CLASSIFICATION OF GENERA

Genera including a large number of species, or with many cultivars, are often subdivided into informal horticultural classifications, or formal cultivar groups in the case of *Clematis* and *Tulipa*. The breeding of new cultivars is sometimes limited to hybrids between closely-related species, thus for *Saxifraga* and *Primula*, the cultivars are allocated to the sections given in the infrageneric treatments cited. Please turn to p.11 for a fuller explanation.
