Key to codes after names of plants

Genera that include a large number of species or which have many cultivars are often subdivided into informal horticultural classifications or more formal Cultivar Groups, as in the case of *Clematis* or *Tulipa*. These are generally based on a particular characteristic or combination of characteristics, such as colour of flower or fruit and shape of flower. In some cases, the group may reflect the nomenclatural history of a group of plants. Thus plants previously listed under *Hebe* but now considered to belong in *Veronica* have the code (H) at the end of their name.
