The International Dianthus Register (1983) & Checklist

Thirty-second Supplement

Introduction	page 1
Additions (January to December 2014)	page 2
List of raisers and registrants	page 19

The following list contains the names of *Dianthus* cultivars added to the International Dianthus Register between 1 January and 31 December 2014, together with any additions to the Checklist where relevant information about the plants concerned has become available.

Raisers and introducers of new cultivars are urged to ensure that the names of all their plants have been registered and are reminded that registration should take place before a plant is released or the name is mentioned in print. Registration concerns all named cultivars. The forms to register a new name can be obtained from the International Dianthus Registrar, at the address below. A certificate of registration will be issued on request. There is no fee for this service. The form may also be downloaded from the RHS website at:

www.rhs.org.uk/Plants/Plant-science/Plant-registration-forms/Dianthusform

The format of entries follows a pattern first adopted in the *Fifth Supplement*, except that pot carnations are now designated as (pt) at the start of their entries. Following the classification and the name of each new cultivar is a statement regarding parentage or origin in parenthesis. The names of those involved in the raising, introduction and registration of the plant are then listed, together with the relevant dates. It may be helpful here to repeat the abbreviations that are employed in the text:

(b) = border carnation	(p) = pink
(c) = carnation	(p,a) = annual pink or plant usually grown as an annual
cv. = cultivar	
G = grown to first flower by...	(pf) = perpetual carnation
Gp = Group	(pt) = pot carnation
H = hybridised by...	R = raised by...
I = introduced by...	REG = registrant
L = listed by...	S = selected by...
(m) = malmaison carnation	(s) = seed parent
N = named by...	

Perpetual carnations are listed, where known, as sprays or standards. The use of the latter term should not be confused with the citation of nomenclatural standards which refer to the individual herbarium specimen or image (slides, prints etc.) which have been selected as the definitive point of reference should any doubt arise about the plant to which the name concerned should apply.

Colour references such as 128D are to the *RHS Colour Chart* (1966, 1986, 1995, 2001, 2007), those such as 730/3 refer to the *Horticultural Colour Chart* (1941). The descriptions are as full and consistent as information provided by the registrant and other sources allow. Any additional material or corrections would be welcomed by the International Registrar.
