nomenclatural standard: colour print provided by registrant (WSY 0038754.)

**‘Spreesonne’ I(b/c)**

Parentage: ‘Impala’ × Weidemann Asiatic seedling AS 12

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1995), I: G. Steinbrück (1998), REG: G. Steinbrück (2003)

Inside light orange-yellow (22D), centre of each tepal and throat tinged with red; outside golden yellow with citron-yellow midribs; spots dark purple (79A), numerous, small to medium sized, on basal half of each tepal (but not near margins); nectaries soft yellow-green (150C), hoary; pollen greyish brown (166A) in very large anthers; style dark greenish yellow (152D); stigma dark red (59A). Fls 170 mm wide; tepals 90 × 44 mm, margins not or slightly wavy, tips not recurved. Lvs scattered, dense, 50 × 16 mm. Stems 1 m, dark green, with 6-8 fls. Late June. (Published in Steinbrück sales list, 1998. Large-flowered for an Asiatic lily. Nomenclatural standard: colour print provided by registrant (WSY 0038752).)

**‘Spreewaldliebe’ I(a/b)**

Parentage: ‘Dawn Star’ × ‘Bélásek’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N:

G. Steinbrück (1997), I: G. Steinbrück (1997), REG: G. Steinbrück (1998)

Inside yellowish white (155D) throat with a soft, pale greenish tinge; outside white; spots red-purple, numerous, small, on the basal half of each tepal; nectaries yellowish white (155D); pollen vivid reddish orange (34A); stigma greyish white. Fls 130 mm wide; tepals 65 × 27 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 10 mm, mid green. Stems 1 m, rather pale green, with up to 20 fls. Early July.

#### **'Spreewald-sommer' I(a/b)**

Parentage: 'Johanna' × brushmarked seedling

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)

Inside vivid orange-yellow (21A), tepal-tips brilliant yellow (11A), throat vivid orange-yellow (21A); outside brilliant yellow (11A), midribs light green; medium-sized spots and noticeable brushmark lines of strong red (46A) on basal third of each tepal; nectaries light yellowish green (134D); pollen deep red (53A); stigma deep red (53A). Fls 120 mm wide; tepals 65 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 12 mm. Stems 0.8 m, dark green to black, with c.10 fls. Early July. (Published in *ILR Eighteenth Supplement* as 'Spreewald-Sommer', but this form of the epithet is not allowed (ICNCP, 2004: Art. 32.13 - the second element of a hyphenated word must start with a lower case letter).)

#### **'Sprenkelinchen' II(-/-)**

Parentage unknown

R: H. Fuchs, N: H. Fuchs, REG: H. Fuchs (1997)

Fls white with small lilac spots. Stems 1.3-1.5 m, with many fls. Late June.

(Published in German Lily Group sales list, 1996.)

#### **'Springfield' I(a/b)**

Parentage: 'Gran Sasso' × unnamed seedling

R: Testcentrum voor Siergewassen B.V. (1992), G: Testcentrum voor Siergewassen B.V., N: Marklily C.V. (2000), I: Marklily C.V. (2000), REG: Marklily C.V. (2000)

Inside light orange-yellow (24C), with a strong orange-yellow (24B) mark above nectaries, throat light orange-yellow (24C); outside pale orange-yellow (24D), tepals edged strong orange-yellow (24B), midribs of outer tepals brilliant yellow-green (149A); spots few, dark red (187A); papillae present; nectaries light orange-yellow (24C), hairy; pollen dark reddish orange (175B); stigma strong red (53B). Fls 170 mm wide; tepals 90 × 50 mm, margins smooth, tips recurved. Lvs scattered, 125 × 20 mm. Stems 1.25 m, green with darker markings, and with 10-14 fls.

#### **'Spring Morn' I(c/c-d)**

Parentage: 'Twilight' × (*pumilum* × bicoloured selection from Coronado Group)

R: Columbia-Platte Lilies (1980), G: Columbia-Platte Lilies (1982), N: Columbia-Platte Lilies (1986), I: Columbia-Platte Lilies (1986), REG: Columbia-Platte Lilies (1988)

Inside deep to strong pink (48B/C) at tepal-tips, shading gradually to light to pale yellowish pink (29C/D) in the throat; outside strong pink (48C/D) with a light green overlay at the base; spots sparse, small, magenta, on basal third of each tepal; nectaries soft buff-orange; pollen moderate reddish brown to dark reddish orange (175A/B). Tepals 60-65 × 25-30 mm, mid green. Stems 0.75-1.25 m, dark green, with 7-20 fls in a long infl. Early to mid June.

#### **'Spring Pink' I(a/-)**

Parentage: unnamed seedling × 'Mont Blanc'

R: Lybelmex Hillegom B.V. (1983), G: Lybelmex Hillegom B.V. (1986), N: Lybelmex Hillegom B.V. (1993), I: Lybelmex Hillegom B.V. (1993), REG: Lybelmex Hillegom B.V. (1993)

Inside yellowish white (155D), midveins suffused with light orange-yellow (25D) in the mid part and moderate purplish red (58A) in the apical part, the base of each tepal with a dark red (187A) edge; outside yellowish white (155D) suffused with moderate purplish red (58A) beside midribs, the midrib of inner tepals brilliant greenish yellow (151D), that of outer tepals strong yellow-green (144B) tipped strong yellow-green (144A); spots dark red (187A) on a third of each tepal; nectaries dark red (187B); pollen sterile. Fls 120 mm wide; tepals 73 × 27 mm. Lvs scattered, 95 × 13 mm, dark green. Stems 0.59 m, mid green, with c.14 fls.

#### **'Spring Song Group VII(-/a,b,c)**

Parentage: derived from *auratum*, *rubellum*, *japonicum* & *speciosum*

R: A.D. Reid (pre 1968), N: A.D. Reid, I: Laurie's Garden (1969)

Fls white, pink and/or red. Fls trumpet-shaped, bowl-shaped or flat; tepals often slightly recurved. Early. (Published in *ILR* (1969) as Spring Song grex.)

#### **'Spring Star' I(a/b)**

Parentage: Sundrop Group × 'Red Carpet'

R: J. Wadkamper (1978), G: J. Wadkamper (1980), N: J. Wadkamper (1984), I: Borbeleta Gardens (1985), REG: J. Wadkamper (1985)

Inside brilliant red-orange, tepal-tips red-orange, throat yellow; outside bright orange; spots deep brown, few. Tepal-margins smooth, tips not recurved. Lvs scattered, mid green. Stems 0.4 m, dark green. Mid June. (Published in *Borbeleta Gardens Cat.*, 1985.)

#### **'Spring Steen' I(a-b/b)**

Parentage unknown

R: Hoffgaarde B.V. (1991), G: Hoffgaarde B.V. (1993), N: Hoffgaarde B.V. (1995), I: Hoffgaarde B.V. (2000), REG: Hoffgaarde B.V. (2001)

Inside vivid yellow (14A), midveins yellow-green at base; outside vivid yellow (14A); spots and papillae present; nectaries green; pollen orange-brown; stigma purple. Fls 140 mm wide; tepals 80 × 20 mm, margins ruffled, tips recurved. Lvs scattered, 70 × 15 mm. Stems 1.3 m, green, with c.4-6 fls (from 10-12 cm bulbs). Early to very early.

**Spring Sunshine Group I(b/b)**

Parentage: Golden Chalice Group × lemon-yellow-flowered *pumilum*

R: L. Lutz (c. 1964), N: L. Lutz

Fls in shades of yellow, moderately spotted. Stems 0.8 m. Early June.

(Published in *ILR* (1969) as Spring Sunshine grex.)

**‘Springtime’ I(a/-)**

Parentage unknown

R: Van der Salm (Holland) (1980), G: Van der Salm (Holland) (1984), N: Van der Salm (USA) (1990), I: Van der Salm (Holland & USA) (1990), REG: Van der Salm (USA) (1990)

Inside and outside vivid yellow (12A), throat intense yellow; spots absent; nectaries green; pollen absent. Tepals 80 × 50 mm, margins smooth, tips slightly recurved.

Lvs scattered, 70 × 20 mm, mid green. Stems 1 m, light green, with 5-20 fls. Late June.

**Sprinkles Group VII(-/-)**

Parentage unknown

R: Strahm Bulb Farm (pre 1982), N: Strahm Bulb Farm Fls white, with pink or lavender spots. Fls 150-225 mm wide. Stems 1.2-1.9 m. Aug

**‘Sprinter’ I(a/-)**

Parentage: ‘Ladykiller’ × Yellow Blaze Group

R: Gebr. N. & B. Laan & Zn (1979), G: Gebr. N. & B. Laan & Zn (1981), N: Gebr. N. & B. Laan & Zn (1986), REG: Gebr. N. & B. Laan & Zn (1986)

Inside strong reddish orange (31B), each tepal with a broad, orange-yellow flame; outside vivid reddish orange (34B), each tepal with a light orange (26C) flame, midribs buff-yellow; spots brown, tiny, in the throat; nectaries brown; pollen moderate reddish orange (171A). Fls 150 mm wide; tepals 70 × 40 mm, tips slightly recurved. Lvs scattered, 100 × 10 mm. Stems 1 m, pale green, with c.6 fls. June to July.

**‘Sprite’ VII(-/d)**

See *L. × parkmanii* ‘Sprite’.

**‘Spruce’ VI(b/a)**

Syn. of ‘Poor Knights’.

**‘Spun Gold’ VI(-/a)**

Parentage: selection from Golden Regale Group

S: LeV. Freimann (c. 1950), N: LeV. Freimann

Fls gold to yellow.

(Published in *LYB* 20: 125 (1957).)

**Squanto Group I(a/-)**

Parentage unknown

R: Blackthorne Gardens (pre 1982), N: Blackthorne Gardens

Fls melon to soft apricot. Stems 0.8 m. May to July.

**‘Staburadze’ VI(-/-)**

Parentage unknown

R: V.P. Orehovs (1967)

Inside creamy white, tepal-margins pale pink; outside dark lilac; pollen brown; stigma brown. Buds dark violet. Fls 110 mm wide, strongly scented. Stems 1 m. July. (Published in M.V. Baranova, *Lilii*, 357 (1990).)

**‘Staburags’ I(a/c)**

Parentage: ‘Baltais Lācis’ × ‘Yellow Giant’

R: A. Balode (1996), G: A. Balode (1998), N: A. Balode (1999), REG: A. Balode (1999)

Inside pale yellow-green (155A) with a brilliant yellow (13C) blotch on each tepal, throat green; outside greenish; spots absent; nectaries light yellow-green; pollen bright orange. Fls 155 mm wide; tepals 85 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 95 × 15 mm, pale green. Stems 0.85 m, light green, with c.3 fls. Mid July.

**‘Staccato’ I(a/c)**

Parentage: (‘Connecticut King’ × ‘Pirate’) × unnamed seedling

R: Gebr. Mak B.V. (1977), G: Gebr. Mak B.V. (1979), N: Gebr. Mak B.V. (1984), I: Gebr. Mak B.V. (1984), REG: Gebr. Mak B.V. (1985)

Inside vivid reddish orange (34A), tepals edged moderate red (179A); outside vivid reddish orange (34A) to moderate red (179A); pollen Saturn red. Tepal-margins smooth, tips not recurved. Lvs scattered, 150 × 15 mm, dark green. Stems 1.1-1.75 m, dark-pigmented, with 8-12 fls (from 16-18 cm bulbs). July.

(Published in *Bloembollencultuur*, 1984.)

**‘Stadion’ VI(b-c/b-c)**

Parentage: ‘Holubice’ × unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside pale beige-apricot; outside with brownish midribs, rosy-veined; nectaries yellow-green; pollen apricot-brown; stigma greyish. Fls 145 mm wide; tepals 100 × 52 mm, thick, margins not wavy, tips slightly recurved; pedicels 85 mm long, brown-dotted. Lvs scattered, 125 × 16 mm, dull dark green. Stems 1.15 m, dark green, spotted at base, with a medium-length infl. Early July.

**‘Stadt Hof’ II(-/-)**

Parentage unknown

R: H. Fuchs, N: H. Fuchs, REG: ICRA (1992)

Fls golden yellow; spots absent. Fls 80-100 mm wide; tepals only slightly reflexed. Late June.

(Published in German Lily Group sales list, 1991.)

**‘Stáňa’ I(a/b)**

Parentage: ‘Connecticut King’ × seedling E-29

R: Šlechtitelaká Stanice Heřmanův Městec, N: Šlechtitelaká Stanice Heřmanův Městec, REG: Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside pale orange, tinted rose-pink, tepal-edges darker on first opening, with centre of tepals greenish, later becoming yellow-orange; spots conspicuous, on a quarter of each tepal. Fls with overlapping tepals that are not recurved. Lvs scattered, 70-85 × 11-15 mm, dark green. Stems 0.7-0.8 m, brown-violet, with 5-8 fls. Early July.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1991.)

#### **‘Stafford’ VIII(a/b)**

Parentage: seedling BJ 95-17 × seedling AJ 94-15

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside light yellow/light orange-yellow (18A/16B), tepal-margins and tips vivid yellow/light orange-yellow (16A/B), strong orange-yellow (17A) along midveins, throat vivid orange-yellow (23A), margins vivid/light yellow (17C/D); outside with outer tepals light yellow/pale orange-yellow (18B/16D), margins strong orange-yellow (17A), at tip light yellow (18B), at base with moderate red (181A) patch, inner tepals light yellow (18B), light yellow (18A) towards margins, at tip strong orange-yellow (17A); spots and papillae absent; nectaries light orange-yellow (19A); pollen vivid reddish orange (34B); stigma moderate red/greyish red (183C/184A). Fls 242 mm wide; tepals 150-157 × 49-72 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 29 mm. Stems 1.1-1.2 m, green with darker markings, and with c.3 fls.

(*A longiflorum*/Asiatic (LA) hybrid.)

#### **‘Stálice’ I(a-b/b)**

Parentage: ‘Dawn Star’ × ‘Red King’ (Div. I)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)

Inside pale apricot-orange, tepal-tips and throat paler, centre of tepals tinged brownish; outside with whitish midribs; spots numerous, dark purple, moderately large, on two-thirds of each tepal; papillae large; nectaries whitish; pollen orange. Fls 120 mm wide; pedicels 50 mm long, slightly spotted. Lvs scattered, 110 × 11 mm, dull light green, held horizontally. Stems 0.75 m, thick, brown-spotted, densely so at base, fls in a short, whorled infl., with secondary buds. Early July.

#### **‘Staminosum’ I(a/b)**

See *L. × maculatum* ‘Staminosum’.

#### **‘Standby’ I(a/-)**

Parentage: (‘Connecticut King’ × Hallmark Group) F<sub>2</sub>

R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc. (1985)

Inside with pink overlying gold, fading, tepal-tips pink/gold, throat deep pink/gold; outside rich pink/gold with a green suffusion; spots absent; nectaries green; pollen brown. Fls 150-180 mm wide; tepals 60 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 30 mm, dark green. Stems 1.1 m, very dark-mottled, with 10-40 fls. Late June.

#### **‘Standing Ovation’ VII(b/-)**

Parentage: ((*L. × parkmanii* Everest Group × ‘Star Gazer’) × unnamed seedling) × (‘Star Gazer’ × ‘Merci’)

R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff

Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1993), I: Bischoff Tulleken Lelies B.V. (1993), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside pale yellow-green (155A), midveins light greenish yellow (8B) flushed with light greenish yellow (8C); outside yellowish white (155B), midribs brilliant yellow (7B); spots moderate reddish brown (175A) on two-thirds of each tepal; papillae brilliant greenish yellow (6C) in the throat; nectaries strong yellow-green (144B); pollen strong orange (24A); stigma dark red (187A). Fls 160 mm wide; tepals 100 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 40 mm, mid green. Stems 0.7 m, dark green, with c.5 fls.

#### **STANZA VIII(a/b)**

Trade designation of ‘Zanlanza’.

#### **‘Star Angel’ VII(a/c)**

Parentage: unnamed seedling × ‘Tom Pouce’

R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside deep purplish pink (72D) on a ground whiter than 155D, midveins light greenish yellow (8B), throat whiter than 155D; outside with a slight deep purplish pink (72D) suffusion over a ground whiter than 155D, midribs light yellow-green (150D) shading to strong yellow-green (144B) towards top, base with a little light yellow-green (150D); spots brilliant yellow (8A) and strong orange (25A/26A); papillae brilliant yellow (8A) and yellowish white (155D); nectaries strong yellow-green (144B); pollen strong reddish orange/strong orange (169A/B); stigma moderate yellow-green (138B). Fls 230 mm wide; tepals 120-130 × 45-70 mm, margins ruffled, tips strongly recurved. Lvs scattered, 150-170 × 25-30 mm. Stems 1.1 m, green with a little darker marking, and with c.5 fls. July.

#### **‘Starbelle’ VI(-/a)**

Parentage: selection from Golden Trumpet Group

N: D. Foxwell (c. 1960)

Fls brilliant greenish yellow (6B); buds mahogany, 150 mm long.

#### **‘Star Blush’ I(a-b/-)**

Parentage: probably an ‘Indian Brave’ hybrid

R: unknown (1984 to 1986), N: Hartle-Gilman Gardens (1994), I: Hartle-Gilman Gardens (1994), REG: Hartle-Gilman Gardens (1994)

Inside strong greenish yellow (153B), tepal-tips strong greenish yellow (153B), throat light yellowish pink (36C); outside light yellowish pink (36C); basal third of each tepal with a pattern of dark lines; nectaries slightly frosted; pollen red-orange. Buds pink. Tepals 88 × 40 mm, margins slightly ruffled, tips very slightly recurved. Lvs scattered, 140 × 12 mm, mid green. Stems 1.2 m, mid green, with 10-15 fls. Midseason.

(Published in Hartle-Gilman Gardens list, 1994.)

**'Starburst Sensation' VIII(b/a)**

Parentage: 'Damson' × *speciosum* 'Tornado'

R: W.G. Ronald (1975), G: W.G. Ronald (1976), N: L.M. Collicutt (1992), I: Agriculture Canada (1992), REG: L.M. Collicutt (1993)

Inside strong purplish red (60C/58C) fading to strong purplish red (71B/C), tepal-tips yellowish white (155D); outside strong to deep purplish red (60B/61A), inner tepals coloured only on midribs; spots absent; papillae few, on basal third of each tepal; nectaries light yellow-green (145B); pollen greyish brown (166A) and strong orange (169C) to moderate reddish brown (175A); stigma moderate purple (79D). Outer tepals 113 × 27 mm, inner tepals 108 × 50 mm, margins smooth, tips slightly recurved, moderate olive-green (146A). Stems 0.76 m, strong yellow-green (144A) with a dark red (187A,B,C) overlay, and with 1-6 fls. July. (An Orienpet (OT) lily.)

**'Starchild' I(b/-)**

Parentage unknown

Fls canary-yellow; spots absent. Stems c.1.1 m, with up to 30 fls. Mid July.

(Published in *Parkland Perennials Cat.* 1996: 9.)

**'Starclass' VII(a-b/b)**

Parentage: pink-flowered seedling × 'Tom Pouce'

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (1999)

Inside yellowish white (155B), tepal-tips edged deep purplish pink (66C) on a white ground; outside yellowish white (155B), tepal-tips edged moderate purplish pink (66D) on a white ground, midribs light greenish yellow (4C) to strong yellow-green (144C) and tipped strong yellow-green (143B); spots brilliant yellow (12B) on up to two-thirds of each tepal; papillae yellowish white (155B) and brilliant yellow (12B), in the throat; nectaries strong yellow-green (144B); pollen strong brown (172A); stigma moderate yellow-green (147D). Fls 210 mm wide; tepals 110 × 40-60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 35 mm, dark green. Stems 0.9 m, green with dark markings, and with c.5-6 fls. July.

**'Stardom' I(a-b/-)**

Parentage: late red-flowered Wadkamper seedling × 'White Prince'

R: J. Wadkamper (1980), G: J. Wadkamper (1982), N: G.C. Keast (c. 1986), I: Borbeleta Gardens (1993), REG: J Wadkamper (1993)

Inside light and moderate yellowish pink (36A & 38B), tepal-tips pale, each tepal with a narrow, white ray running from throat to about half way up; outside darker; spots insignificant spotting; nectaries white; pollen tan. Tepals 75 × 18 mm, margins smooth, tips not recurved. Lvs scattered, 75 × 15 mm, mid green. Stems 0.8 m, green, with c.12 fls. Midseason.

(Published in *Borbeleta Gardens Cat.*, 1993.)

**'Stardrift' VII(a/d)**

Parentage unknown

R: A.C. Imanse (1975), G: A.C. Imanse (1978), N: A.C. Imanse (1979), I: A.C. Imanse (1979), REG: A.C. Imanse (1983)

Inside moderate purplish red to dark reddish orange (186B/C), midveins chrysanthemum-crimson fading to pea-green in centre of fl., tepal-margins ivory-white; outside tepals edged white; spots dark red (187A); pollen dark brown. Fls 250 mm wide; tepals 50 mm wide, margins smooth, tips slightly recurved. Lvs scattered, 170 × 44 mm, dark green. Stems 1.2-1.5 m, green, with 5-8 fls (from 16-18 cm bulbs).

**'Star Dust' VI(b/b-c)**

Misspelling of 'Stardust' (of de Graaff).

**'Stardust' VI(-/c)**

Parentage: seedling of Aurelian Group

R: E.C. Genat (c. 1953), N: E.C. Genat

Fls pale yellow, with brown flecks in centre. Tepals with a slight twist.

**'Stardust' VI(b/b-c)**

Parentage: selection from Sunburst Group

S: J. de Graaff (c. 1958), N: J. de Graaff

Fls white, with orange and green centre. Stems 1-1.2 m. Aug.

(Published in *Oregon Bulb Farms Cat.*, 1959.)

Misspelling: 'Star Dust'.

**'Starfighter' VII(a-b/c)**

Parentage: 'Star Gazer' × unnamed seedling

R: Sande B.V. (1982), G: Sande B.V. (1985), N: Sande B.V. (1990), I: Sande B.V. (1990), REG: Sande B.V. (1991)

Inside moderate to strong purplish red (59C/D), tepals with yellowish white (155B) tips and edges, midveins slightly suffused with strong red (53C), throat light yellow-green (145B); outside yellowish white (155B), the basal half of each tepal strong purplish red (60D), midribs brilliant yellow-green (150C); papillae dark red (187A) on basal half of each tepal; nectaries light greenish grey (188B); pollen brownish orange (171B). Fls 165 mm wide; tepals 75 × 45 mm, margins ruffled, outer more so, tips strongly recurved. Lvs scattered, 165 × 35 mm, mid green. Stems 0.9 m, green, with c.8 fls. July (under glass).

**'Star Fire' I(a/b)**

Parentage unknown

R: W. Windus (c. 1973), N: W. Windus (1981), REG: W. Windus (1981)

Fls vivid reddish orange (43B) throughout; spots absent; pollen moderate reddish orange (178D). Fls 140 mm wide; tepal-margins smooth. Lvs 110 × 20 mm, not twisted below infl. Stems 1.2-1.4 m, with 12 or more fls.

**'Starfire' VII(-/b)**

Parentage: selection from Fire Dancer Group

S: Strahm Bulb Farm (pre 1983), N: Strahm Bulb Farm

Fls crimson-red with darker spots and white tepal-margins. Stems 1-1.9 m. Aug. to Sept.  
(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Star Fire'.)

**'Starfish' I(a/-)**

Parentage: *lancifolium* × unknown  
R: N.A. Lamb, N: N.A. Lamb, I: N.A. Lamb  
Fls in pastel colours. Stems 1 m.  
(Published in *Bull. NALS* 12(2) (1959).)

**'Star Gazer' VII(a/c)**

Parentage unknown  
R: L. Woodriff, N: T.T. Kirsch (pre 1975), I: Sun Valley Bulb Farms, Inc., REG: J. Kirsch (1975)  
Fls red throughout, with dark spots, heavily scented; papillae present; nectaries yellow; pollen orange. Fls fragrant; tepals unusually narrow, margins hardly ruffled, tips recurved. Stems 0.8-1.5 m, with 5-8 fls (from 16-18 cm bulbs). July to Aug.  
(Misspelling: 'Stargazer'. Published in *Lilies and other Liliaceae*, 1975: 96. Bulbs sold as 'Star Gazer' too often turn out to be a different cv., especially *L. × parkmanii* 'Journey's End'. Woodriff moved to Sun Valley Bulb Farm in the late 1960s and his lily stock was acquired by the owner, Ted Kirsch.)

**'Stargazer' VII(a/c)**

Misspelling of 'Star Gazer'.

**'Star in the East' IX(b/c)**

See *auratum* 'Star in the East'.

**'Star Jewel' I(a-b/b)**

Parentage: (seedling 2504-OJ × ('Prato' × 'Stella' (tetraploid form?)) × ('Michella' (tetraploid form?) × 'Saba Jewel'))  
R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)  
Inside strong orange-yellow/vivid yellow (17A/B), throat light yellow-green (154D); outside vivid yellow (12A/13A), tepal-margins strong orange-yellow/vivid yellow (17A/B), at top with some strong yellow-green (144A), at base strong yellow-green (144A/B); spots and papillae absent; nectaries vivid greenish yellow (2A) with strong yellow-green (144A) stripes; pollen dark red (183A); stigma deep red (53A/185A). Fls 145 mm wide; tepals 106 × 37-53 mm, margins smooth, tips slightly recurved. Lvs scattered, 124 × 20 mm, dark green. Stems 0.85-1.1 m, brownish with green spots, and with 2-7 fls.

**'Star King' I(a/-)**

Parentage: 'Sterling Star' × 'Connecticut King'  
R: R. Chiabotta (1976), N: R. Chiabotta (1980), I: Bluebell Lilies, REG: R. Chiabotta (1980)  
Fls brilliant yellow (7B) with a few spots in throat; nectaries frosty; pollen orange. Tepals 70 × 35 mm, not recurved. Lvs scattered, 90 × 20 mm, dark green. Stems 1.2 m, dark green, with 20-30 fls. June.

**'Starkissed' VII(-/-)**

Parentage unknown  
R: Oregon Bulb Farms, Inc. (pre 1986), N: Oregon Bulb Farms, Inc.  
Fls rose-pink; spots dark rose-pink. Tepal-margins wavy.  
(Published in *Bloembollencultuur* 96(22): 18 (1986).)

**'Starlite' VI(b/b)**

Parentage: (*henryi* × seedling of *L. × aurelianense*) × *regaleisargentinae*/sulphureum derivative  
R: E.F. Palmer (1960/61), N: E.F. Palmer, I: E.L. Kline  
Fls creamy yellow, centre apricot; anthers mahogany-brown. Stems 1.5-1.9 m, with 15-20 fls. Aug.

**'Starmaker' VII(b-c/b)**

Parentage unknown  
R: Sun Valley Bulb Farms, Inc. (pre 1985), N: Sun Valley Bulb Farms, Inc. (2002), REG: Sun Valley Bulb Farms, Inc. (2002)  
Inside with a central moderate purplish red (184C) area on each tepal, midveins moderate to strong red (47A/B), moderate purplish red to deep pink (185C/D) along tepal-margins, margins pale yellow-green (155A); outside yellowish white (155D) suffused with purple-pink, midribs light green; spots and papillae present; nectaries green; pollen orange-brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems light green to greyish with some darker markings at the base.

**'Star of Bethlehem' VII(-/-)**

See *L. × parkmanii* 'Star of Bethlehem'.

**'Star of Oregon' IV(-/d)**

Parentage: selection from Bellingham Group  
R: D. Griffiths, N: D. Griffiths (1933)  
Fls orange; spots dark red-maroon, small and well defined in the throat, becoming larger and paler towards tepal-tips and tending to coalesce; anthers purplish; pollen orange-red. Tepals c. 95 mm long; pedicels drooping. Lvs mainly in whorls, dull green above, glossy beneath. Stems 1.2-1.9 m, with 14-20 fls.  
(Published in *USDA Circular* no. 299: 9 (1933). The parents are thought to be *pardalinum* and *humboldtii* var. *ocellatum*. *Star of Oregon* was the boat that carried three men from Oregon to California to establish a livestock industry.)

**'Star Pixie' I(a/-)**

Parentage: 'Charisma' × 'Sun Ray'  
R: E.A. McRae (1975), G: Oregon Bulb Farms, Inc. (1978), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)  
Inside vivid reddish orange (30A), each tepal with a strong orange (24A) ray, tepal-tips vivid reddish orange (30A), throat strong orange (24A); outside strong orange (30D); the basal third of inner tepals with 10-20 small, magenta-purple spots; nectaries green; pollen strong reddish orange (169A). Fls 140-170 mm wide; tepals 80 × 40 mm, margins smooth. Lvs scattered, 120 × 10 mm, dark green. Stems 0.4 m, light green, with 6-30 fls. Mid June.

**'Star Search' I(a/-)**

Parentage: unnamed seedling ex Wadekamper × unnamed seedling ex Wadekamper  
 R: J. Wadekamper (1979), G: J. Wadekamper (1982), N: J. Wadekamper (1992), I: Borbeleta Gardens (1993), REG: J. Wadekamper (1993)  
 Inside and outside strong orange (25A); spots brown on basal half of each tepal; nectaries white; pollen brown. Tepals 85 mm long, margins smooth, tips not recurved. Lvs scattered, 75 × 15 mm, mid green. Stems 1 m, green, with 12-15 fls. Very late.  
 (Published in *Borbeleta Gardens Cat.*, 1993. Similar to 'Enchantment', but flowering much later.)

**'Starshine' VI(b/b)**

Parentage unknown  
 R: H.J. Hartle (1979), N: J. Wadekamper (1976), I: J. Wadekamper (1977), REG: J. Wadekamper (1977)  
 Fls greenish white-cream, throat yellow-orange; spots absent; pollen yellow-brown. Stems 1-1.1 m. July.  
 (Published in *Lilies and other Liliaceae*, 1977: 81.)

**'Starsong' I(a/-)**

Parentage unknown  
 R: P. Whipple, N: P. Whipple (1979), I: Borbeleta Gardens (1981), REG: Borbeteta Gardens (1981)  
 Inside pale yellow (11C) to light yellow (11B), tepal-tips pale yellow (11C), throat ivory; outside ivory-tan; spots brown on two-thirds of each tepal; nectaries greenish; pollen yellowish orange. Tepals 40 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 7 mm, mid green. Stems 0.6 m, light green, with 8-12 fls. July.  
 (Published in *Borbeleta Gardens Cat.*, 1981.)

**'Star Spirit' VII(a/a)**

Parentage: (*L.* × *parkmanii* 'Allura' × 'Star Gazer') × (*L.* × *parkmanii* Little Rascal Group × 'Star Gazer')  
 R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1991), N: PhytoNova (1992), I: PhytoNova (1992), REG: PhytoNova (1995)  
 Inside moderate purplish pink (66D), tepal-edges and tips yellowish white (155B), midveins strong red (53B); outside suffused with strong reddish purple/deep purplish pink (72C/D) on a greenish white (155C) ground, midribs yellowish white (158C) becoming light greenish yellow (3C) near top; spots large, dark red (187A) on all but tepal-tips; papillae present; pollen orange; stigma dark purple. Fls 220 mm wide; tepals 110 × 65 mm, margins smooth, tips recurved. Lvs scattered, 150 × 30 mm, more or less dull green. Stems 1.35 m, green with darker stripes and dots, and with 7-14 fls (from 16-18 cm bulbs). Late. Syn.: 'Saba'.  
 ('Saba' registered in 1992) and 'Star Spirit' (registered in 1995) are synonymous. Normally the later epithet would be a synonym but because Dutch PBR (LEL 837) were granted to 'Star Spirit', this epithet must be accepted (ICNCP, 2004: Art. 24.4.).

**'Star's Pride' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
 R: J.A. Mak (1982), G: J.A. Mak (1984), N: C.A. Kruyer

& Zn (1987), I: C.A. Kruyer & Zn (1987), REG: C.A. Kruyer & Zn (1988)  
 Inside vivid yellow (14B), each tepal with a short, vivid orange-yellow (21A) flame, centre green; outside vivid yellow (9A), midribs slightly green, some tepals with a brownish flame; pollen strong orange (25A). Fls 150 mm wide; tepals 75 × 40 mm, tips slightly recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 0.4 m, green, with c.6 fls.

**'Startling' I(-/-)**

Parentage unknown  
 R: E. Robinson (1967), N: E. Robinson (1982), I: E. Robinson (1982), REG: Gaybird Nursery (1983)  
 Inside with a red-frosted centre, then a ring of palest yellow and with pink tepal-tips; outside pink; dark spots on a yellow ring; nectaries reddish; pollen brown. Tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 20 mm, dark green. Stems c.1.1 m, dark green, with c.10 fls.

**'Star Trek' I(a/-)**

Parentage: (*lancifolium* × unknown) × unnamed ("tall halo bronze") seedling  
 R: W. Windus (1975), G: M.P. Thompson, N: M.P. Thompson (1979), REG: M.P. Thompson (1979)  
 Inside brilliant red-orange, tepal-tips red; outside red, spots red, few, in the throat; nectaries red; pollen brown-red. Tepal-margins slightly ruffled. Lvs dark green, linear. Stems 1.2 m, with bulbils.

**'Stately Maid' IV(-/-)**

See *L.* × *burbankii* 'Stately Maid'.

**'Statesman' I(a/-)**

Parentage: ('Golden Wonder' × seedling 1166) × 'Connecticut King'  
 R: C. Robinson, N: C. Robinson (1979), I: Borbeteta Gardens (1982), REG: J. Wadekamper (1982)  
 Fls vivid yellow (9B) throughout, with green midribs outside; spots absent; nectaries green; pollen yellow. Tepals 80 × 45 mm, margins smooth, tips not recurved. Lvs to 130 × 25 mm, 7-veined, mid green. Stems 0.5-1 m, mid green, with 8-10 fls.

**'Status Hi' VIII(b/a)**

Parentage: (*L.* × *kewense* 'White Henry' × *auratum*) × ((Golden Splendor Group × a 4-way cross) × pink-flowered trumpet)  
 R: A.E. Alexander (1995), G: A.E. Alexander (1999), N: A.E. Alexander (2002), I: A.E. Alexander (2002), REG: A.E. Alexander (2002)  
 Inside pinkish white with a conspicuous gold throat; outside with pink and white bands; spots absent; nectaries green; pollen orange; stigma black. Fls 140 mm wide; tepals 130 × 50 mm, margins smooth, tips becoming quite strongly recurved. Lvs scattered, 110 × 15 mm. Stems 2 m, mid green, flecked with black, with c.12 fls in a racemose infl. Jan. (New Zealand).  
 (An Orienpet (OT) lily. Nomenclatural standard: colour print provided by registrant (WSY 0032053).)

**'St David's Star'** V(-/a)  
Misspelling of *longiflorum* 'Saint David's Star'.

**'Steadfast'** I(a/-)  
Syn. of 'Tribute'.

**'Stelinka'** I(c/d)  
Parentage: 'Tetra Nutmegger' × 'Apricot Supreme'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002),  
REG: B. Mičulka (2002)  
Inside lemon-yellow; outside pale pastel yellow with  
yellow tepal-edges, midribs more-or-less brownish;  
spots very few, dark brown-crimson; nectaries yellow-  
granulated; pollen and stigma brown. Fls 130 mm wide;  
tepals strongly recurved; pedicels 70 mm long, thick,  
brownish. Lvs scattered, 90 × 14 mm, mid green. Stems  
0.75 m, very thick, slightly brown-spotted, with a short  
infl. Early July. Tetraploid.

**'Stella'** I(a/b-c)  
Parentage: ('Monaco' × 'Apeldoorn') × 'Rebecca'  
R: De Jong Beheer B.V. (1990), G: De Jong Beheer B.V.,  
N: De Jong Beheer B.V. (1995), I: De Jong Beheer B.V.  
(1996), REG: De Jong Beheer B.V. (1997)  
Inside and outside vivid yellow (12A), midveins yellow;  
spots few, small; papillae present; nectaries yellow-green;  
pollen reddish brown; stigma violet-red. Tepal-margins  
smooth, tips not or slightly recurved. Stems 1.1 m, green  
with darker stripes and spots, and with up to 10-12 fls  
(from 16-18 cm bulbs). Late.

**'Stella Bianca'** I(a/-)  
Parentage unknown  
R: Hoffgaarde B.V. (1983), G: Hoffgaarde B.V. (1985),  
N: Hoffgaarde B.V. (1988), I: Hoffgaarde B.V., REG:  
Hoffgaarde B.V. (1989)  
Inside pale yellow-green (155A) flushed with pale yellow  
(8D); outside pale yellow (8D) with paler tepal-margins;  
spots few, dark red; pollen moderate orange (167A). Fls  
180 mm wide; tepals 95 × 45 mm, margins smooth, tips  
not recurved. Lvs scattered, 120 × 30 mm, mid green.  
Stems 0.9 m, pale green, with 5-6 fls.

**'Stella Crozier'** VII(-/b)  
Parentage: ((*auratum* 'Wittei' × 'Cymbeline') × *rubellum*)  
× *rubellum*  
R: G.G. & S.F. Blake (1980), G: G.G. & S.F. Blake  
(1983), N: G.G. & S.F. Blake (1984), I: G.G. & S.F.  
Blake (1984), REG: G.G. & S.F. Blake (1984)  
Inside pale purplish pink (56B) shading to white at  
tepal-edges, tips pale purplish pink (56C), throat light  
yellow (15D); outside strong purplish pink (55B); lightly  
spotted with pale purplish pink (56B) to light yellow  
(15D); nectaries light yellow-green (144D); pollen dark  
reddish orange (178B). Fls 210 mm wide; tepals 140 × 70  
mm, margins ruffled, tips slightly recurved. Lvs scattered,  
185 × 43 mm, mid green. Stems 1.5 m, moderate yellow-  
green (147C) mottled with light olive-grey (197B), with  
c.26 fls. Jan. to Feb. (Australia).

**'Stella d'Or'** I(a/-)  
Parentage: seedling G86-10 × seedling G86-2  
R: Vletter & Den Haan, G: Vletter & Den Haan, N:  
Vletter & Den Haan (1993), I: Vletter & Den Haan,  
REG: Vletter & Den Haan (1998)  
Inside vivid yellow (14A), yellow-green at base; outside  
vivid yellow (14A & B); a few spots and some papillae  
present; nectaries green; pollen orange-brown; stigma  
yellow. Tepal-margins ruffled, tips slightly recurved. Stems  
1.2 m, green with darker markings. Midseason.

**'Stella Maris'** I(c/-)  
Parentage: *davidii* var. *wilmottiae* × *pumilum*  
R: A.J. van der Zwet & Sons, N: Voors  
AMH 1948  
Fls dark tomato-red, spots light. Stems with 10-20 fls.

**'Stella Polare'** VII(a/c)  
Parentage: (*L* × *parkmanii* Everest Group × *L* × *parkmanii*  
'Journey's End') × (*L* × *parkmanii* 'Allegra' × 'Star Gazer')  
R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff  
Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies  
B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1991),  
REG: Bischoff Tulleken Lelies B.V. (1994)  
Inside yellowish white (155B), midveins light greenish  
yellow (6D); outside yellowish white (155B) tinged with  
strong yellow-green (144B) at base, midribs light greenish  
yellow (3D) on two-thirds of the length, shading to  
strong yellow-green (144B) at base, tepals tipped with  
strong yellow-green (143B); spots brilliant yellow (10A)  
on two-thirds of each tepal; papillae in throat; pollen  
strong orange (169C); stigma strong purplish red (72A).  
Fls 280 mm wide; tepals 135 × 55 mm, margins ruffled,  
tips slightly recurved. Lvs scattered, 180 × 35 mm, mid  
green. Stems 0.8 m, pale green with darker markings, and  
with c.3 fls.

**'Stellar Gleam'** I(a/-)  
Parentage: selection from Golden Chalice Group  
S: B.G. Hayler, N: B.G. Hayler, I: B.G. Hayler (1974)  
Fls golden yellow; spots absent. Stems 0.6-1 m. Oct. to  
Nov. (Australia).  
(Published in *Golden Ray Gardens Cat.*, 1974.)

**'Stellar Light'** I(b-c/b-c)  
Parentage: unnamed seedling × unnamed seedling  
R: J. Vasarietis (1981), G: J. Vasarietis (1984), N:  
J. Vasarietis (1987), I: J. Vasarietis (1987), REG: J.  
Vasarietis (1992)  
Inside strong orange-yellow (24B), tepal-tips pale yellow  
(20C); outside pale yellow (20C); spots few, black, on  
a third of each tepal; nectaries white; pollen brown. Fls  
140 mm wide; tepals 70 × 40 mm, margins smooth, tips  
slightly recurved. Lvs scattered, 140 × 10 mm, pale green.  
Stems 1.2 m, brownish, with 10-20 fls. Early July.

**'Stelvio'** VIII(a/b)  
Parentage: seedling N 66 × seedling W 91-15  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den  
Haan Beheer B.V., N: Vletter & Den Haan Beheer  
B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG:

Vletter & Den Haan Beheer B.V. (2001)  
Inside yellowish white (155B), midveins strong yellow-green (145A) at base; outside yellowish white (155B), midribs on inner tepals pale yellow-green (4D), on outer tepals pale greenish yellow (1D); spots and papillae absent; nectaries pale yellow-green (157B); pollen brownish orange (164A); stigma light yellow (11B). Fls 170 mm wide; tepals 110 × 50-60 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 15 mm. Stems 1.3-1.5 m, green with darker markings, and with c.4 fls.  
(*A. longiflorum*/Asiatic (LA) hybrid.)

### **Stenographer Group I(b-c/-)**

Parentage: selections from Preston Group  
S: I. Preston, N: I. Preston  
Fls in orange and red shades.  
(Published in *LYB* 8: 156 (1939).)

### **'Stephany' VII(a-b/b)**

Parentage: 'Atlantic Ocean' × white-flowered seedling  
R: Mak Lelieveredeling B.V. (1988), G: Mak-Leek Inc. (1991), N: Mak-Leek Inc. (1996), REG: Mak-Leek Inc. (1997)  
Inside ground colour yellowish white (155D) towards tepal-edges, more a mixture of white and pale greenish yellow (2D) towards centre of tepals, most of the yellow colouring fading after two days; small, strong purplish red (58B/C) rays on inner tepals reach from base to centre, on outer tepals the rays almost reach the tip; outside dark red (183B) shading to moderate reddish orange (179C) mixed with yellowish white (155D), midribs strong yellowish green (141C/D); spots deep purplish red (71A), evenly distributed from the base on three-quarters of each tepal; nectaries yellow/green; pollen strong reddish orange (169A); stigma pale yellow-green (157A). Fls 230-250 mm wide; tepals 110-120 × 40-65 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 50 mm, mid green. Stems 0.9-1.1 m, deep to strong yellowish green (141B/C) with dark brown markings, and with 3-10 fls. Late July to early Aug.

### **'Stephen Harmeling' IV(c/-)**

Parentage: *pardalinum* × *washingtonianum*  
R: S.A. Harmeling (c. 1934), N: S.A. Harmeling, I: W.A. Constable Ltd (c. 1938)  
PC 1938  
Fls yellow, spotted with light crimson. Stems up to 1.8 m, with 2-9 fls.  
Syn.: 'A.J. Harmeling'.  
(Published in *JRHS* 63: cxi (1938). The 1938 award was under the incorrect epithet 'A.J. Harmeling'.)

### **'Sterling Silver' Div. ?**

Given as a parent of 'Impala' and 'Silver Showers'. No further details.

### **'Sterling Star' I(a/b)**

Parentage: (('Lemon Queen' (Div. I) × 'Mega') × 'Edith Cecilia') × 'Croesus'  
R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1973), REG: Oregon

Bulb Farms, Inc. (1973)  
Fls white with cream shading; spots purplish black, on basal third of each tepal. Stems 0.9-1.2 m, with 7-9 fls (from 14-16 cm bulbs). June.  
(Published in *Lilies and other Liliaceae*, 1973/1974: 113.)

### **'Sternenregen' I(a/b)**

Parentage: 'Aelita' × 'Rubinstern'  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2003), I: G. Steinbrück (2004), REG: G. Steinbrück (2004)  
Inside light orange (28D), throat orange with reddish sheen; outside light orange to soft cream; spots many, medium sized, oblong, moderate violet (86A), on three-quarters of each tepal; nectaries white with small black spots towards top; filaments beige; pollen greyish red (178A); style pink below, beige above; stigma violet. Fls 140 mm wide; tepals 80 × 29 mm, margins smooth, tips slightly recurved. Lvs scattered, 62 × 19 mm. Stems 1.1 m, dark green, slightly hairy, with c.6 fls. Late July.

### **'Sterntiger' I(a/-)**

Parentage: (*lancifolium* × *L. × hollandicum*) × (*davidii* × *L. × maculatum*)  
R: C. Feldmaier (c. 1961), N: C. Feldmaier  
Fls vivid yellow (13A), tepal-edges vivid orange-yellow (21A); spots on basal half; nectaries pale yellow (8D). Stems 1 m. Late.

### **'Stern von Buchholz' I(a/b)**

Parentage: 'Ancona' × 'Rosa Hoffnung'  
R: G. Steinbrück (1993), G: G Steinbrück (1995), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2001)  
Inside deep purplish pink (64D), tepal-tips slightly paler, throat deep purplish pink (64D); outside deep purplish pink (64D), midribs whitish green; spots numerous, small, dark reddish orange (175C) on basal half of each tepal; nectaries strong purplish red (61B), running into soft orange at top; filaments soft pink; pollen vivid reddish orange (34A) in large, thick anthers; style soft pink; stigma light yellowish pink (159A). Fls 140 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 17 mm. Stems 0.9 m, dark green, with c.10 fls. Mid June.  
(Published in ELG sales list, 2000. Buchholz is a part of Berlin, where some of the registrant's plants are grown. Nomenclatural standard: colour print provided by registrant (WSY 0028884).)

### **'Stern von Rio' I(a/c)**

Parentage unknown  
R: H. Hörster (pre 1989), N: H. Hörster, REG: H. Hörster (1994)  
Fls dark red with golden yellow midribs. Stems 1.2-1.5 m.  
(Published in German Lily Group sales list, 1992.)

### **'Stern von Weinböhla' I(a/b)**

Parentage: yellow-flowered, up-facing Asiatic seedling 163 × 'Brushstroke'

R: G. Thürmer (1988), G: G. Thürmer (1990), N: G. Thürmer (2001), I: G. Thürmer (2002), REG: G. Thürmer (2001)

Inside pale greenish yellow (2D), throat reddish; outside pale greenish yellow (2D); spots and streaks numerous, strong dark red (59A) on at least the basal half of each tepal; nectaries greenish; pollen moderate reddish orange (171A). Fls 140 mm wide; tepals 80 × 33 mm, margins smooth, tips slightly recurved; buds green. Lvs scattered, 110 × 15 mm. Stems 0.95 m, pale green, with 10-15 fls and some bulbils. Early to mid July.  
(Nomenclatural standard: colour print provided by registrant (WSY 0030332).)

**stewartianum** Balfour fil. & W.W. Smith IX(c/a)

Fls greenish yellow, with deep red spots; nectaries smooth; pollen brownish. Fls fragrant; tepals 35-50 × 7-9 mm, recurved in apical two-thirds. Leaves scattered, 25-70 × 3-5 mm. Stems 0.2-0.5 m, green, sometimes with purple-red spots, with solitary drooping fls. July to Aug. W China (Yunnan).

**var. stictum** IX(a/c)

See *concolor* var. *stictum*.

**'Stilnox'** I(a-b/c)

Parentage: 'Español' × white-flowered tetraploid  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)  
Inside lemon-yellow, tepal-tips and throat paler; outside paler with mahogany midribs; spots dark pink-brown, tiny, on a third of each tepal; nectaries green, white-granulated; pollen chocolate-brown; stigma brown. Fls 145 mm wide; tepals 80 × 44 mm, tips slightly recurved; pedicels 55 mm, thick, heavily brown-dotted. Lvs scattered, 95 × 16 mm, dull mid green. Stems 0.65 m, thick, heavily dotted with dark brown. Mid July. Triploid.

**'St Louis'** V(b/a)

Misspelling of *formosanum* 'Saint Louis'.

**'St Nicholas'** II(c/d)

Misspelling of *L. × dalhansonii* 'Saint Nicholas'.

**'Stockholm'** I(a/b)

Parentage: seedling AW 94-9 × seedling AW 95-7  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside yellowish white (155D); outside yellowish white (155D), midribs light yellow-green (145D), strong yellow-green (145A) at top; spots and papillae absent; nectaries strong yellow-green (144C); pollen moderate reddish orange (171A); stigma pale greenish yellow (1D). Fls 155 mm wide, fragrant; tepals 90 × 53 mm, margins smooth, tips slightly recurved. Lvs 130 × 18 mm. Stems 1.2 m, green with darker markings, with 3-5 fls.

**'Stocvetotshnaya Zvozdotshka'** I(a/-)

Parentage unknown  
Fls nearly white; spots absent.

(Raised in the former USSR. Published in *Lilies and other Liliaceae*, 1975: 26. Classified in Div. VI in *ILR* (1982).)

**'Stones'** I(a/b)

Syn. of 'Holebobo'.

**Stooke's Group** I(c/-)

Parentage: derived from a wide variety of Asiatics  
Very variable.  
(Published in *Constable Cat.*, Autumn 1951 as Stooke's Hybrids: 'orange and yellow shades' were offered. Presumably selected by J.E.H. Stooke.)

**'Stooke's Form'** VI(-/a)

See note under *L. × aurelianense* 'Stooke's Variety'.

**'Stooke's Variety'** I(c/-)

See *L. × manglesii* 'Stooke's Variety'.

**'Stooke's Variety'** VI(-/c)

See *L. × aurelianense* 'Stooke's Variety'.

**'Stoplite'** I(a/-)

Parentage unknown  
R: Sun Valley Bulb Farms, Inc. (1972), N: Sun Valley Bulb Farms, Inc. (1979), I: Sun Valley Bulb Farms, Inc. (1979), REG: Sun Valley Bulb Farms, Inc. (1979)  
Fls strong red (46A), with a spot of strong orange-yellow (24B) at base of each tepal; spots black, numerous; nectaries strong red (46A); pollen moderate reddish orange (171A). Lvs moderate olive-green (137A). Stems 0.9 m.  
(Classified in *ILR* (1982) in Div. VI.)

**'Stormy Sunset'** II(-/l)

Parentage: *L. × dalhansonii* × unknown  
R: E. Robinson (1965), N: E. Robinson (1979), I: E. Robinson (1979), REG: E. Robinson (1980)  
Inside yellow, flushed with red around centre of each tepal; outside all yellow; spots absent. Tepal-tips slightly recurved. Lvs whorled, mid green. Stems 1-1.2 m, green. (Published in Gaybird Nursery list, 1979.)

**'Stotsvetkovaia'** I(b/-)

Parentage: 'Stroinaia' × mixed pollen of 'Sestroretskaia' & *davidii* var. *willmottiae*  
R: V.A. Grot (c. 1959), N: V.A. Grot  
Fls orange-red; pollen absent. Fls double, 80-100 mm wide; tepals 100-120 × 10 mm. Stems up to 2 m, with up to 100 fls. Early July.  
(Unaccepted spelling: 'Stozvetkovaja'.)

**'Stowport Big Pink'** VI(a/-)

Parentage: Pink Perfection Group × McLaren seedling  
G: L.C. Bligh (1998), N: L.C. Bligh (2004), I: L.C. Bligh (2004), REG: L.C. Bligh (2004)  
Inside moderate purplish pink (70D), throat vivid yellow (12A); outside dark red to deep purplish red (59A/B); spots absent; nectaries green; pollen strong orange (24A). Fls 130 mm wide; tepals 100 × 52 mm, margins smooth, tips slightly recurved; pedicels long. Lvs scattered, 230 ×

19 mm, mid green. Stems 2.2 m, green, with c.18 fls in a pyramidal infl. Early Jan. (Tasmania).

**‘Stowport Candy’ VII(b/b)**

See *L. × parkmanii* ‘Stowport Candy’.

**‘Stowport CN’ VI(b/a)**

Parentage: ‘Stowport Big Pink’ × *regale*

G: L.C. Bligh (2000), N: L.C. Bligh (2004), REG: L.C. Bligh (2004)

Inside pale greenish yellow (10D), throat brilliant orange-yellow (23B); outside strong purplish red (59D); nectaries green; pollen strong orange-yellow (163B); stigma brown. Fls 140 mm, strongly scented; tepals 140 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 23 mm. Stems 1.72 m, maroon/green, with c.24 fls. Late Jan. (Tasmania).

**‘Stowport Elegance’ VI(b/a)**

Parentage: yellow-flowered trumpeter × *regale*

R: L.C. Bligh (1999), G: L.C. Bligh (2001), N: L.C. Bligh (2004), REG: L.C. Bligh (2004)

Inside pale yellow (18D) flushed with pale purplish pink (62D); outside moderate purplish pink (59C); nectaries green; pollen soft brown; stigma brown. Fls 140 mm wide, slightly scented; tepals 130 × 47 mm, margins smooth, tips slightly recurved. Lvs scattered, 155 × 11 mm. Stems 1.82 m, green, with c.26 fls in a pyramidal infl. Late Jan. (Tasmania).

**‘Stowport Heart Starter’ VII(b/b)**

Parentage: *auratum* ‘Golden Dancer’ × ‘Snowfall’

R: M. Simpson (1997), G: L.C. Bligh (2000), N: L.C. Bligh (2004), REG: L.C. Bligh (2004)

Inside and outside white, throat light greenish yellow (3C); papillae maroon; nectaries green; pollen strong reddish orange (42B). Fls 170 mm, moderately scented; tepals 120 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 145 × 30 mm. Stems 1.83 m, green, with c.17 fls. Early Feb. (Tasmania).

**‘Stowport Lemon Delight’ VI(b/a)**

Parentage: Aurelian × Aurelian

G: L.C. Bligh (2000), N: L.C. Bligh (2004), REG: L.C. Bligh (2004)

Inside and outside pale greenish yellow (2D), with a trace of burgundy towards base outside; nectaries green; pollen golden brown. Fls 125 mm wide, scented; tepals 90 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, 165 × 38 mm. Stems 1.64 m, green, with c.14 fls. Early Feb. (Tasmania).

**‘Stowport Lemon Squash’ VI(b/a)**

Parentage: Aurelian hybrid × Aurelian hybrid

R: L.C. Bligh (1999), G: L.C. Bligh (2002), N: L.C. Bligh (2004), REG: L.C. Bligh (2004)

Inside and outside light yellow-green (2C); nectaries green; pollen orange. Fls 133 mm wide, scented; tepals 123 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 12 mm. Stems 1.83 m, green, with c.20 fls. Early Feb. (Tasmania).

**‘Stowport Lolita’ VII(b/b)**

Parentage: (*L. × parkmanii* ‘Red Sun’ × *auratum*) × ‘Casa Blanca’

G: L.C. Bligh (2000), N: L.C. Bligh (2004), REG: L.C. Bligh (2004)

Inside pale purplish pink (65C) at first, changing to light purplish pink (65B) to light yellow-green (2C); outside pale purplish pink (65D); papillae mid rose-pink; nectaries green; pollen golden brown; stigma green. Fls 210 mm wide, slightly scented; tepals 120 × 52 mm, margins smooth, tips slightly recurved. Lvs scattered, 132 × 55 mm. Stems 1.54 m, green, with c.13 fls. Early Feb. (Tasmania).

**‘Stozvetkovaja’ I(b/-)**

Unaccepted spelling of ‘Stotsvetkovaia’.

**‘Strasbourg’ VIII(a/b)**

Parentage: seedling J 57 × seedling W 88-12

R: Vletter & Den Haan Beheer B.V. (1996), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside and outside moderate purplish pink (66D), each tepal becoming deep purplish pink (66C) towards margin, throat yellowish white (155D); spots and papillae present; nectaries yellowish white (156D); pollen deep orange-yellow (163A); stigma light yellow-green (145C). Fls 210 mm wide; tepals 125 × 50 mm, margins smooth, tips slightly recurved, rounded and slightly hairy. Lvs scattered, 170 × 22 mm. Stems 1.38 m, green with darker markings, with c.4 fls.

(*A longiflorum*/Asiatic (LA) hybrid.)

**‘Strathmore’ I(a/c)**

Parentage: ‘Edith’ × up-facing, yellow-flowered seedling

R: E.E. Fox (1991), G: E.E. Fox (1993), N: E.E. Fox (1998), I: Fox Lily Ranch (2003), REG: E.E. Fox (2002)

Inside brilliant greenish yellow (6B), throat light greenish yellow (6D); outside brilliant greenish yellow (6C), midribs strong yellowish pink (31C); spots numerous, dark red (59A) on basal third of each tepal; nectaries brilliant greenish yellow (6B); pollen vivid orange-yellow (23A); stigma light yellow (10C). Fls 170 mm wide; tepals 85 × 46 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 46 mm. Stems 0.75 m, green mottled with brown, with 12-14 fls. Late July. (Named for a location in Alberta, Canada. Nomenclatural standard: hard copy of scanned colour image provided by registrant (WSY 0034904).)

**STRAUSS VIII(a/b)**

Trade designation of ‘Zanlauss’.

**‘Strawbelle’ VI(-/a)**

Parentage: selection from Yellow Trumpet Group

N: D. Foxwell (1961)

Inside straw-yellow (HCC 604/1); outside with uranium (green) tint.

**‘Strawberry Frost’ IX(-/d)**

See *martagon* ‘Strawberry Frost’.

**'Strawberry Geranium' Div. ?**

Parentage unknown

(Published in *Amer. Lily Soc. Newsl.* 4 (5 Oct. 1950). No further details.)**Strawberry Hill Group VI(-/-)**Parentage: Olympic Group × *leucanthum* var. *centifolium*

R: A.D. Rothman, N: A.D. Rothman

No further details.

**'Strawberry Roan' I(c/d)**Parentage: *dauidii*? × unknown

R: C.F. Patterson, N: B.G. Hayler (1980), I: B.G. Hayler (1980)

Fls purplish red, centre cream. Stems 1.5 m, with 15-20 fls. Dec. (Australia).

**STRAWBERRY VANILLA LATTE I(a/b)**

Trade designation of 'Ceb Latte'.

**'Strength' VI(-/a)**See *L. × imperiale* 'Strength'.**STRETTO VIII(a/b)**

Trade designation of 'Zanlatto'.

**'Strike a Light' I(a/-)**

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler, N: B.G. Hayler (1985),

I: B.G. Hayler, REG: B.G. Hayler (1985)

Fls vivid reddish orange (30A) throughout; spots absent; nectaries green; pollen orange. Tepals 75 × 35 mm, margins ruffled, tips slightly recurved. Lvs scattered, 130 × 20 mm, mid green. Stems 0.8 m, green, with c.12 fls. Dec. (Australia).

**'Striker' VII(a/b)**

Parentage: seedling 88-152 × seedling 93-41

R: Gebr. Vletter &amp; Den Haan, N: Gebr. Vletter &amp; Den Haan (2003), REG: Vletter &amp; Den Haan Beheer B.V. (2004)

Inside vivid purplish red (57D), tepal-margins pale purplish pink/yellowish white (65D/155D), throat yellowish white (155D); outside dark/moderate purplish pink (186C/D), base of tepals yellowish white (155D), midribs light yellow-green (144D) at base, changing into yellowish white (155D), at top moderate yellow-green (146D); spots moderate purplish red (58A); papillae vivid purplish red (57D); nectaries strong yellow-green (144C); pollen strong reddish orange (169A); stigma deep reddish purple (77A). Fls 230 mm wide, fragrant; tepals 125 × 50-72 mm, margins slightly ruffled, tips recurved. Lvs scattered, 145 × 34 mm. Stems 1-1.1 m, green with darker markings, and with 4-5 fls. (Colour of young fls is more intense.)

**'Striped Beauty' I(a/-)**See *L. × manglesii* 'Striped Beauty'.**'Strohstern' I(b/-)**

Parentage: Panamint Group × Sutter's Gold Group

R: J. Klein (pre 1979), N: J. Klein, REG: J. Klein (1988)  
Fls straw-yellow, with many, large brown spots. Stems 0.8 m or more. Late July.**'Stroinaia' I(b-c/-)**

Parentage unknown

R: E.N. Zaitseva (1956)

Fls brick-red with numerous dark brown spots that are only faintly noticeable; filaments pink-orange; anthers orange-brown with brownish pollen; style violet. Fls 90-100 mm wide, slightly fragrant; tepal-margins smooth, tips recurved. Lvs 150-180 × 15 mm, margin downy. Stems 1.3-2 m, green with brown spots, with 18-25 fls. July.

(Unaccepted spelling: 'Stroinaja'; 'Stroynaya'. Published in M.F. Kireeva, *Lilii*, 67 (1984). Included in *ILR* (1982) as 'Stroynaya'.)**'Stroinaja' I(b-c/-)**

Unaccepted spelling of 'Stroinaia'.

**'Strombolie' VII(a/b)**

Parentage: seedling 93-24 × seedling RW 95-20

R: Vletter &amp; Den Haan Beheer B.V. (1998), N: Vletter &amp; Den Haan Beheer B.V. (2002), REG: Vletter &amp; Den Haan Beheer B.V. (2002)

Inside and outside yellowish white (155D); midribs yellowish white (155B); spots yellowish white (155D); papillae present; nectaries strong yellow-green (144C); pollen brownish orange (172C); stigma light greenish grey (190D). Fls 250 mm wide, slightly scented; tepals 160 × 60 mm, margins ruffled, tips recurved. Lvs scattered, 195 × 45 mm. Stems 0.98 m, green, with 2-3 fls.

**'Strong Gold' I(a/b-c)**

Parentage: 'Brandaris' × 'Pollyanna'

R: J.J.M. De Vries, G: De Vries Veredeling B.V. (1993), N: Jan De Vries (1999), I: De Vries Veredeling B.V. (1999), REG: De Vries Veredeling B.V. (2001)

Inside vivid yellow (12A), base vivid yellow (13A); outside vivid to brilliant yellow (9B &amp; C); spots and papillae present; nectaries green; pollen brown; stigma yellow-green, speckled with red. Fls 170 mm wide; tepals 110 × 50 mm, margins ruffled, tips recurved. Lvs scattered, 130 × 10 mm. Stems 1.1 m, green, with c.8 fls (from 14-16 cm bulbs). Early to midseason.

**'Stroynaya' I(b-c/-)**

Unaccepted spelling of 'Stroinaia'.

**'Stuart Criddle' I(a/-)**

Parentage unknown

R: S. Criddle, N: S. Criddle, I: Experimental Farm (1965)

Fls vivid yellow; spots present. Stems 0.6 m. July. (Published in *ILR* (1969).)**'Studente' I(b/-)**

Parentage: selection from Vasaras Prieks Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls orange-red.  
(Published in *LYB* 33: 78 (1970) and included in *ILR* (1982) as 'Studentka' which is an unaccepted spelling.)

**'Studentka'** I(b/-)

Unaccepted spelling of 'Studente'.

**'Suave'** IX(b/c)

See *auratum* 'Suave'.

**'Sublime'** VII(-/d)

Parentage: (*L.* × *parkmanii* Little Rascal Group × 'Star Gazer') × *L.* × *parkmanii* Little Rascal Group  
R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1991), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1992)  
Inside yellowish white (155D), midveins brilliant greenish yellow (6C/D), throat brilliant yellow-green (150B); outside yellowish white (155D) suffused with pale yellow-green (4D); papillae brilliant greenish yellow (6C) on the basal half of each tepal; nectaries moderate purple (79D); pollen moderate orange (167B). Fls 160 mm wide; tepals 80 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 50 mm, mid green. Stems 0.3 m, green, with c.5 fls.  
Trade designation: RASCAL SUBLIME.

**'Subtle Joanna'** VI(b/a)

Parentage: *leucanthum* var. *centifolium* × Pink Perfection Group  
R: K. Paszyńska (1984), G: K. Paszyńska (1988), N: K. Paszyńska (1992), I: K. Paszyńska (1992), REG: K. Paszyńska (1992)  
Inside white, the tepal-margins slightly suffused with pink, throat lemon-yellow; outside suffused with pink; spots absent; nectaries yellow; pollen brown. Fls 160 mm wide, strongly scented; tepals 130 × 40 mm, margins slightly ruffled, tips slightly recurved; pedicels with some secondary buds. Lvs scattered, 140 × 20 mm, mid green. Stems 1.2 m, green, with 8-12 fls in a crown-like head. Early July.

**'Sudan'** I(c/-)

Parentage: 'Edna Kean' × unknown  
R: P.H. Wright (c. 1950), N: P.H. Wright  
Fls red.

**'Sudzhanskij Solovushka'** I(a/-)

Parentage: 'Vostok-2' × 'Tarantella'  
R: G.K. Shlomin (1987), G: G.K. Shlomin (1990), N: G.K. Shlomin (1990), I: G.K. Shlomin (1993), REG: A.V. Otroshko (1995)  
Inside 'light marble'; outside white; large, dark brown spots throughout; nectaries dark brown; pollen brown. Fls 185 mm wide; tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, green. Stems 1 m, dark green, with c.10 fls, and with bulbils. Mid July.  
(Included in *ILR Fourteenth Supplement* as 'Sudzhanskij Solovushka' which is an unaccepted spelling.)

**'Sudzhanskij Solovushka'** I(a/-)

Unaccepted spelling of 'Sudzhanskii Solovushka'.

**'Sugar and Spice'** I(a/-)

Parentage: (*concolor* × *davidii*) F<sub>2</sub> × pink-flowered Pastel Group  
R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)  
Inside deep purplish pink (58D) to strong or moderate purplish pink (62A/B), tepal-tips deep purplish pink (58D), throat light greenish yellow (5D) just above nectaries shading to white at base; outside moderate purplish pink (62B) with a green overlay along midribs and at base; spots many, tiny, magenta; nectaries soft cream; pollen moderate reddish orange (171A). Tepals 50-60 × 30 mm, margins very slightly ruffled, tips slightly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 0.8-1.5 m, dark green, with 8-22 fls in a long, candelabrum-like infl. Mid June.

**'Sugar Bear'** I(a-b/b-c)

Parentage: (Pastel Group × dwarf selection from Hallmark Group) × 'Honey Bear'  
R: Columbia-Platte Lilies (1979), G: Columbia-Platte Lilies (1982), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987), REG: Columbia-Platte Lilies (1988)  
Inside pale yellow (20D), shading to near white in bright light and high temperatures, tepal-tips pale yellow (20D), throat with a light to pale orange-yellow (23C/D) area (10 × 10 mm) above nectaries; outside pale yellow (20D); spots absent; nectaries heavily white-downy at margins; pollen strong brown (172A). Buds very hairy; tepals 70-90 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-180 × 20 mm, very dark green. Stems 0.5-0.8 m, dark green to black-green, with c.8 fls.  
(Published in *Territorial Seed Co. Cat.*, 1987.)

**'Sugar Jewel'** I(a/c)

Parentage: (('Michella' × 'Sanciro') × unknown) × 'Tetra Unique'  
R: De Jong Lelies Holland B.V. (1993), G: De Jong Lelies Holland B.V. (1995), N: De Jong Lelies Holland B.V. (2002), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2002)  
Inside yellowish white (155D) at base, shading to light purplish pink (73C) and then to deep purplish red (59B) at tepal-tips, throat strong purplish pink (59D); outside deep purplish pink (64D); spots and papillae present; nectaries deep purplish red (59B); pollen moderate reddish brown (175A); stigma dark red (59A). Fls 160 mm wide; tepals 95 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 135 × 22 mm. Stems 1.4 m, dark, with c.11 fls. June.

**'Sugehime'** I(a/-)

Parentage: *callosum* var. *flaviflorum* × *concolor* var. *coridion*  
R: H. Myodo (c. 1963), N: H. Myodo

Fls yellow; spots absent.  
(Included in *ILR* (1982) erroneously as 'Sugekime').

**'Sugekime' I(a/-)**

Error for 'Sugehime'.

**'Suleika' I(a/-)**

Parentage: seedling with melon-coloured fls × seedling with raspberry-coloured fls  
R: V. Matthé (1979), G: V. Matthé (1981), N: V. Matthé (1988), REG: V. Matthé (1988)  
Fls strong purplish red (63A), ageing to strong red (53C), throat with slight orange tinge; spots few, tiny, black, near each nectary; nectaries pink-frosted; pollen orange. Fls 140 mm wide, slightly scented; tepals 80 × 40 mm, the outer with ruffled margins, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 0.7 m, mid to dark green, with 5-8 fls. July.

**'Sulewasser' I(b-c/c)**

Parentage: ('Creme Rispe' × 'Sterling Star') × cream-flowered, up-facing, Asiatic Petruske seedling  
R: N. Martschinke (1980), G: N. Martschinke (1984), N: N. Martschinke (1996), I: N. Martschinke (1996), REG: N. Martschinke (1997)  
Inside very pale yellowish pink (27D), with moderate yellow (162A) at base of outer tepals; outside striped with moderate orange-yellow (165C); spots small, dark red (187A), on basal half of each tepal; pollen dark reddish orange (175B); stigma dark red (187A). Fls 120 mm wide; tepals 60 × 23 mm, margins smooth, tips very slightly recurved. Lvs scattered, 120 × 6 mm, mid green. Stems 1.2 m, green, with c.10 fls. Late June.  
(Published in European Lily Society sales list, 1996.)

**× *sulianense* Constable VI(-/a)**

Parentage: *sulphureum* × *L. × aurelianense*  
R: J.E.H. Stooke (c. 1944), N: J.E.H. Stooke, I: W.A. Constable Ltd (c. 1945)  
Inside with white tepal-tips, throat yellow; outside brown to pink; pollen orange-brown. Fls 175 mm long, scented; tepal-tips recurved. Stems 1.2 m.  
Syn.: 'Sulianense'.  
(Published in *LYB* 13: 160 (1949). Included in *ILR* (1960) as 'Sulianense'. The names 'Sulrianense' and *L. × sulrianense* are errors.)

**'Sulianense' VI(-/a)**

Syn. of *L. × sulianense*.

**× *sulianense* 'Sulphur Queen' VI(c/a)**

Parentage: *sulphureum* × *L. × aurelianense*  
R: J.E.H. Stooke (c. 1944), N: J.E.H. Stooke, I: W.A. Constable Ltd (c. 1945)  
Fls sulphur-yellow, maroon at base. Stems 2-2.5 m, with c.8 fls, and with bulbils. Aug.  
(Published in *LYB* 13: 160, fig. 36 (1949).)

**'Suliko' I(b/-)**

Parentage: 'Zarnitsa' × 'Connecticut King'  
R: V.A. Volkov (c. 1981), N: V.A. Volkov

Fls orange-red with an orange centre; spots large, black; pollen brown. Stems 0.6 m. July.

**'Sulmona' VIII(a/b)**

Parentage: seedling J 76 × seedling W 92-9  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)  
Inside moderate purplish pink (62B), throat similarly coloured except for a little green along the nectaries at the base; outside moderate purplish pink (62B), midribs deep purplish pink (58D) towards top and pale purplish pink (65D) towards base, tips of outer tepals moderate purplish red (58A); spots dark red (59A); papillae absent; nectaries pale purplish pink (62D) becoming moderate purplish pink (62B) towards top; pollen brownish orange (164A); stigma light yellowish pink (159A). Fls 200 mm wide; tepals 120 × 45-60 mm, margins smooth, tips recurved. Lvs scattered, 130 × 20 mm. Stems 1.2-1.3 m, green, with c.6 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**Sulphur Group VI(-/a)**

Parentage: (*regale* × *sargentiae*) × *sulphureum*  
R: E.F. Palmer (c. 1947), N: E.F. Palmer  
Inside ivory to sulphur-yellow; outside tinged with beetroot-purple.  
(Published in *Kline Cat.*, 1947.)

**'Sulphurbelle' VI(-/a)**

Parentage: selection from Yellow Trumpet Group  
N: D. Foxwell (1960)  
Fls brilliant greenish yellow (6A), tinted with green outside.

***sulphureum* Baker IX(b-c/a)**

Inside cream to greenish white, deep yellow towards base; outside flushed with pink; anthers purple-brown; pollen orange or brownish. Fls fragrant; tepals 140-250 × 40-57 mm, tips recurved. Lvs scattered, to 200 × 12-20 mm, Stems 1.5-2 m, green marked with purple, with up to 15 fls and with brown bulbils. N Myanmar, W China (Yunnan).  
Syn.: *myriophyllum*; *myriophyllum* var. *superbum*.

**× *sulphurgale* hort. Perry ex Gard. Chron. VI(-/a)**

Parentage: *sulphureum* × *regale*  
R: F. Scheubel (1913), N: A. Perry, I: A. Perry AM 1922  
Similar to *regale*. Fls produced 2-3 weeks later. Stems 1.2-1.5 m.  
(Published in *Gard. Chron.*, ser. 3, 67: 153 (1920).)

**× *sulphurgale* Vico Gold Group VI(b/a)**

Parentage: *sulphureum* (Burmese form ex. Botanic Garden, Madrid) × *regale* 'Royal Gold'  
R: Sir Peter Smithers, G: Sir Peter Smithers, N: Sir Peter Smithers (1990), REG: Sir Peter Smithers (1990)  
Brilliant yellow (10A), throat with a slight green flush; outside flushed with green or red; spots absent; nectaries

green; pollen orange-brown. Fls strongly scented; tepals 160 × 60 mm, margins smooth, tips strongly recurved. Lvs scattered, 220 × 12 mm, dark green, more numerous than in Vico Afro Group. Stems to 2.5 m, light green spotted with red, with c.15 fls, sometimes bulbils. July. (Published in *ILR Ninth Supplement* as Vico Gold grex.)

× **sulphurgale** ‘Weltfrieden’ VI(-/a)

Parentage: selection from *L.* × *sulphurgale*  
S: C. Bondstedt (c. 1950), N: C. Feldmaier (1952)  
Fls pure white.  
(Published in *LYB NALS* 5: 68-69, figs (1952).)

‘Sulphur Gem’ I(a/b)

Parentage: ‘Typhoon’ × unknown  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1972),  
REG: E. Robinson (1972)  
Fls deep sulphur-yellow; unspotted. Fls 175 mm wide.  
Stems 1 m.  
(Published in *Lilies and other Liliaceae*, 1973: 115.)

‘Sulphurita’ VI(b-c/c)

Parentage: selection from Southland Group  
S: B.G. Hayler (1979), G: B.G. Hayler (1982), N: B.G. Hayler (1984), I: B.G. Hayler (1984), REG: B.G. Hayler (1986)  
Inside cream, throat vivid orange (28B); outside cream with a narrow to broad deep pink (51B) band down each tepal; spots very few, in the throat; nectaries green; pollen brown. Fls 90 mm wide; tepals 80 × 15 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 2 m, green, with 25-30 fls. Early Feb. (Australia).  
(Published in *Golden Ray Gardens Cat.*, 1985.)

‘Sulphur Queen’ VI(c/a)

See *L.* × *sulianense* ‘Sulphur Queen’.

‘Sulphur Song’ I(a-b/-)

Parentage: ‘Pumpkin Sweet’ × ‘Ambrosia’  
R: G.C. Keast (1986), G: G.C. Keast (1988), N: G.C. Keast (1990), I: G.C. Keast, REG: G.C. Keast (1991)  
Fls brilliant yellow (12B) throughout; spots maroon, few, on basal half of each tepal; nectaries frosted; pollen brown. Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 40 mm, dark green. Stems 0.64 m, dark green, with c.12 fls. Mid Dec. to mid Jan. (New Zealand).

× *sulrianense* VI(-/a)

Error for *L.* × *sulianense*.

‘Sulrianense’ VI(-/a)

Error for ‘Sulianense’.

‘Sultan’ I(c/-)

Parentage: *davidii* var. *willmottiae* × ‘Black Prince’ (Div. I)  
R: L.B. Tuffery (c. 1943), N: L.B. Tuffery  
Fls dark red, with gold centre.  
(Published in *Dunhampton Lily Fields Cat.*, 1946.)

‘Sultan’ I(c/-)

Parentage: *davidii* var. *willmottiae* × ‘Edna Kean’  
R: E.F. Palmer, N: E.F. Palmer  
Fls deep red. Stems 1.2 m. July.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *B.L. Palmer Cat.*, 1948.)

‘Sultan’ I(a/b)

Syn. of *L.* × *maculatum* ‘The Sultan’.

‘Sultan Zamback’ IX(b-c/a)

See *candidum* ‘Sultan Zamback’.

‘Sultig’ Div. ?

Parentage unknown  
A stronger grower than ‘T.A. Havemeyer’, with lvs rather more like *sulphureum*.  
(Published in *LYB* 7: 45 (1938). Raised in the USA?)

‘Sumatra’ VII(b/b)

Parentage: unnamed seedling × unnamed seedling  
R: Sande B.V. (1989), G: Sande B.V. (1992), N: Sande B.V. (1997), I: Sande B.V. (2000), REG: Sande B.V. (2001)  
Inside deep red (60A) suffused with dark red (59A) at tepal-margins, tips edged with yellowish white (155B); outside deep/strong purplish red (71A/B) on a paler ground, midribs strong yellow-green (144A) at base, changing to deep red (60A) towards top; nectaries dark greyish purple (202A); pollen moderate reddish brown (175A); stigma dark purple (79A). Fls 280 mm wide; tepals 160 × 40-65 mm, margins ruffled, tips recurved. Lvs scattered, 210 × 40 mm. Stems 1-1.1 m, light green, with 3-9 fls. July to Aug.

‘Summer Charm’ VII(-/)

Parentage unknown  
R: F. Jury (pre 1997)  
Fls very large, white, each tepal with a deep vermilion ray.  
(Published in *M. Jury Cat.*, 1998: 16.)

‘Summer Dress’ VII(-/d)

See *L.* × *parkmanii* ‘Summer Dress’.

‘Summer Festival’ I(a/-)

Parentage unknown  
R: H. Takizawa (pre 1989), N: H. Takizawa  
Inside yellow; spots absent; pollen reddish brown. Tepals recurved. Stems with c.5-7 fls in a rather tight, umbellate infl.  
(Listed in *Miyoshi & Co. Cat.* no. 87: 111 (1989).)

‘Summer Gem’ I(b/-)

Parentage: ‘Edith Cecilia’ × Preston Group  
R: E. Robinson (c. 1962), N: E. Robinson (1966)  
Fls pale lavender, centre straw-coloured, midveins and midribs darker. Outer tepals reflexed. July.

Summer Glory Group VI(-/)

Parentage: derived from Aurelian Group

R: C. Yerex, N: C. Yerex, I: Walter Marx Gardens (1962)  
Fls in tones of clear yellow. July.  
(Published in *ILR* (1969) as Summer Glory Strain.)

**‘Summer Glow’ I(a/-)**

Parentage: ‘Sterling Star’ × ‘Bellona’  
R: Gebr. N. & B. Laan & Zn (1982), G: Gebr. N. & B. Laan & Zn (1984), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)  
Fls white throughout except for a light yellow throat; spots deep purple, in the throat; nectaries white; pollen brown. Fls 145 mm wide; tepals 90 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 110 × 22 mm, dark green. Stems 1 m, green, with c.8 fls. July.

**‘Summer Gold’ I(a/-)**

Parentage: ‘Grace Marshall’ × (*L. × hollandicum* × unknown)  
R: G.E. Holland, N: G.E. Holland, I: G.E. Holland (1953)  
Fls deep apricot, flushed with burnished gold. Stems 1 m. July.  
(Published in *Lilyhaven Cat.*, 1953.)

**‘Summer Jewel’ VII(-/c)**

Parentage unknown  
R: L.G. Farina, N: L.G. Farina (1973), I: L.G. Farina (1973), REG: L.G. Farina (between 1973 and 1981)  
Fls white, barred pink, spotted; nectaries green. Tepal-margins ruffled. Lvs wide. Stems 0.8 m.  
(Published in *Q. Bull. NALS* 1973: 26.)

**‘Summer King’ I(a-b/-)**

Parentage unknown  
R: H. Takizawa (pre 1989), N: H. Takizawa  
Inside deep yellow, each tepal with a more orange area in centre of basal part; spots absent; pollen reddish. Tepal-margins not or very slightly ruffled, tips not recurved. Stems with c.5-7 fls.  
(Listed in *Miyoshi & Co. Cat.* no. 87: 111 (1989).)

**‘Summer Moon’ I(b/-)**

Parentage: ‘Palomino’ × (*lancifolium* × unknown)  
R: E. Robinson, N: E. Robinson, I: E. Robinson (1974), REG: E. Robinson (1975)  
Fls greenish cream, with green veining. Tepals somewhat reflexed. Stems 1.2-1.5 m. July.  
(Published in *Lilies and other Liliaceae*, 1975: 96.)

**‘Summer Night’ I(a-b/b)**

Parentage: ‘Black Butterfly’ × unknown  
R: R. Simonet (c. 1966), N: A.J. Porter (1974), I: A.J. Porter (1975), REG: A.J. Porter (1975)  
Fls black-crimson throughout; spots absent; pollen brown. Lvs long, narrow. Stems 1-1.2 m, with up to 12 fls. July.  
(Published in *Lilies and other Liliaceae*, 1975: 96.)

**‘Summer Pageant’ I(b/-)**

Parentage: ‘Edith Cecilia’ × Preston Group

R: E. Robinson (c. 1962), N: E. Robinson (1966)  
Fls mauve, with a lighter centre. Tepals moderately reflexed. Stems 0.6-1 m. July.

**‘Summer Palace’ VI(c/a)**

Parentage unknown  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Fls pink. Tepal-margins smooth, tips recurved. Stems 1.2 m, with c.8 fls. July.  
(Published in *The Lily Garden Cat.*, 1996/97: 15.)

**‘Summerpearl’ I(a/-)**

Parentage: (*L. × hollandicum* × *lancifolium*) × *bulbiferum* var. *croceum*  
R: De Jong Lelies Beheer B.V. (c. 1960), N: De Jong Lelies Beheer B.V.  
AMH 1966  
Fls persimmon-orange (HCC 710/2), with mandarin-red (HCC 17/1) in centre, flushed HCC 17/2; spots small, dark brown.

**‘Summer Pixie’ I(a/-)**

Parentage: ‘Charisma’ × ‘Sun Ray’  
R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc. (1986)  
Inside vivid orange (28A), fading to vivid reddish orange (30A), throat vivid reddish orange (30A); outside vivid orange (28A) suffused with purple; copiously spotted, and with a slight purple blotch on each tepal; nectaries green-brown; pollen soft brown. Tepals 90 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 30 mm, dark green. Stems 0.4 m, brown-mottled, with 6-20 fls. June.

**‘Summer Queen’ I(a/-)**

Parentage: orange-flowered brushmarked seedling × ‘Dazzler’  
R: R.F. Nelson (1980), G: R.F. Nelson (1984), N: R.F. Nelson (1985), I: R.F. Nelson (1985), REG: R.F. Nelson (1986)  
Inside vivid reddish orange (30B), tepal-tips vivid orange (28B), throat vivid reddish orange (30B); outside strong orange (25A) tending to greenish grey at base; unspotted, but a smudgy brushmark of vivid reddish orange (44B) in the centre of each tepal; nectaries pale yellow-green (157A); pollen vivid reddish orange (44B). Fls 160 mm wide; tepals 85 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 1 m, mid green, with 6-8 fls. Dec. (Australia).

**Summer Serenade Group VII(-/b)**

Parentage: selections from crosses involving *auratum*, *speciosum* & *rubellum*  
R: A.D. Reid, I: Laurie’s Garden (1969)  
Fls white, pink or red. July to Aug.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 39 (1978) as Summer Serenade strain. Included in *ILR* (1982) as Summer Serenade grex.)

**'Summer Song' VI(c/-)**

Parentage: *henryi* var. *citrinum* × Aurelian Group  
 R: D.M. Stone & F.H. Payne (c. 1963), N: D.M. Stone & F.H. Payne  
 Fls brilliant yellow (9C), midribs vivid yellow (9B). Stems up to 2.5 m. July.

**'Summer Tan' I(b/-)**

Parentage unknown  
 R: E. Robinson (c. 1973), N: E. Robinson, I: E. Robinson, REG: E. Robinson (1984)  
 Fls bronze-yellow. Stems 0.8 m.  
 (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978).)

**'Summer Tanager' I(b/b)**

Parentage: bicolour seedling XX-9 × 'Mirage' (Div. I)  
 R: W.S. Summers (1978), G: W.S. Summers (1980), N: M.W. Summers (1992), REG: W.S. Summers (1992)  
 Inside vivid reddish orange (42A); outside moderate red (181B); spots absent; nectaries light green; pollen brownish orange (171B). Fls 135 mm wide; tepals 67 × 31 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 316 × 16 mm, dark green. Stems 1.5 m, green, with 12-50 fls (including many up-facing secondaries). Late June to mid July.

**'Summertime' I(b/c)**

Parentage: 'Connecticut King' ? × 'Zenith'  
 R: W. Windus (1971), N: W. Windus (1976), REG: W. Windus (1976)  
 Fls vivid yellowish orange (30C), tepal-margins vivid reddish orange (30A); spots absent. Tepal-margins smooth, tips scarcely recurved. Stems 1.1-1.2 m. July.  
 (Published in *Lilies and other Liliaceae*, 1976: 93.)

**Summertime Group VI(-/a)**

Parentage: derived from Aurelian Group  
 R: W.M. Spry, N: W.M. Spry  
 Fls cream and white.  
 (Published in *ILR* (1982) as Summertime grex.)

**'Summit' I(c/d)**

Parentage unknown, but involves *callosum* var. *flaviflorum*  
 R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
 Fls yellow, tinted green; pollen pale orange-yellow; stigma green. Tepal-margins smooth, tips strongly recurved. Stems 1.2-1.5 m. Early to mid July.  
 (Published in *The Lily Garden Cat.*, 1996/97: 11.)

**'Sunar' VI(b/a-b)**

Parentage: (*regale* 'Royal Gold' × unknown) × (*henryi* × unknown)  
 R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1990), REG: B. Mičulka (1990)  
 Fls yellow, the outside paler, tepal-margins red-veined, midribs red; nectaries green; pollen light brown. Fls 145 × 85 mm; tepals 120 × 55 mm, margins ruffled, tips moderately recurved; pedicels 90 mm long, moderately spotted with dark violet. Lvs scattered, 120 × 11 mm,

dull deep green, held horizontally, arched, sparse. Stems 1.25 m, slightly spotted with dark violet, silvered. Mid July.

**'Sunbeam' VI(-/c)**

Parentage: selection from Yellow Sunburst Group  
 S: J. de Graaff (pre 1958), N: J. de Graaff, I: C.A. Best  
 Fls lemon-yellow. Tepals recurved. Stems 1.5 m. July to Aug.  
 (Published in *Greenock Farms Cat.*, 1958.)

**'Sun Bonnet' VI(c/a-b)**

Parentage: seedling NH 88-12-2 × large, mid yellow-flowered trumpet seedling  
 R: T.R. Martin (1994), G: T.R. Martin & G. Brundrett (1997), N: T.R. Martin & G. Brundrett (1999), I: T.R. Martin & G. Brundrett (1999), REG: G. Brundrett (1999)  
 Inside brilliant yellow (12B), throat green; outside yellow, outer tepals slightly suffused with deep pink (51B); spots absent; pollen brownish orange (164A); stigma green. Fls 185 mm wide, strongly scented; tepals 125 × 100 mm, margins slightly ruffled, tips becoming strongly recurved/twisted. Lvs scattered, 210 × 11-15 mm. Stems 1.7 m, moderate olive-green (147A), with c.15 fls in a pyramidal infl. Mid to late July.  
 (Nomenclatural standard: colour print provided by registrant (WSY 0015433).)

**'Sunbright' VI(-/c-d)**

Parentage: selection from Yellow Sunburst Group  
 S: J. de Graaff (pre 1958), N: J. de Graaff, I: C.A. Best  
 Fls butter-yellow.  
 (Published in *Greenock Farms Cat.*, 1958.)

**'Sunbright' I(c/d)**

Syn. of 'Porter's Sunbright'.

**'Sun Bronze' I(b/-)**

Parentage: (*bulbiferum* var. *croceum* × *L. × maculatum*) × diploid form of *lancifolium*  
 R: E.F. Palmer (c. 1955), N: E.F. Palmer  
 Fls brick-red, spots maroon. Stems 0.6-1 m. July.  
 (Published in *Kline Cat.*, 1956.)

**'Sunburst' IX(b-c/c)**

See *auratum* 'Sunburst'.

**Sunburst Group VI(c/c)**

Parentage: derivatives from Aurelian Group  
 R: J. de Graaff, N: J. de Graaff  
 Fls white, cream, yellow and orange, resembling *henryi*, but larger and with tepals less reflexed. Stems 1.5-2.2 m.  
 (Published in *Oregon Bulb Farms Cat.*, 1948 and 1954 (new stock). Included in *ILR* (1960) as Sunburst grex.)

**Sunburst Lemon-yellow Group VI(-/c)**

Parentage: selections from Sunburst Group  
 S: J. de Graaff, N: J. de Graaff, I: J. de Graaff (1956)  
 Fls with yellow tones.  
 (Published in *ILR* (1960) as Sunburst Lemon-Yellow Selections grex.)

**‘Sun Club’ I(a/b)**

Parentage: seedling 90208-15 × seedling 92214  
 R: Sande B.V., N: Sande B.V. (2002), REG: Sande B.V. (2003)

Inside and outside vivid yellow (12A/13A), each tepal vivid orange-yellow (23A) at base inside; spots absent; papillae present; nectaries yellow-green; pollen brown; stigma purple. Tepals very short, margins slightly ruffled, tips recurved. Stems tall, with darker markings, with c.7 fls. Early.

**‘Suncrest’ VIII(a/b)**

Parentage: unknown × (*longiflorum* × ‘Snowstar’)  
 R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (1999), I: Bischoff Tulleken Lelies B.V. (2000), REG: Bischoff Tulleken Lelies B.V. (2000)

Inside light yellow-green (2C), with a little strong yellow-green (143C) above nectaries, throat strong yellow-green (143C) with some light yellow-green (150D) towards edges; outside pale greenish yellow (2D) with a little red-brown at base, outer tepals with strong yellow-green (143C) midribs; spots and dashes dark red (187A), densely scattered on three-quarters of each tepal; papillae absent; nectaries greenish white-hairy (155C); pollen strong orange (168A); stigma light yellow-green (154D). Fls 235 mm wide; tepals 120 × 35-50 mm, margins smooth, tips recurved. Lvs scattered, 190 × 20 mm. Stems 1.35 m, light green, with 4-8 fls. July.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**‘Sundance’ VI(-/c)**

Parentage: derived from *regale*, *sargentiae*, *sulphureum* & *henryi*  
 R: E.F. Palmer (c. 1951), N: E.F. Palmer  
 Fls deep sulphur yellow at tepal-tips, paler at base; anthers reddish brown. Stems 1.5-1.9 m. Aug.  
 (Published in *Greenock Farms Cat.*, 1957.)

**‘Sundance’ I(a/c)**

Syn. of ‘Mak’s Sundance’.

**‘Sunday Best’ VII(-/c)**

See *L. × parkmanii* ‘Sunday Best’.

**‘Sunday Dress’ I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
 R: H.R. & R. Cocker (1974), G: H.R. & R. Cocker (1990), N: H.R. & R. Cocker (1990), REG: H.R. & R. Cocker (1990)  
 Inside greyish to deep red (184A/185A), tepal-tips moderate purplish red (184D), throat moderate reddish orange (179C); outside moderate reddish orange (175D) along centre of tepals, outer edges moderate red (185B); spots dark brown spots on basal half of each tepal; nectaries moderate reddish orange (179C); pollen strong red (46A). Tepals 95 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 97 × 15 mm, mid green. Stems 1 m, dark green, with 12-15 fls. July.

**‘Sunday Parfait’ I(a/b)**

Parentage unknown  
 R: J. Wionzek (1998), G: Hillcrest Harmony Flowers (2000), N: D. Nelson (2004), I: Hillcrest Harmony Flowers (2005), REG: D. Putland (2005)  
 Inside strong orange (24A) on basal half of tepals, strong red (47B) on apical half; outside with outer tepals light orange-yellow (25D) edged with vivid reddish orange (34B), inner tepals with prominent moderate red (179B) midribs; spots dark red (59A) on basal part of tepals; papillae frosty white; nectaries green; pollen brownish orange (171B); stigma strong red (47B). Fls 119 mm wide; tepals 75-79 × 21-25 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 170 × 20 mm. Stems 0.9 m, light green, with 22-25 fls. July.  
 (Published in *Hillcrest Harmony Flowers Cat.*, 2005.  
 Nomenclatural standard: colour print supplied by registrant (WSY 0096423).)

**‘Sundial’ I(a/c)**

Parentage unknown  
 R: Columbia-Platte Lilies, N: Columbia-Platte Lilies, I: Columbia-Platte Lilies (1996), REG: ICRA (1998)  
 Inside golden yellow, red in centre at the base of each tepal, the red continuing as a central line up each tepal and also suffused over tips; some dark spots on the basal third of each tepal. Buds reddish. Tepal-margins smooth, at least the outer tepals recurved at tips. Stems 1.2-1.5 m, with a long infl. June.  
 (Published in *The Lily Garden Cat.*, 1996/97: 11, with colour illustration.)

**‘Sundowner’ (Ericksen) I(a,b/-)**

Parentage: ‘Royal Princess’ × creamy yellow-flowered seedling  
 R: J.C. Ericksen, N: J.C. Ericksen (1972), REG: J.C. Ericksen (1975)  
 Fls shaded with rose-pink; pollen red. Fls large. Stems 1.4 m. July.  
 (Published in *Lilies and other Liliaceae*, 1975: 96.  
 Unfortunately, two cvs with the epithet ‘Sundowner’ have been registered. To distinguish them, the name of the raiser is appended to each one and should be thus cited when the names are used - see ICNCP, 2004: Art. 27.5.)

**‘Sundowner’ (Hayler) VII(-/-)**

Parentage unknown  
 R: B.G. Hayler (1963), N: B.G. Hayler (1970), REG: B.G. Hayler (1970)  
 Throat green-yellow, tepal-tips deep purplish pink (54B); outside white, each tepal with a broad midrib of light greenish yellow (4B) to deep purplish pink (54B); spots dark red (59A); anthers vivid reddish orange (32A). Lvs and fls *auratum* type. Stems 1.5 m.  
 (Included in Div. IX in *ILR* (1982).)

**Sundrop Group I(a/-)**

Parentage: “Connecticut” hybrid × *dauricum*  
 R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1972), REG: Oregon Bulb Farms, Inc. (1972)

Fls in golden yellow shades. Stems 0.8-1 m. Early.  
(Published in *Lilies and other Liliaceae*, 1973/1974: 113  
and included in *ILR* (1982) as Sundrop grex. Extremely  
hardy.)

**‘Sunflame’ I(a/-)**

Parentage: (*L. × hollandicum × lancifolium*) hybrid 64-7 ×  
*L. × hollandicum* ‘Grandiflorum’

R: Gebr. N. & B. Laan & Zn (c. 1965), N: Gebr. N. &  
B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1969)  
Inside vivid orange (28B); outside strong orange (25A);  
spots brown; anthers red-brown.  
(Published in *LYB* 33: 257 (1970).)

**‘Sunflight’ I(a-b/b)**

Parentage: ‘Connecticut King’ × ‘Sunrise’

R: E.A. McRae (1975), G: Oregon Bulb Farms, Inc.  
(1978), N: Oregon Bulb Farms, Inc. (1984), I: Oregon  
Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc.  
(1985)

Fls rich cream fading to soft cream or white, centre  
flushed with gold; spots only in centre of fls; nectaries  
green; pollen yellow. Fls 150-180 mm wide; tepals 80  
× 40 mm, margins smooth, tips slightly recurved. Lvs  
scattered, 70 × 20-30 mm, dark green. Stems 0.9-1.2 m,  
dark purple, with 8-30 fls. Late June.

**‘Sungate’ VIII(a/b)**

Parentage: *leichtlinii* var. *maximowiczii* ‘Delta’ ×  
(*longiflorum* × ‘Aristo’)

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff  
Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies  
B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2001),  
REG: Bischoff Tulleken Lelies B.V. (2001)

Inside vivid to light orange (28B/C), throat light  
yellowish pink (27A); outside of inner tepals light orange  
(28C), midribs strong greenish yellow (151B), outside  
of outer tepals light orange (28C) with moderate red  
(47A) at the base, all tipped strong red (53B); spots  
dark red (187B); papillae light orange (28C); nectaries  
light orange (28C); pollen strong brown (172A); stigma  
moderate orange (170D). Fls 180 mm wide; tepals 120  
× 40-55 mm, margins smooth, tips slightly recurved. Lvs  
scattered, 180 × 15 mm. Stems 0.9 × 1.05 m, green with  
darker markings, and with c.4 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Sunglow’ I(b-c/-)**

Parentage: ‘Phyllis Cox’ × unknown

R: E. Robinson (1956), N: E. Robinson (1959), REG: E.  
Robinson (1984)

Inside orange, throat yellow-orange; outside dark orange;  
spots on most of tepal area. Tepal-margins ruffled, tips  
slightly recurved. Stems 0.6 m, green, with c.10 fls. July.

**‘Sunglow’ VII(b/b)**

Parentage: (‘Star Gazer’ × *L. × parkmanii* ‘Allegra’) ×  
*auratum* var. *virginale*

R: Lybelmex Hillegom B.V. (1985), G: Lybelmex  
Hillegom B.V. (1988), N: Lybelmex Hillegom B.V.  
(1993), I: Lybelmex Hillegom B.V. (1993)

Inside yellowish white (155D), light greenish yellow  
(8C) along midveins, midveins greenish yellow (8C)  
at top, otherwise light greenish yellow (8B); outside  
yellowish white (155D), with deep purplish pink (64D)  
along midribs, midribs strong yellow-green (144C) at  
base, shading through brilliant greenish yellow (150D)  
to brilliant yellow-green (154C) at top; spots brilliant  
yellow (7A) on two-thirds of each tepal; pollen strong  
orange (169C); stigma moderate purplish red (186A/C).  
Fls 270 mm wide; tepals 140 × 60 mm, margins ruffled,  
outer more so, tips strongly recurved. Lvs scattered, 200 ×  
50 mm, mid green. Stems 0.7 m, pale green with darker  
markings, and with c.3-8 fls.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name  
already used for another lily. However, European PBR  
(no. 2292) were granted in 1997 and so this name must  
be retained (ICNCP, 2004: Art. 24.4), although it cannot  
be registered.)

**‘Sungod’ I(b/b)**

Parentage: ‘Summer Night’ × unknown

R: E. Brooman (c. 1985), N: A.J. Porter (c. 1987), I:  
Honeywood Lilies (c. 1990), REG: Canadian Prairie Lily  
Society (2001)

Inside dark greyish reddish brown (200A) to dark  
greyish purple (202A), throat small, deep purplish red  
(187D); outside dark red (187A) on midribs, deep  
purplish red (187D) alongside midribs; spots dark, very  
inconspicuous, towards base of tepals; nectaries brilliant  
yellow-green (149C); pollen moderate reddish orange  
(178C); stigma dark red (187A). Fls 110 mm wide,  
pedicels long; tepals 85 × 40 mm, margins smooth,  
tips recurved. Lvs scattered, 85 × 10 mm. Stems 1.2 m,  
brownish green, with up to 10-12 fls. Late July.  
(Nomenclatural standard: colour print provided by  
registrant (WSY 0030811).)

**‘Sungold’ VI(b/b)**

Parentage: seedling of Aurelian Group

R: E.C. Genat (c. 1954), N: E.C. Genat

Fls gold throughout, unspotted, 200 mm wide. Stems  
tall, with up to 20 or more fls. Jan. (Australia).  
(Published in *LYB* 20: 78 (1957).)

**‘Sun Jewel’ I(b/c)**

Parentage: ‘Candela’ × ‘Tetra Stella’

R: De Jong Lelies Holland B.V. (1995), G: De Jong Lelies  
Holland B.V. (1997), N: De Jong Lelies Holland B.V.  
(2001), REG: De Jong Lelies Holland B.V. (2001)

Inside vivid yellow (12A), throat light greenish yellow  
(5C); outside vivid yellow (12A), midribs brilliant  
greenish yellow (1B); spots negligible; papillae absent;  
nectaries light greenish yellow (3C); pollen dark reddish  
orange (175B); stigma vivid red (45A). Fls 160 mm wide;  
tepals 105 × 40-55 mm, margins smooth, tips recurved.  
Lvs scattered, 100-130 × 20 mm. Stems 0.8-1.25 m,  
green with darker markings, and with c.5-8 fls. June.

**‘Sun Kiss’ I(a/b)**

Parentage unknown

N: Lily Company B.V. (2004), REG: Lily Company B.V.

(2004)

Inside vivid yellow (12A), throat pale greenish yellow (1D); outside brilliant yellow (8A), vivid yellow (12A) towards tepal-margins, strong yellow-green (141D) at top; spots and papillae absent; nectaries strong yellow-green (143C); pollen absent; stigma brilliant yellow (7A). Fls 125 mm wide; tepals 75 × 27-32 mm, margins slightly ruffled, tips slightly recurved; pedicels hairy at base. Lvs scattered, 135 × 13 mm, dark green. Stems 0.5-0.8 m, green, with some darker markings in lower half, and with c.18 fls.

**‘Sunkissed’ I(a/-)**

Parentage: (‘Edith Cecilia’ × ‘Mega’) F<sub>2</sub> × ‘Croesus’  
R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1974), REG: Oregon Bulb Farms, Inc. (1974)  
Fls vivid orange (28B) suffused with orange-chiffon. Stems 0.6-1 m. July.  
(Published in *Lilies and other Liliaceae*, 1975: 97.)

**‘Sunlight’ VI(b/b)**

Parentage: derived from Aurelian Group  
R: J. de Graaff (c. 1958), N: J. de Graaff  
AM 1961  
Inside sulphur-yellow; outside flushed with green. Fls c.100 mm wide. Stems 1.2 m. July.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Sunlight’ IX(a/b)**

See *philadelphicum* ‘Sunlight’.

**‘Sunny’ I(a/-)**

Parentage: selection from Zelta Vainags Group  
No further details.

**‘Sunny Afternoon’ I(a/-)**

Parentage unknown  
R: P. Hoff (1987), G: Hoffgaarde B.V. (1989), N: Hoffgaarde B.V. (1989), I: Hoffgaarde B.V., REG: Hoff Quality First (1993)  
Inside vivid orange-yellow (23A), throat pale orange-yellow (23D); outside light yellow (20B), midribs strong yellow-green (144B) becoming strong yellow-green (143A) at top, tepal-margins strong orange (24A); spots dark red (187A) on basal part of each tepal; pollen dark reddish orange (175C); stigma dark reddish orange (173A). Fls 170 mm wide; tepals 90 × 40 mm. Lvs scattered, 80 × 14 mm, mid green. Stems 0.55 m, pale green, with c.10 fls.

**‘Sunny Morn’ I(a/-)**

Parentage: ‘Goldcrest’ × (‘Golden Wonder’ × unknown)  
R: C. Robinson (1978), G: C. Robinson (1982), N: C. Robinson (1985), I: C. Robinson (1985), REG: C. Robinson (1985)  
Fls strong red (53B) throughout except for a vivid yellow (15B) throat; a few streaks of dark brown on basal third of each tepal; nectaries vivid yellow; pollen dark brown. Fls 150 mm wide; tepals 80 × 35 mm, margins smooth,

tips not recurved. Lvs scattered, 75 × 12.5 mm, dark green. Stems 0.7 m, mid green, with c.15 fls. Mid June.  
(There are two cvs with the epithet ‘Goldcrest’. It is not known which was used as the seed parent.)

**‘Sunny Peach’ I(a/b)**

Parentage unknown  
R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)  
Inside pastel apricot-peach, throat deep gold; spots absent. Inner tepals with margins very slightly ruffled, tips slightly recurved. Stems 1.2-1.5 m. Late June.

**‘Sunnyside’ I(a/-)**

Parentage: (‘Joan Evans’ × ‘Connecticut King’) × (‘Enchantment’ × ‘Connecticut King’)  
R: E.A. McRae (1977), G: Oregon Bulb Farms, Inc. (1980), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc. (1985)  
Inside soft yellow with white tepal-margins, tips with a yellow spot at extreme apex, throat golden yellow; outside soft golden yellow; spots absent; nectaries green; pollen soft yellow. Lvs 60 × 15 mm. Stems 1.2 m, purple-mottled, with 8-20 fls. Mid to late June.

**‘Sunny Side Up’ Div. ?**

Given as a parent of ‘Lucky Strike’. No further details.

**‘Sunny Twinkle’ I(b/-)**

Parentage: (*dauidii* × unknown) × ‘Ladykiller’  
R: Gebr. N. & B. Laan & Zn, G: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn (1979), REG: Gebr. N. & B. Laan & Zn (1980)  
Fls strong orange (24A), centre marigold-orange; spots dark brown; anthers rust-brown. Stems 0.9 m.  
Syn.: ‘Gold Tiger’.  
(Published in *Bloembollencultuur*, July 1979.)

**‘Sunpearl’ VII(a-b/b-c)**

Parentage unknown  
R: Sande B.V., N: Sande B.V. (2002), REG: Sande B.V. (2003)  
Inside greenish white (155C), midveins brilliant greenish yellow (6A); outside of inner tepals greenish white (155C); spots brilliant greenish yellow (6A); papillae present; nectaries green; pollen red-brown; stigma purple. Tepals long, margins ruffled, tips strongly recurved. Stems tall. Early to midseason.

**‘Sun Pixie’ I(a/-)**

Parentage: ‘Charisma’ × ‘Honey Bear’  
R: E.A. McRae (1975), G: Oregon Bulb Farms, Inc. (1978), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)  
Inside vivid orange (28A) to vivid reddish orange (30B), each tepal with a strong orange (25B) ray (10 mm wide, 40 mm long) along midvein, tips vivid orange (28A), throat strong orange (25B); outside strong orange (30D); 10-15 magenta-purple spots on basal third of inner tepals; nectaries green; pollen moderate reddish orange

(171A). Fls 150-190 mm wide; tepals 80 × 12 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 8 mm, mid green. Stems 0.4 m, light green, with 8-35 fls. Mid June.

**SUN PIXIE® I(a/b)**

Trade designation of 'Pac Sun'.

**'Sun Ray' I(a/b)**

Parentage: 'Connecticut Lass' × 'Keystone'  
R: D.M. Stone & F.H. Payne (c. 1965), N: D.M. Stone & F.H. Payne

Fls aureolin (HCC 3), lemon-yellow (HCC 4) to nectaries; spots brown; nectaries uranium green (HCC 63); filaments yellow; pollen brown. Tepal-margins smooth, tips recurved. Lvs scattered. Stems 0.7-1 m, with 8-20 fls and many secondary buds. Early to midseason. (Published in *ILR* (1969).)

**'Sunrise' I(b/-)**

Parentage: (Hallmark Group × 'Croesus') × (miniature Hallmark Group × *dauricum*)

R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1974), REG: Oregon Bulb Farms, Inc. (1974)

Fls white, tepal-tips suffused pink. Stems 0.4-1 m. July. (Published in *Lilies and other Liliaceae*, 1975: 97.)

**'Sunrisebelle' VI(-/a)**

Parentage: selection from Golden Trumpet Group  
N: D. Foxwell (1960)

Fls canary-yellow. Buds 125 mm long.

**'Sunseeker' I(a/b)**

Parentage: 'Amber Gold' × 'Mimosa Gold'

R: G. Geering, N: G. Geering

Fls yellow with few spots.

**'Sunset' I(-/-)**

Parentage: 'Lord Melbourne' × *L. × maculatum* 'Yellow Tulip'

R: G. Errey (pre 1950), N: G. Errey

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Listed by Lawrence Ball, 1950. No further details.)

**'Sunset' I(a/b)**

See *L. × maculatum* 'Sunset'.

**'Sunset' IX(c/d)**

See *pardalinum* 'Sunset'.

**Sunset Group Div. ?**

Given as a parent of 'Mystic Sundog'. No further details.

**'Sunset Beacon' I(a/b-c)**

Parentage: 'Merlin' sibling × 'Halloween'

R: W.D. Evans (1981), G: W.D. Evans (1985), N: W.D. Evans (1992), I: W.D. Evans (1992), REG: W.D. Evans (1992)

Inside vivid orange (28A); outside similar, midribs

slightly darker; spots dark red, a few, in the throat; papillae lighter; nectaries vivid orange (28A); pollen strong reddish orange (169A). Fls 140 mm wide; tepals 70 × 35 mm, margins very slightly ruffled, tips not recurved. Lvs scattered, 100 × 15 mm, pale green. Stems 0.8 m, green with a heavy brown overlay, and with c.14 fls. Mid July.

**'Sunsetbelle' VI(-/a)**

Parentage: selection from Golden Trumpet Group

N: D. Foxwell (1960)

PC 1964

Fls vivid yellow (9B); buds red-brown, 100 mm long.

**'Sunset Cloud' I(a/b)**

Parentage: selection from Egmont Group

N: R.E. Harrison, I: R.E. Harrison (pre 1970), REG: ICRA (1998)

Fls gold, deepening to gold-orange. Stems 1-1.9 m, with 10-15 fls.

**'Sunset Glow' II(c/d)**

See *L. × dalhansonii* 'Sunset Glow'.

**'Sunset Rose' I(a/b-c)**

Parentage: ('Aberfoyle' × orange-flowered seedling) × 'Royal Velvet'

R: W.D. Evans (1981), G: W.D. Evans (1985), N: W.D. Evans (1986), I: W.D. Evans (1986), REG: W.D. Evans (1986)

Inside strong pink (54C), throat strong purplish red (54A); outside strong pink (54C), midribs pale orange-yellow (165D); spots many, dark red (59A), on basal two-thirds of each tepal; nectaries almost white; pollen orange-red. Fls 140 mm wide; tepals 85 × 38 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 12 mm, mid green. Stems 1.3 m, dark brown, with c.17 fls. Midseason.

**'Sunshine' VI(-/a)**

Parentage: *sulphureum* × *leucanthum*

R: J. de Graaff (c. 1961), N: J. de Graaff

Fls light sulphur-yellow and deep gold. Stems 1.2-1.9 m.

**'Sunshine' I(c/d)**

Syn. of 'Porter's Sunbright'.

**'Sunshinebright' I(c/d)**

Probably an error for 'Porter's Sunbright' (q.v.).

**Sunshine Flares Group VI(b/b)**

Parentage: selections from Aurelian Group

S: C. Yerex, N: C. Yerex, I: C.A. Best (1956)

Fls in gold and yellow shades. July to Aug.

(Published in *Greenock Farms Cat.*, 1956. Included in *ILR* (1960) as Sunshine Flares grex.)

**'Sunshine Sam' I(a/-)**

Parentage unknown

R: R.A. Prochaska, G: R.A. Prochaska, N: Hartle-Gilman Gardens (1994), I: Hartle-Gilman Gardens (1995), REG:

Hartle-Gilman Gardens (1995)

Inside pale yellow-green (4D), throat brilliant greenish yellow (6A); outside yellow and cream; spots large, round, lavender, on basal three-quarters of each tepal; nectaries slightly frosted, yellow; pollen bright gold. Fls 156 mm wide; tepals 79 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 14 mm. Stems 1.1 m, mid green, with c.12 fls. Midseason.

**‘Sunspot’ I(a/-)**

Parentage: Mid-century Group × Mid-century Group  
R: J. de Graaff (c. 1964), N: J. de Graaff  
Fls deep red with a darker centre; spots black. Stems 0.6-1 m, dark. June.  
(Published in *ILR* (1969).)

**‘Sunsprite’ I(a/-)**

Parentage: (Yellow Blaze Group × ‘King Pete’) × brushmarked seedling  
R: B. Reid (1982), G: B. Reid (1985), N: B. Reid (1992), I: B. Reid (1993), REG: B. Reid (1993)  
Inside brilliant yellow (7A), throat vivid yellow (15B); outside green; spots and streaks moderate red (47A) in the throat; nectaries green; pollen brownish orange (166C). Fls 135 mm wide; tepals 65 × 40 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 58 × 10 mm, mid green. Stems 1.28 m, green, with c.15 fls. July.

**‘Sun Star’ IV(-/-)**

Parentage: *pardalinum* × unknown  
R: F.C. Stern (c. 1931), N: F.C. Stern  
(Published in *LYB* 6: 137 (1937). No further details.)

**‘Sunstar’ I(a/b)**

Parentage: selection from Hollywood Group  
S: J. de Graaff, N: J. de Graaff  
Fls Indian orange (HCC 713/2-713/1), with slight brown spotting at base of tepals. Stems 0.6-1 m. June to July.  
(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Sun Star’. Published in *Oregon Bulb Farms Cat.*, 1955.)

**Sunstar Group I(a/b)**

Parentage: derived from *L.* × *hollandicum*, *lancifolium*, *L.* × *maculatum* & *davidii* var. *willmottiae*  
R: J. de Graaff, N: J. de Graaff  
Fls vermilion-red.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv. Published in *LYB* 11: 35 (1947). In *LYB* 30: 28 (1966), J. de Graaff & E. Hornback give the parentage as ‘Lilian Cummings’ × ‘Umbtig 8’.)

**‘Suntan’ I(b-c/-)**

Parentage: (*cernuum* × unknown) × unknown  
R: J. Barber, N: A.J. Porter (1974), REG: A.J. Porter (1975)  
Fls near vivid orange-yellow (23A) throughout; spotted; nectaries brilliant yellow-green (154B); pollen moderate orange (167B). Lvs long and slender. Stems 1.1 m. July.  
(Published in *Lilies and other Liliaceae*, 1975: 97.)

**Sun Temple Group VI(-/a)**

Parentage: derived from *leucanthum* var. *centifolium*  
R: J.M. Shaver, N: J.M. Shaver, I: C.A. Best (1956)  
Fls in shades of yellow, sometimes flushed with olive-green or wine-red outside. Stems 1.5 m.  
(Published in *Greenock Farms Cat.*, 1956. Included in *ILR* (1982) as Sun Temple grex.)

**‘Sun Valley’ I(a/-)**

Parentage: (‘Enchantment’ × unknown) × ‘Nugget’  
R: E. Robinson (c. 1962), N: E. Robinson  
Fls clear apricot-yellow; spots absent. Stems 0.8 m. July.  
(Published in *ILR* (1969).)

**Superba Group VI(-/a,b)**

Parentage: selections from Aurelian Group  
S: C. Yerex, N: C. Yerex  
Fls white, cream, buff and yellow. Stems 1.5-2.2 m. July to Aug.  
(Published in *Strawberry Hill Cat.*, 1952/53. Included in *ILR* (1960) as Superba grex.)

***superbum* L. IX(c/d)**

Fls orange or sometimes yellow or red, flushed with red, especially at tepal-tips, throat green; spots maroon, towards base of each tepal; nectaries green, hairy; anthers magenta or purple; pollen orange-brown. Fls up to 75 mm wide; tepals up to 75 × 20 mm. Lvs in whorls of 4-20, sometimes the uppermost scattered, 35-110 × 8-28 mm. Stems 1.5-3 m, green, usually purple-flushed, with up to 40 fls. E USA.

***superbum* ‘Copper Head’ IX(c/d)**

Parentage: selection from wild *superbum*  
S: M.G. Henry, I: A. MacNeil  
Fls pure copper.  
(Published in *Sandyloam Cat.*, 1948.)

***superbum* ‘Herc Henry’ IX(c/d)**

Parentage: selection from wild *superbum*  
S: M.G. Henry, I: A. MacNeil  
Fls yellow, tepal-tips shaded red; spots absent.  
(Published in *Sandyloam Cat.*, 1944.)

***superbum* ‘Howard Henry’ IX(c/d)**

Parentage: selection from wild *superbum*  
S: M.G. Henry, I: A. MacNeil  
Fls blood-red, rich and glossy.  
(Published in *Sandyloam Cat.*, 1948.)

***superbum* ‘Josephine Henry’ IX(c/d)**

Parentage: selection from wild *superbum*  
S: M.G. Henry, I: A. MacNeil  
Fls red. Pedicels branched.  
(Published in *LYB NALS* 3: 74-76, illus. (1950).)

***superbum* ‘Mary Henry Davis’ IX(c/d)**

Parentage: selection from wild *superbum*  
S: M.G. Henry, I: A. MacNeil  
Fls yellow, spotted black.  
(Published in *Sandyloam Cat.*, 1941/42.)

**superbum 'Norman Henry' IX(c/d)**  
Parentage: selection from wild *superbum*  
S: M.G. Henry, I: A. MacNeil  
Fls vivid orange-yellow (21A); spots absent.  
(Published in *Sandyloam Cat.*, 1941/42.)

**superbum 'Port Henry' IX(c/d)**  
Parentage: selection from wild *superbum*  
S: M.G. Henry, I: A. MacNeil  
Fls deep pure orange, with very faint spots.  
(Published in *Sandyloam Cat.*, 1942/43.)

**superbum 'Susan Pepper' IX(c/d)**  
Parentage: selection from wild *superbum*  
S: M.G. Henry, I: A. MacNeil  
Fls old rose, shading to a cream centre; spots dark.  
(Published in *Sandyloam Cat.*, 1955.)

**'Super Gazer' VII(-/c)**  
Parentage: selection derived from *speciosum* 'Crimson Glory' × 'Star Gazer'  
R: Rien Veenstra (1978), G: Oregon Bulb Farms, Inc. (1983), N: Rien Veenstra (1989), I: Oregon Bulb Farms, Inc. (1989), REG: Oregon Bulb Farms, Inc. (1989)  
Inside strong purplish red (63A), shading to strong purplish pink (63C) towards tepal-edges, midveins dark red (187C), tepal-tips pale purplish pink (65D), throat strong yellow-green (144B), outlined with brilliant greenish yellow (2B); spots dark red (187B) extending over two-thirds of each tepal; nectaries strong yellow-green (144B); pollen strong orange (26A). Fls 200 mm wide; tepals 115 × 45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 185 × 44 mm, dark green. Stems 1.05 m, moderate yellow-green (146D), with c.5 fls. Midseason.

**'Supernova' VII(-/d)**  
Parentage unknown  
R: Oregon Bulb Farms, Inc. (c. 1979), N: Oregon Bulb Farms, Inc.  
Fls deep red. Stems 1.5-1.9 m. Aug.  
(Has been listed as a *speciosum* selection, but Oregon Bulb Farms give the parentage as unknown.)

**'Super Star' VI(-/)**  
Parentage: Aurelian Group  
I: Rowse Bros Pty Ltd (pre 1974)  
Fls orange-yellow. Stems 1.9 m. Jan. (Australia).  
(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to *speciosum* 'Superstar'.)

**'Superstar' IX(b-c/d)**  
See *speciosum* 'Superstar'.

**'Super Tsing' II(-/b)**  
Parentage: unnamed Martagon type × *tsingtauense*  
R: H.R. & R. Cocker, G: H.R. & R. Cocker, N: H.R. & R. Cocker, I: H.R. & R. Cocker, REG: H.R. & R. Cocker (1997)  
Inside strong orange (30D); outside light orange; spots dark red; pollen bright orange-red. Fls shaped

like *tsingtauense* but larger; tepal-margins smooth, tips strongly recurved. Lvs whorled, mid green. Stems 1 m, mid green, with 5-7 fls. Early.

**'Supreme Command' VI(-/a)**  
Parentage: selection from Olympic Group  
S: A.C. McKillop (c. 1956), N: A.C. McKillop  
Fls pink. Stems 1.2 m.  
(Published in *LYB NALS* 10: 75 (1957).)

**Surprise Ending Group VII(-/b)**  
Parentage unknown  
R: L. Woodriff (1958), G: H.J. & R.L. Strahm (1962), N: R.L. Strahm (1980), I: H.J. & R.L. Strahm (1975), REG: H.J. & R.L. Strahm (1984)  
Inside white, each tepal with a ray that is red at top and yellow below, tepal-tips and outside white, throat gold around and beyond the green nectaries; spots dark red more-or-less all over; pollen orange. Fls 200-225 mm wide; tepals 95 × 45 mm. Lvs scattered, 150 × 45 mm, dark green. Stems 1.2-1.5 m, with 8-15 fls. Aug.  
Syn.: 'Pictum'; Pictum Group.  
(Introduced as 'Pictum' in 1975. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 48 (1978) and included in *ILR* (1982) under this cv. epithet. It was subsequently called Pictum Group (an illegitimate name), and renamed by R. Strahm in 1980. Included in *ILR Third Supplement* as Surprise Ending grex.)

**'Susan' VI(c/a-b)**  
Parentage: *L. × aurelianense* 'Stooke's Variety' × (*sulphureum* × *leucanthum* var. *centifolium*)  
R: H.F. Comber, N: H.F. Comber, I: H.F. Comber AM 1949  
Inside Empire yellow (HCC 603/3), heavily banded and suffused with apricot (HCC 609 to 609/1); outside heavily clouded brick-red (HCC 016/3). Tepal-margins ruffled, tips somewhat reflexed. Stems with up to 25 fls. (Published in *JRHS* 74: 463 (1949). According to *LYB* 13: 160 (1949) the raiser was J.E.H. Stooke.)

**'Susan Eileen' I(a/b)**  
Parentage unknown  
R: A.J. Porter (1975), G: A.J. Porter (1976), N: Honeywood Lilies (1984), I: Honeywood Lilies, REG: Honeywood Lilies (1984)  
Inside at first rosier than light orange (29B), fading to strong orange-yellow (24B), tepal-tips strong orange-yellow (24B), throat brilliant orange (25C); outside strong to brilliant orange (25B/C) on inner tepals, strong orange-yellow (24B) with strong reddish orange (31B) at base on outer tepals; spots dark red (183A) on basal half of tepals; pronounced papillae in centre; nectaries vivid orange (28A); pollen vivid reddish orange (32A). Buds and bracts very hairy. Fls 100 mm wide; tepals 70 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs 100 × 20 mm, mid green. Stems 0.9 m, mid green, with 8-10 fls. July.

**'Susan Elizabeth' VI(-/c)**  
Parentage: unnamed Aurelian seedling × unnamed

Aurelian seedling

R: C.K. Kroell (1989), G: C.K. Kroell (1992), N: C.K. Kroell, REG: C.K. Kroell (1996)

Inside strong orange (24A) in the throat, the colour extending up about a third of tepal length, the apical two-thirds pale yellow (18C) fading towards tip, outer tepals narrowly edged (c.1 mm wide) with strong orange (24A); outside pale yellow (18C), inner tepals with moderate yellow-green (146D) midribs, outer tepals with a 10 mm-wide, moderate yellow-green (146D) band; basal third of each tepal with strong red (46A) flecks; nectaries nearly black; pollen moderate orange (167A). Fls 145 mm wide; tepals 29 mm wide, margins smooth, tips slightly recurved. Lvs scattered, 190 × 22 mm (from mid stem). Stems 1.6 m, with c.9 fls. Late July.

**‘Susan Hall’ VI(-/a)**

Parentage: yellow-flowered trumpet seedling × deep pink-flowered trumpet seedling

R: D.F. McPherson (1969), G: D.F. McPherson (1971), N: D.F. McPherson, I: D.F. McPherson (1976), REG: D.F. McPherson (1976)

Throat brilliant yellow (12B), tepal-margins moderate purplish pink (68C) to light purplish pink (69D). Fls 130 mm wide.

(Published in *Lilies and other Liliaceae*, 1976: 93.)

**‘Susanna’ I(a/-)**

See ‘Suzanna’.

**‘Susan Pepper’ IX(c/d)**

See *superbum* ‘Susan Pepper’.

**‘Susie Lambourne’ Div. ?**

Parentage unknown

(Grown in New Zealand. No further details.)

***sutchuenense* Franch. IX(c/d)**

Syn. of *dauidii* var. *willmottiae*.

**‘Sutherland Fascination’ I(b/c)**

Parentage: ‘Merryspring’ × ‘Sutherland Peach Melody’  
R: D.J. Hay (1996), G: D.J. Hay (1999), N: D.J. Hay (2001), REG: D.J. Hay (2004)

Inside with tepal-tips and base bright pink, central part gold and cream, throat pink; outside pink; spots tiny, at base of tepals; nectaries pink; pollen orange; stigma pink. Fls 130 mm wide; tepals 65 × 28 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 53 × 14 mm. Stems 0.45 m, red-brown below, green above, with c.7 fls. Midseason.

(Nomenclatural standard: colour print supplied by registrant (WSY 0096414).)

**‘Sutherland Flamethrower’ I(b/c)**

Parentage: ‘Merryspring’ × ‘Sutherland Peach Dream’  
R: D.J. Hay (1993), G: D.J. Hay (1996), N: D.J. Hay (1998), REG: D.J. Hay (2001)

Inside gold and red bicolor (essentially pink at apex and along tepal-margins, gold in basal part of each tepal), throat red; outside pink; each tepal with a red flash

down the centre from nectaries to mid tepal, otherwise unspotted; nectaries red. Fls 111 mm wide; tepals 73 × 34 mm, margins smooth, tips slightly recurved. Lvs scattered, 42 × 7 mm. Stems 0.43 m, with c.6 fls. Midseason.

(Nomenclatural standard: colour print provided by registrant (WSY 0031593).)

**‘Sutherland Peach Dream’ Div. ?**

Given as a parent of ‘Sutherland Flamethrower’. No further details.

**‘Sutherland Peach Melody’ I(b/b-c)**

Parentage: ‘Unique’ × ‘Merryspring’

R: D.J. Hay (1993), G: D.J. Hay (1995), N: D.J. Hay (1998), REG: D.J. Hay (2001)

Inside with tepal-tips pink, tepal-centres apricot, throat dark pink; outside pink; heavily spotted with wine-red on basal half of each tepal. Fls 155 mm wide; tepals 73 × 39 mm, margins very slightly ruffled, tips slightly recurved. Lvs scattered, 55 × 9 mm. Stems 0.65 m, green, brown-mottled, with 7-9 fls. Midseason.

(Nomenclatural standard: colour print provided by registrant (WSY 0031599).)

**‘Sutter’s Gold’ Div. ?**

Given as a parent of several cvs. No further details. Probably an error for Sutter’s Gold Group.

**Sutter’s Gold Group I(c/d)**

Parentage: complex *cernuum* × *lancifolium* hybrid

R: J. de Graaff (c. 1964), N: J. de Graaff

Fls deep yellow; spots dark. Stems 1 m. Midseason. (Published in *ILR* (1969) as Sutter’s Gold grex.)

**‘Sutton Court’ II(-/)**

See *L. × dalhansonii* ‘Sutton Court’.

**‘Suvenirs’ VI(b-c/a-b)**

Misspelling of *L. × aurelianense* ‘Suvenirs’.

**‘Suvenirs’ VI(b-c/a-b)**

See *L. × aurelianense* ‘Suvenirs’.

**‘Suverén’ VI(b-c/b-d)**

Parentage: (‘Honeydew’ × ‘Cock Robin’) × (‘Mimosa Star’ × ‘Kankán’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000), REG: B. Mičulka (2000)

Inside yellow; outside brownish and greenish; spots absent; nectaries green; pollen dark brown; stigma greyish white. Fls 140 mm wide; tepals 115 × 42 mm, moderately recurved; pedicels 86 mm long, spotted. Lvs scattered, 125 × 18 mm, dull medium green. Stems 1.15 m, thick, rigid, strongly spotted with red-brown. Mid July.

**‘Suzanna’ I(a/-)**

Parentage: (‘Destiny’ × *lancifolium* var. *flaviflorum* ‘Yellow Tiger’) × unnamed seedling

R: De Jong Lelies Beheer B.V. (pre 1978), N: De Jong

Lelies Beheer B.V., REG: De Jong Lelies Beheer B.V. (1978)

Inside vivid yellow (12A) and (14B), throat green; outside brilliant greenish yellow (6A); spots red-brown; nectaries green; pollen dark reddish orange (175B). Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 75 × 22 mm, dark green. Stems 0.8 m, dark violet, with c.8 fls. Late June.

(Published in *Lilies and other Liliaceae*, 1978/79: 114 and registered in *ILLR* (1982) as 'Susanna'. However, in 1979 Dutch PBR (LEL 28) were granted under the epithet 'Suzanna', so this latter spelling of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Suzanne Summerville' VII(-/-)**

See *L. × parkmanii* 'Suzanne Summerville'.

**'Suzeraine' I(a/-)**

Syn. of 'Coquet'.

**'Suzette' VII(a/b)**

Parentage unknown

R: Mak-Leek Inc. (1984), G: Mak-Leek Inc. (1987), N: Mak-Leek Inc. (1996), REG: Mak-Leek Inc. (2003)

Inside yellowish white (155B); outside yellowish white (155B). midribs light yellow-green (154D), changing into brilliant yellow-green (154C), strong yellow-green (143B) at top; spots yellowish white (155B) on two-thirds of each tepal; papillae yellowish white (155B); nectaries strong yellow-green (145A); pollen strong reddish orange (169A); stigma deep purplish red (71A). Fls 200 mm wide; tepals 105 × 30-45 mm. Lvs 110 × 25 mm, dark green. Stems 0.45 m, green, with 4 fls. Early.

**'Svadba' I(a/-)**

Parentage: ('Zolotinka' × 'Rosita') × 'Tuman'

R: A.V. Otroshko (1991), N: A.V. Otroshko, REG: A.V. Otroshko (1994)

Inside light purplish white, each tepal with a dark red brushmark and some spots. Tepals slightly recurved. Stems 1 m, brown, with 10-14 fls. July.

**'Svatava' I(a/b)**

Parentage: 'Letkis' × 'Advent'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1996), REG: B. Mičulka (1996)

Inside pale beige-peach, throat paler, tepal-centre near nectaries more beige, edges in throat pinkish; outside with greenish brown midribs; spots numerous, fairly large, on two-fifths of each tepal; pollen red-brown; stigma old rose. Fls 130 mm wide; tepals 95 × 33 mm, tips slightly recurved (outer more so); pedicels 75 mm long, green. Lvs scattered, 80 × 13 mm, dull mid green. Stems 0.9 m, slightly brownish at base. Early July.

**'Svatopluk' I(a/b)**

Parentage: ('Vonnice' × 'Wattle Bird') × ('Markéta' × 'Dawn Star')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1997), REG: B. Mičulka (1997)

Inside deep velvet red, each tepal with a little apricot

'tongue', tips paler, throat dark carmine; outside brownish orange-red, midribs browner; spots black, sparse, small, on two-thirds of each tepal; nectaries pink-granulated; filaments dark red; pollen orange-brown; stigma brown-red. Fls 155 mm wide; tepals 85 × 40 mm, margins upcurved, tips slightly recurved; pedicels 80 mm long, dark brown-spotted. Lvs scattered, 100 × 16 mm, deep glossy green. Stems 0.85 m, thick, spotted with dark brown, with a short infl. Early July.

**'Sveiciens Vasarai' I(b/-)**

Parentage: selection from Vasaras Priekis Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls pale lilac.

(Misspelling: 'Sveitsiens Vasarai'. Published in *LYB* 33: 78 (1970) and included in *ILLR* (1982) as 'Sveiziens Vasarai' which is also a misspelling.)

**'Sveiks' I(a/-)**

Parentage: selection from Jūras Zvaigzne Group

S: V.P. Orehovs, N: V.P. Orehovs

Fls orange.

(Published in *LYB* 33: 80 (1970) and included in *ILLR* (1982) as 'Sweiks' which is a misspelling.)

**'Sveitsiens Vasarai' I(b/-)**

Misspelling of 'Sveiciens Vasarai'.

**'Sveiziens Vasarai' I(b/-)**

Misspelling of 'Sveiciens Vasarai'.

**'Sverkaiushchaia' I(c/-)**

Parentage: 'Stroinaia' ×  *davidii* var.  *willmottiae*

R: V.A. Grot (c. 1959), N: V.A. Grot

No further details.

(Included in *ILLR Second Supplement* as 'Sverkaiustschaja' which is an unaccepted spelling.)

**'Sverkaiustschaja' I(c/-)**

Unaccepted spelling of 'Sverkaiushchaia'.

**'Svetku Velte' VI(-/a)**

Misspelling of 'Svētku Velte'.

**'Svētku Velte' VI(-/a)**

Parentage unknown

R: V.P. Orehovs (pre 1970), N: V.P. Orehovs

Inside apricot-yellow; outside very pale pink; pollen orange-yellow. Tepal-margins smooth, tips not recurved. Lvs broad.

(Included in *ILLR Second Supplement* as 'Svetku Velte' which is a misspelling.)

**'Svetlana' I(-/a)**

Parentage: selection from Tsvetaevoi Group

R: Z.N. Tsvetaeva (c. 1940)

Fls pink-violet, centre yellowish with dark spots. Fls scented, with slightly reflexed tepals.

(Published in *Lilies and other Liliaceae*, 1975: 28. Belongs to Tsvetaevoi Group.)

**‘Svetlana’ I(c/d)**

Parentage: ‘Rubinovaia’ × mixed pollen of *cernuum* and its hybrids

R: M.F. Kireeva (1975), N: M.F. Kireeva

Inside creamy pink, with an orange flush at centre; spots black, numerous, small, on basal half of each tepal; filaments pale pink; anthers red-orange. Fls 80-90 mm wide. Stem 0.8-1.2 m, green, with 15-22 fls in a pyramidal infl., and with bulbils. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in M.F. Kireeva, *Lilii*, 66 (1984). Included in *ILR Twentieth Supplement* where the pollen parent was given as “mixed pollen of *cernuum* & Harlequin Group”.)

**‘Světlna Frajmanova’ I(b/-)**

Parentage: complex origin

R: J. Frajman, N: J. Frajman, I: J. Frajman (1980), REG: J. Frajman (1984)

Inside white, with an apricot-salmon tint, throat and tepal-tips very pale; midribs pale beige; nectaries lightly frosted; pollen dark purple. Fls 85 mm wide; tepals 70 × 26 mm, slightly recurved. Lvs scattered, 95 × 8 mm, pale green. Stems 1 m, green. July.

**‘Svetlitsa’ I(a/b-c)**

Parentage unknown

Fls pearly cream with pink tepal-tips.

(Published in M.F. Kireeva, *Lilii*, 66 (2000).)

**‘Světloňoš’ VI(b-c/d)**

Parentage: ((*henryi* × ‘Gold Eagle’) × ‘Mimosa Star’) × ‘Lady Jane’ × ‘Gold Eagle’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005), REG: B. Mičulka (2005)

Inside vivid yellow, tepal-tips paler; outside with brownish midribs; yellow, raised, papillate spots on half of each tepal; nectaries green; pollen apricot; stigma green. Fls 125 mm wide; tepals 95 × 45 mm, thick, moderately curved, margins slightly wavy; pedicels 60 mm, thick, dotted with dark brown. Lvs scattered, 105 × 15 mm, dull dark green. Stems 1.15 m, freely brown-dotted. Mid July.

**‘Svirel’ I(a/c)**

Syn. of ‘Lastochka’.

**‘Swan’ IX(b/c)**

See *auratum* ‘Swan’.

**‘Swan Lake’ VII(-/b)**

Parentage: *auratum* var. *platyphyllum* × (*L.* × *parkmanii* × unknown)

R: J.S. Yeates (c. 1960), N: J.S. Yeates

Fls white with green midribs; spots absent; white papillae present; pollen orange-brown. Stems 1.9 m. An *auratum* type. Aug.

(Published in *R.E. Harrison & Co. Cat.*, 1967.)

**‘Swansdown’ I(c/-)**

Parentage: fawn-flowered (*pumilum* × unknown) × pink-flowered (*pumilum* × unknown)

R: C. Robinson (1971), G: C. Robinson (1974), N: C. Robinson (1983), I: C. Robinson (1984), REG: C. Robinson (1983)

Fls yellowish white (155D) throughout, midribs pale yellow, tinged with reddish purple at base; spots absent; nectaries pale green; pollen brown. Tepals 73 × 23 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 7 mm, dark green. Stems 1 m, dark green, with c.18 fls. July.

**‘Swansea’ VIII(a/b)**

Parentage: seedling BG 95-60 × seedling AJ 94-15

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside strong orange-yellow (24B), strong orange (24A) towards tepal-margins and along midveins, throat moderate yellow-green (139D); outside light orange-yellow (19A), tepal-margins strong orange (25A), midribs moderate yellow-green (146D) at base and top; spots absent; papillae strong orange (24A); nectaries moderate yellow-green (146B); pollen vivid reddish orange (30B); stigma strong orange (30D). Fls 222 mm wide; tepals 128 × 50-60 mm, margins smooth, tips recurved. Lvs scattered 155 × 27 mm. Stems 1.1-1.4 m, green with darker markings especially at base, and with c.7 fls. (*A longiflorum*/Asiatic (LA) hybrid.)

**‘Swan Song’ VII(-/b)**

Parentage: Pink Glory Group (Div. VII) × *nobilissimum*  
R: E.A. McRae (1967), G: Oregon Bulb Farms, Inc. (1970), N: Oregon Bulb Farms, Inc. (1986)

Fls pure white, midribs soft green; spots absent; nectaries apple-green. Fls 180-230 mm wide; tepals 110 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 70 mm, dark green. Stems 1.4 m, light green, with 4-20 fls. Late Aug.

(Included in *ILR Fifth Supplement* as ‘Swansong’, but in 1988 a USPP was granted under the epithet ‘Swan Song’, so this latter form of the name must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Swansong’ VII(-/b)**

See ‘Swan Song’.

**‘Sweet Ann’ VI(b-c/a)**

Parentage: *leucanthum* var. *centifolium* × Pink Perfection Group

R: K. Paszyńska (1984), G: K. Paszyńska (1988), N: K. Paszyńska (1992), I: K. Paszyńska (1992), REG: K. Paszyńska (1992)

Inside of outer tepals white, of inner tepals white strongly suffused with pink at edges and base, throat golden yellow; outside suffused with pink; spots absent; nectaries green; pollen dark brown. Fls 150 mm wide, with some secondary buds, strongly scented; tepals 140 × 50 mm, margins slightly ruffled, tips recurved. Lvs scattered, 130 × 15 mm, mid green. Stems 1.5 m, green, with 10-12 fls in a crown-like head. Early July.

**'Sweet Betsy' II(-/-)**

Parentage unknown

R: unknown (pre 1980), N: D. Dale (1990), I: Parkland Perennials (1994), REG: D. Dale (1993)

Inside cream suffused with pink, throat cream; outside cream overlaid with pink, midribs deep pink; spots very few, maroon, randomly distributed on basal part of each tepal; nectaries cream; pollen golden. Fls 90 mm wide; tepals 37 × 20 mm, margins smooth, tips slightly recurved. Lvs whorled, 146 × 55 mm, mid green. Stems 1.7 m, appearing plum-coloured, with 18-24 fls. Early July.

**'Sweet Cherie' I(b/-)**

Parentage unknown

R: J. Wadekamper (pre 1989)

Fls white; spots dark, numerous, on basal third of each tepal. Tepal-tips slightly reflexed.

(Published in *Dunhampton Lily Fields Cat.*, 1989.)**'Sweet Diamond' VIII(a/b)**

Parentage: (((('Monaco' × unknown) × 'Sun Ray') ×

'Yellow Giant') × selection from (*longiflorum* × 'Gloria')

R: De Jong Lelies Holland B.V. (1996), G: De Jong Lelies Holland B.V. (1998), N: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2001)

Inside strong red (39A) on a deep yellowish pink (39B) ground, a little darker by midveins, tepals edged with vivid reddish orange (30B), throat deep yellowish pink (39B); outside of inner tepals deep yellowish pink (39B) on a moderate yellowish pink (39C) ground, midribs greyish red (178A), outside of outer tepals a little darker and the apical part edged with strong reddish orange (31A); spots negligible; papillae absent; nectaries deep yellowish pink (39B); pollen dark reddish orange (178B); stigma strong red (39A). Fls 160 mm wide; tepals 105 × 40-50 mm, margins smooth, tips recurved. Lvs scattered, 120-150 × 20-25 mm. Stems 1.1 m, green with darker markings, and with c.8 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)**'Sweet Dreams' I(a/b)**

Parentage: 'Peachblush' × pink/white-flowered Pastel Group

R: Columbia-Platte Lilies (1982), G: Columbia-Platte Lilies (1984), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)

Inside light purplish pink (63D/62C) to pale purplish pink (62D), extreme tepal-tips strong purplish pink (63C), throat light to pale orange-yellow (23C/D); outside pale purplish pink (62D); spots absent; nectaries light pink; pollen absent: the small white anthers do not open. Tepals 60-90 × 25-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-150 × 20-25 mm, mid green. Stems 0.8-1.25 m, mid to dark green, with 7-12 fls. Late June.

(Cool weather accentuates the colour, and warm weather and intense light diminishes the pink and yellow.)

**'Sweet Eloquence' VI(b/d)**

Parentage unknown

R: W.T. Craig, G: W.T. Craig, N: C. Helsley (2000), REG: C. Helsley (2003)

Inside white, tepals occasionally edged with moderate purplish pink (66D), throat vivid yellow (12A) extending to basal half of tepals; outside moderate purplish pink (66D); spots absent; nectaries mid green; pollen golden brown; stigma dark red. Fls 145 mm wide; tepals 120 mm long, inner 34 mm wide, outer 22 mm wide, margins slightly ruffled, tips strongly recurved. Lvs scattered, 170 × 24 mm. Stems 1.75 m, with c.12 fls. Early July.

**'Sweet Frost' VII(-/c)**

Parentage unknown

R: H.J. Strahm (pre 1978), N: H.J. Strahm, REG:

Strahm's Lilies, Inc. (1984)

Fls white, sprinkled with red spots; nectaries green; pollen orange. Tepal-margins smooth, tips strongly recurved. Stems 1-1.9 m. Aug.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 49 (1978).)**'Sweet Harmony' VII(a/b)**

Parentage unknown

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1998), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside yellowish white (155D), up to three-quarters of each midvein brilliant greenish yellow (6C); outside yellowish white (155D), midribs pale yellow-green (155A) and light greenish yellow (4C) shading to light greenish yellow (4B) towards top, tipped with strong yellow-green (143B), base also 143B; spots brilliant greenish yellow (6A) on up to three-quarters of each tepal; papillae yellowish white (155D) and brilliant greenish yellow (6A); nectaries strong yellow-green (143B); pollen strong orange to moderate reddish orange (170A/171A); stigma dark purple (79A). Fls 230 mm wide; tepals 120 × 45-65 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 30 mm. Stems 0.9 m, green, with 4-6 fls. July.

**'Sweetheart' I(a/-)**

Parentage: 'Juliana' × (Hallmark Group × 'Destiny')

R: J.F. McRae &amp; L.D. Marshall (1975), G: J.F. McRae (1970), N: J.F. McRae (1984), I: Columbia-Platte Lilies (1982), REG: Columbia-Platte Lilies (1984)

Inside moderate purplish pink (62B), throat light purplish pink (62C); outside light purplish pink (62C); moderately heavy spotting on basal half of tepals. Fls 160-170 mm wide; tepals 70-80 × 20-40 mm, margins usually smooth, tips slightly recurved. Lvs scattered, 100-150 mm long, mid green. Stems 1-1.3 m, deep green, with 6-10 fls in a compact infl. June.

Syn.: 'Irresistible'.

(Originally introduced in 1982 as 'Irresistible' - an illegitimate synonym.)

**'Sweetie' I(b-c/d)**

Parentage unknown

R: J.G. Smith (1977), G: J.G. Smith (1979), N: J.G. Smith (1984), I: J.G. Smith (1984), REG: J.G. Smith (1984)

Fls peach-pink, with a pink throat; spots brown on half of each tepal; nectaries pale pink; pollen brown. Tepals 78 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 13 mm, mid green. Stems 0.75 m, green, with c.22 fls.

**'Sweet Irene' I(a/b)**

Parentage: ('Tetra Ambrosia' × 'Tetra Mont Blanc') × ('Parisienne' × 'Tetra Capri')

R: W.S. Summers, G: W.S. Summers, N: W.S. Summers, I: Hartle-Gilman Gardens, REG: W.S. Summers (2003)

Inside pale orange-yellow (23D) in basal third, moderate pink (49B) in top third, strong pink (54C) each side of the midvein, throat moderate pink (49B); outside deep purplish pink (54B), midribs red over green; tiny black spots scattered in area where throat merges into orange-yellow; nectaries green (130) with very fine ridges on either side; filaments pale pink; pollen moderate red (179A); stigma tan-pink; style brownish. Fls 150 mm wide; tepals 85 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 15 mm. Stems 1 m, speckled with moderate olive-green (137A), with 10-14 fls. Tetraploid.

(Nomenclatural standard: colour print supplied by registrant (WSY 0096346).)

**'Sweet Kiss' I(a-b/b)**

See 'Sweet-kiss'.

**'Sweet-kiss' I(a-b/b)**

Parentage: unnamed hybrid × unnamed hybrid

R: Gebr. N. &amp; B. Laan &amp; Zn (1986), G: Gebr. N. &amp; B. Laan &amp; Zn (1988), N: Gebr. N. &amp; B. Laan &amp; Zn (1994), I: Gebr. N. &amp; B. Laan &amp; Zn (1995), REG: Gebr. N. &amp; B. Laan &amp; Zn (1996)

Inside deep pink (51B) with an orange-yellow flush towards base; outside deep yellowish pink (47C) with an orange-yellow flush; spots few; papillae present; nectaries yellow-green; pollen sterile; stigma violet. Fls 180 mm wide; tepal-margins slightly ruffled, tips recurved. Lvs scattered, mid green. Stems 1.4 m, dark, with 4-7 fls. Midseason.

(Registered as 'Sweet Kiss' in 1996. The same year Dutch PBR were granted as 'Sweet-Kiss' so this form of the epithet must be accepted (ICNCP, 2004: Art. 24.4).

However, in accordance with ICNCP, 2004: Art. 32.13 (the second element of a hyphenated word must start with a lower case letter), the upper case K is here corrected.)

**'Sweet Lorraine' I(a/b)**

Parentage unknown

R: H.E. Hoepner (1972), G: H.E. Hoepner (1982), N: H.E. Hoepner (1983), REG: H.E. Hoepner (1990)

Fls vivid intense orange throughout, except for a gold ray down the centre of each tepal; spots absent; pollen copper-coloured. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.2 m. June.

**'Sweet Love' VII(-/-)**Parentage: ('Star Gazer' × *L. × parkmanii* 'Allegra') × 'Joy'

R: Lybelmex Hillegom B.V. (1984), G: Lybelmex Hillegom B.V. (1988), N: Lybelmex Hillegom B.V. (1991), I: Lybelmex Hillegom B.V. (1992), REG: Lybelmex Hillegom B.V. (1993)

Inside yellowish white (155D), the apical part inconspicuously speckled with deep purplish red (187D), suffused moderate purplish red (58A) on apical part of midvein on a few tepals; outside yellowish white (155D), inconspicuously speckled with deep purplish red (187D) along midrib in apical part, inner tepals with the midrib strong greenish yellow (151C) at the top, fading towards base, outer tepals with the midrib strong yellow-green (144C), tipped strong yellow-green (144A); spots deep purplish red (187D) on basal part of each tepal; pollen light yellow-green (145B); stigma greyish yellow-green (148D). Fls 240 mm wide; tepals 130 × 65 mm, margins smooth, tips strongly recurved. Lvs scattered, 185 × 41 mm, dark green. Stems 0.76 m, mid green, with c.6 fls.

**'Sweet Pearl' VII(a/b)**

Parentage: 'Montracher' × 'Medusa'

R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)

Inside with inner tepals moderate purplish pink (186D), yellowish white (155D) along and above nectaries, tepal-margins yellowish white (155D) in apical half, outer tepals stronger moderate purplish pink (186D), throat yellowish white (155D); outside with basal half of tepals yellowish white (155D), apical half moderate purplish pink (186D), midribs strong yellow-green (143C) at base and top, in between light yellow-green (154D); spots absent; papillae yellowish white (155D); nectaries strong yellow-green (144B); pollen vivid yellowish pink (28A); stigma dark red (187C). Fls 182 mm wide, fragrant; tepals 116 × 41-63 mm, margins smooth to ruffled, tips slightly recurved. Lvs 139 × 45 mm. Stems 0.85-1.3 m, green with darker markings at base, and with 4-7 fls. (The purplish pink colour of outer tepals is less prominent than in inner tepals and it fades with age.)

**'Sweet Sixteen' I(b-b-c)**Parentage: (*bulbiferum* var. *croceum* × *L. × testaceum*) × yellow-flowered Stenographer Group

R: P.M. Byam (c. 1958), N: P.M. Byam

Fls soft yellow, overlaid with light red; with fine spots.

**'Sweet Surrender' I(b-c/c/d)**

Parentage unknown

N: Lily Company B.V. (2000), REG: Lily Company B.V. (2004)

Inside pale yellow-green (4D), throat strong yellow-green (144B); outside light greenish yellow (4C), changing to pale yellow (8D) towards edges of each tepal, midribs light greenish yellow (1C) with a little moderate red (180C) at the base; spots dark red (187A); papillae absent; nectaries yellowish white (155D); pollen strong orange (169B); stigma strong orange (169D) with a little yellow. Fls 140 mm wide, fragrant; tepals 75 × 25-35 mm, margins smooth, tips recurved. Lvs 70 × 10 mm.

Stems 0.8-0.9 m, with some dark markings, with c.11 fls. Early.

Syn.: *tigrinum* 'Sweet Surrender'.

(This lily originated in the USA, but the raiser is unknown.)

### 'Sweiks' I(a/-)

Misspelling of 'Sveiks'.

### 'Swift' I(a/-)

Parentage unknown

R: H. Beentjes (1982), G: H. Beentjes, N: H. Beentjes, I: H. Beentjes, REG: H. Beentjes (1989)

Inside deep pink (50B), tepals flamed strong orange-yellow (24B), throat deep purplish red (71A); outside moderate red (182A), flushed with deep pink (51C); spots dark red (187A) on basal half of each tepal; pollen strong reddish orange (169A). Fls 190 mm wide; tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 10 mm, mid green, with dark tips. Stems 0.75 m, green with darker markings, and with c.7 fls. July.

### 'Swing' VIII(a/b)

Parentage: 'Admiration' × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V. (1984), G: Bischoff Tulleken Lelies B.V. (1987), N: Bischoff Tulleken Lelies B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1992), REG: Bischoff Tulleken Lelies B.V. (1994)

Inside pale orange-yellow (16D), tepals edged with light orange-yellow (16B) and tipped with strong orange (24A), midveins strong orange (24A) for a third of their length, throat light orange-yellow (19A); outside pale yellow (20D) shading to pale yellow (20C) towards tepal-edges, with a slight edging of light yellow (20B), tepals tipped with dark red (187A), midribs strong yellow-green (143B) shading to strong yellow-green (144B); spots dark red (187B) in the throat; pollen dark reddish orange (175B); stigma deep purplish red (71A). Fls 200 mm wide; tepals 105 × 40 mm. Lvs scattered, 140 × 15 mm, mid green. Stems 0.6 m, pale green, with c.4 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

### Swinging Safari Group II(-/-)

Parentage: (*martagon* var. *album* & *martagon* var. *cattaniae* × *medeoloides*) F<sub>2</sub>

R: F. Ewald (pre 1981), N: F. Ewald

Fls ochre-yellow; spots brown. Lvs and stems dark green. Stems 1.6-1.8 m, with up to 15 fls. July.

(Later into growth than *hansonii* hybrids and therefore less subject to frost damage.)

### 'Sybil Stern' III(c/d)

See *L. × testaceum* 'Sybil Stern'.

### 'Sydney' I(a/c)

Parentage: ('Apeldoorn' × *L. × parkmanii* 'Venus')

× (('Sun Ray' × purple-flowered seedling) ×

('Enchantment' × 'Connecticut King') × 'Sterling Star')

R: Mak-Leek Inc. (pre 1996), N: Mak-Leek Inc., REG: ICRA (1998)

Inside yellowish white at centre of fl., tepal-margins and

tips dark pink. Buds dark pink. Tepal-margins ruffled, tips recurved. Stems 1.1 m. Midseason.

Syn.: 'Sidney'.

### 'Sylphide' VII(-/b)

Parentage: Pink Glory Group (Div. VII) × *nobilissimum*

R: E.A. McRae (1967), G: Oregon Bulb Farms, Inc.

(1970), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)

Fls pure white, with deeper midribs; in some the tepals have a soft pink flush; spots absent; nectaries apple-green; pollen moderate red (179A). Fls 180-220 mm wide; tepals 90 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 60 mm, mid green. Stems 0.9 m, light green, with 4-20 fls. Late Aug.

### 'Sylvana' VIII(a-b/b)

Parentage: seedling LA 93081-4 × 'Sancerre'

R: De Jong Lelies Holland B.V. (1995), G: De Jong Lelies Holland B.V. (1997), N: De Jong Lelies Holland B.V. (2001), REG: De Jong Lelies Holland B.V. (2001)

Inside whiter than greenish white (155C), throat greenish white (155C), with strong yellow-green (144A) along nectaries; outside whiter than greenish white (155C), with a light purplish pink (63D) suffusion at base of midribs, outer tepals stronger-coloured; spots dark purple (79A); papillae greenish white (155C) and at edges vivid reddish purple (78A); nectaries greenish white (155C); pollen greyish brown to strong reddish orange (166A/169A); stigma light yellow-green (145C). Fls 210 mm wide; tepals 120 × 50-70 mm, margins smooth to very slightly wavy, tips recurved. Lvs scattered, 125 × 30 mm. Stems 1.2 m, dark, with 4-6 fls. June to July. (A *longiflorum*/Asiatic (LA) hybrid.)

### Sylvan Dell Group VI(b/b)

Parentage: Aurelian Group

R: C. Yerex, N: C. Yerex

Fls green and white.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 47 (1978) as Sylvan Dell strain and included in *ILR* (1982) as Sylvan Dell grex.)

### 'Sylvester' I(a/-)

Parentage: selection from Sundrop Group

G: Bischoff Tulleken Lelies B.V. (1975), N: Bischoff

Tulleken Lelies B.V. (1979), I: Bischoff Tulleken Lelies

B.V. (1979), REG: Bischoff Tulleken Lelies B.V. (1982)

Fls golden yellow, 100-120 mm wide. Lvs scattered, 100 × 10 mm, mid green. Stems 0.6 m, mid green with 6-8 fls. Early June.

### 'Sylvester Cleveland' VI(b-c/b)

Parentage unknown

R: D. Sylvester (c. 1980), G: D. Sylvester (c. 1984), N:

C. Helsley (1996), I: Ozark Mountain Lilies (1996),

REG: C. Helsley (2003)

Inside white, midveins brilliant yellow (13B), throat brilliant yellow (13B) blending into white; outside white, lightly brushed with pinkish brown on basal half; speckled with strong reddish orange (169A) on basal

third of each tepal; nectaries mid green; pollen orange-brown; stigma green. Fls 170 mm wide, strongly scented; tepals 140 mm long, outer 50 mm wide, inner 30 mm wide, margins slightly ruffled, tips slightly recurved. Lvs scattered, 170 × 17 mm. Stems 1.5 m, grey-green, heavily dotted with dark red, with c. 10 fls. Late June.  
(Published in *Ozark Mountain Lilies Cat.*, 1996.)

### 'Sylvia' VII(-/b)

Parentage: Pink Glory Group (Div. VII) × *nobilissimum*  
R: E.A. McRae (1967), G: Oregon Bulb Farms, Inc. (1970), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc., REG: Oregon Bulb Farms, Inc. (1986)  
Inside light purplish pink (65B) shading to deep purplish pink (64D), midveins strong purplish red (64B/C), throat white (10mm); outside pale purplish pink (65C/D), midribs soft green; spots absent; nectaries apple-green; pollen moderate red (179A). Fls 180-230 mm wide; tepals 110 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 70 mm, dark green. Stems 1.2 m, light green, with 4-25 fls. Late Aug.

### 'Sylvia Halloway' VII(-/c)

See *L. × parkmanii* 'Sylvia Halloway'.

### 'Sylvia Jackson' I(c/-)

Parentage: Aurelian Group × Aurelian Group  
R: G.W. Darby (c. 1965), N: G.W. Darby  
Fls creamy yellow, with a central orange zone. Bulbils present.

### 'Symfonieta' Div. ?

Given as a parent of several cvs raised in the Czech Republic and the former USSR.

### Symfonieta Group I(a/b)

Parentage: 'Connecticut King' × (*dauricum* × unknown)  
R: V. Jošt (1974), G: V. Jošt (1977), N: V. Jošt (1984), I: Semptra Praha a.s. (1984), REG: V. Jošt (1984)  
Inside strong orange (25A/B); outside strong orange (25B); unspotted or with some minute spots; nectaries white; pollen vivid yellowish orange (30C). Fls 130-160 mm wide; tepals 70-75 × 36-38 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-110 × 12-15 mm, mid green. Stems 0.5-0.85 m, mid green, with c.15 fls. June.  
(Published in *Zahradnictvo*, 1984. Included in *ILR Third Supplement* as Symfonieta grex.)

### Symphonieta Group Div. ?

Given as a parent of 'Aivenko' and 'Saules Māsa', both raised by V.P. Orehovs. No further details. Possibly an error for Symfonieta Group.

### 'Symphony' I(a-b/b)

Parentage: ('Lyla McCann' × 'Coronation') × 'Coronation'  
R: P.M. Byam (c. 1947), N: P.M. Byam  
Aureolin yellow, with fine, red spots; pollen orange. Fls c.70 mm wide; tepal-margins smooth, tips recurved. Stems 0.8 m, with up to 21 fls. Late June to early July.  
(Published in *LYB NALS* 9: 98 (1956).)

### 'Syndicate' I(a/-)

Parentage: 'Passat' × 'John Dix'  
R: Gebr. N. & B. Laan & Zn (1980), G: Gebr. N. & B. Laan & Zn (1982), N: Gebr. N. & B. Laan & Zn (1985), I: Gebr. N. & B. Laan & Zn (1985), REG: Gebr. N. & B. Laan & Zn (1985)  
Inside purple, throat cream and white; outside light purple; spots purple, in the throat and middle of tepals; nectaries white; pollen brown. Fls 150 mm wide; tepals 85 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 18 mm, dark green. Stems 1.3 m, green, with c.8 fls. June.

### 'Sy-yets' I(a/b)

See *L. × maculatum* 'Sy-yets'.

### *szovitsianum* Fisch. & Avé-Lall. IX(c/d)

Syn. of *monadelphum*.

### *szovitsianum* var. *armenum* Mishchenko IX(c/d)

Syn. of *monadelphum* var. *armenum*

### 'Tabasco' I(a/-)

Parentage: 'Fireflame' × red-flowered Mid-century Group (probably 'Cinnabar' (Div. I))  
R: J. de Graaff, N: J. de Graaff  
Fls chestnut-red; spots black. Stems 0.6-1.2 m, with up to 20 fls. June.  
(Published in *LYB* 21: 63 (1958).)

### 'Taboo' I(a/-)

Parentage: 'Quadroon' × blood-red-flowered seedling  
R: E.E. Fox (1987), G: E.E. Fox (1989), N: E.E. Fox (1990), I: Fox Lily Ranch (1994), REG: E.E. Fox (1993)  
Inside blackish blood-red, each tepal with a narrow, tangerine streak above the frosted, tangerine nectary, throat blood-red; outside blackish blood-red, midribs tan or buff; spots rather tiny, black, on the basal two-thirds of each tepal; pollen brown. Fls 160 mm wide; tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 12 mm, mid green. Stems 0.8-0.9 m, green, mottled with black, with 7-10 fls. Early July.

### 'Tábor' I(a-b/b)

Parentage unknown  
R: J. Kovář, N: J. Kovář (2002), I: J. Kovář (2002), REG: J. Kovář (2005)  
Inside orange, centre of tepals and throat brighter; outside pale apricot-orange; spots violet-brown, large, elongated, on three-quarters of each tepal; nectaries orange, white-granulated; pollen orange-brown; stigma dark violet-brown. Fls 140 mm wide; tepals 85 × 45 mm, scarcely recurved; pedicels 70 mm, profusely dotted with dark violet-brown. Lvs scattered, 95 × 17 mm, slightly glossy deep green. Stems 1 m, very thick, profusely dotted with dark violet-brown, with brownish bulbils. Late June.

### 'Taffy' I(a/-)

Parentage: ('Connecticut King' × Hallmark Group) F2  
R: E.A. McRae (1974), G: Oregon Bulb Farms, Inc. (1977), N: Oregon Bulb Farms, Inc. (1985), I: Oregon

Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc. (1985)

Inside creamy white, fading to more-or-less pure white, tepal-tips cream, throat cream suffused with green; outside cream suffused with green; spots tiny, in a ring in the centre of the fl.; nectaries green; pollen brown. Fls 80-100 mm wide; tepals 50 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 60-80 × 10-15 mm, mid green. Stems 1.4 m, dark purple-brown, with 10-30 fls. Late June.

(Published in *Oregon Bulb Farms retail Cat.*, 1985.)

**‘T.A. Havemeyer’ VI(-/c)**

Parentage: *sulphureum* × *henryi*

R: T. Barry (mid 1930s), N: T. Barry

Inside deep orange-buff, tepal-tips creamy yellow, throat green; outside with broad green midribs; anthers deep brown. Fls 125-175 mm wide, highly scented; tepals recurved. Stems 1.2-2.2 m, with up to 20 fls. Aug. Syn.: ‘Havemeyer’.

(Published in *Gard. Chron.*, ser.3, 102: 149, fig. 62 (1937).)

**‘Tahiti’ VII(a-b/b)**

Parentage unknown

R: Vletter & Den Haan, G: Vletter & Den Haan (1988), N: Vletter & Den Haan (1992), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)

Inside the basal third yellowish white (155D) suffused with strong purplish pink (63C) toward the tip, tips suffused with strong purplish red (63A) and strong yellow-green (144B); outside yellowish white (155D) suffused with strong purplish red (63B), most strongly at tips, midribs light yellow-green (145C), stronger-coloured at base and tip, basal part of tepals deep purplish red (61A); pollen strong orange (169B); stigma dark red (187A/B). Fls 200 mm wide; tepals 105 × 40 mm, margins ruffled, tips not recurved. Lvs scattered, 160 × 38 mm, dark green. Stems 0.75 m, mid green, with 5-7 fls.

**‘Taiga’ I(b/c)**

Parentage: ‘New Age’ (Div. I) × ‘Jumprava’

R: A. Balode (1994), G: A. Balode (1996), N: A. Balode (1999), REG: A. Balode (1999)

Inside vivid reddish orange (33B) tepal-centres vivid orange (28B), throat green; outside orange-red; spots absent; nectaries dark red; pollen dark red. Fls 160 mm wide; tepals 95 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 15 mm, dark green. Stems 1.15 m, green with c.3 fls. Early July.

(The parent ‘New Age’ is not Bischoff Tulleken’s Oriental hybrid but an Asiatic lily sent from Canada.)

**‘Taiksmā’ I(b/-)**

Misspelling of ‘Teiksmā’.

**‘Tainui’ VII(-/-)**

See *L. × parkmanii* ‘Tainui’.

**‘Taisho-benisukashi’ I(a/-)**

See *L. × maculatum* ‘Taisho-benisukashi’.

**‘Taishohsukashi’ I(a/b)**

See *L. × maculatum* ‘Taishohsukashi’.

**‘Taiwan’ VIII(a/-)**

Parentage: seedling J 57 × seedling W 92-13

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside strong purplish red to strong purplish pink (63B/73B), each tepal with a large white base, midveins with green base; outside strong purplish red (63B); spots and papillae present; nectaries green; pollen light brown; stigma grey-green. Tepal-margins slightly ruffled, tips recurved. Stems 1.4 m. Early.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Tajfun’ I(a-b/b)**

Parentage: ‘Pinegos Ares’ × ‘Tetra Tabasco’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)

Inside dark blood-red, tepal-tips and throat paler; outside with centre of each tepal lighter orange, midribs brownish, slightly hairy; spots red-brown, many, large, on two-thirds of each tepal; papillae very dense in the throat; nectaries slightly rose-pink, granulated; pollen red-chocolate; stigma red-chocolate. Fls 125 mm wide, nearly out-facing; tepals 75 × 40 mm, tips slightly recurved; pedicels 85 mm long, thick, densely dotted. Lvs scattered, 110 × 11 mm, dark green, dull. Stems 1 m, dark brown-dotted, with a medium-length infl. Late June. Tetraploid.

**Taj Mahal Group VII(a-b/b)**

Parentage: Pink Glory Group (Div. VII) × *nobilissimum*

R: Oregon Bulb Farms, Inc. (1964), N: Oregon Bulb Farms, Inc. (1980), I: Oregon Bulb Farms, Inc. (1981), REG: Oregon Bulb Farms, Inc. (1981)

Inside pure white, throat soft green; outside white suffused with soft green; spots absent. Fls 175 mm wide, scented; tepal-margins smooth or slightly ruffled, tips not recurved. Lvs scattered, dark green. Stems 1-2.5 m, green, with 4-12 fls. Aug. to Sept.

(Published in *ILR* (1982) as Taj Mahal grex.)

**‘Takachihō’ V(b/a)**

See *longiflorum* ‘Takachiko’.

**‘Takanohana’ I(a/-)**

Parentage: selection from hybrids involving *L. × maculatum*, ‘Hikari’, ‘Enchantment’ & ‘Firecrown’

R: S. Fujishima (1967), N: S. Fujishima

Fls orange-red.

**‘Take Off’ VIII(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1998), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside light orange-yellow (22B), fading towards tepal-tips, midveins strong orange-yellow (22A) for half of each tepal, throat pale yellow (18C); outside pale yellow

(20C/D), each tepal with a narrow, light orange-yellow (22B) margin, midribs strong yellow-green (144C) fading towards top, which is tipped moderate reddish brown (175A); spots dark red (187A) on up to a third of each tepal; papillae light orange-yellow (22C) in the throat; nectaries pale orange-yellow (24D) with a light orange-yellow (22C) rim; pollen moderate reddish brown (175A); stigma light orange (28C). Fls 200 mm wide; tepals 110 × 40-60 mm, margins ruffled, tips recurved. Lvs scattered, 190 × 20 mm. Stems 0.95 m, green, with 2-6 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Taki-no-mine’ I(a/-)**

Parentage unknown  
R: H. Takizawa (pre 1989), N: H. Takizawa  
Inside white; spots absent; pollen reddish brown. Tepal-margins smooth, tips not recurved. Stems with 4-5 fls. (Listed in *Miyoshi & Co. Cat.* no. 87: 110 (1989), with colour illustration.)

**‘Takla’ VI(b/a)**

Parentage unknown  
Fls orange-yellow; midveins with cinnamon spotting. Fls 170-200 × 65-120 mm. Stems 1.1 m. July.  
(Published in *Cvetovodstvo*, 1981(2): 21. Raised and named in the Baltic Republics.)

**‘Talent’ I(a/-)**

Parentage: (‘Tabasco’ × ‘Connecticut Yankee’) × ‘Firecracker’  
R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1981), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1988), REG: Bischoff Tulleken Lelies B.V. (1994)  
Inside vivid to strong red (45C/D), midveins in apical part of tepals with stripes and lines of vivid reddish orange (33B) and a stronger suffusion of colour, throat vivid orange (28A); outside vivid red (45A), tepal-tips dark red (59A), midribs with stripes/lines of moderate orange (167A/C), the base of tepals with some moderate orange (167C); spots dark greyish reddish brown (200A) on the basal part of each tepal; pollen strong orange (69B); stigma dark red (59A). Fls 180 mm wide; tepals 90 × 50 mm. Lvs scattered, 70 × 13 mm, mid green. Stems 0.8 m, pale green with darker markings, and with c.5 fls.

***taliense* Franch. IX(c/d)**

Fls white; spots purple or dark red, over all but the tip of each tepal; nectaries purple; anthers greyish or mauve; pollen yellow; stigma green. Fls fragrant; tepals up to 50-70 × 12-16 mm, papillate at tip. Lvs scattered, 70-130 × 4-6 mm, dark green. Stems 0.7-1.4 m, deep purple, or green marked with purple, with up to 12 fls. W China.

**‘Talis’ VI(b/b)**

Parentage: *L. × aurelianense* × unknown  
R: T. Gertsons, G: T. Gertsons, N: T. Gertsons (1983), I: T. Gertsons, REG: T. Gertsons (1987)  
Inside violet-pink, flushed with white, tepal-tips violet-

pink, throat green; outside violet, midribs darker; pollen yellow. Fls 140-150 mm wide, scented; tepals 140 × 50 mm, margins smooth. Lvs scattered, 110 × 18 mm, mid green. Stems 1-1.1 m, green. Late July.  
(Published in *Därzs un Drava* 7: 21 (1986).)

**‘Talisman’ I(c/-)**

Parentage: contains *lancifolium*, *L. × hollandicum* & *dauidii* var. *willmottii*  
R: J. de Graaff, N: J. de Graaff  
Fls orange, with dense purple-black spots. Stems 1.9 m. July. Resembles ‘Maxwill’, but has bulbils.  
(Published in *Oregon Bulb Farms Cat.*, 1949.)

**‘Tallahassee’ VII(a-b/-)**

Parentage unknown  
R: Mak-Leek Inc. (1988), G: Mak-Leek Inc. (1991), N: Mak-Leek Inc. (2001), I: Mak-Leek Inc. (2002), REG: Mak-Leek Inc. (2003)  
Inside light purplish pink (65B), midveins with white base; outside pale purplish pink (65C); spots and papillae present; nectaries green; pollen light brown; stigma grey-green with purple spots. Fls 200 mm wide; tepals 105 × 40-55 mm, margins strongly ruffled, tips recurved. Lvs 180 × 40-50 mm, mid green. Stem 1.1 m, green with darker coloration present, with 7 fls. Early to midseason.

**‘Tall Boy’ VIII(c/c-d)**

Parentage: *henryi* × *L. × parkmanii* ‘Valley Sundust’  
R: J. Hoell (1980), G: J. Hoell (1984), N: J. Hoell (1988), REG: J. Hoell (1988)  
Fls vivid orange-yellow (23A) throughout, except for strong orange (25A) throat; nectaries green; pollen brown. Fls 150 mm wide, only very slightly scented; tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 235 × 35 mm, mid green. Stems 2.1 m, green with purple streaks, and with 55-60 fls. Jan. to Feb. (Tasmania).  
(An Orienpet (OT) lily. Published in *ILR Seventh Supplement* where it was classified in Div. VII.)

**‘Tallun’ I(b-c/d)**

Parentage: ‘Talisman’ × ‘Lunetka’  
R: J. Kovář (1996), G: J. Kovář (2004), N: J. Kovář (2004), I: J. Kovář (2004), REG: J. Kovář (2004)  
Inside buff-apricot, midveins mid red-pink, tepal-tips shaded pink; outside with pink-red midribs; spots crimson-brown, small, elongated, fairly dense, on three-quarters of each tepal; nectaries buff; filaments buff; pollen rather meagre, orange-brown; style reddish apricot; stigma crimson-pink. Fls 80 mm wide; tepals 70 × 28 mm, very recurved; pedicels 80 mm, dark violet-brown. Lvs 120 × 18 mm, somewhat shiny mid green. Stems 1 m, rigid, spotted with dark violet-brown. Early July.

**‘Tamajishi’ I(a/-)**

Parentage: (*L. × hollandicum* ‘Vermilion Brilliant’ × *dauricum*) × (*L. × maculatum* × ‘Destiny’)  
R: S. Fujishima (1964), N: S. Fujishima  
Fls double, yellow, with an orange throat. Stems short.

**‘Tamara’ VI(-/a)**

Parentage: Golden Splendor Group × ‘Citron’

R: N.A. Miroshniczenko (c. 1979), N: N.A.

Miroshniczenko

Inside golden orange; outside tan. Stems 1.6 m. July.

(It is likely that the pollen parent is ‘Citron’ of Orehovs, because it is the only ‘Citron’ in Div. VI.)

**‘Tamara’ I(a/-)**

Parentage unknown

R: De Jong Lelies Beheer B.V. (pre 1978), N: De Jong

Lelies Beheer B.V., I: De Jong Lelies Beheer B.V. (1980),

REG: De Jong Lelies Beheer B.V. (1978)

Fls strong pink (48C/D), centre light yellow (18B), speckled greyish purple; anthers dark reddish orange (178B).

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Tamāra’. Theoretically this cv. should not have been registered, but it is probable that registration was accepted before Miroshniczenko’s ‘Tamara’ or Orehovs’ ‘Tamāra’ were known to the ICRA. Published in *Lilies and other Liliaceae*, 1978/79: 114.)

**‘Tamara’ I(b/-)**

Misspelling of ‘Tamāra’.

**‘Tamāra’ I(b/-)**

Parentage: selection from Skumstu Group

S: V.P. Orehovs (post 1956), N: V.P. Orehovs

Fls orange-red.

(Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as ‘Tamara’ which is a misspelling.)

**‘Tambo’ I(a/-)**

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler (1977), N: B.G. Hayler

(1983), I: B.G. Hayler (1983), REG: B.G. Hayler (1983)

Fls vivid red (44A) throughout; spots absent; nectaries black. Tepals 60 × 20 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 12 mm, dark green. Stems 0.75 m, with c.10 fls. Dec. (Australia).

**‘Tambovchanka’ I(b-c/d)**

Syn. of ‘Antonina’.

**‘Tambovczanka’ I(b-c/d)**

Unaccepted spelling of ‘Tambovchanka’ (syn. of ‘Antonina’).

**‘Tambovochka’ I(b/-)**

Parentage: selection from Tsvetaevoi Group

R: Z.N. Tsvetaeva (1940)

Inside orange-brown at tepal-tips, centre yellowish with many brown stripes; outside violet. Fls scented.

(Published in *Lilies and other Liliaceae*, 1975: 28 as ‘Tambowotchka’ which is an unaccepted spelling. Belongs to Tsvetaevoi Group.)

**‘Tambowotchka’ I(b/-)**

Unaccepted spelling of ‘Tambovochka’.

**var. tamentomo IX(b-c/d)**

(Misspelling of *speciosum* var. *tametomo*.)

**var. tametome IX(b-c/d)**

(Misspelling of *speciosum* var. *tametomo*.)

**var. tametomo IX(b-c/d)**

See *speciosum* var. *tametomo*.

**‘Tamerlane’ I(a/-)**

Parentage: possibly Preston Group × red-flowered *L. × hollandicum*

R: L. Lutz (c. 1963), N: L. Lutz

Fls soft rose-red; inconspicuously spotted. Fls large. Stems 1.2 m. July.

(Published in *ILR* (1969).)

**‘Ta Ming’ VI(-/c)**

Parentage: *henryi* × (*L. × aurelianense* × unknown)

R: C. Yerex (c. 1943), N: C. Yerex

Fls Nankeen yellow, blending to Ming yellow at centre.

Tepals semi-recurved. Stems 1.5 m. July to Aug.

(Published in *Kline Cat.*, 1963.)

**‘Tammy’ I(b/b-c)**

Parentage: ‘Valencia’ × ‘Quinella’

R: D.F. McPherson (1975), G: D.F. McPherson (1977),

N: D.F. McPherson, I: D.F. McPherson (1979)

Inside brilliant orange-yellow (21B), tepal-tips vivid reddish orange (33B); lightly spotted except at tepal-tips; pollen dark orange. Tepal-tips recurved. Lvs rich green. Stems 1 m, blackish, with 15-20 fls.

**‘Tam-tam’ I(a/-)**

Parentage: selection from (*L. × hollandicum* × unknown)

S: H. Deleeuw Co. Ltd (c. 1962), N: H. Deleeuw Co.

Ltd, I: D. Barnhoorn (1968)

Inside brilliant orange (29A), tepal-tips light orange (28C); outside light orange (28C); spots present. Tepal-margins slightly ruffled. Stems 0.4-0.6 m.

**‘Tan Dalton’ I(b/b)**

Parentage: (*dauricum* × *davidii*) × *wilsonii* var. *flavum*

R: A.D. Harrison (c. 1964), N: A.D. Harrison

Fls strong orange (25B) with large brown spots. Tepals very broad.

(Included erroneously in *ILR* (1982) as ‘Tan Galton’.)

**‘Tanečnice’ VI(b-c/d)**

Parentage: ((‘Damson’ × unknown) × ((*henryi* × ‘Gold Eagle’) × ‘Mimosa Star’)) × ((‘Honeydew’ × ‘Gold Eagle’) × (Silver Sunburst Group × ‘Gold Eagle’))

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)

Inside lemon-yellow, tepal-tips paler; outside with green midribs; spots numerous, linear, tiny, brown, in lines on two-thirds of each tepal; nectaries green; pollen small in amount, brown-orange; stigma green. Fls 105 mm wide, compressed Turk’s cap-shaped; tepals strongly recurved; pedicels 60 mm, brown-dotted, with secondary buds. Lvs scattered, 95 × 30

mm, dull mid green. Stems 1 m, heavily dotted with red-brown. Early July.

**‘Tan Galton’ I(b/b)**

Error for ‘Tan Dalton’.

**‘Tangelo’ I(b/-)**

Parentage: selection from Mid-century Group

S: J. de Graaff, N: J. de Graaff

Fls orange-yellow. Stems 0.6-1.2 m.

(Published in *Oregon Bulb Farms Cat.*, 1950.)

**Tanger Group VI(-/a)**

Parentage: ‘Dillenburg’ × selection from *regale* ‘Royal Gold’

R: Gebr. N. & B. Laan & Zn (pre 1974), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1974)

Inside strong orange-yellow (24B), midveins somewhat greenish; outside each tepal with greenish flame on pale orange; inner tepals orange with small green veins; anthers brown. July.

(Published in *Lilies and other Liliaceae*, 1975: 97 and included in *ILR* (1982) as Tanger grex. Included in E. Fisher, *Named Lily Hybrids and their Origins*, 32 (1978) erroneously as a clone.)

**‘Tangerine’ I(a/-)**

Parentage: selection from Coronado Group

S: J. de Graaff, N: J. de Graaff (1947), I: J. de Graaff (1947)

Fls tangerine-orange, lightly spotted.

(Published in *Oregon Bulb Farms Cat.*, 1947/48.)

**‘Tangerine’ I(a/d)**

Parentage: *L. × scottiae* × unknown

R: W.A. Constable Ltd, N: W.A. Constable Ltd AM 1947

Fls chrome-yellow; spots chocolate-brown. Fls *martagon* type.

(Published in *JRHS* 72: 404 (1947).)

**‘Tangerine’ I(b/-)**

Error for ‘Tangerino’.

**‘Tangerino’ I(b/-)**

Parentage: ‘Gold Urn’ × *davidii* var. *unicolor*

R: D.M. Stone & F.H. Payne (c. 1964), N: D.M. Stone & F.H. Payne

Fls vivid glowing orange; spots absent.

(Published in *LYB* 30: 50 (1967) as ‘Tangerine’, but Stone & Payne Catalogs give ‘Tangerino’.)

**‘Tanglow’ I(a/-)**

Parentage: ‘Edna Kean’ × unknown

R: E. Robinson, N: E. Robinson (1956)

Fls tan to orange, spotted. Stems 1 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)

**‘Tango’ I(b/-)**

Parentage: selection from Mid-century Group

S: J. de Graaff, N: J. de Graaff, I: J. de Graaff (1950)

Fls pale amber; spots black. Stems 0.8 m. July.

(Published in *ILR* (1960) where it was stated to be no longer in cultivation.)

**‘Tango’ IX(b/c)**

See *auratum* ‘Tango’.

**Tango Group I(-/-)**

Parentage: developed from hybrids from Asiatics with densely spotted centres

R: V.P. Orehovs (1980s)

Fls have heavy spotting concentrated around the cherry centre, often with the spots coalescing to produce a bicolour effect. Tepal-tips cream or yellow.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv.)

**‘Tango Nocturno’ Div. ?**

Given as a parent of ‘Latvia’. Mičulka says that it was raised by Orehovs and should be spelt ‘Tango Nokturno’. Or it may be an error for ‘Nakts Tango’. The ICRA has seen no published evidence.

**‘Tanneron’ I(a/-)**

Parentage: seedling RS 622 × seedling RS 515

R: Vletter & Den Haan (1980), G: Vletter & Den Haan (1983), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside pale yellow (19C), slightly striped light orange-yellow (19A); outside pale yellow (19C) and pale orange-yellow (19D), midribs light yellow-green (145C); spots dark red (187A), few, small, in the throat; pollen dark reddish orange (175B). Fls 195 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 13 mm, mid green. Stems 1.5 m, green, with c.12 fls. May.

**‘Tansy’ I(a/-)**

Parentage: *L. × scottiae* × unknown

R: G.M. Chandler (c. 1945), N: G.M. Chandler

Fls bright red, turning reddish brown, 125 mm wide. July.

(Published in *LYB* 10: 60 (1946).)

**‘Tan Tiger’ I(c/-)**

Parentage unknown

R: D.M. Stone & F.H. Payne (pre 1974), N: D.M. Stone & F.H. Payne, REG: D.M. Stone & F.H. Payne (1984)

Inside vivid yellow (15B) overlaid with strong reddish orange (31B), tepal-tips bronze, throat moderate red (47A); outside vivid yellow (15B) overlaid with strong yellowish pink (34D); spots large, dark red (187A/C), on two-thirds of each tepal; nectaries green, white-frosted; pollen moderate orange (167A). Fls 145 mm wide; tepals 90 × 38 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 18 mm, dark green. Stems 1.2 m, with c.14 fls and some bulbils. Late July to Aug.

**‘Tanz der Feen’ I(a/b-c)**

Parentage: Matthé seedling LV 15 × ‘Luxor’

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N:

G. Steinbrück (1999), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)

Inside pale yellow-green (155A), with a soft suffusion of pale yellow (20D) in tepal-centres towards base, tepal-tips pure white; outside pale yellow-green (155A); spots strong purplish red (54A), numerous, medium sized, on basal half of each tepal; nectaries pale yellow-green (155A), hoary; pollen moderate reddish brown (174A); stigma pale yellow (20D). Fls 150 mm wide; tepals 88 × 42 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 15 mm. Stems 0.8 m, mid green, with c.11 fls. Mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0032270).)

#### **‘Tapajos Beach’ I(a-b/b)**

Parentage: ‘White Prince’ × white-flowered Wadekamper seedling

R: J. Wadekamper (1989), G: J. Wadekamper (1999), N: J. Wadekamper (1999), I: Willowwood (2000), REG: J. Wadekamper (1999)

Inside cream, with a light tan blush in centre of fl. and in the throat; outside pink, midribs green; spots absent; nectaries tan; pollen rust-brown. Fls 140 mm wide; tepals 82 × 46 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 15 mm, dark green. Stems 0.6 m, dark tan, with c.13 fls. Midseason.

(Published in *Willowwood Cat.*, 2000.)

#### **‘Taptoe’ I(a/-)**

Parentage: ‘Pirate’ × Asiatic seedling

R: Bischoff Tulleken Leliecultuur B.V. (1977), G: Bischoff Tulleken Leliecultuur B.V. (1980), N: Bischoff Tulleken Leliecultuur B.V. (1984), I: Bischoff Tulleken Leliecultuur B.V. (1984), REG: Bischoff Tulleken Leliecultuur B.V. (1985)

Inside vivid reddish orange (30B) flushed with marigold-orange, throat with violet-red veins; outside strong reddish orange (32B) (inner tepals), vivid reddish orange (34A/B) (outer tepals), somewhat hairy; spots dark brown, tiny; nectaries Indian lake; pollen brownish red. Fls 135 mm wide; tepals 60 × 40 mm. Lvs scattered, 140 × 20 mm, dark green. Stems 0.9-1.25 m, pale green, with 6-9 fls (from 16-18 cm bulbs).

#### **‘Tara’ I(b/-)**

Parentage: yellow-flowered seedling from (*lancifolium* × unknown) × Mid-century Group

R: J. Buckley (c. 1966), N: J. Buckley

Fls deep gold with apricot shading and large, brown spots. Tepals wide. Lvs dark, glossy green. Low-growing.

#### **‘Tara-D’ VII(b/c)**

Parentage: *L. × parkmanii* ‘Wildfire’ × ‘Valley Sunburst’  
R: J. Hoell (1993), G: J. Hoell (1996), N: B. Dutton (2004), REG: B. Dutton (2004)

Inside greenish white (155C), each tepal with a deep purplish pink (55A) ray, throat strong purplish pink (55B); outside yellowish white (155D); purple spots and papillae on all but the tepal-tips; nectaries brilliant yellow-green (149A); pollen moderate brown (200C);

stigma dark red (187B). Fls 162 mm wide, strongly scented; tepals 70 × 40 mm, margins strongly ruffled, tips strongly recurved. Lvs scattered, 165 × 43 mm. Stems 1.8 m, purple, with c.10 fls.

(Named after the registrant’s granddaughter.)

Nomenclatural standard: colour print supplied by registrant (WSY 0096359).

#### **‘Taranaki’ Div. ?**

Parentage unknown

No further details.

(Grown in New Zealand.)

#### **‘Tarantella’ I(c/d)**

Parentage: (*cernuum* × *lancifolium*) F<sub>2</sub>

R: J. de Graaff (c. 1960), N: J. de Graaff

PC 1963

Fls light orange and rose-pink. Stems 1.2 m. July.

#### **‘Target’ I(a/b)**

Parentage: ‘Lüchower Feuerkönig’ × ‘Mánes’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1993),

REG: B. Mičulka (1993)

Inside bright red at tepal-tips, the mid part golden yellow, throat red with a greenish base; outside orange veined red, midribs beige-green at base; spots dark brownish purple, numerous, medium sized, on a quarter of each tepal (half of them near the edges); papillae red, numerous; nectaries white-hairy; pollen chocolate-red; stigma purple. Fls 145 mm wide; tepals 80 × 40 mm, moderately recurved; pedicels moderately spotted. Lvs scattered, 70 × 11 mm, dull green. Stems 0.75 m, dark green, spotted with violet-brown at base. Late June.

#### **‘Tarheel’ I(a/-)**

Syn. of ‘Impact’.

#### **‘Tarragona’ VIII(b/b)**

Parentage: unnamed seedling × ‘Aubade’

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside yellowish white (155B), midveins and alongside the midveins brilliant yellow (14C) for two-thirds of each tepal, paler towards edges, throat greenish white (155C); outside of inner tepals yellowish white (155B), midribs light yellow (160B), outside of outer tepals yellowish white (155D), midribs moderate yellow (160A) at top; spots absent; papillae vivid yellow (13A) on up to two-thirds of each tepal; pollen strong orange (169B); stigma dark red (187A). Fls 170 mm wide; tepals 130 × 45 mm, margins smooth, tips recurved. Lvs scattered, 170 × 30 mm. Stems 0.8-1.3 m, green with darker markings, and 3-6 fls.

(An Orienpet (OT) lily.)

#### **‘Tarumae’ I(a/-)**

Parentage unknown

R: S. Fujishima (pre 1982), N: S. Fujishima

Fls scarlet. Dwarf.

**'Tarzan' I(a/-)**

Parentage unknown

R: Fa Jaap Boon (pre 1983), N: Fa Jaap Boon, REG: Fa Jaap Boon (1983)

Inside vivid yellow (12A), with maize-yellow blotches in the throat; outside vivid yellow (12A), each tepal with a broad, Dresden-yellow flame; spots reddish brown on the whole fl.; nectaries majolica-brown; pollen Spanish orange. Stems green.

**'Tatiana' VI(-/a)**

Parentage unknown

R: N.A. Miroshniczenko (c. 1979), N: N.A. Miroshniczenko

Fls creamy white. Stems 1.7 m. Mid July.

**'Tatranka' I(b/b)**

Parentage: (unknown × 'Hawaiian Punch') × (Hallmark Group × ('Nutmegger' × 'Abendglühen')) × 'Blizzard'  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1996), REG: B. Mičulka (1996)

Inside cream, yellowish near nectaries; outside with mahogany midribs; spots dark brownish pink, sparse, small, oval, on a quarter of each tepal; nectaries white, felt-like; stigma dark purple. Fls 120 mm wide; tepals 80 × 40 mm, slightly recurved; pedicels 100 mm long, with secondary branches. Lvs scattered, 100 × 12 mm, yellowish green. Stems 0.7 m, brown-dotted above, violet-brown at base. Late June.

**'Tatra's Eagle' VI(b-c-c-d)**

Parentage: (*henryi* × ('Caramba' × ((*L. × kewense* 'White Henry') × unknown) × ('Tetra White Henry' × unknown))

R: A. Mego (1994), N: A. Mego (2005), I: A. Mego (2005), REG: A. Mego (2005)

Inside pale ochre-yellow, tepal-centres and throat yellow; outside greenish yellow; sparse chocolate-brown dashes on a third of each tepal; papillae in throat; nectaries dark green; pollen brown; stigma green. Fls 160 mm wide; tepals 100 × 30 mm, moderately recurved, margins wavy; pedicels 170 mm, brown-dotted, with secondary buds. Lvs scattered, 190 × 25 mm, dark green. Stems 1.8 m, densely brown-dotted, with a very long infl. Mid July.

**'Taurus' I(a/-)**

Parentage unknown

R: Vletter &amp; Den Haan (1994), G: Vletter &amp; Den Haan, N: Vletter &amp; Den Haan (1997), I: Vletter &amp; Den Haan (1997), REG: Vletter &amp; Den Haan (1997)

Inside vivid yellow (14A), throat brilliant greenish yellow (6C); outside brilliant yellow (12B), each tepal vivid yellow (14A/B) towards the margin; spots absent; papillae in the throat; nectaries strong yellow-green (143B), with brilliant greenish yellow (6C) hairs; pollen moderate reddish brown (175A); stigma greyish red (176A). Fls 190 mm wide; tepals 105 × 40-60 mm, margins very slightly ruffled, tips recurved. Lvs scattered, 165 × 30 mm, mid green. Stems 1.3 m, green, with 2-3 fls.

**'Tautas Dziesma' VI(b/a)**

Parentage: 'Zeltite' × Golden Splendor Group

R: Ā. Zorgevics (1985), G: Ā. Zorgevics (1990), N: Ā. Zorgevics (2004), I: Ā. Zorgevics (2004), REG: Ā. Zorgevics (2004)

Inside brilliant yellow (8A), throat light yellow-green (150D); outside sulphur; spots and papillae absent; nectaries whitish; pollen light brown; stigma greenish brown. Fls 170 mm wide, strongly scented; tepals 120 × 40 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 90 × 7 mm. Stems 1.3 m, green, with c.7 fls. Bulbs purple. Late July to early Aug. ('Tautas Dziesma' is the name of a folksong. Nomenclatural standard: colour print supplied by registrant (WSY 0096360).)

**'Tautas Fronte' I(a-b/c)**

Parentage unknown

R: J. Vasarietis (1987), G: J. Vasarietis (1990), N: J. Vasarietis (1993), I: J. Vasarietis (1993), REG: J. Vasarietis (1998)

Inside and outside deep red (53A); spots black, small, on basal half of each tepal; nectaries white; filaments white; pollen dark orange. Fls 150 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 105 × 11 mm, dark green. Stems 0.8 m, brown, with c.10 fls. Early July.

Trade designation: PEOPLE'S FRONT.

(Published in *Lilium Balticum Cat.*, 1996.)**'Tavel' I(a/-)**

Parentage: seedling RS 887 × seedling RS 644

R: Vletter &amp; Den Haan (1985), G: Vletter &amp; Den Haan (1987), N: Vletter &amp; Den Haan (1991), I: Vletter &amp; Den Haan (1990), REG: Vletter &amp; Den Haan (1992)

Inside at first moderate to light pink (49B/C) flushed with deep pink (51B), later becoming light pink (50D) flamed deep pink (52B), midveins pale greenish yellow (2D), throat strong yellow-green (143C); outside at first light pink to pale purplish pink (49C/55D), the outer tepals edged strong pink (54C), ageing to moderate to pale purplish pink (54D/55D) with deep purplish pink (54B) margins, midribs suffused with light greenish yellow (8C); spots dark red (187B), few, small, in the throat; nectaries moderate purplish red (184D); pollen vivid yellow (9B). Fls 165 mm wide; tepals 78 × 35 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 115 × 15 mm, mid green. Stems 1.25 m, green, with c.7 fls.

**'Tavel' I(a/-)**

Parentage: ('Duet' (of Bischoff Tulleken) × unnamed seedling) × 'Blizzard'

R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1996)

Inside light yellow (18B) on basal part of each tepal, shading to pale yellow (18C) towards tip and with a light yellow (18A) margin, midveins light yellow (18B) fading towards top; outside pale yellow (18C/D), tepal-margins light yellow (18A), midribs strong yellow-green (144B/C)

tipped strong yellow-green (143A); spots moderate brown (165A) in the throat; papillae absent; nectaries moderate olive-green (146A), surrounded by a pale orange-yellow (19D) rim; pollen vivid reddish orange (32A); stigma vivid reddish orange (34B). Fls 180 mm wide; tepals 110 × 40-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 20 mm, mid green. Stems 1.1 m, green, with c.7 fls. June.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

#### 'Tavello' Div. ?

Given as a parent of 'Nikoleta'. No further details.

#### 'Täve Schur' I(a/-)

Parentage: 'King Pete' × mixed pollen of 'Vater Zille', 'Fanal' & 'Brushstroke'

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (1996), I: G. Steinbrück (1997), REG: G. Steinbrück (1997)

Inside and outside vivid yellow (13A), midveins yellow, strongly developed; spots and lines strong dark red (59A), numerous, on about half of each tepal (the lines forming an indistinct brushmark); nectaries pale green; pollen deep purplish red (59B). Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips strongly recurved. Lvs scattered 90 × 20, dark green. Stems 1.2 m, almost black, with c.12 fls. Mid July.

#### 'Tawantin' I(a/b)

Parentage: 'Panna' × 'Showboat'

R: J. Wiesner (1989), N: J. Wiesner, REG: J. Wiesner (1989)

Fls purple red (HCC 23), tinted with orange; spots tiny, on two-thirds of each tepal along midveins; fine papillae in the throat; pollen red-brown; stigma purple. Fls 130 mm wide; tepals 77 × 35 mm, margins smooth, tips recurved. Lvs broad, dark glossy green. Stems 0.6-0.7 m, brownish at base, with 8-10 fls. Mid July.

#### Tawny Tiger Group I(a/-)

Parentage: *lancifolium* var. *flaviflorum* × (*wilsonii* × red-flowered *L. × hollandicum*)

R: L. Woodriff, N: L. Woodriff

Fls in shades of orange and yellow, heavily spotted. (Published in *Woodriff Cat.*, 1958. Included in *ILR* (1960) as Tawny Tiger grex.)

#### 'Tecumseh' I(a-b/b-c)

Parentage: 'Sutter's Gold' × unknown

R: I. Wiesner (1989), N: I. Wiesner, REG: I. Wiesner (1989)

Inside vivid orange-yellow (21A); outside vivid yellow (17B), midribs greenish yellow; spots dark brown, small, on a third of each tepal; pollen yellow-brown; nectaries yellow-green; stigma pale brown. Fls 165 mm wide; tepals 87 × 32 mm, margins smooth, tips recurved. Lvs deep glossy green. Stems 0.65-0.7 m, green, with 6-8 fls in a short infl. Late July.

#### 'Teenager' I(c/-)

Parentage unknown

R: N. Martschinke (pre 1985), N: N. Martschinke, REG: N. Martschinke (1988)

Fls pastel orange, with vivid orange tepal-tips and a few spots. Stems 1.3 m. Late July.

(Published in German Lily Group sales list, 1985.)

#### 'Teika' I(a/-)

Parentage: *L. × hollandicum* × mixed Asiatic hybrid pollen

R: Ä. Zorgevics (1977), G: Ä. Zorgevics (1981), N: Ä. Zorgevics (1982), I: Ä. Zorgevics (1985), REG: Ä. Zorgevics (1987)

Light orange-brown throughout; spots small, black; nectaries light green; pollen brown. Fls 120 mm wide; tepals 100 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 65 × 10 mm, mid green. Stems 0.8 m, dark green, with c.10 fls. Mid June to early July.

#### 'Teiksma' I(b/-)

Parentage: selection from Jautrie Bërni Group

S: V.P. Orehovs, N: V.P. Orehovs

Fls dark orange.

(Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as 'Taiksma' which is a misspelling.)

#### 'Tekla' VII(b/b)

Parentage unknown

R: Ē. Ieviņa (1994), G: R. Krūmiņš (1997), N: R. Krūmiņš (2001), REG: Liliūm Balticum Association (2004)

Inside light purplish pink, midveins darker; outside with brownish pink midribs; spots cherry-red, on two-thirds of each tepal; pollen brown; stigma light violet. Fls 210 mm wide; tepals 130 × 65 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 150 × 50 mm. Stems 1.05 m, green with up to 15 fls. Early Aug.

(This cv. was registered by the ICRA who unfortunately failed to realize that a cv. with the same name already existed. However, because so little is known about the Div. VI 'Tekla', 'Tekla' raised by Ieviņa, having been registered, is selected by the ICRA as accepted (ICNCP, 2004: Art. 26.3).)

#### 'Tekla' VI(b/a)

Parentage unknown

Fls orange-yellow, midribs with crimson spotting. Fls 170-200 × 65-120 mm. Stems 1.1 m. July,

(Raised and named in the Baltic Republics. Published in *Cvetovodstvo* 2: 21 (1981). See note under 'Tekla' (Div. VII).)

#### 'Telstar' VII(-/b)

Parentage: *auratum* × unknown

R: L.B. Tuffery (c. 1966), N: L.B. Tuffery

Fls dark lavender-wine, *auratum*-like in form. Stems tall.

#### 'Tembhara' I(b-c/c-d)

Parentage: (*lancifolium* var. *flaviflorum* × 'Nutmegger') × 'Connecticut Lemonglow'

R: I. Wiesner, N: I. Wiesner, REG: I. Wiesner (1987)  
Inside deep golden yellow; outside paler, midribs darker yellowish brown; spots dark brown, large, moderately numerous, on three-quarters of each tepal. Fls 90 mm wide; tepals 82 × 35 mm. Lvs 110 × 14 mm, dark green. Stems 1.1-1.2 m, green, tinged with brown at base. Late July.

#### **‘Tempeltanz’ I(c/-)**

Parentage: ‘Amber Gold’ × ‘Destiny’

R: C. Feldmaier (1970), G: C. Feldmaier (1975), N: C. Feldmaier (1978), I: C. Feldmaier (1981), REG: G. & F. Ewald (1988)

Inside vivid orange (28A), tepal-tips and throat vivid orange (28B); outside vivid orange (28A); spots chocolate-brown, on basal half of each tepal; nectaries vivid orange (28A); pollen dark orange. Fls 75 mm wide; tepals 80 × 30 mm, margins smooth, tips strongly recurved; pedicels spreading horizontally. Lvs scattered, 100 × 10 mm, dark green. Stems 1.2 m, green, overlaid with black, with c.15 fls in a racemose infl. July. (Published in *Gesellschaft der Staudenfreunde bulb list*, 1983.)

#### **Temple Group VI(-/a)**

Parentage: derived from *leucanthum* var. *centifolium*

R: J.M. Shaver, N: J.M. Shaver

Fls in shades of white, pale yellow, pink and pale green.

#### **Temple Bells Group VI(c/-)**

Parentage unknown

R: J.M. Shaver, N: J.M. Shaver, REG: J.M. Shaver (1984)

Fls white; spots absent. Tepal-margins smooth, tips strongly recurved. Lvs scattered. Stems 1.3-2 m. July.

(Published in *Rex Bulb Farms Cat.*, 1973: 31.

Reintroduced in 1973.)

#### **‘Tempo’ VII(-/-)**

Parentage unknown

R: Sun Valley Bulb Farms, Inc. (1974), N: Sun Valley Bulb Farms, Inc. (1980), I: Sun Valley Bulb Farms, Inc. (1980), REG: Sun Valley Bulb Farms, Inc. (1980)

Inside deep red (60A), tepal-tips and outer edges yellowish white (155D), throat deep red (60A); outside moderate purplish pink (59C); spotted; nectaries lime-green; pollen rust-coloured. Tepals 175 mm long, margins slightly ruffled. Lvs lanceolate, moderate olive-green (147A). Stems 0.4-0.6 m.

#### **Temptation Group VII(-/d)**

See *L. × parkmanii* Temptation Group.

#### **‘Te Namu’ I(a/c-d)**

Parentage: ((*lancifolium* × *wilsonii*) × red-flowered Preston Group) × ‘Nutmegger’

R: F.D. Chambers (1983), G: F.D. Chambers (1985), N: F.D. Chambers (2001), REG: F.D. Chambers (2001)

Inside and outside reddish orange; spots numerous, fine, red-purple, on basal half of each tepal; nectaries red-orange; pollen red-brown; stigma reddish. Fls 180 mm wide; tepals 90 × 30-40 mm, margins smooth,

tips becoming quite markedly recurved with age. Lvs scattered, 95 × 11 mm, not glossy. Stems 1 m, stained blackish, with c.12 fls in a short pyramidal, irregularly branched infl. Mid Dec. to mid Jan. (New Zealand). (The epithet is Maori for ‘the sandfly that sucks blood’. Nomenclatural standard: colour print provided by registrant (WSY 0028789).)

#### **‘Tender’ I(b/-)**

Parentage unknown

R: Peacock B.V., G: Peacock B.V., N: Peacock B.V.

(1988), I: Peacock B.V., REG: Peacock B.V. (1990)

Inside light purplish pink (65B); outside light purplish pink (65B) with a brilliant yellowish green (140B) base, the basal part of each tepal with a strong purplish red (64C) blotch; spots small, dark red (187A), scattered over the whole tepal; pollen strong orange (169C). Fls 160 mm wide; tepals 85 × 45 mm, the outer with ruffled margins, tips not recurved. Lvs scattered, 140 × 10 mm, mid green. Stems 1 m, with some darker markings, and with c.8 fls. Apr. to May (under glass).

#### **‘Tendresse’ VII(-/b)**

Parentage: (*auratum* × *rubellum*) F<sub>2</sub>

R: Bischoff Tulleken Leliecultuur B.V. (1977), G:

Bischoff Tulleken Leliecultuur B.V. (1980), N: Trior Lelie B.V. (1983), I: Trior Lelie B.V. (1983), REG: Bischoff

Tulleken Lelies B.V. (1985)

Inside pale purplish pink (56A) to whitish, tepal-margins white, throat mimosa-yellow; outside light yellowish pink (36C) to pinkish white; spots currant-red in the throat; nectaries greyish green; pollen moderate reddish orange (171A). Fls 180 mm wide; tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 50 mm, pale green. Stems mid green, with c.8 fls. Early July.

#### **‘Tenerife’ VII(a-b/b-c)**

Parentage: unnamed seedling × unnamed seedling

R: Peacock B.V. & Imanse Lelieveredeling B.V. (1991),

G: Imanse Lelieveredeling B.V. (1993), N: Peacock B.V.

(1994), I: Peacock B.V. & Imanse Lelieveredeling B.V.

(1997), REG: Peacock B.V. (2001)

Inside deep red (53A) on a yellowish white (155B) ground, fading towards tepal-tips and edges, throat yellowish white (155B); outside moderate purplish red (64A) on a yellowish white (155B) ground, fading towards tepal-tips and edges, midribs pale yellow-green (155A), tipped strong yellow-green (143B); spots dark red (187B) on basal part of each tepal; papillae yellowish white (155B) in the throat; pollen strong brown (172A); stigma dark purple (79A). Fls 250 mm wide; tepals 120 × 55-70 mm, margins slightly ruffled, outer more so, tips strongly recurved. Lvs scattered, 180 × 45 mm. Stems 0.75 m, green, with c.2-3 fls.

#### **‘Ten-gallon Turkscap’ IX(b-c/a-d)**

See *canadense* ‘Ten-gallon Turkscap’.

#### **‘Tenira’ I(b/b)**

Parentage: ((‘Kytice’ × unknown) × (‘Parfait’ × unknown)) × (‘Oregon Candlelight’ × ‘Windahloo’)

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside creamy yellow, tepals with yellowish centres; outside with brown-pink midribs; spots absent; nectaries olive-green; filaments white; pollen brown; style brown-green; stigma red-brown. Fls 120 mm wide; tepals 80 × 33 mm, margins smooth, tips moderately recurved; pedicels 50 mm long, rather thick, slightly brown-dotted. Lvs scattered, 115 × 20 mm, dull mid green. Stems 0.95 m, thick, green. Mid June.

**‘Tennessee’ VIII(a-b/b)**

Parentage: (‘Sinai’ × *dauricum*) × (*longiflorum* × ‘Aristo’)  
R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2000)  
Inside a little paler than light orange-yellow (23C), throat paler, midveins above nectaries strong orange/strong orange-yellow (24A/B); outside pale orange-yellow (23D), tepals edged light orange-yellow (23C), midribs suffused with brilliant yellow-green (154C), with darker tips; spots dark red (187A) on a third of each tepal; papillae few, in the throat; nectaries light orange-yellow (23C), hairy; pollen strong brown (172A); stigma deep red (185A). Fls 230 mm wide; tepals 130 × 50-65 mm, margins smooth to slightly wavy, tips slightly recurved. Lvs scattered, 230 × 25 mm. Stems 1.15 m, green, with 2-5 fls. June.

**‘Tesoro’ VII(a/b)**

Parentage: seedling RF 94-07 × seedling RM 97-14  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside with inner tepals vivid purplish red (67B), margins moderate purplish red (70A) above each nectary a small light greenish yellow (3C) patch, tips yellowish white (155D), outer tepals similar but strong purplish red (67A) towards margins, throat yellowish white (155D); outside with outer tepals moderate/strong purplish red

(64A/B), yellowish white (155D) at base, midribs strong yellow-green (144A) at base changing into strong yellow-green (144B), inner tepals moderate purplish red/dark purplish pink (186B/C), moderate purplish red (64A) towards margins, next to midribs yellowish white (155D), midribs strong yellow-green (143C) at base changing into strong yellow-green (144B); spots absent; papillae moderate purplish red (58A); nectaries strong yellow-green (144C); pollen strong reddish orange (169A); stigma pinkish grey (201D) with a little moderate purplish red (70A). Fls 270 mm wide, fragrant; tepals 140 × 57-72 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 210 × 40 mm, dark green. Stems 1-1.1 m, green, with c.5 fls.

**‘Tessa’ VII(b-c/b)**

Parentage unknown

R: M.A. van den Berg (pre 1988), N: M.A. van den Berg (2002), REG: M.A. van den Berg (2002)

Inside of inner tepals yellowish white (155D), with a pink suffusion at the tip, midveins light yellow at base; inside of outer tepals yellowish white (155D) at base and margins, the tip light purplish pink (62C) on a white ground and with light yellow midveins, throat white/green/light yellow; spots and papillae present; pollen dark brown; stigma purple. Tepal-margins ruffled, tips recurved. Stems light green, with a grey, waxy layer and darker markings. Late.

**× testaceum Lindl. III(c/d)**

Parentage: *candidum* × *chalconicum*

AGM 1993

Fls tawny yellow to light orange, usually with a few raised, red spots; anthers red; pollen orange. Fls fragrant; tepals c.80 mm long, recurved. Lvs scattered, 50-100 mm long, often twisted, margin ciliate. Stems 1-1.5 m, purplish with a grey-green bloom, and with 6-12 fls. June to July.

(Published in *Bot. Reg.* 28, Misc: 51 (1842). The first plants were probably raised in Germany or Holland c.1810. Included as × *testaceum grex* in *ILR* (1960) and (1969) - this form of the name is unnecessary and can be regarded as a synonym. Included in E. Fisher, *Named Lily Hybrids and their Origins*, 27 (1978) as *Testaceum* strain, which is also unnecessary and can be regarded as a synonym.)

**× testaceum ‘Aislaby Apricot’ III(c/d)**

Parentage: *candidum* × *chalconicum*

R: Cooper (c. 1966), N: Cooper

Fls large, creamy apricot; pollen red. Resembles *L. × testaceum*.

**× testaceum ‘Apollo’ III(-/d)**

Parentage: *L. × testaceum* × *chalconicum* var. *maculatum*

R: O.E.P. Wyatt (c. 1947), N: O.E.P. Wyatt, I: W.A.

Constable Ltd (1950)

PC 1957

Tepals pale apricot; anthers scarlet. Stems 1.2 m.

(Published in *LYB* 13: 161 (1949).)

**× testaceum ‘Ares’ III(c/d)**

Parentage: *L. × testaceum* × *chalconicum* var. *maculatum*

R: O.E.P. Wyatt (c. 1948), N: O.E.P. Wyatt, I: W.A.

Constable Ltd (1950)

Fls brilliant orange-red, colour tending to fade towards tepal-tips.

(Published in *LYB* 13: 161, 169 (1949).)

**× testaceum ‘Artemis’ III(c/d)**

Parentage: *L. × testaceum* × *chalconicum* var. *maculatum*

R: O.E.P. Wyatt (c. 1952), N: O.E.P. Wyatt

Tepals shell-pink fading to saffron, reflexed. Stems 1 m.

(Published in *JRHS* 81: 301 (1956).)

**× testaceum ‘Beerensii’ III(c/d)**

Parentage: *chalconicum* × *L. × testaceum*

R: T.S. Ware (c. 1895), N: T.S. Ware

AM 1938

Fls deep apricot, fragrant; anthers prominent, orange-scarlet. July.

(Published in *The Garden* 48: 11 (1895).)

**× testaceum ‘Camille’ III(c/d)**

Parentage: (*L. × testaceum* × *chalconicum*) × *chalconicum*

R: L.B. Tuffery, N: L.B. Tuffery

Fls apricot, *chalconicum* type. Stems 1-1.2 m. July.

(Published in *Dunhampton Lily Fields Cat.*, no date.)

**× testaceum ‘Frank Jones’ III(c/d)**

Parentage: *chalconicum* × *candidum*

R: F.J. Jones, N: F.C. Stern (1942)

Fls brick-red.

(Published in *Amer. LYB* 1946: 45.)

**× testaceum grex III(c/d)**

See note under *L. × testaceum*.

**× testaceum ‘Hephaestus’ III(c/d)**

Parentage: *L. × testaceum* × *chalconicum* var. *maculatum*

R: O.E.P. Wyatt (c. 1947), N: O.E.P. Wyatt, I: W.A.

Constable Ltd (1952)

Fls pinkish at first, changing to brick-red, *L. × testaceum* shape. Stems to 1.3 m.

(Published in *LYB* 13: 161 (1949).)

**× testaceum ‘Hughes Apricot’ III(c/d)**

Parentage: *candidum* × *L. × testaceum*

R: G.R. Hughes (early 1950s), N: G.R. Hughes

Fls clear apricot; spots absent. Resembles a large *chalconicum*.

(Published in *LYB* 20: 72 (1957).)

**× testaceum ‘Isabelle’ III(c/d)**

Parentage: *candidum* × *chalconicum*

(Published in *Amer. LYB* 1946: 50. French origin. No further details.)

**× testaceum ‘Jones’ Variety’ III(c/a-d)**

Parentage: *chalconicum* var. *maculatum* × *candidum*

R: F.J. Jones (c. 1932), N: F.J. Jones

AM 1933

Fls Nankeen-yellow, flushed with apricot; spots scarlet, in the throat; pollen red-orange. Tepals not as reflexed as in *L. × testaceum* itself.

(Published in *LYB* 1: 115, fig. 27 (1932).)

× *testaceum* ‘Lilac Weekes’ III(b/d)

Parentage: *candidum* × *L. × testaceum*

R: C. Weekes (c. 1944), N: C. Weekes

Fls shining white. Form and lvs of *L. × testaceum*.

(Published in *LYB* 11: 76 (1947).)

× *testaceum* ‘Olive Isabel’ III(-/-)

Parentage: *chalconidicum* var. *maculatum* × *L. × testaceum* ‘Hughes Apricot’

R: A.C. McKillop (c. 1953), N: A.C. McKillop

Fls dark apricot, marked like *chalconidicum* var. *maculatum*.

(Published in *LYB* 20: 70 (1957).)

× *testaceum* ‘Persephone’ III(b/a-d)

Parentage: *L. × testaceum* ‘Apollo’ × *candidum*

R: O.E.P. Wyatt (c. 1960), N: O.E.P. Wyatt

PC 1966

Fls creamy white; pollen yellow. Fls *L. × testaceum* type but out-facing.

(Published in *LYB* 28: 135 (1965).)

× *testaceum* ‘Spice’ III(-/-)

Parentage: *L. × testaceum* × *candidum*

R: J. de Graaff (c. 1948), N: J. de Graaff

Fls white; pollen red. Stems c.0.6 m. June.

(Published in *LYB* 21: 59 (1958).)

× *testaceum* ‘Sybil Stern’ III(c/d)

Parentage: *chalconidicum* var. *maculatum* × *candidum*

R: F.J. Jones (c. 1938), N: F.J. Jones, I: F.C. Stern

Fls deep salmon-apricot; anthers deep scarlet. Fls similar in shape to original clone of *L. × testaceum*, but somewhat smaller.

(Published in *LYB* 6: 171 (1938). Named after the wife of F.C. Stern.)

× *testaceum* ‘White Knight’ III(c/a)

Parentage: *L. × testaceum* × *candidum*

R: F. Scheubel, N: F. Scheubel, I: H. Cowley

Anthers red instead of yellow (as in *L. × testaceum* itself).

(Published in *Gard. Chron.*, ser. 3, 74: 113, fig.40 (1923).

Lost, but offered again in Oregon Bulb Farms Cat., 1954.)

× *testaceum* ‘White Knight’ III(-/-)

Parentage: *candidum* × *L. × testaceum*

R: G.R. Hughes, N: W.A. Constable Ltd

Sibling of ‘Hughes Apricot’, but with red pollen.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *LYB* 20: 73 (1957).)

× *testaceum* ‘Zeus’ III(c/d)

Parentage: *L. × testaceum* × *chalconidicum* var. *maculatum*

R: O.E.P. Wyatt (c. 1948), N: O.E.P. Wyatt

AM 1949

Fls vivid yellowish orange (30C) with scattered, darker flecks. Fls c.150 mm wide. Stems with c.7 fls.

Syn.: ‘Athene’.

(Formerly called ‘Athene’. Published in *LYB* 13: 161 (1949) and in *JRHS* 74: 463 (1949).)

*Testaceum* strain III(c/d)

See note under *L. × testaceum*.

‘Testa Rossa’ I(a-b/-)

Parentage unknown

N: G.A. Verdegaal & Zn Export B.V. (1995), I: G.A.

Verdegaal & Zn Export B.V. (1997), REG: G.A.

Verdegaal & Zn Export B.V. (1997)

Inside vivid orange (28A) at base, shading to vivid or strong reddish orange (34A/169A) towards tepal-tips;

outside vivid orange/vivid to strong reddish orange

(28A/34A to 169A); spots and papillae present; nectaries

orange; pollen orange; stigma dark purple. Fls 95 mm

wide; tepals 60 × 33 mm, margins slightly ruffled, tips

slightly recurved. Lvs scattered, 70 × 10 mm, green.

Stems 1.2 m, green with some dark markings, and with

3-5 fls (from 10-12 cm bulbs). Mid to late season.

(Found as an unnamed plant in Italy.)

‘Testimony’ I(a/-)

Parentage: (‘Connecticut King’ × unnamed seedling) × ‘Aristo’

R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff

Tulleken Lelies B.V. (1983), N: Bischoff Tulleken Lelies

B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989),

REG: Bischoff Tulleken Lelies B.V. (1991)

Inside light yellow (18B), each tepal flamed brilliant

to light yellow (20A/B), the basal part edged dark red

(187A), throat brilliant yellow-green (150C); outside pale

yellow (19C), midribs suffused with strong yellow-green

(145A); spots dark red (187A) on the flamed part of each

tepal; nectaries dark red (187B); pollen light red-brown.

Lvs scattered, 150 × 13 mm, mid green. Stems 1.1 m,

green, with c.4 fls. Apr. (under glass).

‘Tetra Ambrosia’ I(b/-)

REG: ICRA (2005)

Tetraploid form of ‘Ambrosia’.

‘Tetra Aristo’ I(a/-)

REG: ICRA (1992)

Tetraploid form of ‘Aristo’.

Syn.: ‘Aristo Tetra’; ‘Tetra Orange Aristo’.

(Published in *Q. Bull. NALS* 45(3): 10 (1991).)

**‘Tēvzemes Balva’ I(b-c/b)**

Parentage: ‘Maple Cream’ × ‘Princese Gundega’

R: D.-V. Šķimele (1995), G: D.-V. Šķimele (1997), N: D.-V. Šķimele (1999), REG: D.-V. Šķimele (2004)

Inside soft creamy pink, tepals creamy yellow at base, throat creamy pink; outside creamy pink, midribs green; spots absent; nectaries white; pollen bright orange-red; stigma dark brown. Fls 150 mm wide; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 40 × 10 mm. Stems 0.85 m, bright green, with c.11 fls. Early July. (Published in *Lilium Balticum Register*, 2000.)

**‘Tēvzemīte’ VI(b/a)**

Parentage: ‘Spitniece’ × seedling L-21

R: Ā. Zorgevics (1982), G: Ā. Zorgevics (1990), N: Ā. Zorgevics (2004), I: Ā. Zorgevics (2004), REG: Ā. Zorgevics (2004)

Inside vivid yellow (9B), throat brilliant yellow-green (150A); outside shaded with snuff-brown; spots and papillae absent; pollen light brown; stigma greenish brown. Fls 170 mm wide, strongly scented; tepals 130 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 70 × 10 mm. Stems 1.4 m, green, with c.8 fls. Bulbs purple. Mid July to early Aug (Published in *Lilium Balticum Lily Register* 1995. Epithet is Latvian for ‘fatherland’. Nomenclatural standard: colour print supplied by registrant (WSY 0096361).)

**‘Texas’ I(a/-)**

Parentage: seedling G 844 × ‘Parma’

R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside strong orange (24A), tepals edged vivid yellow (12A), throat brilliant yellow-green (150B); outside vivid yellow (9B), midribs suffused with strong yellow-green (144C); spots absent; nectaries moderate reddish orange (178D); pollen moderate orange (167B). Fls 182 mm wide; tepals 90 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 15 mm, mid green. Stems 1 m, green with slightly darker markings, and with c.11 fls.

**‘Texel’ VII(-/b)**

See *L. × parkmanii* ‘Texel’.

**‘Thalia’ IX(b-c/d)**

See *speciosum* ‘Thalia’.

**‘Thalia’ I(a/b)**

See *L. × hollandicum* ‘Thalia’.

**‘Thassos’ I(a/-)**

Parentage: ‘Palomino’ × ‘Connecticut King’

R: V. Strasser (1974), G: V. Strasser (1976), N: V. Strasser (1978), I: V. Strasser (1980), REG: V. Strasser (1985)

Fls light orange throughout; unspotted. Tepal-margins smooth, tips slightly recurved. Lvs scattered. Stems 1.2 m, brown-green, with up to 40 fls. Diploid. Early July. (Published in *Der Staudengarten* no. 3: 86 (1982).)

**‘Thayer’ I(b/-)**

Syn. of ‘Vanguard’.

***thayerae* E.H. Wilson IX(c/d)**

Syn. of *dauidii*.

**‘The Bronte’ I(b/-)**

Parentage: ‘Pennine Goldie’ × ‘Joseph Fletcher’

R: A.D. Harrison (c. 1964), N: A.D. Harrison  
Fls old gold, with crimson centre and small spots. Tepals half-reflexed. Stems 1.2 m.

**‘The Colonizer Group’ I(a,b/b)**

Parentage: ‘Edna Kean’ × *wilsonii*

R: C.G. Wilson (c. 1949), N: C.G. Wilson

Out-facing fls pastel orange and yellow; up-facing fls red and orange.

(Published in *LYB* 20: 43 (1957). Included in *ILR* (1960) as *The Colonizer* grex.)

**‘The Countess of Lytton’ VI(b/b)**

Parentage: ‘Air Drop’ × ‘Celerity’ × seedling 609

R: G.W. Darby (c. 1964), N: G.W. Darby

Fls white, with grass-green central zone on basal third of each tepal; nectary-star almost black.

(Published in *LYB* 28: 135 (1965).)

**‘The Dalesman’ I(b/d)**

Parentage: ‘Pennine Goldie’ × ‘David Bowes Lyon’

R: A.D. Harrison (c. 1966), N: A.D. Harrison

Fls vivid yellow (12A); spots many, large, maroon; pollen chocolate-brown. Fls very large, *lancifolium* type; tepals very broad, tips reflexed. Stems 1.5 m. July.

**‘The Duchess’ I(b/-)**

Parentage: *amabile* × *L. × maculatum* ‘Yellow Purity’

R: F.L. Skinner (c. 1940), N: F.L. Skinner, I: F.L. Skinner (1943)

Fls large, vivid orange-yellow (21A) heavily spotted with brown. Stems 0.8 m. June.

(Published in *Gard. Chron.*, ser.3, 108: 189, fig. 84 (1940).)

**‘The Empress’ VIII(c/d)**

Parentage: derived from *speciosum*, *auratum*, *henryi* & several golden-flowered trumpets

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)

Inside crimson with subtle shadings and narrow cream-yellow tepal-margins and tips; outside with strong green midribs; papillae conspicuous, dark; nectaries green. Tepals slightly ruffled, slightly twisted, recurved. Stems 1.2-1.9 m. Early Aug.

(An Orienpet (OT) lily. Published in *The Lily Garden Cat.*, 1996/97: 20.)

**‘Thelma’ VII(-/-)**

Parentage: ‘Dawn’ × *L. × parkmanii* ‘Jillian Wallace’

R: G. Errey (c. 1955), N: G. Errey

Fls pale rose-pink.

Syn.: *speciosum* ‘Thelma’.

(Published in *ILR* (1960) as *speciosum* ‘Thelma’.)

**‘The Moor’ IX(b/d)**

See *martagon* var. *cattaniae* ‘The Moor’.

**‘Theodore Haber’ II(b-c/d)**

Misspelling of ‘Theodor Haber’.

**‘Theodor Haber’ II(b-c/d)**

Parentage: *martagon* var. *cattaniae* × *tsingtauense*

R: J. Petruske (c. 1975), N: J. Petruske, REG: J. Petruske (1975)

Fls dark shiny red; pollen orange-yellow. Stems 1 m or more, with up to 20 fls. July.  
(Misspelling: 'Theodore Haber'. Published in *Lilies and other Liliaceae*, 1975: 97.)

**'Theodor Haber Gedenken' I(a/-)**

Parentage: ('Byam's Yellow' × 'Enchantment') × yellow-flowered seedling  
R: T. Haber, G: J. Petruske (1977), N: J. Petruske (1981), I: J. Petruske (1984), REG: J. Petruske (1984)  
Inside brilliant greenish yellow (5A) with a vivid yellow (14B) flush on two-thirds of each tepal; outside light greenish yellow; spots large, dark red (187A), on two-thirds of each tepal; nectaries yellow-green; pollen brownish orange (172C). Fls 125 mm wide; tepals c.100 × 35 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 95 × 16 mm, dark green. Stems 0.8 m, mid green. July.

**'The President' I(a/b)**

See *L. × maculatum* 'Alice Wilson'.

**'Thera' I(b/-)**

Parentage: 'Orange Schale' × 'Connecticut King'  
R: V. Strasser (1975), G: V. Strasser (1977), N: V. Strasser (1979), I: V. Strasser (1981), REG: V. Strasser (1985)  
Inside vivid reddish orange (32A), tepal-tips orange-red, throat red; outside orange-red; spots absent; nectaries red; pollen red. Tepal-margins smooth, tips slightly recurved. Lvs scattered. Stems 1 m, dark green, with up to 15 fls. Early July.

**'Theseus' I(c/d)**

Parentage: (*lankongense × davidii*) × 'Black Butterfly'  
R: C. North (pre 1976), N: C. North, I: Lingarden Ltd & Grampion Growers Ltd, REG: C. North (1977)  
Fls dark crimson-red, scented. Pedicels long, stiff. Stems 1.3 m, with 20-25 fls. Early July. Sterile triploid.  
(Published in *Lilies and other Liliaceae*, 1977: 81.)

**'The Sultan' I(a/b)**

See *L. × maculatum* 'The Sultan'.

**'Thialf' V(-/a)**

See *longiflorum* 'Thialf'.

**'Thibadeau' VI(c/-)**

See *L. × aurelianense* 'Thibadeau'.

**'Thompsonii' IX(b/c)**

See *auratum* 'Thompsonii'.

**'Thor Heyerdahl' I(b-c/d)**

Parentage: 'Amber Gold' × 'Roter Cardinal'  
R: D.E. Schmitzer (1976), G: D.E. Schmitzer (1978), N: D.E. Schmitzer (1980), REG: D.E. Schmitzer (1983)  
Inside vivid orange (28A), throat vivid orange (28B); outside vivid orange (28B) merging into strong orange (25B); spots dark red (183A) on a third of each tepal; nectaries frosted vivid orange (28B); pollen brownish orange (171B). Fls 70-80 mm wide; tepals 70 × 20 mm, margins smooth, tips strongly recurved. Lvs scattered, 68

× 12 mm, mid green. Stems 1.5 m, green, overlaid with brown, with more than 12 fls. Early July.  
(Published in *Der Staudengarten*: 34 (1980).)

**'Thornbirds' VII(-/c)**

Parentage: Red Band Group × (*speciosum* × unknown)  
R: V. Matthé (1973), G: V. Matthé (1977), N: V. Matthé (1986), REG: V. Matthé (1986)

Fls white, tepals with a blood-red ray from base to tip; outside white with light red midribs; papillae blood-red, on four-fifths of each tepal; nectaries apple-green; pollen rust-brown. Fls 170 mm wide, spicily scented; tepals 100 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 140 × 50 mm, mid green. Stems 1.4 m, mid green, with c.10 fls. Aug.

Trade designation: DORNENVÖGEL.

**'Thoughtful' I(b/-)**

Syn. of 'Skumstu'.

**'Thousand Isles' IX(b/c)**

See *auratum* 'Thousand Isles'.

**'Thrasher' I(c/d)**

Parentage: Harlequin Group × Tango Group  
G: G. Brundrett (1997), N: T.R. Martin (1999), I: G. Brundrett (2003), REG: G. Brundrett (2003)  
Inside with light yellowish pink (159A) ground; outside with moderate purplish pink (65A) towards base and on midribs, remainder light yellow (11B) especially at tepal-edges, and with narrow areas of deep purplish red (59B) towards base; spots, brushmarks and papillae all deep purplish red (59B) covering four-fifths of each tepal, the elliptic spots coalescing in the throat; nectaries deep purplish red (59B); pollen strong orange (168B); stigma moderate red (180B). Fls 110 mm wide; tepals 70 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 100 × 10 mm. Stems 1.1 m, strong yellow-green (144B), with c. 13 fls. Early July.  
(Named for a strongly spotted bird native to Ontario where this cv. was raised. Grown from seed from the NALS seed exchange 1995. Nomenclatural Standard: colour print provided by registrant (WSY 0038517).)

**'Thriller' VII(b/c)**

Parentage: (*L. × parkmanii* Little Rascal Group × 'Star Gazer') × *L. × parkmanii* Little Rascal Group  
R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1993)  
Inside yellowish white (155D), midveins pale yellow-green (155A) fading to the top; outside yellowish white (155D), along midribs and at base suffused with moderate purplish red (59C), midribs light yellow-green/pale greenish yellow (2C/D), becoming strong yellow-green (144B) at the top, and strong yellow-green (143C) at the base; spots moderate reddish brown on two-thirds of each tepal; nectaries moderate purple (79D); pollen vivid orange-yellow (23A). Fls 180 mm wide; tepals 90 × 55 mm, outer tepals slightly recurved.

Lvs scattered, 90 × 70 mm, dark green. Stems 0.3 m, pale green with darker markings, and with c.3 fls.

Trade designation: RASCAL THRILLER.

***thunbergianum* Schultes & Schultes I(a/b)**

Syn. of *L. × maculatum*.

(Included in Div. I because, although originally published as a species, it is a synonym of *L. × maculatum* which is placed in Div. I.)

**‘Thunder’ I(a-b/c)**

Parentage unknown

R: B.G. Hayler (1970), G: B.G. Hayler (1972), I: B.G.

Hayler (1976), REG: B.G. Hayler (1978)

Fls dark red, *lancifolium* type. Stems 1.2 m, with bulbils.

(Published in *Golden Ray Gardens Cat.*, 1976.)

**‘Thunderbird’ VI(-/c)**

Parentage: selection from Aurelian Group

S: C. Yerex (c. 1956), N: C. Yerex

Fls with lemon-yellow (HCC 4) centre, blending to saffron-yellow (HCC 7/2) at tepal-tips; outside banded and blended with chrysanthemum-crimson (HCC 824).

Tepal-tips recurved. Stems 1.5 m. July.

**‘Thunderbolt’ VI(b-c/b-c)**

Parentage: *henryi* × (*L. × aurelianense* × unknown)

R: J. de Graaff (c. 1954), N: J. de Graaff

PC 1961, AM 1966

Fls light orange-yellow (24C), centre darker. Stems 1.9 m. July.

**‘Thunderstar’ VI(b/b)**

Parentage: ‘Thunderbolt’ × *regale*

R: M.P. Thompson (1978), N: M.P. Thompson (1979),

REG: M.P. Thompson (1979)

Fls with tepal-tips yellowish white (155B); throat vivid yellow (15B), midribs white-green; spots absent; nectaries green; pollen orange-red. Tepal-margins slightly ruffled. Lvs lanceolate, mid green. Stems 1.2-1.5 m.

**‘Thüringer Akzent’ I(b/d)**

Parentage: ‘Inkagold’ × ‘Artistic’

R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2001)

Inside pale yellow (158A), tepal-tips rather paler, throat pale yellow-green (155A); outside yellowish white (158C), midribs yellowish green; brushmarks conspicuous, narrow, dark purple (79A), continuing up each tepal from tip of nectaries to about mid tepal, and with a few spots below; nectaries yellowish grey (156A) hoary; filaments long, pale yellow-green (155A); pollen greyish brown (166A); style strong brown (172A); stigma moderate yellowish pink (173D). Fls 130 mm wide; tepals 60 × 40 mm, margins strongly but broadly waved, tips becoming strongly recurved. Lvs scattered, 100 × 13 mm. Stems 0.9 m, dark green, with c.11 fls. Late June. (Thuringia is a region of Germany and the original home of the registrant. Nomenclatural standard: colour print provided by registrant (WSY 0028876).)

**‘Thüringer Nachtigall’ I(c/d)**

Parentage: ‘Dawn Star’ × ‘Pohls Weinrote’

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (2002), I: G. Steinbrück (2003), REG: G. Steinbrück (2003)

Inside strong reddish orange (169A), tepal-tips paler; outside pale orange, yellowish white in area of midribs; spots deep purplish red (71A), many, small, on basal three-quarters of each tepal; nectaries grey-white, hoary; filaments pale yellow-green (157B); pollen moderate red (181B); style pale yellow-green (157B); stigma dark red (183B). Fls 140 mm wide; tepals 75 × 31 mm, margins smooth, tips slightly recurved. Lvs scattered, dense, 180 × 11 mm. Stems 0.7 m, dark green, brown-spotted, with 5-7 fls and with stem bulbils. Late June.

(The lvs are unusually long for an Asiatic lily.

Nomenclatural standard: colour print provided by registrant (WSY 0038750).)

**‘Thüringer Triumph’ I(a-b/c)**

Parentage: Asiatic seedling × Asiatic seedling

R: G. Steinbrück (1990), G: G. Steinbrück (1992), N:

G. Steinbrück (2000), I: G. Steinbrück (2001), REG: G. Steinbrück (2001)

Inside pale orange-yellow (19D), tepal-tips rather paler, throat pale orange-yellow (19D); outside pale orange-yellow (19D), midribs pale brown; spots dark red (59A), few, medium sized, often elongated, on basal half of each tepal; nectaries pale yellow-green (157A); filaments light yellowish pink (159A); pollen deep red (185A); style deep orange-yellow (163A); stigma light yellowish pink (159A). Fls 120 mm wide; tepals 65 × 31 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 25 mm, very numerous, thickly clothing the stems. Stems 1.4 m, black, with c.20 fls from red-tipped buds. Lf-axils, pedicels and buds white-hairy. Late June.

(Nomenclatural standard: colour print supplied by registrant (WSY 0028874).)

**‘Thymbra’ VI(b/a-b)**

Parentage: (*L. × sulphurgale* × *leucanthum* var. *centifolium*) × *henryi* ‘Vilány’

R: I. Wiesner (1988), N: I. Wiesner, REG: I. Wiesner (1989)

Inside white, throat orange; outside with purple-tinted green midribs; nectaries olive-green; pollen orange; stigma green. Fls 180 mm wide, scented; pedicels 80-100 mm long. Lvs deep glossy green. Stems 1-1.2 m, brownish at base, with 5-7 fls in a short infl. Bulbs deep purple. Mid July.

**‘Thyra’ I(a/b)**

Parentage: ‘Maria Callas’ × ‘Elvin’s Son’

R: J.L. Johansen (1990), G: J.L. Johansen (1992), N: J.L. Johansen (1996), REG: J.L. Johansen (1996)

Inside strong yellowish pink (37A), ageing to light yellowish pink, throat strong red (46A); outside light yellowish pink; spots dark red (187B), in throat; nectaries strong reddish orange (31A); pollen vivid reddish orange (32A). Fls 170 mm wide; tepals 90 × 32 mm, narrowed at base so tepals are well separated from one another,

margins smooth, tips slightly recurved. Lvs scattered, 130 × 15 mm, mid green. Stems 1.3 m, green, with c.20 fls. Late June.

**‘Tia Blanch’ I(a/c)**

Parentage: ‘White Prince’ × unnamed seedling  
R: J. Wadkamper (1989), G: J. Wadkamper (1991), N: J. Wadkamper (1999), I: Willowood (2000), REG: J. Wadkamper (1999)

Inside and outside ivory-white, throat light tan; spots purple, very few, small, in centre of fl.; nectaries green; pollen rust-brown. Fls 125 mm wide; tepals 70 × 42 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 95 × 12 mm, mid green. Stems 0.75 m, dark brown, with c.8 fls. Midseason.

(Published in *Willowood Cat.*, 2000.)

**‘Tiara’ VII(a/b)**

Syn. of ‘Tiararoyal’.

**‘Tiararoyal’ VII(a/b)**

Parentage: seedling 8920 × seedling 1100  
R: Trior Lelie B.V. (1989), G: Trior Lelie B.V. (1992), N: Trior Lelie B.V. (1992), I: Trior Lelie B.V., REG: Trior Lelie B.V. (1996)

Inside with a strong purplish red (60D) suffusion on a yellowish white (155D) ground, throat yellowish white (155D); outside similarly coloured, midribs pale yellow-green (155A) at base shading to strong yellow-green (144B & C) at apex; spots deep purplish red (59B) on basal part of each tepal; papillae yellowish white (155D); nectaries yellowish white (155D); pollen dark reddish orange (175B); stigma greyish yellow-green (194B). Fls 200 mm wide; tepals 100 × 30-55 mm, margins ruffled, tips recurved. Lvs scattered, 160 × 45 mm, mid green. Stems 1.15 m, dark, with 4-10 fls.

Syn.: ‘Tiara’.

(Registered (see *ILR Fifteenth Supplement* as ‘Tiara’.

However, in 1999 European PBR were granted to this cv. under the epithet ‘Tiararoyal’, and so the accepted cv. epithet becomes ‘Tiararoyal’ (ICNCP, 2004: Art. 24.4).)

**‘Tiber’ VII(a-b/b)**

Parentage unknown

R: Vletter & Den Haan, G: Vletter & Den Haan (1988), N: Vletter & Den Haan (1992), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)

Inside strong purplish red (60D) on a yellowish white (155D) ground, fading to yellowish white (155D) at tepal-tips, midveins strong red (53B); outside of inner tepals strong purplish red (59D) on a yellowish white (155D) ground (fading to top and edges), outside of outer tepals moderate purplish red (59C) on a yellowish white (155D) ground, midribs light yellow-green (150D) suffused with deep purplish red (59B); spots dark red (187A/B) on two-thirds of each tepal; papillae present; pollen dark reddish orange (175B); stigma greyish yellow-green (148D). Fls 240 mm wide; tepals 130 × 80 mm, margins scarcely ruffled, tips slightly recurved. Lvs scattered, 160 × 45 mm, dark green. Stems 0.84 m, mid green, with c.6 fls.

**‘Tibet’ I(a/b)**

Parentage unknown

R: Mak-Leek Inc. (1992), G: Mak-Leek Inc. (1995), N: Mak-Leek Inc. (1998), REG: Mak-Leek Inc. (2003)

Inside pale yellow-green (155A) and deep purplish pink (54B); outside strong pink (54C) on a paler ground, midribs strong yellow-green (143B/C), tepal-tips strong yellow-green (143A); spots dark red (187A) in throat; papillae absent; nectaries strong yellow-green (144B); pollen strong orange (169B); stigma dark greyish yellow (199D). Fls 140 mm wide; tepals 70 × 25-30 mm, margins smooth, tips recurved. Lvs 70 × 15 mm, dark green. Stems 0.85 m, green, with 9 fls. Midseason.

**‘Tiempo’ Div. ?**

Given as a parent of ‘Windsor’. No further details.

**‘Tiffany’ I(a/-)**

Parentage unknown

R: Van der Salm (Holland) (1975), G: Van der Salm (Holland) (1979), N: Van der Salm Bulb Farm, Inc. (1990), I: Van der Salm Bulb Farm, Inc. (1990), REG: Van der Salm Bulb Farm, Inc. (1990)

Inside soft cream to pink, tepal-tips rose-pink, throat golden orange; outside soft pink; copiously spotted in centre of fl.; nectaries soft cream; pollen copper-coloured. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 0.8-1 m, light green. June.

**‘Tiffany Girl’ VI(b/b)**

Parentage: (‘Inca Princess’ × *regale* ‘Gold Cup’) × (‘Starlite’ × Vineland seedling 62 09 11)

R: F.H. Hayes (1973), N: F.H. Hayes (1979), REG: F.H. Hayes (between 1979 and 1981)

Fls deep nasturtium-orange throughout; papillae brown; nectaries green; pollen dark brown. Tepals 110 mm long. Lvs dark green. Stems 1.2-1.5 m.

**‘Tiffany Llenos’ I(b/-)**

Parentage: ‘Pink Tiger’ (Woodriff) × (‘Rosabelle’ × unknown) × ‘Victoria Meyers’)

R: N.F. Bieniasz (1974), G: N.F. Bieniasz (1977), N: N.F. Bieniasz (1985), REG: N.F. Bieniasz (1985)

Fls moderate pink (51D) throughout except for a strong yellowish pink (32C) throat and deep pink (51B) midribs; spots strong red (53D) on two-thirds of each tepal; nectaries strong yellowish pink (32C), frosted; pollen dark reddish orange (178B). Fls 160 mm wide, slightly scented; tepals 80 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 12 mm, mid green. Stems 0.75 m, moderate yellow-green (138B), with c.8 fls. Midseason.

**‘Tiger Group’ I(c/d)**

Parentage: derived from crossing Coronado, Sierra & Sunstar Groups with ‘Coronation’ & ‘Lillian Cummings’  
R: J. de Graaff (c. 1949), N: J. de Graaff

Fls dark red.

Syn.: Tiganum Group.

(In *LYB* 30: 28 (1967), J. de Graaff & E. Hornback give the parentage as ‘Lilian Cummings’ × ‘Umbtig 8’.)

## **Tigeranum Group I(c/d)**

Syn. of Tiger Group.

### **'Tigerauge' I(a/-)**

Parentage unknown

R: H. Böhm (pre 1986), N: H. Böhm

Fls shiny vivid yellow, light brown in centre; spots dark brown. Stems 0.6-0.8 m, with numerous fls and stem bulbils. July.

(Published in German Lily Group sales list, 1992.)

### **Tiger Babies Group I(b-c/d)**

Parentage: 'Pink Tiger' (Woodriff) × mixed pollen of pink- and white-flowered Asiatic hybrids

R: J.F. McRae (1973), G: E.A. & J.F. McRae (1975), N: J.F. McRae & L.D. Marshall (1979), I: Columbia-Platte Lilies (1980), REG: Columbia-Platte Lilies (1980)

Inside light orange (29B) to light yellowish pink (29C), fading to softer, salmon tone, tepal-tips and throat brilliant to light orange (29A/B); outside light to pale yellowish pink (29C/D), midribs and centre overlaid with dark to moderate reddish orange (178B/C); moderate to numerous, small magenta spots on centre half of tepals; nectaries dark to moderate reddish orange (178B/C); pollen greyish reddish brown (200B). Fls 150-175 mm wide, scented; tepals 75-80 × 30-40 mm, recurved. Lvs scattered, 80-150 × 20 mm, dark green. Stems 0.9-1.2 m, deep purple over deep green, with 5-8 fls. June to July. (Published in *Borbeleta Gardens Cat.*, 1980. Included in *ILR* (1982) as Tiger Babies grex.)

### **'Tiger Face' VII(-/c)**

See *L. × parkmanii* 'Tiger Face'.

### **'Tigerkralle' I(b/c)**

Parentage unknown

R: A. Schmidt (pre 1987), N: A. Schmidt, REG: A. Schmidt (1988)

Fls vivid orange; spots many, brown; pollen dark brown. Tepal-tips reflexed. Stems 1.5 m, with stem bulbils. Mid July.

(Published in German Lily Group sales list, 1987.)

### **'Tiger Pink' I(c/-)**

Parentage: *regale* × (*lancifolium* × unknown)

R: Gebr. N. & B. Laan & Zn (1975), N: Gebr. N. & B. Laan & Zn (1977), I: Gebr. N. & B. Laan & Zn (1980), REG: Gebr. N. & B. Laan & Zn (1983)

Inside salmon-pink, tepal-tips dark pink, throat salmon; outside greenish purple; spots dark purple, few; nectaries pink-red; pollen maroon. Tepals 80 × 30-40 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 5 mm, dark green. Stems 1.2 m, purple-green, with 20-30 fls. Late June.

### **'Tiger Queen' I(c/-)**

Parentage: complex hybrid involving *dauidii* var.

*willmotiae* × *lancifolium*

R: C.F. Patterson, N: C.F. Patterson, I: C.F. Patterson (c. 1959)

Fls brick-red (HCC 016), blending to Saturn red near

top of nectaries; basal half profusely spotted with purple-madder (HCC 0128). Tepals half reflexed. Stems 1.5 m. Aug.

Syn.: 'Crimson Queen' (Div. I)

(Introduced as 'Crimson Queen', but epithet later changed to 'Tiger Queen'.)

### **'Tigerspinne' I(a/-)**

Parentage unknown

R: S. Ziepke, N: S. Ziepke, I: S. Ziepke (1972), REG: S. Ziepke (1985)

Inside tepal-tips brilliant greenish yellow (6B), midveins vivid yellow (14A), throat vivid yellow (14A); outside vivid yellow (9B); spots dark red (187A/B), sparse, medium sized, on half of each tepal; nectaries brilliant greenish yellow (3B). Fls 125 mm wide; tepals 90 × 36 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 105 × 10 mm, dark green. Stems 0.8 m, green, with c.8 fls. Mid July.

(Published in *Lilidárska ročenka* 1983.)

### **'Tiger White' I(c/-)**

Parentage: (*lancifolium* × *amabile*) × 'Buchaneer'

R: Gebr. N. & B. Laan & Zn (1976), N: Gebr. N. & B. Laan & Zn (1978), I: Gebr. N. & B. Laan & Zn (1981), REG: Gebr. N. & B. Laan & Zn (1983)

Inside and outside white, throat greenish white; spots maroon-purple, few; nectaries green; pollen brown. Tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 10 mm, mid green. Stems 1.2 m, mid green, with 10-20 fls. July.

Trade designation: WHITE TIGER.

### **'Tigrabile' I(c/d)**

Parentage: *lancifolium* 'Splendens' × *amabile*

R: J.E.H. Stooke (c. 1935), N: J.E.H. Stooke

(Published in *LYB* 6: 137 (1937). No further details.)

### **'Tigrena' I(c/-)**

Parentage: 'Svetlana' × ('Redstart' × 'Dora Pinnow')

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls creamy white, very spotted. Stems up to 1.5 m, with bulbils.

(The seed parent is probably 'Svetlana' of Kireeva.)

### **'Tigrimar' II(-/-)**

Parentage: *martagon* × ? *lancifolium*

R: V.A. Grot (c. 1959), N: V.A. Grot

Buds thicker than those of *martagon*, smaller than those of *hansonii*. Lvs whorled.

(Jānis Vasarietis (*in litt.* June 1998) says that the parentage given is unlikely and is more likely to be *martagon* × *hansonii*: Victors Orehova is of the same opinion. No characters of *lancifolium* are evident. The plant is said to be 'unsightly'.)

### **'Tigrimax' Div. ?**

Given as a parent of 'Attila'. No further details.

### **Tigrimax Group I(a/d)**

Parentage: *lancifolium* × *leichlinii* var. *maximowiczii*

R: I. Preston (1921), G: I. Preston (1923), N: I. Preston  
Similar to *lancifolium*, but fls smaller and brighter on  
longer pedicels, and with small, dark spots. Whole plant  
downy. Aug.

(Published in *Gard. Chron.*, ser. 3, 77: 270, fig.111  
(1925). Included in *ILR* (1982) as *Tigrimax* grex. Cross  
first made by Stout and Rusk, New York Botanical  
Garden, and repeated by Preston.)

**‘Tigrimount’ Div. ?**

Given as a parent of ‘Akane’, ‘Popelka’, ‘Radar’ and  
‘Radegast’, which were raised by B. Mičulka. No further  
details.

**‘Tigrimount Number 2’ I(c/-)**

Syn. of ‘Noris Star’.

**‘Tigrimount Number 3’ I(c/-)**

Syn. of ‘Palermo’ (Div. I).

***tigrinum* Ker Gawl. IX(c/d)**

Syn. of *lancifolium*.

***tigrinum* ‘B.C.R.’ IX(c/d)**

Syn. of *lancifolium* ‘B.C.R.’.

***tigrinum* ‘Burnham Variety’ IX(c/d)**

Syn. of *lancifolium* ‘Burnham Variety’.

***tigrinum* ‘Diploid’ IX(c/d)**

Syn. of *lancifolium* ‘Diploid’.

***tigrinum* var. *flaviflorum* (Makino) Stearn IX(c/d)**

Syn. of *lancifolium* var. *flaviflorum*.

***tigrinum* ‘Flore Pleno’ IX(c/d)**

Syn. of *lancifolium* ‘Flore Pleno’.

***tigrinum* ‘Foliis Variegatis’ IX(c/d)**

Syn. of *lancifolium* ‘Foliis Variegatis’.

***tigrinum* var. *fortunei* Standish IX(c/d)**

Syn. of *lancifolium* var. *fortunei*.

***tigrinum* ‘Malmo’ IX(c/d)**

Syn. of *lancifolium* ‘Malmo’.

***tigrinum* ‘Ravenglass Variety’ IX(c/d)**

Syn. of *lancifolium* ‘Ravenglass Variety’.

***tigrinum* ‘Splendens’ IX(c/d)**

Syn. of *lancifolium* ‘Splendens’.

***tigrinum* var. *splendens* van Houtte IX(c/d)**

Syn. of *lancifolium* ‘Splendens’.

***tigrinum* ‘Sweet Surrender’ I(b-c/c-d)**

Syn. of ‘Sweet Surrender’

***tigrinum* ‘Yellow Tiger’ IX(c/d)**

Syn. of *lancifolium* var. *flaviflorum* ‘Yellow Tiger’.

**‘Tihowa’ Div. ?**

Given as a parent of ‘Athos’, ‘Korfu’ and ‘Paros’ which  
were raised by V. Strasser. No further details.

**‘Tihowa Rotstern’ I(b/-)**

Parentage unknown

R: C. Feldmaier (pre 1972), N: C. Feldmaier

Fls deep red. Stems 1.5 m, with bulbils.

(Published in *Australian Lily Soc. Bull.*, March 1981.)

**‘Tikal’ I(c/-)**

Parentage: *dauidii* × unknown

R: W. Windus (c. 1975), N: W. Windus (1981), REG:

W. Windus (1981)

Fls vivid yellow (13A); spots greyish red (178A); pollen  
moderate reddish orange (178D). Fls 150 mm wide;  
tepals slightly recurved, not twisted. Stems 1.4-1.9 m,  
with up to 20 fls.

**‘Tikal’ I(a/-)**

Parentage unknown

R: W. Windus, N: W. Windus, I: Borbeleta Gardens  
(1988)

Fls pinkish red with almost white centres; darker spots  
chiefly on basal half of pinkish section of each tepal; buds  
turn from green, to pink, to red, with lighter tips before  
opening. Tepal-margins smooth, tips not recurved. Stems  
0.8 m. Midseason.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name  
already used for another lily.)

**‘Tiki’ VII(-/c)**

See *L. × parkmanii* ‘Tiki’.

**‘Timaru’ VIII(a-b/b)**

Parentage: seedling BW 94-3 × seedling AW 94-9

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den  
Haan Beheer B.V., N: Vletter & Den Haan Beheer  
B.V. (1999), I: Vletter & Den Haan Beheer B.V., REG:  
Vletter & Den Haan Beheer B.V. (2001)

Inside whiter than greenish white (155C), throat greenish  
white (155C); outside whiter than greenish white (155C)  
midribs of inner tepals light yellow-green (154D),  
midribs of outer tepals dark yellowish pink (181D) and  
light yellow-green (145B); spots and papillae absent;  
nectaries yellowish white (155B), surrounded by strong  
yellow-green (144B); pollen greyish brown (166A);  
stigma pale greenish yellow (2D) speckled with deep  
pink (180D). Fls 210 mm wide; tepals 115 × 45-55 mm,  
margins very slightly wavy in apical part, tips recurved.  
Lvs scattered, 185 × 25 mm. Stems 1.15-1.25 m, green  
with darker markings, and with c.4 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Timborasso’ I(c/-)**

Parentage unknown

R: A. Weinreich (pre 1987), N: A. Weinreich, REG: A.  
Weinreich (1988)

Fls vivid reddish orange (34A), 120 mm wide. Stems 1.1  
m, dark, infl. with secondary buds. Early July.

(Published in German Lily Group sales list, 1987.)

**'Timbre' I(a/-)**

Parentage: seedling 11-82 × 'Lavender Dream'  
 R: Gebr. N. & B. Laan & Zn (1981), G: Gebr. N. & B. Laan & Zn (1983), N: Gebr. N. & B. Laan & Zn (1986), I: Gebr. N. & B. Laan & Zn (1987), REG: Gebr. N. & B. Laan & Zn (1988)  
 Inside strong yellowish pink (32D), tepals edged light orange (28D), inner tepals with reddish orange veins at edges, throat flamed moderate red (47A); outside light orange to light yellowish pink (29B/C), midribs yellow-green; spots red, in the throat; pollen reddish brown. Fls 160 mm wide; tepals 90 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 1.5-1.7 m, pale green, with 14-15 fls. June to July. (Published in *Bloembollencultuur*, 1987.)

**'Time Diamond' VIII(a/b)**

Parentage: 'Goldina' × seedling LA 93007-4T  
 R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)  
 Inside with inner tepals light orange-yellow (22B), strong orange (24A) along midveins, outer tepals brilliant orange-yellow (23B), strong orange (25A) along midveins, throat greyish yellow-green (191A); outside brilliant yellow (20A), tepal-margins strong orange (24A), strong orange (169C) at base; spots and papillae absent; nectaries strong orange (25A); pollen strong reddish orange (169A); stigma vivid reddish orange (30B). Fls 175 mm wide; tepals 110 × 32-45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 15 mm. Stems 0.9-1.1 m, brownish with green, and with 3-9 fls.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Time Out' VII(a-b/b-c)**

Parentage: ((*L. × parkmanii* 'Allegra' × *L. × parkmanii* Little Rascal Group) × 'Star Gazer') × (*L. × parkmanii* Little Rascal Group × 'Star Gazer')  
 R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1996)  
 Inside yellowish white (155D), midveins vivid yellow (9B); outside yellowish white (155D); spots vivid yellow (9B), medium sized to large; papillae present; nectaries green; pollen orange-brown; stigma dark violet. Fls 220 mm wide; tepals 110 × 40 mm, margins ruffled, outer more so, tips strongly recurved. Lvs scattered, 160 × 45 mm, mid green. Stems 1 m, green, with c.6-8 fls. Late.

**'Timepiece' I(a/-)**

Parentage: unnamed seedling × brushmarked seedling  
 R: H.J. Hartle (1978), G: Hartle-Gilman Lilies (1981), N: Hartle-Gilman Lilies (1987), I: Hartle-Gilman Lilies (1988), REG: Hartle-Gilman Lilies (1988)  
 Vivid orange (28A) throughout; each tepal with a maroon-black ray in the central third and similarly coloured spots; pollen red. Tepals 100 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 130 × 18 mm, mid green. Stems 1.25 m, green, with 12-14 fls. July.  
 (Seedling from Stone & Payne.)

**'Timmy Too' I(a/-)**

Parentage: 'Juno' × 'Carol Jean'  
 R: T. Wadekamper (1979), G: J. Wadekamper (1982), N: J. Wadekamper (1992), I: Borbeleta Gardens (1993), REG: J. Wadekamper (1993)  
 Inside deep purplish pink (55A), throat red; outside pink; spots brown, on two-thirds of each tepal; nectaries white; pollen brown. Tepals 65 × 28 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 12 mm, mid green. Stems 0.5 m, dark green, with c.8 fls. Very early. (Published in *Borbeleta Gardens Cat.*, 1993. The fl. colour does not fade.)

**'Tina' I(a/-)**

Parentage unknown  
 R: J. Rothen, N: J. Rothen, I: Borbeleta Gardens (1985), REG: J. Wadekamper (1985)  
 Fls bright orange; spots brown, few, centrally placed. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green.  
 (Published in *Borbeleta Gardens Cat.*, 1985.)

**'Tince' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
 R: J. Vasarietis, G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)  
 Inside vivid reddish orange (40A), throat strong orange (25A); outside vivid reddish orange (40A); brushmarks black, on two-thirds of each tepal; nectaries greenish; pollen brown. Fls 120 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved; pedicels 90-100 mm long. Lvs scattered, 130 × 15 mm, mid green. Stems 1 m, green, with c.15 fls. Early July.  
 (Published in *Latvian Lily Register*, 1993.)

**'Tindal' I(a/-)**

Parentage: 'Golden Souvenir' × 'Tabasco'  
 R: Gebr. N. & B. Laan & Zn (pre 1976), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1977)  
 Fls vivid reddish orange (32A), heavily spotted.  
 (Published in *Lilies and other Liliaceae*, 1977: 81.)

**'Ting Tang' I(c/-)**

Parentage: (*L. × maculatum* 'Wallacei' × (*lancifolium* × unknown)) × (*L. × maculatum* 'Wallacei' × (*lancifolium* × unknown))  
 R: E.C. Genat, G: E.C. Genat (1957), REG: E.C. Genat (1960)  
 Inside vivid yellowish orange (30C). Fls 115 mm wide; tepals 35 mm broad, moderately reflexed. Stems 1.2 m.

**'Tin Hinan' VII(b/c)**

See *L. × parkmanii* 'Tin Hinan'.

**'Tinkerbell' I(c/d)**

Parentage: (('Hartford' × 'Connecticut Lass') × *cernuum*) × *cernuum*  
 R: L.D. Marshall (1975), G: L.D. Marshall (1977), N: J.F. McRae & Columbia-Platte Lilies (1994), I: Columbia-Platte Lilies (1984), REG: Columbia-Platte Lilies (1984)

Inside strong to light purplish pink (63C/D); outside light purplish pink (63D); spots tiny, magenta, on basal half of tepals; nectaries white/rose-pink; pollen moderate red (179A). Tepals 40-70 × 20 mm, margins smooth, strongly recurved. Lvs scattered, 100-150 × 15-20 mm, mid to dark green. Stems 0.3-0.5 m, green, with 5-8 fls. June.

(Published in *Rex Lilies Cat.*, 1984.)

#### **‘Tinos’ I(a/b)**

Parentage: seedling G 89-10 × seedling G 93-01

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside pale yellow-green (4D) shading downwards to vivid orange-yellow (23A) along each midvein and from above the nectaries (and towards tip on inner tepals), at base with up to a quarter of each tepal suffused with deep red (185A) along edges, outer tepals tipped dark red (187A) and with a dark red (187A) suffusion towards base of midribs, throat strong to slight yellow-green (144C/D); outside paler than pale yellow-green (4D), midribs strong yellow-green (141C), at base and top a little darker; spots absent; papillae few, in the throat of inner tepals; nectaries white-hairy; pollen brown. Fls 160 mm wide; tepals 85 × 35-50 mm, margins smooth, tips slightly recurved, basal parts curved towards the centre. Lvs scattered, 125 × 20 mm. Stems 0.8-1.3 m, green with darker markings, and with 6-8 fls. June.

#### **‘Tintoretto’ VII(a/b)**

Parentage: seedling 92-6 × seedling RH 99-13

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1999), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside yellowish white (155D), midveins brilliant yellow (8A), throat light greenish yellow (8C); outside yellowish white (155D), midribs pale yellow (8D), strong yellow-green (143B) at top; spots and papillae brilliant yellow (8A); nectaries strong yellow-green (144C); pollen moderate reddish orange (171A); stigma light greenish grey (188C) with moderate purple (79D) edge. Fls 280 mm wide, slightly fragrant; tepals 160 × 75 mm, margins ruffled, tips recurved. Lvs 205-265 × 50-60 mm. Stems 1.2 m, green with darker markings at top, and with c.3 fls.

#### **‘Tipathy’ I(a/c)**

Parentage unknown

R: Thomas Zimmerman (1982), G: Thomas Zimmerman (1984), N: Tim Zimmerman (1990), I: Tim Zimmerman (1994), REG: Tim Zimmerman (1995)

Inside reddish orange, blending into orange, tepal-tips reddish orange, throat orange-yellow; outside orange-red; spots absent; nectaries orange-yellow; pollen dark brown. Fls 160 mm wide; tepals 75 × 35 mm, margins very slightly ruffled, tips strongly recurved. Lvs scattered, 135 × 12 mm, mid green. Stems 1.3 m, dark green, with 17-21 fls in a pyramidal infl. Early to mid July.

#### **‘Tip Top’ I(a/-)**

Parentage unknown

R: Bischoff Tulleken Lelies B.V., G: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V. (1980), REG: Bischoff Tulleken Lelies B.V. (1980)

Fls flamed vivid reddish orange (32A) to centre, flushed with strong red (39A); spots dark brown; anthers red-brown. Stems 0.8 m.

(Published in *Bloembollencultuur*, 1980. Included in *ILR* (1982) as ‘Tip-Top’, but in 1981 Dutch PBR (LEL 78) were granted to ‘Tip Top’, so this latter form of the name must be accepted (ICNCP, 2004: Art. 24.4).)

#### **‘Tirol’ I(a/-)**

Parentage: seedling W 639 × seedling W 711

R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside yellowish white (155D) slightly tinged with pale yellow (11D); outside greenish to yellowish white (155C/D) with outer tepals pale yellow-green (4D) and with moderate red (181C) spots; a few, small, dark red (187A) spots in the throat; pollen moderate orange (167A). Fls 165 mm wide; tepals 80 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 1.4 m, with dark markings, and with 6-7 fls. May.

#### **‘Tirreno’ I(a/b)**

Parentage: ‘Montreux’ × ‘Cote d’Azur’

R: Vletter & Den Haan, G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1988), I: Vletter & Den Haan (1993), REG: Vletter & Den Haan (1993)

Inside moderate purplish red (58A) on a yellowish white (155D) ground, each tepal with a small, yellowish white (155D) flare from the throat; outside similarly coloured but the colour stronger at tepal-edges and the base yellowish white (155D), outer tepals tipped strong yellow-green (144A); spots absent; pollen deep orange-yellow (163A); stigma dark red (187A). Fls 140 mm wide; tepals 84 × 44 mm. Lvs scattered, 142 × 21 mm, dark green. Stems 0.8-0.9 m, pale green with darker markings, and with 9-13 fls (from 16-18 cm bulbs).

#### **‘Tirza’ I(a/b)**

Parentage unknown

R: De Jong Lelies Holland B.V., N: De Jong Lelies Holland B.V. (1998), REG: De Jong Lelies Holland B.V. (2003)

Inside of inner tepals deep purplish pink to strong pink (54B/C), of outer tepals strong purplish red to deep purplish pink (54A/B); outside deep purplish pink to strong pink (54B/C); spots and papillae present; nectaries green; pollen red-brown; stigma purple. Tepal-margins slightly ruffled, tips slightly recurved. Stems 1 m, with reddish markings. Early.

#### **‘Titan’ I(a-b/b-c)**

Parentage: Yellow Blaze Group × ‘Connecticut King’

R: V. Baloun (1988), N: V. Baloun, REG: V. Baloun (1989)

Inside yellow, centre apricot; outside pale yellow, midribs greenish; spots absent; nectaries yellow-green with white granulation; pollen ochre-brown. Fls 150 mm wide; tepals 100 × 45 mm, slightly recurved; pedicels 45 mm long, dark green. Lvs scattered, 100 × 19 mm, dark glossy green. Stems 0.9 m, very thick, dark green above, dark brown at base, with c.10 fls. Late June.

**‘Titania’ I(c/-)**

Parentage: ‘Edith Cecilia’ × ‘Lemon Queen’ (Div. I)  
R: G.W. Darby (c. 1965), N: G.W. Darby  
Fls light apricot with darker spots.

**‘Titania’ IX(b-c/d)**

See *speciosum* ‘Titania’.

**‘Titanico’ VII(b/-)**

Parentage unknown  
R: Peacock B.V. & Imanse Lelieveredeling B.V. (c. 1989), G: Peacock B.V., N: Peacock B.V. & Imanse Lelieveredeling B.V., I: Peacock B.V. & Imanse Lelieveredeling B.V., REG: Peacock B.V. (1998)  
Inside light purplish pink (68D), each tepal with deep purplish pink (68A) along the midvein and a narrow yellowish white (155B) flame, throat yellowish white (155B); outside yellowish white (155B), with a little strong purplish red (63A & B) along the midribs, tipped strong yellow-green (143A); spots variable, yellowish white (155B) on two-thirds of each tepal; papillae yellowish white (155B), in the throat; nectaries strong yellow-green (144B); pollen strong reddish orange to strong orange (169A/B); stigma lead-grey. Fls 220 mm wide; tepals 130 × 30-60 mm, margins ruffled, tips strongly recurved. Lvs scattered, 160 × 35 mm, mid green. Stems 1 m, green, with 7-8 fls. Midseason to late. Syn.: ‘Aruba’.

**‘Titian’ I(a/-)**

Parentage: probably a selection from *L. × maculatum*  
Fls dark blood-red, marked with brown, but without black spots; pistil and stamens red. Tepals very broad. Stems 0.35 m, green throughout, with 3-6 fls. (Published in *Rev. Hort.* 1: 284 (1852).)

**‘Titus’ I(b/-)**

Parentage unknown  
R: A. Weinreich, N: A. Weinreich, I: A. Weinreich (pre 1975), REG: A. Weinreich (1985)  
Inside deep red (53A), midveins strong orange-yellow (24B) in the throat; outside strong red (51A); spots dark greyish purple (202A), numerous, large, on three-quarters of each tepal; nectaries red-purple; pollen strong reddish orange (169A). Fls 100 mm wide; tepals 70 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 82 × 6 mm, dark green. Stems 0.75 m, with c.25 fls. Early July. (Published in *Liliárska ročenka*, 1983.)

**‘Tivoli’ I(a/-)**

Parentage: ((*lankongense* × *cernuum*) × (*cernuum* × *davidii*)) × (‘Brandywine’ × ‘Orange Triumph’)

R: Gebr. N. & B. Laan & Zn (1974), N: Gebr. N. & B. Laan & Zn (1982), I: Gebr. N. & B. Laan & Zn (1982), REG: Gebr. N. & B. Laan & Zn (1985)  
Inside deep purplish pink (58D), tepal-tips strong red (51A), throat light yellow (19B); outside strong red (51A); spots few, small, red-brown; nectaries yellow-green; pollen orange-brown. Fls 350 mm wide; tepals 100 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 7-8 mm, pale green. Stems 1.2 m, pale green, with 25-35 fls. Late June. (Published in *Bloembollencultuur*, June 1982.)

**‘Tizian’ I(a/b)**

Parentage: (‘Diblík’ × ‘Connecticut King’) × ‘Wattle Bird’  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1995), REG: B. Mičulka (1995)  
Inside apricot with light orange veining, throat pale yellow, centre crimson-red extending over half of each tepal, tepal-edges yellow-apricot; outside apricot, tepals edged red; spots brown-red, small, moderately numerous, on a quarter of each tepal; nectaries white-granulated; pollen ochre; stigma dark red-brown. Fls 145 mm wide; tepals 80 × 40 mm, slightly recurved. Lvs scattered, 60 × 12 mm, pale glossy green. Stems 0.9 m, green, brownish at base. Early July.

**‘Tlemcen’ VII(a-b/-)**

Parentage unknown  
R: Vletter & Den Haan (pre 1994), N: Vletter & Den Haan, REG: Vletter & Den Haan (1997)  
Inside and outside yellowish white (155D); spots large; papillae yellow-green; nectaries green; pollen red-brown; stigma purple. Tepal-margins ruffled, tips slightly recurved. Stems green with darker spots and stripes.

**‘Toast’ I(a/b)**

Parentage: ‘Sunstar’ × ‘Showboat’  
R: J. Bodalski (1981), G: J. Bodalski (1983), N: J. Bodalski (1985), I: J. Bodalski (1987), REG: J. Bodalski (1987)  
Inside orange, tepal-tips vivid reddish orange (34B), throat vivid orange (28B); outside vivid reddish orange (33B); spots dark brown, elliptical, on basal third of each tepal; pollen strong reddish orange (169A). Tepals 80 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 1 m, grey-green, with c.12 fls. Mid June.

**‘Toasted Jade’ VI(-/a)**

Parentage: Pink Sunburst Group × *leucanthum* var. *centifolium* Black Dragon Group  
R: E. Hickling (c. 1967), N: E. Hickling  
Fls white, throat yellow, outer tepals with brown markings, inner tepals green. Lvs dark green. Stems 1.5 m, with up to 25 fls. July.

**‘Tobruk’ VII(a-b/b)**

Parentage: seedling RM 94-22 × seedling RM 96-9  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1993), REG: Vletter & Den Haan

Beheer B.V. (2003)

Inside vivid purplish red (57C), midveins strong orange-yellow (22A) to halfway, area around nectaries light greenish yellow (8C), throat yellowish white (155D); outside light purplish pink (63D), strong purplish red (64C) towards top of each tepal, midribs light yellow-green (145D), strong purplish pink (62A) flushed with brown-green, and with a moderate yellow-green (137B) spot at top; spots many, strong purplish red (64B); papillae light greenish yellow (8C); nectaries strong yellow-green (144C); pollen strong orange (25A); stigma greenish white (157D). Fls 240 mm wide, slightly fragrant; tepals 135 × 70 mm, margins ruffled, tips recurved. Lvs 165 × 60 mm, dark green. Stems 1 m, green with darker markings, with c.3 fls.

**‘Toccata’ I(c/-)**

Parentage: (*cernuum* × *lancifolium*) F<sub>2</sub>

R: J. de Graaff (c. 1960), N: J. de Graaff

Inside light orange; outside purplish pink. Stems 1.2 m. June to July.

**‘Todi’ VII(-/c)**

Parentage: ‘Casa Blanca’ × unnamed seedling

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)

Inside yellowish white (155B), throat light yellow-green (145C); outside yellowish to greenish white (155B/C), moderate purplish red (184D) blotches at base, midribs light greenish yellow to pale yellow-green (4C/D); papillae ivory-white; pollen strong orange (169C). Fls 240 mm wide; tepals 120 × 60 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 180 × 55 mm, mid green. Stems 1.25 m, green, with c.9 fls. May (under glass).

**‘Togo’ V(b/a)**

See *longiflorum* ‘Togo’.

**‘Toguro’ V(b/a)**

See *longiflorum* ‘Toguro’.

**‘Tokyo’ I(a/-)**

Parentage unknown

R: W. Paauw & Zn B.V. (pre 1987), N: W. Paauw & Zn B.V., REG: ICRA (1998)

Inside orange at tepal-tips; spots on the yellow centre of the fl. Stems 1 m. Midseason.

(Published in *The Lily Nook Cat.*, 1997: 9.)

**‘Tolar’ I(a/b)**

Parentage: ((‘Skookum’ × (‘Margie Wysong’ × *L. × maculatum*)) × ‘Tetra Mountaineer’) × white-flowered tetraploid

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000), REG: B. Mičulka (2000)

Inside pale apricot, tepal-tips paler, throat greenish at base; outside pale apricot, midribs greenish and with a brownish base; spots absent; nectaries green, white-granulated; pollen chocolate-brown; stigma beige. Fls 145

mm wide; tepals 85 × 33 mm, thick, slightly recurved; pedicels 70 mm long, slightly brown-dotted. Lvs scattered, 105 × 10 mm, dull mid green. Stems 1.2 m, thick, slightly brown-dotted. Early July. Tetraploid.

**‘Toledo’ VII(a/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside vivid purplish red (57D), midveins light greenish yellow (6D) in basal half, vivid purplish red (57C) in apical part, throat yellowish white (155D); outside vivid purplish red (57C), midribs with a light yellow-green (144D) spot at base, changing to yellowish white (155D), and becoming vivid purplish red to light purple (57C/85A) at top; spots moderate purplish red (58A); papillae light greenish yellow (6D); nectaries strong yellow-green (144C); pollen strong reddish orange (169A); stigma pale purplish pink (62D). Fls 255 mm wide; tepals 145 × 75 mm, margins ruffled, tips recurved; pedicels with dark markings. Lvs 180 × 42 mm. Stems 1.3 m, green with darker markings, with c.3 fls.

**‘Toljatti Souvenir’ Div. ?**

Given as a parent of ‘Çeketas’. No further details.

**‘Tom Barry’ VI(-/c)**

Parentage: ‘T.A. Havemeyer’ × (‘T.A. Havemeyer’ × unknown)

R: T. Barry (c. 1945), N: T. Barry, I: E.L. Kline

Inside brilliant yellow (13B); outside brilliant yellow (14C); spots absent; anthers dark brown. Stems to 1.9 m. Aug.

(Published in *LYB NALS* 6: 99 (1953).)

**‘Tomboy’ I(a/-)**

Parentage: ‘Beau Geste’ × unknown

R: R.F. Nelson (1979), G: R.F. Nelson (1982), N: R.F. Nelson (1983), I: R.F. Nelson (1983), REG: R.F. Nelson (1984)

Inside vivid red (46B) with a darker centre; outside moderate reddish orange (178C); spots brown on basal third of each tepal; papillae dense; nectaries dark red (187B); pollen greyish red (178A). Fls 120 mm wide; tepals 75 × 20-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 8 mm, mid green. Stems 1.8 m, brown-green, with c.15 fls. Dec. (Australia).

**‘Tom Pouce’ VII(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V., N: Coöp. Kwekersvereniging “The Originals” U.A. (1993), I: Coöp. Kwekersvereniging “The Originals” U.A. (1993), REG: Coöp. Kwekersvereniging “The Originals” U.A. (2000)

Inside deep to moderate purplish pink (66C/D), midveins brilliant yellow (9C), throat yellowish white (155D); outside moderate purplish pink (66D), midribs of outer tepals greenish white (157D) changing to light yellow (14D) towards top; spots absent; papillae brilliant

yellow (9C); nectaries strong yellow-green (144C); pollen strong brown (172B); stigma greyish yellow-green (191B). Fls 210 mm wide; tepals 150 × 45-70 mm, margins ruffled, outer more so, tips recurved. Lvs scattered, 160 × 47 mm. Stems 1 m, green, with 5-10 fls. July.

**'Tom Thumb'** IX(b/c)  
See *auratum* 'Tom Thumb'.

**'Toni'** VI(b/b)  
Parentage unknown  
R: R.F. Nelson (c. 1965), G: R.F. Nelson (c. 1969), N: R.F. Nelson (1971), REG: R.F. Nelson (1984)  
Inside strong orange (24A); outside light orange-yellow (23C); spots absent; nectaries strong yellow-green (145A); pollen strong orange (26A). Fls 190 mm wide; tepals 125 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 135 × 18 mm, mid green. Stems 1.8 m, green marked with brown, with 20-24 fls. Jan. (Australia).

**Tonka Group** VI(-/a)  
Parentage: selection from seedlings similar to *regale* (Published in *Amer. Lily Soc. Newsl.* 4 (2) 1950. No further details.)

**'Topaz'** VI(-/-)  
Parentage unknown  
R: V.A. Grot (pre 1983), N: V.A. Grot  
No further details.

**Topaz Temple Group** VI(-/a)  
Parentage: selections from Temple Group  
S: J.M. Shaver (pre 1966), N: J.M. Shaver, REG: J.M. Shaver (1984)  
Inside pale gold; outside darker, with different shades. Stems 1.2-2 m. July to Aug.  
(Published in *Rex Bulb Farms Cat.*, 1966: 25. Included in *ILR* (1982) as Topaz Temple grex.)

**'Top Choice'** VII(-/b)  
Parentage: unnamed seedling × 'Casa Blanca'  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)  
Inside light purplish pink (62C) on a yellowish white (155B) ground, throat strong yellow-green (144B); outside light to pale purplish pink (62C/D), midribs brilliant yellow-green (154C); spots deep purplish red (187D) in the throat; pollen strong orange (169C). Fls 230 mm wide; tepals 120 × 63 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 160 × 35 mm, mid green. Stems 1.6 m, green, with c.6 fls. May (under glass).

**'Top Clas'** I(a/-)  
Parentage: 'Orchid Queen' × unknown  
R: R.P.H. Clas, I: Oregon Bulb Farms, Inc. (c. 1976), REG: Oregon Bulb Farms, Inc. (1977)  
Fls coral-pink near base, copiously spotted. Stems 0.3-0.6 m. June.

(Named after Ruth Clas. Published in *Lilies and other Liliaceae*, 1977: 81 and included in *ILR* (1982) under the erroneous spelling 'Top Class'.)

**'Top Class'** I(a/-)  
Error for 'Top Clas'.

**'Top Gun'** VIII(a/b)  
Parentage: seedling N 60 × seedling RS 91-01  
R: Vletter & Den Haan (1994), G: Vletter & Den Haan, N: Vletter & Den Haan (1997), I: Vletter & Den Haan (1997), REG: Vletter & Den Haan (1997)  
Inside strong purplish pink (55B) on a white ground, with a white patch above each nectary, throat suffused with moderate purplish red (58A); outside strong purplish pink (55B) on a white ground, the colouring a little stronger than inside, midribs strong yellow-green (144B), fading towards top; spots dark red, on a third of each tepal; papillae few, in the throat; nectaries strong yellow-green (144B), white-hairy; pollen moderate reddish brown (175A); stigma dark red (187B). Fls 235 mm wide; tepals 135-140 × 50-60 mm, margins ruffled, tips recurved. Lvs scattered, 230 × 30 mm, mid green. Stems 1.4 m, green, with 3-5 fls.  
(*A longiflorum*/Asiatic (LA) hybrid.)

**'Tophit'** I(a/b)  
Parentage: 'Sterling Star' × 'Mont Blanc'  
R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1991)  
Inside and outside yellowish white (155D), outer tepal-tips dark greenish yellow (152D), midribs suffused with moderate pink (51D); spots dark red (187A), few, small, in the throat; nectaries light yellow-green (154D), edged moderate purplish red (184C); pollen brownish orange (166C). Fls 175 mm wide; tepals 80 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, 105 × 15 mm, mid green. Stems 0.6 m, with darker markings, and c.3 fls. July (under glass).

**'Topper'** I(a/-)  
Parentage unknown  
R: Van der Salm (Holland) (1974), G: Van der Salm (Holland) (1979), N: Van der Salm Bulb Farm, Inc. (1990), I: Van der Salm Bulb Farm, Inc. (1990), REG: Van der Salm Bulb Farm, Inc. (1990)  
Inside and outside soft melon-orange, throat rich apricot; spots few, tiny, near centre of fl.; nectaries soft cream; pollen brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.2 m, light green. June.

**'Topscore'** I(b/d)  
Parentage: *davidii* × 'Darkest Favorite'  
R: Gebr. N. & B. Laan & Zn (c. 1962), N: Gebr. N. & B. Laan & Zn  
Fls dark brick-red, with a brownish flush and purple-brown spots.

**'Top Secret' VII(a-b/b-c)**

Parentage: (*speciosum* × 'Star Gazer') × 'Dominique'  
 R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1995)  
 Inside yellowish white (155D) with greenish yellow near the base and on midveins, throat light greenish yellow (5C); outside yellowish white (155D); spots yellow, medium sized; papillae present; nectaries green; pollen orange-brown; stigma purple to purplish green. Tepals 137 × 66 mm, margins smooth, tips slightly recurved. Lvs scattered, 168 × 39 mm, mid green. Stems 1.1 m, green, with 6-7 fls ( from 14-16 cm bulbs). Late.

**'Topsy' VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
 Inside strong purplish pink (73B), midveins yellow at base; outside strong purplish pink (73B); spots and papillae present; nectaries yellow-green; pollen orange-brown; stigma dark purple. Tepal-margins ruffled, outer more so, tips recurved. Stems 1.3 m, green with darker stripes and spots, and with c.6 fls. Early to midseason. Trade designation: VLETTOP.

**TOPWHITE VII(a-b/c)**

Trade designation of 'Zanlorwhite'

**'Tora' I(b-c/c-d)**

Parentage: 'Tirreno' × 'Honey Pink'  
 R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)  
 Inside pale yellow-green (155A), tepals with a light yellow (10B) centre, throat green; outside green-white; spots and marbling dark red (187A); nectaries dark brown; pollen orange. Fls 100 mm wide; tepals 60 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 8 mm, dark green. Stems 0.85 m, green, with c.8 fls. Early July.

**'Torch' I(a/-)**

Parentage: *L.* × *hollandicum* × *lancifolium*  
 R: J. de Graaff (c. 1960), N: J. de Graaff  
 Fls brilliant orange-red. Stems 0.8-1 m. July. (Published in *ILR* (1969).)

**'Torchbearer' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
 R: C. Robinson (1977), G: C. Robinson (1980), N: C. Robinson (1983), I: C. Robinson (1984), REG: C. Robinson (1983)  
 Brilliant yellow (14C), throat strong reddish orange (31B); outside brilliant yellow (14C), midribs pale yellow-orange (24D); spots dark brown in the basal half of fl.; nectaries pale green; pollen dark brown. Tepals 76 × 38 mm, margins smooth, tips not recurved. Lvs scattered,

98 × 13 mm, dark green. Stems 1.1 m, dark green, ribbed, with up to 18 fls. July to Aug.

**'Torelli' I(a/-)**

Parentage unknown  
 REG: Vletter & Den Haan Beheer B.V. (2003)  
 Inside vivid orange (28A/B); outside brilliant orange (29A); spots and papillae present; nectaries green; pollen red-brown; stigma red. Tepal-margins slightly ruffled, tips slightly recurved. Stems tall to very tall, with some reddish markings. Midseason.

**'Torero' Div. ?**

See note under 'Ralph de Bricassart'.

**TORERO VII(-/b)**

Trade designation of 'Towny'.

**'Torino' I(b/-)**

Parentage: (*lancifolium* × unknown) × (*dauricum* × unknown)  
 R: Gebr. N. & B. Laan & Zn, G: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn (1979), REG: Gebr. N. & B. Laan & Zn (1980)  
 Inside pale yellow (19C), tepals edged with apricot; outside apricot, veined with Spanish orange; centre spotted brown; anthers red-brown. Stems 1 m. Syn.: 'Cream Tiger' (not of Laan). (Published in *Bloembollencultuur*, July 1979.)

**'Torino' I(a/-)**

Parentage unknown  
 R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992)  
 Inside a little stronger than vivid yellow (12A), throat light greenish yellow (5C); outside a little stronger than vivid yellow (12A), midribs brownish orange (166C) towards base; spots dark red (187B) on basal part of each tepal; pollen moderate reddish brown (175A); stigma dark red (187B). Fls 170 mm wide; petals 90 × 40 mm. Lvs scattered, 120 × 20 mm. Stems 1.15 m, pale green with darker markings, and with c.7 fls. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Tornado' IX(b-c/d)**

See *speciosum* 'Tornado'.

**'Tornessa' VIII(c/b)**

Parentage: seedling 89-102 × seedling 89-22-2  
 R: World Breeding B.V., N: World Breeding B.V. (2001), REG: World Breeding B.V. (2004)  
 Inside light greenish yellow (8B), lighter towards tepal-tips, midveins yellow at base, young fls flushed with red at base; outside light greenish yellow (8B), young fls flushed with red at base; spots and papillae absent; nectaries green; pollen vivid yellowish pink (28A); stigma light yellow-green (145B). Fls 180 mm wide; tepals 148-150 × 46-68 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 205-215 × 32-42 mm, dark green. Stems 1-1.2 m, green with darker spots and stripes,

and with 1-9 fls. Late.  
(An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096401).)

**'Toro' I(a/b)**

Syn. of 'Hocozu'.

**'Toronto' I(a-b/b)**

Parentage: seedling RS 85-34 × seedling RS 88-18  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1994), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside strong purplish red (54A), tepals light yellow (21D) at base; outside deep purplish pink (54B); spots and papillae present; nectaries green; pollen reddish brown; stigma purple. Tepal-margins smooth, tips recurved. Stems 1.5 m, green with darker stripes and spots, and with c.10 fls. Midseason.

**'Torvisio' I(a/b)**

Parentage: 'Pasa Dena' × seedling 85774  
R: Gebr. Vletter & Den Haan, G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1999), I: Gebr. Vletter & Den Haan, REG: Vletter & Den Haan Beheer B.V. (2001)

Inside vivid orange (28B), tepals edged with vivid reddish orange (30A), with a little brilliant orange-yellow (21B) above nectaries, throat brilliant greenish yellow (6A) and vivid orange (28B); outside brilliant to light orange-yellow (23B/C), tepals edged with vivid reddish orange (30B), midribs strong yellow-green (145A) with a little strong yellow-green (144A) at base, and tipped with strong yellow-green (143A); spots few, dark red (187A/B); papillae vivid reddish orange (32A) in the throat; nectaries moderate yellowish pink (31D); pollen strong reddish orange (169A); stigma dark red (59A). Fls 190 mm wide; tepals 100 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 15 mm. Stems 1.1 m, green, with 6-9 fls.

**'Tosa-himeyuri' IX(a/c)**

See *concolor* var. *pulchellum* 'Tosa-himeyuri'.

**'Tosca' VII(a-b/-)**

Parentage: unnamed seedling × unnamed seedling  
R: Imanse Lieveredeling B.V. (1991), N: Peacock B.V. (1995), I: Peacock B.V. (1995), REG: Peacock B.V. (2002)

Inside yellowish white (155D), base of midveins pale yellow (8D) changing into light purplish pink (73C), throat rose-pink; outside yellowish white (155D); spots and papillae present; nectaries green changing into yellow-green; pollen red-brown; stigma purple. Fls 200 mm wide; tepals 110 × 40 mm, margins ruffled, tips recurved. Lvs scattered, 100 × 30 mm. Stems 0.85 m, green, with 2-6 fls. Midseason.

**'Toscana' I(a/b-c)**

Syn. of 'Toscane'.

**'Toscane' I(a/b-c)**

Parentage unknown

R: Vletter & Den Haan, REG: J.P. van Veen (1989)  
Inside light purplish pink (68D) flushed with strong purplish pink (68B), throat yellowish white (155B); outside pale purplish pink (62D), tepals edged with moderate purplish pink (62B), midribs and outer tepals flushed with pale yellow (158B); spots absent; pollen strong orange (169D). Fls 155 mm wide; tepals 80 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 65 × 15 mm, mid green. Stems 0.5-1 m, green with slight darker markings, and with 11-14 fls (from 16-18 cm bulbs). July.

Syn.: 'Toscana'.

(Registered and included in *ILR Tenth Supplement* as 'Toscana'. However, in 1988 Dutch PBR (LEL 381) were granted to this cv. under the epithet 'Toscane', and so this latter spelling of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Toscelli' VII(-/a)**

Parentage: unnamed seedling × unnamed seedling  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1992), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside moderate to light purplish pink (65A/B), tepal-margins and tips almost white, midveins yellow at base; outside pale purplish pink (65C); spots and papillae present; nectaries yellow-green; pollen reddish brown; stigma purple. Tepal-tips recurved. Stems 1.3 m, green with darker stripes and spots. Midseason.

**'Total Victory' IX(b/c)**

See *auratum* 'Total Victory'.

**'Tottenhamii' I(a/-)**

Parentage: *L. × maculatum* × *L. × hollandicum*

R: unknown

Fls yellow, spotted with red.

(Published in *Wallace Cat.*, 1900.)

**'Touch' VII(b/-)**

Parentage: (white-flowered Oriental lily × 'Star Gazer') × 'Cherry Blossom'

R: Lybelmex Hillegom B.V. (1987), G: Lybelmex Hillegom B.V. (1990), N: Lybelmex Hillegom B.V. (1997), I: Lybelmex Hillegom B.V., REG: Lybelmex Hillegom B.V. (1997)

Inside a third of each tepal yellowish white (155D) shading to deep purplish pink (64D) on a white ground towards tip, throat yellowish white (155D); outside a third of each tepal yellowish white (155D) shading to deep purplish pink (64D) on a white ground towards tip, strong yellow-green (144B) at base, strong yellow-green (144A) at tip, outer tepals moderate purplish red (59C) along midribs; a variable amount of light/pale purplish pink (64B/C) spots on basal part of each tepal; papillae yellowish white (155D) in the throat; nectaries strong/light yellow-green (144C/D); pollen strong brown (172A) and strong orange (169B); stigma strong yellow-

green (145B). Fls 220 mm wide; tepals 115 × 30-50 mm, margins ruffled, tips recurved. Lvs scattered, 110 × 20-25 mm, mid green. Stems 1.1 m, green with a little darker marking, and with 2-5 fls.

**‘Touche’ I(a/-)**

Parentage: (Panamint Group × ‘Sterling Star’) × (Yellow Blaze Group × ‘Connecticut King’)

R: Bischoff Tulleken Lelies B.V. (1979), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside pale greenish yellow to pale yellow-green (2D/4D) changing to pale yellow-green (155A/4D), throat strong yellow-green (144C); outside pale yellow-green (4D), tepal-tips brownish orange (165B), the ‘tube’ suffused with moderate reddish orange (178C/D); spots few, dark red (187A), in the throat; nectaries dark red (59A); pollen moderate orange (167A). Fls 170 mm wide; tepals 85 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 17 mm, mid green. Stems 0.6 m, green with darker markings, and with c.9 fls. July.

**‘Tourmalet’ VII(a-b/-)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V. (1985), G: Vletter & Den Haan Beheer B.V. (1988), N: Vletter & Den Haan Beheer B.V. (1991), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside pale yellow-green (155A); outside yellowish white (155D); spots and papillae absent; nectaries green; pollen light brown; stigma dark purple. Stems 1.4 m. Early to midseason.

**‘Tourmaline Red’ I(b/c)**

Parentage: ‘Radiant Glow’ × ‘Edith Cecilia’

R: E. Robinson, N: E. Robinson, I: E. Robinson (1972), REG: E. Robinson (1972)

Fls light red, 150 mm wide. Stems 0.8 m.  
(Published in *Lilies and other Liliaceae*, 1973: 115.)

**‘Tours’ I(a/-)**

Parentage: ‘Puglia’ × seedling RS 89-14

R: Vletter & Den Haan (1993), G: Vletter & Den Haan, N: Vletter & Den Haan (1996), I: Vletter & Den Haan (1996), REG: Gebr. Vletter & Den Haan (1996)

Inside pale greenish yellow (2D), each tepal with a strong red (53B/C) mark about a third of the way from the base which shades out into the rest of the tepal, throat strong to light yellow-green (144C/D); outside pale greenish yellow (2D), tepal-margins a little darker, midribs suffused with dark pink (182D); spots and papillae absent; nectaries paler than light yellow-green (144D), hairy; pollen strong orange (25A); stigma brilliant yellow-green (150B), with reddish brown hairs. Fls 165 mm wide; tepals 90 × 40-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 1.4 m, green with darker markings, and with 6-7 fls.

**‘Tove’ I(a/-)**

Parentage unknown

R: L. Daehnfeldt Inc., G: L. Daehnfeldt Inc., N: H. Larsen (1979), I: H. Larsen (1979), REG: H. Larsen (1987)

Bicolour: inside brilliant yellow (13B) and vivid orange-yellow (23A), tepal-tips brilliant yellow (12B), throat vivid yellow (13A); outside vivid yellow (9A); heavy spots of greyish brown (166A); nectaries green; pollen greyish brown (166A). Tepals 85 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 70 × 20 mm, mid green. Stems 0.6 m, green, with 3-5 fls, and with bulbils. Late July. (Introduced in 1979 as no. ST31.)

**Tower Group VI(c/d)**

Parentage: *henryi* × Aurelian selection

R: T.R. Martin (c. 1956), N: T.R. Martin

Fls orange-apricot; papillae present. Stems 1.9 m. Aug. (Originally called “Niagara Highland Henryi Hybrids”, a name that was never published, and which was abandoned.)

**‘Towering Delight’ II(-/d)**

Parentage: *L. × dalhansonii* ‘Brocade’ × (*L. × dalhansonii* × *tsingtauense*)

R: E. Robinson (1968), N: E. Robinson (1978), I: E. Robinson (1978), REG: E. Robinson (1980)

Inside mauve-pink; outside paler; spots few, maroon. Tepals strongly recurved. Lvs whorled, dark green. Stems 1.5 m, dark green, with 15 or more fls in a triangular infl. (Published in Gaybird Nursery lily list, 1978.)

**‘Towering Turk’ I(c/d)**

Parentage: Red Knight Group × unknown

R: P.H. Wright, N: P.H. Wright, I: P.H. Wright (1975), REG: P.H. Wright (1980)

Fls deep, glossy, rich red, throat darker; spots small, black, below; nectaries red; pollen red-orange. Lvs scattered, numerous, dark green. Stems 1.2 m, dark green, with up to 30 fls. July.  
(Published in *Honeywood Lilies Cat.*, 1975.)

**‘Townhill Variety’ II(-/-)**

Parentage: *L. × dalhansonii* × unknown

R: Lord Swaythling (c. 1935), N: Lord Swathling AM 1938

(Published in *JRHS* 63: 446, cxi, cxiii (1938).)

**‘Townhill Variety’ IX(c/d)**

See *martagon* ‘Townhill Variety’.

**‘Towny’ VII(-/b)**

Parentage: seedling 686 × ‘Acapulco’

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1996), I: Vletter & Den Haan, REG: Vletter & Den Haan Beheer B.V. (1998)

Inside strong purplish red (63A), paler towards the tepal-margins and tips, midveins deep red (60A); outside strong purplish red to strong purplish pink (63B/C); numerous spots and some papillae present; pollen orange-brown; stigma grey. Tepal-margins ruffled, tips strongly recurved.

Stems 1 m, green with dark stripes and spots. Early to midseason.

Trade designation: TORERO.

**‘Toyland’ I(a/-)**

Parentage unknown

R: P. Whipple, G: P. Whipple, N: P. Whipple, I: Borbeleta Gardens (1988), REG: Borbeleta Gardens (1988)

Inside a blend of salmon, yellow and white on basal half of each tepal, tips soft pink, throat brown; outside tan-pink; spots very few, on base of each tepal; nectaries brown; pollen orange. Tepals 90 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 30 mm, mid green. Stems 1 m, dark green, with c.18 fls. July. (Published in *Borbeleta Gardens Cat.*, 1988.)

**‘Tracy’ VII(-/-)**

Parentage unknown

R: T.T. Kirsch (1974), G: T.T. Kirsch (1977), I: Sun Valley Bulb Farms, Inc. (1982), REG: Sun Valley Bulb Farms, Inc. (1983)

Inside moderate purplish pink (66D), redder towards midveins, paler towards greenish white (155C) tepal-margins, tips light purplish pink (62C) edged with white, throat slightly redder than overall colour; outside pale purplish pink (65C) on inner tepals, to deep purplish pink (70C) on outer tepals, all tepals with white margins and darker midribs; spots dark maroon on the basal part of tepals; nectaries strong yellow-green (144B); pollen vivid yellow-orange (23A). Fls 200 mm wide; tepals 130 × 55 mm, margins ruffled, tips strongly recurved. Lvs scattered, 130 × 45 mm, mid green. Stems 0.9-1.4 m, light blue-green with maroon streaks, and with 4-8 fls. July.

Syn.: ‘Pink Sensation’.

**‘Trade Winds’ I(a/-)**

Parentage: (*lanceifolium* var. *flaviflorum* × *leichtlinii* var. *maximowiczii* (unspotted form)) × pale-flowered “halo” seedlings

R: W. Windus (c. 1975), N: W. Windus (1981), REG: W. Windus (1981)

Inside brilliant yellow (12B), flushed with moderate reddish orange (178D) in throat; outside moderate reddish orange (178D); spots absent. Fls 150 mm wide. Stems 1.4-1.5 m, with 10-13 fls.

**Traganza Red Group I(a/-)**

Parentage: *L. × hollandicum* × unknown

R: Traganza, N: Traganza

Fls medium red. Stems 1 m. Early July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978) as Traganza Red strain and included in *ILR* (1982) as Traganza Red grex.)

**‘Traku Pilis’ I(c/b)**

Parentage: *dauidii* × ‘Golden Wedding’

R: S.A. Eicher-Lorka (c. 1974), N: S.A. Eicher-Lorka  
Fls carmine-red; spots small, brown. Stems up to 1.7 m. (Published in *Cvetovodstvo* 3: 37 (1981).)

**‘Trampolina’ VI(-/-)**

Parentage: *regale* × ‘Thunderbolt’

R: Saatzucht Zierpflanzen Erfurt (1982), G: Saatzucht Zierpflanzen Erfurt (1985), N: Saatzucht Zierpflanzen Erfurt, REG: Institut für Gemüse- und Zierpflanzenbau Grossbeeren Erfurt (1994)

Inside white, throat brilliant orange-yellow (23B); outside pale purplish pink (56D); spots absent; nectaries strong yellow-green (144A); pollen yellow-brown. Fls 170 mm wide, scented; tepals 110-120 × 25-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 110-120 × 12 mm, mid green. Stems 1.2 m, dark green, with 12-15 fls. Early to mid July.

**‘Trance’ VII(-/b)**

Parentage: (*auratum* × *rubellum*) F<sub>2</sub>

R: Bischoff Tulleken Leliecultuur B.V. (1977), G: Bischoff Tulleken Leliecultuur B.V. (1980), N: Trior Lelie B.V. (1983), I: Trior Lelie B.V. (1983), REG: Bischoff Tulleken Lelies B.V. (1985)

Inside strong to moderate purplish pink (68B/C); each tepal with an ivory margin and a rhodamine-pink midvein; outside pale purplish pink (55D), midribs yellow; spots cherry-coloured, in the throat; nectaries greyish green; pollen moderate reddish orange (171A). Fls 170 mm wide; tepals 80 × 55 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 35 mm, mid green. Stems 0.5 m, green, with c.8 fls. Early July. (Classified as Div. VI in *ILR Fourth Supplement* but corrected to Div. VII in the *Fifth Supplement*.)

**‘Trankovskii’ II(b/d)**

Unaccepted spelling of ‘Trankovskogo’.

**‘Trankovskogo’ II(b/d)**

Parentage: *monadelphum* × *martagon*

R: D.A. Trankovski (c. 1938)

Fls purplish raspberry-red, shaded with violet, tepals yellow at base; spots brownish black; nectaries green. Fls 80-100 mm wide, fragrant. Lvs 90 × 7-10 mm, downy on margins and veins beneath. Stems 1-2 m, green, white-downy, with 5-15 fls. June to July.

(Published in *LYB* 33: 74 (1970) as ‘Trankovskii’ which is an unaccepted spelling. Included in *ILR* (1982) as ‘Trankovsky’, also an unaccepted spelling.)

**‘Trankovsky’ II(b/d)**

Unaccepted spelling of ‘Trankovskogo’.

**‘Tranquil Dawn’ VII(b/b)**

Parentage: *auratum* ‘Wittei’ × ‘Cymbeline’

R: G.G. & F.S. Blake (1969), G: G.G. & F.S. Blake (1973), N: G.G. & F.S. Blake (1985), I: G.G. & F.S. Blake (1985), REG: G.G. & F.S. Blake (1985)

Inside white, each tepal with a ray of brilliant yellow (13C) shading to light greenish yellow (6D) near tip, tip white flushed with pale purplish pink (56A) (depending on weather), throat strong yellow-green (144C); outside of outer tepals with dark red (59A) midribs shading to moderate purplish pink (66D), inner tepals with moderate red (183D) midribs; spots sparse, faint,

moderate orange (172D), shading to brilliant yellow (13D); nectaries strong yellow-green (144C); pollen dark reddish orange (172B). Fls 280 mm wide; tepals 155 × 70 mm, margins ruffled, tips slightly recurved. Lvs 195 × 80 mm, dark green. Stems 2 m, moderate yellow-green (147C), mottled with light olive-grey (197B), with c.18 fls. Feb. (Australia).  
(Fls have a pink flush when grown in sun.)

**‘Tranquility’ I(a/-)**

Parentage: ‘Redwing’ × (‘Fantasy’ × (*dauricum* ‘Praecox’ × unknown))  
R: G.M. Chandler, N: G.M. Chandler, I: G.M. Chandler (1958)  
Fls ornament-orange (HCC 10/1), suffused with red near nectaries; spots brownish purple. Fls 115-125 mm wide; tepals slightly reflexed. Stems 0.8 m.

**‘Traumstein’ Div.?**

Given as a parent of ‘Rybnik’. No further details. Perhaps an error for ‘Traunstein’.

**‘Traunstein’ VI(-/-)**

Parentage: seedling 2/83 × ‘Glockenturm’  
R: V. Strasser (1983), G: V. Strasser (1986), N: V. Strasser (1992), I: V. Strasser (1992), REG: V. Strasser (1996)  
Inside light yellow (11B), throat yellowish green; outside yellow; nectaries green; pollen orange. Tepals 124 × 49 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 9 mm, dark green. Stems 1.3 m, green, with c.20 fls. Mid July.

**‘Traveller’ I(a-b/b)**

Parentage: (‘Crescendo’ × unknown) × yellow-flowered seedling  
R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (1999)  
Inside vivid yellow (9A); outside vivid yellow (9B) shading to vivid yellow (9A) at tepal-edges; spots dark red (187A), on basal part of each tepal; papillae vivid yellow (9A) and a little dark red (187A), in the throat; nectaries green with a little light greenish yellow (4C); filaments yellow; pollen moderate reddish brown (175A); stigma moderate reddish brown (177A). Fls 170 mm wide; tepals 85 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 15 mm, dark green. Stems 1 m, green with dark spots, and with c.7 fls. June.

**‘Traviata’ I(a/b-c)**

Parentage: (‘Ohnivák’ × (‘Chinook’ × ‘Wattle Bird’)) × (((*lancifolium* var. *flaviflorum* × *wilsonii* var. *flavum*) F<sub>2</sub> × ‘Red Night’ (of Laan)) × ‘Bold Knight’  
R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside deep pink, tepals with narrow white edges and deeper pink centres, throat paler at base; outside with greenish midribs; spots dark brown, very small, on a third of each tepal; nectaries open, olive-green, white-granulated; filaments pink; pollen brown-orange; style

pale brown; stigma whitish. Fls 115 mm wide; tepals 60 × 31 mm, boat-shaped, scarcely recurved; pedicels 50 mm long, slender, green. Lvs scattered, 80 × 11 mm, dull dark green. Stems 0.55 m, green. Mid June.

**‘Treasure’ VII(-/d)**

Parentage: white-flowered seedling × ‘Star Gazer’  
R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1990)  
Inside yellowish white (155B), each tepal with a large, deep purplish pink (58D) flame, throat light yellow-green (145C); outside yellowish white, with a slight light purplish pink (68D) flush on basal half of outer tepals; spots deep purplish red (59B), in centre of each tepal; pollen strong reddish orange (169A). Fls 200 mm wide; tepals 95 × 50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 96 × 24 mm, mid green. Stems 0.6 m, pale green, with 5-6 fls.

**‘Trebla’ I(a/-)**

Parentage unknown  
R: A. Rech (pre 1983), N: A. Rech, REG: A. Rech (1988)  
Fls salmon-red. Stems and leaves dark green. Stems 0.8 m. Mid July.  
(Published in German Lily Group sales list, 1983.)

**‘Treffler’ I(a/b)**

Parentage unknown  
R: Bottema Lelie B.V. & Mts S.E. Bottema & Zn, N: Bottema Lelie B.V. & Mts S.E. Bottema & Zn, I: Bottema Lelie B.V. & Mts S.E. Bottema & Zn, REG: Mts S.E. Bottema & Zn (1999)  
Inside vivid reddish orange (30A/B), throat light orange (28C); outside strong yellowish pink (32C) changing to vivid reddish orange (30B) towards tepal-margins; spots absent; papillae few, self-coloured, in the throat; nectaries light orange (28C); pollen moderate reddish brown (175A); stigma dark red (187B). Fls 170 mm wide; tepals 90 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 15 mm, green. Stems 1 m, green with a little darker marking, and with c.6-10 fls.

**‘Trend’ VI(b-c/b,d)**

Parentage: ((*henryi* × ‘Gold Eagle’) × unknown) × ((‘Andrea’ × ‘Sommertraum’) × (*henryi* × ‘Gold Eagle’))  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)  
Inside ochre-apricot, throat greenish; outside with green midribs; spots absent; nectaries green; pollen ochre-apricot; stigma green. Fls 105 mm wide; tepals 95 × 44 mm, inner tepal-margins gently wavy; pedicels 120 mm, slender, brown-dotted, with secondary buds. Lvs scattered, 145 × 17 mm, dull dark green. Stems 1.45 m, moderately thick, dotted with red-brown. Mid July.

**‘Trendsetter’ I(a/-)**

Parentage unknown  
R: Peacock B.V., G: Peacock B.V., N: Peacock B.V. (1989), I: Peacock B.V., REG: Peacock B.V. (1990)

Inside light orange (28C), throat flushed with strong orange-yellow (24B); outside pale orange-yellow (24D), tepal-margins strong orange-yellow (24B), midribs brilliant to strong yellow-green (142B/144C); spots dark red (187A), in the throat, mainly on inner tepals; pollen strong orange (169C). Fls 170 mm wide; tepals 90 × 52 mm, margins smooth, tips not recurved. Lvs scattered, 180 × 13 mm, mid green. Stems 0.85 m, pale green, with c.7 fls. Apr. to May (under glass).

#### **‘Trento’ VII(a/b)**

Parentage unknown

R: Gebr. Vletter & Den Haan v.o.f., G: Gebr. Vletter & Den Haan v.o.f., N: Gebr. Vletter & Den Haan v.o.f., I: Gebr. Vletter & Den Haan v.o.f., REG: Gebr. Vletter & Den Haan v.o.f. (1999)

Inside moderate to strong purplish red (64A/B) on a paler ground, with dark red from above nectaries to the mid point of each tepal, throat greenish white (155C); outside moderate purplish red (64A) on a paler ground, with a little strong yellow-green (144A) and greenish white (155C) at base, midribs yellowish white (155B), tipped with strong yellow-green (144A); spots dark red (187A) on basal part of each tepal; papillae greenish white (155C) and strong purplish red (64B), in the throat; nectaries strong yellow-green (143C); pollen strong orange (169B); stigma pale yellow-green (195C). Fls 180 mm wide; tepals 105 × 35-45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 160 × 40 mm, dark green. Stems 1.1 m, green, with c.4-6 fls.

#### **‘Trenwell’ I(b/b)**

Parentage unknown

R: G.M. Chandler (1973), N: G.M. Chandler (1978), I: K.L. Watkins (1981), REG: K.L. Watkins (1983)

Inside vivid yellow (14A), throat brilliant greenish yellow (5B) merging to vivid yellow (14A); outside vivid yellow (14A), outer tepals flushed with brownish orange (166C); spots dark red (187A) on basal half of each tepal, a few along apical half of nectaries; nectaries pale yellow (18D); pollen strong orange (24A). Fls 135 mm wide; tepals 70 × 30-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 10 mm, dark green. Stems 1 m, dark red (187A) at base, paling to speckled, dark green above, with 20-30 fls. Mid to late Dec. (Australia).

(Published in *Kenro Bulb Cat.*, 1981.)

#### **‘Tresor’ I(a/b)**

Parentage: unnamed seedling × ‘Brunello’

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1995), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1998)

Inside vivid reddish orange (30B), midveins orange; outside vivid yellowish orange (30C); a few small spots and some papillae present; nectaries orange; pollen brown; stigma purple. Tepal-margins slightly ruffled, tips recurved. Stems 1.2 m, green with darker markings, with c.6 fls. Early to midseason.

#### **‘Treus Herz’ I(a/-)**

Parentage: hybrid involving *dauidii*, *lancifolium* & *L. × maculatum*

R: C. Feldmaier, N: C. Feldmaier (1975), I: C. Feldmaier (1975), REG: C. Feldmaier (1978)

Inside strong orange (25A/B), throat strong orange (25B); outside strong orange (25A) with a reddish hue; chocolate-brown spots in a circle; nectaries reddish; pollen reddish brown. Tepals 70 mm long. Lvs bright green. Stems 1.6 m, with 12-25 fls.

(Published in *Lilies and other Liliaceae*, 1978/79: 114.)

#### **‘Trevi’ VII(-/b-d)**

Parentage: seedling 306 × seedling 599

R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside light purplish pink (65B), tepals edged with yellowish white (155D), throat strong yellow-green (143C) surrounded by a light yellow-green (150D) suffusion; outside yellowish white suffused with pale purplish pink (65C), tepal-edges somewhat darker light purplish pink (65B), midribs light yellow-green (150D); spots deep purplish red (61A), on basal half of each tepal; nectaries spotted moderate purplish red (70A) on a yellowish grey (198D) ground; pollen brownish orange (171B). Fls 240 mm wide; tepals 110 × 60 mm, margins smooth, tips strongly recurved. Lvs scattered, 190 × 32 mm, mid green. Stems 1.15 m, green, with c.7 fls.

#### **‘Trial’ I(a-b/b-c)**

Parentage unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2004), REG: B. Mičulka (2004)

Inside pale apricot, centre deeper, red-pink over nectaries, tepal-tips pinkish; outside pale pink with pale apricot tepal-edges, midribs greenish and brownish; spots few, on a quarter of each tepal; nectaries white-granulated; pollen ochre; stigma pale green. Fls 170 mm wide; tepals 70 × 37 mm, margins slightly wavy, tips slightly recurved, the outer more so; pedicels 60 mm, dotted with dark brown. Lvs scattered, 85 × 12 mm, dull dark green. Stems 0.65 m, thick, sparsely dotted. Mid July.

#### **‘Trianon’ VII(-/b)**

Parentage: seedling RS 535 × seedling OR 644

R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1990)

Inside light orange-yellow (23C/24C) flushed with strong red (46A); outside light orange-yellow (22D) with strong orange-yellow (24B) tepal-margins, outer tepals tinged with dark yellowish pink (181D); spots dark red (187A), few, around the red-flushed area; pollen dark reddish orange (175C). Fls 150 mm wide; tepals 70 × 43 mm, margins smooth, tips not recurved. Lvs scattered, 130 × 12 mm, mid green. Stems 1 m, green with darker markings, and with c.8 fls. May (under glass).

**'Trias' I(b/c)**

Parentage: ('Quinella' × white-flowered hybrid) × ('Junio' × 'Honey Creme')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1993), REG: B. Mičulka (1993)

Bicolour: inside with centre cream-yellow, tepal-tips rosy (paler on inner tepals), yellow over nectaries; outside pale beige, tinged with pink, midribs yellow-green, dotted with red-brown; spots dark purple-brown, very numerous, medium sized, on two-thirds of each tepal; nectaries yellow-green, granulated white and rose-pink; pollen brown; stigma purple. Fls 105 mm wide; tepals 62 × 30 mm, slightly recurved; pedicels 80 mm long, spotted with dark red-brown. Lvs scattered, 90 × 9 mm, dull green. Stems 0.75 m, brown-dotted at base. Mid June.

**'Tribun' VI(c/b)**

Parentage: ((Palmer seedling 582812 × 'Gold Eagle') × 'Mimosa Star') × 'Kankán'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1999), REG: B. Mičulka (1999)

Inside beige-apricot, tepal-tips paler; outside brownish; nectaries dark green; pollen chocolate-brown; stigma greyed violet. Fls 130 mm wide; tepals 105 × 50 mm, tips strongly recurved; pedicels 80 mm long, green. Lvs scattered, 120 × 15 mm, dull pale green. Stems 1.45 m, green, spotted with brown in the middle. Late July.

**'Tribute' I(a/-)**

Parentage: 'Sunstar' × 'Connecticut King'

R: E.A. McRae (1975), G: Oregon Bulb Farms, Inc. (1978), N: Oregon Bulb Farms, Inc. (1984), I: Oregon Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc. (1985)

Inside vivid reddish orange (33B), throat vivid reddish orange (30A/B); outside strong yellowish pink (34D); spots absent; nectaries green; pollen golden yellow. Fls 150-180 mm wide; tepals 80 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 1.25 m, light purple, with 8-10 fls. Dec. (Australia). Syn.: 'Steadfast'.

**'Tribute-to-Norgart' II(c/c-d)**

Parentage: *martagon* var. *cattaniae* 'Album Superbum' × (*martagon* × unknown)

R: L. Høpfner (1982), G: L. Høpfner (1988), N: L. Høpfner (1999), REG: L. Høpfner (1999)

Inside white, throat light green; outside white, each tepal with a light pink stripe; numerous pink spots of many sizes chiefly in basal parts but extending up the sides of tepals; nectaries green; pollen orange; stigma brown/pink. Fls 80-90 mm wide; tepals 40-45 × 13-15 mm, margins smooth, slightly recurved from near the base. Lvs whorled, 150 × 30 mm. Stems 1.5 m, green, with up to 10 fls. Late June to early July.

Syn.: 'White Crow'.

(Named for Norgart Martschinke. Nomenclatural standard: colour print supplied by registrant (WSY 0015951). Despite ICNCP, 2004: Art. 32.13 (the second and third elements of a hyphenated word are to start with a lower case letter), the upper case 'N' is retained because 'Norgart' is a proper name.)

**'Tribute-to-Rasmus' I(a-b/-)**

Parentage: 'Blizzard' × 'Katinka'

R: L. Høpfner (1991), G: L. Høpfner (1994), N: L. Høpfner (1997), REG: L. Høpfner (1997)

Inside and outside creamy white (155A), spots absent; nectaries moderate yellow (160A). Fls 100 mm wide; tepals 50 × 32 mm, margins not or slightly waved, tips not recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 0.6 m, dark greyish reddish brown (200A), with up to 10 fls. Mid June.

(Despite ICNCP, 2004: Art. 32.13 (the second and third elements of a hyphenated word are to start with a lower case letter), the upper case 'R' is retained because 'Rasmus' is a proper name.)

**var. *tricolor* IX(b/c)**

See *auratum* var. *tricolor*.

**'Tricolor Gem' IX(b/c)**

See *auratum* 'Tricolor Gem'.

**'Trident' VII(-/d)**

Parentage: seedling 702 × seedling 666

R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside pale purplish pink (65C), throat strong yellow-green (145A); outside light purplish pink (65B) on a yellowish white ground, midribs pale yellow-green (4D); spots and papillae few, deep purplish red (61A) in the throat; nectaries deep purplish red (187D); pollen strong orange (169B). Fls 295 mm wide; tepals 150 × 67 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 170 × 37 mm, mid green. Stems 0.95 m, pale green, darker in infl., with c.5 fls.

**'Trikala' I(a/-)**

Parentage: ('Gold Brocade' × unknown) × yellow-flowered, up-facing Asiatic seedling

R: V. Strasser (1976), G: V. Strasser (1979), N: V. Strasser (1980), I: V. Strasser, REG: V. Strasser (1997)

Fls vivid reddish orange (34A), throat strong orange (24A) to dark red (59A). Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 0.7 m, rather dark green, with c.14 fls. Mid June.

**'Trilite' I(a/b)**

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler, N: B.G. Hayler (1985), I: B.G. Hayler, REG: B.G. Hayler (1985)

Strong yellowish pink (31C), basal central part of each tepal vivid yellow (13C), throat strong red (39A); outside yellow-brown; spots purple, on two-thirds of each tepal; nectaries pale yellow; pollen brown. Tepals 100 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 1.25 m, light purple, with 8-10 fls. Dec. (Australia)

(Published in *Golden Ray Gardens Cat.*, 1985.)

**'Trinidad' I(b/b-d)**

Parentage: 'Rubinstern' × 'Darja'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)

Inside brilliant yellow (7A); outside brilliant yellow (7A) with soft pink midribs; spots dark red (187A), many, large, on more than three-quarters of each tepal; papillae pale, across the base of each tepal; nectaries yellowish white (155B), hoary; filaments long, slightly reflexed; pollen brownish orange (171B); style long, yellow; stigma light yellowish pink (36A). Fls 140 mm wide; tepals 80 × 41 mm, margins smooth, tips strongly reflexed; pedicels red-brown. Lvs scattered, 90 × 17 mm. Stems 1.1 m, red-brown, with 7-10 fls. Mid July.

(Named for the Cuban town of Trinidad. Nomenclatural standard: colour print provided by registrant (WSY 0032271).)

#### **‘Trinita’ II(c/d)**

Parentage: unnamed hybrid × unnamed hybrid

R: F. Tarlton (1987), N: F. Tarlton & M. Joslin (1999), I: M. Joslin & W. Kuyt (1999), REG: Parkland Perennials (1999)

Inside moderate red (182A) in apical half, light yellow (160B) in basal half, throat pale greenish yellow (160C); outside moderate red (182A); spots c.40-50, large, dark red (187A), on basal half of each tepal, with a few extending up the sides and a few on the outside, all on the ground of light yellow (160B); nectaries coloured as adjacent tepals; pollen moderate reddish orange (171A); stigma moderate red (182A). Fls 40 mm wide, slightly scented; tepals 30 × 15 mm, margins smooth, tips slightly to strongly recurved. Lvs whorled, 80-130 × 30 mm. Stems 1.3 m, moderate olive-green (137A), with 12-14 fls. Early July.

(Nomenclatural standard: colour print supplied by F. Tarlton (WSY 0015386).)

#### **‘Triptique’ VII(-c)**

Parentage: (‘Everest’ × ‘Star Gazer’) × (unknown × ‘White Lightning’)

R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1990), I: Bischoff Tulleken Lelies B.V. (1991), REG: Bischoff Tulleken Lelies B.V. (1993)

Inside yellowish white (155B) suffused with light purplish pink (68D), midveins light greenish yellow (8C) shading to white at top, pale greenish yellow (10D) along midvein at base; outside yellowish white (155D) suffused with light purplish pink (68D) along the pale yellow-green (4D) midrib, which shades to brilliant yellow (7B) and ultimately to strong yellow-green (143B) at the top and to strong yellow-green (144C) below; spots light greenish yellow (6D) on basal part of each tepal; pollen strong orange (169B); stigma pale yellow-green (194D). Fls 290 mm wide; tepals 150 × 60 mm, margins ruffled, tips strongly recurved. Lvs scattered, 190 × 25 mm, dark green. Stems 0.8 m, pale green, with c.5 fls.

#### **‘Tristar’ I(a/-)**

Syn. of ‘Red Tristar’.

#### **‘Triton’ I(a/b)**

Parentage: ‘Juliana’ × unknown

R: K. Braun (1988), N: K. Braun, REG: K. Braun (1990)  
Inside and outside violet-red; spots sparse, fairly large, black, on three-quarters of each tepal; papillae violet-red; nectaries violet-red; pollen orange. Fls 140 mm wide; tepals 80 × 27 mm, recurved; pedicels 100 mm long, brownish green. Lvs scattered, 95 × 10 mm, dark green. Stems 1 m, greenish brown, with c.12 fls. Early July.

#### **‘Triumph’ IX(b/c)**

See *auratum* ‘Triumph’.

#### **TRIUMPHATOR VIII(b/a-b)**

Trade designation of ‘Zanlophator’.

#### **‘Trivento’ VII(-/b)**

Parentage unknown

R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1994)

Inside yellowish white (155B), with a very pale suffusion of deep purplish pink (72D), tepal-tips yellowish white (155B), midveins brilliant yellow (10A) just above the nectaries, pale yellow (10D) and with a reddish flush in the basal part; outside with a pale suffusion of deep purplish pink (72D) on a yellowish white (155D) ground, tepals with a slight edging of deep purplish pink (72D), midribs pale yellow-green (155A), strong yellow-green (145A) towards top, and tipped strong yellow-green (143A); spots moderate purplish red (59C) on basal part of each tepal; papillae light yellow (10C) and yellowish white (155D), in the throat; pollen moderate reddish brown (175A); stigma light yellow-green (145C/D). Fls 210 mm wide; tepals 120 × 55 mm. Lvs scattered, 160 × 30 mm, mid green. Stems 1.3 m, pale green with darker markings, and with c.10 fls.

#### **‘Trixie’ VII(-/c)**

See *L. × parkmanii* ‘Trixie’.

#### **‘Trocadero’ VII(a-b/b)**

Parentage: seedling 801 × seedling 633

R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)

Inside yellowish white (155D), tepal-edges and tips suffused with light purplish pink (62C), midveins strong purplish red (63A/B), throat strong yellow-green (143B/C); outside yellowish white (155B), tepal-edges slightly suffused with light purplish pink (62C), midribs pale yellow-green (4D), strong yellow-green (144B) at top, base speckled with dark red (183B); strong purplish red (64B) spots/papillae in the throat; nectaries light greenish grey (190C); pollen strong reddish orange/strong orange (169A/B); stigma green. Fls 235 mm wide; tepals 110 × 62 mm, margins slightly ruffled, tips recurved. Lvs scattered, 165 × 40 mm, mid green. Stems 1.05 m, pale green, with c.6-7 fls.

#### **‘Trofej’ I(a-b/b-c)**

Parentage: (‘Heureka’ × (‘Rozárka’ × ‘Dagmar’)) ×

((‘Quinnella’ × unknown) × ((‘Juno’ × ‘Honey Crème’) × ‘Endeavor’))

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside lemon-yellow, tepal-centres deeper, throat paler; outside paler yellow, midribs brownish; brushmarks rather faint, dark red-brown; nectaries white-granulated; filaments pale yellow; pollen brown; style brownish; stigma pale yellow. Fls 125 mm wide; tepals 70 × 33 mm, tips slightly recurved; pedicels 45 mm long, slightly brown-dotted. Lvs scattered, 90 × 8 mm, slightly glossy dark green. Stems 0.85 mm, thick, dark green. Mid June.

#### **TROFEO VII(a/b)**

Trade designation of ‘Zanlortrofeo’.

#### **‘Trogon’ I(a/-)**

Parentage: (‘Pirate’ × ‘Sunrise’) × unnamed seedling ex Windus

R: W.S. Summers (1981), G: W.S. Summers (1983), N: W.S. Summers (1994), REG: W.S. Summers (1994)  
Bicolour: inside deep pink (48B) at tepal-tips, pale orange-yellow (19D) at base; outside strong pink (48C); spots brown, small, on orange-yellow part of tepals only; papillae present; nectaries strong pink (48C), slightly frosted; pollen brown. Fls 145 mm wide; tepals 82 × 43 mm, margins smooth, tips slightly recurved. Lvs scattered, 95 × 18 mm, dark green. Stems 1.1 m, green, with 7-20 fls. Late June to early July.

#### **‘Troika’ I(c/-)**

Parentage: (‘Maxwill’ × *regale*) × Bronzino Group  
R: Gebr. N. & B. Laan & Zn (c. 1963), N: Gebr. N. & B. Laan & Zn

Inside brilliant greenish yellow (6B), tepals brown towards edge, red-brown at centre; outside strong reddish orange (31A); spots purple-brown.

#### **‘Trojan’ I(b/b-c)**

Parentage: red-flowered seedling from (*lancifolium* × unknown) × ‘Connecticut Yankee’

R: L. Lutz, N: L. Lutz, I: L. Lutz (1970)  
Fls strong reddish orange (31A), minutely spotted in throat. Stems 1.2-1.5 m, with bulbils. July.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 18 (1978).)

#### **‘Trojan’ I(a-b/-)**

Parentage: ‘Enchantment’ × ‘Connecticut King’  
I: Blackthorne Gardens (1983)  
Inside amber-pink, with oxblood-red brushmarks. Stems 0.75 m. May to June.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

#### **‘Trojanka’ I(a/b)**

Parentage: unknown × ((‘Sonnenkönigin’ × ‘Bellona’) × ‘Picasso’)

R: B. Mičulka, G: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside apricot, tepal tips and centres beige-apricot, tips

pinkish; outside pale pink, midribs beige and green; spots present; nectaries partly open, white-granulated; filaments pale pink; pollen brown; style light brown; stigma brown. Fls 125 mm wide; tepals 75 × 35 mm, tips not recurved; pedicels 70 mm long, slightly brown-dotted. Lvs scattered, 20 × 6 mm, dull deep yellowish green. Stems 0.7 m, thick, slightly dotted. Mid June.

#### **‘Tromba’ VI(-/-)**

Parentage: *regale* × *henryi*

R: Saatzucht Zierpflanzen Erfurt (1986), G: Saatzucht Zierpflanzen Erfurt (1989), N: Saatzucht Zierpflanzen Erfurt, REG: Institut für Gemüse- und Zierpflanzenbau Grossbeeren Erfurt (1994)

Inside white, with vivid yellow (15A) tepal-tips and throat; outside white, midribs strong yellow-green (144B) shaded with strong purplish red (61B); spots absent; nectaries strong yellow-green (144A); pollen yellow-brown. Fls 180 mm wide, scented; tepals 110-115 × 25-40 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 13-15 mm, mid green. Stems 1.6 m, dark green, with c.22 fls. Mid July.

#### **‘Tropic’ I(a/b)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)

Inside vivid orange-yellow (23A), brilliant orange-yellow (21B) towards tepal-edges, edges vivid orange-yellow (23A), throat pale greenish yellow (2D); outside of inner tepals pale yellow (11C), brilliant yellow (11A) towards edges, edges vivid orange-yellow (23A), midribs light greenish yellow (3D); outside of outer tepals pale greenish yellow (2D), edged vivid orange-yellow (21A), tipped with brilliant yellow-green (149A); spots and papillae absent; nectaries pale greenish yellow (2D) hairy; pollen moderate reddish brown (175A); stigma dark red (187B). Fls 170 mm wide; tepals 105 × 50 mm, margins smooth, tips recurved. Lvs scattered, 140 × 10 mm. Stems 1.15 m, dark, with c.4 fls.

#### **‘Tropical’ VII(a/b-c)**

Parentage: seedling 88-225-1 × seedling 88-07

R: World Breeding B.V., N: World Breeding B.V. (2001), REG: World Breeding B.V. (2004)

Inside deep red/strong purplish red (60A/B), lighter towards tepal-margins and tips; outside moderate purplish red (66D); spots and papillae present; nectaries green; filaments pale green; pollen brown-red; stigma purple, spotted. Fls 190-230 mm wide; tepals 140 × 39-64 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 132-206 × 47-61 mm, dark green. Stems 1-1.2 m, green with darker spots and stripes, and with 4-12 fls. Midseason.

(Nomenclatural standard: colour print supplied by registrant (WSY 0096404).)

#### **‘Tropicana’ I(a/b)**

Parentage unknown

R: L. Woodriff (1976), G: L. Woodriff (1977), N: Bowman Creek Farm (1981), REG: Bowman Creek Farm (1981)

Inside raspberry-red, throat shades to pastel yellow and then to raspberry-red at tepal-tips; spots absent; nectaries red; filaments red; pollen orange. Fls 160 mm wide; tepals 85 × 30 mm, margins smooth or slightly ruffled, tips not reflexed. Lvs scattered, 100 × 10 mm, dark green. Stems 0.5 m, green, shaded brown, with c.13-15 fls. June.

#### **‘Tropic Diamond’ VIII(a/b)**

Parentage: seedling LA 93064-26 × Mixed Asiatic pollen R: De Jong Lelies Holland B.V. (1997), G: De Jong Lelies Holland B.V. (1999), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2003)

Inside strong purplish red (60C/D), throat light yellow-green (145C); outside strong purplish red (60D), strong yellow-green (143C) at base, midribs strong purplish red (60C); spots and papillae absent; nectaries strong yellow-green (143B); pollen moderate reddish brown (176B); stigma pale purplish pink (65D). Fls 145 mm wide; tepals 135 × 60 mm, margins smooth, tips slightly recurved. Lvs 165 × 18 mm. Stems 1-1.3 m, green, with c.5 fls. Late June to July.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### **‘Troubadour’ VII(-/c)**

Parentage: (*rubellum* × unknown) × (*rubellum* × unknown)

R: Bischoff Tulleken Leliecultuur B.V. (1975), G: Bischoff Tulleken Leliecultuur B.V. (1978), N: Trior Lelie B.V. (1982), I: Trior Lelie B.V. (1984), REG: Bischoff Tulleken Lelies B.V. (1985)

Inside pale purplish pink (62D), midveins strong purplish red (58B), tepal-tips and margins white, throat rosy white with a strong yellow-green (144C) vein; outside pale purplish pink (62D) to rosy white, midribs primrose-yellow; spots chrysanthemum-crimson, on the whole tepal; nectaries robin-red; pollen strong orange (169C). Fls 220 mm wide; tepals 120 × 60 mm. Lvs scattered, 150 × 40 mm, pale green. Stems 1 m, pale green, with c.7 fls. (Published in *Bloembollencultuur*, 1984.)

#### **‘Trude’ I(a/b)**

Misspelling of ‘Trüde’.

#### **‘Trüde’ I(a/b)**

Parentage: brushmarked seedling × brushmarked seedling R: J. Vasarietis (1984), G: J. Vasarietis (1987), N: J. Vasarietis (1990), I: J. Vasarietis (1990), REG: J. Vasarietis (1992)

Fls strong orange (26A) throughout; with more than half of each tepal covered by a black brushmark, with spots below it; nectaries greenish white; pollen dark brown. Fls 120 mm wide; tepals 64 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm, mid green. Stems 0.8 m, black, with 7-11 fls. Mid July.

(Included in *ILR Eleventh Supplement* as ‘Trude’ which is a misspelling. Trüde is a diminutive of the name Gertrude.)

#### **‘True Grit’ I(a/-)**

Parentage: ‘Byam’s Ruby’ × *dauricum*

R: E.A. McRae (1964), G: Oregon Bulb Farms, Inc. (1967), N: Oregon Bulb Farms, Inc. (1972), I: Oregon Bulb Farms, Inc. (1974), REG: Oregon Bulb Farms, Inc. (1983)

Fls orange-red throughout, except for golden yellow throat; spots black, copious; nectaries green; pollen brown. Fls 130-150 mm wide; tepals 115 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 60-90 × 15 mm, dark green. Stems 0.75 m, light green, with 6-20 fls. June.

#### **‘True Love’ VII(a/b)**

Parentage: unnamed seedling × (*L. × parkmanii* ‘Allegra’ × ‘Star Gazer’) F<sub>2</sub>

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2001), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)

Inside moderate purplish pink (65A), throat, tepal-margins and tips pale yellow-green (155A), midveins pale yellow-green (155A); outside very pale purple (69C), midribs pale yellow-green (4D); spots strong purplish red (71B); papillae present; nectaries strong yellow-green (145A); pollen strong reddish orange (169A); stigma greyish reddish brown (200B). Fls 215 mm wide; tepals 110 × 65 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 185 × 45 mm, green. Stems 1.2 m, light green with darker markings, and with c.4 fls. July.

#### **‘Truly Pink’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: C. Robinson (1979), G: C. Robinson (1983), N: C. Robinson (1987), I: C. Robinson (1987), REG: C. Robinson (1987)

Inside strong purplish pink (55B), paler at extreme base, each tepal with a brilliant yellow (11A) area just above the base, tips strong purplish pink (55B); outside light purplish pink (55C) at tepal-edges, pale yellow (11C) in the centre; spots dark brown on basal half of each tepal; nectaries greenish yellow; pollen dark reddish brown. Tepals 75 × 45 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 18 mm, mid green. Stems 0.41 m, mid green, with c.7 fls. Early. (Lacks the blue pigment usually found in pink Asiatics.)

#### **‘Truly Yours’ I(a/-)**

Parentage: ‘Peachblush’ × ‘Gypsy’

R: E.A. McRae (1976), G: Oregon Bulb Farms, Inc. (1980), N: Oregon Bulb Farms, Inc. (1985), I: Oregon Bulb Farms, Inc. (1985), REG: Oregon Bulb Farms, Inc. (1985)

Inside shell-pink with a cream centre; outside shell-pink with a darker suffusion; spots purple, copious, small, raised; nectaries green; pollen brown. Fls up to 150 mm wide; tepals 60 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 70-80 × 10 mm, mid green. Stems 0.8 m, green, with 8-25 fls. Mid June.

(Published in *Oregon Bulb Farms retail Cat.*, 1985.)

**'Trumao' VII(a/b)**

Parentage unknown

R: Vletter &amp; Den Haan Beheer B.V. (1998), N: Vletter &amp; Den Haan Beheer B.V. (2002), REG: Vletter &amp; Den Haan Beheer B.V. (2002)

Inside strong purplish red (64B), with moderate purplish red (64A) along midveins, throat yellowish white (155D); outside deep purplish pink (66C), midribs with a light yellow-green (145C) stripe, suffused with purplish pink; spots strong purplish red (71B); papillae present; nectaries strong yellow-green (144C), becoming light greenish yellow (3C) towards edges; pollen moderate reddish orange (171A); stigma light to very light purple (76A/B). Fls 220 mm wide, slightly scented; tepals 140 × 70 mm, margins ruffled, tips slightly recurved. Lvs scattered, 190 × 60 mm. Stems 1.02 m, green with darker markings, with c.3 fls.

**'Trumpeter' VI(-a)**Parentage: *L. × imperiale* × unknown

R: E.F. Palmer?, REG: B.L. Palmer (1985)

Inside white, throat soft yellow; outside pink-brown; pollen dark brown. Lvs scattered. Stems 0.9-1.2 m. (Published in *B.L. Palmer Cat.*, 1963.)

**'Trumpeter's Lullaby' VI(-a)**

Parentage: pink-flowered trumpeter × pink-flowered trumpeter

R: C. Helsley (1983), G: C. Helsley (1987), N: C. Helsley (1989), I: Ozark Mountain Lilies, REG: C. Helsley (1989)

Inside pale pink, tinged with white, tepal-margins deep purplish pink (70C), throat vivid yellow (9A); outside moderate purplish pink (70D), midribs deep purplish pink (70C); spots absent; nectaries vivid yellow (9A); pollen strong orange (24A); stigmas dark purple. Fls 110 mm wide; tepals 160 × 25-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 10 mm, pale green. Stems 1.5 m, grey-green, with 12-18 fls. Late June.

**'Truro' I(c/-)**

Parentage: selection from Riviera Group

S: Rosewarne EHS (1967), N: Rosewarne EHS (1974), I: Rosewarne EHS (1978), REG: Rosewarne EHS (1976)

Vivid yellowish orange (30C), tepal-tips vivid reddish orange (41A); throat vivid yellowish orange (30C); outside brilliant orange (25C) on vivid yellowish orange (30C); spots present; nectaries vivid orange (28B); pollen strong reddish orange (169A). Tepals 80 mm long. Lvs moderate olive-green (146A), sword-shaped, tips curled down. Stems 0.9 m. Late June. (Published in *Lilies and other Liliaceae*, 1976: 93.)

**'Truvér' I(a-b/b)**

Parentage: ('Casyra' × unknown) × (('Alexis' × 'Artistic') × 'Mocha')

R: J. Kovář (1999), N: J. Kovář (2005), I: J. Kovář (2005), REG: J. Kovář (2005)

Inside pale apricot with shining centre; outside pinkish at base; brushmarks dark crimson; nectaries greenish, edged with yellow-green; pollen brown-orange; stigma pink-

crimson. Fls 115 mm wide; tepals 70 × 30 mm, slightly recurved; pedicels 70 mm, crimson-dotted. Lvs scattered, 70 × 10 mm, slightly glossy mid green. Stems 0.9 m, finely brown-dotted. Early July.

**'Trylek' I(a-b/b-c)**

Parentage: 'Sterling Star' × unknown

R: J. Kovář (1998), N: J. Kovář (2005), I: J. Kovář (2005), REG: J. Kovář (2005)

Inside pale beige-apricot, each tepal with a small pinkish flame around nectary, tepal-tips paler, throat olive-green; outside pale beige-apricot, midribs pinkish at base; numerous crimson-brown spots and dashes on half of each tepal; nectaries silver-granulated, with yellowish border; pollen bright brown-orange; stigma crimson. Fls 140 mm wide; tepals 75 × 33 mm, very slightly recurved; pedicels 50 mm, slender, finely pale brown-dotted. Lvs scattered, 65 × 8 mm, dull yellow-green. Stems 0.8 m, slender, finely pale brown-dotted. Early July.

**'Tseriba' I(b/-)**

Misspelling of 'Ceriba'.

**'Tsing' II(-/-)**Parentage: *L. × dalhansonii* × *tsingtauense*

R: E. Robinson, G: E. Robinson (1965), N: E. Robinson (1977), REG: E. Robinson (1978)

Fls tangerine-orange, spotted. Stems 0.6-1 m.

(Unacceptable name: 'Tsing' (being derived from

*tsingtauense*) is not acceptable under ICNCP, 2004:Art. 19.13 - after 1959 a name must be in any language other than Latin. Published in *Lilies and other Liliaceae*, 1978/79: 114.)**'Tsingense' II(-/-)**Parentage: *L. × dalhansonii* × *tsingtauense*

R: E. Robinson (c. 1964), N: E. Robinson

Fls blazing orange, with small, central spots. Lvs

*tsingtauense* type. Stems 1.5-1.9 m. July.

(Unacceptable name: 'Tsingense' (being formed from

*tsingtauense*) is not acceptable under ICNCP, 2004: Art. 19.13 - after 1959 a name must be in any language other than Latin.)***tsingtauense* Gilg IX(a/c)**

Fls orange to orange-red; spots maroon; papillae present; pollen orange; stigma orange-yellow. Fls often somewhat zygomorphic. Fls to 60 mm wide: tepals up to 40 × 15 mm, tips slightly recurved. Lvs in whorls of 5-14 in lower part of stem, scattered at top of stem, 40-125 × 15-30 mm, dark green. Stems up to 1.2 m, but usually less, with 1-6 fls. June to July. NE China, Korea.

Syn.: *miquelianum*.***tsingtauense* var. *carneum* (Nakai) Nakai IX(a/c)**

Fls reddish; spots absent.

***tsingtauense* var. *flavum* (Makino) E.H. Wilson****IX(a/c)**

Fls yellow, spotted with dark red.

**‘Tsinson’ II(b/c-d)**  
Syn. of ‘Orange Marmalade’.

**‘Tsitronu Henry’ IX(-/d)**  
See *henryi* ‘Citronu Henrijs’.

**‘Tsitronu Karaline’ I(a/-)**  
Unaccepted spelling of ‘Citronu Karaliene’.

**‘Tsjaikowski’ I(a/c)**  
Parentage: seedling RS 90-21 × seedling RS 92-13  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside pale purplish pink (62D), each tepal light purplish pink (62C) towards margin and tip; throat pale yellow-green (157C); outside pale purplish pink (65D), each tepal moderate purplish pink (65A) towards margin; spots few, deep red (53A); papillae pale purplish pink (62D); nectaries strong yellow-green (143C); pollen brownish orange (165B); stigma dark red (59A). Fls 205 mm wide; tepals 100 × 55 mm, margins smooth, tips slightly recurved. Lvs 180 × 15 mm. Stems 1.4-1.7 m, green with darker markings, with 6-7 fls.

**‘Tsukiha’ I(c/-)**  
Parentage: *leichtlinii* var. *maximowiczii* ‘Akatsuki’ × ‘Golden Gleam’  
R: H. Myodo (c. 1957), N: H. Myodo  
Fls scarlet, with a few, brown spots; pollen orange. Tepals strongly recurved.

**‘Tsvetaeva’ I(-/-)**  
Parentage unknown  
R: Z.N. Tsvetaeva (c. 1940), N: Z.N. Tsvetaeva  
No further details.  
(Published in *LYB* 33: 74 (1970) as ‘Tsvetayeva’ which is an unaccepted spelling. Included in *ILR* (1982) as ‘Tsvetayeva’.)

**Tsvetaevoi Group I(-/-)**  
Parentage: ‘Fialkovaia’ × *dauricum*  
R: Z.N. Tsvetaeva (c. 1940), N: Z.N. Tsvetaeva  
Fls orange-yellow to violet-pink, fragrant. Stems to 1.8 m. Very early.  
(Published in Shipovskaya et al., *Lilium* (1972).)

**‘Tsygansky Romans’ I(a/-)**  
Parentage: ‘Kičunova Piemiņa’ × ‘Connecticut King’  
R: B.P. Guzhavin, N: B.P. Guzhavin (1983)  
Fls red-brown, with yellow tepal-tips and a sulphur-yellow throat. Stems 1.2 m.

**‘Tuahiwi Gold’ VI(b-c/a)**  
Parentage: ‘Pink Frills’ × Copper King Group  
G: A.J. Ritchie (1992), N: A.J. Ritchie (1995), REG: A.J. Ritchie (1995)  
Inside light greenish yellow (5D), tepals narrowly edged with strong yellowish pink (35C), throat vivid yellow (15A); outside strong yellowish pink (35C); spots absent; nectaries green; pollen vivid orange-yellow (23A); stigma

dark red (187A). Fls 80 mm wide; tepals 145 × 46 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 7 mm, dark green (136A). Stems 0.85 m, dark green, mottled greyish red (178A), with c.6 fls. Mid Jan. to mid Feb. (New Zealand).

**‘Tuffery’s Ruby’ I(b/-)**  
Parentage: *davidii* × ‘Black Prince’ (Div. I)  
R: L.B. Tuffery (c. 1943), N: L.B. Tuffery  
Fls dark ruby-crimson, with slight gold markings in centre.  
Syn.: ‘Ruby’.  
(Originally called ‘Ruby’, but epithet changed in November 1958. Published in *ILR* (1960).)

**‘Tule’ V(-/a)**  
See *longiflorum* ‘Tule’.

**‘Tuman’ I(a/-)**  
Parentage: ‘Veronika’ × ‘Vanguard’  
R: A.V. Otroshko (1988), N: A.V. Otroshko, REG: A.V. Otroshko (1991)  
Fls creamy white, with a few brown spots and some brown pencil-marks; pollen red. Tepals 72 × 33 mm. Stems 1-1.3 m. June to July.

**‘Tumšais Tango’ I(a/c)**  
Parentage: ‘Dzintars’ × mixed pollen of various members of the Tango Group  
R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)  
Bicolour: inside brilliant yellow (7A), throat greenish; outside yellow; each tepal with a dark red (187A) blotch over half the tepal, together with numerous, small and large, dark red spots; nectaries brown; pollen brown. Fls 150 mm wide; tepals 80 × 40 mm, waxy. Lvs scattered, dark green. Stems 0.9 m, green, with c.9 fls. Mid July.  
(Nomenclatural standard: colour print provided by registrant (WSY 0022987).)

**‘Tundra’ VI(b/a-b)**  
Parentage: ‘Penelope’ × Silver Sunburst Group  
R: P.L. Greenfield (1974), G: P.L. Greenfield (1976), N: P.L. Greenfield (1976), REG: P.L. Greenfield (1985)  
Inside white, tinged with green, tepal-tips white, throat greenish yellow; outside greenish white; spots absent; nectaries green; pollen light brown. Tepals 120 × 50 mm, margins smooth, tips recurved. Lvs scattered, 170 × 18 mm, dark green. Stems 1.8 m, green with darker patterning, and with up to 10 fls. Dec. (New Zealand).

**‘Tune Up’ VIII(a/b)**  
Parentage: (*longiflorum* × pink-flowered seedling) × ‘Montreux’  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2001)  
Inside vivid red (45A) on a white ground, stronger coloured at tepal-tips; outside dark red (59A) on a paler ground, midribs strong yellow-green (144C), tipped with

strong yellow-green (143A); spots absent; papillae pale yellow-green (155A), in the throat; nectaries yellowish white (155B), surrounded by strong yellow-green (145A) and a white rim; pollen moderate reddish brown (175A); stigma strong yellow-green (151C). Fls 180 mm wide; tepals 90 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 15 mm. Stems 1 m, green, with c.7 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Tunis’ I(a/-)**

Parentage: unnamed seedling × ‘Sancerre’  
R: Vletter & Den Haan, G: Vletter & Den Haan (1983), N: Vletter & Den Haan (1990), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1991)  
Inside yellowish white (155B), tepals edged with strong yellow-green (145A) at base, midveins suffused with light pink (49C); spots absent; nectaries dark red (187C); pollen deep orange-yellow (163A). Fls 185 mm wide; tepals 90 × 45 mm, margins smooth, slightly recurved. Lvs scattered, 110 × 10 mm, mid green. Stems 1.1 m, with darker markings, and with c.9 fls. July (under glass).

**‘Turandot’ VIII(a/b)**

Parentage: seedling Lars 93-4 × seedling W 91-28  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside strong purplish pink (68B) on a deep purplish pink (68A) ground, midveins dark, throat very pale purple (69A); outside light purplish pink (63D), strong purplish red (63A) towards tepal-edges, midribs of inner tepals light yellowish pink (159A), of outer tepals light yellow-green (150D); spots deep purplish red (187D); papillae few; nectaries light purplish pink (65B), hairy; pollen strong orange (26A); stigma moderate red (47A). Fls 160 mm wide; tepals 110 × 60 mm, margins smooth, tips recurved. Lvs scattered, 180 × 35 mm. Stems 1.1 m, dark, with 3-6 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Turban’ I(c/b)**

Parentage unknown  
R: G. Pätzold (pre 1986), N: G. Pätzold, REG: G. Pätzold (1997)  
Fls orange with red-brown spots. Tepal-tips strongly reflexed. Stems 1.3 m. Mid July.  
(Published in *Gartenbau*, 1996: 10.)

**‘Tureček’ I(b-c/-)**

Parentage: *leichtlinii* var. *maximowiczii* × unknown  
R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B. Mičulka (1984)  
Inside pale orange, tinged with rose-pink, tepal-tips paler; outside with reddish midribs; papillae small; nectaries orange; pollen brown. Fls 62 mm wide; tepals 65 × 23 mm, strongly recurved; pedicels slightly dotted. Lvs dull dark green. Stems 0.7 m, dotted with dark violet, especially below, slightly hairy. Mid July.

**‘Turkey Red’ I(b/d)**

Parentage unknown  
R: G. Brown, G: G. Brown (1992), N: G. Brown, I: G. Brown, REG: F. Brown (1999)  
Inside vivid reddish orange (34A), throat vivid reddish orange (34B); spots in the centre of each tepal; nectaries red; pollen dark reddish orange (173A). Fls 150 mm wide; tepals 70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm. Stems 1.33 m moderate yellow-green (147B), with up to 30 fls, including secondary and tertiary buds. Mid July to mid Aug.

**‘Tweedle-dee’ I(a/-)**

Parentage: selection from Pisky Group  
S: Rosewarne EHS (1967), N: Rosewarne EHS (1974), I: Geest Ltd, REG: Rosewarne EHS (1976)  
Inside vivid yellow (9A), throat brilliant orange-yellow (21B) on vivid yellow (9A); outside brilliant yellow (8A) tinged with deep yellowish pink (47C); spots present; nectaries light greenish yellow (8C); pollen vivid orange-yellow (23A). Tepals c.90 mm long. Lvs moderate olive-green (146A), sword-shaped, short and broad, tips curled down. Stems c.0.5 m. Early July.  
(Published in *Lilies and other Liliaceae*, 1976: 93 (where it is said to be a sport of *lancifolium*)).

**‘Tweedle-dum’ I(a/-)**

Parentage: selection from Pisky Group  
S: Rosewarne EHS (1967), N: Rosewarne EHS (1974), I: Geest Ltd, REG: Rosewarne EHS (1976)  
Brilliant orange (29A) throughout, throat with orange yellow (21A/B) overlay; spots present; nectaries light orange (28D); pollen strong reddish orange (169A). Tepals c.85 mm long. Lvs strong yellow-green (144A), sword-shaped, with the broad tips of top lvs curled down. Stems 0.4 m. Early July.  
(Published in *Lilies and other Liliaceae*, 1976: 93 (where it is said to be a sport of *lancifolium*)).

**‘Twilight’ I(b/-)**

Parentage: (‘Edith Cecilia’ × ‘Mega’) F<sub>2</sub> × (((‘Lemon Queen’ (Div. I) × unknown) × ‘Edith Cecilia’) × *dauricum*)  
R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc., I: Oregon Bulb Farms, Inc. (1976), REG: Oregon Bulb Farms, Inc. (1977)  
Fls deep pink, fading to almost purple, slightly spotted. Tepals slightly reflexed. Stems 0.6-1 m, dark. June.  
(Published in *Lilies and other Liliaceae*, 1977: 82.)

**‘Twilight Diamond’ VIII(a/b)**

Parentage: seedling LA 93007-18 × (seedling 2008 RS × seedling 2519 RS)  
R: De Jong Lelies Holland B.V. (1996), G: De Jong Lelies Holland B.V. (1998), N: De Jong Lelies Holland B.V. (2003), I: De Jong Lelies Holland B.V. (2002), REG: De Jong Lelies Holland B.V. (2003)  
Inside light orange-yellow (22D), each tepal with strong orange-yellow (22A) towards top, throat pale yellow (20D); outside pale yellow (19C), base and midribs moderate reddish orange (42D) becoming moderate pink

(35D), tepal-margins brilliant yellow (21C), tips strong yellowish green (141C); spots dark red (59A); papillae light yellow-orange (22D); nectaries greyish yellow-green (191A); pollen strong brown (172A); stigma strong purplish red (58B). Fls 200 mm wide; tepals 105 × 57 mm, margins smooth, tips recurved. Lvs 160 × 25 mm. Stems 1.3 m, green, with c.6 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Twilight Life’ VIII(a/-)**

Parentage: pinkish red-flowered Asiatic seedling × (*longiflorum* × ‘Aristo’)  
R: Bischoff Tulleken Lelies B.V. (1987), G: Bischoff Tulleken Lelies B.V. (1990), N: Bischoff Tulleken Lelies B.V. (1994), I: Bischoff Tulleken Lelies B.V. (1994), REG: Bischoff Tulleken Lelies B.V. (1996)  
Inside moderate red/moderate purplish red (185B/C), midveins light orange-yellow (22C) above nectaries and shading into tepal, throat deep/moderate red (185A/B); outside moderate red/moderate purplish red (185B/C), outer tepals edged with deep red (85A), midribs white-hairy; spots dark red (187A) on a third of each tepal; papillae few, in the throat; pollen moderate reddish orange (171A); stigma light orange (26C). Buds hairy. Fls 200 mm wide; tepals 130 × 40-55 mm, margins smooth, tips hardly recurved. Lvs scattered, 200 × 20 mm, mid green. Stems 1-1.3 m, green with darker markings and 2-5 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Twilight Time’ VII(a/b)**

Parentage: (‘Swan Lake’ × ‘Freedom’) × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1991), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2000)  
Inside greenish white (155C), with up to two-thirds of each midvein suffused with vivid purplish red (57D); outside greenish white (155C), midribs of outer tepals with a little brilliant yellow-green (154C) towards top, tipped with strong yellow-green (144B); spots dark red (187C); papillae greenish white (155C); nectaries strong yellow-green (144C); pollen strong reddish orange/strong brown (169A/172A); stigma dark purple (79A). Fls 250 mm wide; tepals 140 × 42.5-60 mm, margins ruffled, tips recurved. Lvs scattered, 200 × 45 mm. Stems 1.1 m, light green, with c.3-6 fls. July.

**‘Twincolour’ I(a-b/b)**

Parentage unknown  
R: Vletter & Den Haan Beheer B.V. (pre 1988), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)  
Inside strong reddish orange (42B), each tepal with a central area of vivid yellow (12A) and dark purple-red markings, throat red-brown; outside strong reddish orange (42B), darker towards tepal-margins; spots and papillae present; pollen brown; stigma dark purple. Tepal-margins ruffled, tips slightly recurved. Stems light green with darker markings at base. Very early to early.

**‘Twinkle’ IX(b-c/d)**

See *speciosum* ‘Twinkle’.

**‘Twinkles’ I(a/-)**

Syn. of ‘Cascade Queen’.

**‘Twist’ I(a-b/b)**

Parentage: ‘Enchantment’ × Yellow Blaze Group & ‘Connecticut Yankee’  
R: K. Braun, N: K. Braun, I: K. Braun (1992), REG: K. Braun (1993)  
Inside orange, each tepal with a paler centre; outside orange; spots brown, medium sized, moderately numerous, on two-thirds of each tepal; nectaries pale orange; pollen brown; stigma orange. Fls 120 mm wide; tepals 85 × 27 mm, somewhat recurved; pedicels 80 mm long, green. Lvs scattered, 85 × 16 mm, dark glossy green. Stems 0.7, green and brown, hairy. Late July.

**‘Twister’ VIII(b/c)**

Parentage: unnamed seedling × unnamed seedling  
R: Japan Tobacco Inc. (1994), G: Japan Tobacco Inc. (1997), N: Japan Tobacco Inc. (2001), I: Japan Tobacco Inc. (2001), REG: Zabo Plant B.V. (2001)  
Inside vivid orange (28A), throat light orange (28C); outside brilliant orange (29A), tepals edged with vivid orange (28A), midribs greyish red (182B); spots and papillae absent; nectaries light yellowish pink (27A); pollen and stigma dark red (187A). Fls 205 mm wide; tepals 110-115 × 40-50 mm, margins slightly ruffled, tips recurved. Lvs scattered, 175 × 20 mm. Stems 1.2 m, dark, with c.7 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Typhoon’ I(a/-)**

Parentage: Fighter Group selection from Preston Group  
S: I. Preston, N: I. Preston (1944)  
Fls flame-scarlet. Stems 0.6-1 m. June to July.  
(Published in *Gard. Chron.*, ser. 3, 115: 160, fig. 81 (1944).)

**‘Tyre’ IX(b/c)**

See *auratum* ‘Tyre’.

**‘Uchida’ IX(b-c/d)**

See *speciosum* var. *rubrum* ‘Uchida’.

**‘Uchida Kanoka’ IX(b-c/d)**

Syn. of *speciosum* ‘Uchida’.

**‘Uchida Speciosum’ IX(b-c/d)**

Syn. of *speciosum* ‘Uchida’.

**‘Udine’ I(a/-)**

Parentage: ‘Pirate’ × ‘Harmony’  
R: V. Strasser (1975), G: V. Strasser (1978), N: V. Strasser (1979), I: V. Strasser (1986), REG: V. Strasser (1997)  
Fls orange throughout. Tepal-margins smooth, tips not recurved. Lvs scattered, dark green. Stems 0.8 m, almost black, with up to 25 fls. Mid June.

**'Ueda-beni' I(a/b)**

See *L. × maculatum* 'Ueda-beni'.

**'Ufo' I(a/b)**

Parentage: 'Sonnentiger' × 'Connecticut Bronze'

R: K. Braun (1986), N: K. Braun (1989), REG: K. Braun (1989)

Inside bronze, centre of each tepal rose-pink, throat yellow; outside bronze; spots brown, sparse, medium sized, on half of each tepal; papillae rose-pink; nectaries bronze; pollen brown. Fls 154 mm wide; tepals 85 × 35 mm, margins slightly curled, tips slightly recurved; pedicels 96 mm long, green. Lvs scattered, 70 × 14 mm, glossy green. Stems 0.95 m, infl. with secondary buds. Early July.

**'Ugonohikari' I(b/-)**

Parentage: (*lancifolium* × unknown) × (*L. × maculatum* × unknown)

R: S. Sato (c. 1976), N: S. Sato

Fls yellow.

**'Ugunigā' I(a/b)**

Parentage: 'Diana' × seedling L-32-8

R: Ā. Zorgevics (1990), G: Ā. Zorgevics (1994), N: Ā. Zorgevics (2004), I: Ā. Zorgevics (2004), REG: Ā. Zorgevics (2004)

Inside vivid reddish orange (32A), throat strong yellowish pink (32D); outside vivid red (46C); spots dark brown at the base of each tepal; nectaries orange; pollen dark brown; stigma pale. Fls 110 mm wide; tepals 75 × 40 mm, margins smooth; tips slightly recurved. Lvs scattered, 90 × 10 mm, glossy. Stems 1.1 m, dark green, with c.9 fls. Bulbs white. Early to mid July.

(The seed parent is probably 'Diana' (of Kireeva).  
Nomenclatural standard: colour print supplied by registrant (WSY 0096362).)

**'Ukrainka' I(-/-)**

Parentage unknown

R: N.S. Nezovibatko (pre 1981), N: N.S. Nezovibatko  
No further details.

**'Uldis' I(b/c)**

Parentage: unnamed seedling × 'Nata'

R: D.-V. Šķimele (1992), G: D.-V. Šķimele (1995), N: D.-V. Šķimele (1997), REG: D.-V. Šķimele (2001)

Inside deep lilac pink, each tepal with darker margin and paler base, throat dark pink; outside greenish pink, midribs yellow-brown; spots tiny, black, on basal part of each tepal; nectaries greenish pink; pollen dark brown; stigma dark brown. Fls 140 mm wide; tepals 70 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 15 mm. Stems 1.1 m, green, with c.8 fls. Late June to early July.

(Published in *Lilium Balticum Lily Register*, 1998.)

**'Ulla' I(a/b)**

Parentage: unnamed seedling × 'Blinklicht'

R: D.-V. Šķimele (1990), G: D.-V. Šķimele (1992), N: D.-V. Šķimele (1995), REG: D.-V. Šķimele (2001)

Inside light red, paler at tepal-tips and with a dark brown ray over half of each tepal, throat darker; outside light red, midribs brownish; spots dark brown, few, tiny, near the creamy nectaries; pollen brown; stigma dark brownish red. Fls 150 mm wide; tepals 78 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 22 mm. Stems 1 m, dark green, with c.5 fls. Early July. (Published in *Lilium Balticum Lily Register*, 1998.)

R: Van der Salm Bulb Farm, Inc. (1979), G: Van der Salm Bulb Farm, Inc. (1980), N: Van der Salm Bulb Farm, Inc. (1981), I: Van der Salm Bulb Farm, Inc. (1987), REG: Van der Salm Bulb Farm, Inc. (1988)  
Inside white, tepal-tips strong purplish pink (68B), throat vivid purplish red (66A); outside strong purplish pink (68B); nectaries purplish red; pollen reddish brown. Tepals 70-80 × 28-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 90-130 × 8-10 mm, mid to dark green. Stems 1-1.25 m, green with darker spots, and with 7-35 fls. June to July.

**'Universal'** VII(a/b-c)  
Parentage: seedling 90-27 × seedling RM 95-73  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (1995), REG: Vletter & Den Haan Beheer B.V. (2003)  
Inside vivid purplish red (57D), light greenish yellow (6D) along nectaries, midveins light orange-yellow (19A); outside light purple (75B), midribs brilliant yellow-green (150D) changing to brilliant yellow-green (149C) towards top; older fls becoming light purple (76A); spots and papillae strong purplish red (60B); nectaries brilliant greenish yellow (151D); pollen strong orange (168A); stigma dark purple (79B). Fls 235 mm wide, slightly fragrant; tepals 138 × 80 mm, margins slightly ruffled; tips slightly recurved. Lvs 230 × 57 mm, light green. Stems 1.1 m, light green with darker markings, with c.2 fls.

**'Universe'** VII(a-b/c)  
Parentage: ('Swan Lake' × unnamed seedling) × 'Opus One'  
R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997), REG: Bischoff Tulleken Lelies B.V. (1997)  
Inside yellowish white (155D), midveins pale yellow-green (155A); outside yellowish white (155D), midribs pale yellow-green (155A) towards base and tinged with brilliant/light yellow-green (154C/D) towards top, tepal-tips strong yellow-green (143B); spots yellowish white (155D) on two-thirds of each tepal; papillae few, yellowish white (155D), in the throat; nectaries yellow-

green (144B); stigma strong yellow-green (143B) with a dark red (187A) rim. Fls 260 mm wide; tepals 140 × 45-65 mm, margins ruffled, outer more so, tips recurved. Lvs scattered, 200 × 50 mm, mid green. Stems 1.08 m, light green, with 4-7 fls. July.

**'University of Saskatchewan'** I(a/b)  
Parentage: 'Geneve' × 'Merryspring'  
R: D.J. Hay (1997), G: D.J. Hay (2000), N: D.J. Hay (2002), REG: D.J. Hay (2002)

Inside white with a gold blush in the middle of each tepal; outside white tinged with pink; a halo of dark spots surrounding the throat; nectaries green; pollen orange; stigma green. Fls 134 mm wide; tepals 68 × 37 mm, margins smooth, tips very slightly recurved. Lvs scattered, 38 × 10 mm, glossy. Stems 45 cm, green, with c.7 fls. Midseason.

(Named to celebrate the 100th anniversary of the University of Saskatchewan. Nomenclatural standard: colour print provided by registrant (WSY 0035138).)

**'Uno'** VI(c/d)  
Parentage: *L. × aurelianense* 'Alaska' × 'Brno'  
R: K. Braun, N: K. Braun, I: K. Braun (1992), REG: K. Braun (1993)

Inside white, tepals with yellow centres and white edges, throat green; outside with green midribs; moderately numerous, brown dashes on two-thirds of each tepal; nectaries green; pollen chocolate-brown. Fls 130 mm wide; tepals 120 × 47 mm, twisted; pedicels 100 mm long, green and brown. Lvs scattered, 123 × 33 mm, glossy mid green. Stems 1 m, green and brown, with secondary buds. Mid July.

**'Unspoiled'** VII(a/b)  
Parentage: ((*L. × parkmanii* Little Rascal Group × 'Star Gazer') × yellow-flowered seedling) × (*L. × parkmanii* Little Rascal Group × 'Star Gazer')  
R: Bischoff Tulleken Lelies B.V. (1985), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1995), I: Bischoff Tulleken Lelies B.V. (1996), REG: Bischoff Tulleken Lelies B.V. (1996)

Inside with a very pale suffusion of strong purplish red (59D) on a yellowish white (155D) ground, tepals stronger coloured towards tips, outer tepals edged with yellowish white (155D), midveins light yellow-green (150D) shading into the tepal, throat yellowish white (155D); outside with a very pale suffusion of strong purplish red (59D) on a yellowish white (155D) ground, outer tepals mainly yellowish white (155D), midribs brilliant yellow-green (150C); spots strong purplish red (59D) on two-thirds of each tepal; papillae present in throat; nectaries strong yellow-green (144B); pollen strong orange (169C/D); stigma dark red (187A). Fls 240 mm wide; tepals 140 × 40-65 mm, margins ruffled, tips recurved. Lvs scattered, 120 × 55 mm, mid green. Stems 0.85 m, pale green, with 3-6 fls. July.

**'Unter den Linden'** VII(a-b/b-c)  
Syn. of 'Colonna'.

**‘Unzen’ V(-/a)**  
See *longiflorum* ‘Unzen’.

**‘Upal’ I(a/b)**  
Unaccepted spelling of ‘Úpal’.

**‘Úpal’ I(a/b)**  
Parentage: ‘Connecticut King’ × ‘Abendglühen’  
R: B. Mičulka (pre 1984), N: B. Mičulka, REG: B. Mičulka (1985)  
Inside rich yellow, tepal-centres apricot, tepal-edges and throat paler yellow; outside pale yellow, midribs greenish; spots dark brown, sparse, small, on a third of each tepal; nectaries pale green-frosted; pollen orange; stigma reddish brown. Fls 125 mm wide; tepals 70 × 40 mm, tips slightly recurved. Lvs 70 × 7 mm, slightly glossy green. Stems 0.6 m, brown-dotted. Early July.  
(Included in *ILR Fourth Supplement* as ‘Upal’ which is an unaccepted spelling.)

**‘Up Date’ I(a/b)**  
Parentage: (‘Gran Paradiso’ × ‘Snowstar’) × (‘Grand Prix’ × (Yellow Blaze Group × ‘Connecticut King’))  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1998), REG: Bischoff Tulleken Lelies B.V. (1999)  
Inside strong orange/strong orange-yellow (24A/B), vivid orange (28B) above nectaries, tepals narrowly edged with vivid orange (28A); outside pale yellow (18C) shading to strong, vivid orange (25B,28A) towards tepal-edges; spots few, dark red (187A); papillae vivid orange (28A) in the throat; nectaries moderate olive-green (137A) with a little light orange-yellow (24C); pollen strong brown (172A); stigma dark red (187A). Fls 190 mm wide; tepals 95 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 20 mm, dark green. Stems 1 m, green, with c.4-7 fls. July.

**‘Úplněk’ I(b/d)**  
Parentage: Sutter’s Gold Group × unknown  
R: B. Mičulka (c. 1982), N: B. Mičulka, REG: B. Mičulka (1984)  
Inside pale yellow, throat greenish; outside pale green tinted red; spots reddish brown, small, scarce, in the throat; pollen brown. Fls 90 mm wide; tepals 70 × 36 mm, tips recurved; pedicels brown-dotted. Lvs 100 × 13 mm, glossy. Stems 1.1 m, brown-spotted, with a pyramidal infl. Early July.

**‘Upright Gaze’ VII(-/a)**  
Parentage unknown  
R: Sun Valley Bulb Farms, Inc., N: Sun Valley Bulb Farms, Inc.  
No further details.  
(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 48 (1978).)

**‘Uprightum’ IX(b-c/d)**  
Syn. of *speciosum* ‘Erectum’.

**‘Uprising’ VIII(-/)**  
Parentage: ‘June Fragrance’ × ‘Burnished Rose’  
R: E. Hickling (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987), REG: Columbia-Platte Lilies (1988)  
Inside pale yellow (8D) to pure white, tepal-tips pale yellow (8D) to pure white, throat pure white; outside pale yellow (8D) to pure white; spots deep magenta, many, small; nectaries green, edged with white; pollen moderate red (179A). Tepals 55-65 × 25-30 mm, margins ruffled, tips slightly recurved. Lvs almost whorled, 80-180 × 20-30 mm, dark green. Stems 1.8-2.4 m, glossy black, with 8-20 fls on semi-erect pedicels. Late May.  
(In hot weather and sunlight, the fls bleach to pure white.)

**‘Upstar’ VII(-/)**  
Parentage unknown  
R: C. Carmine (1988), G: C. Carmine (1991), N: P. Aker B.V. (1991), I: P. Aker B.V. (1992), REG: P. Aker B.V. (1993)  
Inside greenish white (155C) suffused with strong purplish red (64C), midveins strong red (53C), throat greenish white (155C); outside yellowish white (155B) suffused with moderate purplish pink (70D) along midribs, tepals tipped with strong yellow-green (143C); spots deep red on a third of each tepal. Fls 200 mm wide; tepals 105 × 50 mm, margins ruffled, tips slightly recurved; nectaries pinkish grey (201D); pollen strong brown (172A). Lvs scattered, 150 × 35 mm, mid green. Stems 0.75 m, pale green, with c.7 fls.

**‘Urandi’ VIII(c/b)**  
Parentage: seedling E 905 × seedling 89.32.11-1  
R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)  
Inside dark purplish pink (186C) with pale yellow-green (4D) along midveins, midveins brilliant yellow (7B) at base; outside dark purplish pink (186C) flushed with pale yellow-green (4D); spots absent; papillae present; nectaries green; pollen brown-red; stigma green. Fls 200 mm wide; tepals 157-168 × 44-67 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 157-265 × 25-47 mm, dark green. Stems 1-1.2 m, green, with 1-9 fls. Late.  
(An Orienpet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096406).)

**‘Urania’ IX(b-c/d)**  
See *speciosum* ‘Urania’.

**‘Uranus’ VI(-/a)**  
Parentage unknown  
R: G.M. Chandler, N: G.M. Chandler, I: R.F. Nelson (1962)  
Tepals uranium-green (HCC 63/3), throat Dresden-yellow (HCC 64/1); nectaries green; pollen Mars green (HCC 013). Fls 125 mm wide. Stems up to 2.4 m, with up to 20 fls.

**'Urbino' VII(-/-)**

Parentage unknown

R: Gebr. Vletter &amp; Den Haan, G: Gebr. Vletter &amp; Den Haan (1988), N: Gebr. Vletter &amp; Den Haan (1992), I: Gebr. Vletter &amp; Den Haan (1993), REG: Gebr. Vletter &amp; Den Haan (1993)

Inside yellowish white (155D) at the base inside, suffused with deep purplish pink (70C) towards each tepal-tip, midveins deep red (60A) becoming moderate purplish red (64A) towards top, the area along each midvein strong purplish red (64B); outside with a yellowish white (155D) ground suffused with strong purplish red (64C) and becoming strong purplish red (64B) at tepal-tips, midribs pale yellow-green (155A) becoming strong yellow-green (144C) at top, outer tepals tipped with strong yellow-green (144A); spots dark red (187B) on basal part of each tepal; pollen strong orange (169B); stigma moderate red (183D). Lvs scattered, 180 × 45 mm, dark green. Stems 0.87 m, mid green, with c.5 fls.

**'Ursula' I(a-b/b)**

Parentage unknown

R: Douwe Wierstra B.V. (1991), N: Douwe Wierstra B.V. (2002), REG: Douwe Wierstra B.V. (2002)

Inside of inner tepals vivid orange-yellow (21A) with some dark red (183A), inside of outer tepals vivid yellow (15A/17B) with some dark red (183A); throat vivid yellow (12A), with dark red-brown markings; outside of inner tepals vivid yellow (17B) sometimes with brownish orange (165B) at the base, outside of outer tepals vivid yellow (15A); spots and papillae present; nectaries yellow-green; pollen orange-brown; stigma purple-red. Tepal-margins ruffled, tips recurved. Stems brown with green spots and darker markings. Midseason.

**'USA' VII(b/b)**

Parentage: unnamed seedling × 'Dominique'

R: Mak Lelieveredeling B.V. (1984), G: Mak Lelieveredeling B.V. (1991), N: Mak Lelieveredeling B.V. (1991), I: Mak-Leek Inc. (1992), REG: Mak-Leek Inc. (1996)

Inside strong purplish pink (73B), midveins deeper; outside light purplish pink (68D); spots medium sized on basal half of each tepal; papillae present; nectaries yellow-green; pollen orange; stigma green and violet. Tepals 120-125 × 45-50 mm, margins ruffled, tips recurved. Lvs scattered, 125 × 45-50 mm, mid green. Stems 0.25 m, green with darker markings, and with 6-7 fls. Early.

**'Usmeshka Sontsa' I(a/-)**

Parentage unknown

R: R.R. Rutkovskaya (1986), N: R.R. Rutkovskaya (1991), I: R.R. Rutkovskaya (1992), REG: A.V. Otroshko (1995)

Inside bright yellow; outside yellow; a plum-red brushmark (18 × 145 mm) and dark red spots in the centre of each tepal; pollen yellow. Fls 145 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 13 mm, mid green. Stems 1 m, green, with 6-7 fls. Early July. (Published in *Khozjain* no.12 (1993).)

**'Ustica' VII(c/c-d)**

Parentage unknown

R: Bischoff Tulleken Lelies B.V., G: Bischoff Tulleken Lelies B.V., REG: PhytoNova B.V. (1995)

Inside vivid purplish red (57D), tepals edged with yellowish white (155B), midveins vivid purplish red (61C), throat ivory-white; outside strong purplish red (60B) on an ivory-white ground, midribs suffused with pale greenish yellow (2D); spots few, deep red (60A), near the throat; nectaries strong yellow-green (144B); pollen brownish orange (171B); stigma deep reddish purple (77A). Fls 210 mm wide; tepals 110 × 50 mm, margins slightly ruffled, tips moderately to strongly recurved. Lvs scattered, 150 × 37 mm, mid green. Stems 1.2 m, mid green with darker markings, and with c.10 fls. July.

**'Utageo' I(a-b/-)**Parentage: 'Enchantment' × *L.* × *maculatum*

R: S. Fujishima (c. 1959), N: S. Fujishima

Fls orange; spots purple-brown; pollen orange; Fls 128 mm wide. Lvs and stems pale green. Early July.

**'Utah' VII(-/-)**See *L.* × *parkmanii* 'Utah'.**'Utopia' I(a/-)**

Parentage: (Hallmark Group × 'Uncle Sam') × 'Connecticut King'

R: Oregon Bulb Farms, Inc. (1972), N: Oregon Bulb Farms, Inc. (1980), I: Oregon Bulb Farms, Inc. (1981), REG: Oregon Bulb Farms, Inc. (1981)

Fls bright buttercup-yellow, except for yellow-green throat and a few black spots near centre; nectaries green; pollen light brown. Fls 150 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1.4 m, with 8-20 fls. June to July.

**'Utrennaia Zvezda' VIII(-/-)**

Parentage: 'Podarok' × mixed pollen of Amālijas Group &amp; orange-yellow-flowered Asiatics

R: V.A. Volkov (c. 1976), N: V.A. Volkov

Fls creamy white, with an orange centre. Stems 0.6 m. July.

(Included in *ILR Third Supplement* as 'Utrennaja Zvezda' which is an unaccepted spelling.)**'Utrennaja Zvezda' VIII(-/-)**

Unaccepted spelling of 'Utrennaia Zvezda'.

**'Utrennaia Zvezda' I(a/b-c)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova &amp; V.V. Martynova (1990)

Fls creamy white towards tepal-tips, pale lemon-yellow towards base with brownish spots. Fls 120-130 mm wide; tepal-margins smooth, tips recurved. Stems 1.1-1.2 m, with 9-13 fls. July.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Utrennaia Zvezda'.

Published in M.F. Kireeva, *Lilii*, 71 (2000).)

**‘Utro Tumannoe’ I(a/b-c)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova &amp; V.V. Martynova (1996)

Fls creamy white; spots dark brown on basal half to two-thirds of each tepal; pollen orange-red. Fls 110-120 mm wide; tepal-margins smooth, tips recurved. Stems 1.2-1.3 m, with up to 25 fls.

(Published in M.F. Kireeva, *Lilii*, 72 (2000).)**‘Uvertiura’ I(a/-)**

Parentage: ‘Zabava’ × mixed pollen of ‘Aelita’ &amp; ‘Svetlana’

R: V.A. Volkov (1982), N: V.A. Volkov

Fls orange-pink, spotted. Stems 1.4 m, with bulbils. July.

(The seed parent is probably ‘Svetlana’ of Kireeva.)

**‘Uzticiba’ VI(-/a)**

Misspelling of ‘Uzticiba’.

**‘Uzticiba’ VI(-/a)**

Parentage unknown

R: V.P. Orehovs (pre 1970), N: V.P. Orehovs

Inside pink, throat yellow; outside pink; pollen red-brown. Tepal-tips strongly recurved, twisted.

(Included in *ILR Second Supplement* as ‘Uzticiba’ which is a misspelling.)**‘Uzvara’ I(b/b)**

Parentage: selection from Sapņotāja Group

S: V.P. Orehovs, N: V.P. Orehovs

Fls orange; spots numerous, on three-quarters of each tepal; pollen orange-brown. Buds very hairy.

(Published in *LYB* 33: 79 (1970) and included in *ILR* (1982) as ‘Uzvara’ which is a misspelling.)**‘Uzvara’ I(b/b)**

Misspelling of ‘Uzvara’.

**‘Va Bien’ I(a/-)**

Parentage unknown

R: Vletter &amp; Den Haan (1994), G: Vletter &amp; Den Haan,

N: Vletter &amp; Den Haan (1997), I: Vletter &amp; Den Haan

(1997), REG: Gebr. Vletter &amp; Den Haan (1997)

Inside vivid yellow (12A), tepal-tips edged with light greenish yellow (4C); midveins vivid yellow (13A) at base; outside strong yellow-green (144C), tepal-edges vivid yellow (12A), tipped with strong brown (172A); spots and papillae absent; nectaries strong yellow-green (143A); pollen moderate reddish brown (175A); stigma brownish orange (164A). Fls 170 mm wide; tepals 105 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 130 × 15 mm, mid green. Stems 1.15 m, green, with 7-8 fls.

**‘Vada’ I(a/b)**

Parentage: ‘Tetra Tabasco’ × ‘Fire King’ (Div. I)

R: J.M. van Tuyl (1978), G: J.M. van Tuyl (1980), N:

J.M. van Tuyl (1983), I: J.M. van Tuyl (1983), REG:

J.M. van Tuyl (1983)

Inside strong reddish orange (31A), throat vivid reddish orange (33A); outside light orange-yellow (19A) fading to strong red (39A), midribs light green; spots brown, small,

in the throat; pollen light grey-brown. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 0.8-0.9 m, green, with 7-15 fls.

**‘Vagabond’ I(b/-)**

Parentage: selection from Mid-century Group

S: J. de Graaff, N: J. de Graaff

Fls salmon-orange. Stems 1.5 m. July.

(Published in *Oregon Bulb Farms Cat.*, 1949.)**‘Vakarstunda’ I(b-c/d)**

Parentage: ‘Nata’ × mixed pollen from Tango Group

R: D.-V. Šķimele (1991), G: D.-V. Šķimele (1994), N:

D.-V. Šķimele (1997), REG: D.-V. Šķimele (2001)

Inside purplish pink; outside purplish pink with darker midribs; large, dense, dark red-brown spots and marbling on half of each tepal; nectaries creamy, hairy; pollen brownish orange; stigma brownish orange. Fls 140 mm wide; tepal-margins smooth, tips strongly recurved. Lvs scattered, 110 × 15 mm. Stems 0.8 m, dark green, with c.7 fls. Late July.

(Published in *Lilium Balticum Lily Register*, 1998.)**‘Valaška’ I(a/b)**

Parentage: Thomas seedling 4 × ‘Tetra Aristo’

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003),

REG: B. Mičulka (2003)

Inside apricot-orange, darker around nectaries, base of throat paler; outside pale orange, midribs pale yellow-green; spots dark brown-crimson, many, large, on half of each tepal; papillae in throat; nectaries white-granulated; pollen red-brown; stigma pink-brown. Fls 130 mm wide; tepals 90 × 45 mm, margins slightly waved, tips scarcely recurved (the outer more so); pedicels 60 mm long, thick, profusely brown-dotted. Lvs scattered, 145 × 21 mm, dull dark green. Stems 0.85 m, very thick, profusely brown-dotted. Mid July.

**‘Valdemar’ VIII(b/b)**

Parentage: seedling PG 95-39 × seedling A 4 B

R: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den

Haan Beheer B.V. (1994), REG: Vletter &amp; Den Haan

Beheer B.V. (2003)

Inside light greenish yellow (8C), each tepal with brilliant yellow (8A) base and midvein, throat pale yellow-green (4D); outside pale yellow-green (4D), midribs light yellow-green (144D) at base; spots brilliant yellow (8A); papillae present; nectaries strong yellow-green (143C); pollen strong orange (25A); stigma dark purple (79A). Fls 250 mm wide, slightly fragrant; tepals 150 × 78 mm, margins slightly ruffled, tips recurved. Lvs 210 × 50 mm, dark green. Stems 1.1 m, with c.2 fls.

(An Orienpet (OT) lily.)

**‘Val di Fassa’ I(a/b)**

Parentage unknown

R: Gebr. Vletter &amp; Den Haan, N: Gebr. Vletter &amp; Den

Haan (2002), REG: Vletter &amp; Den Haan Beheer B.V.

(2004)

Inside strong orange-yellow (17A), throat light yellow-green (145D); outside vivid yellow (14A), tepal-margins

strong orange-yellow (17A), midveins moderate olive-green (146A) at base and top, base also with some brownish orange (171B); spots absent; papillae strong orange-yellow (17A); nectaries strong yellow-green (144A); pollen moderate reddish brown (174A); stigma deep purplish red (59B). Fls 165 mm wide; tepals 115 × 45-60 mm, margins smooth, tips recurved. Lvs scattered, 180 × 15 mm. Stems 1.25-1.5 m, brownish with green spots, and with c.6 fls.

**‘Val di Sole’ I(a/b)**

Parentage: seedling OR 90-07 × seedling OR 93-06  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside vivid yellow (9A), throat light yellow-green (150D); outside of inner tepals light greenish yellow (4B), edged with brilliant yellow (7A), midribs brilliant yellow (7B); outside of outer tepals brilliant greenish yellow (6C), edged with brilliant greenish yellow (6B); spots and papillae absent; nectaries light yellow-green (150D); pollen dark reddish orange (175C); stigma vivid yellow (9A). Fls 140 mm wide; tepals 105 × 55 mm, margins smooth, tips recurved. Lvs scattered, 170 × 30 mm. Stems 0.95 m, dark, with c.5-9 fls.

**‘Valdivia’ VII(a/b)**

Parentage: seedling 89-59 × seedling 93-13  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside moderate purplish pink (66D), tepal-tips and margins vivid purplish red (57D), throat greenish white (155C); outside of inner tepals moderate purplish pink (70D), towards margins and tips becoming deep purplish pink (70C) on a paler ground; outside of outer tepals moderate purplish pink (6D), with a little greenish white (155C) on the midribs and tipped with strong yellow-green (144A); spots deep red (60A); papillae deep purplish pink (64D); nectaries light yellow-green (144D); pollen brownish orange; stigma dark purple (79A). Fls 270 mm wide; tepals 195 × 50 mm, margins very slightly ruffled, tips slightly recurved. Lvs scattered, 170 × 60-80 mm. Stems 1.4 m, dark green, with c.5 fls.

**‘Valencia’ I(b/b)**

Parentage: selection from Mid-century Group  
S: J. de Graaff (1941), N: J. de Graaff, I: Oregon Bulb Farms, Inc. (1949)  
Fls strong orange (24A) with darker orange midribs; spots small, deep purple, on basal half of each tepal. Fls 120 mm wide; tepal-tips strongly recurved. Stems 1 m. June to July.  
(Published in *Oregon Bulb Farms Cat.*, 1949.)

**‘Valentina’ I(a/-)**

Parentage unknown  
R: J. Marks (pre 1970), N: J. Marks  
Fls red-orange.

**‘Valentina Tereschkova’ VI(-/a)**  
Unaccepted spelling of ‘Valentina Tereshkova’.

**‘Valentina Tereshkova’ VI(-/a)**  
Parentage: trumpet hybrid × Green Magic Group  
R: V. Negrobov (c. 1964), N: V. Negrobov  
Inside pure white, centre pale green; outside green with brown stripes; pollen brown. Fls up to 120 × 180 mm. Stems 1.5 m. July.  
(Published in *LYB* 33: 77 (1970) and included in *ILLR* (1982) as ‘Valentina Tereschkova’, which is an unaccepted spelling.)

**‘Valentine’ I(a/b-c)**  
Parentage: (‘Connecticut King’ × Hallmark Group) × (‘Connecticut King’ × Hallmark Group)  
R: J.F. McRae (1978), G: J.F. McRae & Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1982), I: Columbia-Platte Lilies (1982), REG: Columbia-Platte Lilies (1984)

Inside light to pale purplish pink (62C/D), tepal-tips pale purplish pink (62D), throat strong purplish pink (58C); outside light to pale purplish pink (62C/D); spots absent; nectaries frosty white/green; pollen moderate orange (167A/B). Tepals 30-40 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100-150 × 20 mm, pale to mid green. Stems 0.6-1.2 m, green, with 6-8 fls. July.  
(Published in *Rex Lilies Cat.*, 1982.)

**‘Valentino’ VII(-c-d)**  
Parentage: *L. × parkmanii* ‘Allura’ × ‘Star Gazer’  
R: Bischoff Tulleken Lelies B.V. (1978), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989)

Inside strong/light purplish pink (55B/C), tepal-margins narrow, pale purplish pink (56D), throat strong to light yellow-green (145A/B) edged with light greenish yellow (8C), midveins with strong red (53C/D) flush on basal half; outside with outer tepals deep to moderate purplish red (66C/D), tepal-margins white, inner tepals pale purplish pink/yellowish white (56C/155B); spots strong red (53C/D), on basal half of each tepal; papillae purplish red/purplish brown on each tepal-base; nectaries very pale purple (69B); pollen strong orange (169A). Fls 220 mm wide; tepals 105 × 60 mm, margins smooth or slightly ruffled, tips usually recurved; pedicels long, often with a leafy bract. Lvs scattered, 170 × 32 mm, mid green. Stems 1-1.15 m, pale green, with c.7-9 fls.  
(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to ‘Valentina’.)

**‘Valeriia’ I(a/b)**  
Parentage unknown  
Fls orange-apricot  
(Published in M.F. Kireeva, *Lilii*, 57 (2000).)

**‘Valerio’ I(a-b/b)**  
Parentage: ‘Compass’ × ‘Gran Paradiso’  
R: Lybelmex Hillegom B.V., N: Lybelmex Hillegom B.V., REG: Lybelmex Hillegom B.V. (1995)

Inside vivid orange (28A) with darker tepal-margins, throat orange; outside strong orange (30D); spots and papillae very few; pollen red-brown; stigma purple. Tepal-margins smooth, tips slightly recurved. Lvs scattered, green. Stems 1 m, with darker stripes and speckles, and with 7-11 fls.

**'Valiant' I(a-b/b)**

Parentage: (*bulbiferum* var. *croceum* × *L.* × *maculatum* 'Mahogany') × *davidii* var. *wilmottiae*

R: E.F. Palmer (c. 1949), N: E.F. Palmer

Fls deep red, spotted; stamens almost black. Stems 1.5-1.9 m. July.

(Published in *Kline Cat.*, 1950.)

**'Valldemosa' I(b/c-d)**

Parentage: ('Medora' × 'Mont Blanc') × Asiatic seedling NNC6.44

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Inside light yellow (162C), tips pale yellow (162D), throat yellowish white (158D); outside light yellow (162C), with yellowish grey (156A) midribs; spots absent; nectaries yellowish white (158D); pollen moderate reddish brown (175A); stigma brownish orange (164A). Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 18 mm. Stems 1 m, black, with 8-10 fls. Early to mid July.

(Nomenclatural standard: colour print provided by registrant (WSY 0024682).)

**'Valley Boy' VII(-/-)**

Parentage: *L.* × *parkmanii* 'Valley Sundust' × 'Tall Boy'

R: J. Hoell (1982), G: J. Hoell (1986), N: J. Hoell (1991), I: J. Hoell (1991), REG: J. Hoell (1991)

Inside white, with light orange-yellow (16B) rays, throat light yellowish pink (36C); outside strong purplish pink (55B); spots brown on two-thirds of each tepal; nectaries green; pollen strong red (46A). Fls 160 mm wide; tepals 110 × 50 mm, margins smooth, tips strongly recurved. Lvs scattered, 130 × 35 mm, mid green. Stems 1.65 m, moderate olive-green (137A). Jan. (Australia).

**'Valley Charm' VII(-/b)**

Parentage: *auratum* var. *platyphyllum* × 'Dream Valley'

R: J. Hoell (1986), G: J. Hoell (1990), N: J. Hoell (1993), REG: J. Hoell (1994)

Inside deep purplish pink (54B), the colour most concentrated along midveins, tepals with broad, clearly defined, 5 mm-wide, white margins, throat strong purplish red (54A); outside pale purplish pink (56B); spots vivid reddish purple (74B) on all of each tepal except on the white margins; nectaries brilliant yellow-green (142B); pollen vivid reddish orange (33A). Fls 200 mm wide, very symmetrical; tepals 120 × 52 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 210 × 50 mm, dark green. Stems 1.4 m, mid green, with 16-18 fls. Early Feb. (Australia).

**'Valley Dawn' VII(-/-)**

Parentage: *L.* × *parkmanii* 'Valley Sundust' × 'Tall Boy'  
R: J. Hoell (1982), G: J. Hoell (1986), N: J. Hoell (1991), I: J. Hoell (1991), REG: J. Hoell (1991)

Inside white, each tepal with a brilliant yellow (12B) ray, throat pale purplish pink (56C); outside moderate purplish red (186A); spots moderate purplish red (186B) on two-thirds of each tepal; nectaries brilliant yellow-green (142B); pollen moderate reddish brown (166B). Fls 192 mm wide; tepals 155 × 55 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 50 mm, dark green. Stems 1.7 m, moderate yellow-green (138B), with 18-20 fls. Fertile. Feb. (Australia).

**'Valley Flame' VII(b/b)**

Parentage: derived from *L.* × *parkmanii* 'Red Sun', 'Apricot Belle' & *L.* × *parkmanii* 'Jillian Wallace'

R: J. Hoell (1982), G: J. Hoell (1985), N: J. Hoell (1988), REG: J. Hoell (1988)

Inside vivid red (57A), tepal-tips white, throat vivid red (57A); outside vivid purplish red (57C); spots moderate purplish red on all but the tip of each tepal; nectaries vivid yellowish green (140A); pollen vivid red (46C). Fls 155 mm wide, slightly scented; tepals 75 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 210 × 50 mm, dark green. Stems 1.5 m, mid green streaked with purple, with c.25 fls (including some secondary buds). Jan. (Australia).

**'Valley Jester' VII(b-c/b)**

Parentage: *L.* × *parkmanii* 'Frosty Morn' × ('Apricot Belle' × *L.* × *parkmanii* 'Jillian Wallace')

R: J. Hoell (1981), G: J. Hoell (1984), N: J. Hoell, REG: J. Hoell (1989)

Inside deep purplish pink (67C), tepal-tips pale yellow-green (155A), throat brilliant yellow-green (150C); outside light pink; spots dark pink, on basal two-thirds of each tepal; nectaries green; pollen orange-red. Fls 160 mm wide, slightly scented; tepals 85 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 45 mm, dark green. Stems 1.7 m, mid green with purple streaks and with 22-25 fls (including secondaries). Jan. to Feb. (Australia).

**'Valley Opal' IX(b/c)**

See *auratum* 'Valley Opal'.

**'Valley Sultan' VII(b/b)**

See *L.* × *parkmanii* 'Valley Sultan'.

**'Valley Sunburst' Div. ?**

Given as a parent of 'Tara-D'. No further details.

**'Valley Sundust' VII(b-c/b)**

See *L.* × *parkmanii* 'Valley Sundust'.

**'Valmontone' VIII(a/b)**

Parentage: seedling J 57 × seedling RS 92-20

R: Gebr. Vletter & Den Haan v.o.f., G: Gebr. Vletter & Den Haan v.o.f., N: Gebr. Vletter & Den Haan v.o.f., I: Gebr. Vletter & Den Haan v.o.f., REG: Gebr. Vletter &

Den Haan v.o.f. (1999)

Inside strong red (53C/D), each tepal with a dark edge towards base, throat strong yellow-green (143C) along nectaries; outside strong red (53D) on a paler ground, tepals narrowly edged with strong red (53C), midribs moderate yellow-green (146D), tipped strong yellow-green (144C); spots dark red (187A), on a third of each tepal; papillae strong pink (54C), in the throat; nectaries strong yellow-green (143C), with a little strong pink (54C); pollen moderate reddish brown (175A); stigma moderate purplish pink (54D). Fls 190 mm wide; tepals 100 × 40-50 mm, margins ruffled, tips recurved. Lvs scattered, 120 × 20 mm, dark green. Stems 1.3 m, green, with c.5 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Valodzīte' I(a-b/b)

Parentage: 'Dzintars' × seedling 4-21-4

R: Ā. Zorgevics (1985), G: Ā. Zorgevics (1990), N: Ā. Zorgevics (2004), I: Ā. Zorgevics (2004), REG: Ā. Zorgevics (2004)

Inside and outside vivid reddish orange (33B), throat moderate yellowish pink (33D); spots dark red towards base of each tepal; pollen brown-orange; stigma brown. Fls 110 mm; tepals 60 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs whorled, 90 × 12 mm, glossy. Stems 1 m, brownish green, with c.9 fls. Bulbs white. Late July to early Aug.

(*Valodzīte* is the name of a bird. Nomenclatural standard: colour print supplied by registrant (WSY 0096363).)

#### Valour Group VI(-/a)

Parentage unknown

R: W.M. Spry (c. 1965), N: W.M. Spry

Fls green.

(Published in *ILR* (1982) as Valour grex.)

#### 'Valparaiso' VIII(a/b)

Parentage: seedling PH 95-48 × seedling RH 95-17

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside: inner tepals brilliant yellow (13C), pale yellow-green (4D) towards margin and tip, outer tepals light greenish yellow (4C) towards margin and greenish white (157D) towards tip, throat pale yellow-green (4D); outside: inner tepals brilliant yellow (13C), pale yellow-green (4D) towards margin, outer tepals pale yellow-green (4D), towards margin and on midribs light greenish yellow (4C); spots and papillae brilliant yellow (13C); nectaries strong yellow-green (144B); pollen strong brown (172A); stigma light olive-grey (197B) flushed with purple. Fls 280 mm wide, slightly fragrant; tepals 170 × 75 mm, margins ruffled, tips recurved. Lvs 180 × 35 mm, dark green. Stems 1.1 m, with c.2 fls.

(An *Oriental* (OT) lily.)

#### 'Valse Triste' I(a/b)

Parentage unknown

R: J. Vasarietis (1990), G: J. Vasarietis (1993), N: J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J.

Vasarietis (1998)

Inside vivid red (46B) gradually shading to strong red (46A) in the throat; outside vivid red (46B); spots absent; nectaries reddish; pollen dark brownish orange. Fls 130 mm wide; tepals 70 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 0.7 m, brownish, with 9-11 fls, including secondary buds. Early July. (Nomenclatural standard: colour print provided by registrant (WSY 0038514).)

#### 'Vālsirdība' I(-/-)

Parentage unknown

R: J. Vasarietis (pre 1999), N: J. Vasarietis

Inside white to very pale yellow, throat yellow; spots dark red, scattered on basal quarter of each tepal; pollen orange-brown; stigma orange-brown. Tepal-margins smooth or slightly ruffled, margins of outer tepals upcurved, tips not recurved.

#### 'Vamp' I(a/b)

Parentage: ('Red Spire' × seedling OH15) × unknown

R: Cebeco Lilies, Inc., N: Cebeco Lilies, Inc., REG:

ICRA (1998)

Inside clear fluorescent bronze-red, each tepal with a gold blush in the centre. Tepals slightly recurved. Stems 0.8 m. Midseason.

(Published in *The Lily Nook Cat.*, 1998.)

#### 'Vampyr' I(a-b/b-c)

Parentage: ('Plavovláška' × 'Blizzard') × ('Roma' × ('Red Echo' × 'Mánes'))

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003),

REG: B. Mičulka (2003)

Inside white tinged with light salmon, tepal-tips white, throat deep purple-pink, the colour extending to three-fifths of each tepal; outside pale pink, midribs deeper; spots dark brown-pink, medium sized, scattered on a quarter of each tepal; papillae linear; nectaries white-granulated; pollen ochre; stigma pink-brown. Fls 125 mm wide; tepals 80 × 30 mm, margins slightly wavy, tips slightly recurved. Lvs scattered, 85 × 11 mm, dark green, moderately glossy. Stems 0.75 m, dotted with black-brown, with a short infl. Late June.

#### 'Vanda' I(a/-)

Parentage unknown

R: V.P. Orehova

Fls pale yellow, 120 mm wide; tepals 80 × 30 mm. Stems 0.8-1 m, green, with 8-10 fls. July.

(Published in M.V. Baranova, *Lilii*, 323 (1990).)

#### 'Vanessa' I(a/-)

Parentage: *wilsonii* var. *flavum* × 'Connecticut King'

R: E.A. McRae (1971), N: Oregon Bulb Farms, Inc.

(1982), I: Oregon Bulb Farms, Inc. (1982), REG:

Oregon Bulb Farms, Inc. (1983)

Inside vivid yellow (12A), flushed with vivid orange-yellow (21A) along midveins, throat orange-yellow (21A); outside vivid yellow (12A); small spots in a narrow ring parallel to the nectaries; nectaries green; pollen moderate

orange (167A). Fls 150-180 mm wide; tepals 70 × 30-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 80-120 × 20 mm, dark green. Stems 0.95-1.5 m, soft green overlaid with soft purple, with 8-30 fls. Early July.

**'Van Gogh' I(b/-)**

Parentage: seedling RS 517 × seedling W 711  
R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside deep purplish pink (64D), basal half of each tepal light yellow/yellowish white (162C/158D); outside strong to moderate purplish red (61B/186B); spots dark red (187A), few, in the throat; pollen strong orange (169B). Fls 180 mm wide; tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 140 × 12 mm, mid green. Stems 1 m, green, with c.7 fls. May.

**'Vanguard' I(b/-)**

Parentage: 'Connecticut King' × (*leichtlinii* var. *maximowiczii* × 'Golden Wonder') F<sub>2</sub>  
R: E.A. McRae (1970), N: Oregon Bulb Farms, Inc. (1982), I: Oregon Bulb Farms, Inc. (1982), REG: Oregon Bulb Farms, Inc. (1983)

Fls soft orange; very few spots near papillae; brushmarks red; nectaries green; pollen brown. Fls 150-180 mm wide; tepals 90 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm, pale green. Stems 1.6 m, light green, with 8-20 fls. Late June.  
Syn.: 'Thayer'.

**'Van Houttei' I(a/b)**

See *L. × maculatum* 'Van Houttei'.

**'Vanilla Baby' II(-/-)**

Parentage: Windsong Group × white-flowered seedling  
R: J.C. Ericksen, G: J.C. Ericksen, N: D. Dale (1992), I: Parkland Perennials (1994), REG: D. Dale (1993)  
Inside white, throat cream; outside cream-white with buff midribs; spots absent; nectaries cream to lime-green; pollen golden. Fls 85 mm wide; tepals 38 × 20 mm, margins smooth, tips strongly recurved. Lvs whorled, 160 × 42 mm, mid green. Stems 1.8 m, light green at top, darker green near base, with 18-28 fls. Early July.

**'Vanilla Ice' I(b/-)**

Parentage: 'Pumpkin Sweet' × 'Ambrosia'  
R: G.C. Keast (1986), G: G.C. Keast (1988), N: G.C. Keast (1990), I: G.C. Keast, REG: G.C. Keast (1991)  
Fls light yellow (19B), each tepal with a deeper flush in the centre, together with maroon spots; nectaries frosted; pollen brown. Fls 160 mm wide; tepals 80 × 40 mm, margins smooth, slightly recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 0.6 m, black, with c.12 fls. Mid Dec. to early Jan. (New Zealand).

**'Vanillecreme' I(b/c-d)**

Parentage: ('Medora' × 'Mont Blanc') × Asiatic seedling  
R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1997), REG: G.

Steinbrück (1999)

Fls yellowish white (155D), with a light yellow suffusion inside especially along the midveins in the throat; spots strong red (46A), very few, scattered on basal third of each tepal; nectaries very pale green (130D); filaments whitish; pollen dark red (59A); stigma yellow-green (157A). Fls 120 mm wide; tepals 60 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 15 mm. Stems 0.7 m, dark green, with c.10 fls. Mid July. (Published in ELG sales list, 1997.)

**'Vanity' VII(a/b)**

Parentage unknown  
R: Oregon Bulb Farms, Inc. (1982), G: Oregon Bulb Farms, Inc. (1986), N: Cebeco Lilies, Inc., I: Cebeco Lilies, Inc., REG: Cebeco Lilies, Inc. (1994)  
Inside moderate purplish red (64A), throat deep red (60A); outside dark purplish pink (186C); spots dark red (187A), on basal two-thirds of each tepal. Fls 200 mm wide; tepals 140 × 72 mm, margins strongly ruffled, tips slightly recurved. Lvs scattered, 160 × 45 mm, mid to dark green. Stems 0.87 m, moderate yellow-green (137C) mottled with paler green and blotched with dark red (187A), with c.5 fls. Early.  
(A good cv. for forcing.)

**'Vanta' Div. ?**

Given as a parent of 'Salna Pavasari'. No further details.

**'Varese' VIII(a-b/-)**

Parentage: seedling J-57 × seedling RS 86-20  
R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1996), I: Vletter & Den Haan (1996), REG: Gebr. Vletter & Den Haan (1996)  
Inside light purplish pink (55C), throat paler than pale purplish pink (55D); outside light to pale purplish pink (55C/D) with deep purplish pink (58D) tepal-edges; spots few, moderate purplish red (58A), in the throat; papillae absent; nectaries white, hairy, with light yellow-green (144D) around and above; pollen strong orange (169B), but very little produced; stigma light yellow (21D). Fls 190 mm wide; tepals 100 × 40-55 mm, margins smooth, tips slightly recurved. Lvs scattered, 135 × 30 mm, mid green. Stems 1.3 m, green, with 5-7 fls. (*A longiflorum*/Asiatic (LA) hybrid.)

**'Variant' I(a/-)**

Parentage: 'Connecticut King' × 'Yellow Present'  
R: Peacock B.V. (1984), G: Peacock B.V. (1985), N: Peacock B.V. (1989), I: Peacock B.V., REG: Peacock B.V. (1990)  
Inside brilliant yellow (7A/B), each tepal with a big, vivid yellow (15A) flame; outside of outer tepals brilliant yellow (7B), inner tepals light yellow (10B), midribs vivid to brilliant yellow-green (154A/B); spots absent; pollen strong brown (172A). Fls 190 mm wide; tepals 95 × 42 mm, margins smooth, not recurved. Lvs scattered, 165 × 16 mm, mid green. Stems 1.8 m, green, with c.13 fls. May (under glass).

**'Variegated' I(a/b)**

See *L. × hollandicum* 'Variegated'.

**'Variegatum' IX(b/a)**

See *candidum* 'Variegatum'.

**'Varinia' I(a/-)**

Parentage: ('Destiny' × 'Amber Gold') × ('Sonnewende' × 'Sonnentiger')

R: V. Strasser (1979), G: V. Strasser (1981), N: V. Strasser (1984), REG: V. Strasser (1991)

Brilliant yellow (7A) throughout; brushmarks purple, on half of each tepal; nectaries green; pollen vivid orange (28A). Fls 140 mm wide; tepals 95 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 105 × 12 mm, dark green. Stems 1.1 m, dark green, with c.12 fls. Early July.

**'Varsma' VI(c/d)**

Misspelling of 'Värsma'.

**'Värsma' VI(c/d)**

Parentage: 'Ekzotika' × *henryi* var. *citrinum*

R: A. Balode (1993), G: A. Balode (1996), N: A. Balode, REG: A. Balode (1997)

Inside brilliant yellow (7B), throat strong yellow-green (143C); outside greenish yellow; unspotted, but with strong reddish orange (31B) stripes (as in *henryi*); nectaries light greenish; pollen very bright orange. Fls 120 mm wide; tepals 75 × 35 mm, margins slightly ruffled, tips strongly recurved. Lvs 150 × 24 mm, dark green. Stems 1 m, green, with c.2 fls. Late June.

(Included in *ILR Seventeenth Supplement* as 'Varsma' which is a misspelling.)

**'Vasaras Prieks' I(b/-)**

Parentage: selection from Vasaras Prieks Group

S: V.P. Orehovs (1959), N: V.P. Orehovs

Fls orange, with large black spots; pollen dark brown. Stems to 1.8 m, with c.10 fls.

Syn.: 'Joy of Summer'.

(Published in *LYB* 33: 78 (1970) as 'Vasaras Prieks'.)

**Vasaras Prieks Group I(b/b)**

Parentage: (Sestroretskaia Group × 'Fialkovaia') × *amabile*

R: V.P. Orehovs (c. 1957), N: V.P. Orehovs

Fls apricot-pink to orange-red, sometimes with dark brown spots; pollen brown. Fls 100-150 mm wide, slightly scented. Lvs scattered, up to 100 × 10-15 mm. Stems 0.8-1.6 m, with 7-15 fls. June to July.

Syn.: Joy of Summer Group.

(Published in *LYB* 33: 78 (1970) as Vasaras Prieks Hybrids.)

**'Vashon' IV(-/d)**

Parentage: selection from Bellingham Group

R: D. Griffiths, N: D. Griffiths

Fls between vivid yellow (9A) and vivid yellow (15A); each tepal with brown spots towards base, becoming larger and redder towards centre and tip; pollen yellow. Lvs whorled in middle of stem, scattered above and

below. Stems to 2 m, with c. 20 fls.

(Published in *USDA Circular* no. 299: 8 (1933). The parents are thought to be *parryi* and *humboldtii* var. *ocellatum*.)

**'Vasilisa' I(a/-)**

Parentage: 'Stroinaia' × 'Joan Evans'

R: M.F. Kireeva (1983), N: M.F. Kireeva

Fls apricot-yellow, spotted. Stems 1.2 m, with bulbils. July.

**'Vater Zille' I(a/c)**

Parentage: Asiatic seedling × mixed pollen of brushmarked seedling & 'Brushstroke'

R: G. Steinbrück (1989), G: G. Steinbrück, N: G.

Steinbrück

Inside yellow; brushmarks large, purple-violet; nectaries green.

**'Vatra' I(a/b-c)**

Parentage: 'Roter Cardinal' × Peters seedling 66-24

R: V. Baloun (1985), N: V. Baloun, REG: V. Baloun (1988)

Inside deep crimson, throat and tepal-tips paler, centre of each tepal stained with apricot; outside with beige-orange midribs; spots tiny, sparse, on a sixth of each tepal; nectaries pink-frosted; pollen brown; stigma brown-red. Fls 120 mm wide; pedicels 70 mm long, dark violet-brown. Lvs scattered, 95 × 13 mm, slightly glossy light green. Mid July.

**'Vaudeville' I(a/-)**

Parentage: (('Appleblossom' × 'Sunrise') × 'Connecticut King') × orange-flowered seedling

R: V.E. Bowen (1982), G: V.E. Bowen (1984), N: V.E.

Bowen (1992), I: C. Helsley (1992), REG: V.E. Bowen (1992)

Inside vivid orange (28B), shading to vivid orange (28A) at tepal-tips; outside brilliant orange (25C), outer tepals with green midribs; spots brown, small to medium sized, from nectaries to the mid part of each tepal; nectaries frosted; pollen brown. Fls 160 mm wide; tepals 70 × 40 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 100 × 20 mm, mid green. Stems 1.2 m, green, with 15-20 fls. Mid to late June.

**'Vaughn's Hybrid' Div. ?**

Parentage unknown

(Published in *LYB NALS* 2: 56 (1949). No further details.)

**'Väverite' Div. ?**

R: V.P. Orehovs (pre 1985), N: V.P. Orehovs

Given as a parent of 'Arabeska'.

**'Večernice' I(b/b-c)**

Parentage: ('Juno' × 'Honey Creme') × ('Parfait' × 'Wattle Bird')

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005),

REG: B. Mičulka (2005)

Inside old rose with small yellow gleam around nectaries;

tepal-tips and throat paler; spots black-brown, oval, numerous, on half of each tepal; papillae present; nectaries white- and pink-granulated; pollen brown; stigma dark purple-brown. Fls 140 mm wide; tepals 90 × 47 mm, slightly curved; pedicels 70 mm, brown-black. Lvs scattered, 85 × 14 mm, glossy dark green. Stems 0.6 m, thick, dark green. Late June.

**‘Vecumnieki’ VI(-/a)**

Parentage: *L. × aurelianense* × unknown

R: T. Gertsons, G: T. Gertsons, N: T. Gertsons (1985), I: T. Gertsons, REG: T. Gertsons (1987)

Inside light green, throat green; outside darker green with slightly brownish veining; pollen dark yellow. Fls 190 mm wide, scented; tepals 180 × 65 mm, margins smooth. Lvs scattered, 120 × 20 mm, mid green. Stems 1.4 m, green. Late July to early Aug.

(Published in *Dārzs un Drava* 7: 21 (1986).)

**‘Veczernyi Motiv’ I(c/d)**

Parentage: red-flowered seedling × ‘Black Butterfly’

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls black-red. Stems 1.7 m.

**‘Veczernyi Zvon’ I(a/-)**

Parentage: ‘Stroinaia’ × ‘Byam’s Ruby’

R: M.F. Kireeva (c. 1976), N: M.F. Kireeva

Fls purple-red; spots absent. Stems up to 2 m. July.

**‘Vedea’ VII(b/b)**

Parentage: unnamed seedling × unnamed seedling

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)

Inside yellowish white (155D), broad tepal-edges and tips strong purplish red to strong purplish pink (63B/C), throat strong yellow-green (144B); outside yellowish white (155D), tepal-edges suffused with moderate purplish pink (70D), midribs light yellow to pale greenish yellow (10C/D); spots few, small, strong purplish red (64B), on basal third of each tepal; filaments green; pollen dark reddish orange (175B); stigma orange-pink. Fls 270 mm wide; tepals 130 × 75 mm, margins ruffled, tips slightly recurved. Lvs scattered, 190 × 40 mm, mid green. Stems 1.15 m, green with a few darker markings, and with 5-7 fls. May (under glass).

Trade designation: MARCO POLO; SAVONA.

**‘Vedekla’ I(a/b)**

Parentage unknown

R: J. Vasarietis (1989), G: J. Vasarietis (1992), N: J. Vasarietis (1995), I: J. Vasarietis (1995), REG: J. Vasarietis (1999)

Inside opening pale yellow (11C), soon fading to white, throat pale yellow (11C); outside pale yellow (11D) fading to white; spots very few, dark, near the nectaries; nectaries white on a greenish ground; pollen brownish orange; stigma greyish green. Fls 150 mm wide; tepals 90 × 45 mm, margins distinctly but narrowly ruffled, tips slightly recurved. Lvs scattered, 130 × 13 mm, mid green. Stems 0.85 m, green, with c.10 fls. Mid July.

Trade designation: DAUGHTER-IN-LAW.

(Published in *Lilium Balticum Cat.*, 1996. Nomenclatural standard: colour print provided by registrant (WSY 00223032).)

**‘Veernaya’ VI(-/c)**

Parentage: Aurelian Group × Orange Sunburst Group

R: V.P. Eremin (c. 1960), N: V.P. Eremin

Fls golden yellow; pollen rust-brown. Fls up to 180 mm wide, scented; tepal-tips curled back. Stems up to 1.8 m. Aug.

(Published in *LYB* 33: 78 (1970).)

**‘Velasco’ VII(-/b)**

Parentage: complex hybrid origin

R: Bleydenhoek V.o.f. (1978), G: Bleydenhoek V.o.f. (1981), N: Gebr. Van Zanten B.V., I: Gebr. Van Zanten B.V. (1988), REG: Gebr. Van Zanten B.V. (1988)

Inside white, throat green-yellow; outside white with yellow midribs; spots small, yellow and rose-pink on half of each tepal; pollen orange-brown. Tepals 125-136 × 42-57 mm, margins ruffled, tips slightly to strongly recurved. Lvs scattered, 226-240 × 34-54 mm, mid green. Stems 1.25-1.35 m, green/brown, with c.7 fls.

**‘Velasquez’ VIII(b/b-c)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside pale greenish yellow (13D), each tepal light orange-yellow (23C) in basal third and along midvein, throat pale yellow (20C); outside pale orange-yellow (19D), each tepal flushed with light yellow (20B) in basal third, midribs brilliant yellow-green (150C), strong purplish pink (63C) along midribs of outer tepals; spots vivid orange-yellow (23A); papillae present; nectaries strong greenish yellow (151A); pollen moderate brown (200C); stigma deep red (60A). Fls 250 mm wide; tepals 140 × 70 mm, margins slightly ruffled, tips recurved. Lvs 250 × 40 mm, dark green. Stems 1.45 m, green with darker margins, with c.4 fls. (An Orienpet (OT) lily.)

**‘Veldze’ I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis, G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)

Inside white, tepals with a soft violet tint on basal part, throat white; outside white, tinted with violet; spots tiny, inconspicuous, on a quarter of each tepal; nectaries white; pollen brown. Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 135 × 10 mm, mid green. Stems 0.85 m, green, with 7-10 fls. Early July.

(Published in *Latvian Lily Register*, 1993.)

**‘Velehrad’ I(a/b-c)**

Parentage: ‘Diblík’ × (‘Red Echo’ × ‘Mánes’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1994), REG: B. Mičulka (1994)

Inside yellow, flushed reddish around nectaries, throat yellow, tepal-tips golden yellow; outside paler, midribs broad, mahogany-brown; spots black-brown, small, sparse, on a quarter of each tepal; nectaries green, white-granulated; pollen brown; stigma dark brown-purple. Fls 160 mm wide; tepals 90 × 40 mm, slightly recurved; pedicels 80 mm long, dotted dark brown. Lvs scattered, 110 × 18 mm, dark green. Stems 1 m, dotted with red-brown. June.

#### **'Velta' I(b/-)**

Parentage unknown

R: V.P. Orehovs, G: V.P. Orehovs, N: V.P. Orehovs (1985), I: V.P. Orehovs, REG: V.P. Orehovs (1987)

Tepals light golden yellow with a slight orange tint throughout; spots many, dark lilac. Fls 140 mm wide; tepals 60 × 25 mm, margins smooth, tips strongly recurved. Lvs scattered, 55 × 8 mm, mid green. Stems 1 m, green, with c.12 fls.

(Published in *Dārzs un Drava* 7: 21 (1986).)

#### **'Veltjums Baiba' VII(b/c)**

Parentage: 'Āfricāniete' × a Dutch Oriental lily

R: Ē. Ieviņa (1995), G: R. Krūmiņš (1998), N: R. Krūmiņš (2000), REG: Liliūm Balticum Association (2004)

Inside cherry-red, midveins darker, each tepal with light lavender margin; outside greenish pink, midribs greenish; papillae deep reddish brown; pollen light brown; stigma grey. Fls 220 mm wide, slightly scented; tepals 135 × 70 mm, margins slightly ruffled, tips slightly recurved.

#### **'Velvette' VII(-/c)**

Parentage: (*L. × parkmanii* × unknown) × (*L. × parkmanii* × unknown)

R: B.G. Hayler (c. 1958), G: B.G. Hayler (1962), N: B.G. Hayler, I: B.G. Hayler (1966)

Inside strong purplish pink (62A), each tepal with a narrow white margin and white tip, throat white with pale green star; spots maroon, dense; pollen rust-coloured. Fls 200 mm wide; tepal-tips reflexed. Lvs *speciosum* type. Stems 1.5 m.

#### **'Vendetta' I(a/c)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (1981), G: J. Vasarietis (1984), N: J. Vasarietis (1988), I: J. Vasarietis (1988), REG: J. Vasarietis (1992)

Inside and outside vivid red (44A); each tepal with a 25 mm-long orange line in the centre; spots black, sparse, on a quarter of each tepal; nectaries reddish; pollen brown. Fls 60 mm wide; tepals 90 × 42 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 8 mm, dark green. Stems 1-1.2 m, green, with 13-17 fls. Late June.

#### **'Vendija' I(a/b)**

Parentage unknown

R: J. Vasarietis (1990), G: J. Vasarietis (1993), N: J. Vasarietis (1996), I: J. Vasarietis (1996), REG: J. Vasarietis (2001)

Inside creamy white at first, fading to white, throat and

outside white; c.10 tiny dark spots scattered around each nectary; nectaries white on a greenish ground; pollen brown; stigma greyish brown; Fls 130mm wide, slightly scented, especially in the evening; tepals 70 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 12 mm. Stems 0.8 m, light green, with c.12 fls. Mid July. (Published in *Lilium Balticum Lily Register*, 1996. Vendija is the ancient name of a region in Latvia. Nomenclatural standard: colour print provided by registrant (WSY 0030814).)

#### **'Vendulka' I(a/b)**

Parentage: 'Connecticut King' × 'Sayville'

R: Šlechtitelaká Stanice Heřmanův Městec, N:

Šlechtitelaká Stanice Heřmanův Městec, REG:

Šlechtitelaká Stanice Heřmanův Městec (1994)

Inside deep orange, darker at tepal-edges, tinged with green on first opening; spots absent. Fls 150-180 mm wide; tepals touching at margins, margins slightly wavy, tips recurved; pedicels 60-90 mm long, thick. Lvs scattered, 95-110 × 15-22 mm, dark green. Stems 0.8-0.9 m, green, with 8-11 fls. Early July.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha, 1991.)

#### **'Venedig' I(b/-)**

Parentage: 'John Dix' × 'Connecticut King'

R: V. Strasser (1976), G: V. Strasser (1978), N: V. Strasser (1981), I: V. Strasser (1984), REG: V. Strasser (1986)

Fls vivid orange-yellow (23A) throughout; spots on a third of each tepal. Fls 160 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, dark green. Stems 1.1 m, dark brown, with c.18 fls. July.

#### **Veneration Group I(a/-)**

Parentage: 'Snowbird' × (up-facing Asiatic seedling × 'Angeline')

R: J.C. Ericksen (1980), G: J.C. Ericksen (1984), N: J.C. Ericksen, REG: J.C. Ericksen (1989)

Inside white; outside at first green, changing to white; some fls with a few red spots near centre of fl., most unspotted; nectaries green; pollen yellow. Tepals 55 × up to 40 mm, very thick and stiff, margins smooth, tips slightly or not recurved. Lvs scattered, 75 × 25 mm, pale green. Stems 0.8-1 m, pale green, with 5-7 fls. Late.

#### **'Venere' VII(a-b/b)**

Parentage unknown

R: Vletter & Den Haan (pre 1993), N: Vletter & Den Haan Beheer B.V. (2002), I: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside and outside yellowish white (155D), midveins deep pink (50B); spots and papillae deep pink; nectaries green, shading to yellow; pollen orange-brown; stigma dark purple. Tepal-margins ruffled, tips scarcely recurved. Stems 1.1 m, with dark markings, with 4-7 fls. Very early to early.

#### **'Venetia Brewis' II(-/d)**

Parentage: *martagon* × unknown

AM 1939

Fls yellow, *martagon* type.

(Published in *LYB* 8: 84 (1939).)

**'Veneto' VIII(a/b)**

Parentage: seedling J 57 × seedling RS 90-15

R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan (1996), I: Vletter & Den Haan (1996), REG: Gebr. Vletter & Den Haan (1996)

Inside moderate purplish red/deep pink (185C/D), tepals edged moderate purplish red (185C), throat and nectaries strong yellow-green (144C), the colour shading strongly into tepals; outside deep pink (185D), tepals edged moderate red/moderate purplish red (185B/C), midribs light yellow-green (144D), outer tepals less coloured, narrowly edged moderate red (185B); spots few, deep/moderate red (185A/B), in the throat; papillae absent; nectaries white, hairy; pollen moderate reddish brown (175A); stigma light yellow-green (154D). Fls 205 mm wide; tepals 115 × 45-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 25 mm, mid green. Stems 1.3 m, pale green with a little darker marking, and with 6-8 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

**'Venezia' VII(a-b/b-c)**

Parentage: 'Star Gazer' × unnamed seedling

R: Vletter & Den Haan (1980), G: Vletter & Den Haan (1983), N: Vletter & Den Haan (1988), I: Vletter & Den Haan, REG: Vletter & Den Haan (1991)

Inside moderate purplish pink (74D), tepal-margins ivory-white, midveins strong purplish red (60B), throat strong yellow-green (144C); outside moderate purplish red (186A), tepals with yellowish white (155B) margins, and suffused with light yellow-green (150D) at base; spots dark red (187A/B), on basal half of each tepal; pollen dark reddish orange to brownish orange (172B/C). Fls 170 mm wide; tepals 110 × 45 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 170 × 35 mm, mid green. Stems 1.2 m, green, with c.7 fls. May to June (under glass).

**'Venezuela' VII(a/b)**

Parentage: seedling 92-59 × seedling RM 95-73

R: Vletter & Den Haan Beheer B.V. (1998), N: Vletter & Den Haan Beheer B.V. (2002), REG: Vletter & Den Haan Beheer B.V. (2002)

Inside yellowish white (155D) with brilliant yellow (8A) along midveins; outside yellowish white (155D), each tepal with strong yellow-green tip; spots brilliant yellow (8A); papillae present; nectaries strong greenish yellow (151A/B); pollen greyish brown to moderate reddish brown (166A/B); stigma light greenish grey (190D). Fls 190 mm wide; tepals 145 × 45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 215 × 68 mm. Stems 1 m, green, with c. 5 fls.

**'Venix' I(a/b)**

Parentage: seedling G 85-4 × seedling RS 85-10

R: Vletter & Den Haan (1985), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den

Haan (1990), REG: Vletter & Den Haan (1992)

Inside pale yellow (11C) with a moderate, reddish orange (42D) blush, throat suffused with strong yellow-green (143C); outside pale yellow (11D) with pale yellow (11C) tepal-edges, outer tepals suffused with moderate red (179B); spots few, dark red (187A), in the throat; nectaries pale yellow-green (184D) edged with dark red (187C); pollen dark reddish orange (175B). Fls 195 mm wide; tepals 90 × 45 mm, margins smooth, tips strongly recurved. Lvs scattered, mid green. Stems 1.4 m.

**'Venta' VII(-/-)**

Parentage unknown

R: K. Zeltans (pre 1983), N: K. Zeltans  
No further details.

**'Venta' I(a/b)**

Parentage unknown

R: V.P. Orehovs (pre 1995), N: V.P. Orehovs

Inside white with small maroon spots; pollen bright orange. Fls 100 mm wide. Stems 0.7 m.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Ventimiglia' VIII(a-b/b)**

Parentage: seedling PH 95-48 × seedling A 4 B

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside brilliant yellow (12B), each tepal pale greenish yellow (2D) towards margins and tip, throat light yellow (12C); outside pale greenish yellow (2D), midribs light yellow-green (145B), along midribs pale yellowish pink (159D); spots vivid yellow (12A); papillae present; nectaries strong yellow-green (145A); pollen moderate reddish brown (177A); stigma moderate reddish brown (177A). Fls 250 mm wide, strongly fragrant; tepals 130 × 75 mm, margins slightly ruffled, tips slightly recurved. Lvs 195 × 45 mm, dark green. Stems 1.2 m, light green with darker markings, with c.3 fls.  
(An *Orienspet* (OT) lily.)

**'Ventoux' I(a/-)**

Parentage: seedling RS 892 × seedling OR 971

R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)

Inside pale yellow (11C/D), tepals flamed deep pink (52B); outside yellowish white (155B), outer tepals tinged with light yellow-green (145B), midribs light yellow-green (145B/C); spots few, dark red (187A), on the inner tepals in the throat; pollen moderate reddish orange/brownish orange (171A/B). Fls 190 mm wide; tepals 95 × 45 mm, margins smooth, not recurved. Lvs scattered, 185 × 14 mm, mid green, recurved. Stems 1.5 m, green with darker markings, and with c.7 fls. May.

**'Venture' I(a/b)**

Parentage: 'Tabasco' × 'Connecticut Red'

R: Oregon Bulb Farms, Inc. (1972), N: Oregon Bulb Farms, Inc. (1979), I: Oregon Bulb Farms, Inc. (1980),

REG: Oregon Bulb Farms, Inc. (1980)  
Fls intense deep red (53A); spots almost black; nectaries deep dark red (187A); pollen moderate reddish brown (174A). Fls 100 mm wide; tepals 80 × 10 mm, slightly recurved. Lvs scattered, 120 × 15 mm, mid green. Stems 1.5 m, dark, with 8-25 fls. Plant downy. June to July.

**'Venus' VII(-/b)**

See *L. × parkmanii* 'Venus'.

***venustum* Kunth I(a/b)**

Syn. of *L. × maculatum* 'Venustum'.  
(Included in Div. I because, although published as a species, it is a synonym of *L. × maculatum* 'Venustum' which is placed in Div. I.)

**'Venustum' I(a/b)**

See *L. × maculatum* 'Venustum'.

**'Venustum Macranthum' I(a/b)**

See *L. × macranthum* 'Venustum Macranthum'.

**'Vera' I(b/-)**

Parentage: selection from Vasaras Prieks Group  
S: V.P. Orehovs (post 1956), N: V.P. Orehovs  
Fls red.  
(Published in *LYB* 33: 78 (1970).)

**'Vera' VI(-/a)**

Parentage unknown  
R: N.A. Miroshniczenko (c. 1980), N: N.A. Miroshniczenko  
Inside white; outside brownish. Stems 1.8 m. Early.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Vera Cruz' VIII(a/b)**

Parentage: red-flowered seedling × ('Snowstar' × 'Gran Paradiso')  
R: Bischoff Tulleken Lelies B.V. (1993), G: Bischoff Tulleken Lelies B.V. (1996), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2002)  
Inside moderate reddish orange (35A), each tepal with a strong orange (24A) flame, throat strong orange (168B); outside strong to vivid reddish orange (34C/B); spots greyish red (176A); papillae present; nectaries strong orange (168A); pollen vivid reddish orange (34B); stigma dark red (187C). Fls 180 mm wide; tepals 125 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 18 mm, light green. Stems 0.98 m, dark, with 4-7 fls. July.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Vera Matthé' I(b/c-d)**

Parentage: 'Agnes Bernauer' × mixed pollen of 'Blickfang' & 'Papagena'  
R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (2000), I: G. Steinbrück (2000), REG: G. Steinbrück (2000)  
Inside moderate yellowish pink (39C), throat a little

darker; outside similarly coloured; dark red spots and a brushmark on basal half of each tepal; nectaries moderate yellowish pink; filaments long; pollen dark red (183A); stigma deep yellowish pink. Fls 170 mm wide; tepals 85 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 22 mm. Stems 1.1 m, dark green, with c.11 fls. Mid to late July.

(Named in honour of the German lily breeder.

Nomenclatural standard: colour print provided by registrant (WSY 0024692).)

**'Verdi' I(a/-)**

Parentage: seedling RS 851 × seedling RS 895  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside strong purplish pink (63C), outer tepals tinged with pale purplish pink/greenish white (65D/155C), tips pale purplish pink/greenish white (65D/155C); outside pale purplish pink (65D), tepals with strong purplish pink (68B) margins and pale orange-yellow (159C) midribs; spots dark red (59A), in the throat; pollen strong orange (169C). Fls 150 mm wide; tepals 70 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 170 × 12 mm, mid green. Stems 1.15 m, green, with 8-10 fls. May.

**'Verdura' VI(b/c-d)**

Parentage: Aurelian Group × seedling 49-518  
R: C. Yerec (c. 1951), N: C. Yerec  
Inside chartreuse-green (HCC 663); outside pea-green (HCC 61), blending to green (HCC 663/3) at tepal-margins.

**'Verigold' I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: R.H. Bazett (1990), G: R.H. Bazett (1992), N: R.H. Bazett (2001), I: The Lily Nook (2003), REG: R.H. Bazett (2001)  
Inside vivid yellow (17B), throat strong orange-yellow (17A); outside vivid yellow (14B) shading to vivid yellow (14A) at tepal-margins; spots dark purple, numerous, small, elongated, on basal half of each tepal; nectaries green-yellow; pollen strong brown (172A); stigma red-purple on a green base. Fls 160 mm wide; tepals 95 × 57 mm, margins smooth, tips not recurved. Lvs scattered, 150 × 20 mm. Lvs and tepals of heavy texture. Stems 1.1 m, dark green, with c.15 fls, including secondaries. Late June to July.  
(Nomenclatural standard: colour print provided by registrant (WSY 0030918).)

**'Vermeer' I(a-b/b-c)**

Parentage: seedling RS 86-20 × seedling RS 87-40  
R: Vletter & Den Haan (1991), G: Vletter & Den Haan, N: Vletter & Den Haan (1995), I: Vletter & Den Haan, REG: Vletter & Den Haan Beheer B.V. (1998)  
Inside strong purplish pink (55B), each tepal shading to white at base and margins; outside strong purplish pink (55B); spots few, small, in the throat; some papillae present; nectaries pink; pollen greyed red; stigma red.

Tepal-margins smooth, tips recurved. Lvs scattered. Stems 1.25 m, green, with c.7 fls. July.

**'Vermilion Brilliant'** I(a/b)

See *L. × hollandicum* 'Vermilion Brilliant'.

**'Verna'** I(b/-)

Parentage: *lanceifolium* var. *flaviflorum* × unknown  
R: D.B. Fox (pre 1969), N: D.B. Fox, REG: D.B. Fox (1969)

Fls opening strong orange (24A) to strong orange-yellow (24B), deepening with age to strong orange (25A/B), tepal-tips paler, with a touch of green; spots present. Tepals recurved. Lvs mid green. Stems 1.4 m, fairly dark. (Published in *LYB* 33: 257 (1970).)

**'Vernal Moon'** VI(b/b)

Parentage: selection from Aurelian Group  
S: C. Yerex (c. 1945), N: C. Yerex

Inside Marguerite yellow (Maers & Paul 10-C/1) at tips, blending to chartreuse (Maers & Paul 11-L-1) at centre; outside brushed with purple. (Published in *Rex Bulb Farms Cat.*, 1966.)

**'Verona'** VI(-/a)

Parentage: Aurelian Group × selections from *leucanthum*  
R: J. de Graaff (c. 1954), N: J. de Graaff  
Similar to 'Damson', but fls a lighter plum-purple. Fls 130 mm wide; tepal-tips recurved. Stems 1.5 m. July.

**'Veronese'** VIII(a-b/b)

Parentage: seedling PH 96-59 × seedling RH 96-4  
R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside light greenish yellow (5D), each tepal brilliant greenish yellow (5B) at base and along midvein, throat yellowish white (155C); outside pale yellow green (4D), each tepal light greenish yellow (4C) along margin, midribs flushed with vivid purplish red (61C); spots brilliant yellow (7A); papillae present; nectaries strong yellow-green (144A); filaments pale green; pollen dark reddish orange (175B); style green; stigma dark purple (79B). Fls 250 mm wide; tepals 140 × 70 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 250 × 50 mm, dark green. Stems 1.5 m, green, with 4-8 fls. (An Orienpet (OT) lily.)

**'Veronica Tennant'** I(c/-)

Parentage: ('Cromottiae' × unknown) × *dauidii* var. *unicolor*  
R: W.A. Constable Ltd (pre 1951), N: W.A. Constable Ltd  
Fls clear lemon-yellow; spots absent. (Published in *Constable Cat.*, autumn 1951.)

**'Veronie'** I(a-b/b)

Parentage: unnamed seedling × unnamed seedling  
R: Imanse Lelieveredeling B.V. & Peacock B.V. (1995), G: Marklily C.V. (1998), N: Marklily C.V. (2001), I: Marklily C.V. (2002), REG: Marklily C.V. (2002)

Inside vivid reddish orange (32A), throat strong yellowish pink (32D); outside strong reddish orange (31B), tepals edged with vivid reddish orange (32A), midribs on outer tepals strong yellow-green (143A); spots few, dark red (187A); papillae present; pollen strong reddish orange (169A); stigma vivid reddish orange (30A). Buds hairy. Fls 160 mm wide; tepals 90 × 50 mm, margins smooth, tips recurved. Lvs scattered, 190 × 15 mm. Stems 1.2 m, dark, with c.6 fls. Early.

**'Veronika'** I(a/b)

Parentage: complex hybrid involving 'Rubinovaia', 'Redstart', 'Destiny', *cernuum* & *L. × maculatum*  
R: M.F. Kireeva (1980), N: M.F. Kireeva  
Fls pale apricot-pink; spots small, brown, on basal half to two-thirds of each tepal; filaments pale pink; anthers orange-brown. Fls 110-130 mm wide; tepal-margins smooth, tips eventually recurved. Stems 0.9-1.5 m, with 9-15 fls, and with bulbils. July. (Published in M.F. Kireeva, *Lilii*, 45 (1984).)

**'Versailles'** VI(-/c)

See Versailles Group.

**Versailles Group** VI(-/c)

Parentage unknown  
R: J. Bakker (1978), G: J. Bakker (1981), N: J. Bakker (1985), I: Licomba (1988), REG: Licomba (1988)  
Inside greenish white (155C); outside greenish white with pale yellow-green (4D) midribs; spots dark red (187B/C); pollen moderate reddish orange to brownish orange (171A/B). Fls 160 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, 180 × 35 mm, mid green. Stems 1 m, pale green, with 8-9 fls. (Published as a cv. in *ILR Tenth Supplement*.)

**'Versija'** VI(c/b)

Parentage unknown  
R: J. Vasarietis (pre 1999), N: J. Vasarietis  
Fls white with strong orange-yellow on basal half of each tepal; red spots and lines scattered on basal half of each tepal; nectaries green; pollen orange-red; stigma green. Tepals rather oblong, margins smooth, tips recurved.

**'Verunka'** I(a/b)

Parentage: ('Chaco' × 'Orion') × 'Blackwatch'  
R: K. Braun (1987), N: K. Braun, REG: K. Braun (1988)  
Yellow/rose-pink bicolor: inside centre of each tepal yellow, base and tip rose-pink; outside rose-pink; spots brown, medium sized, on two-thirds of each tepal; papillae cream; nectaries rose-pink; pollen brown; stigma rose-pink. Fls 168 mm wide; tepals 86 × 35 mm, recurved; pedicels 92 mm long, slightly hairy, green. Lvs scattered, 80 × 15 mm, glossy dark green. Stems 1 m, brownish, with secondary buds. Early July.

**'Verviers'** VIII(a-b-c)

Parentage: seedling BW 96-33 × seedling AW 94-09  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (2002), REG: Vletter & Den Haan Beheer B.V. (2004)

Inside yellowish white (155D); outside yellowish white (155D), pale greenish yellow (2D) along midveins, at base and top strong yellow-green (144B), outer tepals with a strong purplish red (63B) streak; spots and papillae absent; nectaries strong yellow-green (143C); pollen moderate brown (165A); stigma light greenish yellow (1C). Fls 200 mm wide; tepals 117 × 53-65 mm, margins smooth, tips recurved. Lvs scattered, 140 × 22 mm. Stems 0.9-1.4 m, green with darker markings, and with 3-4 fls. (A *longiflorum*/Asiatic (LA) hybrid.)

#### **'Veselaia' I(a/b)**

Parentage: *concolor* × mixed *L. × hollandicum* hybrids

R: V.A. Grot (1959), N: V.A. Grot

Fls golden orange; spots chestnut-brown, large, numerous, on two-thirds of each tepal. Fls 120-150 mm wide. Stems 1.3 m, spotted with dark purple, with up to 20 fls. July.

(Included in *ILR Second Supplement* as 'Veselaja' which is an unaccepted spelling.)

#### **'Veselaja' I(a/-)**

Unaccepted spelling of 'Veselaia'.

#### **'Veselvaia Vdova' I(a/b)**

Parentage unknown.

Fls orange-red.

(Published in M.F. Kireeva, *Lilii*, 38 (2000).)

#### **'Vesna' I(b-c/-)**

Parentage: Citronella Group × Sutter's Gold Group

R: B. Mičulka (pre 1984), N: B. Mičulka, REG: B. Mičulka (1985)

Inside yellow, throat greenish, centre apricot; outside with brownish midribs; spots fairly numerous, small, red-brown, on a quarter of each tepal; nectaries white-frosted; pollen brown. Fls 100 mm wide; tepals 80 × 35 mm, considerably recurved. Lvs dark dull green. Stems 0.7 m, black. Early July.

#### **'Vesnjanka' I(b/-)**

Parentage unknown

R: N.S. Nezovibatko (pre 1981), N: N.S. Nezovibatko

Fls light pink, with a paler centre; spots numerous, on three-quarters of each tepal; anthers not developed. Tepal tips recurved.

(Published in *Cvetovodstvo* 1: 33 (1981).)

#### **'Vesper' I(a/-)**

Parentage: ('Connecticut King' × Hallmark Group) × ('Connecticut King' × Hallmark Group)

R: J.F. McRae (1978), G: J.F. McRae & Columbia-Platte Lilies (1980), N: Columbia-Platte Lilies (1983), I: Columbia-Platte Lilies (1983), REG: Columbia-Platte Lilies (1984)

Inside pale yellow-green (4D), fading to white, tepal-tips pale yellow-green (4D) to white, throat light greenish yellow (4C); outside greenish yellow to white; spots absent; nectaries green; pollen deep orange-yellow (163A). Tepals 60-80 × 20-30 mm, margins smooth, tips slightly recurved. Lvs scattered, 120-150 × 20 mm, mid

green. Stems 0.6-0.9 m, green, with 4-7 fls. June. (Published in *Rex Lilies Cat.*, 1983.)

#### **'Vespucci' VII(b/b-c)**

Parentage: ('Merci' × 'Casa Blanca') × 'Maybride'

R: Lybelmex Hillegom B.V. (1988), G: Lybelmex Hillegom B.V. (1992), N: Lybelmex Hillegom B.V. (1996), I: Lybelmex Hillegom B.V., REG: Lybelmex Hillegom B.V. (1996)

Inside yellowish white (155D), midveins pale yellow-green (155A); outside yellowish white (155D) midribs pale yellow-green (155A), tinged with strong purplish red (60D) at base and strong yellow-green (144C) at top; spots absent; papillae on two-thirds of each tepal; nectaries strong yellow-green (144B); pollen strong reddish orange/strong orange (169A/B); stigma pale yellow-green (157A) and dark red (59A/187A). Fls 245 mm wide; tepals 120 × 45-65 mm, margins somewhat ruffled, tips recurved. Lvs scattered, 180 × 55 mm, mid green. Stems 1.1 m, pale green, with 5-9 fls. July to Aug.

#### **'Vesta' I(a/b)**

Parentage unknown

R: M.F. Kireeva, N.V. Ivanova & V.V. Martynova (1993)

Fls pale golden yellow, with pinkish flush and small, brownish spots. Fls 120-130 mm wide; tepal margins wavy. Stems 0.9-1.2 m, with 9-13 fls. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a Group. Published in M.F. Kireeva, *Lilii*, 40 (2000).)

#### **Vesta Group VI(-/c)**

Parentage: Aurelians

R: J.M. Shaver (pre 1966), N: J.M. Shaver, REG: J.M. Shaver (1984)

Fls in pastel shades of orange, yellow, cream or white, throat orange, lemon-yellow or lime; spots absent. Tepal margins smooth, tips slightly recurved or twisted. Lvs scattered. Stems 1.3-2.3 m. July to Aug.

(Published in *Rex Bull Farms Cat.*, 1996: 30.)

#### **var. *vestale* IX(b-c/d)**

See *speciosum* var. *tametomo*.

#### **'Vestálka' I(a-b/c)**

Parentage: ('Korál' × 'Juno') × 'Blizzard'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000), REG: B. Mičulka (2000)

Inside white, each tepal with a yellowish ray above the nectary; outside with yellowish green midribs; spots sparse, tiny, dark brown-purple, on a third of each tepal; nectaries green, white-granulated; pollen chocolate-brown; stigma red-brown. Fls 130 mm wide; tepals 70 × 38 mm, margins slightly wavy, tips very slightly recurved; pedicels 65 mm long, dark brown, with secondary buds. Lvs scattered, 75 × 12 mm, slightly glossy mid green. Stems 0.7 m, brown-spotted above, brown at base, with a medium-long infl. Late June.

#### **'Vesuvius' I(b/-)**

Parentage: *bulbiferum* var. *croceum* × 'Connecticut

Yankee'

R: E. Hickling (1972), N: E Hickling (1976), I: J. Wadekamper (1976), REG: J. Wadekamper (1976)  
Fls red-orange throughout, darker inside; spots few; nectaries yellow-orange; pollen orange-brown. Lvs broad, dark green. Stems 1.1 m. July.  
(Published in *Lilies and other Liliaceae*, 1976: 93.)

**'Vezi'** I(c/d)

Unaccepted spelling of 'Vezi'.

**'Vezi'** I(c/d)

Parentage: Sutter's Gold Group × 'Connecticut Yankee'  
R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B. Mičulka (1984)

Fls glowing orange; spots few, brown-violet, on half of each tepal; nectaries frosted pale orange; pollen orange. Fls 75 mm wide; tepals 80 × 35 mm, margins slightly curled, tips strongly recurved. Lvs 75 × 10 mm, dull green. Stems 0.9 m. Mid July.  
(Included in *ILR Third Supplement* as 'Vezi' which is an unaccepted spelling.)

**'Viat'** I(a/-)

Parentage: 'Connecticut King' × 'Diana'  
R: G.N. Ovechkin (1984), G: G.N. Ovechkin (1987), N: G.N. Ovechkin (1992), I: G.N. Ovechkin (1993), REG: G.N. Ovechkin (1995)

Inside yellow, flushed with brown in the centre of each tepal, throat yellow; outside dark brown; dark spots on a third of each tepal; nectaries light brown; pollen brown. Fls 140 mm wide; tepals 90 × 26-37 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 12 mm, mid green. Stems 1.1 m, mid green, with c.9 fls, and with bulbils. Mid July.  
(The pollen parent is probably 'Diana' (of Kireeva).  
Published in *Fazenda*, no. 9-10 (1993).)

**'Vicenza'** VIII(a/-)

Parentage unknown  
R: Vletter & Den Haan Beheer B.V. (2003)  
Inside strong purplish red to strong purplish pink (63B/C), redder in young fls, midveins green at base; outside strong purplish pink (63C), darker along tepal-margins; spots and papillae present; nectaries green; pollen brown; stigma green. Tepal-margins ruffled, tips slightly recurved. Stems medium to tall. Early.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**'Viceroy'** VII(-/a)

Parentage: 'Ming Joy' × mixed pollen  
R: J.C. Ericksen (c. 1963), N: J.C. Ericksen  
Fls primrose-yellow, each tepal with a darker yellow ray, throat also darker. Tepal-tips reflexed. Lvs shiny green. Stems 1.4 m.

**'Vicky'** I(a/-)

Parentage unknown  
R: P. Hoff (1993), G: Hoffgaarde B.V. (1994), N: Hoffgaarde B.V. (1995), I: Hoffgaarde B.V. (1996), REG: Hoffgaarde B.V. (1997)

Inside yellowish white (155B), throat strong yellow-green (143C); outside pale yellow-green (155A), tepal-tips strong yellow-green (144C), midribs tipped with light greenish yellow (4C); spots dark red (187A), on a third of each tepal; papillae yellowish white (155B), few, in the throat; nectaries strong yellow-green (143C); pollen a little stronger than moderate orange (167A); stigma dark red (59A). Fls 170 mm wide; tepals 90 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 20 mm, mid green. Stems 0.9-1.1 m, green with darker markings, and with 7-9 fls. Some tepals can be suffused moderate purplish red (58A) inside and out.  
Trade designation: HOFFRICA® VICKY.

**'Vico Afro Group'** VI(b/a)

Parentage: *sulphureum* (Burmese form ex. Botanic Garden, Madrid) × African Queen Group  
R: Sir Peter Smithers, G: Sir Peter Smithers, N: Sir Peter Smithers (1990), REG: Sir Peter Smithers (1990)  
Vivid yellow (12A) to light orange-yellow (24C) throughout; outside with red midribs and flushing; spots absent; nectaries green; pollen orange. Tepals 130 × 70 mm, margins smooth, tips strongly recurved. Lvs scattered, 130 × 12.5 mm. Stems up to c.2 m, with up to 10 fls. Mid July to Aug.  
(Published in *ILR Ninth Supplement* as Vico Afro grex.)

**'Vico Gold Group'** VI(b/a)

See *L. × sulphurgale* Vico Gold Group.

**'Vico Queen'** VI(-/a)

Parentage: selection from Vico Afro Group  
S: Sir Peter Smithers, G: Sir Peter Smithers (c. 1986), N: Sir Peter Smithers (1995), REG: Sir Peter Smithers (1995)  
Inside strong orange-yellow (22A), throat strong orange (25A); outside broadly striped with moderate orange (170B) along midribs; spots absent; pollen orange. Fls 155 mm wide, strongly and pleasantly scented, especially in the evening; tepals 190 mm long, margins smooth, tips slightly recurved. Lvs scattered, 190 × 13 mm, mid green. Stems 2 m, pale green with darker mottling, and with 7 or more fls, bulbils absent. July.  
(Self-fertile and resistant to virus. Nomenclatural standard: herbarium specimen provided by registrant (WSY 0014845).)

**'Victor'** I(c/-)

Parentage: selection from Sapņotāja Group  
No further details.

**'Victoria'** I(a/-)

Parentage unknown  
R: H. Deleeuw Co. Ltd, G: Sande B.V. (1976), N: Sande B.V. (1980), REG: Sande B.V. (1981)  
Fls greyish red, tepal-tips tomato-red; spots oxblood-red on half of each tepal; pollen majolica-brown.

**'Victoria Falls'** VIII(a/b)

Parentage: (Sundrop Group × *dauricum*) × (*longiflorum* × 'Aristo')

R: Bischoff Tulleken Lelies B.V. (1986), G: Bischoff Tulleken Lelies B.V. (1989), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2001)  
Inside light/pale orange-yellow (23C/D), midveins strong orange-yellow (24B), throat pale orange-yellow (23D); outside lighter than pale orange-yellow (23D), becoming 23D towards tepal-margins, midribs paler than brilliant greenish yellow (151D), outer tepals tipped with strong yellow-green (143A); spots dark red (187A), on a third of outer tepals; papillae few, in the throat; nectaries light orange-yellow (24C); pollen strong brown (172A); stigma light orange (28C). Fls 220 mm wide; tepals 115 × 40-55 mm, margins slightly wavy, tips recurved. Lvs scattered, 170 × 17.5 mm. Stems 0.85 m, light green, with 3-5 fls. June.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Victoria Meyers’** I(a/-)  
Misspelling of ‘Victoria Meyers’.

**‘Victoria Meyers’** I(a/-)  
Parentage unknown  
R: N.F. Bieniasz, N: N.F. Bieniasz (1982), REG: N.F. Bieniasz (1982)  
Throat brilliant yellow (21C), tepal-tips deep pink (51C); outside strong pink (54C); spots absent; nectaries raspberry; pollen strong red (50A). Lvs scattered, dark green. Stems 1.1 m, with 24-30 fls.  
(Misspelling: ‘Victoria Meyers’. Named for the raiser’s granddaughter.)

**Victorian Lace Group** VIII(b/-)  
Parentage unknown  
R: Cebeco Lilies, Inc. (pre 1995), N: Cebeco Lilies, Inc., REG: ICRA (1998)  
Inside light rose-pink at centre of fl., otherwise creamy; nectaries green-gold. Fls 225-275 mm wide. Stems to 1.5 m (or 3 m under glass).  
(Oriental (OT) lilies.)

**‘Victory’** I(c/-)  
Parentage: *lancifolium* × *leichtlinii* var. *maximowiczii*  
R: J. de Graaff (c. 1958), N: J. de Graaff  
Fls orange red; spots deep maroon. Stems 0.6 m. Aug.  
(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘Victory’** IX(b/c)  
See *auratum* ‘Victory’.

**‘Victory of Dreams’** VI(b/a)  
Parentage: *leucanthum* var. *centifolium* × ‘Heart’s Desire’  
R: K. Paszyńska (1984), G: K. Paszyńska, N: K. Paszyńska (1992), I: K. Paszyńska (1992), REG: K. Paszyńska (1992)  
Inside cream, tinged with pink at base and along tepal-margins, throat amber-yellow; outside greenish overlaid with pink; spots absent; nectaries amber-yellow; pollen dark brown. Fls 150 mm wide, strongly scented; tepals 125 × 45 mm, margins slightly ruffled, tips slightly

recurved. Lvs scattered, 140 × 20 mm, mid green. Stems 1.4 m, green, with 6-8 fls in a crown-like head. Early July.

**‘Viena’** I(a/-)  
Parentage: seedling W 481 × seedling W 659  
R: Vletter & Den Haan (1982), G: Vletter & Den Haan (1985), N: Vletter & Den Haan (1989), I: Vletter & Den Haan, REG: Vletter & Den Haan (1990)  
Inside greenish white (155C); outside yellowish/greenish white (155B/C), midribs light yellow-green (145C), suffused with dark pink (182D) at base; spots few, dark red (187A), on the inner tepals in the throat; pollen brownish orange (172C). Fls 195 mm wide; tepals 90 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 105 × 20 mm, mid green. Stems 1.5 m, green, with c.4-6 fls. May.

**‘Vigante’** I(a/b)  
Parentage: ‘Nepal’ × ‘Alisa’  
R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)  
Inside pale yellow-green (155A), throat light greenish yellow (3C); outside white, midribs pinkish; spots dark red (187A), on basal half of each tepal; nectaries brown; pollen dark yellow. Fls 155 mm wide; tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 15 mm, dark green. Stems 1.1 m, green, with c.4 fls. Early July.

**‘Vigneron’** I(a/-)  
Parentage unknown  
R: Vletter & Den Haan (1993), G: Vletter & Den Haan, N: Vletter & Den Haan (1997), I: Vletter & Den Haan (1997), REG: Vletter & Den Haan (1997)  
Inside brilliant greenish yellow (3A), with light greenish yellow (3C), tepals narrowly edged with brilliant greenish yellow (3A) at tips, throat with a little pale yellow-green (155A); outside light yellow-green (150D), tepals narrowly edged with brilliant greenish yellow (3A) and tipped strong yellow-green (143C); spots absent; papillae brilliant greenish yellow (3A), in the throat; nectaries strong yellow-green/pale yellow-green (143B/155A); pollen moderate reddish brown (175A); stigma dark reddish orange (178B). Fls 160 mm wide; tepals 90 × 40-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 85 × 20 mm, mid green. Stems 1 m, green, with c.6 fls.

**‘Vignola’** I(a/b)  
Parentage: seedling OR 87-09 × seedling 85710-1  
R: Vletter & Den Haan, G: Vletter & Den Haan, N: Vletter & Den Haan, I: Vletter & Den Haan, REG: Gebr. Vletter & Den Haan v.o.f. (1999)  
Inside strong orange (25A) on a brilliant yellow (21C) ground, with a little vivid orange (28A) above nectaries, at tepal-margins and at tips; outside strong orange (25B) on a paler ground, each tepal narrowly edged strong orange (25A), midribs strong yellow-green (144C), tipped strong yellow-green (143A); spots dark red (187A), in the throat; papillae pale orange-yellow (24D), in the throat; nectaries pale orange-yellow (24D); pollen

strong brown (172A); stigma moderate red (47A). Fls 190 mm wide; tepals 100 × 35-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 25 mm, dark green, hairy. Stems 1.2 m, dark green with dark stripes and spots, and with c.7-9 fls.

**‘Vija’ I(b/-)**

Parentage: ‘Svetlana’ × ‘Iolanta’

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls pale lavender; spots lilac-pink. Stems 1.3 m, with bulbils.

(The seed parent is probably ‘Svetlana’ of Kireeva.)

**‘Viking’ I(c/d)**

Parentage: *dauidii* var. *willmottiae* × diploid *lancifolium*

R: E.F. Palmer (c. 1942), N: E.F. Palmer, I: E.F. Palmer (1948)

Fls orange-red; spots maroon, numerous. Stems 1.2-1.9 m, dark and shiny, with up to 20 fls, and with bulbils. July.

(Published in *LYB NALS* 2: 77 (1949).)

**‘Vikomt’ I(a/c)**

Parentage: ‘Grun-weiss’ × (‘Windahloo’ × ‘Endeavor’)

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2002),

REG: B. Mičulka (2002)

Inside pale yellow on opening, fading to yellowish cream, throat paler, greenish; spots dark pinkish brown, moderately numerous, moderately large, on a third of each tepal; brushmarks mahogany, small, inconspicuous. Fls 150 mm wide; tepals 90 × 45 mm, hardly recurved; pedicels 80 mm long, thick, green, hairy. Lvs scattered, 120 × 15 mm, dark yellowish green. Stems 0.95 m, green, brown at base, slightly hairy, and with a short infl. Early June.

**‘Viktorka’ VI(b/a-b)**

Parentage: orange-flowered trumpet × (Sulphur Group × ‘Stardust’ (probably of de Graaff))

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1991),

REG: B. Mičulka (1991)

Inside white tinged with beige-cream, throat beige-apricot extending half-way up tepals; outside with the apricot colour shining through, midribs greenish; nectaries yellowish green; pollen apricot; stigma yellowish green. Fls 75 × 130 mm; tepals 110 × 43 mm, tips slightly recurved; pedicels 90 mm long. Lvs scattered, 75 × 8 mm, glossy green. Stems 1.1 m, brownish at base, lightly spotted above. Early July.

**‘Vilany’ IX(-/d)**

See *henryi* ‘Viļāny’.

**‘Viļāny’ IX(-/d)**

See *henryi* ‘Viļāny’.

**‘Vilja’ Div. ?**

Parentage unknown

R: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn

No further details.

**‘Villach’ I(a/-)**

Parentage: ‘Connecticut King’ × ‘Parabola’

R: V. Strasser (1976), G: V. Strasser (1978), N: V. Strasser (1980), I: V. Strasser (1985), REG: V. Strasser (1990)

Vivid yellow (14A) throughout; spots purple, on two-thirds of each tepal; nectaries green; pollen orange. Fls 150 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, 85 × 12 mm, dark green. Stems 1 m, green, with c.18 fls. Mid July.

**‘Villanova’ VII(b/b-d)**

Parentage: derived from unnamed Oriental hybrids

R: Mak Lelieveredeling B.V., G: Mak-Leek Inc. (1991),

N: Mak-Leek Inc. (1996), I: Mak-Leek Inc. (1997),

REG: Mak-Leek Inc. (1997)

Inside each tepal with a vivid red (45B) ray, edges light purplish pink (73C), tips deep purplish pink (66C), throat close to vivid red (45B); outside ivory-white to pink; papillae magenta-pink, moderate sized, on basal three-quarters of each tepal; nectaries light greenish grey (202D); pollen moderate reddish brown (175A). Buds slender, pointed. Fls c.180 mm wide; tepals 80-100 × 50 mm, tips slightly recurved. Lvs scattered, 125 × 55 mm, mid green. Stems 0.8-1.35 m, green with darker markings, and with c.8-12 fls. Aug.

**Viltigrinum Group I(b/d)**

Misspelling of Willtigrinum Group.

**‘Vimal Gandhi’ VI(b/b)**

Parentage: ‘Dee Simmons’ × ‘Thunderbolt’

R: A.D. Harrison (1977), G: A.D. Harrison (1981), N:

A.D. Harrison (1985), I: A.D. Harrison (1985), REG:

A.D. Harrison (1985)

Fls strong orange (24A) throughout; spots absent; nectaries moderate yellow-green (146D); pollen vivid orange-yellow (23A). Fls 160 mm wide; tepals 100 × 36 mm, margins smooth, tips slightly recurved. Lvs scattered, 180 × 18 mm, moderate olive-green (146A). Stems 1.5 m, dark yellowish green (139A) with 6 or more fls. July (under glass).

**‘Vina del Mar’ VIII(a-b/b)**

Parentage: seedling PH 95-48 × seedling A 4 B

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside brilliant yellow (12B), each tepal pale greenish yellow (10D) towards margins and tip, throat pale greenish yellow (10D); outside pale greenish yellow (10D), midribs pale yellow (11D) flushed with light pink; spots vivid yellow (13A); papillae present; nectaries strong yellow-green (144B); pollen moderate reddish brown (166B); stigma moderate brown (165A). Fls 260 mm wide, strongly fragrant; tepals 140 × 70 mm, margins slightly ruffled, tips slightly recurved. Lvs 195 × 70 mm. Stems 1.2 m, light green, with c.3 fls. (An Orienpet (OT) lily.)

**Vineland Aurelians Group VI(b/c)**

Parentage: erect form of *henryi* × white-flowered, semi-

trumpet seedling of *L. × aurelianense*  
R: E.F. Palmer (c. 1945), N: E.F. Palmer  
Fls off-white to medium apricot. Fls 110-150 mm wide;  
tepals semi-reflexed. Stems 1.6-2 m. July to Aug.  
Syn.: Dominion Aurelians Group.  
(Published in *Greenock Farms Cat.*, 1956. Included in *ILR*  
(1960) as Vineland Aurelians grex.)

#### **Vineland Golden Aurelians Group VI(b-c/a)**

Parentage: derived from *regale*, *sargentiae*, *sulphureum* &  
*henryi*

R: E.F. Palmer, N: E.F. Palmer, I: Horticultural  
Experiment Station (1962), REG: Horticultural  
Experiment Station (1983)

Fls deep golden yellow; outside at first greenish to deep  
yellow; spots absent; pollen golden yellow. Tepal-margins  
ruffled, tips slightly recurved. Lvs scattered, dark green.  
Stems 1.2-1.9 m, dark green, with 5-25 fls. July.  
(Published in 'Plant breeding and variety testing at  
Vineland 1926-1963', published by Ontario Dept. of  
Agriculture. Included in *ILR* (1982) as Vineland Golden  
Aurelians grex.)

#### **'Vinex' I(a/b)**

Parentage unknown

REG: ICRA (1990)

Inside crimson-red, throat darker; outside paler, midribs  
darker; spots large, oval, black, on basal half of each tepal;  
nectaries frosted crimson; pollen orange-brown. Fls 120  
mm wide; tepals 75 × 32 mm, tips slightly recurved;  
pedicels 80 mm long, spotted with red-brown. Lvs  
scattered, 70 × 11 mm, light green, dull, sparse. Stems 0.8  
m, thick at base, dotted with red-brown above. Early July.  
(Perhaps of Dutch origin, pre 1985.)

#### **'Vinnija' I(a/c)**

Parentage: 'Evrika' × 'Arabeska'

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode  
(1999), REG: A. Balode (1999)

Inside light yellowish pink (36A), tepals with light  
yellow-green (154D) centre, throat green; outside  
brilliant yellow-green (142B); spots numerous, small,  
deep red (60A) and also marbling on each waxy tepal;  
nectaries greenish; pollen absent. Fls 120 mm wide; tepals  
60 × 25 mm, margins smooth, tips slightly recurved. Lvs  
scattered, 85 × 5 mm, mid green. Stems 0.95 m, green,  
with c.5 fls. Early July.

#### **'Vino' VII(c/d)**

Parentage: a late selection from Fire Dancer Group ×  
'Star Gazer'

R: Bischoff Tulleken Lelies B.V. (1978), G: Bischoff  
Tulleken Lelies B.V. (1982), N: Bischoff Tulleken Lelies  
B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989),  
REG: Bischoff Tulleken Lelies B.V. (1989)

Inside deep purplish pink (64D), tepal-margins very pale  
purple (73D), midveins strong red (53B), throat strong  
yellow-green (144C) with narrow brilliant greenish yellow  
(6C) edges; outside moderate purplish red (64A), inner  
tepals moderate purplish pink (70D); spots and papillae  
dark red (187A), over the entire surface of each tepal;

pollen strong orange (169B). Fls 200 mm wide; tepals  
90 × 40 mm, margins smooth, tips slightly recurved. Lvs  
scattered, 90 × 40 mm, mid green. Stems 0.55 m, green,  
with c.4 fls. Aug.

#### **'Violeta' VI(-/-)**

Parentage: *sargentiae* × *leucanthum* var. *centifolium*

R: V.P. Orehovs (c. 1962), N: V.P. Orehovs

No further details.

(Included in *ILR Second Supplement* as 'Violetta' which is  
a misspelling.)

#### **'Violet M. Constable' I(c/d)**

Parentage: 'Cromottiae' × *amabile* var. *luteum*

R: W.A. Constable Ltd (c. 1938), N: W.A. Constable Ltd

Fls rich yellow-orange, each tepal heavily spotted with  
deep purple on basal two-thirds; pollen orange-brown;  
stigma yellow. Fls c. 80 mm wide. Stems 1-1.8 m, with  
20-30 fls. June to July.

(Published in *JRHS* 64: ciii (1939).)

#### **'Violet Niles Walker' I(a/b)**

See *L. × maculatum* 'Violet Niles Walker'.

#### **'Violet Ray' IX(b/c)**

See *auratum* 'Violet Ray'.

#### **'Violetta' I(b/-)**

Parentage unknown

R: unknown (pre 1991)

Fls dark red, tepal-tips rather paler; spots dark, in centre  
of fl.

#### **'Violetta' VI(-/-)**

Misspelling of 'Violeta'.

#### **'Virgil' I(a/-)**

Parentage unknown

R: V. Weiser (1976), G: V. Weiser (1978), N: B.  
Weiser (1991), I: Borbeleta Gardens (1991), REG: J.  
Wadekamper (1993)

Fls moderate orange (167C), throat pink; spots large,  
brown, on basal half of each tepal; nectaries white; pollen  
brown. Tepals 120 × 30 mm, margins smooth, tips not  
recurved. Lvs scattered, 100 × 25 mm, mid green. Stems  
0.95 m, dark brown, with c.12 fls. Midseason.  
(Published in *Borbeleta Gardens Cat.*, 1991.)

#### **var. *virginale* IX(b/c)**

See *auratum* var. *virginale*.

#### **'Virgo' VII(a/c)**

Parentage: (*speciosum* × 'Star Gazer') × (*L. × parkmanii*  
'Allegra' × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1982), G: Bischoff  
Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies  
B.V. (1992), I: Bischoff Tulleken Lelies B.V. (1992),  
REG: Bischoff Tulleken Lelies B.V. (1994)

Inside yellowish white (155D); outside yellowish white  
(155D), midribs pale yellow-green (155A) tinged with  
light yellow-green (145B) at base, outer tepals tipped

with strong yellow-green (143A); spots and papillae yellowish white (155D), on two-thirds of each tepal; pollen strong orange (169B); stigma pale yellow-green (194D) and deep purplish red (71A). Fls 230 mm wide; tepals 190 × 60 mm, margins ruffled, tips recurved. Lvs scattered, 160 × 45 mm, mid green. Stems 0.8 m, green, with much darker markings and c.4 fls.

**var. *viridulum* IX(b-c/a)**

See *brownii* var. *viridulum*.

**'Virinea' I(a/b)**

Parentage: 'Svetlana' (of Kireeva) × 'Iolanta'  
R: M.F. Kireeva & N.V. Ivanova (1988), N: M.F. Kireeva  
Fls pale red, with a yellow centre; spots black, on basal yellow part of each tepal; pollen red. Fls 130-140 mm wide. Stems 0.9 m, with 9-15 fls. July.  
(Published in M.F. Kireeva, *Lilii*, 58 (2000). Included in *ILR Twentieth Supplement* as 'Virineja' which is an unaccepted spelling.)

**'Virineja' I(a/b)**

Unaccepted spelling of 'Virinea'.

**'Visaversa' VIII(a-b/b)**

Parentage: seedling 123-1 × seedling 90.056-14  
R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)  
Inside moderate red/moderate purplish red (185B/C), midveins yellow-green at base changing into pink-red; outside moderate purplish red (185C); spots absent; papillae present; nectaries green; pollen brown-red; stigma grey-purple. Fls 200 mm wide; tepals 135-140 × 42-60 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 180-195 × 23-39 mm, dark green. Stems 0.9-1.3 m, green with darker spots and stripes, and with 2-9 fls. Midseason to late.  
(An Oriempet (OT) lily. Nomenclatural standard: colour print supplied by registrant (WSY 0096402).)

**'Vischenka' I(b/-)**

Unaccepted spelling of 'Vishenka'.

**'Vishenka' I(b/-)**

Parentage: 'Nochka' × 'Smuglianka'  
R: M.F. Kireeva (1984), N: M.F. Kireeva  
Fls dark red, spotted. Fls 90-110 mm wide. Stems 1-1.2 m, with bulbils. June to July.  
(Unaccepted spelling: 'Vischenka'. Published in M.F. Kireeva, *Lilii* 33 (2000).)

**'Visione' I(a/b)**

Parentage unknown  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (1999)  
Inside with basal part of tepals yellowish white (155B), apical part strong/light purplish pink (73B/C) on a white ground, throat with a little strong purplish red (63B); outside strong purplish red/strong purplish pink

(63B/C) on a white ground, midribs strong yellow-green (144C), dark red (187A) at top; spots dark red (187A), in the throat; papillae yellowish white (155B) with a little dark red (187A); nectaries strong yellow-green (143A) with a little yellowish white (155B); pollen moderate reddish brown (175A); stigma dark red (187A). Fls 170 mm wide; tepals 85 × 45-60 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 12 mm, dark green. Stems 1.1 m, green, with c.5 fls.

**'Visir' VII(a-b/b)**

Parentage unknown  
R: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1994)  
Inside yellowish white (155B), with a very pale suffusion of strong purplish pink (68B), apical part of tepals paler, midveins deep red (60A), fading towards top, throat yellowish white (155B); outside yellowish white (155B) tinged with deep to strong purplish pink (68A/B) alongside midribs, the colour fading towards tepal-edges, tinged with strong yellow-green (144B) at base, midribs yellowish white (155B) in basal part of each tepal and moderate orange-yellow (164B) in apical part, tipped strong yellow-green (143B); spots dark red (187A), on basal part of each tepal; pollen strong reddish orange (169A); stigma dark red (187A). Fls 230 mm wide; tepals 110 × 55 mm, margins ruffled, outer more so, tips slightly recurved. Lvs scattered, 160 × 35 mm, pale green with darker markings, and with c.5 fls.

**forma *vittatum* IX(b-c/d)**

See *speciosum* var. *clivorum* forma *vittatum*.

**'Vittatum' V(b/a)**

See *longiflorum* 'Vittatum'.

**'Vittorea' VII(a-b/b)**

Parentage unknown  
R: Gebr. Vletter & Den Haan, G: Gebr. Vletter & Den Haan, N: Gebr. Vletter & Den Haan (1992), I: Gebr. Vletter & Den Haan, REG: Gebr. Vletter & Den Haan (1994)  
Inside strong purplish red (60C) on a yellowish white (155D) ground, the colour stronger towards tepal-tips, midveins brilliant yellow (12B) to deep red (53A); outside suffused with strong purplish red (60D) on a yellowish white (155D) ground, midribs strong yellow-green (144C) becoming strong yellow-green (144B) at top, outer tepals tipped with strong yellow-green (144A); spots deep purplish red (187D), on two-thirds of each tepal; pollen strong orange (169C); stigma moderate yellow-green (147D). Fls 285 mm wide; tepals 155 × 90 mm, margins ruffled, outer more so, tips slightly recurved. Lvs scattered, 215 × 40 mm, dark green. Stems 0.89 m, mid green, with c.3-6 fls.

**Viva Group I(c/d)**

Parentage: *pumilum* × *leichtlinii* var. *maximowiczii*  
'Unicolor'  
R: J.F. McRae (1977), G: J.F. McRae (1979), N: Columbia-Platte Lilies (1981), I: Columbia-Platte Lilies

(1982), REG: Columbia-Platte Lilies (1984)  
Fls vivid reddish orange (34A), except for a vivid to strong reddish orange (34A/C) throat; mostly unspotted, a few plants with very pale, half-toned spots; nectaries red, white-fuzzy; pollen vivid yellow (17B) or sometimes absent. Tepals 50-70 × 20 mm, margins smooth, tips strongly recurved. Lvs scattered, 80-120 × 20 mm, mid green. Stems 1.2-1.5 m, green, with 6-20 or more fls. June.

(Published in *Rex Lilies Cat.*, 1982; *Borbelata Gardens Cat.*, 1982. Included in *ILR Third Supplement* as *Viva gres.*)

#### **'Vivaldi' I(a/b)**

Parentage: seedling RS 646 × 'Sanciro'  
R: Vletter & Den Haan, G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1990), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1991)  
Inside pale purplish pink (55D) suffused with strong purplish pink (55B), tips of outer tepals strong yellow-green (144A), throat slightly suffused with light yellow-green (145B/C); outside pale purplish pink (56B/C), tepals edged moderate purplish pink (62B), midribs slightly suffused with greenish white (157D); spots small, dark red (187B), in the throat; papillae present; nectaries moderate purplish red (184C); filaments whitish; pollen moderate orange (167A/B); stigma orange. Fls 150 mm wide; tepals 70 × 45 mm, margins smooth, tips not or slightly recurved. Lvs scattered, 105 × 15 mm, mid green. Stems 0.85-1 m, green, with c.9-11 fls. July.

#### **VIVIANA VII(a/b)**

Trade designation of 'Zantriana'.

#### **'Vivija' I(a/b)**

Parentage unknown  
R: J. Vasarietis (1990), G: J. Vasarietis (1993), N: J. Vasarietis (1996), I: J. Vasarietis (1996), REG: J. Vasarietis (2001)  
Inside strong purplish pink (55B) towards tepal-tips, gradually shading to light purplish pink (55C) in mid tepal with an indistinct white area (c.20 × 20 mm) above the nectaries, throat strong purplish pink (55B); outside strong purplish pink (55B); all colours fade with age; spots black, numerous, tiny, on basal third of each tepal; nectaries short, white; pollen brown; stigma greyish brown. Fls 140 mm wide; tepals 70 × 32 mm, margins slightly waved and noticeably pinched in towards tip, inner tepals noticeably broader, tips slightly recurved. Lvs scattered, 90 × 9 mm. Stems 0.8 m, greenish brown, with c.11 fls, including some secondaries. Early to mid July. (Published in *Lilium Balticum Lily Register*, 1996.  
'Vivija' is the pet name of the registrant's wife (Violeta).  
Nomenclatural standard: colour print provided by registrant (WSY 0030816).)

#### **'Vize' I(a-b/c)**

Parentage: (('Mohykán' × ('Chinook' × 'Wattle Bird')) × ('Rusalka' (of Mičulka) × unknown) × (('Korál' × ('Chinook' × 'Wattle Bird')) × unknown)  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2000),

REG: B. Mičulka (2000)

Inside pale orange, throat with an apricot tone; outside paler, midribs slightly pinkish; spots dark brown-crimson, sparse, small, on a fifth of each tepal; brushmarks brown-crimson; nectaries white-granulated; pollen red-brown; stigma pink. Fls 115 mm wide; tepals 70 × 38 mm, margins slightly waved, tips slightly recurved; pedicels 80 mm long, slightly brown-dotted. Lvs scattered, 115 × 13 mm, mid green, shiny. Stems 0.95 m, thick, stiff, green, with a moderately long infl. Late June.

#### **'Vizma' I(b/c)**

Parentage: 'My Joe Ann' × 'Nakts Tango'  
R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)  
Inside moderate purplish pink (66D), throat greyed; with numerous, dense, small and large, dark red (187B) spots and marbling over the whole of each tepal; outside greyed purple; nectaries brown; pollen dark orange. Fls 155 mm wide; tepals 80 × 45 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 120 × 25 mm, dark green. Stems 0.95 m, green with brown stripes, and with c.7 fls. Early July.

#### **'Vlad'ka' I(a/b)**

Parentage: 'Red Fortune' × 'Firebrand'  
R: Šlechtitelská Stanice Heřmanův Městec (1994)  
Fls dark red, throat deep orange; spots medium sized, on a third of each tepal. Fls 130 mm wide; tepal-margins slightly ruffled, tips recurved. Lvs scattered, glossy dark green. Stems 0.65 m, thick, rigid, with abundant brown-red marks. Late July.  
(This cv. no longer exists.)

#### **'Vlad'ka' I(a-b/b-d)**

Syn. of 'Olinka'.

#### **'Vlasta' I(a-b/b-c)**

Parentage: cream-flowered tetraploid × ('Gran Paradiso' × 'Tetra Aristo')  
R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2003), REG: B. Mičulka (2003)  
Inside pale old rose, centre of each tepal cream with an apricot tint, throat cream; spots dark brown-pink, numerous, large, on half of each tepal; nectaries white-granulated; pollen orange-brown. Fls 145 mm wide; tepals 85 × 42 mm, margins smooth, tips not recurved.; pedicels 55 mm long, very thick, slightly spotted. Lvs scattered, 130 × 20 mm, dark dull green. Stems 0.9 m, very thick, slightly spotted, with a short infl. Mid June. Tetraploid.

#### **'Vlebur' VII(b/b-d)**

Parentage: 'Casa Blanca' × seedling 501  
R: Vletter & Den Haan (1984), G: Vletter & Den Haan (1987), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)  
Inside yellowish white (155D), midveins pale yellow (8D), shading to light greenish yellow (8C) in the throat, throat strong yellow-green (144C) edged light greenish yellow (6D); outside yellowish white (155D), midribs

pale greenish yellow (1D), shading to strong yellow-green (144C) at top; papillae moderate red (183C/D), on basal half of each tepal; nectaries very pale green (192C) slightly spotted with strong purplish red (72A); pollen strong brown (172A). Fls 230 mm wide; tepals 130 × 68 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 170 × 30 mm, mid green. Stems 0.9 m, green, dark-pigmented in infl., with c.6 fls.  
Trade designation: DUET.

**'Vlemora' VII(-/b)**

Parentage: seedling T 466 × seedling 501  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)  
Inside greenish white (155C), midveins brilliant greenish yellow (4A) at base, shading to pale yellow-green (4D) at top, throat strong greenish yellow (151A); outside greenish white (155C), midribs greenish to yellowish white (155C/D); papillae light greenish yellow (4B); nectaries dark purple (79A); pollen strong orange (169B). Fls 170 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, 120 × 21 mm, mid green. Stems 1 m, green, with c.7 fls.  
Trade designation: CASTOR.

**VLETAL VII(a/b-c)**

Trade designation of 'Almeria'.

**VLETCOR VII(a/b)**

Trade designation of 'Corso'.

**VLETDOR VII(a/b)**

Trade designation of 'Dordogne'.

**VLETGEN VI(a/b)**

Trade designation of 'Genova'.

**VLETRous VII(a/b)**

Trade designation of 'Rousillon'.

**VLETSOL VII(a/b)**

Trade designation of 'Soldera'.

**VLETSPA VII(a/b)**

Trade designation of 'Spain'.

**VLETTOP VII(a-b/b)**

Trade designation of 'Topsy'.

**VLETWIN VII(a-b/b)**

Trade designation of 'Windsor'.

**'Vogue' I(a/-)**

Parentage unknown  
R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1994)  
Inside with a patchy suffusion of light purplish pink (62C) on a yellowish white (155B) ground, tepals edged with yellowish white (155B); outside suffused with light

purplish pink (62C) on a yellowish white (155B) ground, tepal-tips strong purplish red (59D), midribs moderate purplish pink (62B); spots dark red (187B), on a third of each tepal; papillae coloured as tepals, in the throat; pollen strong orange (26A); stigma strong purplish red (59D). Fls 180 mm wide; tepals 90 × 50 mm. Lvs scattered, 90 × 15 mm. Stems 1 m, green, with c.8 fls.

**'Volcano' I(a/-)**

Parentage: selection from Mid-century Group  
S: J. de Graaff, N: J. de Graaff, I: J. de Graaff (1954)  
Fls blood-red. Stems 1-1.5 m.  
(Published in *ILR* (1960).)

**'Volendam' I(a/c)**

Parentage unknown  
R: Fa Jaap Boon, G: Fa Jaap Boon, N: Fa Jaap Boon, REG: Fa Jaap Boon (2000)  
Inside vivid orange (28A), throat brilliant orange/light yellowish pink (29A/C); outside brilliant orange (29A) on midribs, vivid orange (28A) towards tepal-edges, outer tepals a little paler; spots and papillae absent; nectaries brilliant orange (29A); pollen moderate reddish orange (171A); stigma moderate orange (168C). Fls 130 mm wide; tepals 75 × 30-40 mm, margins smooth, tips not recurved. Lvs scattered, 160 × 20 mm. Stems 1.5 m, bright green, with c.9 fls.

**'Volga' VII(-/c)**

See *L. × parkmanii* 'Volga'.

**'Volgogradskaja' I(a/-)**

Parentage unknown  
R: V.A. Grot (c. 1958), N: V.A. Grot  
Fls yellow-orange, spotted. Stems 1.4 m. June.  
(Included in *ILR Third Supplement* as 'Volgogradskaya' which is an unaccepted spelling.)

**'Volgogradskaya' I(a/-)**

Unaccepted spelling of 'Volgogradskaja'.

**'Volkhova' I(a/b-c)**

Parentage: unnamed seedling × 'Connecticut King'  
R: M.F. Kireeva & N.V. Ivanova (1986), N: M.F. Kireeva  
Fls deep yellow, each tepal with a darker centre; spots brownish, around nectaries. Fls 140-150 mm wide. Lvs 100 × 15 mm, glossy dark green. Stems 0.8-1 m, greenish brown, with 5-12 fls, and with bulbils. June to July.  
(Published in M.V. Baranova, *Lilii*, 318 (1990).)

**vollmeri Eastwood IX(c/d)**

Syn. of *pardalinum* subsp. *vollmeri*.

**subsp. vollmeri IX(c/d)**

See *pardalinum* subsp. *vollmeri*.

**'Volna' I(a-b/b)**

Parentage: ('Stroinaia' × *davidii* var. *willmottiae*) × 'Destiny'  
R: M.F. Kireeva (1976), N: M.F. Kireeva  
Fls bright orange; spots absent; filaments pale orange;

pollen absent. Fls 100-110 mm wide. Stems 1-1.9 m, with 11-20 fls. July.

(Published in M.F. Kireeva, *Lilii*, 45 (1984).)

#### 'Volos' I(a/-)

Parentage unknown

R: H. Hauwert (1988), G: H. Hauwert (1990), N: H. Hauwert (1997), I: H. Hauwert (1997), REG: H. Hauwert (1997)

Inside vivid/brilliant orange-yellow (21A/B), pale yellow (20C) towards tepal-tips, tips vivid orange-yellow (21), throat brilliant yellow (21C) edged pale yellow-green (155A); outside pale orange-yellow (19D), tepals edged with pale yellow (19C), shading to brilliant orange-yellow (23B) towards tips, tips strong orange (24A); spots dark red (187A), on a third of each tepal; papillae absent; nectaries pale yellow (20C); pollen moderate reddish orange/brownish orange (171A/B); stigma dark red (187B). Fls 150 mm wide; tepals 80 × 35-45 mm, margins smooth, tips slightly recurved. Lvs scattered, 110 × 15 mm, mid green. Stems 0.85 m, green, with c.9 fls.

#### 'Volpaia' I(b/-)

Parentage: *lancifolium* var. *flaviflorum* × *wilsonii*

R: D.B. Fox (c. 1966), N: D.B. Fox

Fls brilliant orange (29A) to strong orange (30D), spotted. Tepals recurved. Stem green, dark-stained.

#### 'Voltaire' I(-/-)

Parentage: "common orange-flowered bulbiferous lily" × *L. × maculatum*

R: H. Groom (c. 1848), N: H. Groom

Fls deep brown. Stems short.

(Published in *JHS* 3: xliii (1848). The seed parent is probably *bulbiferum*.)

#### 'Volturno' VIII(a/b)

Parentage: seedling EW 95-08 × seedling AW 94-09

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2001), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside more white yellowish white (155D); outside similarly coloured, with light yellow-green (145B) at base and brilliant yellow-green (149A) at tip, midribs light greenish yellow (3D); spots absent; papillae whiter than yellowish white (155D); nectaries whiter than yellowish white (155D), surrounded by light yellow-green (145C); pollen moderate orange (167A); stigma light greenish yellow (5C). Fls 190 mm wide; tepals 130 × 50-70 mm, margins smooth or slightly wavy, tips recurved. Lvs scattered, 150 × 25 mm. Stems 1-1.1 m, green, with 3-6 fls.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Volzhanka' VI(-/a)

Parentage: Aurelian Group × Pink Perfection Group

R: E.V. Parmanin & Z.S. Sapozhnikove (1968), N: E.V. Parmanin & Z.S. Sapozhnikova

Fls cream, with a lemon-yellow throat. Stems 1.5 m. July to Aug.

#### 'Vonnice' I(a/b-c)

Parentage unknown

R: C.K. Kroell (1972), N: J. Wadekamper (1975), I: J. Wadekamper (1976), REG: J. Wadekamper (1976)

Inside bronze, each tepal with a yellow stripe, tips bronze, throat green; outside bronze; spots russet, on basal quarter of each tepal; nectaries green; pollen brown. Tepal-tips recurved. Lvs dark green. Stems 1.2-1.5 m, with bulbils. July.

(Published in *Lilies and other Liliaceae*, 1976: 94 and included in *ILR* (1982) as Div. 1(b-c), but the fls were later confirmed to be up-facing and this was corrected in *ILR Third Supplement*.)

#### 'Voodoo' I(a/-)

Parentage: red-flowered hybrid × red-flowered hybrid

R: Gebr. N. & B. Laan & Zn (1986), G: Gebr. N. & B. Laan & Zn (1988), N: Gebr. N. & B. Laan & Zn (1994), I: Gebr. N. & B. Laan & Zn (1994), REG: Gebr. N. & B. Laan & Zn (1996)

Inside dark red (187B) in the basal part, apical part a little paler, tips with a little strong reddish orange (42B), throat reddish orange (42B), midveins dark red (187A) towards base; outside moderate reddish orange/brownish orange (171A/B), shading to dark red (187C) towards tepal-edges and narrowly edged dark red (187A); spots dark red (187A), on basal part of each tepal; papillae absent; nectaries dark red (187A); pollen dark reddish orange (175B); stigma dark red (187A). Fls 150 mm wide; tepals 80 × 25-35 mm, mid green. Stems 0.9 m, pale green with a lot of darker markings, and with c.12 fls. Late May.

#### 'Vospominanii' VI(-/a)

Parentage: 'Ceriņu Violetā' × 'Damson'

R: V.P. Eremin (c. 1966), N: V.P. Eremin

(Published in *LYB* 33: 76 (1970). No further details.)

#### 'Vostochnaia Skazka' I(a/b)

Parentage unknown

R: M.F. Kireeva (1984)

Fl dark cherry-red; spots dark, on basal half of each tepal. Fls 120-130 mm wide; tepal-margins smooth, tips recurved. Lvs dark green. Stems 0.9-1.1 m, with 15-26 fls. July.

(Published in M.F. Kireeva, *Lilii*, 33 (2000).)

#### 'Vostok' I(a/-)

Parentage: 'Pamiati Matrosova' × *L. × hollandicum*

R: V.A. Grot (1961), N: V.A. Grot

Fls dark red. Stems 1 m.

#### 'Vostok-2' I(a/b)

Parentage: 'Stroinaia' × 'Pamiati Matrosova'

R: V.A. Grot (1961), N: V.A. Grot

Fls bright orange-red; spots brown, in the throat; filaments pale orange; anthers orange-brown. Fls 100-120 mm wide. Lvs 90 × 6 mm, glossy dark green. Stems 1.2-1.5 m, green, with 7-12 fls. July.

(Published in M.F. Kireeva, *Lilii*, 48 (1984).)

**‘Voyageur’ I(a/-)**Parentage: *lancifolium* × ‘Valiant’

R: J.C. Ericksen (c. 1963), N: J.C. Ericksen

Fls dark crimson, large. Tepals slightly reflexed. Stems 1 m or more, with bulbils. Mid Aug.

**‘Voyagiana’ I(a/-)**

Parentage: selection from (‘Voyageur’ × unknown)

S: J.C. Ericksen (c. 1963), N: J.C. Ericksen

Fls dark crimson. Tepals slightly reflexed.  
(Published in *ILR* (1969).)**‘Vranac’ I(a-b/-)**

Parentage unknown

REG: Vletter &amp; Den Haan Beheer B.V. (2003)

Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen brown; stigma green and purple. Tepal-margins slightly ruffled, tips slightly recurved. Stems medium to tall. Midseason.

**‘Vulcan’ I(-/-)**Parentage: “common orange-flowered bulbiferous lily” × *L. × maculatum*

R: H. Groom (c. 1848), N: H. Groom

Fls deep brown. Stems short.

(Published in *JHS* 3: xliii (1848). The seed parent is probably *bulbiferum*.)**‘Vulkan’ I(b/-)**

Parentage unknown

R: VEG Zierpflanzen (pre 1986), N: VEG Zierpflanzen

Fls orange. July.

(Unacceptable name: ICNCP, 1980: Art. 13, Recommendation 13 Ah - name too similar to ‘Vulcan’.  
Published in *Gartenbau* 1986: 10.)**‘Vulkan’ I(b/-)**

Parentage unknown

R: V. Matthé (pre 2001), N: V. Matthé

Fls dark red, shiny. Stems 1.2 m. Early July.

(Unacceptable name: ICNCP, 2004: Art. 19.25 - name too similar to ‘Vulcan’. Published in ELG sales list, 2001.)

**‘Vulkan’ I(a/-)**

Syn. of ‘Wulfenite’.

**‘Vypushnoi Bal’ VI(-/c)**

Parentage: ‘Extaz’ × mixed pollen of yellow- and green-flowered trumpets

R: V.A. Volkov (1984), N: V.A. Volkov

Fls greenish white with green throat; pollen brown. Stems 1.4 m. Aug.

**‘Vzljot’ I(a/b)**

Parentage: ‘Nachalo’ × ‘Fobos’

R: A.V. Otroshko (1991), N: A.V. Otroshko, REG: A.V. Otroshko (1994)

Inside red, the centre of each tepal orange; spots absent; pollen brown. Fls 120 mm wide; tepals 70-74 × 26-37 mm, margins smooth, tips not recurved. Stems 0.8 m, green. June.

(Included in *ILR Thirteenth Supplement* as ‘Vzljot’ which is an unaccepted spelling.)**‘Vzljot’ I(a/b)**

Inaccepted spelling of ‘Vzliot’.

**‘Wadai’ IX(a/b)**See *dauricum* ‘Wadai’.**‘Wadai Flore Pleno’ IX(c/d)**See *leichtlinii* var. *maximowiczii* ‘Wadai Flore Pleno’.**‘Wadai Magnificum’ IX(c/d)**See *leichtlinii* var. *maximowiczii* ‘Wadai Magnificum’.**‘Wada’s Variety’ IX(c/d)**See *leichtlinii* var. *maximowiczii* ‘Wada’s Variety’.**‘Wagner’ VII(a/b)**

Parentage: seedling 88-111 × seedling RM 95-34

R: Vletter &amp; Den Haan Beheer B.V. (1998), G: Vletter &amp; Den Haan Beheer B.V. (2002), N: Vletter &amp; Den Haan Beheer B.V. (2002), REG: Vletter &amp; Den Haan Beheer B.V. (2002)

Inside moderate purplish pink (65A), with strong purplish pink (68B) along midveins, throat yellowish white (155D); outside light purplish pink (65B); spots moderate purplish red (64A); papillae present; nectaries strong yellow-green (142A) shading into light greenish yellow (3D); pollen strong orange (168A); stigma pale yellow-green (157C). Fls 230 mm wide, slightly scented; tepals 140 × 80 mm, margins smooth, tips slightly recurved. Lvs scattered, 170 × 33 mm. Stems 1.1 m, dark, with c.2 fls.

**‘Wahlula’ VI(c/-)**

Parentage: Aurelian Group no. 47-2 × yellow-flowered trumpet

R: C. Yerex (c. 1955), N: C. Yerex

Fls light apricot with cream markings.

(Published in *LYB* 21: 47 (1958).)**‘Waiata’ VII(-/c)**Parentage: (*auratum* × unknown) × *L. × parkmanii* ‘Manawatu’

R: W.A. Christensen, N: W.A. Christensen

Fls white; spots lavender. Stems 1.2-1.5 m.

**‘Waireka’ VI(-/a)**

Parentage unknown

R: J.S. Yeates (pre 1982), N: J.S. Yeates, REG: ICRA (1998)

Fls copper-coloured; spots absent. Tepal-tips spreading. (Shorter than usual for an Aurelian.)

**‘Waitemata’ VII(b/-)**Parentage: *L. × parkmanii* ‘Manawatu’ × unknown

R: W.A. Christensen, N: W.A. Christensen

Fls white; spots lavender. Tepal-tips reflexed.

**'Walküre' I(a/b)**

Parentage: 'Rubinstern' × 'Mohykán'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1996)

Inside moderate red (47A); outside strong red (50A); spots absent; pollen vivid reddish orange (34A). Fls 160 mm wide; tepals 85 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 22 mm, dark green. Stems 1 m, rather dark green, with c.15 fls. Mid to late June.

(A very strong, robust lily.)

**'Wallacei' V(b/a)**

See *formosanum* 'Wallacei'.

**'Wallacei' I(a/b)**

See *L. × maculatum* 'Wallacei'.

***wallichianum* Schultes & Schultes IX(b/a)**

Fls white or cream, throat greenish or yellow; outside tinged with yellow or green towards base; pollen yellow. Fls fragrant; tepals 150-300 mm long. Lvs scattered, up to 250 × 120 mm. Stems to 2 m, green, sometimes tinged with purple, with 1-4 fls. Himalaya.

***wallichianum* 'Burnhamense' V(-/a)**

Parentage: *wallichianum* var. *neilgherrense* × *wallichianum*  
R: H.F. Comber, N: H.F. Comber (c. 1936)  
PC 1938

Large white trumpets with tepal-tips recurved. Lvs 150-175 × 13-25 mm, dark green. Stems up to 1 m.

Syn.: *L. × burnhamense*.

(Published in *Gard. Chron.*, ser. 3, 100: 212, fig. 89 (1936).)

***wallichianum* var. *neilgherrense* (Wight) Hara****IX(b/a)**

Lvs up to 120 × 15-30 mm. Stems c.0.9 m. S India.

Syn.: *neilgherrense*.

***wallichianum* var. *neilgherrense* 'Snowsprite' V(b/a)**

Parentage: selection from *wallichianum* var. *neilgherrense*  
S: R. & E. Ratcliffe (c. 1958), N: R. & E. Ratcliffe  
Fls pure white.

Syn.: *neilgherrense* 'Snowsprite'.

***wallichianum* 'Snowsprite' V(b/a)**

See *wallichianum* var. *neilgherrense* 'Snowsprite'.

**Wallinum Group I(-/)**

Parentage: *L. × maculatum* 'Wallacei' × (*lancifolium* × unknown)

(Possibly raised in Australia. R.M. Withers, *Liliums in Australia*, 171 (1967) lists this as a cv. and says it is 'represented in the parentage of more modern hybrids'. Included in *ILR* (1982) as Wallinum grex.)

**'Wall Street' I(a-b/-)**

Parentage: 'Rolito' × ('Judith' × 'Red Carpet')

R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff

Tulleken Lelies B.V. (1991), N: Bischoff Tulleken Lelies B.V. (1993), I: Bischoff Tulleken Lelies B.V. (1995), REG: Bischoff Tulleken Lelies B.V. (1995)

Inside strong glossy red (46A), tepal-tips vivid red (46B), throat strong red (46A); outside vivid reddish orange (34A); spots small, in a restricted area; papillae present; nectaries purplish red; pollen red-brown; stigma orange, spotted purplish red. Tepal-margins smooth, tips slightly recurved. Lvs scattered, green. Stems 0.95-1.1 m, with darker stripes and splashes, and with c.7-10 fls. Midseason.

(Registered as 'Wallstreet', but in 1996 Dutch PBR (LEL1235) were granted under the epithet 'Wall Street', so this form of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'Wallstreet' I(a-b/-)**

See 'Wall Street'.

**'Walter Bentley' I(c/-)**

Parentage: ('Maxwill' × 'Edna Kean') × 'Dark Princess'

R: G.W. Darby (c. 1965), N: G.W. Darby

Fls Indian orange (HCC 713/1); spots dark. Tepals three-quarters reflexed.

(Published in *LYB* 24: 109 (1961).)

**'Walter Darby' I(c/-)**

Parentage: ('Maxwill' × 'Edna Kean') F<sub>3</sub> × 'Dark Princess'

R: G.W. Darby (c. 1956), N: G.W. Darby

(Published in *JRHS* 84: 68 (1959). No further details.)

**'Walter Engstler' I(a/-)**

Parentage unknown

R: J. Klein (pre 1985), N: J. Klein, REG: J. Klein (1988)

Fls yellow, with a few spots. Stems 0.8 m. Late June.

(Published in German Lily Group sales list, 1985.)

**'Walters' I(b-c/-)**

Parentage unknown

R: H.E. Hoepner (pre 1985), G: S.R. Kaul, N: S.R. Kaul,

I: Wisconsin Regional Lily Society (1992), REG: S.R.

Kaul (1993)

Fls dark orange, spots large, anthers rust-brown. Tepal-margins slightly ruffled, tips strongly recurved. Lvs long, mid green. Stems 1.2 m, dark brown, with secondary fls and with bulbils. June to July.

**'Walter Ward' VII(-/)**

Parentage: *auratum* × unknown

R: J.S. Yeates, N: J.S. Yeates

Fls white, each tepal with a gold ray and a few, small, dark spots.

Syn.: *auratum* 'Walter Ward'.

(Published in *Winstone (Merchants) Ltd Cat.*, 1958.)

**'Waltztime' I(a/-)**

Parentage unknown

R: B.G. Hayler (1974), N: B.G. Hayler, I: B.G. Hayler

(1981), REG: B.G. Hayler (1980)

Inside with vivid orange (28B) tepal-tips, throat vivid orange (28A); outside vivid orange (28B); spots black,

around top of nectaries on inner tepals; nectaries white; pollen light brown. Fls 150 mm wide; tepals 80 × 35 mm, tips not recurved. Lvs scattered, 150 × 15 mm wide, dark green. Stems 1 m, purple-green, with c.15 fls. Mid Dec. (Australia).

#### 'Wanda' I(a/-)

Parentage unknown

R: R. Simonet & F. Fellner (1974), N: F. Fellner, I: J. Wadekamper & Piedmont Gardens (1978), REG: J. Wadekamper (1978)

Fls wine-red, tepal-tips deep red, throat red; spots inconspicuous; nectaries red; pollen dark brown. Tepal-margins smooth. Lvs scattered, dark green. Stems 0.8-1 m, dark red. Midseason.

(Published in *Lilies and other Liliaceae*, 1978/79: 114.)

#### 'Wandin Giant' V(-/-)

Parentage unknown

G: C. Moore (1987), N: C. Moore (1989), I: C. Moore (1989), REG: C. Moore (1991)

Inside yellowish white (155D), throat green; outside yellowish white (155D) shading to very pale green (192C); spots absent; nectaries green; pollen strong orange-yellow (163B). Fls 150 mm wide; tepals 160 × 60 mm, margins smooth, tips slightly recurved; pedicels 140-210 mm long. Lvs scattered, 150 × 19 mm, mid green. Stems 1.2 m, greyish yellow-green (191B), with 5-12 fls. Late Dec. to Jan. (Australia).

(Raised from Australian Lily Society seed. Flowers in first year from seed.)

#### 'Wantagh' I(a/-)

Parentage unknown

R: H.O. Beracha, N: H.O. Beracha

Fls yellow; spots absent. Stems 1.2 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)

#### Warburton Group VIII(-/a)

Parentage: (*regale* × *nepalense*) × *L. × aurelianense*

R: The Hon. Lewis Palmer?, N: The Hon. Lewis Palmer? PC 1955

Similar to *regale*, but less red outside, and more yellow in throat.

(Published in *LYB* 19: 147 (1956), without description.)

#### 'Ward' IX(b/b-c)

See *auratum* var. *virginale* 'Ward'.

#### *wardii* Stapf ex F.C. Stern IX(c/d)

Fls pink or pinkish purple, midveins purple in basal half; spots purple or dull crimson; nectaries dark green; anthers purple; pollen orange; stigma green or pinkish. Fls c.60 mm wide, fragrant; tepals 50-65 × 7-15 mm. Lvs scattered, 30-80 × 6-20 mm, dark green. Stems up to 1.5 m, dark green tinged with purplish brown, with up to 40 fls. July to Aug. W China (Xizang).

#### var. *warei* IX(c/d)

See *pardalinum* var. *warei*.

#### 'Warhawk' I(a/-)

Parentage: seedling from hybrids involving 'Pirate'

R: H.E. Hoepner (1976), G: H.E. Hoepner (1980), N: H.E. Hoepner (1983), I: H.E. Hoepner (1985), REG: E.A. McRae (1985)

Fls red/yellow bicolor.

#### 'Warm Traces' II(-/-)

Parentage: *L. × dalhansonii* 'Mrs R.O. Backhouse' × white- and yellow-flowered seedling

R: E.E. Fox (1984), G: E.E. Fox (1988), N: E.E. Fox (1990), I: Fox Lily Ranch (1994), REG: E.E. Fox (1993)

Inside white in apical half, light yellow in basal half, throat mid yellow; outside white suffused with cream, midribs pink; spots maroon, small, numerous, on the middle section of each tepal; nectaries lime-green; pollen cinnamon. Fls 60 mm wide; tepals 35 × 17 mm, margins smooth, tips slightly recurved. Lvs whorled, 125 × 50 mm, pale green. Stems 1.25 m, light green, with 18-26 fls. Early July.

#### 'Warm Welcome' VIII(a/b)

Parentage: ('Grand Prix' × 'Sterling Star') × (*longiflorum* × 'Sterling Star')

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (1999), I: Bischoff Tulleken Lelies B.V. (2000), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside strong orange-yellow (24B) on a light orange-yellow (24C) ground, tepals edged with strong orange (25A), throat pale orange-yellow (24D); outside light yellowish pink (27A), shading towards tepal-edges to strong orange (26B) and edged strong orange (26A), midribs on basal part of tepals deep pink (48B); spots and papillae absent; pollen strong brown (172A); stigma strong red (46A). Fls 190 mm wide; tepals 120 × 40-60 mm, margins smooth, tips recurved. Lvs scattered, 80-120 × 20-35 mm. Stems 1.3 m, green with darker markings, and with c.6 fls. June.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Warnemünde' I(a/c)

Parentage: 'Skywatcher' × 'Goldprinzessin'

R: G. Steinbrück (1989), G: G. Steinbrück (1993), N: G. Steinbrück (2002), I: G. Steinbrück (2003), REG: G. Steinbrück (2003)

Inside and outside brilliant yellow (21C) with a slight reddish tinge; spots moderate red (184B), few, small, on basal half of each tepal; nectaries grey-violet; pollen dark red (183A); stigma dark red (183A). Fls 140 mm wide; tepals 70 × 27 mm, margins smooth, tips pointed, not recurved. Lvs scattered, 80 × 13 mm. Stems 0.9 m, dark green, with c.10 fls. Mid July.

(Named for the venue where the International Garden Exhibition was held in 2003.)

#### 'War Paint' I(b/-)

Parentage unknown

R: V. Weiser, N: V. Weiser (1976), I: J. Wadekamper (1978), REG: J. Wadekamper (1977)

Fls deep red, each tepal with an orange stripe down centre; spots absent; nectaries orange-red; pollen brown.

Lvs scattered. Stems 1 m. Midseason.  
(Published in *Lilies and other Liliaceae*, 1978/79: 114.)

**‘Warragul Gem’ VII?**

Parentage unknown  
Fls white flushed with pink.  
(Raised in Australia before 1973.)

**‘Warrior’ I(a/-)**

Syn. of ‘Redland’.

**‘Warrior’ VII(-/-)**

See *L. × parkmanii* ‘Warrior’.

**‘Warszawa’ VII(a-b/c)**

Parentage: seedling 501 × seedling 201  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)  
Inside light to pale purplish pink (62C/D), throat strong yellow-green (144B); outside yellowish white (155D) with light purplish pink (65B) blotches, midribs slightly suffused with pale yellow-green (4D), outer tepals suffused with moderate purplish pink (62B), with strong yellow-green (144C) midribs at tips; spots moderate purplish red (59C), on basal half of each tepal; nectaries moderate purplish red (70A); pollen strong orange (169B). Fls 295 mm wide; tepals 140 × 65 mm, margins slightly ruffled, outer more so, tips recurved. Lvs scattered, 190 × 30 mm, mid green. Stems 1 m, pale green, with c.5 fls.

**‘Wartburgmelodie’ I(a/c)**

Parentage: ‘Aelita’ × Yellow Blaze Group  
R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2003)  
Inside light orange-yellow (22D), throat somewhat stronger-coloured; outside light orange-yellow (22D); spots many, large, deep purplish red (59B) on three-quarters of each tepal; nectaries grey-white, tinged with soft green at ends; filaments soft yellow; pollen strong reddish orange; stigma deep red (53A). Fls 150 mm wide; tepals 85 × 37 mm, margins smooth, tips not recurved. Lvs scattered, 60 × 14 mm. Stems 1 m, dark green, with 10-12 fls. Late July to early Aug.  
Syn.: ‘Spätsommer’.  
(Was first distributed as ‘Spätsommer’, but that epithet was rejected for registration. Nomenclatural standard: colour print provided by registrant (WSY 0038751).)

**‘Washington’ VIII(a/b)**

Parentage: *longiflorum*/Asiatic seedling 84-627 × *longiflorum*/Asiatic seedling 84.89-2  
R: J.W.A. van der Wereld (1989), G: J.W.A. van der Wereld, N: J.W.A. van der Wereld (1995), I: J.W.A. van der Wereld (1995), REG: World Flower B.V. (1996)  
Inside vivid orange (28A/B), throat light orange (28D); outside vivid orange (28A/B), midveins suffused with moderate reddish brown (175A); spots and papillae absent; nectaries light orange (28C); pollen near greyish

brown (166A); stigma brilliant orange (29A). Fls 170 mm wide; tepals 100 × 35-45 mm, margins smooth, tepals and tepal-tips slightly recurved. Lvs scattered, 110 × 20 mm, green. Stems 1.1 m, with darker markings and a solitary fl. (as described for registration).  
(A *longiflorum*/Asiatic (LA) hybrid.)

***washingtonianum* Kellogg IX(b/a)**

Fls white, remaining white or ageing to light pink; spots small, purplish, towards base of each tepal; anthers pinkish; pollen yellow. Fls up to 110 mm wide, scented; tepals 80-110 × 10-25 mm, tips recurved. Lvs in whorls of 6-14, up to 100 × 25 mm, wavy-margined. Stems up to 2.5 m, usually less, with up to 60 fls. W USA (S Oregon, NW California).

***washingtonianum* var. *minus* Purdy IX(b/a)**

Fls white, with profuse purple spots. Tepals narrower than in *washingtonianum* itself. Stems usually less than 1.2 m. (M.W. Skinner in *Flora of North America* 26: 182 (2002) considers that this variety is synonymous with *washingtonianum*.)

***washingtonianum* subsp. *purpurascens* (Stearn) M.W. Skinner IX(b/a-b)**

Fls opening white, tinged with purple, ageing to lavender or purplish wine, almost bowl-shaped. Tepals 67-95 mm long. Syn.: *washingtonianum* var. *purpurascens*.

***washingtonianum* var. *purpurascens* Stearn IX(b/a-b)**

Syn. of *washingtonianum* subsp. *purpurascens*.

**‘Wasunger Karneval’ I(a/c)**

Parentage: ‘Heidi III’ × ‘Berliner Morgen’  
R: G. Steinbrück (1992), G: G. Steinbrück (1995), N: G. Steinbrück (1998), I: G. Steinbrück (1999), REG: G. Steinbrück (1999)  
Inside moderate yellowish pink (39C) suffused with soft orange, tepal-tips light orange-yellow (22D), throat strong orange-yellow (17A); outside light orange-yellow (22D); spots dark red (59A), numerous, small, on three-quarters of each tepal; nectaries yellowish white (155A); stigma moderate reddish orange (175B). Fls 120 mm wide; tepals 60 × 30 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 25 mm. Stems 1 m, black, with c.8 fls. Late June.

**‘Watch Me’ VIII(a/c)**

Parentage: ‘Swing’ × ‘Reinesse’  
R: J. Vanheusden (1995), G: J. Vanheusden (1997), N: J. Vanheusden (1997), I: J. Vanheusden (1997), REG: J. Vanheusden (1997)  
Inside white, the centre of each tepal yellow, throat yellow; outside white; spots brown, on the yellow centre of each tepal; nectaries light green; pollen orange; stigma dark brown. Fls c.140 mm wide; tepals c.70 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, c.70 × 8 mm, mid green. Stems 0.6 m, green, with c.15 fls. Early July.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Waterloo’ I(a/-)**

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N: Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1994)

Inside vivid reddish orange (34A), a third of each tepal with a vivid reddish orange (33B) flame, throat dark red (187B) along tepal-edges; outside vivid reddish orange (34B), basal tepal-edges strong red (46A), outer tepals stronger-coloured; spots dark red (187A), on a quarter of each tepal (but mostly on inner tepals); pollen strong red (39A); stigma vivid reddish orange (34B). Fls 200 mm wide; tepals 105 × 50 mm. Lvs scattered, 110 × 15 mm. Stems 0.7 m, pale green, with c.7 fls.

**‘Watermelon’ I(a/-)**

Parentage unknown

R: T.L. Bartel, N: T.L. Bartel

Fls pink to orange. Stems 1.1-1.1 m.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)**‘Watermelon Sundae’ I(a/-)**

Parentage unknown

Fls orange-red and pink. Stems 1.2 m. July.

(From Stone & Payne stock. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 42 (1978).)**‘Wattle Bird’ I(a/c)**

Parentage: unnamed seedling × ? ‘Connecticut King’

R: B.G. Hayler (1973), G: B.G. Hayler (1976), N: B.G. Hayler, I: B.G. Hayler (1978), REG: B.G. Hayler (1978)

Fls yellow, each tepal deeper in centre; spots absent.

Tepals broad. Stems 1 m, with up to 20 or more fls, and with bulbils. Dec. (Australia).

(Published in *Lilies and other Liliaceae*, 1978/79: 114.)**‘Wave Crest’ IX(b-c/d)**See *speciosum* ‘Wave Crest’.**‘Waxwing’ I(b/-)**Parentage: (*philadelphicum* × unknown) × *amabile*

R: J.C. Taylor, N: J.C. Taylor

Fls strong orange (24A), spotted. Tepals slightly reflexed.

Stems 1.1-1.2 m, with 12-14 fls. June.

(Published in *LYB NALS* 1: 1, fig. p.102, 104 (1947/48).)**‘Wayfarer’ I(a/-)**

Parentage: unnamed seedling × unnamed seedling

R: C. Robinson (1979), G: C. Robinson (1982), N: C. Robinson (1986), I: C. Robinson (1986), REG: C. Robinson (1986)

Inside with apical half of each tepal vivid yellow (15A), basal half moderate reddish orange (41C); outside vivid yellow (15A); spots few, dark brown, on basal third of each tepal; nectaries vivid yellow (15A); pollen dark brown. Fls 115 mm wide; tepals 80 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 12 mm, dark green. Stems 0.8 m, dark green, with c.10 fls. Mid July.

**‘Wayne’s Dream’ I(a/b)**

Parentage unknown

R: W. Lindsay (1997), G: W. Lindsay (2000), N: D. Lindsay (2002), REG: D. Lindsay (2002)

Inside lemon-yellow; outside lemon-yellow with tan stripe along midribs; tepals with maroon spots and faint red brushmarks (more on inner tepals); nectaries green; anthers purple; pollen tangerine; stigma light yellow and red. Fls 150 mm wide, slightly scented; tepals 80 × 35 mm, margins very slightly wavy, tips slightly recurved. Lvs scattered, 70-135 × 9-12 mm. Stems green, with up to 23 fls (including secondaries). Mid July to early Aug. (Named in memory of the raiser. Nomenclatural standard: colour print provided by registrant (WSY 0034923).)

**‘Wedding Bells’ I(c/-)**

Parentage: unnamed seedling × unnamed seedling

R: J. Vasarietis (1984), G: J. Vasarietis (1988), N: J. Vasarietis (1991), I: J. Vasarietis (1991), REG: J. Vasarietis (1992)

Inside and outside light yellowish pink (27A); spots few, tiny, in the throat; nectaries greenish white; pollen orange. Fls 110 mm wide; tepals 65 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 85 × 15 mm, mid green. Stems 0.9 m, brown, with 20-22 fls. Mid to late July.

**‘Wedding Day’ I(a/-)**

Parentage: orange-flowered hybrid × red-flowered hybrid

R: Gebr. N. &amp; B. Laan &amp; Zn (1983), G: Gebr. N. &amp; B. Laan &amp; Zn (1985), N: Gebr. N. &amp; B. Laan &amp; Zn (1988), I: Gebr. N. &amp; B. Laan &amp; Zn (1991), REG: Gebr. N. &amp; B. Laan &amp; Zn (1993)

Inside strong orange (25A/B), each tepal with a moderate red (179A) flame above the throat, midveins strong orange (25A), throat brilliant orange/light orange-yellow (25C/D); outside strong orange (25A/B), each tepal edged vivid orange (28A) and tipped dark red (187A), the base slightly suffused brownish orange (165B); spots dark red (187A), on half of each tepal; nectaries moderate red (185B); pollen moderate reddish brown (175A). Fls 170 mm wide; tepals 80 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 20 mm, mid green. Stems 0.8 m, pale green with darker markings and c.8 fls. (Registered as ‘Weddingday’, but in the same year Dutch PBR (LEL 709) were granted as ‘Wedding Day’, so this latter form of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

Inside strong orange (25A/B), each tepal with a moderate red (179A) flame above the throat, midveins strong orange (25A), throat brilliant orange/light orange-yellow (25C/D); outside strong orange (25A/B), each tepal edged vivid orange (28A) and tipped dark red (187A), the base slightly suffused brownish orange (165B); spots dark red (187A), on half of each tepal; nectaries moderate red (185B); pollen moderate reddish brown (175A). Fls 170 mm wide; tepals 80 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 20 mm, mid green. Stems 0.8 m, pale green with darker markings and c.8 fls. (Registered as ‘Weddingday’, but in the same year Dutch PBR (LEL 709) were granted as ‘Wedding Day’, so this latter form of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Weddingday’ I(a/-)**

See ‘Wedding Day’.

**‘Wedding Dress’ VII(-/c)**See *L. × parkmanii* ‘Wedding Dress’.**‘Wedding March’ VII(b/b-c)**See *L. × parkmanii* ‘Wedding March’.**‘Wee Anne’ I(a/-)**

Parentage unknown

N: D. Dale (1994), I: Parkland Perennials (1995), REG: D. Dale (1994)

Inside with a pink throat shading upwards to yellow and light pink; outside light pink; spots absent; nectaries pink/green; pollen absent. Fls 100 mm wide; tepals 50 × 25 mm, margins smooth, tips slightly recurved. Lvs scattered, 60 mm long, dark green. Stems 1.4 m, dark green, with c.16 fls. Early July.

(Purchased as a seedling from E.H. Doerr, 1987.)

### 'Wega' VI(b/b)

Parentage unknown

R: B. & W. Kossowski (1983), G: B. & W. Kossowski, N: B. & W. Kossowski (1988), I: B. & W. Kossowski (1988), REG: ICRA (1995)

Fls yellow throughout; pollen orange-brown. Stems 1.3 m, with c.12 fls. July.

### 'Weinrote Pyramide' I(b-c/d)

Parentage: Asiatic hybrid × Asiatic hybrid

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1997), I: G. Steinbrück (1999), REG: G. Steinbrück (2001)

Inside and outside vivid red (44A), bright and glossy; spots absent; nectaries grey-white; anthers on long filaments which are coloured as the tepals; pollen dark red (183A); stigma strong yellowish pink (34D) on a long style coloured as the tepals. Fls 130 mm wide; tepals 60 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 72 × 21 mm. Stems 1.2 m, dark green, with c.18 fls in a pyramidal infl. Mid June.

(Nomenclatural standard: colour print provided by registrant (WSY 0028872).)

### 'Weinroter Tiger' I(b/-)

Parentage: *lanceifolium* × unknown

R: H. Böhm, N: H. Böhm, REG: ICRA (1992)

Fls wine-red, with fine spots. Stems 1.3 m, with bulbils. Mid July.

(Published in German Lily Group sales list, 1991.)

### 'Weisse Nächte' I(b/d)

Parentage: 'Dawn Star' × 'Pink Joy'

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (1996), I: G. Steinbrück (1996), REG: G. Steinbrück (1998)

Inside yellowish white (155B), tepal-tips paler, throat greenish; outside white; spots few, moderate brown (200D), medium sized, on basal third of each tepal; nectaries whitish green; pollen strong orange (26A); stigma greyish brown (166A). Fls 120 mm wide; tepals 60 × 30 mm, margins smooth, tips strongly reflexed. Lvs scattered, 70 × 9 mm, dark green. Stems 0.8 m, rather dark green, with up to 8 fls. Late June to early July.

### 'Weisse Noblesse' I(a/b-c)

Parentage: 'Brushstroke' × ('Medora' × 'Mont Blanc')

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Inside and outside yellowish grey (156C); spots scattered,

inconspicuous, on basal part of each tepal; nectaries pale green-white; pollen strong red (46A). Fls 160 mm wide; tepals 80 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 15 mm, dark green. Stems 1 m, almost black, with c.20 fls in a pyramidal infl. Early July.

### 'Weisser Thüringen' I(a/-)

Parentage: 'Mont Blanc' × 'Bělásek'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Inside and outside yellowish white (155D), with an orange tinge in centre of fl.; spots orange-red, numerous, small, on three-quarters of each tepal; pollen strong orange-yellow (24B). Fls 130 mm wide; tepals 70 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 65 × 10 mm, dark green. Stems 0.8 m, rather dark green, with c.14 fls. Late June.

### 'Weisser Zauber' I(a/c)

Parentage: Asiatic seedling × ('Medora' × 'Mont Blanc')

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Inside and outside yellowish white (155D), with yellowish tinge; spots chocolate-brown, numerous, medium sized, on three-quarters of each tepal; pollen strong brown. Fls 130 mm wide; tepals 60 × 35 mm, margins smooth, tips slightly reflexed. Lvs scattered, 90 × 12 mm, mid green. Stems 1.2 m, almost black, with c.20 fls. Mid July.

### 'Weisse Witwe' I(b/c-d)

Parentage: ('Medora' × 'Mont Blanc') × Asiatic seedling

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1997), REG: G. Steinbrück (1998)

Inside greyish white (156C), throat suffused with soft light yellowish pink (27A); outside greyish white, midribs prominent; spots few, small, vivid reddish orange (34A), on basal third of each tepal; nectaries frosted white (155A); pollen dark; stigma dark red (183A). Fls 120 mm wide; tepals 60 × 30 mm, margins smooth, tips somewhat recurved. Lvs scattered, 60 × 10 mm, dark green. Stems 0.7 m, rather dark green, with up to 8 fls. Mid July.

### 'Weisse Wolke' Div. ?

Parentage unknown

(Grown in Romania. No further details.)

### 'Welcome Nugget' VI(-/a)

Parentage: gold-flowered trumpet seedling × gold-flowered trumpet seedling

R: D.F. McPherson (1966), G: D.F. McPherson (1968), N: D.F. McPherson, I: D.F. McPherson (1972), REG: D.F. McPherson (1972)

Fls brilliant greenish yellow (6C), deepening to brilliant greenish yellow (6A) in throat. Stems 1.5 m. July.

(Published in *Lilies and other Liliaceae*, 1973: 115. Fl. colour does not fade.)

**'Wellington' VII(a-b/-)**

Parentage unknown

REG: Vletter & Den Haan Beheer B.V. (2003)

Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen red-brown; stigma yellow-green. Tepal-margins strongly ruffled, tips strongly recurved. Midseason to late.

**'Wels' VI(-/a)**

Parentage: Golden Clarion Group × Copper King Group

R: V. Strasser (1973), G: V. Strasser (1977), N: V. Strasser (1979), I: V. Strasser (1985), REG: V. Strasser (1997)

Inside rosy white; outside reddish brown. Tepal-margins smooth, tips slightly recurved. Lvs dark green. Stems 1.15 m, rather dark green, with up to 8-10 fls. Mid July.

**'Welfrieden' VI(-/a)**

See *L. × sulphurgale* 'Welfrieden'.

**'Weltmeister' I(a/-)**

Parentage: *L. × hollandicum* × *lancifolium*

R: Gebr. N. & B. Laan & Zn (c. 1964), N: Gebr. N. & B. Laan & Zn

Fls vivid orange (28B), veined with vivid reddish orange (32A); spots dark brown.

**'Welwyn Ivory' VI(-/l-)**

Parentage: *L. × aurelianense* × (*leucanthum* var. *centifolium* × *sargentiae*)

R: G.W. Darby, N: G.W. Darby

No further details.

**'Welwyn Tetraform' V(b/a)**

See *formosanum* 'Welwyn Tetraform'.

**'Wendenschloss' I(a/-)**

Parentage unknown

R: G. Steinbrück (pre 1992), N: G. Steinbrück

Fls carmine-red with an orange sheen.

**'Wendy's Choice' I(b/-)**

Parentage: red-flowered, up-facing Asiatic seedling × red-flowered, out-facing Asiatic seedling

R: E.E. Fox (1987), G: E.E. Fox (1990), N: E.E. Fox (1992), I: Fox Lily Ranch (1997), REG: E.E. Fox (1996)

Inside strong red (46A) at centre of fl, shading to paler at tepal-tips, throat strong red (46A); outside strong red (46A); spots few, black, on basal third of each tepal; nectaries deep yellowish pink (46D); pollen dark reddish orange (173A). Fls 138 mm wide; tepals 70 × 36 mm, margins smooth, tips slightly recurved; pedicels moderate brown (200C). Lvs scattered, 98 × 12 mm, mid green. Stems 1 m, moderate brown (200C), with 16-22 fls. Late July.

***wenshanense* L.J. Peng & F.X. Li IX(b-c/a)**

Fls white, throat yellowish green, midveins brownish; spots absent; nectaries greenish, lacking papillae; anthers brown with yellow pollen. Fls fragrant; outer tepals c.180 × 25 mm; inner tepals c.30 mm wide; all with strongly recurved tips. Leaves scattered, 90-100 × 10-12 mm,

margin papillate. Stems greyish white, 1.2-1.8 m, with fls solitary or 2-7. June to July. W China (Yunnan).

**'West Burke' I(a/b)**

See *L. × hollandicum* 'West Burke'.

**'Westella' I(a/b)**

Parentage: 'Wattle Bird' × 'Byjingo'

R: R.E. Allan (1987), G: R.E. Allan (1988), N: R.E.

Allan (1991), I: R.E. Allan (1991), REG: R.E. Allan (1991)

Inside vivid reddish orange (33A), vivid yellowish orange (30C) along midveins and at tepal-tips, vivid reddish orange (34A) towards base; outside vivid reddish orange (34A); spots absent; nectaries vivid reddish orange (34A); pollen vivid orange (28A). Fls 145 mm wide; tepals 93 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 18 mm, dark green. Stems 1.2 m, strong yellow-green (145A), with c.12 fls. Late Dec. (Australia).

**'Western Sunset' Div. ?**

Parentage unknown

(Published in *Amer. Lily Soc. Newsl.*, 5 Oct. 1950. No further details.)

**'West Riding' I(c/-)**

Parentage: 'Pennine Red Beacon' × 'Progenitor'

R: A.D. Harrison (c. 1964), N: A.D. Harrison

Fls deep crimson-red, heavily spotted. Fls large; tepals very broad, strongly reflexed.

**'Whatcom' VIII(-/d)**

Parentage: seedling of self-pollinated 'Black Beauty'

R: T. McMurray, N: T. McMurray (1980), I: Borbeleta Gardens (1981), REG: J. Wadekamper (1983)

Inside red, the green centre surrounded by white; outside red; spots scarcely noticeable; pollen brown. Tepal-margins smooth, tips strongly recurved. Lvs scattered, dark green. Stems 1.1 m, with 10-12 fls. Late.

(Published in *Borbeleta Gardens Cat.*, 1981. Closely resembles 'Black Beauty', but extremely vigorous and with brown pollen.)

**'Whilito' I(a/b)**

Parentage: 'Sterling Star' × 'Chinook'

R: J.M. van Tuyl (1980), G: J.M. van Tuyl (1982), N:

J.M. van Tuyl (1985), I: J.M. van Tuyl (1985), REG: IVT (1985)

Fls white; spots brown, on basal third of each tepal; pollen red. Tepal-margins slightly ruffled, tips very slightly recurved. Lvs scattered. Stems 0.7-1.2 m, dark green, with 1-12 fls. (2n = 24)

(Tolerant of low light)

**'Whirlwind' I(a/-)**

Parentage: 'Twilight' × pink-flowered Asiatic

R: E.A. McRae (1979), G: Oregon Bulb Farms, Inc.

(1982), N: Oregon Bulb Farms, Inc. (1986), I: Oregon Bulb Farms, Inc. (1986), REG: Oregon Bulb Farms, Inc.

(1986)

Inside wine-pink, throat rich wine-coloured; outside soft wine-pink; spots few, tiny, in centre of fl.; nectaries maroon-red; pollen chocolate-brown. Tepals 100 × 5 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 15 mm, dark green. Stems 1.6 m, mottled with brown, with 6-30 fls. Mid to late June.

#### **'Whirlybird' VI(c/c)**

Parentage unknown

R: C. Yerex (c. 1951), N: C. Yerex

Fls white, tepal-tips blending to bronze-yellow centre. Fls very large, suggestive of a helicopter in flight. Stems 1.2-1.5 m. July to Aug.

(Published in *Kline Cat.*, 1964.)

#### **'Whisper' I(a/-)**

Parentage unknown

R: unknown, G: Hartle-Gilman Gardens (1991), N:

Hartle-Gilman Gardens (1996), I: Hartle-Gilman

Gardens (1996), REG: Hartle-Gilman Gardens (1996)

Inside pale yellow-green (155A), throat brilliant yellow-green (150C); outside white, midribs yellow-green; spots absent; nectaries moderate yellow-green (146B); pollen bright gold. Tepals 82 × 38 mm, margins smooth, tips slightly recurved. Lvs scattered, 94 × 9 mm, moderate olive-green (147A). Stems 0.77 m, moderate yellow-green (146D), with c.9 fls.

#### **'White American' V(b/a)**

See *longiflorum* 'White American'.

#### **'White Angel' (Bottema) VII(-/-)**

Parentage unknown

REG: G. Bottema (1989)

Fls greenish white (155C), outside with light yellow-green (150D) midribs; papillae pale yellow-green (157C); pollen vivid orange-yellow (21A). Fls 200 mm wide; tepals 110 × 45 mm, margins ruffled, tips strongly recurved. Lvs scattered, 120 × 50 mm, mid green. Stems 0.7 m, green, with 5 fls.

(Raised in Japan before 1974. Included in *ILR Eighth Supplement* where the PBR information relating to Hoff's 'White Angel' was wrongly attributed to Bottema's cv.)

#### **'White Angel' (Hoff) I(a/b)**

Parentage unknown

R: Fa P. Hoff & Zn

Inside with inner tepals pale yellow/pale greenish yellow (8D/10D), becoming pale yellow (11D) towards tip, outer tepals pale greenish yellow (9D/10D), also becoming pale yellow (11D) towards tip; outside with outer tepals pale yellow (8D), tips with a little red-purple, inner tepals pale yellow (11D), pale greenish yellow (10D) at margin and tip; spots dark brown-purple; papillae present; pollen orange-brown; stigma dark purple. Tepal-margins ruffled, tips slightly recurved. Stems light green with some darker markings.

Syn.: 'Brigitte Bardot'.

(Originally sent for PBR (refused) in The Netherlands (and published in *Bloembollencultuur* 96 (22): 18 (1986)) as 'Brigitte Bardot'. In 1987 Dutch PBR (LEL 241) were

granted under the epithet 'White Angel', but this was not known to the ICRA until after Bottema's 'White Angel' had been registered. Under ICNCP, 2004: Art. 24.4, 'White Angel' of Hoff must be accepted, although it cannot be registered. To distinguish between the two cvs, the name of the raiser/registrant is appended to each and should be thus cited when the epithets are used (ICNCP, 2004: Art. 27.5).)

#### **'White Baby' I(a/b)**

Parentage: cream-flowered seedling × 'Reinesse'

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (1996), I: Bischoff Tulleken Lelies B.V. (1997), REG: Bischoff Tulleken Lelies B.V. (1997)

Inside yellowish white (155B); outside yellowish white (155B), tepal-tips strong yellow-green (143A), midribs strong yellow-green (143A) at base, fading towards top; spots and papillae absent; nectaries strong yellow-green (143B); pollen strong orange (24A); stigma moderate yellow (161B). Fls 160 mm wide; tepals 90 × 30-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 160 × 15 mm, mid green. Stems 0.55 m, green, with 7-11 fls. June.

#### **WHITE BALLERINA I(a/-)**

Trade designation of 'Bal White'.

#### **'White Beauty' II(-/d)**

See *L. × dalhansonii* 'White Beauty'.

#### **'White Breeze' I(a/b)**

Parentage: unnamed seedling × ('Duet' (of Bischoff Tulleken) × 'Symphony')

R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2001), REG: Bischoff Tulleken Lelies B.V. (2002)

Inside pale orange-yellow (19D), tepal-margins pale yellow (19C), throat light greenish yellow (145D); outside pale yellowish pink (27D) with a stripe of light yellow-green (145C) along midribs; spots and papillae absent; nectaries strong yellow-green (145A); pollen vivid reddish orange (34B); stigma light yellowish pink (29C). Fls 165 mm wide; tepals 95 × 30 mm, margins smooth, tips slightly recurved. Lvs scattered, 115 × 15 mm. Stems 0.46 m, green with darker stripes, with c.13 fls. June.

#### **'White Butterflies' I(c/d)**

Parentage unknown

R: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies, REG: ICRA (1998)

Inside white; outside white with bands of pink (broader on the outer tepals). Tepal-margins smooth, tips distinctly recurved. Stems 1-1.2 m. Early June.

#### **'White Cameo' VII(-/b)**

Parentage: *auratum* var. *tricolor* × *japonicum*

R: E.L. Kline (c. 1956), N: E.L. Kline

Fls pure white, each tepal with a faint, gold ray and a few pink or yellow spots; anthers yellow or reddish. Fls large.

Stems 1-1.5 m. July.  
(Published in *Kline Cat.*, 1957.)

**'White Cap' I(a/-)**

Parentage: *L. × maculatum* type × unknown  
R: E. Robinson (1975), N: E. Robinson (1981), I: E. Robinson (1981), REG: Gaybird Nursery (1983)  
Fls white throughout, at first tinged with yellow; spots absent; nectaries pale yellow; pollen brown. Tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 70 × 10 mm, mid green. Stems c.0.8 m, dark green, with c.4 fls.

**'White Chalice' IX(b/c)**

See *auratum* 'White Chalice'.

**'White Champion' IX(b-c/d)**

See *speciosum* 'White Champion'.

**'White Cloud' I(a/-)**

Parentage: 'Sterling Star' × 'Golden Coronet'  
R: Bischoff Tulleken Leliecultuur B.V. (1977), G: Bischoff Tulleken Leliecultuur B.V. (1980), N: Bischoff Tulleken Leliecultuur B.V. (1984), I: Bischoff Tulleken Leliecultuur B.V. (1985), REG: Bischoff Tulleken Leliecultuur B.V. (1988)  
Inside pale greenish yellow to pale yellow-green (2D/4D); outside pale greenish yellow (2D); spots small, dark red (59A), in the throat; pollen moderate orange (167A). Fls 140 mm wide; tepals 70 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 80 × 15 mm, mid green. Stems 0.6 m, green with darker spots, with 14-16 fls. June.

**'White Cloud' Div. ?**

Parentage unknown  
(Raised in USA ? No further details.)

**'White Clown' VII(-/c)**

Parentage unknown  
R: L. Woodriff (1958), G: H.J. & R.L. Strahm (1963), N: R.L. Strahm (1973), I: H.J. & R.L. Strahm (1973), REG: H.J. & R.L. Strahm (1984)  
Fls white, throat chartreuse-green; spots absent; nectaries chartreuse. Fls sometimes semi-double or double, 185 mm wide; tepals 90 × 45 mm. Lvs scattered. Stems 1.1 m. July to Aug.  
(Published in *Rex Bulb Farms Cat.*, 1973. Fls sometimes become pink after opening, when in sun.)

**'White Crow' II(c/c-d)**

Syn. of 'Tribute-to-Norgart'.

**'White Cup' VII(a-b/b)**

Parentage: (unnamed seedling × 'Casa Blanca') × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2001), REG: Bischoff Tulleken Lelies B.V. (2001)  
Inside whiter than yellowish white (155D), midveins

light yellow-green (154D); outside whiter than yellowish white (155D), midribs brilliant greenish yellow (151D), at base with a little strong yellow-green (144B) and a darker suffusion, pale yellow (11C) along midribs of outer tepals; spots absent; papillae whiter than yellowish white (155D); nectaries strong yellow-green (144B); pollen strong orange (169B); stigma dark red (187C). Fls 260 mm wide; tepals 140 × 50-70 mm, margins ruffled, tips strongly recurved. Lvs scattered, 185 × 65 mm. Stems 1-1.05 m, light green, with 4-9 fls. July.

**'White Delight' VII(-/-)**

Parentage unknown  
R: Sun Valley Bulb Farms, Inc. (1973), N: Sun Valley Bulb Farms, Inc. (1977), I: Sun Valley Bulb Farms, Inc. (1979), REG: Sun Valley Bulb Farms, Inc. (1979)  
Inside yellowish white (155D), throat brilliant yellow-green (150B), tepal-tips and outside yellowish white (155D); spots sometimes present, pale pink; nectaries strong yellow-green (145A); pollen strong reddish orange (31A). Tepals 90 mm long, margins slightly ruffled. Lvs elliptic, moderate yellow-green (146B). Stems 1 m.

**'White Diamond' VI(-/-)**

Parentage: *longiflorum* 'Hinomoto' × *brownii*  
R: G.A. van Veen (1976), G: G.A. van Veen (1977), N: G.A. van Veen (1980), I: G.A. van Veen (1981), REG: G.A. van Veen (1985)  
Inside white; outside ivory-white with cream midribs; nectaries green; pollen vivid yellow (17C). Fls 140 mm wide; tepals 155 × 55 mm. Lvs scattered, 160 × 25 mm, mid green. Stems 1.25 m, pale green, with c.3 fls.  
(Published in *Bloembollencultuur*, 1984.)

**'White Dove' I(a/b-c)**

Syn. of 'Happy Thoughts'.

**White Dove Group VI(b/b-c)**

Parentage unknown  
R: L. Woodriff, REG: ICRA (1985)  
Fls white, some with light gold throat; lightly spotted with lavender or rose-pink. Fls 120-180 mm wide. Stems 0.9-1.5 m. July.  
(Published in *Rex Bulb Farms Cat.*, 1966/67: 37. Included in *ILR Fourth Supplement* as White Dove grex.)

**'White Dream' VII(b-c/-)**

Parentage unknown  
R: T.T. Kirsch (1974), G: T.T. Kirsch (1977), N: Sun Valley Bulb Farms, Inc. (1982), I: Sun Valley Bulb Farms, Inc. (1982), REG: Sun Valley Bulb Farms, Inc. (1982)  
Fls yellowish white (155D) except for a brownish purple base to midrib; spots deep red (53A), numerous, on basal two-thirds of each tepal; nectaries light green; pollen strong reddish orange (169A). Tepals 130 × 32-64 mm, margins ruffled, tips slightly reflexed. Lvs scattered, 100-140 × 25-32 mm, dark green. Stems 0.75-1.25 m, light green blotched with maroon, glaucous, with 1-10 fls. July.

**'White Dwarf' I(a/b)**

Parentage: 'Albipayne' × dwarf white-flowered seedling

R: H. Mantel (1987), G: H. Mantel (1989), N: H. Mantel (1996), I: Mt Hood Lilies Inc. (1996), REG: Mt Hood Lilies Inc. (1996)

Inside white, shading to green parallel to nectaries; outside green in bud, shading to white on opening; spots magenta, few, tiny, inconspicuous, on basal quarter of each tepal; nectaries green; anthers small, white, lacking pollen; stigma purple. Fls 120-140 mm wide; tepals 60-70 × 28-35 mm, margins smooth, tips very slightly recurved. Lvs scattered, 100-140 × c.20 mm. Stems 30-70 cm, deep green overlaid with soft purple, and with 4-8 fls (from 12-16 cm bulbs). Mid to late June.

**‘White Eagle’ IX(b/a)**

See *candidum* ‘White Eagle’.

**‘White Elegance’ V(b/a)**

Parentage: seedling 84-30-10 × seedling 84-43-2

R: J.W.A. van der Wereld (1987), G: J.W.A. van der Wereld (1988), N: J.W.A. van der Wereld (1993), I: J.W.A. van der Wereld (1995), REG: J.W.A. van der Wereld (1995)

Inside and outside yellowish white (155D), throat green changing to white; spots absent; nectaries green; pollen yellow; stigma white. Tepal-margins smooth, tips recurved. Lvs scattered, green. Stems 1.3 m, green with darker markings, and with 3-8 fls. Midseason.

**‘White Elf’ IX(b/a)**

See *candidum* ‘White Elf’.

**‘White Emperor’ IX(b/c)**

See *auratum* ‘White Emperor’.

**‘White Europe’ V(b/a)**

See *longiflorum* ‘White Europe’.

**‘White Excelsior’ V(-/a)**

Parentage: *formosanum* (or possibly *longiflorum*) × *longiflorum* var. *takeshima*

R: A.J. van der Zwet & Sons, N: A.J. van der Zwet & Sons

AMH 1936, FCCH 1937

Tepals white, with a green midrib.

**‘White Explosion’ V(b/a)**

Parentage: *longiflorum* ‘White Fox’ × unnamed seedling

R: J.W.A. van der Wereld (1986), G: J.W.A. van der Wereld (1989), N: J.W.A. van der Wereld (1994), I: J.W.A. van der Wereld (1993), REG: J.W.A. van der Wereld (2001)

Inside yellowish white (155D), green at base; outside yellowish white (155D); spots and papillae absent; nectaries green; pollen yellow; stigma white. Tepal-tips strongly recurved. Stems 1.4 m, green, with 3-6 fls (from 16-18 cm bulbs). Late to very late.

**‘Whiteface’ VI(b/b)**

Parentage: said to be *regale* or *L. × imperiale* ‘George C. Creelman’ × *auratum*

R: F.M. Abbey (pre 1952), N: F.M. Abbey

Fls white. Stems 1-1.2 m. July to Aug. (Published as *regale* × *auratum* in *Gardenside Cat.*, 1952, and as ‘G.C. Creelman’ × *auratum* in *Gardenside Cat.*, 1954.)

**‘White Falcon’ IX(b/a)**

See *candidum* ‘White Falcon’.

**White Flakes Group VII(-/d)**

Parentage: selections from Zealandia Group

S: L.B. Tuffery (c. 1966), N: L.B. Tuffery

Fls pure white; nectaries green. Resembles white *speciosum*, but with much larger fls.

(Published in *ILR* (1969) as White Flakes grex.)

**‘White Forest’ V(-/a)**

See *longiflorum* ‘White Forest’.

**‘White Fox’ V(b/a)**

See *longiflorum* ‘White Fox’.

**‘White Friendship’ V(b-c/a)**

Parentage: (*longiflorum* ‘Indian Summer’ × ‘Saeki’)

× (*longiflorum* ‘White Europe’ × *longiflorum* ‘Indian Summer’)

R: J.W.A. van der Wereld (1984), G: J.W.A. van der Wereld (1985), N: J.W.A. van der Wereld (1991), I: J.W.A. van der Wereld (1990), REG: J.W.A. van der Wereld (1991)

Inside yellowish to greenish white (155B/C), throat light yellow-green (145B/C); outside with a pale yellow-green (157C) tube, otherwise yellowish white; spots absent; pollen vivid yellow (13A). Fls 160 mm wide; tepals 190 × 65 mm, margins smooth, tips strongly recurved. Lvs scattered, 200 × 25 mm, mid green. Stems 1.35 m, green, with up to at least 9 fls. May (under glass).

**‘White Frills’ VII(-/b)**

Parentage unknown

R: L. Woodriff (1957), G: H.J. & R.L. Strahm (1963), N: R.L. Strahm (1974), I: H.J. & R.L. Strahm (1974), REG: Strahm’s Lilies, Inc. (1981)

Inside white, throat strong yellow-green (144B); outside very pale pink; spots absent; nectaries strong greenish yellow (151A); pollen orange. Fls 200 mm wide; tepals 95 × 50 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 50 mm, pale green. Stems up to 1.9 m, dark red, with 5-9 fls. Aug.

(Published in *Rex Bulb Farms retail Cat.*, 1973.)

**‘White Glory’ IX(b-c/d)**

See *speciosum* ‘White Glory’.

**White Glory Group I(a-b/-)**

Parentage: selection from Futura Group

S: Blackthorne Gardens, N: Blackthorne Gardens, I: Blackthorne Gardens (1982)

Fls white inside, with a few rose-maroon spots in centre of fl. Stems 0.75 m.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for a cv.)

**'White Gold' I(c/-)**

Parentage: *lancifolium* × (('Maxwill' × *regale*) × seedling 37-538-1)

R: C.F. Patterson, N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1950)

Fls apricot, bleaching to creamy yellow. Fls 75-90 mm wide. Stems 1 m, with up to 11 fls. July.

(Published in *LYB NALS* 5: 66 (1952).)

**'White Happiness' I(a/-)**

Parentage unknown

R: Gebr. N. & B. Laan & Zn, G: Gebr. N. & B. Laan & Zn, N: Gebr. N. & B. Laan & Zn (1979), REG: Gebr. N. & B. Laan & Zn (1980)

Fls ivory-white; spots dark red; anthers red-brown.

(Published in *Bloembollencultuur*, 1979.)

**'White Heaven' V(b/a)**

See *longiflorum* 'White Heaven'.

**'White Henry' VI(b-c/c)**

See *L. × kewense* 'White Henry'.

**'White Heron' VII(-/-)**

Parentage unknown

R: F. Jury (pre 1998), N: F. Jury

Fls large, pure white.

**'White Hope' VII(b/b-d)**

Parentage: (white-flowered seedling × 'Star Gazer') × (white-flowered seedling × 'Star Gazer')

R: Bischoff Tulleken Lelies B.V. (1981), G: Bischoff Tulleken Lelies B.V. (1985), N: Bischoff Tulleken Lelies B.V. (1988), I: Bischoff Tulleken Lelies B.V. (1989), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside yellowish to greenish white (155B/C), the tepal-tips tinged with pale yellow (8D), throat strong yellow-green (144B); outside yellowish white (155B), with light greenish yellow (6D) midribs, and blotched strong yellow-green (144A); ivory-white papillae in the throat and a few, moderate purplish red (59C) spots in centre of each tepal; nectaries deep reddish purple to dark purple (77A/79B); pollen strong orange (169C). Fls 230 mm wide; tepals 125 × 60 mm, margins smooth, tips strongly recurved. Lvs scattered, 200 × 40 mm, mid green. Stems 0.9 m, green, with 5-8 fls. May to June (under glass).

**'White Horn' V(b/a)**

See *longiflorum* 'White Horn'.

**'White Horse' VII(c/b)**

Parentage unknown

R: S. Hogewoning (1988), G: S. Hogewoning (1990), N: D. Kromhout (1991), I: D. Kromhout & S. Hogewoning (1993), REG: D. Kromhout & S. Hogewoning (1994)

Inside yellowish white (155D), midveins pale yellow-green (155A) at base, becoming yellowish white (155D) at top; outside yellowish white (155D), midribs pale yellow-green (155A), outer tepals tipped with strong yellow-green (144C); spots and papillae yellowish white

(155D); pollen strong orange (169C); stigma moderate yellow-green (138B). Fls 235 mm wide; tepals 120 × 75 mm, margins slightly ruffled, tips recurved. Lvs scattered, 150 × 50 mm. Stems 1.05 m, pale green, with 4-6 fls.

**'White House' VII(a/b)**

Parentage: (*L. × parkmanii* 'Allegra' × 'Star Gazer') × unnamed seedling

R: Bischoff Tulleken Lelies B.V. (1989), G: Bischoff Tulleken Lelies B.V. (1994), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2002)

Inside yellowish white (155D); outside yellowish white (155D), each tepal suffused with light yellow-green (145C) at base; spots yellowish white (155D); papillae present; nectaries strong yellow-green (144C); pollen brownish orange (171B); stigma strong violet (86B). Fls 230 mm wide, scented; tepals 145 × 75 mm, margins ruffled, tips recurved. Lvs scattered, 140 × 53 mm. Stems 0.75 m, green, with c.3 fls. July.

**'White Ice' VII(b/c)**

Parentage unknown

R: L. Woodriff (1958), G: H.J. Strahm (1961), N: R.L. Strahm (1963), I: H.J. & R.L. Strahm, REG: Strahm's Lilies, Inc. (1983)

Inside pure white, throat pale green; outside with burgundy midribs; spots absent; nectaries moderate yellowish green (138A); pollen bronze-orange. Fls 200 mm wide; tepals 100 × 65 mm, margins smooth, tips slightly recurved. Lvs scattered, 175 × 50 mm, mid green. Stems 1.5 m, with 7-20 fls. Aug. to Sept. (Published in *Rex Bulb Farms Cat.*, 1980.)

**'White Ideal' V(-/a)**

See *longiflorum* 'White Ideal'.

**'White Jade' VI(-/a)**

Parentage: selection from Olympic Group

S: A.C. McKillop (c. 1956), N: A.C. McKillop

Tepals greenish white, reflexed.

(Published in *LYB NALS* 10: 75 (1957).)

**'White Jamboree' VII(-/c)**

See *L. × parkmanii* 'White Jamboree'.

**White Jamboree Group VII(-/c)**

See *L. × parkmanii* 'White Jamboree Group'.

**'White Kiss' I(a/-)**

Parentage: 'Little Kiss' × white-flowered Asiatic seedling  
R: Gebr. N. & B. Laan & Zn (1987), G: Gebr. N. & B. Laan & Zn (1989), N: Gebr. N. & B. Laan & Zn (1989), I: Gebr. N. & B. Laan & Zn (1993), REG: Gebr. N. & B. Laan & Zn (1995)

Inside yellowish white (155D) throughout, with a greenish gloss when young; outside yellowish white (155D) throughout; spots very few near base and margins of tepals; papillae present; nectaries yellow-green; anthers tepaloid, pollen absent; stigma purple. Fls 90 mm wide, double; tepal-margins smooth, either just the tip or the

whole tepal recurved. Lvs scattered, green. Stems 1.1 m, uniformly dark, with 3-6 fls. Midseason.

**‘White Knight’ III(-/-)**

See *L. × testaceum* ‘White Knight’ (of Hughes).

**‘White Knight’ III(c/a)**

See *L. × testaceum* ‘White Knight’ (of Scheubel).

**‘White Lace’ I(c/d)**

Parentage: selection from Rosepoint Lace Group  
S: Columbia-Platte Lilies (pre 1996), N: Columbia-Platte Lilies

Inside white, with numerous, small, deep rose-pink spots and streaks; stigma and pollen dark. Tepal-margins smooth, tips strongly recurved. Stems 1.2 m. Mid June. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**‘White Lace’ V(b/a)**

See *longiflorum* ‘White Lace’.

**‘White Lady’ I(c/d)**

Parentage unknown  
R: unknown

Fls white; spots conspicuous, red-brown, on basal half of each tepal; pollen red-brown. Stems 1-1.2 m. Aug. (Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily. Published in *Wallace & Barr Cat.*, 1985. De Jager (UK) in their 1987 Catalogue gave it as cv. of *lancifolium* and said it was raised by Laan, but Laan said (*in litt.* June 1988) that it is not known to them.)

**‘White Lady’ VI(-/a)**

Syn. of ‘Baltā Dāma’.

**‘White Lightning’ VII(-/b)**

Misspelling of ‘White Lightning’.

**‘White Lightning’ VII(-/b)**

Parentage: selection from stock containing *speciosum* var. *album*, *auratum* & *rubellum*

S: Sun Valley Bulb Farms, Inc., N: J. Kirsch (1975), I: J. Kirsch (1975), REG: J. Kirsch (1975)

Fls pure white; spots absent. Lvs Oriental type. Stems 1 m. June.

(Published in *Lilies and other Liliaceae*, 1975: 97.

Included in *ILR* (1982) as ‘White Lightning’ which is a misspelling.)

**‘White Lion’ VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V., N: Coöp. Kwekersvereniging “The Originals” U.A. (1997), I: Coöp. Kwekersvereniging “The Originals” U.A. (1997), REG: Coöp. Kwekersvereniging “The Originals” U.A. (2000)

Inside greenish white (155C), flushed with pale greenish yellow (2D) above nectaries; outside greenish white (155C), midribs yellowish white (155D), tinged with

pale greenish yellow (2D) towards top, tipped light yellow-green (144D); spots light purplish pink (65B), few; papillae greenish white (155C); nectaries strong yellow-green (144B); pollen strong reddish orange (169A); stigma dark purple (79A) with a little deep purplish red (71A). Fls 200 mm wide; tepals 125-130 × 32-62 mm, margins ruffled, outer more so, tips recurved. Lvs scattered, 190 × 45 mm. Stems light green, with 5-8 fls. July.

**‘White Magic’ V(b/-)**

Parentage unknown

R: J.W.A. van der Wereld, N: Liliande B.V. (2003), REG: J.W.A. van der Wereld (2004)

Inside yellowish white (155D), midveins green at base; outside yellowish white (155D); spots and papillae absent; nectaries green; pollen orange-yellow; stigma light yellow. Tepals long, margins very slightly ruffled, tips recurved. Lvs scattered. Stems tall, green with few fls. Midseason to late.

**‘White Mero Star’ VII(a/b)**

Syn. of ‘Puerto Rico’.

**‘White Mountain’ VII(a-b/c)**

Parentage: *speciosum*? × ‘Star Gazer’

R: J.C. Smit (1979), G: M.A. van den Berg (1982), N: M.A. van den Berg (1985), N: M.A. van den Berg (1985), REG: M.A. van den Berg (1985)

Inside ivory-white, each tepal with a short, brilliant yellow (8A) ray, throat with yellow-green veins; outside white with pink midribs; spots greyish red, on two-thirds of each tepal; nectaries pale green. Fls 210 mm wide; tepals 110 × 45 mm. Lvs scattered, 200 × 40 mm, mid green. Stems 1.05 m, mid green, with c.6 fls.

**‘White Opal’ VII(-/c)**

See *L. × parkmanii* ‘White Opal’.

**‘White Orchid’ IX(b-c/d)**

See *speciosum* var. *album* ‘White Orchid’.

**‘White Palermo’ V(-/-)**

Parentage: unnamed seedling × *longiflorum* ‘White American’

R: IVT (1980), G: IVT (1981), N: IVT (1987), I: C.H. Adrichem, REG: C.H. Adrichem (1988)

Inside white, with broad, light yellow-green (145B) midveins in the throat; outside light yellow-green (145D) below, white above, with pale yellow-green (155A) midribs; pollen bright yellow. Fls 180 mm wide; tepals rather strongly recurved. Lvs scattered, 220 × 30 mm. Stems 1.7 m, dark green, with c.8 fls.

**‘White Panamint’ I(-/-)**

(This name and its entry in *ILR* (1982) should be deleted. Its inclusion arose from a misinterpretation of the seed parent of ‘Cloud Nine’, which should now read - white-flowered seedling × Panamint Group.)

**'White Paradise' V(-/-)**

Parentage: *longiflorum* 'White American' × unnamed seedling

R: IVT (1981), G: IVT (1982), N: IVT (1987), I: C.H. Adrichem, REG: C.H. Adrichem (1988)

Inside white, with strong yellow-green (145A) midveins in the throat; outside light yellow-green (145D) below, white with ivory-white midribs above; pollen bright yellow. Fls 160 mm wide; tepals strongly recurved. Lvs scattered, 210 × 30 mm. Stems 0.7 m, dark green, with c.4 fls.

**'White Pastel' I(a-b/-)**

Parentage unknown

R: H. Jacobi, N: H. Jacobi (1979), I: Borbeleta Gardens (1980), REG: Borbeleta Gardens (1981)

Inside pale yellow (11D) to light yellow (19B), turning pure white, throat pale green; outside tan; spots absent; nectaries greenish; pollen red-brown. Tepals 70 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 10 mm, mid green. Stems 0.8 m, brown, with 10-12 fls. Late July.

(Published in *Borbeleta Gardens Cat.*, 1980.)

**'White Peacock' I(a/-)**

Parentage: unnamed seedling × 'Batist'

R: Peacock B.V., G: Peacock B.V., N: Peacock B.V. (1988), I: Peacock B.V., REG: Peacock B.V. (1990)

Inside yellowish white (155D); outside greenish white (155C), midribs tinged with dark yellowish pink (181D); spots few, small, dark red (187A), only at the base of inner tepals; pollen moderate orange (167A). Fls 160 mm wide; tepals 75 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 95 × 13 mm, mid green. Stems 0.75 m, green with darker markings, and with c.13 fls. May (under glass).

**'White Pearl' IX(b-c/d)**

See *speciosum* 'White Pearl'.

**'White Perfection' IX(b/a)**

See *regale* 'White Perfection'.

**'White Picture' I(a-b/-)**

Parentage: unknown × ((*cernuum* × unknown) × unknown)

R: A.J. Porter (1974), N: A.J. Porter (1980), I: A.J. Porter (1980), REG: A.J. Porter (1980)

Inside white, tepal-tips sometimes tinged with brilliant yellow (10A), throat brilliant yellow (10A); outside greenish to greyed orange; spots brown, on the yellow part of each tepal; nectaries green; pollen brownish orange (165B). Tepal-margins very slightly ruffled; tips not recurved. Lvs scattered, dark green. Stems 1.1 m, sturdy. Early.

(Published in *Honeywood Lilies Cat.*, 1980. *Botrytis*-resistant.)

**'White Pillar' I(b/c)**

Parentage: white-flowered Ray Elders Asiatic seedling × 'Indian Princess'

R: E.E. Fox (1990), G: E.E. Fox (1992), N: E.E. Fox (1994), I: Fox Lily Ranch (2004), REG: E.E. Fox (2004)  
 Inside white, throat light orange-yellow (23C); outside dull white, midribs moderate reddish orange (178C); spots dark red (59A) on basal third of each tepal; nectaries light orange-yellow (23C); filaments white; pollen strong orange (169B); stigma moderate purplish red (185C). Fls 110 mm wide; tepals 60 × 36 mm, margins smooth, tips strongly recurved. Lvs scattered, 175 × 22 mm. Stems 1 m, mid green, with 20-28 fls. Late July.  
 (Nomenclatural standard: colour print supplied by registrant (WSY 0096383).)

**WHITE PIXIE® I(a/b)**

Trade designation of 'Snow Crystal'.

**'White Prince' I(a/-)**

Parentage: cream-flowered Asiatic seedling × unspotted, white-flowered, flat "Tiger" - ? *lancifolium*

R: J. Wadkamper (pre 1977), N: J. Wadkamper (1977), I: J. Wadkamper (1979), REG: J. Wadkamper (1978)

Fls cream at first, turning snow-white; spots absent; nectaries cream; pollen light brown. Tepal-margins smooth, tips slightly recurved. Stems 0.8 m. Midseason. (Published in *Lilies and other Liliaceae*, 1978/79: 114.)

**'White Princess' I(b-c/d)**

Parentage: (*lancifolium* × ('Maxwill' × *regale*)) × L. no. 37-538-1

R: C.F. Patterson (c. 1953), N: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan  
 Buds hairy. Fls creamy white, spotted purple. Stems 1.2 m. July.

**'White Pygmy' V(b/a)**

See *longiflorum* 'White Pygmy'.

**'White Queen' V(b/a)**

See *longiflorum* 'White Queen'.

**'White Ruffles' I(a/c)**

Syn. of 'Ruffles'.

**'White Sail' I(a/-)**

Parentage: 'Sterling Star' × (unnamed seedling × 'Connecticut King')

R: Bischoff Tulleken Lelies B.V. (1980), G: Bischoff Tulleken Lelies B.V. (1984), N: Bischoff Tulleken Lelies B.V. (1989), I: Bischoff Tulleken Lelies B.V. (1990), REG: Bischoff Tulleken Lelies B.V. (1991)

Inside pale yellow-green (155A/4D), throat light greenish yellow (4C); outside yellowish white (155D) with pale yellow-green (4D) tepal-edges and brilliant to light yellow-green (150C/D) midribs; spots few, small, dark red (187B), in the throat, mainly on inner tepals; nectaries sap-green; pollen strong orange (24A). Fls 185 mm wide; tepals 85 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 15 mm, mid green. Stems 0.85 m, green with some darker markings, and with c.8 fls. July (under glass).

**'White Sapphire'** V(-/a)  
See *longiflorum* 'White Sapphire'.

**'White Satin'** V(b-c/a)  
See *longiflorum* 'White Satin'.

**'White Sheen'** V(b/a)  
See *longiflorum* 'White Sheen'.

**'White Shell'** I(b/-)  
Parentage: 'Snow Bunting' × unknown  
R: E. Robinson (1970), N: E. Robinson (1979), I: E. Robinson (1979), REG: E. Robinson (1980)  
Fls creamy white with a pink flush and a few spots near centre. Fls 125 mm wide; tepals not recurved. Lvs scattered, dark green. Stems 1 m, light green.  
(Published in Gaybird Nursery list, 1979.)

**'White Shot'** V(b/a)  
See *longiflorum* 'White Shot'.

**'White Snow'** VII(b/b)  
Parentage: unnamed seedling × 'White Stargazer'  
R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2003)  
Inside yellowish white (155D); outside yellowish white (155D), vivid purplish red (57D) at base, midribs flushed greenish; spots and papillae yellowish white (155D); nectaries strong yellow-green (144C); pollen strong brown (172A); stigma deep reddish purple/strong purple (77A/B). Fls 210 mm wide, fragrant; tepals 120 × 62 mm, margins slightly ruffled, tips recurved. Lvs 160 × 54 mm, green. Stems 1 m, light green, with 5-8 fls. July.

**'White Soul'** I(a/b)  
Parentage unknown  
G: L. Høpfner (1994), N: L. Høpfner (1997), REG: L. Høpfner (1997)  
Inside and outside white (155D); spots many, purple, on basal half of each tepal; nectaries moderate yellow-green (146C); pollen vivid reddish orange (34B); stigma light yellow-green (144D). Fls 140 mm wide; tepals 70 × 30 mm, margins smooth, tips very slightly recurved. Lvs scattered, 60 × 13 mm, pale green. Stems 1 m, light green, with up to 10 fls. July.  
(Grown from seed sent from New Zealand.)

**'White Star'** VI(-/d)  
Parentage: Aurelian  
R: O.S. Blumhardt (pre 1958), N: O.S. Blumhardt  
Fls white, throat bright orange.  
(Unacceptable name: see note under *L. × parkmanii* 'White Star'.)

**'White Star'** VII(-/c)  
See *L. × parkmanii* 'White Star'.

**'White Star Gazer'** VII(a/b-c)  
See 'White Stargazer'.

**'White Stargazer'** VII(a/b-c)  
Parentage: ('Star Gazer' × 'Friendship') × ('Star Gazer' × white-flowered seedling)  
R: Bischoff Tulleken Lelies B.V. (1983), G: Bischoff Tulleken Lelies B.V. (1986), N: Bischoff Tulleken Lelies B.V. (1990), REG: H.J.A. Rooyakkers (1991)  
Inside yellowish white (155B), throat strong yellow-green (143B); outside yellowish white (155B), with moderate purplish red (184C) blotches at the junction with the pedicel; midribs light greenish yellow (6D); spots absent; papillae white; nectaries dark purple (79B); pollen strong reddish orange (169A). Fls 240 mm wide; tepals 105 × 60 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 110 × 25 mm, mid green. Stems 0.7 m, green, with 6-9 fls. Aug.  
(Registered as 'White Star Gazer' (see *ILR Tenth Supplement*, but in 1993 Dutch PBR (LEL 868) were granted under the epithet 'White Stargazer', so this latter form of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**'White Superior'** V(-/-)  
Parentage: selection from 'White Excelsior'  
S: A.J. van der Zwet & Sons, N: A.J. van der Zwet & Sons  
AMH 1946, FCCCH 1946  
Fls white, throat green.

**'White Surprise'** VII(b/b)  
Parentage unknown  
R: Sun Valley Bulb Farms, Inc. (pre 1985), N: Sun Valley Bulb Farms, Inc. (2002), REG: Sun Valley Bulb Farms, Inc. (2002)  
Inside shiny yellowish white (155D); outside yellowish white (155D), outer tepals with greenish midribs; spots and papillae present; nectaries green; pollen orange-brown; stigma pale grey-green. Fls strongly scented; tepal-margins strongly ruffled, tips slightly recurved. Stems light green/greyish.

**'White Swallow'** I(a/-)  
Parentage unknown  
R: S.E. Bottema (1985), G: S.E. Bottema, N: S.E. Bottema (1987), I: S.E. Bottema (1987), REG: S.E. Bottema (1988)  
Inside and outside greenish white (155C), midveins light yellow-green (145C); some dark red spots in a circle within the throat; pollen deep orange-yellow (163A). Fls 140 mm wide; tepals 80 × 35 mm, margins ruffled, tips slightly recurved. Lvs scattered, 105 × 15 mm, dark green. Stems 0.95 m, green, with c.15 fls.

**'White Swan'** VI(-/-)  
Parentage: *regale* 'White Perfection' × unknown  
R: F. Singer (pre 1971), N: F. Singer, REG: F. Singer (1971)  
Inside white and brilliant greenish yellow (6A).  
Syn.: *regale* 'White Swan'.  
(Published in *Lilies and other Liliaceae*, 1973: 113.)

**'White Tiger' I(b/b-c)**

Parentage: ('Connecticut Lass' × 'Minuet') × 'Snow Bunting'  
 R: Piedmont Gardens (pre 1968), N: Piedmont Gardens (1968), I: Piedmont Gardens (1970), REG: Piedmont Gardens (1978)  
 Fls white, with small purple spots in basal third of each tepal; nectaries white; anthers orange; pollen absent. Fls small. Stems 0.7-1.3 m. Aug.  
 (Published in *Lilies and other Liliaceae*, 1978/79: 115; in E. Fisher, *Named Lily Hybrids and their Origins*, 44 (1978).)

**WHITE TIGER I(c/-)**

Trade designation of 'Tiger White'.

**'White Triumphator' V(a-b/a)**

See *philippinense* 'White Triumphator'.

**'White Twinkle' I(a-b/b)**

Parentage unknown  
 R: Laan Lilies, N: Lico Export B.V. (2000), I: Lico Export B.V. (2000), REG: Lico Export B.V. (2000)  
 Inside and outside pale yellow-green (155A); midribs brilliant yellow-green (150B) with basal part greyish red (178A), outside of outer tepals greyish red (178A) at base, tipped dark greyish reddish brown (200A); spots dark red (187A), on basal part of each tepal; papillae few, in the throat; nectaries white-hairy; pollen strong orange (169B); stigma dark red (187A). Fls 170 mm wide; tepals 95 × 35-50 mm, margins smooth, outer tepals recurved. Lvs scattered, 70 × 12 mm. Stems 1-1.4 m, green, with lots of darker markings, and with c.13 fls.

**'White Tycoon' VIII(a-b/b)**

Parentage unknown  
 R: Testcentrum voor Siergewassen B.V., N: Marklily C.V. (2003), REG: Marklily C.V. (2004)  
 Inside with outer tepals yellowish white (155D), strong yellow-green (143A) along nectaries, inner tepals with a dark purple (79A) edge, throat strong yellow-green (144B), edges yellowish white (155D); outside with outer tepals yellowish white (155D), strong yellow-green (143C) at base, midribs moderate purplish red (59C) in basal third, with green-yellow flush when young, purple colour fading with age, strong yellow-green (144B) at top, inner tepals with dark purple (79A) edge; spots and papillae absent; nectaries strong yellow-green (143A), hairy; pollen dark reddish orange (175C); stigma strong yellow-green (144A). Fls 130 mm wide; tepals 120 × 50-60 mm, margins smooth, tips not recurved. Lvs scattered, 115-130 × 20-30 mm, dark green. Stems 0.95-1.2 m, green, with c.3 fls.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'White Virgin' I(a/-)**

Parentage: unnamed seedling × unnamed seedling  
 R: Fa P. Hoff & Zn (1981), G: Fa P. Hoff & Zn (1982), N: Fa P. Hoff & Zn (1985), I: Fa P. Hoff & Zn (1985), REG: Fa P. Hoff & Zn (1985)  
 Fls light greenish yellow (4B), tepal-tips pale yellow-green

(4D), throat oxblood-red; tepals blotched oxblood-red; anthers fused, pollen absent. Tepals 80 × 40 mm. Lvs scattered, 110 × 20 mm, dark green. Stems 1.25 m, with dark pigment, and with c.7 fls.  
 (Published in *Bloembollencultuur*, 1985. Classified incorrectly in *ILR Fourth Supplement* as Div. VI (d).)

**'White Whiskers' VII(-/d)**

Parentage unknown  
 R: L. Woodriff (1964), N: L. Woodriff (1967), I: L. Woodriff (1967), REG: L. Woodriff & Fairyland Begonia & Lily Garden (1984)  
 Inside pure white; outside greenish white; spots absent; papillae white, numerous; nectaries green; pollen brown. Tepals 75 × 25 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered. Stems 1.5 m, green, with c.10 fls. Aug.  
 (Published in *Fairyland Lily Garden Cat.*, 1967.)

**'White Wings' VI(c/d)**

Parentage: Aurelian Group  
 R: C. Yerex, N: C. Yerex, I: Rex Bulb Farms (1966), REG: ICRA (1984)  
 Fls white, throat pale apricot; spots absent. Fls on long pedicels. Lvs scattered. Stems 1.2-1.6 m. July to Aug.  
 (Published in *Rex Bulb Farms Cat.*, 1968/69: 26.)

**'Whitewood' II(-/-)**

Parentage: (*L. × dalhansonii* 'Brocade' × unknown) × white-flowered *martagon*  
 R: E. Robinson (1975), G: E. Robinson (1980), N: E. Robinson (1985), I: E. Robinson (1985), REG: ICRA (1997)  
 Fls white (at first very pale yellow); with some reddish spots near centre; nectaries pink; pollen orange. Tepal-margins smooth, tips slightly recurved. Lvs whorled, pale green. Stems 1.4 m, green, with c.12 fls. Early July.

**'Whitney' V(a-b/a)**

Parentage unknown  
 N: Van den Bos Breeding B.V. (1999), REG: Van den Bos Breeding B.V. (2003)  
 Inside and outside yellowish white (155D); spots and papillae absent; nectaries green; pollen yellow; stigma white. Tepal-margins slightly ruffled, tips recurved. Lvs dark green. Stems 0.25 m, dark green, with c.5 fls. Midseason to late.

**'Widor' VII(-/b-d)**

Parentage: seedling 222 × seedling 215  
 R: Vletter & Den Haan, G: Vletter & Den Haan (1984), N: Vletter & Den Haan (1988), I: Vletter & Den Haan (1991), REG: Vletter & Den Haan (1991)  
 Inside light purplish pink (65B) suffused with deep purplish pink (64D), midveins pale greenish yellow (10D), throat strong yellow-green (144C); outside moderate purplish pink (62B), midribs brilliant yellow-green (150B) suffused with yellowish white (155D); spots and papillae few, small, vivid purplish red (57D), in the throat; nectaries light greenish grey (190D); pollen moderate orange (167B). Fls 180 mm wide; tepals 80 ×

50 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 190 × 28 mm, mid green. Stems 1.05 m, dull green, with c.11 fls. July.

**‘Wiener Blut’ VIII(a-b/b)**

Parentage unknown

R: Bottema Lelie B.V. & Mts S.E. Bottema & Zn,  
N: Bottema Lelie B.V. & Mts S.E. Bottema & Zn, I:  
Bottema Lelie B.V. & Mts S.E. Bottema & Zn, REG:  
Mts S.E. Bottema & Zn (1999)

Inside strong red (47B) on a paler ground; outside deep pink (47D), tepals narrowly edged with moderate red (47A), midribs strong yellow-green (144B) tipped strong yellow-green (143A); spots few, dark greyish reddish brown (200A), on a third of each tepal; papillae absent; nectaries strong yellow-green (144B); pollen dark reddish orange (175C); stigma strong yellow-green (144B) and greyish brown (166A). Fls 190 mm wide; tepals 90 × 35-40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 20-25 mm, dark green. Stems 0.95 m, green with dark spots, and with 4-6 fls.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**‘Wiener Walzer’ I(c/d)**

Parentage: Feldmaier Asiatic seedling Fe 4 × Neumann Asiatic seedling NN C7.44

R: G. Steinbrück (1989), G: G. Steinbrück (1993), N: G. Steinbrück (1998), I: G. Steinbrück (1998), REG: G. Steinbrück (2003)

Inside moderate reddish orange (178C) shading to moderate purplish pink (54D) at tepal-tips; outside deep purplish pink (58D), with strongly developed pale orange-beige midribs; spots dark brown, few, tiny, at the base of each tepal; nectaries pale pink, continued at top into soft orange strips; filaments soft pink; pollen dark reddish orange (173A); style soft pink; stigma dark red (59A). Fls 120 mm wide; tepals 70 × 35 mm, margins slightly waved, tips strongly recurved; pedicels long, dark. Lvs scattered, 90 × 13 mm. Stems 0.7 m, black-violet, with c.8 fls. Early July.

(Published in ELG sales list, 2000. Nomenclatural standard: colour print provided by registrant (WSY 0038748).)

***wigginsii* Beane & Vollmer IX(c/d)**

Syn. of *pardalinum* subsp. *wigginsii*.

**subsp. *wigginsii* IX(c/d)**

See *pardalinum* subsp. *wigginsii*.

**Wilconking Group I(a/-)**

Parentage: *wilsonii* var. *flavum* × ‘Connecticut King’

R: L. Woodriff (pre 1982), N: L. Woodriff

Fls yellow-orange, flushed with gold, tepal-tips yellow; spots maroon, on a third of each tepal; nectaries white; pollen dark orange. Fls 140 mm wide; tepals 85 × 40 mm, margins ruffled, tips slightly recurved. Lvs scattered, 95 × 322 mm, dark green. Stems 0.8 m, dark green, with c.10 fls. July.

**‘Wild Canary’ I(a/-)**

Parentage unknown

R: E. Hickling (pre 1993), N: E. Hickling, REG: ICRA (1997)

Fls light yellow, spotted. Stems c.0.8 m. Very late.  
(Published in *Borbeleta Gardens Cat.*, 1993.)

**‘Wild Card’ VII(a-b/b)**

See ‘Wildcard’.

**‘Wildcard’ VII(a-b/b)**

Parentage unknown

R: Mak Lelieveredeling B.V. (1984), G: Mak Lelieveredeling B.V. (1987), N: Mak-Leek Inc. (1996), REG: Mak-Leek Inc. (1997)

Inside white, with a pale greenish yellow (2D) ray from base to middle of each tepal. throat white and pale greenish yellow (2D); outside white with light green stripes, midribs soft green; spots strong purplish red (60B/C), on about a third of each tepal in the throat; nectaries light green; pollen strong reddish orange (169A); stigma close to strong purplish red (60C). Fls 180 mm wide; tepals 100 × 30-50 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 140 × 25 mm, moderate yellow-green (138A/B). Stems 0.8-1.25 m, green overlaid with plum-purple, and with 4-12 fls. Early Aug.

(Registered as ‘Wild Card’, but in 1998 a USPP was granted under the epithet ‘Wildcard’, so this latter form of the epithet must be accepted (ICNCP, 2004: Art. 24.4).)

**‘Wildfire’ I(b/b)**

Syn. of ‘Firebright’.

**‘Wildfire’ VII(b-c/c)**

See *L. × parkmanii* ‘Wildfire’.

**‘Wild Orchid’ Div. ?**

Parentage unknown

Fls lemon-green at first, becoming creamy white; spots magenta. Stems up to 2.2 m.  
(Grown in New Zealand.)

**‘Wild Treasure’ VIII(b/a-b)**

Parentage: *longiflorum* ‘Lorina’ × ‘Muscader’

R: De Jong Beheer B.V. (1993), G: De Jong Beheer B.V. (1995), N: De Jong Beheer B.V. (2000), I: De Jong Beheer B.V. (2002), REG: De Jong Beheer B.V. (2002)

Inside greenish white (155C), midveins yellow-green at base, shading above into vivid purplish red (57C); outside yellowish white (155B); spots and papillae absent; nectaries green; pollen red-brown; stigma grey. Tepals 162 mm long, margins smooth or vary slightly wavy, tips recurved. Lvs scattered, 230 × 30 mm, more impressed than in ‘Sea Treasure’. Stems 1.05 m, green, with c.6 fls. Late.

(A *longiflorum*/Oriental (LO) hybrid.)

**'Wilja' Div. ?**

Given as a parent of 'Balder'.

**'Will' VII(b/c)**

See *L. × parkmanii* 'Will'.

**'Willcrovidii' I(-/-)**

Parentage: *dauidii* var. *willmottiae* × 'Crovidii'

R: J.E.H. Stooke (1928), N: J.E.H. Stooke

AM 1932

Fls orange-red, with numerous black spots. Stems up to 2 m.

(Published in *Gard. Chron.*, ser. 3, 92: 68 (1932).)

**'Willeke Alberti' VII(a/b)**

Parentage: unnamed seedling × unnamed seedling

R: Testcentrum voor Siergewassen B.V. (1994), G:

Testcentrum voor Siergewassen B.V., N: Marklily C.V.

(1999), I: Marklily C.V. (1999), REG: Marklily C.V.

(2000)

Inside moderate purplish pink (70D) shading to deep purplish pink/dark purplish pink (70C/186C) towards tepal-edges, midveins white for up to three-quarters of length, throat greenish white (155C); outside deep/moderate purplish pink (70C/D), midribs greenish white (155C), outer tepals tipped with strong yellow-green (144B); spots and papillae greenish white (155C); nectaries strong yellow-green (144C); stigma light greenish grey (190C) suffused with moderate purple (79D). Fls 240 mm wide; tepals 125-135 × 67.5 mm, margins ruffled, tips recurved. Lvs scattered, 215 × 65 mm. Stems up to 1.1 m, light green with a little darker marking, and with c.9 fls. July to Aug.

**'William Bates' VI(-/-)**

Parentage: 'T.A. Havemeyer' × unknown

R: T. Barry (c. 1941), N: T. Barry

Fls light tangerine-orange, shading to ivory, 135 mm wide, tepal-tips slightly recurved.

(Published in *Florists Exchange and Hort. Trade World*: 11 (1944).)

**'William Craig' I(a/b)**

See *L. × hollandicum* 'William Craig'.

**'William Fenton' I(c/-)**

Parentage: *dauidii* 'Queen Charlotte' × 'Progenitor'

R: A.D. Harrison (c. 1965), N: A.D. Harrison

Fls vivid yellowish orange (30C), well spotted. Fls large, *dauidii* type; tepals broad, three-quarters reflexed.

**'William White' I(a/-)**

Parentage: complex hybrid

R: C.F. Patterson, I: Dept. of Horticulture, University of Saskatchewan (1974)

Fls yellowish white (158D) with green midribs; spots dark red (187A), on basal two-thirds of each tepal; nectaries light greenish yellow (3D). Tepals slightly reflexed. Stems 0.4-0.6 m. July.

(Published in E. Fisher, *Named Lily Hybrids and their Origins*, 10 (1978).)

**'Will Millar' I?(-/-)**

Parentage: seedling from Stenographer Group

R: P.H. Wright

Fls glowing red. July.

(Published in *Gardenside Cat.*, 1952, 1954.)

**var. *willmottiae* IX(c/d)**

See *dauidii* var. *willmottiae*.

**'Willow Wood' I(a/-)**

Parentage: ('Connecticut King' × unknown) × yellow-flowered brushmarked seedling

R: J. Wadekamper (c. 1977), N: J. Wadekamper, I: J.

Wadekamper (1979), REG: J. Wadekamper (1978)

Fls yellow; spots absent; brushmarks purple; nectaries

yellow-green; pollen brown. Tepal-margins smooth. Lvs scattered. Stems 1 m.

(Published in *Lilies and other Liliaceae*, 1978/79: 115.

Photo in E.A. McRae, *Lilies*, 305 (1998) shows dark spots on the tepals below the brushmarks.)

**'Willtigrinum' I(b/d)**

Parentage: selection from Willtigrinum Group

S: V.P. Orehovs (post 1960), N: V.P. Orehovs

Fls shiny orange-red, 80-90 mm wide. Stems 1.5 m, with up to 30 fls.

(Unacceptable name: ICNCP, 2004: Art. 19.13 - after 1959 a name must be in any language other than Latin - for derivation see Willtigrinum Group. Also unacceptable under ICNCP, 2004: Art. 27.1 - name already used for a Group. Published in *LYB* 33: 81 (1970).)

**Willtigrinum Group I(b/d)**

Parentage: *dauidii* var. *willmottiae* × *lancifolium*

R: V.P. Orehovs (1960), N: V.P. Orehovs

Fls pale orange to dark red, with a lilac flush; spots large, dark brown; pollen dark brown; stigma dark brown. Fls (80-)120-150 mm wide, unscented; pedicels 70-100 mm. Lvs scattered, up to 150 × 30 mm. Stems 1.4-2 m, with 12-25 fls, and with black bulbils. Bulbs white. July to Aug.

(Unacceptable name: ICNCP, 2004: Art. 19.13 - after 1959 a name must be in any language other than Latin, and 'Willtigrinum' is formed from var. *willmottiae* and *tigrinum* (syn. of *lancifolium*). Misspelling: 'Villtigrinum Group'. Published in *LYB* 33: 80 (1970).)

**'Willy Dobbe' I(a/-)**

Parentage: seedling 3-68 × seedling 33-66

R: Gebr. N. & B. Laan & Zn (pre 1976), N: Gebr. N. & B. Laan & Zn, REG: Gebr. N. & B. Laan & Zn (1977)

Fls vivid yellow (14B), slightly spotted.

(Published in *Lilies and other Liliaceae*, 1977: 82.)

***wilsonii* Leichtlin IX(a/b)**

Fls reddish orange or apricot, midveins yellow; spots dark, dense. Tepals 75-100 × 25-40 mm. Lvs hairless. Stems to 1 m. Japan.

Syn.: *elegans* var. *pardinum*.

(Very similar to *dauricum* and perhaps only a variety of it.)

**var. wilsonii IX(-/a)**  
See *longiflorum* var. *wilsonii*.

**wilsonii var. flavum hort. Constable IX(a/b)**  
Fls buttercup- or primrose-yellow, centre of tepals flushed with old gold; spots red-purple. Stems 0.6-0.8 m, minutely downy, with 6-10 fls. Aug.

**wilsonii 'Luteum' IX(a/b)**  
Fls yellow, spotted with black.

**'Wilson's Giant White' V(-/-)**  
See *formosanum* 'Wilson's Giant White'.

**'Wilson's Pure White' V(b/a)**  
See *formosanum* 'Wilson's Pure White'.

**'Windahloo' I(a/-)**  
Parentage: brushmarked Asiatic seedling × brushmarked Asiatic seedling  
R: R.M. Withers (1980), G: R.M. Withers (1982), N: R.M. Withers (1982), I: R.M. Withers (1984), REG: R.M. Withers (1985)  
Inside vivid yellow (14A), tepal-tips vivid yellow (14B), throat vivid yellow-green (154A); outside vivid yellow (13A); each tepal with a large, dark red (183A) brushmark (25 × 30 mm) on the middle third, and a few, small spots adjacent to it; nectaries vivid yellow-green (154A); pollen vivid orange-yellow (23A). Fls 150 mm wide; tepals 80 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 105 × 10 mm, dark green. Stems 0.8 m, strong yellow-green (144B), with c.8 fls. Nov. to Dec. (Australia).

**'Wind Dancer' I(b/-)**  
Parentage unknown  
R: H.E. Hoepner (pre 1985), G: S.R. Kaul, N: S.R. Kaul, I: Wisconsin Regional Lily Society (1992), REG: S.R. Kaul (1993)  
Fls very light yellow, spotted. Lvs very broad, dark green. Stems 1.8 m, thick, dark brown. July.

**'Windfest' I(a/-)**  
Parentage unknown  
R: Van der Salm (Holland) (1975), G: Van der Salm (Holland) (1979), N: Van der Salm Bulb Farm, Inc. (1990), I: Van der Salm Bulb Farm, Inc. (1990), REG: Van der Salm Bulb Farm, Inc. (1990)  
Inside cream to soft gold, tepal-tips rose-pink, throat rich carmine-pink; outside soft rose-pink; spots absent; nectaries rich rose-pink; pollen copper. Tepal-margins smooth, tips slightly recurved. Lvs scattered, dark green. Stems 1 m, dark-mottled. June.

**'Wind Maker' VIII(a/c)**  
Parentage: 'Reinesse' × 'Swing'  
R: J. Vanheusden (1995), G: J. Vanheusden (1997), N: J. Vanheusden (1997), I: J. Vanheusden (1997), REG: J. Vanheusden (1997)  
Inside and outside bright white; spots absent; nectaries light green; pollen dark orange; stigma dark orange. Fls

120 mm wide; tepals c.60 × 20-25 mm, margins smooth, tips not recurved. Lvs scattered, c.60 × 7 mm, mid green. Stems 0.5 m, dark green, with c.10-15 fls. Early July. (*A longiflorum*/Asiatic (LA) hybrid.)

**Windsong Group II(-/c-d)**  
Parentage: (*martagon* × unknown) × 'Kelmars'  
R: J.C. Ericksen (c. 1966), N: J.C. Ericksen, REG: J.C. Ericksen (1975)  
Fls pale mauve-white to dark blackish red-purple; some fls with ringed white spots. Stems up to 1.7 m, with up to 25 fls. June.  
(Published in *Lilies and other Liliaceae*, 1975: 97.  
Included in E. Fisher, *Named Lily Hybrids and their Origins*, 27 (1978) as a clone.)

**'Windsor' VII(a-b/b)**  
Parentage: 'Tiempo' × 'Colonna'  
R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2000), I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2000)  
Inside yellowish white (155B), up to two-thirds of area along each midvein light greenish yellow (8B); outside yellowish white (155B), up to two-thirds of each midrib brilliant yellow (8A); spots brilliant yellow (7A), on up to two-thirds of each tepal; papillae light greenish yellow (8B); nectaries strong yellow-green (144B); pollen a little darker than strong orange (169C); stigma pale yellow-green (193A). Fls 220 mm wide; tepals 120 × 40-60 mm, margins ruffled, outer more so, tips recurved. Lvs scattered, 140 × 35 mm, dark green. Stems 1.25 m, green, with c.5 fls.  
Syn.: 'La Seine'.  
Trade designation: VLETWIN.  
(Originally named 'La Seine' and registered in 1999. However, before this epithet was published, a request was made to change the epithet to 'Windsor', and this cv. was published as 'Windsor' in *ILR Nineteenth Supplement*. Dutch PBR (LEL 1574) were granted to 'Windsor' in 2000.)

**'Wine and Roses' I(c/d)**  
Parentage: red-flowered seedling × 'Evensong'  
R: J. Wadkamper (1980), G: J. Wadkamper (1983), N: J. Wadkamper (1986), I: Borbeleta Gardens (1988), REG: Borbeleta Gardens (1988)  
Inside orange, tepal-tips orange-red, throat red-orange; outside red; spots dark brown on all but the apical third of each tepal; nectaries deep red; pollen brown. Tepals 100 × 35 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 120 × 30 mm, mid green. Stems 1.1 m, dark green, with 15-17 fls. Late July.  
(Published in *Borbeleta Gardens Cat.*, 1988.)

**'Wineglow' VII(b-c/b-c)**  
Parentage unknown  
R: B.G. Hayler (c. 1955), G: B.G. Hayler (1960), N: B.G. Hayler, I: B.G. Hayler (1963)  
Inside each tepal with a vivid red (57A) ray, shading lighter to white border; evenly spotted red-brown; pollen

orange. Fls *auratum* type, 230 mm wide. Lvs *auratum* var. *platyphyllum* type, deep green. Stems 1-1.1 m.

**‘Wine Goblet’ I(a/b)**

Parentage: (‘Aberfoyle’ × (‘Tamerlane’ × ‘Connecticut King’)) × ‘Royal Velvet’

R: W.D. Evans (1981), G: W.D. Evans (1985), N: W.D. Evans (1986), I: W.D. Evans (1986), REG: W.D. Evans (1986)

Inside moderate red (47A), tepal-tips and throat deep yellowish pink (46D); outside dark pink (182D); moderately spotted dark red (59A) in the throat; nectaries strong red (46A); pollen brown. Fls 150 mm wide; tepals 85 × 33 mm, margins smooth, tips slightly recurved. Lvs scattered, 125 × 18 mm, mid green. Stems 1.2 m, green, with c.18 fls. Midseason to late.

**‘Wine Pixie’ I(a/-)**

Parentage: ‘Sunrise’ × ‘Red Carpet’

R: E.A. McRae (1970), G: Oregon Bulb Farms, Inc. (1976), N: Oregon Bulb Farms, Inc. (1983), I: Oregon Bulb Farms, Inc. (1984), REG: Oregon Bulb Farms, Inc. (1984)

Inside with tepal-tips wine-red, throat burgundy-red; outside rich wine-red; spots masked by the dark ground; nectaries maroon-red; pollen brown. Tepals 80 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 20 mm, dark green. Stems 0.4 m, dark, mottled with brown, with 6-25 fls. June.

**‘Winered’ I(a/-)**

Parentage: ‘Snow Bunting’ × unknown

R: E. Robinson (1970), N: E. Robinson (1979), I: E. Robinson (1979), REG: E. Robinson (1980)

Inside bright wine-red, throat slightly darker; outside lighter; spots fine, red. Tepals slightly recurved. Lvs scattered, mid green. Stems 1 m.

(Published in Gaybird Nursery list, 1979.)

**‘Winesap’ I(a/-)**

Parentage: (‘Paprika’ × ‘Prince Charming’ (Div. 1)) × (‘Prince Charming’ (Div. 1) × ‘Enchantment’)

R: Oregon Bulb Farms, Inc., N: Oregon Bulb Farms, Inc. (c. 1978)

Fls rich wine to fuchsia-pink. Lvs narrow. Stems 0.6-1 m.

**‘Wing Commander’ I(a/-)**

Parentage: red-flowered, up-facing Asiatic seedling × ‘Summer Night’

R: A.J. Burnett (1987), G: A.J. Burnett (1989), N: A.J. Burnett, I: Fox Lily Ranch (1995), REG: E.E. Fox (1995)

Inside and outside dark black-red; with fine, black spots/papillae in the centre; nectaries black-red; pollen brown. Fls 135 mm wide; tepals 60 × 32 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 20 mm, dark green. Stems 1.5 m, almost black, with 10-14 fls. Late July to early Aug.

**‘Winner’ I(a/b)**

Parentage unknown

R: Bottema Lelie B.V. & Mts S.E. Bottema & Zn,

N: Bottema Lelie B.V. & Mts S.E. Bottema & Zn, I: Bottema Lelie B.V. & Mts S.E. Bottema & Zn, REG: Mts S.E. Bottema & Zn (1999)

Inside vivid reddish orange (33A,34A); outside vivid reddish orange (34A), tepal-tips strong yellow-green (143A); spots absent; papillae vivid reddish orange (34A); nectaries moderate olive-green (146A) and strong yellowish pink (34D); pollen dark red (187A); stigma dark red (183A). Fls 170 mm wide; tepals 90 × 35-45 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 15 mm, dark green. Stems 1.1 m, green with dark spots, and with c.7 fls.

**‘Winnetou’ I(a/-)**

Parentage: unnamed seedling × ‘Inkafürst’

R: V. Matthé (1980), G: V. Matthé (1982), N: V. Matthé (1986), REG: V. Matthé (1986)

Inside coppery bronze, fading to golden bronze; outside copper-orange with greenish brown midribs; spots dark, medium sized, on basal half of each tepal; pollen brown. Fls 140 mm wide; tepals 80 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 90 × 15 mm, dark green. Stems 0.9-1 m, dark green, brown at base, with c.10 fls, and with stem-bulbils. Mid July.

**‘Winnie’ I(a/-)**

Parentage: ((*lanceifolium* × unknown) × unnamed seedling) × ‘Connecticut King’

R: J. Wadekamper (1973), N: Borbeleta Gardens (1980), I: Borbeleta Gardens (1981), REG: Borbeleta Gardens (1981)

Inside vivid reddish orange (33B), throat deeper orange-red; outside tannish orange-red blend; spots few, brown, small, elongated, on basal quarter of each tepal; nectaries frosted white; pollen red-brown. Tepals 90 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 15 mm, mid green. Stems 1.4 m, brown, with 30-40 fls. July.

(Published in *Borbeleta Gardens Cat.*, 1981.)

**‘Winning Spirit’ VI(b-c/b)**

Parentage: *L. × kewense* ‘White Henryi’ × yellow-flowered trumpet seedling

R: C. Helsley (1988), G: C. Helsley (1991), N: C. Helsley (2003), REG: C. Helsley (2003)

Inside pale yellow (20D), throat strong orange (25B); outside light green; unspotted; nectaries olive-green; pollen golden; stigma light green. Fls 150 mm wide, strongly scented; tepals 130 mm long, outer 50 mm wide, inner 25 mm wide, margins smooth, tips slightly recurved. Lvs scattered, 120 × 18 mm. Stems 1.25 m, green, lightly dotted with dark reddish green, with c. 8 fls. Late June.

**‘Winnipeggy’ I(b-c/-)**

Parentage unknown

R: H.E. Hoepner (1984), G: H.E. Hoepner (1987), N: R. Kaul (1990), I: S.R. & R. Kaul (1990), REG: S.R. & R. Kaul (1990)

Inside and outside red, throat darker red; spots very few, small, black, on basal quarter of each tepal; nectaries

yellow-red; pollen rusty red-brown. Tepals 80 × 30 mm, margins smooth, tips not recurved. Lvs scattered, dark green. Stems 1.35 m, dark green, with 30-35 fls in a long infl. (with secondary and tertiary buds), and with bulbils. Midseason to late.

Trade designation: ON WISCONSIN.

#### **'Winona' I(a-b/b)**

Parentage: 'Merlin' × 'Phoebus'

R: W.D. Evans (1981), G: W.D. Evans (1985), N: W.D. Evans (1992), I: W.D. Evans (1992), REG: W.D. Evans (1992)

Inside brilliant yellow (7A), throat light greenish yellow (3C); outside with moderate orange (173C) midribs; spots small, greyish brown (166A), on basal part of each tepal; nectaries light greenish yellow (3C); pollen dark reddish orange (173A). Fls 145 mm wide; tepals 80 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 9 mm, mid green. Stems 1.2 m, greyish brown (166A) with c.14 fls. Mid to late July.

#### **'Winsome' I(a/b)**

Parentage: ('Ethelwaite' sibling × 'Merlin') × ('King Pete' × unknown)

R: W.D. Evans (1982), G: W.D. Evans (1985), N: W.D. Evans (1992), I: W.D. Evans (1992), REG: W.D. Evans (1992)

Fls vivid orange (28B); spots few; nectaries orange; pollen orange; style orange. Fls 130 mm wide; tepals 65 × 40 mm, margins smooth, tips not recurved. Lvs scattered, 85 × 16 mm, mid green. Stems 0.75 m, green flecked with brown, with c.10 fls that drop their tepals cleanly, leaving the conspicuous and decorative orange style. Mid July.

#### **'Winsome Lass' I(a/-)**

Parentage: 'Maple Cream' × 'Indian Queen'

R: Hartle-Gilman Gardens (1981), G: Hartle-Gilman Gardens (1983), N: Hartle-Gilman Gardens (1991), I: Hartle-Gilman Gardens (1992), REG: Hartle-Gilman Gardens (1992)

Inside creamy white (159D), throat deep pink (180D); outside deep pink (180D); spots red/brown, on central third of each tepal; nectaries frosted pink; pollen red. Tepals 72 × 30 mm, margins slightly ruffled, tips not recurved. Lvs scattered, 90 × 10 mm, mid green. Stems 0.76 m, mid green, with 10-14 fls. Midseason. (Published in *Hartle-Gilman Gardens Cat.*, 1992.)

#### **'Winston Churchill' VII(-/b)**

Parentage: selection from Zealandia Group

S: L.B. Tuffery (c. 1965), N: L.B. Tuffery

Fls very large, dark red with slight lavender overlay. Lvs dark. Stems 1.5 m. Late.

#### **'Winter Ballet' I(b/-)**

Parentage: ('Hawaiian Punch' × a Tesca seedling) × (a Tesca seedling × Oregon Bulb Farms, white-flowered, up-facing Asiatic seedling) × a Whipple seedling)

R: J. Wadekamper (1981), G: Hartle-Gilman Gardens (1984), N: Hartle-Gilman Gardens (1987), I: Hartle-Gilman Gardens (1988), REG: Hartle-Gilman Gardens

(1988)

Inside pale orange-yellow (159C), throat pale yellow (158A); outside green with brown midribs; spots dark red-black, on central quarter of each tepal; pollen red-brown. Tepals 70 × 38 mm, margins ruffled, tips slightly recurved. Lvs scattered, 114 × 12 mm, dark green. Stems 1.22 m, brown/green, with 20-22 fls. Mid July. (Published in NALS Q. Bull., June 1988.)

#### **'Winter Moon' I(b/-)**

Parentage: (*lancifolium* × unknown) × unknown

R: E. Robinson (1970), N: E. Robinson (1978), REG: E. Robinson (1980)

Inside chalk-yellow; outside paler yellow; unspotted. Tepals slightly recurved. Lvs scattered, pale green. Stems 1.2 m, pale green, with c.12 fls.

#### **'Winterset' I(a/b)**

Parentage unknown

R: B.G. Hayler, G: B.G. Hayler (1981), N: B.G. Hayler (1985), I: B.G. Hayler, REG: B.G. Hayler (1985)

Inside pale yellow (158B), throat pale yellow (158B); outside green-white; spots purple, on basal two-thirds of tepals; nectaries green-white; pollen light brown. Fls 150 mm wide; tepals 85 × 37 mm, margins smooth, tips not recurved. Lvs scattered, 100 × 12 mm, mid green. Stems 0.75 m, mid green, with c.8 fls. Dec. (Australia).

#### **'Winter Sunset' VI(-/a)**

See *L. × imperiale* 'Winter Sunset'.

#### **'Wirena' VI(b/a-b)**

Parentage: Pink Perfection Group × 'Pink Pearl'

R: R. Widerski, N: R. Widerski, I: R. Widerski (2004), REG: R. Widerski (2004)

Inside creamy white with pink veining, throat golden; outside red-brown, midribs brown; spots absent; pollen yellow-brown; stigma brown. Fls 150 mm wide; tepals 130 × 60 mm, strongly recurved, tough; pedicels 90 mm, thick, green and brown. Lvs scattered, 130 × 11 mm, glossy mid green. Stems 1.2 m, thick, green and brown, with medium-sized infl. Mid July.

#### **'Wiroma' VI(b/a)**

Parentage: 'Anna Maria' × 'Fatima'

R: R. Widerski, N: R. Widerski, I: R. Widerski (2004), REG: R. Widerski (2004)

Inside deep orange, tepal-tips paler; outside brown-red-orange, midribs brown-red; spots absent; pollen yellow; stigma grey-bronze. Fls 100 mm wide; tepals 75 × 50 mm, slightly curved, margins gently ruffled; pedicels 80 mm long, thick, green, with secondary buds. Lvs scattered, 90 × 12 mm, dull mid green. Stems 1.1 m, thick, brown-dotted, with medium-sized infl. Early July.

#### **'Wisconsin Snow' I(b/c)**

Parentage unknown

R: H.E. Hoepner (1985), G: H.E. Hoepner (1988), N: H.E. Hoepner (1992), I: H.E. Hoepner (1992), REG: H.E. Hoepner (1992)

Inside white with a slight green tinge in centre of fls;

outside white, midribs small, soft green and pink, tepal-tips tinged greenish brown; almost unspotted; nectaries green-tinged; pollen dark orange. Tepals 80 × 40 mm, margins smooth, tips slightly to moderately recurved. Lvs scattered, 130 × 16 mm, mid green. Stems c.1.4 m, mid green, with at least 8-12 fls, which do not bleach rapidly. Midseason to late.

Syn.: 'Wis Snow'.

(Originally submitted for registration as 'Wis Snow' and published as such in *ILR Eleventh Supplement*. The epithet was amended to 'Wisconsin Snow' in *ILR Thirteenth Supplement*. Because it was validly published, 'Wis Snow' must be regarded as a synonym.)

#### 'Wisdom' VII(-/c)

Parentage: unnamed seedling × unnamed seedling

R: W. Paauw & Zn B.V. (1991), G: W. Paauw & Zn B.V. (1992), N: W. Paauw & Zn B.V. (1992), I: Peacock B.V. & Imanse Lelieveredeling B.V., REG: W. Paauw & Zn B.V. (1996)

Inside yellowish white (155D), midveins light yellow (10B) from the nectaries up to two-thirds the length of tepal; outside yellowish white (155D), midribs white (155A), tipped strong yellow-green (144B); spots variable (none to many); papillae yellowish white (155D) and vivid yellow (12A), on two-thirds of each tepal; nectaries strong yellow-green (144C); pollen strong orange (169B); stigma dark red (187A) on a pale yellow-green (193B) ground. Fls 270 mm wide; tepals 140 × 40 mm, margins ruffled, tips strongly recurved. Lvs scattered, 210 × 65 mm, mid green. Stems 1.1 m, pale green, with c.3 fls.

#### 'Wis Snow' I(b/c)

Syn. of 'Wisconsin Snow'.

#### 'Witchery' VII(-/b)

Parentage: 'Tranquil Dawn' × 'Felice'

R: G.G. & F.S. Blake (1984), G: F.S. Blake (1988), N: F.S. Blake (1993), I: F.S. Blake (1993), REG: F.S. Blake (1994)

Inside pale purplish pink (56C), tepal-tips strong purplish pink (55B), throat brilliant yellow (14C); outside pale purplish pink (56C); spots strong purplish red (61B), fairly sparse; nectaries brilliant yellow-green (12B); pollen dark reddish orange (178B). Fls 180 mm wide; tepals 140 × 60 mm, margins ruffled, tips slightly recurved. Lvs scattered, 210 × 45 mm, mid green. Stems 2 m, moderate yellow-green (147C), with c.20 fls. Jan. (Australia).

#### 'Wittei' IX(b/c)

See *auratum* 'Wittei'.

#### 'Wlad's Spider' I(a/-)

Parentage unknown

R: W. Czarniecki (1986), G: W. Czarniecki (1989), N: W. Peryt (1993), I: W. Peryt (1993), REG: W. Czarniecki (1993)

Inside vivid reddish orange (32A), each tepal-centre flushed with pale yellowish pink (29D), throat moderate orange (167A); outside brilliant orange (19A); spots absent; nectaries strong orange (25A); pollen strong brown (172A). Fls 165 mm wide; tepals 90 × 25-34 mm,

margins smooth, tips slightly recurved. Lvs scattered, 90 × 14 mm, mid green. Stems 1.2 m, strong yellow-green (144A), with c.20 fls. July.

#### 'W.N. Craig' I(a/b)

Syn. of *L. × hollandicum* 'William Craig'.

#### 'W.O. Backhouse' II(-/-)

See *L. × dalhansonii* 'W.O. Backhouse'.

#### 'Wolga-träumerei' I(b/b)

Parentage: Asiatic seedling × 'Impact'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1995), I: G. Steinbrück (1996), REG: G. Steinbrück (1997)

Inside strong orange (168A), throat light yellow (162C); outside light yellow (162C); dark purplish brushmarks (and associated spotting towards the sides of the brushmark) on basal half of each tepal; nectaries pale green; stigma and pollen strong orange-yellow (24B). Fls 160 mm wide; tepals 85 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 80 × 10 mm, pale green. Stems 0.8 m, pale green, with c.15 fls. Late June to early July.

#### 'Wonder' V(b/a)

See *formosanum* 'Wonder'.

#### 'Wonder' IX(b/c)

See *auratum* 'Wonder'.

#### 'Wonderbell' V(-/a)

See *longiflorum* 'Wonderbell'.

#### 'Wonderbell Improved' V(-/a)

See *longiflorum* 'Wonderbell Improved'.

#### 'Wonderland' VII(-/b)

Parentage: unnamed seedling × unnamed seedling

R: W. Paauw & Zn B.V. (c. 1991), G: W. Paauw & Zn B.V. (1994), N: W. Paauw & Zn B.V., I: W. Paauw & Zn B.V. (1994), REG: Peacock B.V. & Imanse Lelieveredeling B.V. (1995)

Inside light to pale purplish pink (62C/D), with light yellow (19B) to light yellowish pink (27B) along the midveins, tepal-tips light to pale purplish pink (62C/D), throat light yellow to light yellowish pink (19B/27B); outside pale purplish pink (62D); large red spots and some papillae present; nectaries yellow-green; pollen orange-brown; stigma grey. Fls 260 mm wide; tepals 130 × 70 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 40 mm, mid green. Stems 1.3 m, green with darker spots and stripes, and with 6-11 fls (from 16-18 cm bulbs). Midseason to late.

#### 'Wonga' I(a/-)

Parentage unknown

R: G.M. Chandler (pre 1983), N: G.M. Chandler, REG: ICRA (1997)

Inside clear yellow; outside bronze. Lvs shiny green. Stems 0.6 m, with an umbellate infl. of up to 15 fls; some

bulbils produced.  
(Published in *K.L. Watkins Cat.*, 1983.)

**'Wood Nymph' II(c/d)**  
Misspelling of 'Wood-nymph'.

**'Wood-nymph' II(c/d)**  
Parentage: *martagon* × unknown  
R: G. Yeld (pre 1901), N: G Yeld  
No further details.

Syn.: *martagon* 'Wood Nymph'.  
(Published in *JRHS* 26: 386 (1901). Included in *ILR* (1982) as *martagon* 'Wood Nymph' which is a misspelling.)

**'Woodriff's Memory' VII(a-b/b)**  
Parentage: unnamed seedling × seedling 201  
R: Vletter & Den Haan (1983), G: Vletter & Den Haan (1986), N: Vletter & Den Haan (1991), I: Vletter & Den Haan (1990), REG: Vletter & Den Haan (1992)  
Inside light purplish pink (73C), throat brilliant yellow-green (142B); outside light purplish pink (73C), midribs strong yellow-green (142A); papillae strong purplish red (64B); nectaries deep purplish red (71A); pollen strong orange (169C). Fls 240 mm wide; tepal-margins ruffled, tips slightly recurved. Lvs scattered, 180 × 35 mm, mid green. Stems 1.15 m, green, with c.5-7 fls.

**'Woodstock' VII(a/b)**  
Parentage: white/yellow-flowered seedling × 'Asari'  
R: Bischoff Tulleken Lelies B.V., N: Bischoff Tulleken Lelies B.V., REG: Bischoff Tulleken Lelies B.V. (2004)  
Inside with inner tepals moderate purplish pink (62B), light purplish pink (62C) towards margins, with some yellowish white (155D) next to nectaries, and brilliant greenish yellow (3A) above nectaries, outer tepals similar but apical half with narrow yellowish white (155D) margin; outside with outer tepals strong purplish pink (63D), pale purplish pink (65D) towards margins, midribs strong yellow-green (143C) at base and top, in between brilliant yellow-green (150B), next to each midrib a small deep purplish red (59B) patch, inner tepals pale yellow-green (155A) in basal half, changing into light purplish pink (62C) towards margins and tips, midribs deep purplish red (59B) at base, towards top becoming brilliant yellow-green (150B); spots absent; papillae yellowish white (155D) and brilliant greenish yellow (3A); nectaries strong yellow-green (144C), brilliant greenish yellow (3A) at top and edge; pollen dark reddish orange (173A); stigma brilliant violet (92A). Fls 180-250 mm wide, slightly fragrant; tepals 123 × 50-71 mm, margins smooth to slightly ruffled, tips recurved. Lvs scattered, 155 × 40 mm. Stems 0.7-1 m, green with darker markings, and with c.3 fls.

**'Worldwhite' V(b/a)**  
Parentage: unnamed seedling × unnamed seedling  
R: Van den Bos Breeding B.V. (1993), G: Van den Bos Breeding B.V., N: Van den Bos Breeding B.V. (2000), I: Van den Bos Breeding B.V. (2000), REG: Van den Bos Breeding B.V. (2000)

Inside and outside greenish white (155C); midribs yellowish white (155D); spots and papillae absent; nectaries strong to light yellow-green (145A to 145B/C); pollen strong orange-yellow (17A); stigma light yellow-green (145D). Fls 200 mm wide; tepals 180 × 62-75 mm, margins smooth, tips recurved. Lvs scattered, 195 × 35 mm. Stems up to 1.6 m, light green, with c.6 fls. (Included in *ILR Nineteenth Supplement* as Div. VI, although the registration form placed it in Div. V.)

**'Wowie' I(b-c/c)**  
Parentage: 'Connecticut King' × (orange-flowered seedling from 'Scarlet Robe' × ('Edith Cecilia' × *davidii* var. *unicolor*))

R: C. Robinson (1972), G: C. Robinson (1975), N: Columbia-Platte Lilies (1987), I: Columbia-Platte Lilies (1987), REG: Columbia-Platte Lilies (1988)  
Inside vivid reddish orange (30A/B), tepal-tips vivid reddish orange (30A), throat vivid orange (28A); outside vivid reddish orange to vivid orange (30B/28A); a few, inconspicuous spots at base of each tepal; nectaries soft orange; pollen moderate reddish brown (177A). Tepals 60-90 × 25-30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 100-150 × 10-20 mm, dark green. Stems 1.4-2 m, dark green, with 7-25 fls (including secondary buds) in a compact infl. Late June.

**'W.R. Hawkins' IX(b-c/d)**  
See *speciosum* 'W.R. Hawkins'.

**'Wulfenite' I(a/-)**  
Parentage: red-flowered, out-facing Asiatic seedling × 'Nachalo'  
R: A.V. Otroshko, N: A.V. Otroshko, REG: A.V. Otroshko (1994)  
Fls dark red; spots absent; nectaries yellow; pollen orange. Tepals 91 × 38 mm. Stems 1 m.  
Syn.: 'Vulkan'.  
(Originally named 'Vulkan'.)

**'Wyatt' IX(a/b)**  
See *philadelphicum* 'Wyatt'.

**Wyatwood Group IV(c/d)**  
Parentage: 'Oliver Wyatt' × Bullwood Group  
R: A.W.A. Baker (1970), G: A.W.A. Baker (1974), N: A.W.A. Baker (1985), I: A.W.A. Baker, REG: A.W.A. Baker (1985)  
Inside yellow, tepals sometimes with an orange infusion as a central mark, tips yellow, throat yellow; outside yellow shading to green at base; a few, small spots in the throat; nectaries green; pollen red or brown. Tepals 60 × 12 mm, margins smooth, tips slightly recurved. Lvs whorled, 100 × 15 mm, mid green. Stems 1.7 m, green, with c.15 fls. July.  
(Published in *ILR Fourth Supplement* as Wyatwood grex.)

***xanthellum* F.T. Wang & Tang IX(b-c/d)**  
Fls yellow; spots absent; nectaries frosted; pollen orange. Tepals c. 35 × 6 mm. Lvs scattered, 40-80 × 2-3 mm. Stems 0.3-0.5 m, with 1-2 fls. W China (Sichuan).

**xanthellum var. luteum S. Yun Liang IX(b-c/d)**

Fls yellow with purple spots.

**'Xero' VII(-/a)**

Parentage unknown

R: Vletter & Den Haan Beheer B.V., G: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V., I: Vletter & Den Haan Beheer B.V., REG: Vletter & Den Haan Beheer B.V. (2001)

Inside moderate purplish pink (65A), each tepal paler at base and tip, edged yellowish white (155D), midveins yellow changing into a little lighter than deep red (60A); outside light purplish pink (65B); spots and papillae present; pollen reddish brown; stigma purple. Tepal-tips recurved. Stems 1.4 m, green. Early to midseason.

**'Xerxes' I(c/-)**

Parentage: ('Redbird' × unknown) × mixed pollen

R: J. Welsch, N: J. Welsch, I: J. Welsch (pre 1980), REG: J. Welsch (1985)

Inside strong reddish orange (42B), tepal-tips and throat strong reddish orange (42C); outside deep yellowish pink (41D); spots dark red (187B) to deep purplish red (187D), many, medium sized, on two-thirds of each tepal; nectaries red, white-frosted; pollen moderate reddish orange (171A). Fls 120 mm wide; tepals 81 × 34 mm, margins smooth, tips slightly or not recurved. Lvs scattered, 82 × 12 mm, mid green. Stems 1.1 m, greyed purple, with c.10 fls and bulbils. Mid July. (Published in *Liliárska ročenka*, 1983.)

**'Xotica' VII(a-b/b)**

Parentage: seedling 88.24 × 'Pink Paradise'

R: World Breeding B.V., N: Liliande B.V. (2003), REG: World Breeding B.V. (2004)

Inside moderate purplish pink (62B), each tepal with brilliant/light yellow (10A/B) flame, midveins brilliant yellow (10A) at base; outside light purplish pink/very pale purple (73C/D); spots and papillae yellow; nectaries green; filaments pale green; pollen brown-red; stigma dark purple. Fls 180 mm wide; tepals 160-165 × 55-85 mm, margins slightly ruffled, tips strongly recurved. Lvs scattered, 106-219 × 34-45 mm, dark green. Stems 0.8-1.1m, green, with 3-11 fls. Midseason to late. (Nomenclatural standard: colour print supplied by registrant (WSY 0096403).)

**'Yamabuki' I(a/-)**

Parentage: ('Enchantment' × *L. × maculatum*) × *dauricum*

R: S. Fujishima (1963), N: S. Fujishima

Fls yellowish orange.

**'Yamaska' I(c/d)**

Parentage: 'Coronation' × 'Lyla McCann'

R: I. Preston, N: Central Experimental Farm, Ottawa (1954), I: Central Experimental Farm, Ottawa (1954) Inside saffron-yellow (HCC 7/1); outside maize-yellow (HCC 607); moderately spotted purple-brown; pollen red-brown. Lvs up to 75 mm long, narrow. Stems pod green (HCC 061) and Scheele's green (HCC 860/3), overlaid with fine, brown spots and with up to 50 fls.

**'Yangtze' VI(c/c)**

Parentage unknown

R: unknown (1965), G: W.T. Craig (1969), N: W.T. Craig (1973), I: B & D Lilies (1988/89), REG: W.T. Craig (1986)

Inside brilliant orange-yellow (23B), throat with a slight blush of vivid yellow (13A) above nectaries, tepal-tips brilliant orange-yellow (23B); outside brilliant orange-yellow (23B); some papillae present, some with more-or-less dark red (183B) markings; nectaries strong yellow-green (144A); pollen moderate orange (167A). Tepals 105-110 × 26-35 mm, margins smooth, tips slightly recurved. Lvs scattered, 136 × 25 mm, mid green. Stems 1.7 m, dark green, with 20 or more fls. Mid July.

**'Yankee Doodle' I(c/-)**

Parentage: *lancifolium* × unknown

R: J.W. Silva (1970), N: J.W. Silva (1972), REG: J.W. Silva (1972)

Fls deep orange-red; more-or-less unspotted; nectaries slightly darker; pollen rust-coloured. Lvs dark green. Stems 1.4 m. July.

(Published in *Lilies and other Liliaceae*, 1975: 97.)

**'Yatsugatake' V(a-b/a)**

Parentage: selection from Formolongi Group

Inside white, throat with a greenish tinge; outside slightly tinged with pale yellowish green; pollen pale orange-yellow; stigma white. Tepal-margins smooth, tips hardly recurved. Lvs scattered, rather broad. Stems with 2-3 fls. (Selected (before 1989) and named in Japan. Listed in *Miyoshi & Co. Cat. no. 87: 115* (1989), with colour illustration.)

**'Yellito' I(a/c)**

Parentage: 'Connecticut King' × 'Juliana'

R: J.M. van Tuyl (1980), G: J.M. van Tuyl (1982), N: J.M. van Tuyl (1985), I: J.M. van Tuyl (1985), REG: J.M. van Tuyl (1985)

Fls yellow throughout; spots brown, on basal half of each tepal; pollen yellow. Tepal-margins smooth, slightly recurved at tips. Stems 0.7-1.1 m, green, with 1-15 fls. (This cv. is tolerant of low light.)

**'Yellow' I(c/d)**

Parentage: 'Golden Gleam' × 'Yellow Bunting'

R: R. Warner (pre 1963)

Fls clear, waxy yellow. Stems with up to 15 fls.

Syn.: *pumilum* 'Yellow'.

(Very vigorous. Published in *Honeywood Lily Cat.*, fall 1963.)

**'Yellow Baby' I(a-b/b)**

Parentage unknown

REG: World Breeding B.V. (2003)

Inside strong orange-yellow/vivid yellow (17A/B); outside vivid yellow (17B); spots and papillae present; nectaries orange-yellow; pollen orange-brown; stigma purple. Tepal-margins smooth or very slightly ruffled, tips recurved. Stems short. Early.

**'Yellow Bird' I(c/-)**

Parentage: *lancifolium* × Mid-century Group  
 R: De Jong Lelies Beheer B.V., I: H. van der Ster (1964),  
 REG: (1969)

Fls brilliant orange-yellow (21B) with small, brown spots.  
 (Published in *LYB* 33: 257 (1970).)

**'Yellow Blaze' Div. ?**

Given as a parent of 'Bright Beauty', 'Connecticut King' and 'Lady Fair'. No further details. Perhaps an error for Yellow Blaze Group.

**'Yellow Blaze Group' I(a/b)**

Parentage: 'Nutmegger' × *wilsonii* var. *flavum*  
 R: D.M. Stone & F.H. Payne (c. 1965), N: D.M. Stone & F.H. Payne

Fls vivid yellow (9A/B) and brilliant yellow (9C), spots dark, decreasing in size towards tepal-bases; pollen orange. Stems 1.2-1.5 m. July to Aug.  
 (Published in *ILR* (1969) as Yellow Blaze grex.)

**'Yellow Bowl' VI(-/-)**

Parentage: selection from Aurelian Group  
 Fls yellow.

(Published in *LYB* 21: 136 (1958). Sent to Stern by J.E. Bradfield from USA.)

**'Yellow Bride' VIII(a/b)**

Parentage: seedling OR 89-32-11-2 × seedling 91-30-00  
 R: World Breeding B.V. (1993), G: World Breeding B.V. (1996), N: Kwekersvereniging "Het Vrije Westen" (2001), REG: Kwekersvereniging "Het Vrije Westen" (2001)  
 Inside vivid yellow (12A), each tepal changing to pale yellow-green (4D) towards top, and edged brilliant yellow (12B), throat vivid yellow (12A); outside pale yellow-green (4D), each tepal edged vivid yellow (12A), and vivid yellow (12A) at base, midribs strong yellow-green (144B) for up to a quarter, dark purplish pink (186C) towards top, outside of outer tepals suffused dark purplish pink (186C) all over; nectaries strong yellow-green (144B); spots and papillae absent; pollen strong brown (172A); stigma moderate yellow-green (139C). Fls 235-250 mm wide; tepals 140 × 40-70 mm, margins very slightly ruffled, tips recurved. Lvs scattered, 180 × 50 mm. Stems 1.1-1.15 m, green with darker markings and 2-5 fls.

Syn.: 'Yellow Sun' (Div. VIII).

(An Orienpet (OT) lily. Originally registered as 'Yellow Sun' in 2001 (published in *ILR Twentieth Supplement*). Unfortunately, in 2002 European PBR were granted to a different 'Yellow Sun', thus causing confusion. However, World Breeding B.V. then applied for Dutch PBR under the new epithet 'Yellow Bride' and PBR (LEL 1948) were granted in 2003. Under (ICNCP, 2004: Art. 24.4), the epithet 'Yellow Bride' must be accepted, and confusion is avoided.)

**'Yellow Bunting' I(c/d)**

Parentage: *pumilum* × unknown  
 R: F.L. Skinner, N: F.L. Skinner, I: F.L. Skinner (1944)  
 Fls canary-yellow.

Syn.: *pumilum* 'Yellow Bunting'.  
 (Published in *Amer. LYB* 1946: 106.)

**'Yellow Butterfly' IV(c/c)**

Parentage: Bellmaid Group × an American hybrid with flat fls

R: N. Martschinke (1979), G: N. Martschinke (1991), N: N. Martschinke (1994), I: N. Martschinke (1997), REG: N. Martschinke (2000)

Inside vivid orange-yellow (21A); outside vivid orange-yellow (21A) to strong orange (26A); spots dark red (59A), very fine, in centre of fl.; nectaries strong yellow-green (144B); pollen dark reddish orange (175B); stigma dark red (59A). Fls 100 mm wide; tepals 85 × 23 mm, margins smooth, tips slightly recurved. Lvs whorled, 105 × 18 mm, mid green. Stems 1.2 m, green, with c.11 fls. Early July.

(Published in *Europäische Liliengesellschaft*, bulb list, 1997. The epithet alludes to the form of the fl. The fls become lighter with age. Nomenclatural standard: colour print provided by registrant (WSY 0022855).)

**'Yellow Calla' Div. ?**

Parentage unknown  
 (Published in *Amer. Lily Soc. Newsl.*, 1950. No further details.)

**'Yellow Diamond' VIII(b/b)**

Parentage: 'Jonita' × seedling LA 93007 T  
 R: De Jong Lelies Beheer B.V., N: De Jong Lelies Beheer B.V. (2004), REG: De Jong Lelies Holland B.V. (2004)  
 Inside vivid yellow (12A), throat light yellow/pale greenish yellow (10C/D) with some strong yellow-green (144C); outside brilliant/light yellow (10A/B), tepal-margins vivid yellow (12A); spots dark red (187A); papillae few, vivid yellow (12A); nectaries strong/light yellow-green (144C/D); pollen strong brown/dark red (172A/187A); stigma moderate purplish red/dark purplish pink (186B/C). Fls 190 mm wide; tepals 110-115 × 39-50 mm, margins smooth, tips slightly recurved. Lvs scattered, 155 × 22 mm. Stems 0.95-1.1 m, light green with darker markings, and with 3-11 fls.  
 (A *longiflorum*/Asiatic (LA) hybrid.)

**'Yelloween' VIII(a/b)**

Parentage: seedling 91-30-00-2 × seedling 90-058-1  
 R: World Breeding B.V., REG: Liliande B.V. (2003)  
 Inside yellow (12B), throat light green (145A); outside yellow (8A), midribs light green (145A); spots and papillae absent; nectaries light green (145A); pollen dark purple-red (185A); stigma light green (145A). Fls 210 mm wide, fragrant; tepals 130-140 × 40-60 mm, margins smooth or very slightly ruffled, tips recurved. Lvs 100-150 × 15-30 mm, green. Stems 1.2 m, green, with 4-9 fls. July to Aug.  
 (An Orienpet (OT) lily.)

**'Yellow Fashion' VIII(a/b)**

Parentage: (*longiflorum* 'Slocum's Ace' × 'Sterling Star') × 'Connecticut King'  
 R: J.F. McRae (1985), G: J.F. McRae (1988), N: Mt

Hood Lilies Inc. (1996), I: Mt Hood Lilies Inc. (1996), REG: Mt Hood Lilies Inc. (1996)  
Inside brilliant yellow (13B) to brilliant yellow/light greenish yellow (8A/B); outside light greenish yellow (8B) to brilliant yellow (13C), overlaid with deep pink (51C); spots absent, or few, small, magenta-black, on basal quarter of each tepal; pollen vivid orange-yellow (23A) to deep orange-yellow (163A); stigma yellow-green to white. Fls 150-200 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered, 100-150 × 20-40 mm, mid green. Stems 0.75-1.5 m, mid green, with 8-20 fls (from 14-16 cm bulbs). Late June.

Syn.: 'Carmelita'.

(A *longiflorum*/Asiatic (LA) hybrid. Registered and published in *ILR Sixteenth Supplement* in 1996 as 'Carmellita'. However, this lily had been patented in the USA in 1994 under the epithet 'Yellow Fashion', and this Patent predates the grant of Dutch PBR under the epithet 'Carmelita' in 1998. 'Carmelita' is thus a synonym.)

#### 'Yellow Fellow' VIII(a-b/b)

Parentage: yellow-flowered seedling × ('Aristo' × *longiflorum*)

R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1995), N: Bischoff Tulleken Lelies B.V. (2002), I: Bischoff Tulleken Lelies B.V. (2002), REG: Bischoff Tulleken Lelies B.V. (2002)

Inside light greenish yellow (6D), each tepal with brilliant yellow (7A) midvein and margin, throat yellowish white (155D); outside light greenish yellow (5D), each tepal with pale yellow-green (4D) base and brilliant greenish yellow margin; spots dark red (59A); papillae present; nectaries pale yellow-green (4D); pollen vivid orange (28A); stigma brilliant yellow (7A), edged with orange-yellow (21A). Fls 230 mm wide; tepals 135 × 65 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 18 mm. Stems 0.94 m, green, with 4-6 fls. June.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Yellow Flash' VII(a/b-c)

Parentage: unnamed seedling × unnamed seedling  
R: Bischoff Tulleken Lelies B.V. (1988), G: Bischoff Tulleken Lelies B.V. (1992), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2001), REG: Bischoff Tulleken Lelies B.V. (2001)

Inside yellowish white (155D), midveins light greenish yellow (8B) along up to two-thirds of each tepal; outside yellowish white (155D), midribs light yellow-green (150D) on up to two-thirds of each tepal, at top light greenish yellow (8B); spots brilliant yellow (7A); papillae negligible; pollen strong reddish orange (169A); stigma strong yellow-green (142A) speckled with moderate purplish red (58A). Fls 240 mm wide; tepals 130 × 60 mm, margins slightly ruffled, tips recurved. Lvs scattered, 180 × 40 mm. Stems 0.9-1.1 m, green, with c.8 fls. July.

#### 'Yellow Flight' VIII(a-b/b)

Parentage: unnamed seedling × (*longiflorum* × 'Sterling Star')  
R: Bischoff Tulleken Lelies B.V. (1992), G: Bischoff Tulleken Lelies B.V. (1996), N: Bischoff Tulleken Lelies B.V. (2000), I: Bischoff Tulleken Lelies B.V. (2001),

REG: Bischoff Tulleken Lelies B.V. (2001)

Inside brilliant greenish yellow (5A), tepal-edges brilliant greenish yellow (6A), midveins brilliant greenish yellow (6A), throat of inner tepals light greenish yellow (3D), throat of outer tepals almost transparent, pale yellowish pink (27D); outside pale yellow-green (4D) shading to brilliant greenish yellow (6B) towards tepal-edges, outer tepals with a variegated suffusion of moderate purplish red (184C); spots dark red (187A), few; papillae absent; pollen strong orange (26A); stigma light greenish yellow (5C). Buds hairy. Fls 210 mm wide; tepals 130 × 45-60 mm, margins smooth, tips recurved. Lvs scattered, 160 × 25-30 mm. Stems 1.1-1.3 m, green, with lots of darker markings, and with 6-8 fls. July.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Yellow Giant' I(a/b)

Parentage: *wilsonii* var. *flavum* × 'Connecticut King'  
R: Oregon Bulb Farms, Inc. (1973), G: Oregon Bulb Farms, Inc. (1975), N: Oregon Bulb Farms, Inc. (1981), I: Oregon Bulb Farms, Inc. (1981), REG: Oregon Bulb Farms, Inc. (1981)

Fls bright yellow with a deep gold flush in centre of tepals; spots magenta-brown, on basal sixth of each tepal; nectaries green; pollen brown. Fls 150-180 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered, 80-120 × 15-20 mm, glossy dark green. Stems 1.1-1.7 m, green, with 8-30 fls (including secondary buds). June to July.

Syn.: 'Joanna'.

(Registered in 1981 as 'Joanna' and included in *ILR* (1982), but was granted Dutch PBR (LEL 120) in 1985 under the epithet 'Yellow Giant' which becomes the accepted cv. epithet (ICNCP, 2004: Art. 24.4). Although USPP were granted in 1987 under the epithet 'Joanna', this is a later grant and 'Joanna' must be treated as a synonym.)

#### 'Yellow Glory' VI(b/b)

Parentage: derived from *henryi* & trumpet hybrids

R: L.B. Tuffery (c. 1966), N: L.B. Tuffery

Fls pure yellow, 200 mm wide, *auratum* var. *platyphyllum* in form.

#### 'Yellow Gold' VIII(a/-)

Parentage unknown

R: unknown (pre 1997), N: unknown, REG: ICRA (1998)

Inside yellow-gold, with a muted apricot blush. Midseason. (A *longiflorum*/Asiatic (LA) hybrid. Listed in *The Lily Nook Cat.* 1997: 19.)

#### 'Yellow Grace' I(a/b-c)

Parentage unknown

R: unknown (pre 1996), REG: ICRA (1998)

Inside glossy yellow, with conspicuous, large, very dark (almost black) brushmarks, with some associated spotting; stigma pale. Tepal-margins smooth, tips not recurved. Stems 1.2 m. June.

(Listed in *The Lily Garden Cat.*, 1996/97: 12, with colour illustration.)

**'Yellow Havemeyer' VI(-/-)**

Parentage: unknown × 'T.A. Havemeyer'  
 R: LeV. Freimann (pre 1956), N: LeV. Freimann  
 Fls lemon-yellow, with brown papillae. Stems with up to 35 fls.

**'Yellow Hornet' I(a/b)**

Parentage: seedling OJ-56 × 12-79 × seedling A-285-86  
 R: Oregon Bulb Farms, Inc. (pre 1997), REG: Cebeco Lilies, Inc. (1998)  
 Inside brilliant greenish yellow (6A), throat brilliant greenish yellow to pale yellow-green (6C/4C); outside light greenish yellow (8B) with brilliant yellow (8A) tepal-edges; each tepal with dark red (187B) spots below a dark red (187A/B) brushmark; nectaries brilliant greenish yellow to yellow-green; pollen greyish red (176A); stigma flesh coloured. Buds large, yellow. Fls 190 mm wide; tepals 110 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 93 × 13 mm, mid green. Stems c.1 m, yellow-green. Midseason.

**'Yellow Jewel' I(a/-)**

Parentage unknown  
 R: T.T. Kirscht, N: Sun Valley Bulb Farms, Inc. (1974), I: Sun Valley Bulb Farms, Inc. (1974)  
 Fls butter-yellow; spots absent. Lvs wide. Stems 0.6-1 m. June.  
 (Published in E. Fisher, *Named Lily Hybrids and their Origins*, 10 (1978). Raised from Stone & Payne seed.)

**'Yellow Joy' I(a-b/b)**

Parentage: 'Golden Jubilee' × 'Connecticut King'  
 R: F. Fellner (1975), G: F. Fellner (1978), N: F. Fellner (1987), I: Riverside Gardens (1987), REG: F. Fellner (1987)  
 Fls yellow, throat green; spots maroon-black on basal half of each tepal; nectaries green; pollen brown. Fls 130 mm wide; tepal-margins smooth, tips slightly recurved. Lvs scattered. Stems 1-1.1 m, with 8-11 fls. July.

**'Yellowlita' I(a/b-d)**

Parentage: 'Aelita' × Yellow Blaze Group  
 R: G. Steinbrück (1991), G: G. Steinbrück (1994), N: G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G. Steinbrück (2002)  
 Inside vivid yellow (9A), shading to yellowish white (158D) at tepal-tips; outside yellowish white (158D), midribs pale green; spots deep purplish red (61A), many, large, elliptic, on three-quarters of each tepal; nectaries pale yellow-green (157C), hoary; pollen moderate red (181A), anthers on long, slender, very pale greenish yellow filaments; stigma greyish brown (166A) on a long, dark greenish yellow style. Fls 130 mm wide; tepals 70 × 37 mm, margins smooth, tips strongly recurved. Lvs scattered, 75 × 18 mm. Stems 1 m, dark green, with c.9 fls. Mid July.  
 (The epithet is derived from parts of the names of both parents. Nomenclatural standard: colour print provided by registrant (WSY 0032273).)

**'Yellow Magic' I(a/-)**

Parentage: 'August Gold' × yellow-flowered seedling  
 R: W. Craig (1980), G: Hartle-Gilman Gardens (1982), N: Hartle-Gilman Gardens (1989), I: Hartle-Gilman Gardens (1989), REG: Hartle-Gilman Gardens (1990)  
 Inside vivid yellow (12A), throat vivid yellow (13A); outside reddish brown and yellow; spots absent; nectaries green; pollen yellow-orange. Tepals 72 × 32 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 18 mm, dark green. Stems 1.2 m, dark brown/green, with 20-24 fls. Late.

**'Yellow Maid' IV(c/a-b)**

See *L. × burbankii* 'Yellow Maid'.

**'Yellow Ochre' VI(-/a)**

Parentage: selection from Golden Clarion Group  
 S: Commissioners for Crown Lands (c. 1956), N: Commissioners for Crown Lands  
 Fls Empire-yellow (HCC 603/2).  
 (Published in *LYB* 20: 141 (1957).)

**'Yellowood' II(-/-)**

Parentage: (*L. × dalhansonii* 'Brocade' × unknown) × unknown  
 R: E. Robinson (1975), G: E. Robinson (1980), N: E. Robinson (1981), I: E. Robinson (1985), REG: ICRA (1997)  
 Inside rich yellow; outside paler; spots absent; pollen yellow. Tepal-margins smooth, tips slightly recurved. Lvs whorled, dark green. Stems 1.2 m, dark green, with c.20 fls. Early July.

**'Yellow Parade' I(b/-)**

Parentage: *lancifolium* × Mid-century Group  
 R: De Jong Lelies Beheer B.V., I: H. van der Ster (1964), REG: (1969)  
 Fls brilliant yellow (13B); spots red-brown.  
 (Published in *LYB* 33: 257 (1970).)

**'Yellow Present' Div. ?**

Given as a parent of 'Variant'. No further details.

**'Yellow Princess' I(a/c-d)**

Parentage: ('Connecticut King' × 'Chinook') × (*wilsonii* × yellow-flowered seedling)  
 R: Mak Lelieveredeling B.V. (1986), G: Mak Lelieveredeling B.V. (1988), N: Mak-Leek Inc. (1990), REG: Mak-Leek Inc. (1997)  
 Inside vivid yellow (14B), throat brilliant yellow (13C); outside strong yellowish pink (34D), midribs vivid/brilliant yellow (13A/B); some small, dark red (187A) spots on inner tepals only; each tepal with a red-brown brushmark; nectaries soft green; pollen deep orange-yellow (163A); stigma dark purple (79A). Fls 190 mm wide; tepals 90 × 30-40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 150 × 20 mm, mid green. Stems 0.9-1.15 m, green with some darker markings, and with 6-14 fls. Late June.

**'Yellow Purity'** I(a/b)  
See *L. × maculatum* 'Yellow Purity'.

**'Yellow Regale'** VI(-/a)  
Parentage: possibly a sport from *regale*  
Fls yellow.  
(Published in *LYB* 21: 61 (1958).)

**'Yellow Ribbons'** VII(b/c)  
Parentage unknown  
R: L. Woodriff (1958), G: H.J. Strahm, N: R.L. Strahm, I: H.J. & R.L. Strahm, REG: Strahm's Lilies, Inc. (1983)  
Fls white, each tepal with a yellow-orange ray, throat green; spots golden; nectaries gold; pollen orange-brown. Fls 225-250 mm wide; tepals 115 × 45 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 30 mm, mid green. Stems 1.2 m or more, dark green, with 6-10 fls. Late Aug.  
(Included as unclassified in *ILR* (1982).)

**'Yellow River'** VIII(b/b)  
Parentage: yellow-flowered Asiatic seedling × (*longiflorum* × 'Aristo')  
R: Bischoff Tulleken Lelies B.V. (1990), G: Bischoff Tulleken Lelies B.V. (1993), N: Bischoff Tulleken Lelies B.V. (1998), I: Bischoff Tulleken Lelies B.V. (1999), REG: Bischoff Tulleken Lelies B.V. (2000)  
Inside brilliant greenish yellow (6B), throat pale greenish yellow (1D), tepal-edges brilliant greenish yellow (5A) on a pale greenish yellow (1D) ground, above the nectaries a little brilliant yellow-green (149A); outside pale greenish yellow (1D) changing to brilliant greenish yellow (5A) towards tepal-edges, outer tepals suffused with strong pink (48D) to right of midribs; spots dark red (187A), few; papillae absent; nectaries light yellow-green (150D); pollen dark reddish orange (175C); stigma strong orange-yellow (24B). Fls 190 mm wide; tepals 115 × 40 mm, margins smooth, tips recurved. Lvs scattered, 210 × 20 mm. Stems 1.1 m, green with darker markings at base, and with c.5 fls. July.  
(A *longiflorum*/Asiatic (LA) hybrid.)

**Yellow Shelburne Trumpets Group** VI(-/a)  
Parentage: derived from *L. × imperiale* Shelburne Group (incl. *L. × imperiale* Pink Trumpet Group) × *regale* 'E.C. Butterfield'  
R: F.M. Abbey, N: F.M. Abbey, I: F.M. Abbey, REG: F.M. Abbey (1985)  
Fls in various yellows, from soft cream, through clear yellow to some with a much darker colour outside. Fls *regale*-like trumpets.  
(Published in *Gardenside Gossip* 24: 4 (1959). Included in *ILR Fourth Supplement* as Yellow Shelburne Trumpets grex.)

**'Yellow Splendor'** VI(-/a)  
Parentage: *regale* 'Royal Gold' × Golden Splendor Group  
R: B. Mičulka (pre 1983), N: B. Mičulka, REG: B. Mičulka (1984)  
Inside deep yellow; outside with deep mahogany midribs; nectaries green; pollen brown; stigma dark purple. Fls

120 mm wide; tepals 120 × 47 mm, margins slightly curled, strongly recurved; pedicels strongly violet-dotted. Lvs 100 × 8 mm, dull green. Stems dotted with violet. Mid July.

**'Yellow Spotless'** IX(c/d)  
See *amabile* 'Yellow Spotless'.

**'Yellow Star'** I(b/b-c)  
Parentage: *lancifolium* × Mid-century Group  
R: De Jong Lelies Beheer B.V., I: H. van der Ster (1964), REG: (1969)  
Fls vivid yellow (12A); spots brown, small, on basal quarter of each tepal; filaments yellow; anthers bright brown. Tepal-tips recurved. Stems to 1.3 m. Aug.  
Syn.: 'Yellow Tiger'.  
(Published in *LYB* 33: 257 (1970).)

**'Yellowstone'** I(a/-)  
Parentage: 'Croesus' × 'Uncle Sam'  
I: Oregon Bulb Farms, Inc. (1975), REG: Oregon Bulb Farms, Inc. (1975)  
Fls bright yellow, copiously spotted. Stems 1-1.2 m. June to July.  
Syn.: 'Patriot'.  
(Published in *Lilies and other Liliaceae*, 1975: 94 as 'Patriot'. Published in E. Fisher, *Named Lily Hybrids and their Origins*, 11 (1978) as 'Yellowstone'.)

**'Yellow Submarine'** I(a/-)  
Parentage unknown  
R: Hoffgaarde B.V., G: Hoffgaarde B.V., N: Hoffgaarde B.V., I: Hoffgaarde B.V., REG: Hoffgaarde B.V. (1990)  
Inside vivid yellow (14B), throat light yellow-green (145B), tepals flamed vivid yellow (15A); outside brilliant yellow (12B), tepals edged vivid yellow (12A); spots dark red (187A), few, small, on inner tepals in the throat; pollen brownish orange (171B). Fls 165 mm wide; tepals 80 × 50 mm, margins smooth, tips not recurved. Lvs scattered, 65 × 13 mm, mid green. Stems 0.55 m, green with slight darker markings, and with c.6 fls. July.

**'Yellow Sun'** I(a/b)  
Parentage unknown  
R: Jan De Vries, REG: De Vries Veredeling B.V. (2003)  
Inside between vivid orange-yellow (23A) and strong orange (24a); outside vivid yellow (17B/C); spots present; papillae very few; nectaries green; pollen light brown; stigma orange-yellow. Tepal-margins slightly ruffled, tips very slightly recurved. Stems medium to tall. Early to midseason.  
(The grant of USPP in 2002 fixes the epithet of this cv. despite another 'Yellow Sun' being registered in 2001. This latter 'Yellow Sun' is now named 'Yellow Bride' (see note under 'Yellow Bride').)

**'Yellow Sun'** VIII(a/b)  
Syn. of 'Yellow Bride'.

**Yellow Sunburst Group** VI(-/a)  
Parentage unknown

(‘Sunbeam’ and ‘Sunbright’ are both selections (by J. de Graaff, pre 1958) from this Group. No further details. Published in *ILR* (1982) as Yellow Sunburst grex.)

**‘Yellow Sunrise’ VI(-/b)**

Parentage unknown

R: E.C. Genat, I: Rowse Bros Pty Ltd (c. 1979)

Fls vivid yellow, 100-125 mm wide. Stems 1-1.2 m.

**‘Yellow Surf’ VI(b/a)**

Parentage: ‘Anna Maria’ × ‘Afričanka’

R: A. Mego (1994), N: A. Mego (2005), I: A. Mego (2005), REG: A. Mego (2005)

Inside lemon-yellow; outside with green and brown midribs; spots absent; nectaries green; pollen golden yellow; stigma dark green. Fls 140 mm wide, strongly scented; tepals 160 × 50 mm, strongly recurved, margins smooth; pedicels 100 mm long, brown-dotted, with tertiary buds. Lvs scattered, 150 × 10 mm, dull mid green. Stems 1.5 m, thick, dark green. Late June.

**‘Yellow Tango’ I(a/b)**

Parentage: ‘Saule’ × Tango Group

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode (1999), REG: A. Balode (1999)

Inside vivid yellow (12A), throat green; outside dark yellow; spots dark red (59A), over whole area of tepals; nectaries brown; pollen dark yellow. Fls 210 mm wide; tepals 100 × 45 mm, waxy, margins smooth, tips not recurved. Lvs scattered, 170 × 25 mm, dark green. Stems 1.15 m, brown-green, with c.7 fls. Early July.

**‘Yellow Tiger’ IX(c/d)**

See *lancifolium* var. *flaviflorum* ‘Yellow Tiger’.

**‘Yellow Tiger’ I(b/-)**

Syn. of ‘Yellow Star’.

**Yellow Tiger Group I(a-b/-)**

Parentage unknown

R: N.A. Lamb (pre 1963), G: N.A. Lamb, I: F.M. Abbey  
Fls in varying shades of yellow and orange. July.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name used for a cv. Published in *Gardenside Gossip* 28: 8 (1963).)

**‘Yellow Trumpet’ Div. ?**

Parentage unknown

R: B.S. Doak, N: B.S. Doak

Fls yellow.

**Yellow Trumpet Group VI(-/-)**

Parentage: selection from Aurelian Group

S: C. Yerex, N: C. Yerex, I: C. Yerex

No further details.

**‘Yellow Tulip’ I(a/-)**

See *L. × maculatum* ‘Yellow Tulip’.

**‘Yerioga’ I(b-c/-)**

Parentage: (*lancifolium* var. *flaviflorum* × ‘Nutmegger’) ×

**‘Connecticut Lemonglow’**

R: I. Wiesner, N: I. Wiesner, REG: I. Wiesner (1987)

Fls deep yellow-gold, midveins brownish yellow; spots brown, numerous, large, on half of each tepal; pollen cinnamon. Fls 110 mm wide; tepals 83 × 36 mm, moderately recurved. Lvs 110 × 14 mm, dark green, glossy. Stems 0.8-0.9 m, dark red-brown. Late July.

**‘Yesterday’ I(a-b/b)**

Parentage: ‘Polednice’ × ‘Impact’

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1997), I: G. Steinbrück (1998), REG: G. Steinbrück (1998)

Inside strong orange (170A), tepal-tips brilliant yellow (13C); outside strong orange (170A); spots dark red (183A), few, small to medium sized, on basal third of each tepal (sometimes with just 1 or 2 further out); nectaries pale yellow-green (157C); pollen blackish brown; stigma pale red. Fls 130 mm wide; tepals 60 × 35 mm, noticeably broad and blunt, margins smooth, tips not recurved. Lvs scattered, 80 × 12 mm, dark green. Stems 0.9 m, almost black, with up to 13 fls. Late June to early July.

**‘Yeti’ I(a/b)**

Parentage: ‘Juno’ × ‘Odysseus’

R: J. Bodalski (1981), G: J. Bodalski (1983), N: J. Bodalski (1985), I: J. Bodalski (1987), REG: J. Bodalski (1987)

Inside yellow, throat light yellow (11B), tepal-tips pale yellow (11C); outside strong greenish yellow (151A); spots brown, large, on basal two-thirds of each tepal; pollen dark reddish orange (175C). Buds hairy. Tepals 70 × 30-40 mm, margins ruffled, tips not recurved. Lvs scattered, 85 × 15 mm, dark green. Stems 0.6 m, hairy, dark green, with c.12 fls. Mid June.

(There is a tendency for the fl. to double the tepals and stamens.)

**‘Yokohama’ I(a/b)**

Parentage unknown

R: Fa Jaap Boon, G: Fa Jaap Boon, N: Fa Jaap Boon, I: Fa Jaap Boon, REG: Fa Jaap Boon (2000)

Inside vivid yellow (9A), throat brilliant/light yellow-green (154C/D); outside brilliant yellow (9C), tepals edged vivid yellow (9B), midribs strong yellow-green (143A) at base, shading strongly into tepal; spots and papillae absent; nectaries brilliant/light yellow-green (154C/D); pollen vivid orange-yellow (23A); stigma moderate reddish orange (171A). Fls 170 mm wide; tepals 95-100 × 25-40 mm, margins smooth, tips not or scarcely recurved. Lvs scattered, 170 × 15 mm. Stems 1.05 m, green, with c.8 fls.

**‘Yokohama Pride’ IX(b-c/d)**

See *speciosum* ‘Yokohama Pride’.

**‘Yolanda’ I(a/-)**

Parentage unknown

R: Oregon Bulb Farms, Inc. (pre 1985), N: Oregon Bulb Farms, Inc.

Fls bright yellow; spots few, dark, on basal quarter of each tepal. Stems 1-1.2 m.

(Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Iolanta'.)

**'Yolanta'** I(b/-)

Unaccepted spelling of 'Iolanta'.

**'Yoma'** I(a/-)

Parentage: (*lancifolium* var. *flaviflorum* × *wilsonii*) × 'Redstart'

R: D.B. Fox (pre 1969), N: D.B. Fox, REG: D.B. Fox (1969)

Fls strong yellowish pink (32C), throat vivid reddish orange (32A); spots present. Lvs pale to mid green. Stems 1.2 m, dark. July.

(Published in *LYB* 33: 257 (1970).)

**'York'** VII(a/b)

Parentage: unnamed seedling × unnamed seedling

R: Mak-Leek Inc. (1990), G: Testcentrum voor Siergewassen B.V. (1994), N: Hopman Lelie B.V., I: Hopman Lelie B.V., REG: Hopman Lelie B.V. (2001)

Inside strong purplish pink (63C), tepals edged yellowish white (155D), midveins strong red (53C) shading into the tepal; outside strong purplish pink (63C) on a white ground, tepals edged yellowish white (155D), midribs pale yellow-green (155A) with a little strong yellow-green (144C) at base and top; nectaries strong yellow-green (144C), surrounded by light yellow (10B) with a strong red (53C) flush; spots dark red (187B), on up to a third of each tepal; papillae a few near the nectaries; pollen strong brown (172A); stigma moderate yellow-green (139C). Fls 210 mm wide; tepals 110-115 × 35-55 mm, margins ruffled, tips recurved. Lvs scattered, 150 × 30 mm. Stems 1.1 m, pale green with darker markings, and with c.8 fls.

**Yosemite Group** VI(b/a)

See *L. × centigale* Yosemite Group.

**'Young'** I(c/-)

Parentage: selection from Sappotāja Group

**'Younger's Big Red'** I(a/-)

Parentage unknown

R: H.E. Hoepner (pre 1985), G: S.R. Kaul, N: R. Mitchell, I: S.R. Kaul (1992), REG: S.R. Kaul (1993)  
Tepals red, with a lighter orange-red stripe running into nectaries; pollen orange. Fls 150 mm wide. Lvs broad, mid green. Stems 1.5 m, with 10-15 fls (including secondaries). June to July.

**'Younost'** VI(-/a)

Unaccepted spelling of 'Iunost'.

**'Youryi Gagarin'** VI(-/c)

Unaccepted spelling of 'Yuri Gagarin'.

**'Youth'** IX(b/c)

See *auratum* 'Youth'.

**'Youzhanka'** I(b/-)

Unaccepted spelling of 'Iuzhanka'.

**'Yuba'** IX(c/d)

See *pardalinum* 'Yuba'.

**'Yubae'** I(a/-)

Parentage: 'Enchantment' × a variety of *L. × maculatum*

R: S. Fujishima (c. 1962), N: S. Fujishima

Fls red.

**'Yukatan'** I(a/c)

Parentage unknown

R: A. Weinreich, N: A. Weinreich, REG: ICRA (1996)

Fls brass-coloured, tepal-tips deeper; spots dark brown, on basal half of each tepal. Mid July.

(Published in German Lily Group sales list, 1989.)

**'Yuki-no-hikari'** VIII(b-c/c)

Parentage: Formolongi Group × *auratum*

R: H. Takizawa (c. 1976), N: H. Takizawa

Fls pale yellowish white, banded with pink, becoming pure white with age; pollen reddish brown. Fls 150-170 mm wide, like *auratum* but smaller, tepal-tips recurved; pedicels ascending. Stems with 7-8 fls.

**'Yukon'** VI(-/a)

Parentage: *L. × aurelianense* × (*L. × imperiale* 'George C. Creelman' × 'Crow's Hybrid')

R: G.W. Darby (c. 1954), N: G.W. Darby

Fls white with an orange central zone.

**'Yukon Cornelius'** I(a/-)

Parentage unknown

R: H.E. Hoepner & S.R. Kaul (1985), G: S.R. Kaul (1988), N: S.R. Kaul (1989), REG: S.R. & R. Kaul (1991)

Inside clear, very light yellow on opening, fading to a blend of pale yellow and white with greenish tones (the stronger yellowish area on the widest part of each tepal), throat mid green; outside yellowish green to white; spots absent; nectaries very pale yellow to mid green; pollen rusty orange. Tepals 105 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 22 mm, mid green. Stems 1.2 m, with 12-20 fls. Mid to late season.

**'Yum Yum'** I(a/-)

Parentage: unnamed seedling × unnamed seedling

R: J.A. Mattas (pre 1975), N: J.A. Mattas (1976), REG: J.A. Mattas (1977)

Fls strong pink (48D) throughout; circle of spots at base of throat; pollen brown. Lvs dark green. Stems 0.8 m.

(Published in *Lilies and other Liliaceae*, 1977: 82.)

**'Yum Yum'** I(a/b)

Parentage: unnamed seedling × unnamed seedling

R: Cebeo Lilies, Inc. (pre 1998), N: Cebeo Lilies, Inc.

Inside raspberry-pink at tepal-tips, contrasting with bright white, spotted centre. Tepals slightly recurved.

(Unacceptable name: ICNCP, 2004: Art. 27.1 - name already used for another lily.)

**'Yunaska' VII(-/a)**

Parentage unknown

R: Vletter &amp; Den Haan Beheer B.V., G: Vletter &amp; Den Haan Beheer B.V., N: Vletter &amp; Den Haan Beheer B.V., I: Vletter &amp; Den Haan Beheer B.V., REG: Vletter &amp; Den Haan Beheer B.V. (2001)

Inside moderate purplish pink (62B), a little paler at tepal-bases, midveins yellow changing to orange-pink; outside pale purplish pink (62D); spots and papillae present; nectaries green; pollen reddish brown; stigma dark purple. Tepal-tips strongly reflexed. Stems 1.3 m, green. Early to midseason.

***yunnanense* Franch. IX(c/b)**Syn. of *bakerianum* var. *yunnanense*.**var. *yunnanense* IX(c/b)**See *bakerianum* var. *yunnanense*.**'Yuras Zwaigzne' I(a/-)**

Unaccepted spelling of 'Jūras Zwaigzne'.

**Yuras Zwaigzne Group I(a/b)**

Unaccepted spelling of Jūras Zwaigzne Group.

**'Yuri Gagarin' VI(-/c)**

Parentage: selection from Cosmic Group

S: N.A. Miroschniczenko (c. 1979), N: N.A.

Miroschniczenko

Fls ivory-white, shaded pale orange, with a reddish orange nectary-star in centre. Stems 1.6 m. July.

(Unaccepted spelling: 'Iurii Gagarin'. Included in *ILR Third Supplement* as 'Yourii Gagarin', which is also an unaccepted spelling. Named after the Soviet cosmonaut.

When transliterated according to the method specified in ICNCP, the name would be 'Iurii Gagarin', which is rather different from the accepted spelling used in most non-Russian countries. The ICRA has therefore decided to adopt the more recognizable 'Yuri Gagarin'.)

**'Yuzuki' I(a/-)**Parentage: 'Enchantment' × *L. × maculatum* 'Orange Queen'Fls pale orange. Generally similar to *L. × maculatum* 'Orange Queen'.(Published in *LYB* 30: 59 (1967). Raised in Hokkaido, Japan before 1966.)**'Yvonne' I(c/-)**Parentage: *lanceifolium* var. *flaviflorum* × unknown

R: D.B. Fox (c. 1967), N: D.B. Fox

Fls near strong orange (28B); spotted in throat up to less than half of each tepal. Tepals recurved. Stems green, dark-stained.

(Published in *ILR* (1969).)**'Zabava' I(b/-)**

Parentage unknown

R: M.F. Kireeva (c. 1976), N: M.F. Kireeva

Fls dark red, with black spots. Stems 1 m, with bulbils. July.

**'Zagadka' I(c/-)**

Parentage: 'Nochka' × 'Nutmegger'

R: B.P. Guzhavin, N: B.P. Guzhavin (1981)

Fls sulphur-yellow with reddish stripes, spotted. Stems up to 1.5 m, with bulbils.

**'Zagora' VII(a-b/b)**

Parentage unknown

REG: World Breeding B.V. (2003)

Inside and outside pale greenish yellow (10D), each tepal with a deep red (53A) flame along midvein; spots few; papillae present; nectaries green; pollen red-brown; stigma dark purple. Fls 240 mm wide; tepal-margins very slightly ruffled, tips recurved. Lvs narrow. Stems 1.5 m, green, with c.4 fls. Late.

**'Zalivska Piemīņa' VI(-/a)**Parentage: a hybrid of five generations pollinated with a mixture of pollen from *leucanthum* var. *centifolium*, *L. × sulphurgale* & 'Gloriosum'

R: V.P. Orehovs (c. 1952), N: V.P. Orehovs

Fls white; pollen deep yellow; style and stigma brown. Fls 130 mm wide, wide open. Stems 0.8-1 m. July.

Syn.: 'Memory of Zalivsky'; 'Pamiati Zalivskogo'.

(Published in *LYB* 28: 134 (1965) and included in *ILR* (1969) as 'Memory of Zalivsky' (which is a translation of the Latvian epithet and not permitted under ICNCP, 2004: Art. 29.1). The synonym 'Pamiati Zalivskogo' is a transliteration from Russian (as published in M.V. Baranova, *Lilii*, 357 (1990)) into the Roman alphabet.)**'Zalivskii' V(-/l-)**Parentage: *formosanum* var. *pricei* × *longiflorum*

R: I.L. Zalivski (1939), N: I.L. Zalivski

Fls white, scented. Stems to 0.7 m.

(Published in *LYB* 33: 75 (1970) as 'Zalivskii'.)**'Zambak' IX(b-c/a)**See *candidum* 'Sultan Zambak'.**'Zanarma' VII(a/b)**

Parentage: seedling 8910 × seedling 1310

R: Trior Lelie B.V. (1990), G: Trior Lelie B.V. (1993), N:

Trior Lelie B.V. (1993), I: Trior Lelie B.V., REG: Trior Lelie B.V. (1996)

Inside light reddish purple (74C) on a yellowish white (155B) ground, midveins (from above nectaries) darker-coloured, throat yellowish white (155B); outside yellowish white (155B), suffused with moderate purplish pink (74D), each tepal narrowly edged 74D, midribs yellowish white (155B) below, becoming strong yellow-green (144C) above and strong yellow-green (143A) at top; spots moderate purplish red (64A) on basal part of each tepal; papillae vivid yellow (12A) in the throat; nectaries strong yellow-green (144C); pollen moderate reddish brown (175A); stigma greyish yellow-green (194A). Fls 240 mm wide; tepals 120 × 45-70 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green, 140 × 45 mm. Stems 0.9 m, green with a few darker markings, with c.7 fls.

Syn.: 'Arma'.

(Registered (see *ILR Sixteenth Supplement* as 'Arma'). However, in 1999 European PBR were granted to this cv. under the epithet 'Zanarma', and so the epithet must be changed to 'Zanarma' (ICNCP, 2004: Art. 24.4).)

#### 'Zanda' I(a/b)

Parentage: 'Andrea' × 'Willow Wood'

R: G. Steinbrück (1990), G: D.-V. Škimele (1993), N: D.-V. Škimele (1995), REG: D.-V. Škimele (2004)

Inside clear yellow; outside bright yellow; each tepal with a few tiny, dark red spots near nectaries and a dark red pencil brushmark; nectaries yellow; pollen brown; stigma light brown. Fls 150 mm wide; tepals 80 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 50 × 15 mm. Stems 0.9 m, greenish brown, with c.8 fls. Mid July.

(Published in *Lilium Balticum Register*, 1998. Zanda is a Latvian female name.)

#### 'Zanlabia' VIII(a-b/b)

Parentage: unnamed seedling × unnamed seedling

R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)

Inside strong purplish pink (63C), throat light yellow-green (150D); outside deep purplish pink (64D); spots and papillae absent; nectaries strong purplish pink (63C); pollen moderate reddish brown (175A); stigma light orange-yellow (23C). Fls 140 mm wide; tepals 105 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 165 × 22 mm. Stems 1.06 m, green with darker markings at base, with c.6 fls.

Trade designation: CAMBIA.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Zanlabizet' VIII(a/b)

Parentage: unnamed seedling × unnamed seedling

R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)

Inside light purplish pink (63D) with pale purplish pink (62D) along midveins (young fls deep pink to strong red (51C/51A)), throat pale purplish pink (62D); outside moderate purplish pink (62B), each tepal with strong purplish pink (62A) margins; spots and papillae absent; nectaries strong yellow-green (142A); pollen moderate reddish orange (173B); stigma very pale purple (69B). Fls 210 mm wide; tepals 115 × 75 mm, margins slightly ruffled, tips recurved. Lvs scattered, 155 × 23 mm. Stems 1.32 m, green with darker markings, with 4-6 fls. Midseason.

Trade designation: BIZET.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Zanlacato' VIII(a/b)

Parentage: unnamed seedling × unnamed seedling

R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002),

REG: Van Zanten Flowerbulbs B.V. (2002)

Inside pale yellow-green (4D) at base, shading upwards to strong purplish pink (62A), throat light purplish pink (62C); outside strong purplish pink (63C); spots absent; papillae present; nectaries strong violet (90B); pollen almost absent; stigma light yellow-green (154D). Fls 150 mm wide; tepals 105 × 60 mm, margins smooth, tips slightly recurved. Lvs scattered, 175 × 21 mm, light green. Stems 1.3 m, light green, with c.7 fls. Midseason.

Trade designation: SPICCATO.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Zanlacoup' VIII(a/b)

Parentage unknown

R: Van Zanten Flowerbulbs B.V. (1997), G: Van Zanten Flowerbulbs B.V. (1999), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2003)

Inside deep purplish pink (64D) above throat, each tepal very pale purple (69D) in basal half, moderate purplish pink (70D) in apical half, throat yellowish white (155D); outside of outer tepals light purple (75B) with light reddish purple (74C) margins and strong yellow-green (143C) tips, inner tepals yellowish white (155D) with light purple (75B) flame at top; spots dark red (59A), few; papillae absent; nectaries strong yellow-green (143C); pollen deep orange-yellow (163A); stigma pale orange-yellow (159B). Fls 155 mm wide; tepals 110 × 55 mm, margins very slightly ruffled, tips slightly recurved. Lvs 110 × 23 mm, green. Stems 1.1 m, green with darker markings, with 5-7 fls.

Trade designation: COUPLET.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Zanlahalley' VIII(a/b)

Parentage unknown

R: Van Zanten Flowerbulbs B.V., N: Van Zanten Flowerbulbs B.V. (2001), REG: Van Zanten Flowerbulbs B.V. (2004)

Inside light orange-yellow (22C), tepal-margins and tips strong orange (24A), throat light yellow-green (145D); outside light orange-yellow (24C), tepal margins strong orange-yellow (24B), light yellow-green (144D) along midribs; spots dark red (59A); papillae absent; nectaries strong yellow-green (144B); pollen greyish red (178A); stigma brilliant orange (29A). Fls 172 mm wide; tepals 115 × 40-54 mm, margins smooth, tips recurved. Lvs scattered, 120 × 22 mm. Stems 0.8-1.3 m, green, with c.3 fls.

Trade designation: HALLEY.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Zanlaitro' VIII(a-b/b)

Parentage: unnamed seedling × unnamed seedling

R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)

Inside pale yellow (18C) shading into deep pink (48B), each tepal with deep pink (50B) margin, throat deep pink (50B); outside deep pink (48A); spots and papillae

absent; nectaries moderate red (180A); pollen vivid orange (28A); stigma strong yellowish pink (37A). Fls 150 mm wide; tepals 110 × 60 mm, margins smooth, tips strongly recurved. Lvs scattered, 205 × 20 mm. Stems 1.29 m, light green, with c.6 fls.

Trade designation: INTRO.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Zanlalce' VIII(a/b)

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)

Inside yellowish white (155B) at base, each tepal with margins and tips moderate purplish pink (62B), throat light yellow-green (145C); outside light purplish pink (65B), each tepal with deep purplish pink (66C) margins; spots and papillae present; nectaries pale yellow-green (157B); pollen greyish brown (166A); stigma light green. Fls 185 mm wide; tepals 115 × 45 mm, margins smooth or very slightly ruffled, tips slightly recurved. Lvs scattered, 115 × 25 mm. Stems 1.23 mm, green with dark spots, with 3-5 fls. Midseason.

Trade designation: DOLCE.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Zanlanza' VIII(a/b)

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)

Inside yellowish white (155D); outside light yellow-green (142D) at base, flushed with greyish red (182B), shading to yellowish white (155B) above and yellowish white (155D) towards tepal-margins, midribs sometimes flushed with greyish red (182B); spots absent; papillae present; nectaries brilliant yellow-green (149B); pollen moderate reddish brown (174A); stigma moderate purplish red (64A). Fls 200 mm wide; tepals 135 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 26 mm. Stems 1.6 m, green with darker markings, with c.4 fls. Midseason.

Trade designation: STANZA.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Zanlapromes' VIII(a/b)

Parentage unknown

R: Van Zanten Flowerbulbs B.V., N: Van Zanten Flowerbulbs B.V. (2003), REG: Van Zanten Flowerbulbs B.V. (2004)

Inside pale yellow-green (4D), with strong yellow-green (144C) flush/stripes along basal half of each midvein, throat strong yellow-green (144C), with greenish white (155C) on edges; outside with outer tepals pale yellow-green/pale yellow (4D/8D), midribs with a strong yellow-green (144C) stripe, strong yellow-green (144B) at top, at base with little moderate red (181B) stripes, inner tepals pale yellow-green (4D), with moderate red (181B) stripe at base; spots and papillae absent; nectaries greenish white

(155C); pollen moderate brown (165A); stigma moderate purplish red (185C) on a light yellow-green (144D) ground. Fls 165 mm wide; tepals 130-133 × 46-59 mm, margins smooth to slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 22 mm. Stems 0.9-1.5 m, green with darker markings, and with 4-6 fls.

Trade designation: PROMESA.

(A *longiflorum*/Asiatic (LA) hybrid. The fls age to pale yellow-green (155A).)

#### 'Zanlarelli' VIII(a/b)

Parentage unknown

R: Van Zanten Flowerbulbs B.V., G: Van Zanten Flowerbulbs B.V. (1998), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2003)

Inside vivid purplish red (57D), vivid purplish red (57C) towards margins of each tepal, throat pale greenish yellow (2D); outside pale purplish pink (65C/B), midribs flushed with greyish yellow-green (148D), light yellow-green (144C) at top; spots few, dark red (59A); papillae absent; nectaries strong yellow-green (143C); pollen moderate reddish brown (166B); stigma light yellowish pink (36D). Fls 180 mm wide; tepals 115 × 60 mm, margins smooth or very slightly ruffled, tips recurved. Lvs 85 × 23, green. Stems 1.1 m, green with darker markings, with c.3-5 fls.

Trade designation: CORELLI.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Zanlasic' VIII(a/b-c)

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)

Inside pale yellow-green (155A), throat brilliant yellow-green (142B); outside pale yellow-green (155A), midribs light yellow-green (150D); spots and papillae absent; nectaries light yellow-green (142D); pollen moderate brown (165A); stigma brilliant yellow-green (150C). Fls 190 mm wide; tepals 105 × 53 mm, margins smooth, tips slightly recurved. Lvs scattered, 120 × 20 mm. Stems 1.1 m, green, with c.6 fls.

Trade designation: MUSIC.

(A *longiflorum*/Asiatic (LA) hybrid.)

#### 'Zanlspacer' VIII(a/a)

Parentage unknown

R: Van Zanten Flowerbulbs B.V., N: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2004)

Inside moderate pink (51D), tepal-margins with a strong reddish orange (31B) flush (that becomes more prominent with age) and dark red (59A) edge, along midveins deep pink (51B), throat strong purplish red (59D); outside with outer tepals deep purplish pink (70C), flushed with moderate yellowish pink (39C) towards margins, margins strong red (47B), midribs moderate yellow-green (139D) at base and top, inner tepals moderate purplish pink (70D), strong pink

(50C) towards margins, deep purplish pink (70C) along midribs, midribs moderate yellow-green (139D) at base; spots many, dark red (59A); papillae absent; nectaries strong yellow-green (144B); pollen vivid reddish orange (32A); stigma strong reddish orange (31B). Fls 140 mm wide; tepals 130 × 41-51 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 20 mm. Stems 1.15-1.2 m, green with darker markings, and with c.5 fls. Trade designation: SPACER.  
(*A. longiflorum*/Asiatic (LA) hybrid.)

**'Zanlatet' VIII(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)  
Inside pale yellow-green (155A), throat strong yellow-green (145A); outside pale yellow-green (155A); spots and papillae present; nectaries greenish white (155C); pollen dark reddish orange (173A); stigma light yellow-green (145C). Fls 200 mm wide; tepals 125 × 53 mm, margins smooth, tips recurved. Lvs scattered, 158 × 23 mm. Stems 1.27 m, green with dark markings, with c.5 fls. Midseason.  
Trade designation: MOTET.  
(*A. longiflorum*/Asiatic (LA) hybrid.)

**'Zanlatto' VIII(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)  
Inside pale orange-yellow (16D), each tepal with light orange-yellow (16B) margin, throat light yellow-green (145D), outside pale yellow (158A), each tepal with light yellow (18A) margin; spots and papillae absent; nectaries yellowish grey (156A); pollen dark reddish orange (173A); stigma light orange (29B). Fls 200 mm wide; tepals 120 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 150 × 20 mm. Stems 1.3 m, dark, with c.6 fls. Midseason.  
Trade designation: STRETTO.  
(*A. longiflorum*/Asiatic (LA) hybrid.)

**'Zanlauss' VIII(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)  
Inside strong purplish pink (63C) at first, ageing to moderate purplish pink (62B), throat yellowish white (155B); outside light purplish pink (63D), each tepal with strong purplish red (63B) margin; spots and papillae present; nectaries pale purplish pink (62D); pollen deep orange-yellow (163A); stigma pale yellow-green (4D) and brilliant greenish yellow (6B). Fls 180 mm wide; tepals 125 × 45 mm, margins smooth, tips slightly recurved. Lvs scattered, 140 × 38 mm. Stems 1.2 m, green with darker

markings at base, with 3-5 fls. Midseason.  
Trade designation: STRAUSS.  
(*A. longiflorum*/Asiatic (LA) hybrid.)

**'Zanlazart' VIII(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)  
Inside brilliant yellow (7A), throat light yellow-green (150D); outside brilliant greenish yellow (6C), each tepal with brilliant greenish yellow (6A) margin; spots few; papillae absent; nectaries pale greenish yellow (1D); pollen moderate orange (167A); stigma brilliant orange (29A). Fls 225 mm wide; tepals 115 × 42 mm, margins smooth, tips recurved. Lvs scattered, 200 × 28 mm. Stems 1.33 m, the lower two-thirds dark, shading into green above, with c.4 fls. Midseason.  
Trade designation: MOZART.  
(*A. longiflorum*/Asiatic (LA) hybrid.)

**'Zanlazfica' I(a/b)**

Parentage unknown  
R: Van Zanten Flowerbulbs B.V., N: Van Zanten Flowerbulbs B.V. (2003), REG: Van Zanten Flowerbulbs B.V. (2004)  
Inside strong orange (25B), vivid yellowish pink (28A) towards tepal-margins and tips; outside vivid orange (28B), tepal-tips moderate yellow-green (143D); spots absent; papillae vivid yellowish pink (28A); nectaries strong yellow-green (143C), pollen moderate red (179A); stigma vivid reddish orange (30B). Fls 160 mm wide; tepals 100 × 40-50 mm, margins smooth, tips recurved. Lvs scattered, 150 × 18 mm. Stems 0.9-1.25 m, brownish with green, and with 7-8 fls.  
Trade designation: BENFICA.

**'Zanlophator' VIII(b/a-b)**

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1994), G: Van Zanten Flowerbulbs B.V. (1996), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)  
Inside vivid purplish red (57C), each tepal shading to yellowish white (155D) at tip and margin, throat strong yellow-green (144C); outside yellowish white (155D); spots and papillae absent; nectaries strong yellow-green (144C); pollen moderate orange (172D); stigma pale yellow-green (149D). Fls 260 mm wide, scented; tepals 195 × 65 mm, margins smooth, tips strongly recurved. Lvs scattered, 230 × 35 mm. Stems 1.2-1.4 m, green, with c.4 fls. Midseason.  
Trade designation: TRIUMPHATOR.  
(*A. longiflorum*/Oriental (LO) hybrid.)

**'Zanlorlika' VII(a-b/b)**

Parentage unknown  
R: Van Zanten Flowerbulbs B.V. (1995), G: Van Zanten Flowerbulbs B.V. (1998), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002),

REG: Van Zanten Flowerbulbs B.V. (2003)  
Inside very pale purple (69B), midveins light purplish pink (73C), throat deep purple (79C); outside very pale purple (69B), midribs light purplish pink (73C) and strong yellow-green (144A) at top; spots absent; papillae present; nectaries strong yellow-green (144C); pollen strong brown (172A); stigma pale yellow-green (157A). Fls 200 mm wide; tepals 125 × 65 mm, margins ruffled, tips recurved. Lvs 153 × 40 mm, light green. Stems 1.2 m, light green, with c.4 fls.  
Trade designation: MILIKA.

#### **‘Zanloropium’ VII(a/b)**

Parentage unknown

R: Van Zanten Flowerbulbs B.V., N: Van Zanten Flowerbulbs B.V. (2003), REG: Van Zanten Flowerbulbs B.V. (2004)

Inside deep purplish red (61A), strong purplish red/strong reddish purple (72A/B) towards tepal-margins, apical part of each tepal with narrow yellowish white (155D) margin, midveins deep red (60A), throat yellowish white (155D); outside with outer tepals deep purplish red (61A), deep purplish red (71A) towards margins, midribs yellowish white (155D) and deep red (60A), strong yellow-green (144C) at top, margins at base pale greenish yellow (1D), inner tepals strong purplish red (61B), strong purplish red (71B) towards margins, margin yellowish white (155D) at tip, midribs yellowish white (155D) with some moderate purplish red (64A), light yellow-green (144D) at base, margins pale greenish yellow (1D) at base; spots absent; papillae dark red (59A); nectaries strong yellow-green (144B) with brilliant greenish yellow (6A) edge; pollen deep orange-yellow (163A); stigma light purple (77C). Fls 195 mm wide, fragrant; tepals 135 × 50–68 mm, margins ruffled, tips slightly recurved. Lvs scattered, 215 × 45 mm. Stems 1.2–1.6 m, green, with c.5 fls.  
Trade designation: OPIUM.

#### **‘Zanlorsanna’ VII(a/b)**

Parentage unknown

R: Van Zanten Flowerbulbs B.V. (1996), G: Van Zanten Flowerbulbs B.V. (1999), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2003)

Inside vivid purplish red/strong purplish red (57D/63C), throat yellowish white (155D); outside very light purple (75C), each tepal with light purple (75B) margins and strong yellow-green (143B) tip, midribs yellowish white (155B) at base; spots strong purplish red (60B); papillae yellowish white (155D); nectaries strong yellow-green (144C); pollen strong orange (24A); stigma vivid yellow-green (154A). Fls 200 mm wide; tepals 120 × 54 mm, margins slightly ruffled, tips recurved. Lvs 135 × 35 mm, green. Stems 1.2 m, light green with darker markings, with c.6 fls. Midseason.  
Trade designation: SANNA.

#### **‘Zanlortrofeo’ VII(a/b)**

Parentage unknown

R: Van Zanten Flowerbulbs B.V., N: Van Zanten

Flowerbulbs B.V. (2003), REG: Van Zanten Flowerbulbs B.V. (2004)

Inside with inner tepals vivid purplish red (67B) towards tip and from halfway upwards at margins fading into very pale purple (69D), along midveins strong red (53B), outer tepals strong purplish red (67A) fading towards margins into very pale purple (69B), margins at tip very pale purple (69D), along midveins strong red (53B), throat yellowish white (155D); outside with outer tepals strong purplish red (64C), fading into moderate purplish pink (66D) towards margins, margins narrow, yellowish white (155D), midribs strong yellow-green (144C) at base, fading into light yellow-green (145D) at top with a strong purplish red (64C) flush, strong yellow-green (143B) at top, inner tepals deep purplish pink (64D), with yellowish white (155D) veins at base, margins moderate purplish red (64A), fading into yellowish white (155D) at top, midribs light yellow-green (142D) at base; spots absent; papillae many, moderate purplish red (58A); nectaries strong yellow-green (144B), flushed with strong red (53B) and with light greenish yellow (1C) edge; pollen absent; stigma yellowish grey (194C). Fls 220 mm wide; tepals 115 × 44–55 mm, margins ruffled, tips slightly recurved. Lvs scattered, 150 × 43 mm. Stems 1–1.4 m, light green with darker markings, and with c.7 fls.  
Trade designation: TROFEO.

#### **‘Zanlorvenna’ VII(a/b)**

Parentage unknown

R: Van Zanten Flowerbulbs B.V., N: Van Zanten Flowerbulbs B.V. (2003), REG: Van Zanten Flowerbulbs B.V. (2004)

Inside strong purplish red (64B), tepal-margins and tips greenish white (155C), along midveins deep red/strong purplish red (60A/B), throat greenish white (155C); outside with outer tepals moderate purplish red (64A/70A), margins greenish white (155C), base strong yellow-green (144C) and moderate red (185B), midribs with greenish white (155C) stripe flushed with moderate/strong purplish red (64A/B), at top strong yellow-green (144B) with some strong yellow-green (144A), inner tepals strong purplish red/strong reddish purple (64B/70B), at base and margins greenish white (155C), midribs greenish white (157D) at base, changing into moderate purplish red (64A), at top light yellow-green (144D); spots absent; papillae greenish white (155C) and deep purplish red (187D); nectaries strong yellow-green (144B) with light yellow (10C) edge; pollen moderate reddish brown (175A); stigma light grey/deep purple (191C/79C). Fls 270 mm wide, fragrant; tepals 165 × 52–75 mm, margins ruffled, tips slightly recurved. Lvs scattered, 200 × 47 mm. Stems 1.1–1.5 m, green, with 3–7 fls.  
Trade designation: RAVENNA.

#### **‘Zanlorwhite’ VII(a-b/c)**

Parentage unknown

R: Van Zanten Flowerbulbs B.V., N: Van Zanten Flowerbulbs B.V. (2003), REG: Van Zanten Flowerbulbs B.V. (2004)

Inside yellowish white (155D), midveins pale yellow-

green (155A); outside with inner tepals yellowish white (155D), midribs strong yellow-green (144C) at base, at top brilliant greenish yellow (151D) with a little strong yellow-green (143B), outer tepals similar but with a vivid purplish red (57D) patch next to base of midribs; spots absent; papillae yellowish white (155D); nectaries moderate yellow-green (143D); pollen strong reddish orange (169A); stigma deep reddish purple (77A). Fls 245 mm wide, fragrant; tepals 133 × 54-72 mm, margins ruffled, tips recurved. Lvs scattered, 215 × 49 mm, dark green. Stems 1.1-1.45 m, green, with c.4 fls.  
Trade designation: TOPWHITE.

#### **'Zantriana' VII(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1993), G: Van Zanten Flowerbulbs B.V. (1995), N: Van Zanten Flowerbulbs B.V. (2002), I: Van Zanten Flowerbulbs B.V. (2002), REG: Van Zanten Flowerbulbs B.V. (2002)  
Inside strong purplish red (61B/64B), throat strong yellow-green (144B); outside strong purplish red (64B), midribs greenish white (155C) at base, shading into deep purplish pink (64D) and strong yellow-green (144B) at tip; spots absent; papillae present; nectaries yellowish white (155D); pollen strong reddish orange to strong orange (169A/B); stigma pale yellow-green (149D). Fls 200 mm wide; tepals 130 × 40 mm, margins scarcely ruffled, tips slightly recurved. Lvs scattered, 145 × 40 mm. Stems 1.1 m, dark, with 2-6 fls. Midseason.  
Trade designation: VIVIANA.

#### **'Zantricob' VII(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1992), G: Koninklijke Van Zanten B.V. (1995), N: Koninklijke Van Zanten B.V. (1999), I: Koninklijke Van Zanten B.V. (2000), REG: Koninklijke Van Zanten B.V. (2000)  
Inside deep red (60A), tepals strong purplish red (60B) towards edges, narrowly edged greenish white (155C) at tip, throat greenish white (155C); outside deep red (60A), tepals strong purplish red (60C) towards edges, with a little greenish white (155C) at tip; spots dark red (187A); papillae strong purplish red (60B); nectaries strong yellow-green (144C); pollen dark reddish orange (172B); stigma dark red (187A). Fls 200 mm wide; tepals 125 × 45-65 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 205 × 55 mm. Stems 1.3 m, light green, with c.6 fls.  
Trade designation: COBRA.

#### **'Zantriconst' VII(b/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1993), G: Koninklijke Van Zanten B.V. (1997), N: Koninklijke Van Zanten B.V. (2001), I: Koninklijke Van Zanten B.V. (2001), REG: Van Zanten Flowerbulbs B.V. (2001)  
Inside and outside whiter than greenish white (155C); outside suffused with deep purplish red (187D) at base fading out into the tepals; spots absent; papillae whiter than 155C; nectaries strong yellow-green (144B); pollen strong to moderate reddish orange (169A/171A); stigma

dark purple (79B) on a paler ground. Fls 230 mm wide; tepals 135-150 × 50-60 mm, margins ruffled, tips recurved. Lvs scattered, 155 × 40 mm. Stems 1 m, light green, with c.3-5 fls.  
Trade designation: CONSTANTA.

#### **'Zantrifid' VII(a/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1992), G: Koninklijke Van Zanten B.V. (1995), N: Koninklijke Van Zanten B.V. (2000), I: Koninklijke Van Zanten B.V. (2000), REG: Koninklijke Van Zanten B.V. (2000)  
Inside greenish white (155C), midveins light greenish yellow (8C) on half of each tepal; outside greenish white (155C), midribs brilliant greenish yellow (1B), outer tepals tipped with strong yellow-green (144B); spots light greenish yellow (8C); papillae greenish white (155C), tipped light greenish yellow (8C); nectaries strong yellow-green (144B); pollen strong brown (172A); stigma dark purple (79A). Fls 205 mm wide; tepals 130 × 45-60 mm, margins ruffled, tips recurved. Lvs scattered, 155 × 45 mm. Stems 0.9 m, green with darker markings, and with c.5-6 fls.  
Trade designation: FIDANZA.

#### **'Zantrijus' VII(a-b/b)**

Parentage: unnamed seedling × unnamed seedling  
R: Koninklijke Van Zanten B.V. (1993), G: Koninklijke Van Zanten B.V. (1996), N: Koninklijke Van Zanten B.V. (2001), I: Koninklijke Van Zanten B.V. (2001), REG: Van Zanten Flowerbulbs B.V. (2001)  
Inside variegated moderate purplish red (70A) on a white ground; outside variegated moderate purplish red (70A) on a white ground with deep purplish red (187D) midribs tipped with strong yellow-green (144B); outside stronger coloured than inside; spots absent; papillae self-coloured, on up to two-thirds of each tepal; pollen strong orange (168A & B); stigma dark red (183B). Fls 240 mm wide; tepals 130-140 × 50-70 mm, margins ruffled, tips recurved. Lvs scattered, 160-175 × 25-80 mm. Stems 1 m, light green, with c.3-4 fls.  
Trade designation: JUSTINA.

#### **'Zantrirod' VII(a/b)**

Parentage: unnamed hybrid × unnamed hybrid  
R: Koninklijke Van Zanten B.V. (1993), G: Koninklijke Van Zanten B.V. (1996), N: Koninklijke Van Zanten B.V. (2000), I: Koninklijke Van Zanten B.V. (2001), REG: Van Zanten Flowerbulbs B.V. (2001)  
Inside strong purplish pink (63C), towards the tepal-tips on a white ground, throat more white than 155D, midveins above nectaries with a little pale yellow (8D); outside strong to light purplish pink (63C&D) on a white ground, tepals with some strong purplish red (63A) at the tips, at the base with a little white, midribs light yellow-green (150D) with a little strong purplish red (63A), and strong yellow-green (144B) at base and top; spots strong purplish red (63A); papillae coloured as the tepals; stigma yellowish grey (156A) with a little purple. Fls 230 mm wide; tepals 130-140 × 50-70 mm, margins ruffled, tips recurved. Lvs scattered, 220-240 × 30-70 mm. Stems 1.2-

1.4 m, green with darker markings and c.5 fls.

Trade designation: RODINA.

#### 'Zantrischei' VII(a/b-c)

Parentage: unnamed seedling × unnamed seedling

R: Koninklijke Van Zanten B.V. (1991), G: Koninklijke Van Zanten B.V. (1994), N: Koninklijke Van Zanten B.V. (2001), I: Koninklijke Van Zanten B.V. (2001), REG: Van Zanten Flowerbulbs B.V. (2001)

Inside very pale to very light purple (69B/75C), changing to moderate purplish pink (65A) on a paler ground towards tepal-tips and margins, throat greenish white (155C); outside very pale purple (69B), at tepal-tips and margins very light purple (75C) on a paler ground, midribs a little stronger coloured and tipped strong yellow-green (144B); spots moderate purplish pink (65A); papillae greenish white (155C); pollen strong to moderate reddish orange (169A/171A); stigma light yellow-green (145C). Fls 240 mm wide; tepals 120-130 × 50-70 mm, margins ruffled, tips recurved. Lvs scattered, 200 × 55 mm. Stems 1.1-1.4 m, green, with a little darker marking, and c.4-6 fls.

Trade designation: SHEILA.

#### 'Zanzibar' VI(-a)

Parentage: selection from Golden Splendor Group

S: J. de Graaff (c. 1954), N: J. de Graaff

Inside deep burnished gold; outside with dark red stripes.

#### 'Zaragoza' VIII(a-b/b-c)

Parentage: seedling PG 95-62 × seedling A 4 B

R: Vletter & Den Haan Beheer B.V., N: Vletter & Den Haan Beheer B.V. (2000), REG: Vletter & Den Haan Beheer B.V. (2003)

Inside brilliant yellow (7B), midveins brilliant yellow (7A), throat pale yellow-green (4D); outside: inner tepals brilliant yellow (10A), midribs greenish white (155A), outer tepals pale yellow-green (155A) with light greenish yellow light greenish yellow (7D) margins, midribs moderate yellow-green (143D) with a small strong yellow-green (143A) spot at top; spots and papillae brilliant yellow (7A); nectaries strong yellow-green (144B); pollen strong reddish orange (169A); stigma dark purple (79A). Fls 290 mm wide, slightly fragrant; tepals 155 × 75 mm, margins slightly ruffled, tips recurved. Lvs 190 × 45 mm, dark green. Stems 1.2 m, green with darker spots, with c.3 fls.

(An Orienpet (OT) lily.)

#### 'Zarja' I(a/-)

Parentage unknown

R: J.C. Koopman, N: J.C. Koopman, REG: J.C.

Koopman (1992)

Inside moderate red (47A) suffused with deep red (53A) towards the light yellowish pink (159A) throat; outside moderate red (47A) with midribs and outer tepals suffused with moderate reddish orange (173B); nectaries dark red (187A); pollen dark reddish orange (172B). Fls 178 mm wide; tepals 85 × 35 mm, margins smooth, tips strongly recurved. Lvs scattered, 100-130 mm long, mid green. Stems 1.4-1.6 m, with 8-12 fls.

#### 'Zarnitsa' I(c/-)

Parentage: seedling from open-pollinated 'Fuga'

R: V.A. Volkov (1977), N: V.A. Volkov

Fls pale orange, spotted. Stems 2.1 m. July.

#### 'Zarte Pankowerin' I(a/c)

Parentage: 'Sterling Star' × 'Brushstroke'

R: G. Steinbrück (1988), G: G. Steinbrück (1991), N: G. Steinbrück (2000), I: G. Steinbrück (2001), REG: G. Steinbrück (2003)

Inside creamy white at first, rapidly becoming pale yellow-green (155A), suffused with greenish white at base of tepals; outside pale yellow-green (155A), midribs soft green; spots deep purplish red (71A), numerous, medium sized, on basal half of each tepal; nectaries pale yellow (158A), hoary, continued as forked lines the same colour as the spots; pollen strong orange (168A); stigma greyish reddish orange (174B). Fls 125 mm wide; tepals 60 × 35 mm, margins smooth, tips not recurved. Lvs scattered, 120 × 10 mm. Stems 0.7 m, pale green, with 8-10 fls. Early to mid July.

(For epithet see 'Pankower Revue'. Published in ELG sales list, 2001. Nomenclatural standard: colour print provided by registrant (WSY 0038747).)

#### 'Zateinitsa' I(b/-)

Parentage: 'Zarnitsa' × *davidii* var. *willmottiae*

R: V.A. Volkov (c. 1980), N: V.A. Volkov

Fls bright orange; spots black. Stems 1.8 m. July.

#### 'Zauberflöte' I(a/b-c)

Parentage: unnamed seedling × mixed pollen of

'Mandarin' (of de Graaff) & 'Snowcap'

R: G. Steinbrück (1989), G: G. Steinbrück (1992), N: G. Steinbrück (1999), I: G. Steinbrück (2001), REG: G. Steinbrück (2002)

Inside pale yellow (159A), tepal-tips yellowish white (158D); outside similarly coloured with soft green midribs which are edged with pale pink; spots deep reddish purple (77A), numerous, small, on basal half of each tepal; nectaries soft green; pollen strong orange (169B); stigma moderate orange (173C). Fls 150 mm wide; tepals 82 × 37 mm, margins smooth, tips very slightly recurved. Lvs scattered, 93 × 18 mm. Stems 0.7 m, dark green, with c.8 fls. Late June.

(Nomenclatural standard: colour print provided by registrant (WSY 0032274).)

#### 'Zauberin' I(b-c/c-d)

Parentage: 'Troika' × 'Prince Charming' (Div. I)

R: A. Weinreich (pre 1978), G: A. Weinreich, N: A.

Weinreich, REG: N. Martschinke (2000)

Inside greyish red/dark reddish orange (178A/B) shading to strong orange (169C) at tepal-tips and to strong orange (169B) in the throat; outside greyish red (178A), midribs moderate yellow-green (146C); spots fine, dark red (187A), near centre of fls; nectaries moderate yellow-green (146C); pollen brownish orange (172C); stigma dark red (187C). Fls 90 mm wide; tepals 60 × 27 mm, margins smooth, tips slightly recurved at first, later more strongly recurved. Lvs scattered, 75 × 10 mm, dark green.

Stems 0.6 m, dark green, with c.8 fls. Early to mid July. (Nomenclatural standard: colour print provided by registrant (WSY 0022853).)

**'Zdena' I(a/-)**

Parentage: 'Karmen' (of Jošt) × *L. × scottiae* 'Roter Prinz'  
R: V. Jošt (1971), G: V. Jošt (1974), N: V. Jošt (1984), I: Semptra Praha a.s., REG: V. Jošt (1984)

Inside vivid orange (28B), throat vivid orange (28A), tepal-tips vivid reddish orange (33B); outside vivid reddish orange (34B), darker along tepal-margins; spots dark greyish purple (202A), medium sized, on three-quarters of each tepal; nectaries white; pollen strong orange (169B). Fls 115-140 mm wide; tepals 77 × 33 mm, margins smooth, tips slightly recurved. Lvs scattered, 88 × 11 mm, mid green. Stems 0.6-0.7 m, mid green, with c.12 fls. June to July.

**'Zealandia Group VII(-/-)**

Parentage: (*L. × parkmanii* 'Pauline Tuffery' × *japonicum*) × (*speciosum* × *auratum*)

R: L.B. Tuffery, N: L.B. Tuffery

Fls carmine-pink to crimson-scarlet and lavender. Stems 1.2 m.

(Published in *Dunhampton Lily Fields Cat.*, 1954.)

**'Zelda' I(a/b)**

Parentage unknown

N: De Jong Lelies (1984)

Inside vivid orange (28B) with a Saturn red flush; outside brilliant orange (29A) with orange tepal-edges and yellow midribs; spots dark brown, many, small; nectaries violet-red; pollen dark red-brown. Stems 0.9 m, with 10-13 fls (from 14-16 cm bulbs).

**'Zelenaia' VI(-/a)**

Parentage: *L. × imperiale* 'Estoniia' × Olympic Group  
R: V.N. Esinovskaya (1967), N: V.N. Esinovskaya

Inside greenish white; outside olive-green. Tepals 150 × 35-60 mm, slightly curled. Lvs dark green. Stems 1.2 m, with bulbils. Late July.

(Included in *ILR Second Supplement* as 'Zelenaja' which is an unaccepted spelling.)

**'Zelenaja' VI(-/a)**

Unaccepted spelling of 'Zelenaia'.

**'Zelenyi Luch' VI(-/-)**

Parentage: 'Gloriosum' (Russian origin) × *formosanum*

R: V.A. Grot (c. 1963), N: V.A. Grot

No further details.

**'Zelos' I(c/-)**

Parentage: 'Karmen' (of Jošt) × 'Ariadne'

R: V. Jošt (1976), G: V. Jošt (1979), N: V. Jošt (1984), I: V. Jošt (1985), REG: V. Jošt (1984)

Inside deep purplish pink (54B), tepal-tips strong pink (54C), throat light orange (29B); outside strong pink (48C) becoming darker at tepal-margins; spots dark red (187B) to deep purplish red (187D), numerous, small; nectaries frosty orange-white; pollen strong reddish

orange (169A). Fls 80-85 mm wide, scented; tepals 67 × 39 mm, margins smooth, tips strongly recurved. Lvs scattered, c.120 × 13 mm, dark green. Stems 1.2 m, green-purple, with c.11 fls. Late June.

**'Zelta Bikeris' I(a/-)**

Misspelling of 'Zelta Biķeris'.

**'Zelta Biķeris' I(a/-)**

Parentage: selection from Zelta Vainags Group

S: V.P. Orehovs (1960), N: V.P. Orehovs

Fls strong orange-yellow (24B); spots brown; anthers reduced; stigma violet. Fls 100 mm wide. Lvs 120 × 10-13 mm, directed upwards. Stems 1.2 m, green. July. (Published in *LYB* 33: 80 (1970) and included in *ILR* (1982) as 'Zelta Bikeris' which is a misspelling.)

**'Zeltaine' VI(-/a)**

Parentage: Aurelian Group

R: V.P. Orehovs (c. 1962), N: V.P. Orehovs

No further details.

**'Zelta Jubileia' VI(b/a)**

Misspelling of 'Zelta Jubileja'.

**'Zelta Jubileja' VI(b/a)**

Parentage unknown

R: V.P. Orehovs

Inside deep apricot, tepal-tips cream; outside lilac; nectaries yellow; pollen pale brown; stigma brown. Fls 140-160 mm wide, scarcely scented. Lvs glossy, leathery, 180 mm long. Stems 1.1-1.2 m. Late July. (Misspelling: 'Zelta Jubileia'. Published in *Cvetovodstvo*, 1981 (2): 21.)

**'Zeltamute' I(a/c)**

Parentage unknown

R: J. Vasarietis (1986), G: J. Vasarietis (1989), N:

J. Vasarietis (1992), I: J. Vasarietis (1992), REG: J. Vasarietis (1998)

Inside strong orange-yellow (17A); outside vivid yellow (17B); spots purple, on a third of each tepal; nectaries long, bright white; pollen dark orange. Fls 180 mm wide; tepals 43 × 30 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 140 × 20 mm, dark green. Stems 0.85 m, brown, with up to 20 fls. Mid June to early July. (Published in *Lilium Balticum Cat.*, 1996. Nomenclatural Standard: colour print provided by registrant (WSY 0038512).)

**'Zelta Rudens' VI(-/a)**

Parentage unknown

R: V.P. Orehovs (pre 1973), N: V.P. Orehovs

Inside pale yellow; outside light green; pollen orange-brown. Fls crowded.

**'Zelta Sapnis' Div. ?**

Parentage unknown

R: V.P. Orehovs (pre 1970), N: V.P. Orehovs

Fls pale yellow; pollen dark. Tepal-tips recurved.

**‘Zelta Vainags’ I(a/-)**

Parentage: selection from Zelta Vainags Group  
 S: V.P. Orehovs (1960), N: V.P. Orehovs  
 Fls orange-yellow.  
 Syn.: ‘Golden Crown’.  
 (Published in *LYB* 33: 80 (1970).)

**Zelta Vainags Group I(a/b)**

Parentage: Golden Chalice Group × *L. × hollandicum*  
 R: V.P. Orehovs (c. 1954), N: V.P. Orehovs  
 Inside orange-yellow to golden yellow, tepal-tips rose-pink; spots large, reddish brown; pollen brown. Fls unscented. Stems up to 0.8 m, dark brown, with c.5 fls. June.  
 Syn.: Golden Crown Group; Golden Wreath Group.  
 (Published in *LYB* 33: 79 (1970) as Zelta Vainags Hybrids.)

**‘Zelta Vasara’ I(a/-)**

Parentage: selection from Zelta Vainags Group  
 S: V.P. Orehovs, N: V.P. Orehovs  
 Fls golden orange.  
 (Published in *LYB* 33: 80 (1970) and included in *ILL* (1982) as ‘Zelta Vasari’ which is a misspelling.)

**‘Zelta Vasari’ I(a/-)**

Misspelling of ‘Zelta Vasara’.

**‘Zeltene’ Div. ?**

Given as a parent of ‘Māte Terēze’. No further details.

**‘Zeltite’ VI(b/b)**

Parentage: Golden Clarion Group × *regale*  
 R: Ā. Zorgevics (1971), G: Ā. Zorgevics (1975), N: Ā. Zorgevics (1976), I: Ā. Zorgevics (1980), REG: Ā. Zorgevics (1987)  
 Inside light apricot; outside darker; spots absent; nectaries light green; pollen orange. Fls 130 mm wide; tepals 150 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, 90 × 11 mm, mid green. Stems 1.3 m, dark green, with c.8 fls. Mid July to early Aug.

**‘Zeltkalne’ I(a/b)**

Parentage: unnamed seedling × unnamed seedling  
 R: J. Vasarietis, G: J. Vasarietis (1989), N: J. Vasarietis (1989), I: J. Vasarietis, REG: J. Vasarietis (1993)  
 Inside and outside vivid orange-yellow (23A); spots black, 4-7, small, on each tepal; nectaries white; pollen brown. Fls 140-150 mm wide; tepals 95 × 50 mm, margins smooth, tips slightly recurved. Lvs scattered, 190 × 15 mm, mid green. Stems 1.1 m, green, with c.12 fls. Late June to early July.  
 (Published in *Latvian Lily Register*, 1993.)

**‘Zeltstarite’ Div. ?**

Given as a parent of ‘Ķeketas’. No further details.

**‘Zemgale’ VI(b/b)**

Parentage: Golden Clarion Group × *regale*  
 R: Ā. Zorgevics (1974), G: Ā. Zorgevics (1979), N: Ā. Zorgevics (1980), I: Ā. Zorgevics (1984), REG: Ā.

Zorgevics (1987)

Inside creamy white, tepals with white tips; outside white; spots absent; nectaries light green; pollen light brown. Fls 120 mm wide; tepals 120 × 30 mm, margins smooth, tips strongly recurved. Lvs scattered, 90 × 12 mm, dark green. Stems 1.5 m, dark green, with c.10 fls. Mid July to early Aug.

**‘Zenith’ I(c/-)**

Parentage: ‘Citronella’ × (‘Edith Cecilia’ × ‘Nubian’)  
 R: L. Lutz (c. 1964), N: L. Lutz  
 Fls plum, with darker spots. Tepals slightly reflexed. Stems 1.2 m. July.

**‘Zenīts’ I(a/-)**

Parentage: ‘Connecticut Bronze’ × unknown  
 R: T. Gertsons, G: T. Gertsons, N: T. Gertsons (1983), I: T. Gertsons, REG: T. Gertsons (1986)  
 Inside brick-red, throat green; outside darker brick-red; spots dark brown, few, small, in centre of fl.; pollen orange. Tepals 70 × 35 mm, margins smooth, tips slightly recurved. Lvs scattered, mid green. Stems 1.5 m, brownish. Mid July.  
 (Published in *Dārzs un Drava* 7: 21 (1986))

**‘Zenta’ I(b/-)**

Parentage: selection from Skumstu Group  
 S: V.P. Orehovs (1959), N: V.P. Orehovs  
 Fls bright red, glossy.  
 (Published in *LYB* 33: 79 (1970).)

**‘Zephyr’ I(a/b)**

Parentage: ‘Sunrise’ × (‘Connecticut King’ × Harlequin Group)  
 R: Oregon Bulb Farms, Inc. (1974), N: Oregon Bulb Farms, Inc. (1981), I: Oregon Bulb Farms, Inc. (1981), REG: Oregon Bulb Farms, Inc. (1981)  
 Inside soft pink; outside rose-pink; spots black, numerous, small; nectaries green; filaments whitish; pollen deep brown. Fls 150 mm wide; tepal-margins smooth, tips not recurved. Lvs scattered, mid green. Stems 1.2 m, light green, with 8-25 fls. June.

**‘Zerīnu Violeta’ VI(-/a)**

Misspelling of ‘Ceriņu Violeta’.

**‘Zest’ I(a/-)**

Parentage: ((*concolor* × *dauidii*) F<sub>2</sub> × ‘Sunkissed’) × ((*concolor* × *dauidii*) F<sub>2</sub> × ‘Juliana’)  
 R: Columbia-Platte Lilies (1981), G: Columbia-Platte Lilies (1983), N: Columbia-Platte Lilies (1988), I: Columbia-Platte Lilies (1988), REG: Columbia-Platte Lilies (1988)  
 Inside light orange (28C/D) to light yellowish pink (27A), throat light yellowish pink (27A) to light orange (28D), tepal-tips light orange (28C); outside light orange (28C/D) with a light green overlay at base, softer plum along midribs; spots deep magenta, many, small; nectaries soft orange, white-downy; pollen moderate red (180A). Tepals 50-60 × 30 mm, margins smooth, tips very slightly recurved. Lvs scattered, 100-150 × 10-20 mm, dark

green. Stems 0.8-1.4 m, dark green, with 8-22 fls in a candelabrum-like infl. Mid June.

**'Zesty Zinger' I(a/b)**

Parentage unknown

R: Cebeco Lilies, Inc., N: Cebeco Lilies, Inc., REG: ICRA (1998)

Inside golden orange, with striking plum brushmarks.

Tepals slightly recurved. Stems 0.8 cm. Midseason.

(Published in *The Lily Nook Cat.*, 1998.)

**'Zeus' I(c/-)**

Parentage: (*lancifolium* × unknown) × unknown

Fls golden yellow; spots dark. Tepals recurved. Stems 1.2-1.5 m. July.

(Unacceptable name; ICNCP, 2004: Art. 27.1 - name already used for another lily. Listed by Blackthorne Gardens in 1982.)

**'Zeus' III(c/d)**

See *L. × testaceum* 'Zeus'.

**'Zheltaia Ptitsa' I(a/b)**

Parentage unknown

R: M.F. Kireeva (1980)

Fls bright golden yellow; spots many, brownish, on basal half of tepals. Fls 140-150 mm wide; tepal-margins smooth, tips recurved. Stems 0.9-1.1 m, with 9-12 fls. July.

(Published in M.F. Kireeva, *Lilii*, 40 (2000).)

**'Zheltaia Tsaplja' I(a/b-c)**

Parentage: unnamed seedling × unnamed seedling

R: M.F. Kireeva (1983), N: M.F. Kireeva

Fls bright yellow; spots dark, on basal two-thirds of each tepal. Stems 1.3 m. July.

(Included in *ILR Fourth Supplement* as 'Zheltaya Tsaplja' which is an unaccepted spelling.)

**'Zheltaya Tsaplja' I(a/b-c)**

Unaccepted spelling of 'Zheltaia Tsaplja'.

**'Zhemchuzhnaia' VI(-/-)**

Parentage: 'Gloriosum' (Russian origin) × *formosanum*

R: V.A. Grot (c. 1960), N: V.A. Grot

No further details.

(Unaccepted spelling: 'Zhemchuzhnaja'.)

**'Zhemchuzhnaja' VI(-/-)**

Unaccepted spelling of "Zhemchuzhnaia".

**'Zhivago' I(a/b)**

Parentage unknown

R: L. Woodriff (1975), G: L. Woodriff (1976), N: Bowman Creek Farm (1981), REG: Bowman Creek Farm (1981)

Fls bright orange, throat darker; basal third of each tepal with moderate maroon spots; nectaries dark orange; pollen rust-coloured. Fls 170 mm wide; tepals 90 × 35 mm, margins ruffled, tips slightly reflexed. Lvs scattered, 75 × 15 mm, dark green. Stems 0.3 m, green, with c.15 fls. May to June.

**'Zhizel' I(a-b/b-c)**

Parentage: (('Rubinovaia' × unknown) × Hallmark

Group) × mixed pollen of 'Liudmila' (of Kireeva) & 'Alfa' R: M.F. Kireeva (1981), N: M.F. Kireeva

Fls pale apricot to nearly white; spots reddish brown on basal half to two-thirds of each tepal; filaments white; pollen orange. Fls 130-140 mm wide. Lvs 80-100 × 15 mm, glossy green. Stems 0.8-1.2 m, greenish brown, with 9-16 fls, and with bulbils. July.

(Published in M.F. Kireeva, *Lilii*, 48 (1984).)

**'Zidtaurenis' I(a-b/b)**

Parentage: unnamed seedling × 'Monte Rosa'

R: D.-V. Škimele (1995), G: D.-V. Škimele (1997), N: D.-V. Škimele (1999), REG: D.-V. Škimele (2004)

Inside soft pink, midveins cream, throat purplish pink; outside pink, midribs greenish yellow; spots absent; nectaries white; pollen bright orange; stigma pink. Fls 140 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 80 × 20 mm. Stems 0.6 m, dark green, with c.8 fls. Early July.

(Published in *Lilium Balticum Register*, 2000. The epithet is Latvian for 'silk butterfly'.)

**'Ziedoklis' I(a/b)**

Parentage unknown

R: J. Vasarietis (1990), G: J. Vasarietis (1993), N:

J. Vasarietis (1996), I: J. Vasarietis (1996), REG: J. Vasarietis (2001)

Inside vivid orange (28A) with a pink overlay, throat vivid orange (28A); outside vivid orange (28B); spots black, moderate sized, on basal third of each tepal; nectaries white; pollen brown; stigma greyish. Fls 130 mm wide; tepals 70 × 40 mm, margins smooth, tips slightly recurved. Lvs scattered, 100 × 12 mm. Stems 1.05 m, nearly black at base, greenish brown above, with c.19 fls in a pyramidal infl. Mid July.

(Published in *Lilium Balticum Lily Register*, 1996. The epithet is Latvian for 'credence'. Nomenclatural standard: colour print provided by registrant (WSY 0030819).)

**'Ziedonis' VII(b/b)**

Parentage unknown

R: Ē. Ieviņa (1994), G: R. Krūmiņš (1997), N: R.

Krūmiņš (2001), REG: Lilium Balticum Association (2004)

Inside light pink, darker in the centre, midveins cherry-red; outside greyish white; papillae brown-red, on half of each tepal; nectaries light green; pollen red-brown; stigma blue-green. Fls 220 mm wide; tepals 125 × 55 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 200 × 60 mm. Stems 1 m, green, with 8-9 fls. Late July.

**'Ziemeļniecē' VI(b/b)**

Misspelling of 'Ziemeļniecē'.

**'Ziemeļniecē' VI(b/b)**

Parentage unknown

R: V.P. Orehovs (pre 1970), N: V.P. Orehovs

Fls creamy white, tinged with yellow inside; pollen pale

brown. Tepal-tips recurved. Stems 0.8 m. Late July.  
(Included in *ILR Second Supplement* as 'Ziemelniece'  
which is a misspelling.)

**'Zigeunerbraut'** VI(-/-)

Parentage unknown

R: H. Böhm (pre 1981), N: H. Böhm

Inside yellow, tepal-edges and tips veined with red-brown;  
outside with red-brown midribs; nectaries olive-green;  
pollen apricot-ochre. Fls 125 mm wide, scented; tepals  
125 × 47 mm, recurved. Lvs 90 × 11 mm, dark green.  
Stems 1.8 m dark green, violet-dotted especially below.  
Early July.

**'Zigeunerliebe'** I(b/-)

Parentage: 'Enchantment' × ('Radostnaia' × red-flowered  
seedling)

R: De Jong Lelies Beheer B.V. (pre 1978), N: De Jong Lelies  
Beheer B.V., REG: De Jong Lelies Beheer B.V. (1978)

Fls vivid reddish orange (43A), with scarlet suffusion,  
centre spotted with dark reddish purple; anthers orange-  
brown.

(Published in *Lilies and other Liliaceae*, 1978/79: 115.)

**'Zillah'** I(a/-)

Parentage: *wilsonii* var. *flavum* × 'Gay Dawn'

R: R.J. Sinclair (1971), N: R.J. Sinclair (1980), I: R.J.  
Sinclair (1980), REG: R.J. Sinclair (1980)

Fls strong red (46A), paler outside and along tepal-edges;  
spots black, small, except at tepal-tips; nectaries greenish;  
pollen brown. Fls 160 mm wide; tepals 90 × 25-35 mm,  
slightly recurved. Lvs scattered, 160 × 15 mm, pale green.  
Stems 0.6 m, green, with c.8 fls. Nov. (Australia).

**Zim Sam Group** I(a-b/b)

Parentage: 'Powder Puff' × 'Pumpkin Sweet'

R: G.C. Keast (1988), G: G.C. Keast (1990), N: G.C.  
Keast (1991), REG: G.C. Keast (1992)

Fls French rose (HCC 520) throughout; spots maroon,  
very few, on basal half of each tepal; pollen brown. Fls  
130 mm wide; tepals 65 × 35 mm, margins smooth, tips  
strongly recurved. Lvs scattered, 80 × 11 mm, mid green.  
Stems 1 m, black, with c.12 fls. Late Dec. to early Jan.  
(New Zealand).

**'Zimstern'** I(b/c)

Parentage: 'Winnetou' × 'Goldprinzessin'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N:  
G. Steinbrück (2002), I: G. Steinbrück (2002), REG: G.  
Steinbrück (2002)

Inside vivid reddish orange (32A) suffused with pale  
orange-yellow (24A) especially along centre in basal half  
of each tepal; outside vivid reddish orange (32A); spots  
dark red (187B), numerous, small, on basal half of each  
tepal; nectaries light yellowish pink (159A); pollen dark  
red (187A); stigma moderate red (179A). Fls 140 mm  
wide; tepals 70 × 40 mm, margins smooth, tips not  
recurved. Lvs scattered, 60 × 20 mm. Stems 0.7 m, dark  
green, with c.11 fls. Mid June.

(Nomenclatural standard: colour print provided by  
registrant (WSY 0032241).)

**'Zinaida'** I(-/b-c)

Parentage: selection from Tsvetaevoi Group

R: Z.N. Tsvetaeva (1940)

Fls crimson-red, centre yellow; outside violet; spots faint;  
pollen brownish; stigma violet. Fls 80-110 cm wide,  
pleasantly scented. Lvs 150-170 × 20 mm. Stems 1-1.3  
m, green, with 7-11 fls. May to June.

(Published in *Lilies and other Liliaceae*, 1975: 28. Belongs  
to Tsvetaevoi Group.)

**'Zinge'** I(a/b)

Unaccepted spelling of 'Ziņģe'.

**'Ziņģe'** I(a/b)

Parentage unknown

R: D.-V. Šķimele (1992), G: D.-V. Šķimele (1994), N:  
D.-V. Šķimele (1997), REG: D.-V. Šķimele (2001)

Inside light yellow-orange, with darker tepal-margins,  
throat green; outside light yellow-orange, midribs  
greenish brown; spots dark red on a third of each tepal;  
nectaries white; pollen brownish red; stigma dark red. Fls  
140 mm wide; tepals 80 × 40 mm, margins smooth, tips  
slightly recurved. Lvs scattered, 160 × 15 mm. Stems 1.4  
m, green with brownish streaks and spots, and with c.7  
fls. Mid to late June.

(Published in *Lilium Balticum Lily Register*, 1998.

Included in *ILR Twentieth Supplement* as 'Zinge' which is  
a misspelling.)

**'Zinta'** I(a/b)

Parentage: 'Baltais Lācis' × 'Shirley'

R: A. Balode (1995), G: A. Balode (1997), N: A. Balode  
(1999), REG: A. Balode (1999)

Inside strong yellowish pink (37A) with a vivid orange-  
yellow (21A) centre, throat yellow-orange; outside strong  
yellowish pink; some black spotting around the throat.  
Tepal 85 × 35 mm, margins smooth, tips not recurved.  
Lvs scattered, 110 × 15 mm, dark green. Stems 1.1 m,  
green, with c.3 fls. Early July.

**'Ziorat'** I(b-c/-)

Parentage: 'Pioneer' × *L. × maculatum* 'Orange'

R: I. Wiesner (1988), N: I. Wiesner, REG: I. Wiesner  
(1990)

Fls strawberry-red; spots dark to black, moderately  
numerous, on half of each tepal; pollen brown-red;  
stigma pale purple-red. Fls 140-170 mm wide; tepals 90  
× 38 mm, very twisted, recurved. Lvs scattered, 150 × 10  
mm, dark green. Stems 0.75 m, green. Bulbs white. Mid  
July.

**'Zita'** I(c/-)

Parentage: 'Svetlana' × 'Grietiņa'

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls mahogany-red; spots black, large. Stems 1 m, with  
large bulbils.

(The seed parent is probably 'Svetlana' of Kireeva.)

**'Zitrone'** I(b/-)

Parentage: (*lancifolium* × *L. × maculatum*) × unknown

R: L. Denkwitz (pre 1980), N: L. Denkwitz

Inside lemon-yellow, with a few spots. Lvs light green. Stems 1.1 m, with up to 15 large fls. Late July. (Unacceptable name: ICNCP, 1980: Recommendation 13 Ah - name too similar to 'Citron'. Published in German Lily Group sales list, 1980.)

**'Zitronenbaum' VI(c/-)**

See *L. × aurelianense* 'Zitronenbaum'.

**'Zitronenglöckchen' II(-/-)**

Parentage unknown

R: H. Fuchs, N: H. Fuchs, REG: H. Fuchs (1997)

Fls clear greenish yellow, smaller and more narrowly bell-shaped than others in this group. Stems 1-1.2 m. Mid June.

(Published in German Lily Group sales list, 1995.)

**'Zitronenmädchen' I(a/-)**

Parentage: 'Sonnenkranz' × Panamint Group

R: A. Weinreich (pre 1989), N: A. Weinreich, REG: ICRA (1998)

Fls pale yellow, spotted. Stems 0.6 m.

**'Zitronu Henry' IX(-/d)**

See *henryi* 'Citronu Henrijs'.

**'Zitrospinne' I(a/c)**

Parentage unknown

R: J. Klein, N: J. Klein, REG: ICRA (1996)

Fls light yellow. Stems 1.2 m, with secondary buds. Mid July.

(Published in German Lily Group sales list, 1989.)

**'Zitroster'n' I(a/-)**

Parentage unknown

R: J. Klein (pre 1985), N: J. Klein, REG: J. Klein (1988)

Fls lemon-yellow; spots absent. Stems 0.8 m. Late July.

(Published in German Lily Group sales list, 1985.)

**'Zlata' I(a/-)**

Parentage: Pastel Group × 'Connecticut King'

R: V. Jošt (1975), N: V. Jošt (1979), I: V. Jošt (1983), REG: V. Jošt (1984)

Fls vivid orange-yellow (21A); spots purple-brown, large, on half of each tepal; nectaries white; pollen strong orange (169C). Fls 100-120 mm wide; tepal-margins slightly ruffled. Lvs scattered, 91 × 9 mm, dark green. Stems 0.7-0.9 m, with 8-13 fls. Late June.

**'Zlatá Pagoda' I(c/d)**

Parentage: Preston Group × unknown

R: J. Marks (pre 1969), N: J. Marks, REG: B. Mičulka (1986)

Inside yellow, tepal-centres pale apricot, throat pale yellow; outside yellow, midribs red-brown; spots purple-brown, numerous, small, on two-thirds of each tepal; pollen brown. Fls 60 mm wide; tepals 65 × 23 mm, strongly recurved. Lvs 75 × 33 mm, dark. Stems 0.8 m, dark violet, hairy at lf-bases. Early July.

**'Zlatá Praha' VI(b/c)**

Parentage: 'Gold Eagle' × white-flowered trumpet

R: K. Vereš, N: K. Vereš, I: K. Vereš (1997), REG: K. Vereš (1997)

Inside orange-gold, centre of fl. darker; outside pale ochre, midribs greenish; small papillae present, as well as small, brownish dashes on two-thirds of each tepal; nectaries green; pollen orange-brown; stigma green. Fls 140 mm wide; tepals 70 × 30 mm, margins slightly recurved; pedicels 120 mm long, green. Lvs scattered, 130 × 30 mm, glossy mid green. Stems 1.3 m, dark green. Mid July.

**'Zlatava Frajmanova' I(a/-)**

Parentage: complex origin

R: J. Frajman, N: J. Frajman, I: J. Frajman (1980), REG: J. Frajman (1984)

Inside pale yellow, tepal-centres golden brown, tepal-tips and throat paler; outside with beige midribs; spots dark brown, few, tiny, in the throat; pollen ochre brown; stigma pale yellow. Fls 145 mm wide; tepals 75 × 36 mm; pedicels spotted with dark brown. Lvs scattered, 95 × 12 mm, glossy mid green, twisted. Stems 1.1 m, spotted with dark brown. July.

**'Zlatice' II(c/c-d)**

Parentage: *L. × dalhansonii* Paisley Group × unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1991), REG: B. Mičulka (1991)

Inside white, with pale beige shading and a golden tint above the nectaries; outside white with lightly spotted edges and pink midribs; spots pink, dense, medium sized, on four-fifths of each tepal; nectaries yellowish green; pollen brown; stigma dark carmine-brown. Fls semi-globular, 52 mm wide; tepals 35 × 13 mm, slightly to moderately recurved; pedicels 25 mm long, violet-brown. Lvs whorled, 80 × 30 mm, yellowish green, dull. Stems 1.05 m, dotted with violet-brown, green at base, with a longish infl. Mid June.

(Revised description: that published in *ILR Twelfth Supplement*, p.32 (1994) was supplied in error by the registrant.)

**'Zlato' I(c/d)**

Syn. of 'Marksovo Zlato'.

**'Zlatovláška' I(b-c/c)**

Parentage: Panamint Group × 'Joan Evans'

R: V. Baloun (1982), N: V. Baloun, REG: V. Baloun (1987)

Inside dark apricot, throat paler; outside with a beige tint, midribs brownish; spots dark red-brown, numerous, medium sized, on two-thirds of each tepal; fine papillae in the throat; nectaries pale apricot. Fls 90 mm wide; tepals 75 × 30 mm, irregularly and strongly twisted. Lvs 60 × 7 mm, glossy green. Stems 0.9 m, dark violet, with c.10 fls. Late June.

**'Zlatý Lunar' I(b-c/-)**

Parentage: 'Sonata' × 'Connecticut Yankee'

R: K. Braun (1978), N: K. Braun, REG: K. Braun (1984)

Inside cadmium-orange; outside lemon-yellow, tepal-tips Indian yellow; spots few, on a third of each tepal; nectaries greenish white, frosted; pollen saffron-yellow. Fls 100 mm wide; tepal-tips strongly recurved. Stems 0.4-0.5 m, pale green. Early July.

**‘Žlutana’ I(a/b)**

Parentage: orange-flowered hybrid ex Patterson × unknown

R: B. Mičulka (1982), N: B. Mičulka

Inside yellow, tinted apricot, tepal-tips yellow; outside with pale green midribs; spots dark red-brown, fairly numerous, small, on half of each tepal; nectaries green, frosted white; pollen ochre. Fls 135 mm wide. Lvs 110 × 10 mm, dull green. Stems 0.9 m, tinged with brown.

**‘Zobor’ VI(b/b)**

Parentage: *L.* × *kewense* ‘White Henryi’ × (‘Damson’ × ‘Mabel Violet’)

R: A. Mego (1995), N: A. Mego (2005), I: A. Mego (2005), REG: A. Mego (2005)

Inside white suffused with pale pink, tepal centres and throat yellow; outside dark pinkish purple, midribs green; spots absent; nectaries dark green, pollen yellow; stigma grey-green. Fls 140 mm wide, slightly scented; tepals 115 × 45 mm, slightly recurved, margins slightly wavy; pedicels 100 mm, thick, brown-dotted. Lvs scattered, 150 × 18 mm, dull mid green. Stems 1.5 m, thick, dark green. Early July.

**‘Zodiac’ VII(a-b/b)**

Parentage: ‘Vedea’ × ‘Santa Fe’

R: Sande B.V., N: Sande B.V. (1997), REG: Sande B.V. (2003)

Inside and outside yellowish white (155D); spots absent; papillae present; nectaries green; pollen red-brown; stigma purple. Tepals medium sized, margins ruffled, more so in outer tepals, tips strongly recurved. Stems 1 m, with c.6 fls. Early to midseason.

**‘Zoia’ VI(-/a)**

Parentage: Negrobov seedling 1 × ‘Orange Sunburst’

R: E.V. Parmanin & Z.S. Sapozhnikova (c. 1972), N: E.V. Parmanin & Z.S. Sapozhnikova

Fls pale greenish, throat white; anthers dark orange. Fls 120-130 mm wide, fragrant. Stems up to 2 m. July. (Unaccepted spelling: ‘Zoja’.)

**‘Zoja’ VI(-/a)**

Unaccepted spelling of ‘Zoia’.

**‘Zolotaia Devochka’ I(b/-)**

Parentage: Sestroretskaia Group × *amabile*

S: I.L. Zalivski (1959), N: I.L. Zalivski

Fls golden yellow; spots dark brown; pollen brownish; stigma violet. Fls 60 mm wide, slightly scented. Lvs 80-100 × 8-10 mm. Stems 0.7-0.9 m, brown-green, with 5-7 fls. July.

(Published in M.V. Baranova, *Lilii*, 335 (1990). Included in *ILR* (1982) as ‘Solotaya Devochka’ which is an unaccepted spelling.)

**‘Zolotaia Kaplia’ I(b/-)**

Parentage: ‘Rubinovaia’ × unnamed seedling

R: M.F. Kireeva (1980), N: M.F. Kireeva

Fls orange-yellow, spotted. Stems 1.2 m, with bulbils. July. (Included in *ILR Fourth Supplement* as ‘Zolotaja Kaplja’ which is an unaccepted spelling.)

**‘Zolotaia Niva’ I(c/-)**

Parentage: Citronella Group × ‘Golden Jubilee’

R: N.I. Rutski (c. 1974), N: N.I. Rutski

Fls golden orange, spotted. Stems dark, up to 1 m. (Included in *ILR Second Supplement* as ‘Zolotaya Niva’ which is an unaccepted spelling. A lily with the same epithet was published in M.V. Baranova, *Lilii*, 319 (1990) who says it was raised by Kireeva in 1984. However, it is not mentioned in Kireeva’s books. Baranova’s description is as follows: Fls 80-100 mm wide, orange with small spots. Pollen and stigma dark brown. Fls bowl-shaped, yellow-bronze. Stems 0.8-0.9 m, green with brown spots. June. It is perhaps the same as Rutski’s lily, but more investigation is needed.)

**‘Zolotaja Kaplja’ I(b/-)**

Unaccepted spelling of ‘Zolotaia Kaplia’.

**‘Zolotaya Niva’ I(c/-)**

Unaccepted spelling of ‘Zolotaia Niva’.

**‘Zoloteye Runo’ I(b/-)**

Unaccepted spelling of ‘Zolotoe Runo’.

**‘Zolotinka’ I(a/b)**

Parentage: ‘Rubinovaia’ × mixed pollen from Golden Chalice Group & ‘Destiny’

R: M.F. Kireeva (1976), N: M.F. Kireeva

Fls bright golden yellow; spots black, on basal half of each tepal; filaments pale yellow; anthers dark brown. Fls 110-120 mm wide. Stems 0.6-0.7 m, with 5-11 fls. June to July. (Published in M.F. Kireeva, *Lilii*, 49 (1984).)

**‘Zolotko’ Div. ?**

Given as a parent of ‘Planeta Mars’ and ‘Planeta Zemlia’, both raised by V.A. Volkov. No further details.

**‘Zolotoe Leto’ I(a/b)**

Parentage: ‘Vostok-2’ × Golden Chalice Group

R: M.F. Kireeva (1972), N: M.F. Kireeva

Fls bright yellow with an orange-yellow centre; spots dark, on basal half of each tepal; filaments pale yellow; anthers dark brown. Fls 120-140 mm wide. Lvs shiny dark green. Stems 0.8-0.9 m, with 7-11 fls. June to July. (Published in M.F. Kireeva, *Lilii*, 49 (1984). Included in *ILR Third Supplement* as ‘Zolotoye Leto’ which is an unaccepted spelling.)

**‘Zolotoe Runo’ I(b/-)**

Parentage: (‘Stroinaia’ × ‘Rubinovaia’) × ‘Destiny’

R: M.F. Kireeva (1977), N: M.F. Kireeva

Fls yellow; spots brown, large. Stems 0.7 m, with bulbils. June.

(Unaccepted spelling: ‘Zolotoye Runo’.)

**'Zolotoye Leto' I(a/b)**

Unaccepted spelling of 'Zolotoe Leto'.

**'Zolotoye Runo' I(b/-)**

Unaccepted spelling of 'Zolotoe Runo'.

**'Zolushka' IX(-/c-d)**

See *henryi* 'Zolushka'.

**'Žonglér' VI(b-c/b)**

Parentage unknown

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (2005),

REG: B. Mičulka (2005)

Inside cream, throat pale beige-apricot; outside with pale green midribs; spots absent; nectaries dark green; pollen brown; stigma dark red-brown. Fls 155 mm wide; tepals 105 × 40 mm, slightly curved, wavy and twisted; pedicels 55 mm, dark green, slightly brownish-dotted. Lvs scattered, 1.5 × 19 mm, glossy dark green. Stems 0.75 m, thick, brownish-dotted. Late June.

**'Zonnewende' I(a/-)**

This epithet and the description published in *Lilies and other Liliaceae* 1978/79: 115 are errors and should be deleted.

**'Zora' I(a/b)**

Parentage: 'Amber Gold' × mixed pollen of 'Connecticut King' & 'Connecticut Yankee'

R: K. Braun (1964), N: K. Braun, REG: K. Braun (1987)

Inside and outside raspberry-red, centre red; spots red-brown, fairly numerous, medium sized, on two-thirds of each tepal; papillae red, in the throat; nectaries rose-pink; pollen brown. Fls 160 mm wide; tepals 81 × 30 mm, recurved; pedicels 78 mm long, hairy. Lvs scattered, 117 × 12 mm, dull pale green. Stems 1 m, green-brown. Early July.

**'Zora' I(a/b)**

Parentage: 'Connecticut King' × 'Sunrise'

R: Šlechtiteláková Stanice Heřmanův Městec (pre 1992), N: Šlechtiteláková Stanice Heřmanův Městec

Inside yellow, each tepal flushed with brown-orange on basal half, and with a brown-red centre; small spots in the throat. Fls 150-170 mm wide; tepals slightly overlapping; pedicels 65-80 mm long. Lvs scattered, 70-90 × 11-14 mm, mid green. Stems 0.9-1.05 m, green, with c.20 fls. Mid June.

(Published in *Listina povolených odrůd okrasných rostlin*, MZ Praha. Included here as it is given in the Index of Licensed Varieties in the Czech Republic; it is unacceptable for registration because the epithet has already been used for another lily (ICNCP, 2004: Art. 27.1).)

**'Zorienka' I(b/-)**

Parentage: 'Svetlana' × 'Iolanta'

R: B.P. Guzhavin, N: B.P. Guzhavin (1983)

Fls straw-pink, throat apricot. Stems 1.3 m, with bulbils. (The seed parent is probably 'Svetlana' of Kireeva.)

**'Zorro' I(a/b)**

Parentage: 'Sarina' × 'Avignon'

R: B. Mičulka, N: B. Mičulka, I: B. Mičulka (1998),

REG: B. Mičulka (1998)

Inside strong velvet orange-red, tinted brownish, tepal-tips paler, throat apricot; outside with brownish midribs; spots absent or very few (0-2) on each tepal; papillae branched; nectaries white-granulated; pollen orange-brown; stigma beige. Fls 135 mm wide; tepals 95 × 48 mm, fleshy, slightly recurved; pedicels 90 mm long, slightly brown-dotted, with secondary buds. Lvs scattered, 140 × 22 mm, slightly glossy mid green. Stems 1 m, very thick, densely dotted pale brown and with a short infl. Late June. Triploid.

**'Zsa Zsa' I(a/b)**

See 'Zsazsa'.

**'Zsazsa' I(a/b)**

Parentage unknown

R: P. Hoff (1989), G: Hoffgaarde B.V. (1991), N:

Hoffgaarde B.V. (1991), I: Hoffgaarde B.V. (1992), REG: Hoffgaarde B.V. (1994)

Inside pale yellow (8D), paler towards the tepal-tips; outside pale yellow-green (155A/8D), pale yellow (8D) at tepal-edges, inner tepals with brilliant greenish yellow (151D) midribs, midribs on outer tepals brilliant greenish yellow (151D) over 20mm, tipped strong yellow-green (144A); spots dark red (187A), in the throat; pollen moderate orange (167A); stigma dark red (187A). Fls 180 mm wide; tepals 95 × 50 mm. Lvs scattered, 110 × 18 mm. Stems 1.05 m, pale green, with c.6 fls. Syn.: 'Holebubu'.

(Although registered as 'Zsa Zsa', an USPP was granted under the epithet 'Zsazsa' on 3 Jan. 1995, and this form of the epithet must now be accepted (ICNCP, 2004: Art. 24.4). The same year, on 16 May, Dutch PBR were granted under the epithet 'Holebubu', but this later epithet must be regarded as a synonym.)

**'Zulu' Div. ?**

Parentage unknown

(Published in *Amer. Lily Soc. Newsl.* 4 (3), January 1951.

No further details.)

**'Zuni' I(a/b)**

Parentage unknown

R: W. Windus (c. 1982), G: W. Windus (c. 1985), N: W. Windus, REG: W. Windus (1991)

Inside and outside vivid greenish yellow (2A); spots absent; nectaries greenish; pollen brown. Tepals 70 × 40 mm, overlapping below, margins smooth, tips not recurved. Lvs scattered, mid green. Stems 1.14-1.16 m, mid green, with 6-8 fls and some stem bulbils. Late June to early July.

**'Zur Fröhlichen Pfalz' I(b/b)**

Parentage: 'Skywatcher' × 'Vater Zille'

R: G. Steinbrück (1992), G: G. Steinbrück (1995), N:

G. Steinbrück (1999), I: G. Steinbrück (1999), REG: G. Steinbrück (2000)

Inside light orange-yellow, tepal-tips light orange (28D); outside light orange-yellow with broad yellow midribs; spots moderate orange (167C), numerous, small, on basal three-quarters of each tepal; nectaries pale green-white; pollen moderate red (183B); stigma strong orange-yellow (17A). Fls 170 mm wide; tepals 90 × 40 mm, margins slightly ruffled, tips slightly recurved. Lvs scattered, 110 × 15 mm. Stems 1.2 m (in the open), dark green, with 8-10 fls. Mid July.

(The epithet is the name of a Berlin restaurant.  
Nomenclatural standard: colour print provided by registrant (WSY 0024677).)

**‘Zuzka’ I(a/b)**

Parentage: ‘Connecticut King’ × (‘Connecticut Yankee’ × ‘Connecticut Glow’)

R: K. Braun (1983), N: K. Braun, REG: K. Braun (1985)

Inside glowing orange-yellow, throat orange; outside slightly paler; spots black, large, on a quarter of each tepal; papillae pale yellow; nectaries pale orange; pollen orange; stigma orange. Fls 183 mm wide; tepals 95 × 38 mm, margins curled, tips slightly recurved. Lvs 108 × 20 mm, glossy dark green. Stems 0.86 m, brownish. Early July.

**‘Zvaigzne’ IX(-/d)**

See *henryi* ‘Zvaigzne’.

**‘Zvaigžņu Vārti’ II(c/d)**

Parentage unknown

R: D. Hercberts, G: D. Hercberts (1998), N: D. Hercberts (2002), I: D. Hercberts (2002), REG: D. Hercberts (2003)

Inside white, throat greenish; outside white, midribs green; spots cherry-red; nectaries green; pollen dark orange; stigma cherry-red. Fls 55 mm wide; tepals 40 × 17 mm, margins smooth, tips slightly recurved. Lvs whorled, 130 × 50 mm. Stems 1.4 m, green, darker in upper part, with c. 22 fls. Mid to late June.

(The epithet is Latvian for ‘star gates’. Raised from seed obtained from NALS seed exchange.)

**‘Zvanu Tornis’ II(c/d)**

Parentage unknown

R: D. Hercberts (1993), G: D. Hercberts (1997), N: D. Hercberts (2002), I: D. Hercberts (2002), REG: D. Hercberts (2003)

Inside pink-orange, lighter at tepal-tips, midveins greenish, throat lighter; outside orange-pink, midribs pink; spots cherry-red on yellow-orange flush; pollen orange. Fls 50 mm wide; tepals thick, 45 × 16 mm, margins smooth, tips strongly recurved. Lvs whorled with c.20 lvs per whorl, to 200 × 55 mm, dark green. Stems 1.8 m, green, darker in upper part, with c. 24 fls. Mid to late June.

(The epithet is Latvian for ‘bell tower’.)

**‘Zvezda Akhmatovoi’ VI(-/a)**

Parentage: trumpet hybrids × ‘Richard Latty’

R: N.G. Korshikova (1989)

Fls lemon-yellow, scented. Stems 1-1.05 m. July.

(Published in M.F. Kireeva, *Lilii*, 87 (2000).)

**‘Zviozdochka’ I(a/c)**

Parentage: (‘Paprika’ × *L. × maculatum*) × Golden Chalice Group

R: M.F. Kireeva (1983), N: M.F. Kireeva

Fls red with black spots. Stems 0.5 m. June.

(Unaccepted spelling: ‘Zviozdoczka’)

**‘Zviozdoczka’ I(a/c)**

Unaccepted spelling of ‘Zviozdochka’.

# GLOSSARY

- Allotriploid:** an organism that possesses 3 sets of chromosomes in each normal vegetative cell, 2 sets being from one parent and 1 set from the other.
- Aneuploid:** an organism with fewer or more chromosomes than usual in each normal vegetative cell.
- Anther:** the pollen-producing part of a stamen, borne at the top of the filament (q.v.).
- Author:** the person who first described and published the scientific name of a plant. The author's name may be placed after the scientific name. An author may sometimes be referred to as an authority.
- Authority:** author (q.v.)
- Axil:** the upper angle between the stem and a leaf or leaf-stalk.
- Bract:** a leaf-like structure found at the base of a pedicel (flower-stalk), where it joins the stem.
- Brushmark:** a large mark (often spade-shaped, triangular or oval) on the basal half of a tepal, and of a contrasting colour to the main colour of the tepal.
- Carpel:** one of the central female parts of a flower, containing ovules that, after fertilization, become seeds. A lily flower has 3 fused carpels that become a fruit-capsule with 3 compartments.
- Ciliate:** describes the margin of a leaf or bract that is fringed with hairs.
- Claw:** the narrowed base of a tepal.
- Clone:** two or more individuals, originally derived from one plant by asexual propagation, which remain genetically identical. A clone may also be a cultivar.
- Cultivar:** a category in the taxonomic hierarchy (q.v.) of cultivated plants that is clearly distinct, uniform and stable in its characteristics and which, when propagated by appropriate means, retains those characteristics.
- Diploid:** an organism that possesses 2 sets of chromosomes (one set from each parent) in each normal vegetative cell. This is the most common state for most organisms. In lilies the diploid state is expressed as  $2n = 24$ .
- Epithet:** the final word or words in a name that denotes an individual taxonomic unit.
- F<sub>1</sub>:** a plant-breeding term for the result of a repeatable cross between 2 pure-bred lines (q.v.).
- F<sub>2</sub>:** a plant-breeding term for the result of self-pollination within a population of F<sub>1</sub> hybrids.
- F<sub>3</sub>:** a plant-breeding term for the result of self-pollination within a population of F<sub>2</sub> hybrids.
- F<sub>4</sub>:** a plant-breeding term for the result of self-pollination within a population of F<sub>3</sub> hybrids.
- Filament:** the stalk of a stamen, that bears the anther at its top.
- Forma:** often termed 'form' in common practice, it is the lowest botanical category employed here in the taxonomic hierarchy (q.v.): a subdivision of a species, subspecies or varietas. Usually only differs from the typical plant in a single character.
- Group:** a formal category that denotes an assemblage of cultivars and/or individuals that possess defined similarity.
- Inflorescence:** a number of flowers that are grouped closely together to form a structured unit.
- Infraspecific category:** a category below the species level in the taxonomic hierarchy (q.v.), i.e. a subspecies, varietas or forma.
- Lanceolate:** lance-shaped, i.e. narrowly elliptic but with the widest point one-third from the base, 3-4 times as long as wide.
- Line:** a plant breeding term used to describe plants resulting from repeated self-fertilization or inbreeding.
- Linear:** describes a parallel-sided leaf or tepal that is many times longer than wide.
- Node:** a point on a stem where leaves arise.
- Ovate:** egg-shaped in outline, broadest towards the base.
- Pedicel:** the stalk of an individual flower.

<b>Perianth:</b>	the sepals and petals considered collectively, especially in flowers such as lilies where there is no clear differentiation between sepals and petals. In some publications each individual part of the perianth is termed a perianth-segment, but the <i>ILLR</i> uses the alternative term tepal (q.v.).	<b>Taxonomic hierarchy:</b> the consecutively subordinate categories used in the classification of wild plants. The following are used in the <i>ILLR</i> : species subspecies varietas forma In any species, none, or only some, or all subordinate categories may be present.
<b>Polyloid:</b>	an organism that possesses more than 2 similar sets of chromosomes in each normal vegetative cell.	<b>Tepal:</b> one of the parts of the perianth of the flower, when (as in lilies) the flower is not clearly differentiated into a calyx (composed of sepals) and a corolla (composed of petals). Lily flowers have 6 tepals (unless the flowers are double).
<b>Raceme:</b>	an inflorescence consisting of stalked flowers arranged on a single axis.	<b>Tepaloid:</b> tepal-like.
<b>Ray:</b>	on a tepal, a longitudinal band of colour that usually runs from the base to the tip, although it may not always reach the tip. It is a different colour from the main colour of the tepal.	<b>Tetraploid:</b> an organism that possesses 4 similar sets of chromosomes in each normal vegetative cell.
<b>Solitary:</b>	describes a flower that is borne singly, not in a group.	<b>Trade designation:</b> a name which, although technically superfluous, is used to market a plant when the original name is considered to be unsuitable for commercial purposes.
<b>Species:</b>	the fundamental category in the taxonomic hierarchy (q.v.): species are grouped into genera.	<b>Triploid:</b> an organism that possesses 3 similar sets of chromosomes in each normal vegetative cell. Most triploid plants are sterile.
<b>Stamen:</b>	the male organ of a flower, consisting of a stalk (filament) and a terminal pollen-bearing part (anther). Lily flowers have 6 stamens.	<b>Umbellate:</b> describes an inflorescence in which the pedicels (q.v.) arise together at the top of the stem.
<b>Staminode:</b>	an infertile stamen. In lilies the staminodes are usually tepaloid (q.v.).	<b>Varietas:</b> often termed 'variety' in common practice, it is the category between subspecies and forma in the taxonomic hierarchy (q.v.): a subdivision of a species or subspecies that differs from the typical plant in one or two characters, but does not necessarily occur in a different geographical area.
<b>Stigma:</b>	the top part of the style, often differing from it in texture, to which pollen adheres after it is deposited, prior to fertilization.	<b>Zygomorphic:</b> describes a flower that is bilaterally symmetrical.
<b>Style:</b>	the usually slender, upper part of a carpel, bearing the stigma at its tip.	
<b>Subspecies:</b>	the category between species and varietas in the taxonomic hierarchy (q.v.): a subdivision of a species, that usually differs from the typical plant in two or more characters. Different subspecies usually occur in different geographical areas.	
<b>Synonym:</b>	a validly published name that is not the accepted (correct) name for the plant in question. For example, 'White Dove' is a synonym of 'Happy Thoughts', Seastar Group is a synonym of Jūras Zvaigzne Group, <i>L. tigrinum</i> is a synonym of <i>L. lancifolium</i> , <i>L. martagon</i> var. <i>dalmaticum</i> is a synonym of <i>L. martagon</i> var. <i>cattaniae</i> .	

# RAISERS AND REGISTRANTS

This list includes raisers, selectors, nominants and introducers, as well as registrants. In previous editions of the *ILLR*, people who have died were marked as such, but because of the difficulties of keeping this information up to date, this practice has been discontinued. Addresses have been shortened, because some people prefer that their complete address is not published.
